its physiological action see *Saponin*. It is sometimes used as an antipyretic and in coryza. It may be used instead of soap for washing the hairy scalp or other cutaneous surfaces affected with eruptions, ulcers, &c., and is useful as a deodorant in foetor of sweat from the feet or armpits.

Q. saponaria. A tree, native in Chili and Peru. Its bark is termed *Quillaia* (q. v.).

Quilla'ic acid. An acid of quillaia bark, present in commercial *saponin*. By the mouth, it is said to be non-poisonous; but is extremely poisonous when injected sub-cutem.

Quilla'in. An extract of quillaia bark.

Quilled suture. See *Suture, quilled*.

Quill'wort. Common name for *Isoetes*.

Quiltor. Syn. for *Quittor*.

Qui'na. Another form for *Quinina*, the Latinized form of the word *Quinine*.

Q. qui'na. See *Cinchona*.

Qui'næ. Gen. of *Quina*. For sub-headings, *Quinæ acetæ*, &c., see under *Quininæ*.

Quinam'icine. $C_{19}H_{24}N_2O_2$. An alkaloid obtained by heating sulphate of *quinamine*.

Quinamidine. $C_{19}H_{24}N_2O_2$. An amorphous alkaloid prepared from *Quinamine* by the action of dilute sulphuric acid.

Quin'amine. $C_{19}H_{24}N_2O_2$. An alkaloid obtained from cinchona bark. It is a crystalline body. Its solutions are dextro-rotatory, and are not fluorescent.

Quinaqui'na. See *Cinchona*.

Qui'nary. (L. *quinus*, five by five.) Made up of five parts, *pentamereous*.

Qui'nate. (L. *quinus*; F. *quiné*; I. *cinquina*; G. *fünffzählig*.) Epithet applied to plants having leaves inserted five by five round the stem; also, to leaves that are divided deeply into five divisions, *quinquifid*; and also to leaves composed of five leaflets, *quinquifoliate*.

Quince. (L. *cydonium*. F. *coing*; I. *cotoqua*; G. *Quitte*.) The fruit of the *Pyrus cydonia*.

Q., Bengal'. Corolam. The fruit of the *Ægle marmelos* (q. v.).

Q. seed. See *Cydonium*.

Quin'cke's capillary pulse. A fuller name for *Q.'s pulse*.

Q.'s disease'. A term for *Urticaria, giant* (q. v.).

Q.'s pulse. (After Quincke, who first described it.) A capillary pulsation which can be observed in the bed of the finger-nail in cases of aortic regurgitation.

Quincun'cial. Belonging to, or arranged in, a *Quincunx*.

Quin'cunx. (L. *quincunx*, five-twelfths.) Term applied to a mode of planting trees so that, in whatever way they are viewed, they appear equidistant. Each tree in one row is equally distant from four others, two on the right and two on the left. The term is derived from the marking of five upon dice. Also, applied to leaves when they are arranged round the stem in a simple spiral of five leaves, the sixth covering the first. It has also been applied to a form of æstivation when the corolla and calyx are in fives, and are so arranged in the bud that two of the five are external.

Quine'tum. (Sp. *quina*, bark.) Term for a mixture of the alkaloids of the bark of *Cinchona succirubra*, used in India as a febrifuge.

Quinhy'drone. $C_{12}H_{10}O_4$. It consists of equal molecules of quinone and hydroquinone, and is prepared by mixing these two substances. It forms green needles with a golden lustre.

Quin'la. See *Quinina*. This was formerly the official name for quinine, chemical authorities having at that time determined that the names of alkaloids should end in *ia*. This was abandoned, and the older nomenclature was recognised in the British Pharmacopœia of 1885.

Q. blan'ca. White quinine. A name for the ordinary quinine.

Quin'iaë. Gen. of *Quinia*. For sub-headings, see under *Quininæ*.

Quin'ic. Belonging to *Quinine*.

Q. acid. $C_6H_7(OH)_4COOH$. Found in a number of plants, and in cinchona bark combined with the alkaloids. It crystallises in monoclinic prisms, readily soluble in water and alcohol. It unites with bases to form a series of salts, the quimates. Calcium quinate is a bye-product in the manufacture of quinine.

Q. fe'ver. The fever which occasionally appears in persons who are engaged in the manufacture of quinine; it is accompanied by an erythematous eruption.

Qui'nicine. $C_{20}H_{24}N_2O_2$. An alkaloid isomeric with quinine and quinidine. It is prepared by heating quinine and glycerine to 190° C. It has a bitter taste, and is insoluble in water. Its solution in dilute acid is dextro-rotatory. It is not so deeply coloured as quinine by chlorine-water and ammonia.

Q. sul'phate. Prepared by heating the acid sulphate of quinine till it melts. It is easily soluble in water and alcohol.

Qui'nidine. $C_{20}H_{24}N_2O_2$. An alkaloid of cinchona, believed to be isomeric with quinine. Its action is said to be similar to that of quinine, except that it does not so readily cause giddiness and tinnitus aurium.

Q. bisul'phate. $C_{20}H_{24}N_2O_2 \cdot H_2SO_4 \cdot 4H_2O$. Acid sulphate of quinidine. Prepared by evaporating a solution of sulphate of quinidine in dilute sulphuric acid. It is very soluble in water.

Q. hydr'i'odate. $C_{20}H_{24}N_2O_2 \cdot HI$. Hydriodate of quinidine. Prepared by the action of potassium iodide upon quinidine sulphate. It is anhydrous, and is sparingly soluble in water and in alcohol.

Q. sul'phate. $(C_{20}H_{24}N_2O_2)_2 \cdot H_2SO_4 \cdot 2H_2O$. Obtained chiefly from *Cinchona pitayensis*. The mother liquors after crystallization of sulphate of quinine yield on concentration crystals consisting largely of this salt. An excess of ammonia is added to the mother liquors; these are then filtered, and solution of soda is added to the filtrate, which precipitates impure quinidine. It is purified by solution in dilute sulphuric acid and re-crystallisation. It occurs in silky white crystals resembling sulphate of quinine. It is distinguished from sulphate of quinine in that the quinidine precipitated from its solution by ammonia is sparingly soluble in excess of ammonia and ether, whilst quinine is readily soluble. In ague and intermittent fevers quinidine is considered equal in value to quinine as an antipyretic and antiperiodic. Though it is apt to cause vomiting, it is said to be less likely to produce nervous symptoms.

Quiniflor'ous. (L. *quini*, five each; *flos*, a flower. F. *quiniflore*; I. *quiniflora*; G. *fünfblumig*.) Epithet applied to a plant which bears five flowers.

Quini'metry. (*Quinia*; Gr. μέτρον, a measure. F. *quinimétrie*.) The process of estimating the amount of quinine, cinchonine, and other alkaloids in cinchona bark.

QUININA—QUININÆ

Quini'na. (Peruvian, *kina* or *kina-kina*, said to mean bark. F. *quinine*; G. *Chinin*.) Latinised form of the word *Quinine*. An alkaloid obtained from various species of cinchona. $C_{20}H_{24}N_2O_2 \cdot 3H_2O$. It is prepared by precipitating a solution of the sulphate with an alkali. An amorphous precipitate falls, this if kept under water becomes crystalline. It occurs as long colourless silky crystals, or may be amorphous; it is inodorous, and has a bitter taste which develops slowly, as the alkaloid is sparingly soluble in water. Its solutions are lævo-rotatory. It is a powerful base, and neutralises the mineral acids, producing crystalline salts. If chlorine-water, and then an excess of ammonia, be added to an acid solution of quinine, the mixture acquires an emerald-green colour; if this be neutralised or rendered faintly acid, the colour changes to purplish red. This forms a useful test for the presence of quinine.

Quini'næ. Gen. of *Quinina*.

Q. ac'etas. $C_{20}H_{24}N_2O_2 \cdot C_2H_3O_2$. It is prepared by mixing hot solutions of sulphate of quinine and acetate of sodium. On cooling, crystals of acetate of quinine separate. It dissolves readily in hot water. It contains 84 per cent. of quinine.

Q. arsen'ias. Arseniate of quinine. $2(C_{20}H_{24}N_2O_2) \cdot AsH_3O_4 \cdot 4H_2O$. Prepared by dissolving quinine in arsenic acid. It occurs in white, acicular needles, and contains about 20 per cent. of arsenic acid and 67 per cent. of quinine. Dose, $\frac{1}{8}$ to $\frac{1}{2}$ grain, in a pill. Action, antiperiodic.

Q. ar'senis. Arsenite of quinine. $3(C_{20}H_{24}N_2O_2) \cdot As_2O_3 \cdot 3H_2O$. Prepared by the action of silver arsenite upon hydrochlorate of quinine, in the presence of alcohol.

Q. ben'zoas. Benzoate of quinine. $C_{20}H_{24}N_2O_2 \cdot C_7H_5O_2$.

Q. bimuriat'icum carbamida'tum. A syn. for *Q. hydrochloras carbamidata*.

Q. bisul'phas. (F. *Sulfate acide de quinine*; G. *Chininbisulfat*.) Acid sulphate of quinine. $C_{20}H_{24}N_2O_2 \cdot H_2SO_4 \cdot 7H_2O$. Prepared by mixing 100 grm. of sulphate of quinine with 500 grm. of water, and adding 115 grm. of acid. sulphuric. dil. This is set aside to crystallise, and the crystals are dried over sulphuric acid. Occurs in colourless crystals (rhombic prisms or silky needles), efflorescing upon exposure to air; taste, acid. It dissolves in ten parts of water. Action the same as that of quini'næ sulphas.

The true bisulphate of quinine—

$(C_{20}H_{24}N_2O_2)(H_2SO_4)_2 \cdot 7H_2O$ is obtained by the action of 350 grm. of dilute sulphuric acid on 100 grm. of quinine sulphate. This acquires a brownish colour on exposure to light, and is easily soluble in alcohol and water.

Q. bro'mas. $C_{20}H_{24}N_2O_2 \cdot HBrO_3$. Is prepared by the action of barium bromate upon sulphate of quinine. It detonates in contact with strong sulphuric acid. It is sparingly soluble in cold water.

Q. chlo'ras. Prepared by dissolving quinine in chloric acid. It explodes when heated above its melting point. Dose, 1 to 5 grains or more, in a pill with glycerine of tragacanth.

Q. cit'ras. $2C_{20}H_{24}N_2O_2 \cdot C_6H_8O_7$. A sparingly soluble salt, crystallising in white needles, only slightly soluble in water. Dose, 1 to 5 grammes or more, either in a pill with glycerine of tragacanth, or suspended in water.

Q. ferrocy'anas.

It occurs in orange crystals or as a yellowish-green amorphous powder.

Q. fluo'ridum. This salt has been used therapeutically in cases of rickets and enlarged spleen. (Extra Pharm., 1891.)

Q. hydri'o'das. Acid hydriodate of quinine (ioduret of quinine).

Prepared by the action of potassium iodide upon acid solution of quinine. It occurs in transparent prisms or scales.

Q. hydrobro'mas. (F. *Bromhydrate de quinine*; G. *Chininhydrobromat*.) Hydrobromate of quinine. $C_{20}H_{24}N_2O_2 \cdot HBr \cdot 2H_2O$. It is prepared by the action of barium bromide upon sulphate of quinine in boiling water. It consists of colourless needles permanent in ordinary air, and having a bitter taste. It is soluble in 15 parts of water at 59° F., and readily soluble in alcohol. It is more soluble than ordinary sulphate of quinine, is not irritating, and has been considered useful for hypodermic injection. The small amount of hydrobromic acid present in an ordinary dose does not materially alter its effect. Dose, 1 to 5 grains, or more.

Q. hydrobro'mas ac'ida. Acid hydrobromate of quinine. $C_{20}H_{24}N_2O_2(HBr)_3 \cdot H_2O$. Prepared in the same way as *Q. hydrobromas*, excepting that there must not be an excess of the barium bromide. It is more soluble than *Q. hydrobromas*. Dose, $\frac{1}{2}$ to 2 grains hypodermically.

Q. hydrochlo'ras. B.P. and U.S.P. (F. *chlorhydrate de quinine*; G. *Chininhydrochlorat*.) Hydrochlorate of quinine.

It is prepared in a similar way to the sulphate, the separated alkaloid being neutralised by hydrochloric acid instead of sulphuric. The crystals are somewhat larger than those of the sulphate, but are otherwise similar. It is soluble in thirty-four parts of water. It gives the tests of hydrochloric acid and of quinine. Dose 1 to 10 grains; when used hypodermically its dose is 2 to 4 grains. Its physiological action and uses are the same as those of the sulphate.

Q. hydrochlo'ras ac'ida. Is more soluble than *Q. hydrochloras*. Its colour is darkened by the action of light.

Q. hydrochlo'ras carbamida'ta. A term for *Quinine and urea hydrochloride*.

Q. hypophos'phis. Hypophosphite of quinine. Prepared by mixing solutions of calcium hypophosphite and sulphate of quinine.

Q. io'das. $C_{20}H_{24}N_2O_2 \cdot HI O_3$. Iodate of quinine. It occurs in white pearly crystals, sparingly soluble in cold, readily soluble in hot, alcohol.

Q. ki'nas. A syn. for *Q. quinas* (q. v.).

Q. lac'tas. Lactate of quinine. Prepared by dissolving quinine in lactic acid. It is a very soluble salt. Dose, 1 to 20 grains.

Q. mu'rias. Muriate of quinine. Syn. for *Q. hydrochloras*.

Q. ni'tras. $C_{20}H_{24}N_2O_2$. (F. *Nitrate ou azotate de quinine*.) Nitrate of quinine. Prepared by decomposing the neutral sulphate of quinine with nitrate of barium. It occurs in silky needles.

Q. o'leas. Oleate of quinine. A solution of 1 part of quinine in 3 of oleic acid.

Q. phe'nyl sul'phas. Carbolated sulphate of quinine. $2(C_{20}H_{24}N_2O_2) \cdot C_6H_5O \cdot 2H_2O$. Prepared by the action of phenol upon sulphate of quinine dissolved in alcohol.

QUININÆ

Q. phos'phas. Phosphate of quinine.
 $2(C_{20}H_{24}N_2O_2, H_3PO_4, 2H_2O)$.

Prepared by dissolving quinine in dilute phosphoric acid.

Q. qui'nas. Quinate or kinate of quinine. Prepared by the double decomposition of quinate of barium and sulphate of quinine. It is not crystalline, is freely soluble in water, and has been recommended for hypodermic injection.

Q. sal'cy'las. Salicylate of quinine. Prepared by the action of salicylate of ammonium upon hydrochlorate of quinine. It has been used especially in neuralgia and in osteoarthritis. Dose, 1 to 6 grains.

Q. sul'phas. B.F. and U.S.P.

$[(C_{20}H_{24}N_2O_2)_2H_2SO_4]_2 \cdot 7H_2O$.

(*F. sulfate de quinine*; *G. Schwefelsaures Chinin*.) It is derived from various kinds of Cinchona bark and Remigia bark. Sulphate of quinine consists of filiform, white, monoclinic crystals, which effloresce upon exposure. It has an intensely bitter taste, is almost insoluble in water, and has a neutral action. At ordinary temperatures it dissolves only to the extent of 1 part to 700, but is readily soluble in water acidulated with sulphuric acid. Its solutions are fluorescent. It gives the reactions of sulphuric acid. Its solutions treated with chlorine-water and afterwards with ammonia give an emerald green colour. It dissolves in pure sulphuric acid, giving a feeble yellow tint; and when gently warmed undergoes no change. Ignited in air it leaves no residue. The sulphate of quinine sold by chemists should not contain more than five per cent. of the other alkaloids, as cinchonine, cinchonidine, &c., contained in cinchona bark. The preparation of sulphate of quinine involves three stages: 1st, the extraction of the alkaloids from cinchona bark in some soluble form; 2nd, the precipitation of the alkaloids from this solution; 3rd, the purification of the sulphates of the alkaloids, and their separation one from the other. The outline of these processes is as follows:—The alkaloids are easily extracted by means of hot dilute sulphuric or hydrochloric acid. Lime is added to the acid decoction, when the salts are decomposed, and the alkaloids together with excess of lime are precipitated. The alkaloids are extracted from this precipitate by boiling alcohol. The residue, after evaporation of the alcohol, is treated with hot water and sulphuric acid dropped in, the alkaloids always being in excess. The hot filtrate from this is decolourised by charcoal, and on cooling yields sulphate of quinine. As sulphate of quinine is the least soluble of the allied alkaloids it is readily purified by repeated crystallisation.

The recognition of these alkaloids in a sample of quinine is possible by several methods. Hesse's is as follows:—1 grm. of sulphate of quinine warmed with 7 c.c. of a mixture of chloroform and absolute alcohol, in the proportion of 2 of chloroform to 1 of alcohol, should yield a perfect solution, remaining clear when cold. Kerner's test is employed in the U.S.P., and depends upon the greater solubility of quinine than the other alkaloids in ammonia water:—2 grms. of salt are agitated with 20 grms. of lukewarm water for 13 hours, this is then cooled to 15° C. exactly. The mixture is filtered; and of the filtrate 15 c.c. are placed in a test tube and covered with 7 c.c. ammonia water, sp. gr. .960. The test tube is closed and shaken, and no deposit should appear. It is important that the conditions be exactly observed.

Cinchona bark was introduced from South America by the conquerors of Peru; for a long time its value was not appreciated. About the middle of the seventeenth century it was distributed by the Jesuits all over Europe, and hence was called Jesuit's bark. The alkaloids were first obtained, but not properly isolated, by Duncan in 1803. Quinine was introduced into Medical practice in 1820.

Quinine and its various salts are antiseptic, and tend to arrest fermentation. It increases the appetite if administered in small doses, and is a valuable stomachic tonic; but larger doses are irritating and produce vomiting. In fevers and other illness the digestive organs are often irritable, and the administration of quinine is often difficult.

Upon the circulatory system: quinine increases the frequency of the pulse in animals when administered in small doses, but large doses cause paralysis of the heart. Upon man, quinine causes a reduction in the pulse rate, at the same time increasing the strength of the circulation, owing to an increase in the energy of the cardiac systole. Larger doses however tend to paralyse the vaso-motor centre and weaken the heart, and are therefore apt to produce collapse.

Upon the blood: it is probable that a large dose of quinine increases the number of white corpuscles, and that diapedesis is lessened.

Quinine tends to lessen tissue-change, and diminishes the amount of urea excreted. In fever it reduces the temperature, if administered in large doses.

Quinine has a marked effect upon the nervous system. Small doses diminish the reflex activity of the spinal cord. Large doses given to an animal cause staggering convulsions, dilated pupils, afterwards torpor and impaired vision.

In man similar symptoms are produced: noises and buzzing in the ears, dimness of vision, vertigo, headache, restlessness followed by depression, twitchings of the limbs, and even convulsions. Coma may follow. (See also *Quinism*.) The idiosyncrasy of patients is often marked in reference to quinine; some persons are very susceptible, and five grains may produce a long train of nervous symptoms, whilst others are but little affected. A tolerance to the drug is often established. On the other hand small doses of quinine increase the amount of blood circulating through the brain, and at the same time moderately stimulate the nervous centres; hence quinine is a valuable general tonic and nervous stimulant, the unpleasant symptoms of larger doses being due to a weakened cerebral circulation and a depression of the cerebral centres.

The effect of quinine upon the cerebral circulation has been determined by actual experiment in the human subject after trephining, by Dr. Mary Putman Jacobi, who took sphygmographic tracings.

In susceptible people an erythematous rash resembling urticaria is produced by quinine; it may appear within fifteen minutes after a dose of five grains is taken. In some cases large doses of quinine have caused retention of urine or hæmaturia, and cases are recorded in which abortion has followed the administration of quinine in large doses for ague.

A solution of quinine is sometimes used as an antiseptic, in cystitis as an injection; it has also been used locally in conjunctivitis, gonorrhœa, &c. It has been considered useful for washing

QUININE—QUINOVIN

out the pleural cavity in empyema. There is no doubt as to the value of quinine in malarial fevers, as a prophylactic, and as a cure of ague and all intermittent fevers.

In other fevers, yellow fever, typhoid, typhus, quinine is not so directly useful; but it is largely used as an antipyretic, and is less depressing than many other remedies; also, in smaller doses, as a general stimulant and tonic. As a nervous tonic its value is universally recognised; in neuralgia, in debility, and in all forms of nervous depression; also in phthisis, tubercular disease of glands, joints, &c.; and in general cachectic conditions of the body, quinine is a valuable adjunct to other treatment.

The dose of quinine is from 1 to 10 grains, or more.

Q. tan'nas. Tannate of quinine. A solution of quinine is precipitated by tannic acid, and a pale yellow amorphous powder falls. It has been used medicinally, being considered to be less irritating than the sulphate; but the value of the quinine is in great part lost.

Q. u'ras. Urate of quinine. Prepared by boiling quinine and uric acid together in water, filtering, and evaporating the filtrate. It has been considered more efficacious than other salts in obstinate malaria.

Q. valer'ianas. (*F. valerianate de quinine*; *G. baldriansaures Chinin*.) Valerianate of quinine. $C_{20}H_{24}N_2O_2 \cdot C_5H_{10}O_2 \cdot H_2O$. White crystals with a slight odour of valerian, which is very manifest when a solution is acidulated with sulphuric acid. Prepared by dissolving quinine in warm valerianic acid. It is used as a tonic and antispasmodic in hysteria.

Q. vi'num. See *Vinum quininæ*.

Quinine'. See *Quinina*. For salts of quinine not given below, see under *Quininæ*.

Q., amor'phous. A powdered alcoholic extract of the bark of *Cinchona calisaya*, mixed with an equal quantity of calcium hydrate.

Q., amor'phous bo'ric. Syn. for *Q., borate of*.

Q. and i'ron. See *Ferri et quininæ citras*.

Q. and ure'a hydrochlo'ride. Crystalline. Soluble in an equal weight of water, soluble in strong alcohol. Used for hypodermic injection.

Q. antimo'niate. Prepared by mixing aqueous solutions of quinine sulphate and potassium antimoniate. It has been used in malarial diseases.

Q., be'ta-. A name for *Quinidine*.

Q., bo'rate of. This is a readily soluble preparation, and has been used therapeutically.

Q., brown. A preparation made as follows:—*Calisaya* bark is extracted with very dilute hydrochloric acid; the extract is precipitated with carbonate of soda; the precipitate exhausted with strong alcohol; this is filtered, and the alcohol distilled off. The residue is then dried and powdered.

Q. bush. Popular name for the *Garrya fremontii*.

Q. cam'phorate. A compound of quinine with camphoric acid.

Q.-flow'er. A name for the root of *Sabatia Elliotii* (q. v.).

Q., poor man's. Term for the seeds of *Cæsalpinia bonduce* and *C. bonducella*.

Quinin'ism. A syn. for *Quinism*.

Quinio'metry. See *Quinimetry*.

Quini'retin. The yellowish-brown precipitate which appears after exposing quinine solutions to sunlight.

Quin'ism. Quinine produces well-marked symptoms when taken in excess, called cinchonism or quinism; these are noises in the head, ringing in the ears, deafness, loss of sight, impaired sensation and headache. Large doses of quinine cause complete deafness, staggering gait, and even delirium and convulsions. Death has been recorded.

Quin'ium. An alcoholic extract of cinchona barks. These are selected and mixed so that the proportion of quinine in them shall be twice that of the cinchonine. It is said that it possesses all the properties of cinchona.

Quinizar'in. $C_{14}H_8O_4$. An isomeride of alizarin, obtained by heating quinol with sulphuric acid and phthalic anhydride.

Quino'a. The *Chenopodium quinoa*. Also, the seeds of *Chenopodium quinoa*.

Quin'odin. An alkaloidal body, resembling quinine in exhibiting a bluish fluorescence, which has been found (Du Prè and Bence Jones, 1866) in the tissues and fluids of the human and other animal organisms.

Quinoi'din. A brown residue obtained by evaporating to dryness the mother liquors after the crystallisation of the alkaloids of cinchona. It consists of a variable amount of the transformation-products of the alkaloids.

Q. chlo'ride. The same as *Q. hydrochlorate*.

Q. hydrochlo'rate. Prepared by heating 1 part of purified quinoïdin with 4 of water, adding dilute hydrochloric acid to dissolve, filtering, and evaporating.

Q. hydrochlo'ride. The same as *Q. hydrochlorate*.

Quinoi'l. An old name for quinine.

Quinol. $C_6H_4(OH)_2$. Syn. for *Hydroquinone*.

Quino'lein. The same as *Quinolin*.

Quinolin. (*Quina*; Gr. *ἐλαιον*, oil.) A syn. for *Chinolin*.

Quinology. (*Quina*; *λόγος*, a discourse.) Cinchonology; the study of the varieties of *Cinchona* and their alkaloids.

Quinone'. $C_6H_4O_2$. Originally obtained by oxidizing quinic acid; it can also be obtained by the direct oxidation of benzene, and by other synthetical methods. It is crystalline and very volatile. It stains the skin brown, is soluble in water and hot alcohol, and gives a series of halogen substitution-compounds.

Quinotan'nic ac'id. Cinchonatanic acid. The tannin contained in cinchona bark. It gives a greenish precipitate with ferric salts. It is a light yellow, amorphous body, soluble in water and alcohol.

Quino'va-bit'ter. See *Quinovin*.

Quino'va-sug'ar. $C_6H_{12}O_6$. A saccharine substance obtained from quinovin. It resembles mannitan.

Quinov'a-tan'nic ac'id. Resembles *quino-tannic acid*, and is obtained from *Cinchona nova*.

Quino'vic ac'id. $C_{24}H_{36}O_4$. An acid principle found in false cinchona bark. It is prepared, as well as quino'va-sugar, by the decomposition of *quinovin*. It is tasteless, and not soluble in water. Its alcoholic solution is not coloured with ferric chloride.

Quino'vin. $C_{30}H_{48}O_8$. A neutral principle found in *Cinchona nova* and in other barks.

QUINOYL—QUINTESSENCE

It occurs in amorphous masses, insoluble in water, but soluble in ether and chloroform.

Quinoyl. A diatomic radical supposed to exist in quinone; quinone being considered the hydride of quinoyl ($C_6H_2O_2$) H_2 .

Quinquangular. (L. *quinque*, five; *angulus*, F. *quinguanulé*; I. *quinguancolato*; G. *finfwinkelig*.) Having five angles.

Quinquangulate. The same as *Quinquangular*.

Quinquangulous. The same as *Quinquangular*.

Quinquaud's disease. A term for *Folliculitis decalvans*, after Quinquaud who described the disease.

Q's plaster. A plaster for the external administration of calomel in syphilis. Empl. diachyli 3000 parts, calomel 1000, castor oil 300. The calomel is first suspended in the oil, and then the Empl. diachyli is added, and the whole mixed together. The preparation thus formed is spread on linen. It is so prepared that a square of $2\frac{1}{2}$ inches of the plaster contains 18 grains of calomel.

Quinquecap'sular. Bot. Having five capsules.

Quinquecostate. (L. *quinque*; *costa*, a rib.) Bot. Five-ribbed.

Quinquedentate. (L. *quinque*; *dens*, a tooth. F. *quinguedenté*; I. *quinguedentita*; G. *finfzählig*.) Having five teeth or serratures.

Quinquedigitate. (L. *quinque*; *digitus*, a finger. F. *quinguedigité*; I. *quinguedigitato*; G. *finffingerförmig*.) Zool. Having five digits. Bot. Having five digitations; term applied to a leaf with five folioles.

Quinquifar'ious. (L. *quinque*; *fero*, to bear. F. *quingueforié*; G. *finffreihig*.) Epithet applied to leaves disposed in five rows along the stem.

Quinquifid. (L. *quinque*; *findo*, to cleave. F. *quinguefide*; I. *quinguefido*; G. *finfspältig*.) Bot. Divided into five parts by clefts nearly reaching the middle; an epithet applied to leaves.

Quinquiflorous. (L. *quinque*; *flos*, *floris*, a flower. F. *quingueflore*; I. *quinguefloro*; G. *finffblumig*.) Having five flowers.

Quinquifoliate. (L. *quinque*; *folium*, a leaf.) Having five leaves.

Quinquifoliolate. (L. *quinque*, five; *foliolus*, dim. from *folium*, a leaf. F. *quinguefoliolé*; I. *quinguefogliolknato*; G. *finffblättig*.) Epithet for a leaf that is made up of five folioles.

Quinquifolium. (L. *quinque*; *folium*, a leaf.) A name for *Potentilla reptans*, or cinquefoil.

Q. majus. The same as main heading.

Quinquеfor'ous. (L. *quinque*; *foro*, to pierce. F. *quingueforé*; I. *quingueforato*; G. *finfflochig*.) Biol. Having five apertures.

Quinquеju'gate. (L. *quinque*; *jugum*, a yoke. F. *quinguejugué*; I. *quinguejugato*; G. *finffpaarig*.) Epithet applied to a leaf having five pairs of leaflets.

Quinquelobate. (L. *quinque*; *lobus*, the tip of the ear. F. *quinguelobé*; I. *quinguelobato*; G. *finfflappig*.) Having five lobes.

Quinquelocular. (L. *quinque*; *loculus*, a compartment. F. *quingueloculaire*; I. *quingueloculare*; G. *finff-fächerig*.) Bot. Epithet applied to a fruit that has five compartments.

Quinqueloculine. The same as *Quinquelocular*.

Quinquеpar'tite. (L. *quinque*; *par-*

titus, divided. F. *quinguepartite*; I. *quinguepartito*; G. *finfftheilig*.) Bot. Having five parts. Epithet applied to a calyx having five clefts nearly reaching the base; as in *Digitalis purpurea*.

Quinquеpli'cate. (L. *quinque*; *plico*, to fold. F. *quingueplié*; I. *quinguepiegato*; G. *finffältig*.) Biol. Having five folds.

Quinquеpunc'tate. (L. *quinque*; *punctum*, a point. F. *quinguepunctiforme*; I. *quingueforacchiato*; G. *finffspitzig*.) Having five spots or points.

Quinquera'diate. (L. *quinque*; *radius*, a ray.) Biol. Five-rayed.

Quinquеsep'tate. (L. *quinque*; *septum*, a partition.) Having five septa.

Quinquеse'rial. The same as *Quinquеseriate*.

Quinquеse'riate. (L. *quinque*; *series*, a row or chain. F. *quinguesérié*; I. *quingueseriato*; G. *finffreihig*.) Epithet applied to plants having quincuncial leaves arranged in five spiral longitudinal rows.

Quinquetuber'culate. (L. *quinque*; *tuberculum*, a tubercle.) Biol. Having five tubercles.

Quinquеvalve. The same as *Quinquеvalvulate*.

Quinquеval'vulate. (L. *quinque*; *valva*, a door. F. *quinguevalvé*; I. *quinguevalvato*; G. *finffklappig*.) Bot. Epithet applied to a fruit having five valvular openings.

Quinquina. (*Quina*.) A preparation of the cinchona alkaloids, prepared by maceration with acidulated water, and precipitation by means of any soluble alkali.

Quinquino. South American name for the *Myroxylon peruiferum*.

Quin'sy. (Formerly *squi-nancy*, a corruption of *cynanche*. G. *kuváγκη*, sore-throat; F. *esquinancie*; I. *schinanzia*.) The popular name for acute phlegmonous tonsillitis.

Q., ling'ual. A rare form of quinsy in which the inflammation spreads to the tongue, giving rise to acute suppurative glossitis.

Q., malign'ant. A name for *Diphtheria*.

Q., nerv'ous. A popular name for *Anchoné*.

Q., wolf. A popular name for *Lychanche*.

Quinta essen'tia. L. (F. *quintessence*; I. *quintessenza*; G. *Quintessenz*.) Quintessence or fifth essence. Term used formerly by the alchemist to represent the active principle of a substance, separated by art from the various inert bodies with which it was combined.

Quintan. (L. *quintus*, fifth; F. *quintane*; I. *quintana*; G. *Quintanfeber*.) A term applied to an ague which recurs after three days of interval. The paroxysms occur on the first, fifth, ninth, thirteenth, &c., days respectively.

Quintane. (L. *quintus*, fifth.) C_5H_{12} . Amyl hydride. The fifth member of the paraffin (C_nH_{2n+2}) series.

Quinteroón. (Span. *quinteron*.) The offspring of the marriage of a white man or woman with a quadroon, 15-16th white and 1-16th negro.

Q., black. The offspring of a negro and a quadroon, 15-16th negro and 1-16th white.

Quintessence. (L. *quinta essentia*. F. *quintessence*; I. *quintessenza*; G. *Quintessenz*.) Fifth essence. A term now obsolete in the original sense and used only metaphorically. Formerly applied to the most volatile principles

QUINTINE—RABIES

obtained from drugs; also, to the alcoholic extracts of drugs distilled five times.

Quintine. 1. *Chem.* C_6H_8 . Valerylene. The fifth member of the series C_nH_{2n-2} .

2. *Bot.* A membrane sometimes found surrounding the ovule, external to the *quartine*.

Quintister'num. (*L. quintus*; *ster-num*.) That portion of the sternum which corresponds to the fifth intercostal space; it has separate centres of ossification.

Quintroon'. See *Quintero*.

Quin'tuple. (*L. quintuplex*.) Five-fold.

Quin'tuple-rib'bed. The same as *Quintuplicostate*.

Quintu'plets. (*Quintuple*.) Five children at one birth.

Quintuplicos'tate. (*L. quintus*, the fifth; *plica*, a fold; *costa*, a rib.) *Bot.* Epithet applied to leaves which give off two ribs on either side of the midrib.

Quintus. (*L.*) Fifth.

Q. column's. A fasciculus of nerve-fibres, apparently arising from the upper nucleus of the fifth cranial nerve, and decussating along the aqueduct of Sylvius.

Q. ten'do extenso'ris lon'gi digito'rum pe'dis. The fifth tendon of the long extensor of the foot. A syn. for *Peroneus tertius*.

Quin'ua. The *Chenopodium quinoa*.

Quir'icua. A term for *Chloasma*.

Quiri'nus oil. A natural petroleum (sp. gr. 0.835), named from the chapel of St. Quirinus at Tegernsee, near which it issues.

Quisqua'lis. A Genus of the Nat. Ord *Combretaceae*, natives of tropical Africa and Asia.

Q. chinen'sis. A plant used by the Chinese as a febrifuge.

Q. in'dica. An ornamental East-Indian shrub. Its leaves are used as food, and its fruit is anthelmintic.

Quitch. (See *Quicken*.) A name for the *Triticum repens*.

Q.-grass. The same as *Quitch*.

Quit'ter. The same as *Quittor*.

Quit'tor. (*Mid. E. quiter*, rottenness.) An ulcer or fistulous wound on the coronet of the horse's hoof.

Quiz. (*L. quasare*, to question.) Term used in the United States for an informal exercise on Medical studies.

Quiz'zer. One who prepares students for examinations. The term is only used in the United States; the nearest English equivalent to a "coach" or a "grinder." But the practice of "quizzing" is much more universal there than "coaching" here, and consequently a quizzer almost takes the place of an English tutor.

Quotid'ian. (*L. quotidie*, daily. *F. quotidien*; *I. quotidiano*; *G. täglich Vorkommend*.) Term applied to an ague which recurs once in twenty-four hours. It is the commonest variety. A double quotidian recurs twice every day.

Q. fe'ver. (*L. febris quotidiana*. *F. fièvre quotidienne*; *I. febre intermittente*; *G. halles Fieber*.) A syn. for *Ephemera*.

Quo'tient. See *Respiratory quotient*.

R.

R. This letter, usually written with a slight flourish at the end, *R*, is placed at the commencement of a prescription as an abbreviation of *L. recipe*, take. It was originally the sign of the planet Jupiter, \mathbf{z} , and was prefixed to a formula in order to propitiate and to invoke the aid of that deity.

R is also an abbreviation for *Right*, for *Réaumur*, and for *Resistance* (electric).

r. Abbreviation for *Radius of curvature*.

Rab'bit. (*Mid. E. rabet*; derivation is uncertain. *F. lapin*; *I. coniglio*; *S. conejo*; *G. Kaninchen*.) The *Lepus cuniculus*.

Rabdoi'des sutura. (*Ῥάβδος*, a rod; *ἑδος*, resemblance; *L. sutura*, a seam.) The rod-like suture. A name for the *Sagittal suture*.

Rabic. The same as *Rabid*.

Rabid. (*L. rabidus*, raging. *F. enragé, furieux*; *I. rabbioso*; *G. wüthend*.) Mad, raging; generally applied to an animal suffering from *Rabies*; also, belonging to rabies.

Rabidity. The state of being *Rabid*.

Rab'idness. The same as *Rabidity*.

Rab'idus. (*L.*) Mad, raging.

Rab'iel. Old term for *Sanguis draconis*, dragon's blood.

Ra'bies. (*L. rabies*, fury, madness, as of dogs.) An acute infectious disease of animals, depending on a specific virus, the nature of which is not known, and communicable to man by means of inoculation. The poison especially attacks the nervous system, and is found in the secretions, notably in the saliva. The disease as

conveyed to man by the bite of a rabid animal is usually termed *Hydrophobia*. The dog-tribe, including the wolf, and the cat, are the animals most susceptible. A form occurs in Rodents termed *R., dumb* (q. v.).

Three stages are recognised. 1. A premonitory stage of depression. 2. A convulsive stage, or stage of excitability. 3. A paralytic stage. For detailed description, see *Hydrophobia*.

R. can'ina. Canine rabies, rabies in the dog.

R., dumb. A form occurring in the *Rodentia*. The premonitory and convulsive stages are absent, and paralyses are noticeable from the beginning.

R., false. See *R., pseudo*.

R. fel'ina. Feline rabies, rabies in the cat.

R., paralyt'ic. 1. A syn. for *R., dumb*.

2. A form of acute ascending spinal paralysis, believed to be due to the poison of *Rabies*.

R., pseu'do- False rabies. 1. A series of neurotic manifestations closely simulating the symptoms of *Rabies*; but differing in their longer duration, their absence of progressiveness, and their amenability to treatment.

2. A condition resembling *Rabies* occurring in dogs infested with *Strongylus gigas*, or induced experimentally in animals by the injection of certain drugs.

R., tanace'tic. A pathological condition resembling *Rabies*, but not always fatal; artificially produced in rabbits by intravenous injection of oil of tanacetum (see *Tanacetum*).

RABIETIC—RACHIALGITIS

Rabietic. Belonging to, affected with, or of the character of, *Rabies*.

Rabific. (*L. rabies*; *facio*, to make.) Causing or communicating *Rabies*.

Rabiform. (*L. rabies*; *forma*, shape, resemblance.) Resembling *Rabies*.

Rabigenic. A syn. for *Rabific*.

Rabious. (*Rabies*.) Mad, raging.

Rabira. An old name for *Stannum*, tin.

Rabl's fluid. A fixing-fluid, invented by Rabl, for microscopic objects, composed of 200 c.c. of .33 per cent. chromic acid with four or five drops of formic acid. The object should be fixed for twelve to twenty-four hours, and then washed in water and hardened in alcohol. Especially useful for the study of nuclei.

Rabuteau's method. A method invented by Rabuteau for estimating the quantity of acids in the stomach. The volatile acids are driven off by heat, and the residue is then shaken up with an excess of ether, which takes up the lactic acid. This acid is separated, and quinine or cinchonine added to neutralise the remainder. The mixture is shaken up with chloroform, which dissolves out the hydrochlorate of quinine or cinchonine; the chloroform is then distilled off, and the chlorine estimated in the residue. (Gould's Diet.)

Racahout. *F.* (Arab. *raqaut*.) A name originally given by the Arabs (*raqaut*) to the starch obtained from the edible corn of the *Quercus ilex*; but the racahout sold in Paris is probably a mixture of some form of starch with chocolate or cocoa and sugar, and flavoured with vanilla. It is said to be analeptic, and is recommended as a food for invalids.

Raccoon'-berry. The berry of the *Podophyllum peltatum*.

Race. (Probably related to *reiza*, Old G. for a line. *F. race*; *I. razza*; *G. Geschlecht*.) Those members of a species of animals or plants which have many characteristics in common. The term is generally applied to classes of the human species, the individuals of which resemble each other in form, complexion, and other respects; these resemblances being transmitted to their descendants. See *Man*, *racos* of.

Raceme. (*L. racemus*, a cluster of grapes.) *Bot.* An inflorescence which is indeterminate, and has a common peduncle bearing one-flowered pedicels along its sides.

Racemed. Disposed in *racemes*.

Racemic acid. (*L. racemus*, a cluster of grapes.) $C_4H_6O_6$. This acid is a variety of tartaric acid found, together with the ordinary dextro-rotatory acid, in the grapes grown in the Vosges. To obtain it, the mother-liquor, after the separation of the argol, is boiled with chalk, when calcium racemate separates; this salt is decomposed by sulphuric acid, and the filtrate from the calcium sulphate is evaporated until crystallisation occurs.

Racemic acid differs from the tartaric acid of commerce in that it crystallises with one molecule of water of crystallisation, and the crystals easily effloresce. It also has no action upon polarised light.

Pasteur has shown that it consists of a mixture of equal proportions of dextro- and lævo-tartaric acids. If the racemates of sodium and ammonium are mixed in suitable proportions, crystals of a double salt can be obtained, of a shape similar to Rochelle salt. It is found upon examination that these are not all exactly alike,

but that some have a hemihedral face upon the opposite sides of the crystal to others. Thus one variety is, as it were, the reflected image of the other. If these crystals be mechanically separated, they will be found to yield respectively dextro- and lævo-rotatory tartaric acids. See also *Tartaric acid*.

Racemiferous. (*L. racemus*, a cluster of grapes; *fero*, to bear. *F. racémiflore*; *G. traubblümig*.) Epithet applied to plants bearing flowers in *racemes*.

Racemiform. Having the form of a *raceme*.

Racemose. (*L. racemosus*, clustering. *F. racémeux*; *I. racemoso*; *G. traubig*.) Having the appearance of a bunch of grapes, or of a *raceme*.

R. adeno'ma. See *Adenoma*, *racemose*.

R. a'neurysm. A syn. for *Aneurysm* by *anastomosis* (q. v.).

R. cells. Term for a mass of cells arranged in a racemose manner on either side of a central duct.

R. glands. (Old *F. gland*; from *L. glans*. *F. glandes en grappe*; *I. ghiandole racemose*; *G. traubenförmig Drüsen*.) Glands which consist of acini arranged in clusters round a branched excretory duct. The terminal branch of the duct ends in a number of minute saccules, and this constitutes a minute lobule or acinus of the gland, which is built up by the union of these lobules. There is, as a rule, one common excretory duct. The ultimate sacculi are lined with secretory cells, sometimes nearly filled with them. The salivary and mammary glands are examples of racemose glands.

R. var'ix. A syn. for *Varix*, *anastomotic*.

Racemule. (Dim. of *L. racemus*, a cluster of grapes.) A small *raceme*.

Racemulose. Having the characters of a *racemule*, or arranged in *racemules*.

Rachammel'ca. (Hebrew *rechem*, the uterus; *molech*, a king.) A term invented by Delœus, and intended to express a supposed active principle of generation or uterine "plastic spirit."

Rach'i. Old term for *Mercury*.

Rachia'i. Nom. plur. (Ῥάχϊς, the spine.) The spinal muscles.

Rachiag'ra. (Ῥάχϊς, the spine; ἄγρα, a seizure.) Term for gouty or rheumatic pain in the spinal muscles.

Rach'ial. Syn. for *Rachidial*.

Rachial'gia. (Ῥάχϊς, the spine; ἄλγος, pain. *F. rachialgia*; *I. rachialgia*; *G. Rückgratschmerz*.) Pain in the back or along the spine. The term is used independently of any particular morbid process.

R. mesenter'ica. A syn. for *Tabes mesenterica*.

R. pic'tonum. (*L. pictones*, the people of Poitou.) A syn. for *Colica pictonum*.

R. pictorien'sium. (*L. pictor*, a painter.) A syn. for painters' colic, the pain of which may sometimes be referred to the back. See *Colic*, *painter's*.

R. picto'rum. (*L. pictor*, a painter.) Painters' colic.

Rachial'gic. Belonging to, or affected with, *rachialgia*.

Rachialgi'tis. (Ῥάχϊς, the spine; ἄλγος, pain; fem. adj. term. ιτις.) An old term for inflammation of the spinal cord, *Myelitis*.

RACHIASMUS—RADIAL

Rachias'mus. ('Páx̄is, the spine.) Term for the spasm of the posterior cervical muscles which occurs in the early part of an epileptic fit.

Rachid'ial. The same as *Rachidian*.

Rachid'ian. ('Páx̄is, the spine. F. *rhachidien*; I. *rachideo*.) Spinal.

R. ar'teries. The *Spinal arteries*.

R. bulb. The *Medulla oblongata*.

R. canal'. The *Vertebral canal*.

Rachil'la. ('Páx̄is, the spine.) *Bot.* The central stalk of an inflorescence. The term has been applied to the zigzag central stem on which the florets are arranged in the spikelets of grasses.

Rachiocamps'is. ('Páx̄is, the spine; κάμψις, a twisting.) Spinal curvature.

Rachio'chysis. ('Páx̄is, the spine; χύσις, a pouring forth.) A syn. for *Hydro-rhachis*.

Rachiodyn'ia. ('Páx̄is, the spine; δόνη, pain.) Pain referred to the spine.

Rachiokypo'sis. ('Páx̄is, the spine; kyphosis.) A syn. for *Kyphosis*.

Rachio'meter. ('Páx̄is, the spine; μέτρον, a measure.) A syn. for *Sciolosometer*.

Rachiomyeli'tis. ('Páx̄is, the spine; μυελίτις.) A syn. for *Myelitis*.

Rachiomyeloph'thisis. ('Páx̄is, the spine; μύελος, the spinal marrow; φθίσις, a wasting.) A syn. for *Tabes dorsalis*.

Rachiomy'e'los. ('Páx̄is, the spine; μύελος, the spinal marrow.) A term for the *Spinal cord*.

Rachiopara'lysis. ('Páx̄is, the spine; paralysis.) Spinal paralysis.

Rachiophy'ma. The same as *Rachiphyma*.

Rachiople'gia. ('Páx̄is; πληγή, a stroke or shock.) A syn. for *Rachioparalysis*.

Rachiotome. An instrument for performing *Rachiotomy*.

Rachio'tomy. ('Páx̄is, the spine; τομή, a cutting.) Incision of the vertebral column.

Also, division of the foetal spine to facilitate delivery.

Rachiphy'ma. ('Páx̄is; φῦμα, a tumour.) A tumour on the back.

Rach'is. ('Páx̄is, the spine. F. *rhachis*; I. *rachide*; G. *Rückgrat*.) *Anat.* The vertebral column.

Bot. The central axis of the floral spike in grasses.

R. na'si. (L. *nasum*, the nose.) The median line from the root to the tip of the nose.

Rachisag'ra. ('Páx̄is; ἄγρᾱ, a seizure. F. *rachisagre*; I. *rachisagra*; G. *Rückgrats-gicht*.) A gouty or rheumatic affection of the spine.

Rachis'chisis. ('Páx̄is, the spine; σχίσις, a cleaving.) A syn. for *Spina bifida*.

Rachitæ. ('Páx̄is, the spine.) Collective term for all the muscles attached to the spinal column.

Rachit'ic. (*Rachitis*. F. *rhachitique*; I. *rachitico*; G. *rhachitisch*.) Relating to *Rachitis*; rickety.

R. ros'ary. A term for the beaded ribs in *Rickets*, which give the appearance of a chain or garland hanging from the neck.

R. rose-gar'land. A syn. for *R. rosary*.

Rachit'is. ('Páx̄is, the spine. F. *rachitisme*; I. *rachitismo*; G. *englischer Kränk-heit*.) See *Rickets*.

R. adu'tor'um. (L. *adultus*, part. of *adoleo*, to grow up.) *Rachitis* of adults. A syn. for *Mollities ossium*.

R. annu'lar'is. Annular rachitis. A congenital variety which is characterised by the post-natal occurrence of furrowing and fractures of the bones. (Winckler.)

R., fo'e'tal. Foetal rickets. See under *Rickets*.

R. micromel'ica. (Μίκρος, small; μέλος, a limb.) A form of intra-uterine rachitis characterised by shortening of the long bones and thickening of their shafts. (Winckler.)

R. sen'il'is. Senile rachitis. A syn. for *R. adu'torum*.

Rachitome. ('Páx̄is, the spine; τέμνω, to cut. F. *rhachitome*; I. *rachitomo*.) See *Rachiotome*.

Rachit'omous. ('Páx̄is, the spine; τόμος, sharp, cutting.) *Biol.* Epithet applied to those vertebræ which are made up of pieces originally separate; also, epithet applied to those animals which have segmented vertebræ.

Rachitomy. See *Rachiotomy*.

Racho'ma. (Ραχώω.) The same as *Rachosis*.

Racho'sis. (Ραχώω, to lop the young vine-shoots slantwise. F. *rhacose*; I. *racosi*.) The production of an irregular abrasion; also, a relaxation of the integuments of the scrotum.

Rachyl'ysis. ('Páx̄is, the spine; λύσις, a loosening.) A method of forcible correction of lateral curvature of the spine, *Scoliosis*, by means of an apparatus exercising pressure or traction.

Ra'cial. Belonging to *Race*.

Rack. Syn. for *Arrack* (q. v.).

Raclage. (F.) Scraping; applied especially to the scraping of epithelial growths, such as lupus, with the Volkmann's spoon. (Litré.)

Raclement. (F. From *racler*, to scrape.) The method of scraping bone in certain operations, or of scraping the skin. (Litré.)

Racleur'. (F. From *racler*, to scrape.) A syn. for *Curette* (q. v.).

Raco'sis. See *Rachosis*.

Rac'ri. An old term for *Sal ammoniac*.

Rad'cliffe, John. An eminent physician, born at Wakefield in 1650, graduated at Oxford in 1669, and died in 1714.

R.'s elix'ir. See *Elizir, Radcliffe's*.

Rad'emacher, Johann Gott'fried. A German physician, born 1772, died 1850.

R.'s mirac'ulous plas'ter. A fuller name for *R.'s plaster*.

R.'s plas'ter. See *Plaster, Rademacher's*.

Radesyg'ë. (Danish *rada*, bad; *syge*, disease.) A name given to a virulent disease which appeared in Scandinavia in the eighteenth century. Some authorities have considered it to have been a form of leprosy; others have considered it to have been syphilis.

R. canaden'sis. See *Syphiloid, Canadian*.

R. is'trica. See *Scherlievo*.

R. scableuse'. (F.) See *Spedalskhed*.

R. sco'tica. See *Sibbens*.

Ra'diad. (*Radius*.) Term signifying toward the radial aspect.

Ra'dial. (L. *radius*, a spoke of a wheel. F. *radial*; I. *radiale*; G. *radial*.) Diverging from a common centre, like a radius or spoke of a wheel.

Also, in *Anat.*, belonging to the *radius* of the forearm.

RADIAL

Also, in *Biol.*, belonging to a radiating process or to a ray.

R. artery. (L. *arteria radialis*. F. *artère radiale*; I. *arteria radiale*; G. *Speichenschlagader*.) The radial and ulnar arteries are formed by the bifurcation of the brachial artery just below the bend of the elbow and near the neck of the radius. The course of the radial artery down the forearm is nearly a straight line as far as the styloid process of the radius; below this it winds round the outer side of the wrist-joint to reach the dorsal side, where it passes through the first interosseous space to the palm, and there, anastomosing with the deep branch of the ulnar artery, constitutes the deep palmar arch.

In the forearm the artery is superficial, except at the upper part where it is overlapped by the belly of the supinator longus muscle. It lies successively upon the tendon of the biceps, the supinator brevis, the pronator radii teres, the flexor sublimis, the flexor longus pollicis, the pronator quadratus, and the radius. In addition to muscular branches, the artery gives off in this part of its course the recurrent radial, the anterior radial carpal, and the superficial volar arteries. The radial nerve lies to the outer side of the artery, and is only in relation to it in the middle third of the forearm.

In the neighbourhood of the wrist, the artery is in contact with the ligaments of the joint, and the three extensor tendons of the thumb are superficial to it. It gives origin successively to the following branches:—the posterior radial carpal, the first dorsal interosseous, the dorsalis pollicis, and the dorsalis indicis. The radial artery reaches the palm by passing between the heads of the adductor indicis muscle; and under the flexor brevis pollicis it gives off two branches, the princeps pollicis and the radialis indicis.

R. artery, aneurysm of. Spontaneous aneurysm of the radial artery is extremely rare, and is generally secondary to disease of the heart. Traumatic aneurysm is more frequent.

R. artery, ligature of. The radial artery can be easily exposed and tied above the wrist, as it lies between the tendons of the flexor carpi radialis and the supinator longus, immediately beneath the deep fascia. In order to tie the radial artery in the middle of the forearm an incision is made in the line of the artery through the skin and deep fascia. The internal edge of the supinator longus muscle is then turned outwards, and a prolongation of the deep fascia of the forearm is exposed, beneath which the radial artery is found.

R. artery, line of. An anatomical term for the surface-marking of the radial artery in the forearm, which is a straight line, commencing a finger's breadth below the centre of the bend of the elbow, and reaching to the anterior part of the styloid process of the radius.

R. artery, varieties of. A high origin of the radial artery occurs about once in eight subjects (Quain), and in these cases the artery usually arises from the axillary or upper part of the brachial. A low origin is rare. The radial is sometimes joined by a vas aberrans which arises from the axillary artery and runs a course similar to the radial in cases of high origin of that artery. The radial artery sometimes is superficial to the muscles in the upper part of the forearm, it also may be superficial to the tendons at the wrist. It sometimes is unusually small, and in that case the deficiency is made

up by the ulnar, or occasionally by a median artery.

R. aspect. The aspect directed towards the side on which the radius is situated.

R. bundle. Bot. A fibro-vascular bundle in which the phloëm and xylem are arranged in alternate rays.

R. carpal arteries. See *Carpal arteries, anterior and posterior*.

R. digital arteries. (L. *digitus*, a finger.) Those on the radial border of the fingers.

R. fibres of retina. Syn. for radiating fibres of the retina. See under *Retina*.

R. fossa. The depression on the *humerus* above the capitellum, which receives the head of the radius in extreme flexion of the forearm.

R. glands. The lymphatic glands of the forearm lying close to the radial artery.

R. groove. A syn. for *Musculo-spiral groove*. The musculo-spiral nerve is termed by Continental anatomists the radial nerve, hence the musculo-spiral groove has been called the radial groove.

R. head of humerus. The *Capitellum*, that part of the head of the humerus which articulates with the radius.

R. lymphatic vessels. The lymphatics which accompany the radial artery.

R. nerve. (L. *nervus radialis superficialis*. F. *branche terminale antérieure du nerf radial*; I. *nervo cutaneo esterno anteriore*; G. *der hoch liegenden Ast des Nervus Radialis*.) The nerve known to Continental anatomists as the radial is termed by English anatomists the musculo-spiral. The radial nerve is one of the two divisions formed by the bifurcation of the musculo-spiral nerve near the outer condyle of the humerus. It contains no motor fibres. The nerve is at first covered by the supinator longus muscle, and lies to the outer side of the radial artery. It becomes subcutaneous when it escapes from beneath the posterior border of the tendon of that muscle. At the back of the wrist it divides into two; the outer division supplies the skin over the ball and the radial side of the thumb; the inner division gives three branches to the fingers, the first to the contiguous sides of the thumb and index finger, the second to the adjacent sides of the index and middle, and the third, which receives a branch from the ulnar nerve, to the sides of the middle and ring fingers respectively. These branches generally receive filaments from the external cutaneous nerve, and they terminate near the proximal inter-phalangeal joints, where they unite with filaments from the palmar digital nerves. The area supplied by the radial and ulnar nerves on the back of the hand is subject to considerable variation; in some cases the radial supplies the whole of it.

R. pulse. (L. *pulsus*, a pushing; from *pello*, to push or strike. F. *pouls radial*; I. *pulso radiale*; S. *pulso radial*; G. *radial Puls*.) The pulsation of the radial artery felt at the wrist. The artery as it lies upon the lower end of the radius is superficial, and is extremely convenient for examination, especially as the hand of a patient is very accessible and usually uncovered. The hand, moreover, is not a vital organ, and does not undergo extreme functional changes, so that the blood supply, so far as the functions performed by the hand are concerned, is practically constant. On this account the radial pulse gives a useful indication of the

RADIALE—RADICAL

general systemic circulation. These are some of the reasons why the radial pulse has been examined and studied by physicians from the earliest times.

R. recur'rent artery. (L. *arteria recurrens radialis*; *recurro*, to run back. F. *artère récurrente radiale*; I. *arteria ricorrente radiale*.) A small artery arising from the radial near its origin, as it lies on the supinator brevis muscle. Arching upwards, it anastomoses with the anterior terminal branch of the superior profunda artery.

R. vein. Commencing on the back of the hand from a plexus, and receiving a branch from the deep palmar veins, the radial vein ascends along the outer side of the forearm to the bend of the elbow, where it joins with the median cephalic branch of the median vein to form the cephalic vein. It is provided with valves, and is subcutaneous.

Radialë. (L. neut. of *radialis*.) A term given in Comparative Anatomy (Os radiale) to the most external bone of the proximal row of carpal bones, the bone corresponding to the radius. In man, the radialë is represented by the scaphoid bone.

Radialis. (L. From *radius*.) Radial; pertaining to the radius or radial side.

R. anti'cus. Syn. for *Flexor carpi radialis*.

R. exten'sor brev'lor. Syn. for *Extensor carpi radialis brevior*.

R. exten'sor long'lor. Syn. for *Extensor carpi radialis longior*.

R. exten'us brev'is or **brev'lor.** (L. *externus*, outwards.) Syn. for *Extensor carpi radialis brevior*; called *externus* because the muscle is situated on the outer side of the forearm.

R. exten'us long'us or **long'lor.** Syn. for *Extensor carpi radialis longior*.

R. exten'us prim'us. Syn. for *Extensor carpi radialis longior*.

R. exten'us secun'dus. Syn. for *Extensor carpi radialis brevior*.

R. in'dicis artery. (L. *index*, gen. *indicis*, a pointer, the fore-finger. F. *collatérale externe de l'index*; I. *collaterale esterna dell'indice*.) The dorsal artery of the index finger, which arises from the radial artery just before the latter enters the first interosseous space. It supplies the radial border of the dorsal side of the index finger.

R. inter'us. Syn. for *Flexor carpi radialis*.

R. inter'us brev'is. Syn. for *Flexor carpi radialis brevis*. (Wood.)

R. inter'us mi'nor. The same as *R. internus brevis*.

R. inter'us profun'dus. The same as *R. internus brevis*.

R. secun'dus. Syn. for *Extensor carpi radialis brevior*.

Radia'ta. (L. *radius*.) Old term for a group of the Invertebrata, characterised by possessing ray-like processes, now classed under separate subkingdoms—the *Echinodermata*, *Infusoria*, &c.

Radiate. (L. *radius*, a spoke. F. *radié*; I. *radiato*; S. *radiado*; G. *gestrahlt*.) Arranged radially; diverging from a centre.

In *Bot.*, epithet applied to those compound flowers which have tubular central florets and ligulate outer ones, as, e. g., the daisy.

R. lig'ament of wrsit. A name given

to those palmar ligaments uniting the bones of the carpus which diverge from the os magnum.

Radiated substance of kidney. Term for the medulla of the kidney.

Radiatiferous. (L. *radius*; *flos*, a flower. F. *radiatiflore*; I. *radiatiflora*; G. *strahlenblumig*.) Having radiate flowers.

Radia'tiform. (L. *radius*; *forma*, shape.) Having a radiate appearance.

Radiating fibres of retina. See under *Retina*.

Radia'tio. (L.) A casting forth bright beams or rays; radiation.

R. caud'icis. (L. *caudex*, -*icis*. G. *Stammstrahlung*.) That part of the *corona radiata* which is continuous with the *caudex*.

R. centra'lis. The *Corona radiata*.

R. corporis callo'si. (G. *Balkenstrahlung*.) The radiation of the corpus callosum. That part of the *corona radiata* connected with the *corpus callosum*.

R. medullar'is cer'ebr'i. The radiation of the medulla of the cerebrum. A syn. for the *Corona radiata*.

R. thal'am'i op'tic'i. (G. *Sehbrügelstrahlung*.) The radiation of the optic thalamus. Name for that part of the *corona radiata* connected with the *optic thalamus*.

Radiation of gas'es. The radiation from a source of light, such as a gas-flame, consists mainly of *obscure* or heat-rays, only a small proportion consisting of *luminous* or light-rays.

R. of gas'es, lu'minous. See under *R. of gases*.

R. of gas'es, obscure'. See under *R. of gases*.

Radical. (L. *radix*, a root. F. *radical*; G. *radical*, *bis zur Wurzel gehörig*.) 1. Adj. Belonging to the root. Fundamental, aiming at the root.

2. Sub. Chem. (G. *Grundstoff*.) An unsaturated molecule which enters into or becomes freed from combination without change, and which determines the character of the compound of which it forms a part. A *simple radical* is one made up of two atoms of an element; a *compound radical* is a molecule of two or more elements in combination.

R., ac'id. Chem. The compound radical left after withdrawing all the hydroxyl (OH) from an oxy-acid. Salts are formed by the union of an acid and a basic radical. The following are examples of acid radicals: Nitrosyl (NO), nitroxyl (NO₂), sulphuryl (SO₂).

R., al'cohol. Chem. A term sometimes used for the compound radical which, united with hydroxyl, forms an alcohol. The alcohols may be considered as hydrates of alcohol radicals.

R., al'dehyd. A radical which forms an aldehyd by replacing two hydrogen atoms of an alcohol.

R., ba'sic. Chem. Term for those radicals which unite with acid radicals to produce salts. Potassoxyl (KO) and Zincoxyl (ZnO₂) are examples, and are monad and dyad radicals respectively. Thus zinc sulphate may be considered as formed by the union of the acid radical sulphuryl (SO₂) and the basic radical zincoxyl (ZnO₂). ZnO₂SO₂ = ZnSO₄.

R., bas'yious. A syn. for *R., basic*.

R. cure. Surg. A complete or perfect cure obtained by removing the disease, as it were, by the roots.

R. cure of her'nia. See *Hernia*, *radical cure of*.

RADICANT—RADII

R. cure of hy'drocele. A term sometimes applied to the treatment of hydrocele by exciting inflammation of the sac by injecting tincture of iodine. It is a valuable means of treatment, but it frequently fails to cure.

R. cure of var'icocele. (*L. varix*, a dilated vein; *Gr. κήλη*, a tumour.) An operation for varicocele by which an obliteration of the dilated veins is produced.

R., elec'tro-neg'ative. The same as *R., negative*.

R., elec'tro-pos'itive. The same as *R., positive*.

R. mois'ture. See *Humidum radicale*.

R., neg'ative. *Chem.* A radical which is electro-negative; that is, one which is liberated during electrolysis at the positive pole. Acid radicals are frequently termed negative.

R., neg'ative bas'yloous. *Chem.* A basic radical which, by the substitution of a molecule of oxygen for two molecules of hydrogen, acquires acid properties. Thus *benzoyl* ($C_6H_5.CO$) may be considered as derived from *benzyl* ($C_6H_5.CH_2$), the former being related to benzoic acid ($C_6H_5.COOH$), and the latter to benzylic alcohol ($C_6H_5.CHO_2H$).

R. opera'tion. *Surg.* An operation calculated to completely cure a disease. Extirpation.

R.s, organ'ic. See *Radicules, organic*.

R., pos'itive. *Chem.* A radical which is electro-positive; that is, one which during electrolysis appears at the negative pole. Compound radicals which are basic are sometimes termed positive.

R., pos'itive bas'yloous. A syn. for *R., basic*. See also *R., positive*.

R. ves'sels. Minute blood-vessels having a peripheral origin, which unite to form larger trunks.

R. vin'egar. A name for glacial acetic acid.

Rad'icant. (*L. radior*, to take root. *F. radicañt*; *I. radicante*; *G. wurzelnd*.) Taking root. Epithet applied to creeping stems which take root where they touch the earth.

Radicate. (*L. radix*, a root.) *Biol.* Rooted or adherent.

Radication. (*L. radix*, a root. *F. radication*; *I. radicazione*; *S. radicaçion*; *G. Würzelung*.) Term for the general disposition of the roots of a plant. The term has also been applied to a supposed principle by which plants germinate.

Rad'icel. (*L. radicella*, dim. of *radix*, a root. *F. radicelle*.) A rootlet.

Radicellar. Relating to a *Radicel*.

Radices. Roots. Plur. of *Radix*.

R. accesso'riæ brev'es gan'glii cili-ari's. Accessory short roots of the ciliary ganglion. Term for occasional branches connecting the ciliary ganglion with the third and other cranial nerves.

R. accesso'riæ me'diæ gan'glii cili-ari's. Intermediate accessory roots of the ciliary ganglion. Term for occasional branches connecting the ciliary ganglion either with the internal carotid plexus or the ophthalmic plexus of the sympathetic.

R. aperien'tes quin'que. (*L. radix*, a root; *aperio*, to bring out; *quinque*, five.) The five aperient roots of ancient writers were the following:—Asparagus, butcher's broom, fennel, parsley, and smallage.

R. aperien'tes quin'que mino'ris. (*L. minor*, less.) The five lesser aperient roots of

ancient writers were caper, dandelion, eryngo, madder, and rest-harrow.

R. hyoid'eï os'sis. Syn. for *Cornua hyoidei ossis*.

Radici'colous. (*L. radix*, a root; *colo*, to inhabit. *F. radicole*; *G. wurzelbewohnend*.) Epithet applied by de Candolle to plants that are parasitic upon the roots of other plants.

Radici'fiorous. (*L. radix*; *flos*, a flower. *F. radiflore*; *G. wurzelblumig*.) Epithet applied to flowers growing from the root or root-stock.

Radici'form. (*L. radix*; *forma*, shape.) Having the form of a root.

Rad'icle. (From *L. radícula*, dim. of *radix*. *F. radicule*; *I. radicella*; *S. radícula*; *G. Würzelchen*.) A rootlet. 1. In *Anat.* The beginning of a vein; also, the initial fibril of a nerve.

2. In *Bot.* A term used for the initial stem of an embryo, below the cotyledons; in other words, the hypocotyledonary primal internode. It is often called the caudicle.

R., ascen'ding, of for'nix. Term for the anterior crura of the fornix, which pass upwards from the corpora albicantia.

R., com'pound. *Chem.* A radicle made up of several dissimilar atoms.

R., descen'ding, of for'nix. Term for the posterior crura of the fornix, which pass downwards from the optic thalami to the corpora albicantia.

R.s, organ'ic. *Chem.* Radicles consisting of carbon-compounds.

Rad'icose. (*L. radix*, a root.) Having many or large roots.

Radicu'la. (Dim. of *L. radix*, a root.) A *Radicle*.

Radicu'lar. (*L. radícula*, dim. of *radix*, a root. *F. radiculaire*.) Pertaining to roots, more especially nerve-roots.

R. ar'teries. (*F. artères radiculaires*.) Minute arteries passing along nerve-roots to supply the spinal cord.

R. fasci'culus, inter'nal. (*L. fasciculus*, a little bundle.) See *Radicular fibres, internal*.

R. fi'bres, exter'nal. Term for certain fibres of the posterior nerve-roots which enter the grey matter of the spinal cord, and pass into the *substantia gelatinosa*.

R. fi'bres, inter'nal. A bundle of white fibres forming the greater part of the posterior nerve-root, which enters the white matter of the postero-external column of the spinal cord. These fibres are sometimes called the internal radicular fasciculus. They turn upwards in the white matter and eventually reach the grey matter, which they cross obliquely, passing in the direction of the anterior cornu. It is, however, uncertain whether some of these fibres do not ascend the white matter longitudinally. The ultimate destination of the main bundle is uncertain; but it is probable that some of them enter Clarke's column. This bundle of fibres becomes degenerated early in locomotor ataxy, and it has been thought by some to be the site of the primary lesion in that disease.

Rad'icule. (*Radicula*.) The same as *Radicle*.

Radicu'lose. (*Radicula*.) Bearing root-lets.

Ra'dien. (*Radius*.) *Anat.* Belonging to the *Radius*.

Ra'dii auricular'es. Term for ima-

ginary lines projected on the skull on either side at right angles to a line passing through the two auricular points.

R. ciliar'es. The ciliary processes.

R. fron'tis. (L. *frons*, the forehead.) The wrinkles on the forehead.

R. lent'is. (Lens, *lentis*. G. *Linsen-nähte*.) Faint, radiating lines present at the poles of the crystalline lens.

R. medullar'es. The radiating bundles formed by the receiving tubules of the kidney.

Ra'diism. Radiation.

Ra'dio-bicip'ital bur'sa. The Bursa bicipitalis radialis.

Ra'dio-car'pal. (Radius; carpus. Mod. L. radio-carpianus, radio-carpalis. F. radio-carpien; I. radio-carpico.) Relating to the radius and the carpus.

Ra'dio-car'pal amputa'tion. Amputation at the Radio-carpal articulation.

Ra'dio-car'pal articula'tion. The wrist-joint.

Ra'dio-car'pal lig'a'ments. See Wrist-joint, ligaments of.

Ra'dio-car'peo-metacar'peus. The Flexor carpi radialis brevis of Wood.

Ra'dio-car'peus. The same as Radio-carpeo-metacarpeus.

Ra'dio-dig'ital. (Radius; digit.) Belonging to the radius and the digits.

Ra'dio-hu'meral articula'tion. (Radius; humerus, the bone of the arm. F. radio-humeral.) That part of the elbow-joint which is formed by the head of the radius and the capitellum of the humerus.

Radi'olus. (Dim. formed from L. radius.) 1. Zool. A secondary ray of the main rachis of a feather.

2. Surg. A sound or probe.

Ra'dio-metacar'pal'is. (Radius; metacarpal.) Term for the flexor carpi radialis brevis when, as occasionally happens, this muscle is inserted on the metacarpus.

Radio'meter. (L. radius; Gr. μέτρον, a measure. F. radiomètre.) An instrument devised by Professor Crookes, possessing four metal discs or vanes, suspended vertically by light wire, so that they revolve round a central pivot. One surface of each disc is bright and the other dull black. The whole is contained in a glass globe partially exhausted of air. The discs rotate rapidly when placed in a bright light, the blackened surfaces being usually repelled. It has been shown by Tait and Dewar that the phenomenon is really a thermal one.

Radiometric. Belonging to the Radiometer.

Ra'dio-mus'cular. (Radius; muscular.) Anat. Belonging to the radius and the muscles attached to it. In especial, epithet applied to the muscular branches of the radial artery in the forearm, and also to the corresponding branches of the radial nerve.

Ra'dio-pal'mar. Anat. Belonging to the radius and to the palm of the hand.

Ra'dio-pal'mar artery. The Superficial volar artery.

Ra'dio-pal'mar'is. (L. radius; palma, the palm of the hand.) An inconstant muscle, which arises from the radius below the flexor sublimis digitorum, and is inserted in common with the palmaris longus. (Testut.)

Ra'dio-ul'nar Belonging to the radius and ulna.

Ra'dio-ul'nar articula'tion, in-fe'rior. (L. inferior, lower. F. articulation cubito-radiale inférieure; I. articolazione cubico-radiale inferiore.) The lower joint between the radius and ulna. It is formed by the sigmoid cavity of the radius and the outer side of the lower end of the ulna. The bones are kept in contact principally by the triangular fibro-cartilage; but in addition there are some scattered ligamentous fibres in front and behind. The triangular fibro-cartilage is interposed between the ulna and the carpus, it is attached at its apex to the styloid process of the ulna, and by its base to the inferior extremity of the radius between the ulnar and carpal articulating surfaces. The synovial membrane of the inferior radio-ulnar articulation is, on account of its looseness, called the membrana sacciformis; it passes between the radius and ulna and between the ulna and the fibro-cartilage; its synovial cavity does not communicate with the wrist-joint, unless the fibro-cartilage is perforated.

Ra'dio-ul'nar articula'tion, su-per'ior. (L. articulus, a joint; superior, upper. F. articulation cubito-radiale supérieure; I. articolazione cubito-radiale superiore.) The upper articulation between the radius and ulna. The head of the radius is received by the lesser sigmoid cavity of the ulna, and is held in its place by the orbicular ligament which encircles it, and within which it rotates during pronation and supination. The annular or orbicular ligament is attached to the margins of the lesser sigmoid cavity of the ulna at its anterior and posterior margins. The synovial membrane of this joint is continuous with that of the elbow-joint.

Ra'dio-ul'nar fibro-car'tilage. See Radio-ulnar articulation, inferior.

Ra'dio-ul'nar lig'a'ments. The interosseous membrane, or ligament, of the forearm, extends between the adjacent borders of the radius and ulna, commencing above about an inch below the tubercle of the radius. Its fibres are directed downwards and inwards. The open space above this, called the hiatus interosseus, through which the posterior interosseous vessels pass, is limited above by a band of fibres called the oblique or round ligament, which passes downwards and outwards from the coracoid process to the radius. For the other radio-ulnar ligaments, see Radio-ulnar articulation, inferior, and Radio-ulnar articulation, superior.

Rad'ish. (L. radix, a root. F. radis; I. ravanello; S. reponche; G. Rettig.) The Raphanus sativus, also, its root.

R., dwarf. The Chamæraphanus.

R., gar'den. A fuller name for the Radish.

R., horse. (F. raifort; I. radice; S. rabano; G. Meerrettig.) The Cochlearia armoracia.

Ra'dius. (L. The spoke of a wheel. Also, the outer bone of the forearm. F. radius; I. radio, raggio; G. Speichenknochen.) In Biology. 1. The outer of the two long bones of the forearm, extending from the humerus to the carpus. The human radius averages a little more than nine inches in length; it has a disc-shaped head, the concave surface of which articulates superiorly with the capitellum; the vertical margin of the head is cylindrical, and it rotates in the lesser sigmoid cavity of the ulna, within the orbicular ligament.

There is a slightly constricted neck below the head.

RADIX

The shaft of the bone has a slight convexity directed outwards and backwards. At its upper part and internally, immediately below the neck, is the bicipital tubercle, to the posterior part of which the biceps muscle is attached. The shaft presents a sharp internal border which affords an attachment to the interosseous membrane. This separates the anterior and posterior surfaces. The anterior surface is limited above by the oblique line of the radius which runs from the lower part of the tubercle downwards and outwards.

The rounded external surface presents near the middle a rough impression to which the tendon of the pronator radii teres is inserted.

The lower extremity of the radius, which is broad and thick, articulates with the carpus, and its inner aspect presents a small surface called the sigmoid cavity which articulates with the ulna.

Projecting downwards on the outer side of the lower articular surface is the styloid process. The lower extremity of the radius is marked by grooves on its posterior surface for the passage of the extensor tendons of the wrist and hand.

The radius is almost entirely covered with muscles. The head can easily be felt to rotate during pronation and supination when the forearm is extended, in a dimple on the outer side of the olecranon. The styloid process is subcutaneous. The radius receives its nutrient artery from the anterior interosseous artery, and its nerve supply from the anterior interosseous nerve, through a foramen which is directed upwards, and is situated a little above the middle of the bone.

The shaft of the radius presents a centre of ossification about the eighth week of intra-uterine life, the nucleus of the carpal epiphysis in the second year after birth, and the centre for the head about the eighth year. The upper epiphysis unites about the thirteenth year, and the lower about the twentieth. The radius is serially homologous with the tibia.

The radius is defined by comparative anatomists as that bone of the antibrachium which is situated on the pre-axial (or external) side of the embryonic arm.

In all Mammals the radius and ulna are readily distinguished. Pronation and supination are possible in the Primates, Edentata, Marsupials, and in some Rodents. In the Carnivora, Insectivora, and Proboscidea, the bones are distinct, but do not admit of movement upon one another. In the Ungulata and Cheiroptera, the radius is the principal bone of the antibrachium, and the ulna is either rudimentary or ankylosed to the radius. In Reptiles, Birds, and Amphibia the radius is present, and is generally distinct from the ulna.

2. In the plural (Radii), the rays of the first order in the shaft of a Bird's feather.

3. A vein of the wing in Insects.

4. One of the cartilaginous rods supporting the fin-rays in Fishes.

5. One of the radiating threads in the spider's web.

6. One of the five forked pieces of the oral skeleton in Echinodermata.

R., dislocations of. The head of the radius is liable to dislocation, either forwards, backwards, or outwards. The forward dislocation is the most common of these. The signs of this accident are an inability to flex the forearm or completely extend it, and the presence of the head of the bone in front of the lower end of the

humerus, and its absence from its usual site when examined from behind. It is difficult to keep the radius in place after reduction, owing to rupture of the orbicular ligament. The outward and backward dislocations are both rare. See also *Wrist, dislocations of.*

R. fixus. *Cranium.* A line passing from theinion to the *hormion*.

R., fracture of. (*L. frango, fractum, to break.*) The radius may be broken through the neck, or the shaft, or the carpal extremity. Fracture of the neck of the radius is rare, and, when present, is often difficult of detection owing to the absence of deformity. Apart from simultaneous fracture of the ulna, fracture of the shaft of the radius is somewhat rare; it is, however, commoner than fracture of the ulna alone.

Fracture through the lower end of the radius is a common accident, especially in elderly women, but it may occur at all ages and in both sexes. It is usually the result of a fall upon the palm. Four kinds of fractures in this situation are described—(1) simple transverse, (2) transverse, with dorsal displacement of the lower fragment and hand, or Colles' fracture, (3) comminuted, (4) and lastly, impaction fracture.

Colles' fracture is the commonest. It has received this name from the Irish surgeon by whom it was first described. The deformity is very characteristic. The wrist with the end of the radius makes a considerable dorsal protuberance, whilst on the palmar side there is a hollow, limited above by the projecting edge of the radius. The styloid process of the ulna is unduly prominent, whilst the radial edge of the forearm is concave owing to the displacement of the lower end of the radius with the hand to the radial side. In addition to the injury to the bone there is often rupture of the internal lateral ligament of the wrist, and possibly of the triangular fibro-cartilage, together with a variable amount of injury to the tendons and their sheaths.

R. of curvature. The radius of the circle, or segment of the circle, obtained by cutting a spherical body at right angles to its surface.

R., semilunar cavity of. A syn. for sigmoid cavity of radius. See *Radius*.

R. vector. Radius-carrier. An astronomical term for the line joining the centre of attraction to the centre of the object acted upon. Thus, a line joining the centre of the sun and the centre of a planet is the radius vector.

Radix. (*L.* A root; probably allied to *ῥάδις*, a rod. *F. racine*; *I. radice*; *S. raiz*; *G. Wurzel*.) The root of a plant; the fundamental part of a structure; also, the base of a system of logarithms. See also *Root*.

1. As used in *Anatomy*, the radix or root is usually the base or point of attachment of an organ. When used in reference to ganglia the term signifies the small nerve-branches which directly unite with the ganglia (the principal nerves). A ganglion is, therefore, said to have roots, radix brevis, longus, motoria, and so forth. See *Ganglion*.

2. The roots of plants forming medicinal drugs. These are given under separate headings.

R. abri. The root of *Abrus precatorius*, the Indian liquorice. It occurs in commerce in twisted pieces about half to one inch thick. The bark is thin and of a pale yellowish brown colour, and the wood yellowish, breaking with a short fibrous fracture. It has a sweet mucilaginous taste. See *Abrus precatorius*; also, *Jequirity*.

RADIX

R. accesso'ria sphe'no-palati'na. A nerve-filament which sometimes unites the sphe'no-palatine and ciliary ganglia.

R. accesso'ria sphe'no-palati'na gan'glii ciliar'is. A fuller term for *Radix accessoria sphe'no-palatina*.

R. aconiti. See *Aconiti radix*.

R. aco'ri. The rhizome, *Acorus calamus*, the sweet flag. See *Acorus*.

R. actæ'æ. See *Actæa racemosa*.

R. alexiphar'maca. Alexipharmic root. Name for the root of several species of *Dorstenia* (q. v.).

R. alkan'næ. See *Alkanet*.

R. alopecu'rioides. Term for the root of *Ononis hircina*, *O. repens*, and *O. spinosa*.

R. althæ'æ. See *Althæa radix*.

R. anti'ca proces'sus transver'si ver'tebræ. Anterior root of the transverse process of a vertebra. Syn. for *Parapophysis*.

R. antidysenter'ica. Antidysenteric root. The root of cephaëlis ipecacuanha, which has received this name on account of its value in the treatment of dysentery. See *Ipecacuanhæ radix*.

R. aor'tæ. The aortic bulb.

R. armora'ciæ. See *Armoraciæ radix*.

R. ar'nicæ. See *Arnica radix*.

R. artemis'icæ. The root of *Artemisia vulgaris*, mugwort. It occurs in pieces, nearly 8 in. long and about 1 in. thick. These are covered with thin, tough radicles, which are 3 in. long and about 1-12 in thickness. It was at one time given as a remedy for epilepsy, more especially in weakly and nervous persons, and was also thought to be a valuable remedy in amenorrhœa.

R. as'ari. The rhizome of *Asarum canadense*. Wild ginger. See *Asarum*.

R. ascen'dens for'niciis. A name for *Fornix*, pillars of, anterior.

R. aspar'agi. The rhizome of *Asparagus officinalis*. See *Rhizoma asparagi*.

R. barda'næ. See *Bardanæ radix*.

R. belladon'næ. See *Belladonnæ radix*.

R. benedic'tæ sylves'tris. A name for the root of *Geum rivale*.

R. ben'galê. Bengal root. See *Cassu-muniar*.

R. bezoard'ica. A syn. for *R. alexi-pharmaca*.

R. brasillen'sis. Brazilian root. A syn. for *Ipecacuanha*.

R. brev'is gan'glii ciliar'is. The short root of the ciliary ganglion. A branch of the third cranial nerve which enters the ciliary ganglion.

R. brev'is gan'glii submaxillar'is. The short root of the submaxillary ganglion. Term for branches of the lingual nerve which pass to the submaxillary ganglion.

R. britan'nica. A name common to the roots of the *Runex aquaticus*, *R. hydrolapathum*, and *R. maximus*.

R. cain'cæ vel caina'næ. (F. *cainça*; G. *Caincawurzel*.) The root of *Chiococca racemosa*.

R. cal'ami aromati'ci. The same as *Rhizoma calami*.

R. carl'næ. (G. *Eberwurzel*.) The root of *Carlina acaulis*. (Linn.) It occurs in pieces about an inch in length, often cut lengthways; outside it is wrinkled and of a brownish colour; within it is somewhat fleshy, and pre-

sents broad medullary rays. It has a strong unpleasant odour and a bitter taste. It has been held to be a powerful diuretic and diaphoretic, and has been given in the typhoid state, and in amenorrhœa. Dose, 10 to 20 grs. of the powder.

R. carot'ica. (*Karotides*, the carotid arteries.) The carotid root. A branch joining the sympathetic plexus on the carotid artery and the sphe'no-palatine ganglion. The same as the great deep petrosal nerve.

R. caryophylla'tæ aquat'icæ. The rhizome of *Geum rivale*, water-avens.

R. cerebel'li. The root of the cerebellum. Syn. for *Restiform body*.

R. chi'næ. China root. The rhizome of *Smilax china*.

R. Christophoria'næ. Baneberry root. The rhizome and rootlets of *Actæa spicata*.

R. cimicifu'gæ. Cimicifuga root. The rhizome of *Actæa racemosa*.

R. cochlear'is. (*L. cochlea*, a snail shell.) The cochlear root. The branch of the auditory nerve which supplies the *cochlea*.

R. col'chici. The same as *Colchici cormus*, B.P. The tubers of *Colchicum autumnale*, meadow saffron.

R. colom'bo. The same as *Calumbæ radix*, B.P.

R. colom'bo america'næ. American calumba root. The root of *Fraseria Walteri*. See *R. Fraseræ*.

R. consol'idæ majo'ris. The root of *Symphytum officinale*. Comfrey root. See *R. symphyti*.

R. cor'dis. (*L. cor*, the heart.) The base of the heart.

R. den'tis. The root or fang of a tooth.

R. descen'dens for'niciis. A name for *Fornix*, pillars of, posterior.

R. dul'cis. (*L. dulcis*, sweet.) Sweet root. The same as *Glycyrrhizæ radix*, liquorice root.

R. dysenter'ica. Dysenteric root. The same as *R. antidysenterica*.

R. en'ulæ. The same as *R. inulæ*.

R. epiglottidis. The base of the epiglottis, which is attached in the median line to the thyroid cartilage.

R. exter'na nervi saphe'ni exter'ni. Outer root of the external saphenous nerve. The same as the *Peroneal communicating nerve*.

R. fil'icis mar'is. The rhizome of the male fern, *Filix mas*.

R. Fra'seræ. (F. *racine de colombo de Mariette*; G. *Fraserwurzel*.) The root of *Fraseria Walteri* (Michaux), American colombo root. It bears some resemblance to gentian root, but is yellower in colour. It is usually dried in longitudinal slices, and as the central fleshy part shrinks, the bark overlaps. The transverse section presents no medullary rays, which distinguishes it from calumba root. It is considered a tonic and simple bitter, but when fresh it is emetic and purgative.

R. galan'gæ. The rhizome of *Alpinia officinarum*, galangal. See *Galanga*.

R. galan'gæ majo'ris. The root of *Alpinia galanga*. See *Galanga*.

R. galan'gæ mino'ris. A fuller name for *R. galangæ*.

R. ganglio'sa. The gangliated root. A term sometimes used for the sensory root of the fifth cranial nerve.

R. gelse'mii. (F. *racine de gelsemium*;

RADIX

G. Gelsemienwurzel.) The rhizome and roots of *Gelsemium sempervirens* (Aiton). The yellow jasmine. The rhizome is about one inch in diameter; the roots smaller; externally they are yellowish brown with purplish longitudinal streaks. The rhizome presents a central pith and yellowish wood, intersected by whiter medullary rays; the roots have no pith cavity. It has a peculiar aromatic odour, and very little taste; the bark is bitter. See also *Gelsemium nitidum*.

R. gentian'æ. See *Gentiane radix*.

R. gentian'æ al'ba. This name was once given to the root of *Laserpitium latifolium*, on account of a supposed resemblance to gentian root.

R. glycyrrh'izæ. See *Glycyrrhizæ radix*.

R. glycyrrh'izæ hispan'icæ. Spanish liquorice root. The same as *Glycyrrhizæ radix*.

R. gram'inis. The same as *Rhizoma graminis*.

R. Hele'nii. The same as *R. inulæ*.

R. helle'bori al'bi. White hellebore root. The same as *Rhizoma veratri*.

R. helle'bori ni'gri. (*F. racine de ellébore noir*; *G. schwarze Nieswurzel*.) Black hellebore root. The rhizome and rootlets of *Helleborus niger*. As the rootlets are brittle, they are generally broken from the rhizome, in the commercial drug. The rhizome is three inches long, a quarter to half an inch thick, and in section presents a thick wrinkled bark, a central whitish pith, and six to ten wedge-shaped wood bundles arranged between broad medullary rays. It has a sweetish taste with a bitter after-taste. See *Helleborus niger*.

R. helle'bori viridë. The rhizome and rootlets of the *Helleborus viridë*. This is not the same as that sometimes called green hellebore (*Veratrum viridë*). Its general characters closely resemble the root of the black hellebore, but the rhizome is smaller, two inches long and a quarter of an inch thick. It is considered by some to be a more active drug.

R. hemides'mi. See *Hemidesmi radix*.

R. imperato'riæ. The root-stock of *Imperatoria ostruthium*, masterwort. It contains a volatile oil and a principle, Imperatorin, from which angelic acid can be obtained. The drug was formerly prescribed as a stimulant in asthenic fever, the typhoid state, and delirium tremens. Also locally, as a masticatory to stimulate unhealthy ulcers in the mouth.

R. india'na. Indian root. The same as *Ipecacuanhæ radix*. Is cultivated in India, but is indigenous to Brazil.

R. in'dica Lopezia'na. (*L. indicus*, Indian. Named by a Portuguese in honour of Lopez.) The root of *Toddalia acuminata*. See *Toddaliæ radix*.

R. inferio'ra gan'glii ciliar'is. Syn. for *R. brevis ganglii ciliaris*.

R. inferio'ra gan'glii ophthal'mici. Inferior root of the ophthalmic ganglion. A syn. for *R. brevis ganglii ciliaris*.

R. in'ulæ. (*F. racine d'année*; *G. Alantwurzel*.) The root of *Inula helenium*. It is about six inches long, one inch and a half thick, with several long branches, but it occurs in commerce in transverse slices. These present a concave surface on account of the fleshy character of the root, which shrinks as it dries. The pieces are whitish-grey within, outside brownish and wrinkled. There are prominent medullary

rays. In parts of the root are shining red points which are resin cells. See also *Inula helenium*.

R. ipecacuan'hæ. See *Ipecacuanhæ radix*.

R. i'reos. The same as *Rhizoma iridis*.

R. i'ridis florentinæ. The same as *Rhizoma iridis florentinæ*.

R. jala'pæ. See *Jalapa*.

R. krame'riæ. See *Kramerie radix*.

R. lap'athi. The same as *R. rumicis*.

R. levis'tici. The root of *Levisticum officinale*.

R. lin'guæ. (*L. lingua*, the tongue.) The root of the tongue.

R. liquiri'tiæ. *Glycyrrhizæ radix*.

R. liquiri'tiæ echina'tæ. The root of *Glycyrrhiza echinata*. It has been considered by some that this root is the commercial Russian liquorice root, but this is incorrect. It has a more bitter taste, and is not so sweet as the Russian liquorice.

R. liquiri'tiæ munda'ta. The same as *Glycyrrhiza russica*.

R. liquiri'tiæ rus'sicæ. Russian liquorice root. The root of *Glycyrrhiza glandulifera*, a variety of *G. glabra*.

R. lon'ga gan'glii sphenopalati'ni. The long root of the sphenopalatine ganglion. A name for the *Petrosal nerve*, great superficial.

R. lon'ga infer'ior gan'glii ciliar'is. The long inferior root of the ciliary ganglion. An occasional offset from the ciliary ganglion to one of the ciliary nerves.

R. Lo'pez. Lopez-root. Discovered near the mouth of the African river Zambesi by Juan Lopez Pigueiro. Brought into Europe in 1771 by Gaubius. It was used therapeutically in chronic dysentery and phthisis. It closely resembles *Toddalia aculeata*, of which it is probably a derivative. (Gould's Dict.)

R. Lopezia'na. Syn. for *R. Lopez*.

R. majo'ra trigem'ini. The larger root of the trigeminus. The same as the sensory root of the fifth nerve.

R. me'dia ner'vi olfacto'rii. The middle root of the olfactory (first cranial) nerve.

R. medul'læ spina'lis. The root of the spinal cord. Varolius' name for the *Medulla oblongata*.

R. melampo'dii. The same as *R. hellebori nigri*.

R. mesenter'ica. The root or base of the mesentery.

R. mesenter'ii. The root of the mesentery.

R. mino'ra trigem'ini. The smaller, or motor, root of the trigeminus or fifth cranial nerve.

R. min'si. The root of *Sium minsi*.

R. mol'lis gan'glii o'tici. The soft root of the otic ganglion. Nerve-fibres passing between the otic ganglion and the sympathetic plexus on the middle meningeal artery.

R. mol'lis gan'glii submaxillar'is. The soft root of the submaxillary ganglion. Term for those fibres in the sympathetic nerve-plexus on the external maxillary artery which join the submaxillary ganglion.

R. moto'ria gan'glii ciliar'is. The motor root of the ciliary ganglion.

R. moto'ria gan'glii o'tici. The motor root of the otic ganglion. Term for those fibres of the inferior maxillary nerve which enter the otic ganglion.

R. moto'ria gan'glii sphenopala-ti'ni. The motor root of the sphenopalatine ganglion. Another name for the *Petrosal nerve*, *great superficial*.

R. moto'ria gan'glii submaxillar'is. The motor root of the submaxillary ganglion. Those fibres of the chorda tympani nerve which enter the submaxillary ganglion.

R. na'si. The root of the nose.

R. ner'vi opt'ici. The root of the optic nerve. A term for the *Optic tract*.

R. olfacto'ria gris'ea. The grey olfactory root. Syn. for *R. media nervi olfactorii*.

R. olfacto'ria superio'ra. The superior olfactory root. Term for those fibres of the olfactory nerve which arise from the *caruncula mamillaris*.

R. olsnit'li. The root of *Selinum palustre*, or marsh parsley. This root was once used in the treatment of epilepsy.

R. Pareir'æ. See *Pareiræ radix*.

R. pe'nis. The same as *Crus penis*.

R. petro'sa. The petrosal root. A name for the *Petrosal nerve*, *great superficial*.

R. petrosell'ni. The root of *Petroselinum sativum* (Hoffmann), parsley. It is about six inches long, three quarters of an inch thick, has a thick white bark, longitudinally wrinkled below, and showing on section radially striate markings; within this the section is yellow, with irregular medullary rays. A decoction of the root is used in strangury.

R. phytolac'cæ. The root of *Phytolacca decandra*.

R. pi'lli. The root of a hair.

R. podophyl'li. See *Podophylli rhizoma*, B.P.

R. posti'ca proces'sūs transver'si ver'tebræ. The posterior root of the transverse process of a vertebra. Sömmering's term for *Diapophysis*.

R. prio'ra proces'sūs transver'si ver'tebræ. The anterior root of the transverse process of a vertebra. A syn. for *Parapophysis*.

R. proces'sūs spino'si. The root of a spinous process (of a vertebra).

R. pulmo'nis. The root of the lung.

R. pyre'thri. See *Pyrethri radix*, B.P.

R. pyre'thri german'ici. The root of *Anacyclus officinarum*, cultivated in Germany.

R. ratan'hicæ. The same as *Krameria radix*. B.P.

R. recur'rens gan'glii ciliar'is. The recurrent root of the ciliary ganglion. The same as *R. longa inferiora ganglii ciliaris*.

R. rhe'i. See *Rhei radix*, B.P.

R. rho'diæ. The root of the *Sedum rhodiola*.

R. rubra. (L. *rubra*, fem. of *ruber*, red.) The root of the *Rubia tinctorium*, madder.

R. ru'micis. The root of *Rumex crispus*, the yellow dock, and other species of *Rumex*. See *Rumex*.

R. sa'lep. See *Tubera salep*.

R. saponaria. The root of *Saponaria officinalis*. Soap root. It is about twelve inches long and one-eighth of an inch thick. The bark is longitudinally wrinkled, and the wood yellowish white. It has no odour, and tastes at first sweetish and then acid. See *Saponaria*.

R. sar'sæ. See *Sarsæ radix*. B.P.

R. sarsaparil'icæ. The same as *Sarsæ radix*. B.P.

R. sas'safras. See *Sassafras radix*. B.P.

R. scammo'niæ. See *Scammonia radix*.

R. sen'egæ. See *Senegæ radix*.

R. sensiti'va gan'glii submaxillar'is. The sensitive, or sensory, root of the submaxillary ganglion.

R. serpentar'icæ. The same as *Serpentaria rhizoma*.

R. serpen'tum. (L. *serpens*, a snake.) The root of *Ophiorhiza mungos*.

R. sum'bul. See *Sumbul radix*.

R. sympath'ica gan'glii ciliar'is. Sympathic or sympathetic root of the ciliary ganglion.

R. sympath'ica gan'glii sphenopala-ti'ni. Sympathic or sympathetic root of the sphenopalatine ganglion. Syn. for *Petrosal nerve*, *great deep*.

R. sym'phiti. (F. *consoude*; L. *consolida*; S. *consuelda mayore*; G. *Beinwell*.) The root of *Symphytum officinale*. Comfrey root. A fleshy, tapering root, about 8 inches long, and 1 inch wide above. It has several heads, and but few branches. When dry, it is wrinkled, black externally, the inner bark is whitish, the medulla grey. It contains much mucilage and but little starch or tannin. It is demulcent, also astringent, and was formerly used for bruises and cracked nipples, and internally as an astringent in hæmorrhage from mucous membranes.

R. tarax'aci. See *Taraxaci radix*.

R. un'guis. The root of a nail (of a finger or toe).

R. urinar'ia. (Mod. L. *urinarius*, belonging to, or exciting the secretion of, urine.) A name for the roots of *Ononis hircina*, *O. repens*, and *O. spinosa*.

R. valeria'næ. See *Valerianæ radix*.

R. vera'tri vi'ridis. The same as *Veratri viridis rhizoma*.

R. vestibular'is. The vestibular root. A name for the anterior root of the auditory or eighth cranial nerve, which supplies the *vestibule*.

Ra'dula. (L. *rado*, to scrape.) The same as *Scalprum*. An old name for a scraper or spatula. Also, applied to the lingual ribbon of the molluscs, on which are arranged transverse rows of teeth or hooks. The radula lies in a sheath on the lower and posterior surface of the buccal cavity.

Radzy'gè. The same as *Radesygè*.

Raf'finose. A syn. for *Melitose* (q. v.).

Raffie'sia. (After Sir Stamford Raffles.) A genus of plants parasitic on the roots of others, and bearing large flowers of a fetid odour.

R. Ar'noldi. A Sumatran species. Action the same as that of *R. patma*.

R. pat'ma. A Javanese species, used in the form of decoction as an astringent and styptic in metrorrhagia.

Ra'fie. (F. Also termed *rave* or *feu d'herbe*.) An eruptive febrile disease which has been observed in cattle, near Paris and in some parts of Normandy. The rash occurs on the internal surface of the hind legs, and appears on the fourth or fifth day of the disease. (Littre's Dict.)

Rag-pick'er's disease'. (G. *Hadernkrankheit*.) A syn. for *Pustule, malignant*.

Ragatz'. A place in St. Gall, Switzerland, noted for its thermal waters and baths.

Ragaz'. Another spelling of *Ragatz*.

Rage. (F.) Rabies. Also, any very painful affection.

RAGGED—RÂLE

R. de tête. (F. *tête*, head.) A disease present in France in the year 1841, closely resembling epidemic meningitis.

Ragged lady. Popular name for the *Nigella damascena*.

Ragle. (F.) A special visual hallucination observed in people who travel across the desert. It takes the appearance of water and herbage.

Ragweed. The *Ambrosia elatior*.

R. fever. A syn. for *Hay-fever*.

R., golden. The *Senecio aureus*.

R., great. The *Ambrosia trifida*.

Ragwort. The *Senecio aureus*.

Rai. The Indian mustard plant, *Sinapis juncea*.

Raia. The same as *Raja*.

Raidæ. The same as *Rajidæ*.

Railway brain. Another name for *R. spine*.

R. in'juries. These have received separate consideration by surgeons on account of their frequency, and also because they are apt to be accompanied by severe shock, followed by a long train of nervous symptoms. Apart from lesions of bones and ligaments manifestly due to the accident, four different conditions can be distinguished. 1. Lesions of the cord and membranes attributable to the accident. 2. Nervous shock and its consequences. 3. Secondary consequences of spinal concussion. 4. Hysteria and malingering.

1. The lesions which may be produced are very various, viz. hæmorrhage into the membranes, laceration of the cord or its membranes, inflammation of the membranes, meningitis and associated myelitis.

2. The shock produced by an accident is often independent of the violence of the blow. The symptoms are on the whole very constant, though the kind of accident be various. Loss of power in the legs, partial suppression of urine, impairment of sensation in the lower limbs, failure of digestion, vomiting, fainting, and sleeplessness, are all common results of a railway accident. These symptoms may last for months.

3. The secondary consequences are generally continuous with the preceding without any interval of complete restoration to health. The patient commonly loses business ability. Moreover, he may have a tottering gait, defective digestion, coldness of the limbs, and other signs of feeble circulation. The special senses are often affected; thus, amblyopia with or without retinal changes is common, deafness, and impaired sensation may be present. In some of these cases definite lesions of the spinal cord are present.

4. Nearly all such patients are highly emotional, and tend to exaggerate their suffering, so that the symptoms seem to be of a hysterical character. In some cases wilful deception has been practised. The malingerer is, however, generally easily distinguished from the emotional and nervous patient.

There is reason, nevertheless, to believe that the possibility of obtaining damages from a railway company directly or indirectly affects the condition of certain patients, and the issue raised often presents much difficulty from a medico-legal point of view.

R. kidney. An affection of the kidney said to be set up by the constant jarring in railway travelling.

R. spine. A term sometimes used for the

effects produced by a concussion of the spine occurring in a railway accident. It has no definite pathological significance; but is used generally in those cases when no definite lesion can be demonstrated, but when there are many obscure nervous symptoms.

The effects produced by a blow upon the back are extremely various; thus actual lesions of the bones and ligaments of the spinal cord and its membranes and nerve-roots are common, and in addition to these, emotional disturbance is often a prominent feature. In some cases a well-marked hysterical condition is produced. In order to claim damages actual malingering seems to be practised occasionally. See also *R. injuries*.

Rain bath. Term for a therapeutic apparatus, consisting of four or six circles of piping fixed two or three inches apart. There are three lines of fine holes in each piece of piping. The patient stands within these circles, and the water issues from the holes under considerable pressure.

Rain-gauge. An apparatus for the estimation of the amount of rain falling over a given area in a given time.

Rain'bow disease'. A common term for *Herpes iris*.

R. weed. The *Lythrum salicaria*.

R. worm. A syn. for *R. disease*.

Rain'ey's bod'ies. Term for *Psorosperms* in the muscles of certain animals, notably the pig.

R.'s cap'sules. A syn. for *R.'s bodies*.

R.'s cor'puscles. A syn. for *R.'s bodies*.

R.'s tubes. A syn. for *R.'s bodies*.

Rai'sin. (L. *uva*, pl. *uæ*. F. *raisin*; I. *uva*; S. *wa*; G. *Weintraube*.) The dried grape, from the *Vitis vinifera*. See *Uva*; also, *Passæ*. The varieties of raisin are: Malaga, Valencia, Smyrna, Corinthian (the currant), Sultana, Muscatel, &c.

Raja. (F. *raie*; I. *razza*; S. *raya*; G. *Roche*.) A Genus of the *Rajidæ*. All the species inhabit the sea, and all are edible.

R. ba'tis. The skate. Used as food.

R. clava'ta. The thornback. Skin used to make isinglass for clarifying beer.

R. oxyrrhyn'cus. The sharp-nosed ray. An edible species inhabiting the Mediterranean.

Raj'idæ. The Rays and Skates. The *Rajidæ* are a Family of fishes forming a Genus of the *Chondropterygii*. They have depressed bodies and expanded pectoral fins, making a broad rhombic disc; they possess a long slender tail which has no dorsal spine. Nearly all the species are edible. They are found over a wide geographical area.

Raj'ides. (Claus.) A Tribe of the *Plagiostomi*, including, besides the skates and rays, the torpedoes, sting rays, and sawfishes.

Rak. The same as *Arack*.

Rakasi'ra. A term for *Kapahu balsam*, or *Balsam of copaiva*.

Rake teeth. Teeth that are unduly wide apart, having a fancied resemblance to a rake.

Ra'ki. A Turkish liqueur, in the preparation of which *Gum mastio* is used.

Ra'kia. A form of spirit made from grapes, mixed with aromatics, in Dalmatia.

Rak'li pill. An Indian name for *Leprosy*.

Rakoc'zy. The chief spring at Kissen-
gen (q. v.).

Râle. (From the French *râle*, a rattle. Gr.

RÂLE

ρόγχος; I. *rantolo*; G. *Röcheln*.) A French word, which originally signified the rattle in the throat of the dying, caused by the passage of air over an accumulation of mucus in the larynx and trachea. Laennec first applied the term *râle* to certain adventitious sounds heard within the chest, which he recognised and described in his work on "Auscultation Médiante," published in 1819.

Râles are adventitious sounds accompanying and in part obscuring the respiratory murmur, produced wholly within the lung, and generally due to the passage of air over or through abnormal secretions in the bronchi or finer tubes.

Laennec's classification of *râles* is as follows—(1) *Le râle crépitant* or crepitant *râle*; (2) *râle muqueux* or mucous *râle*, (3) *le râle sec, sibilant ou ronflant*, dry *râles*, sonoro-sibilant *râles*. These terms are in general use; they do not, however, cover all the adventitious sounds heard over the lungs, and a great number of additional names have been introduced.

Some writers—Dr. Latham, Sir Thos. Watson, and others—have restricted the word *râle* to interrupted sounds heard within the lungs, thus using the word in the sense of rattle, and excluding the dry continuous sounds which they term *rhonchus* and *sibilus*. *Râle*, *rhonchus*, and rattle were, however, originally synonymous terms. See *Rhonchus*.

R.s., amphoric. *Râles* having an *amphoric* character, and occurring under similar conditions to those giving rise to *amphoric breathing*.

R.s., bronchial. *Râles* generated in the bronchial tubes.

R.s., bubbling. *Râles* produced by bubbling of air through mucus in the respiratory passages. Three varieties are described. 1. *Large*, produced in the trachea and bronchi. 2. *Medium*, produced in the large ramifications of the bronchi. 3. *Small*, produced in the smallest ramifications of the bronchi.

R.s., bullous. A syn. for *R.s., moist*.

R.s., cavernous. (L. *caverna*, a cave.) The same as gurgling *râles*; *râles* produced in a cavity.

R.s., click'ing. A variety of *R.s., dry crackling* which have a clicking character.

R.s., coarse. A *râle* which seems to be produced by the rupture of a large bubble. During progressive softening of a tubercular focus the *râles* heard over it become larger and coarser until, perhaps, gurgling *râles* are produced.

R.s., consonating. (L. *consono*, to resound.) Consonating *râles* are distinct, sharp *râles* produced in the neighbourhood of consolidations of the lung, and conducted directly to the ear. They are clear and ringing, and are often termed reverberating. The term consonating as applied to *râles* was proposed by Skoda. There is, however, no consonance in the limited sense of the word as used in acoustics.

R.s., coo'ing. A variety of *R.s., sibilant*, somewhat resembling the cooing of pigeons.

R.s., creak'ing. The same as *R.s., dry crackling*.

R.s., crep'itant. (L. *crepito*, to crackle. F. *râle crépitant*.) A sound heard over the lung during inspiration which resembles the sound produced by rubbing a lock of hair with the fingers near the ear. It is usually only heard towards the end of inspiration. It occurs in pneumonia, œdema of the lung, in some cases of pulmonary

collapse, and also in some cases of œdematous pleura. In acute pneumonia it is an important and early sign preceding the development of bronchial breathing. Crepitant *râles* are often called fine crepitations, or fine-hair crepitations.

R.s., crack'ing. The same as *R.s., crepitant*.

Also, term used to mean *R.s., dry crackling*.

R.s., dry. (F. *le râle sec*.) A term introduced by Laennec for the *râles* which are continuous and not interrupted. See *R.s., sonorosibilant*.

R.s., dry crack'ing. A crackling sound heard on inspiration, consisting of two or three sharp, dry, crackles, and unattended by mucous *râles*. The presence of dry crackling *râles* is considered to be significant of the commencement of softening in tubercular deposits in the lung.

R.s., exothoracic. The same as *R.s., extrathoracic*.

R.s., extrathoracic. *Râles* produced in the air-passages outside the thorax, i.e. in the larynx or trachea.

R.s., fine. A term used in opposition to coarse *râles*, to express the idea conveyed to the mind that the dimensions of the bubble or other agent producing the sound are small.

R.s., friction. *Râles* generated by the friction produced between two sticky inflamed serous surfaces, either the surfaces of the pleura (pleurisy), the pericardium (pericarditis), or of both (pleuro-pericarditis). The sound is like that produced by rubbing together two pieces of rough leather.

R., gur'gling. Loud mucous *râles* which are produced in cavities in the lung, and which have a low-pitched, gurgling or bubbling character.

R.s., gut'tural. (L. *guttur*, the throat.) *Râles* produced in the throat.

R.s., his'sing. Term for high-pitched, sibilant *râles*. See *R.s., sibilant*.

R.s., hu'mid. The same as *R.s., moist*.

R.s., hu'mid crack'ing. The same as *R.s., moist crackling*.

R.s., intermed'iate. Clymer's name for a class of *râles* intermediate in character between dry and moist *râles*.

R.s., intrathoracic. *Râles* generated within the thorax.

R.s., larynge'al. *Râles* generated in the larynx.

R.s., metallic. Another name for *R.s., metallic tinkling*.

R.s., metallic tink'ing. A peculiar ringing *râle*, described by Laennec as resembling the sound produced in some metal or glass vessel when struck by a pin. It is a single sound, not regularly produced at each respiratory movement, and is accompanied by a ringing echo, such as to suggest the dropping of water into a cavern. It occurs in pyo-pneumothorax and in some cases of large phthisical cavities.

R.s., moist. (F. *le râle humide*.) *Râles* which are interrupted, and which suggest a bubbling of air through a fluid. See *R.s., mucous*.

R.s., moist bronchial. A syn. for *R.s., mucous*.

R.s., moist crack'ing. A form of mucous *râle*, of a reverberating character, heard over tuberculous deposits in the lung, when softening is established, but before the formation of a cavity.

R.s., mu'cous. (F. *râle muqueuse*. I. *rantolo mucosus*.) The sound produced by the

RAMAG—RAMI

passage of air through liquids contained in the air-cavities. In its character it resembles the bursting of a series of bubbles. Mucous râles vary according to the apparent size of the bubbles, and all varieties occur from subcrepitant to the gurgling râle heard over large phthisical cavities. In cases of feeble respiratory movement, râles are often not distinctly heard until a deeper breath is taken. Mucous râles produced in the neighbourhood of consolidation of the lung are generally very distinctly conducted to the ear; these have been called reverberating or consonating râles.

R.s, piping. A term for a variety of *R.s*, *sibilant* which have a piping sound.

R.s, pleur'al. A term for pleural friction sounds. See *R.s*, *friction*.

R.s, re'dux. (L. *redux*, leading back. F. *râles de retour*.) Returning râles. Term for the *subcrepitant* râles heard in pneumonia during the stage of resolution.

R.s, reverberating. (L. *reverbero*, to cast back, or repel.) The same as *R.s*, *consonating*.

R.s, saw'ing. A variety of *R.s*, *sibilant* which make a sawing noise.

R.s, sib'ilant. (L. *sibilus*, a whistling or hissing. F. *le râle sibilant*.) A sound produced in the finer bronchial tubes, of a whistling character, and due to a narrowing of the tube from some cause. The note produced is high-pitched and continues without interruption during either inspiration or expiration, and sometimes during both. A sibilant râle is frequently removed by cough. The causes which produce this râle are generally obstruction to a small bronchus by mucus, the narrowing of the calibre of the finer tubes which occurs in spasmodic asthma, and, rarely, cicatricial changes in the tubes or pressure on them from without. Sibilant râles are frequently termed *sibilus*.

R.s, snor'ing. A syn. for *R.s*, *sonorous*.

R.s, son'oro-sib'ilant. (L. *sonorus*, resounding; *sibilus*, a hissing.) Term applied to râles of which some are snoring and some whistling in character. It depends upon the size of the bronchial tube whether the impediment offered by mucus will give rise to a high-pitched or low-pitched sound, the sonorous and sibilant râles respectively. Hence these frequently co-exist. See also *Rhynchus* and *Sibilus*.

R.s, son'orous. (L. *sonorus*, loud, resounding.) A low-pitched, more or less continuous, sound of a snoring character, produced by a narrowing of a bronchus, generally by mucus. Coughing usually causes a modification or disappearance of the sound. In some cases a sonorous râle is produced by cicatricial changes in the bronchial tube, or by pressure upon it. A palpable fremitus is a frequent accompaniment.

R.s, subcrep'itant. (L. *sub*, under; *crepito*, to crackle.) A form of mucous râle which is so fine as to approach the crepitant râle. It is generally a distinct and sharp series of sounds, principally heard during inspiration, and is best obtained over lung resolving from pneumonia. Under these circumstances the sound is often called *redux* crepitation, also *redux* râles. Subcrepitant râles are very commonly heard in phthisis.

R.s, submu'cous. A syn. for *R.s*, *subcrepitant*.

R.s, trache'al. Râles generated in the trachea.

R.s, vesic'ular. A syn. for *R.s*, *crepitant*.

R.s, vibra'ting. A syn. for *R.s*, *dry*.

R.s, whis'tling. A syn. for *R.s*, *sibilant*.

Ram'ag. Old term for *Cinis*. Ashes.

Rama'lis vena. (L. *ramale*, a dead bough.) The vena porta, so named on account of its supposed resemblance to a bough stripped of leaves.

Ramar'is. (L. *ramus*, a branch.) The same as *Ramealis*.

Ramastrum. (L. *ramus*, a branch.) Bot. Jungius' term for the branchings of the petiole or petioles of a pinnate leaf.

Rambu'tan. The *Nephelium lappaceum*, the fruit of which is recommended for fevers.

Ram'dohr's su'ture. A method of treatment of transversely-divided intestine, introduced by Ramdohr. A single suture unites the parietal abdominal wall with the lower part of the bowel into which the upper part is invaginated.

Ra'meal. See *Ramealis*.

Ramealis. (L. *ramus*, a branch.) Bot. Situated, or growing, on branches.

Rameanus. (L. *ramus*, a branch.) Growing from a branch or branches.

Ramear'ius. (L. *ramus*, a branch.) Bot. Growing on branches; epithet applied to aerial roots that grow on branches.

Ra'med. Old term for *Rhabarbarum*, or rhubarb.

Ramel'li. Plur. of *Ramellus*.

Ramellose. Bearing *Ramelli*.

Ramel'lus. (Dim. of L. *ramus*, a branch.) Term applied by Link to the subdivisions of the secondary petioles of pinnate leaves.

Ramenta. (L. *ramenta*, a chip.) Plur. of *Ramentum*.

R. intestino'rum. Scrapings of the intestines. Term for shreds of the intestinal mucous membrane discharged per rectum in malignant dysentery.

Ramenta'ceous. Bot. Characterised by *Ramentum*. Covered with small, membranous scales.

Ramen'tum. (Plur. *ramenta*. L. *rado*, to scrape down.) 1. Bot. A kind of pubescence consisting of a covering of flat, shaving-like hairs.

2. Pathol. Term (Gr. syn. *ξύματα*) applied by Hippocrates (*Aph.* vii, 67) to the membranous particles on the internal surface of the intestines, which are separated and carried away by the acrid intestinal discharges in dysentery. See *Ramenta intestinorum*.

3. Chem. Filings, raspings.

Ra'meus. The same as *Ramealis*.

Ra'mex. (L. *ramus*, a branch.) Surg. An old term for *Hernia*.

R. varico'sus. Varicose *ramex*. A term for *Varicocele*.

Ra'mi. Plur. of *Ramus*.

R. acceleran'tes. Accelerator nerves.

R. adipo'si. Adipose branches. Name for twigs passing from the lumbar arteries to the adipose capsule of the kidney on either side.

R. alar'es. Alar branches. Twigs from the angular artery to the ala of the nose on either side.

R. alveolar'es. Alveolar branches. Branches from the infraorbital and inferior dental arteries to the alveolar processes of the superior and inferior maxilla respectively.

R. anterio'res nervo'rum spina'llium. Anterior divisions of the spinal nerves.

R. articular'es. Articular branches. Term for nerves or blood-vessels which supply an articulation.

R. bronchia'les. Bronchial branches. Twigs from the arch of the aorta to the right and left bronchi.

R. bucca'les. Buccal branches. Name for twigs from the *alveolar* nerves supplying the mucous membrane of the cheeks.

R. cardi'aci. Cardiac branches. Name for twigs from the *gastric* artery to the cardiac portion of the stomach. Also, syn. for *R. cardi'aci nervi vagi*.

R. cardi'aci nervi va'gi. Cardiac branches of the vagus nerve.

R. cervi'co-spina'les. Cervico-spinal branches. Name for branches from the *ascending cervical* artery passing to the spinal canal.

R. clavicula'les. Clavicular branches. Name for branches from the *transverse cervical* artery to the subclavius muscle.

R. communican'tes. (*L. communicans*, pres. part. of *communico*, to make common, or impart.) Communicating branches. The rami communicantes are nerves which connect the spinal nerves with the sympathetic system. In man the four upper pass to the superior cervical ganglion, the fifth and sixth join the middle, and the seventh and eighth join the lower cervical ganglion. The thoracic, lumbar and sacral nerves are usually united with the corresponding ganglia of the sympathetic by rami communicantes. These communicating branches consist of a white and grey portion; the former resembles a spinal nerve in structure, and receives fibres from both the anterior and posterior roots, the latter is non-medullated and resembles the sympathetic nerves.

R. communican'tes no'ni. Communicating branches of the ninth (cranial nerve).

R. cuta'nei. Cutaneous branches. Branches of the *anterior* and *posterior perforating* nerves.

R. denta'les. Dental branches. Term for the terminal twigs of the *inferior dental* artery passing to the lower teeth.

R. diplo'ici. Diploic branches. Term for the alveolar branches of the *inferior dental* artery.

R. dorsa'les na'si. Dorsal branches of the nose. Term for twigs from the *angular artery* to the posterior portion of the nose.

R. emissar'ii. Emissary branches. Term for those branches of the anterior spinal nerveplexuses which pass out through the intervertebral and anterior sacral foramina.

R. epiplo'ici. Epiploic branches. Branches of the *gastro-duodenal* artery to the great omentum.

R. episclera'les. Episcleral branches. Term for the branches of the *anterior ciliary* arteries which anastomose with the posterior ciliary.

R. fascia'les. Fascial branches. Term for twigs supplying the face from the infra-orbital, inferior palpebral, external nasal nerves, and the upper branch of the superficial cervical nerve.

R. fronta'les. Frontal branches. Term for twigs from the *supra-trochlear* nerve supplying the skin of the forehead.

R. gas'trici. Gastric branches. Term for branches to the stomach: (1) from the *gastric* artery; (2) from the *gastro-duodenal* artery.

R. gingiva'les. Gingival branches. Term

for those branches of the *dental* arteries which pass to supply the gums through minute canals in the alveolar process.

R. glandula'les. Glandular branches. Term applied to the branches of the *superior thyroid* artery which pass to the thyroid gland.

R. intestina'les. Intestinal branches. Term for branches from cerebro-spinal nerves to the abdominal viscera.

R., is'chio-pu'bic. The rami of the pubes and ischium together.

R. labia'les inferio'res. Inferior labial branches. Branches to the lower lip from the *mental* nerve.

R. lingua'les nervi glos'so-pharynge'i. Lingual branches of the glosso-pharyngeal nerve.

R. mammar'ii exter'ni. External mammary branches. Branches from the *intercostal arteries* to the mamma.

R. margina'les. Marginal branches. Term for twigs from the *palpebral* arteries to the free edge of the eyelids.

R. masseter'ici. Masseteric branches. Branches to the masseter from the *external carotid*.

R. mastoide'i. Mastoid branches. Term for twigs to the mastoid cells from the *stylo-mastoid* artery.

R. meninge'i. Meningeal branches. Branches to the meninges of the brain from (1) the *posterior auricular* artery, and (2) the *lacrimal* artery.

R. meninge'i anti'ci. Anterior meningeal branches. Term for branches to the falx cerebri and dura mater from the *anterior ethmoidal* artery.

R. muscular'es. Muscular branches. Branches of blood-vessels or nerves distributed to muscles.

R. nasa'les. Nasal branches. Twigs to the septum and sides of the nose from the *anterior ethmoidal* artery.

R. œsophage'i. Œsophageal branches. Branches to the upper part of the œsophagus from the *inferior thyroid* artery.

R. of is'chium. See under *Ischium*.

R. of pu'bes. See under *Pubes*.

R. olfacto'rii. Olfactory branches. Term for the *Olfactory* nerve.

R. orbita'les. Orbital branches. Term for (1) arterial twigs from the *infraorbital artery* to the muscles and periosteum of the orbit; (2) arterial twigs from the *middle meningeal artery* to the orbit; (3) nerve twigs from the *spheno-palatine ganglion* to the orbit and its periosteum.

R. palpebra'les exter'ni. External palpebral branches. Term for the twigs into which the *orbital* branch of the *transverse facial* artery divides, and which supply the outer part of the orbicularis palpebrarum and the skin.

R. palpebra'les superior'es. Superior palpebral branches. Term for twigs to the upper eyelid from the *supra-trochlear* nerve.

R. pancreat'ici. Pancreatic branches. Term for the pancreatic branches of the *hepatic* artery.

R. parenchymato'si. Parenchymatous branches. Term for the branches of the *hepatic* artery going to the liver-substance.

R. parotide'i. Parotid branches. The branches of the *external carotid* artery to the parotid gland.

RAMIFICATION—RAMUS

R. pectora'les. Pectoral branches. Twigs to the pectoral muscles from the *acromio-thoracic* artery.

R. pectora'les latera'les. The same as *R. perforantes laterales*.

R. perforan'tes. Perforating branches. The same as *R. parenchymatosi*.

R. perforan'tes anterio'res. Anterior perforating branches. The anterior branches from the *intercostal nerves* to the skin of the thorax and abdomen.

R. perforan'tes latera'les. Lateral perforating branches. The lateral branches from the *intercostal nerves* to the skin.

R. perforan'tes posterio'res. A syn. for *R. perforantes laterales*.

R. perforan'tes superficia'les. A syn. for *R. perforantes laterales*.

R. pericardi'aci va'gi. Pericardiac branches of the *vagus* nerve.

R. perioste'a'les. Periosteal branches. Twigs distributed to the periosteum of the maxillary sinus from the *posterior dental* artery.

R. pharynge'l. Pharyngeal branches. Branches from the *inferior thyroid* artery to the part of the pharynx near the thyroid gland. Also, the pharyngeal branches of the *vagus* nerve.

R. pinna'les. The branches belonging to the pinnae or alae of the nose. Syn. for *R. alares*.

R. pterygoide'l. Pterygoid branches. Branches to the pterygoid muscles from the *external carotid* artery.

R. semicircular'es tempora'les. Semicircular temporal branches. Term for branches to the upper part of the temporal muscles from the *middle temporal* artery.

R. sphe'no-orbita'les. Spheno-orbital branches. Nerves to the orbit from the *spheno-palatine* ganglion.

R. superficia'les. Superficial branches. Twigs to the biliary ducts and portal fissure from the *hepatic* artery.

P. tar'sei. Tarsal branches. Twigs to the edges of the eyelids from the *palpebral* arteries.

R. thyroi'dei. Thyroid branches. Twigs to the thyroid gland from the *inferior thyroid* artery.

R. trachea'les. Tracheal branches. Branches of the *inferior thyroid* artery passing to the trachea.

R. ventra'les. Ventral branches. Term for those branches of the *intercostal arteries* which supply the intercostal muscles and ribs.

Ramifica'tion. (L. *ramus*, a branch; *facio*, to make.) Branching.

R., dicho'tomous. Bot. A continual branching into two, the apex being aborted.

Ramiflo'rous. (L. *ramus*, a branch; *flos*, *floris*, a flower. F. *ramiflore*; G. *Ast blüthig*.) Epithet applied to plants the flowers of which grow on branches.

Ramiform. (L. *ramus*, a branch; *forma*, a likeness. F. *ramiforme*; G. *astförmig*.) Resembling a twig or branch.

Ramiformis. (L. *ramus*, a branch; *forma*, shape.) *Ramiform*.

Ram'igri. Chem. Old term syn. with *Colophonia*.

Ramoles'cence. (F. *ramollir*, to soften.) A softening.

Ramollis'sement. (F. From *ramollir*, to soften again; which is derived from L. *mollis*, soft. G. *Erweichung*.) A morbid softening. See also *Mollities*.

R. des os. (F.) Softening of bones. *Osteomalacia*.

Ramose. (L. *ramus*, a branch. F. *rameux*; G. *astig*.) Much branched.

Ramosus. (L. *ramus*, a branch.) *Ramose*.

Ram'phos. (Ῥάμφος, the crooked beak of birds, especially of birds of prey.) A beak. Term used as syn. with *Rostrum*.

Ramphothe'ca. (Ῥάμφος a beak; θηκή, a sheath. F. *ramphothèque*, G. *Schnabelscheide*.) Illiger's term for the horny cutaneous covering of the beak in birds.

Rams'den's eye-piece. An eye-piece consisting of two plano-convex lenses, invented by Ramsden for use in micrometry.

Ram'sted. A name for *Linaria vulgaris*.

Ram'ule. (L. *ramulus*, dim. of *ramus*, a branch. F. *ramule*; G. *Ästchen*.) A little branch; a division of a ramus.

Also, the branches of certain plants, as butcher's broom, which closely resemble leaves.

Ram'uli. (Plur. of *ramulus*.) Small branches.

R. gingiva'les. Term for the gingival nerves.

R. is'thmi fauc'ium. Syn. for *R. mandibulares*.

R. mandibular'es. Term for nerve-twigs given off to the mucous membrane of the back part of the mouth, from the *submaxillary ganglion*.

R. sabi'næ. Syn. for *Sabinæ cacumina* (q. v.).

R. sphenoida'les. A name for branches of the *Vidian nerve* which supply the body of the sphenoid bone.

Ramuliflo'rous. (L. *ramulus*; *flos*, *floris*, a flower.) Bot. Bearing flowers upon *ramules*.

Ramulose. (L. *ramulus*.) Possessing *Ramules*.

Ramulus. (L. dim. of *ramus*.) A small branch or shoot.

R. ampul'læ horizonta'lis. Ramule of the horizontal ampulla. A branch to the horizontal semicircular canal from the vestibular nerve.

R. ampul'læ inferio'ris. Ramule of the inferior ampulla. Twig to the ampulla of the inferior semicircular canal from the cochlear nerve.

R. ampul'læ sagitta'lis. Ramule of the sagittal ampulla. Syn. for *R. ampullæ superioris*.

R. ampul'læ superio'ris. Ramule of the superior ampulla. Twig to the superior semicircular canal from the vestibular nerve.

R. coch'leæ. Ramule of the cochlea. Branch of the cochlear nerve to the cochlea.

R. reces'sus utric'uli. Ramule of the recess of the utricle. Twig to the utricle from the vestibular nerve.

R. sac'culi. Ramule of the sacculus. Twig to the sacculus from the cochlear nerve.

Ramus. (L. Plur. *rami*.) A branch. Also, a term for the *Penis*.

R. abdomina'lis. Abdominal branch. A term for the *Hypogastric nerve*.

R. acetab'uli. Branch of the acetabulum. Term for the branch to the hip-joint from the *internal circumflex artery*.

R. acromia'lis. Acromial branch. Term for the *Acromial artery*.

R. acus'ticus. Acoustic branch. Term for the *Small superficial petrosal nerve*.

R. anastomot'icus profun'dus. Deep anastomotie branch. Term for the *Deep facial vein*.

R. anastomot'icus pub'icus. Anastomotie pubic branch. Term for the *Pubic artery*.

R. ante'rior ascen'dens. Ascending anterior branch. Syn. for *R. anterior nervi acustici*.

R. ante'rior nar'ium. Anterior branch of the nares. Term for *External nasal nerve*.

R. ante'rior nervi acust'ici. Anterior branch of the acoustic nerve. A term for the *Cochlear nerve*.

R. ante'rior radia'lis. Anterior radial branch. Term for the external branch of the *radial nerve*, which ramifies over the ball of the thumb.

R. articular'is ge'nu. Articular branch to the knee. Term for the branch to the knee-joint from the *long saphenous nerve*.

R. articular'is ge'nu infe'rior. Inferior articular branch to the knee. The lower of the two branches from the *peroneal nerve* to the knee-joint.

R. articular'is ge'nu supe'rior. Superior articular branch to the knee. The upper of the two branches from the *peroneal nerve* to the knee-joint.

R. ascen'dens. Ascending branch. Term for a branch of the *transverse cervical artery* which passes to the *splenius capitis* and deep neck-muscles.

R. ascen'dens fos'sæ Syl'vii. Ascending branch of the fossa (*i. e.* fissure) of Sylvius. Term for the anterior branch of the fissure of Sylvius.

R. ascen'dens glabellar'is. Ascending glabellar branch. Term for a twig from the *angular artery* to the inner angle of the orbit.

R. ascen'dens ner'vi va'gi. Ascending branch of the vagus nerve. Term for a twig from the *superior laryngeal branch* of the vagus to the epiglottis.

R. ascen'dens os'sis is'chii. The *R.*, ascending, of the *ischium*.

R., ascen'ding, of the is'chium. See under *Ischium*.

R., ascen'ding, of the pu'bes. See under *Pubes*.

R. auricular'is Arnol'di. Auricular branch of Arnold. Term for the auricular branch of the *vagus*, Arnold's nerve.

R. auricular'is infe'rior. Inferior auricular branch. Term for the anterior branch of the *great auricular nerve*.

R. auricular'is ner'vi glos'so-pharynge'i. Auricular branch of the *glossopharyngeal nerve*. Another name for *tympanic branch* of *glossopharyngeal nerve*.

R. auricular'is ner'vi va'gi. The auricular branch of the *vagus nerve*.

R. auricular'is poste'rior superficia'lis. Posterior superficial auricular branch. Term for the *posterior branch* of the *great auricular nerve*.

R. auricular'is va'gi. See *R. auricularis nervi vagi*.

R. auriculo-ventricular'is. Auriculo-ventricular branch. Syn. for *R. circumflexus*.

R. basilar'is. Basilar branch. Syn. for *R. meningeus*.

R. brachia'lis. Brachial branch. Term

for the *thoracic branch* of the *inferior thyroid artery*.

R. bul'bo-caverno'sus. A term for *Artery of bulb of urethra*.

R. cana'lis spina'lis. Branch of the spinal canal. Term for the twig from an *intercostal artery* to the walls of the spinal canal.

R. cardi'acus ner'vi va'gi infe'rior. The inferior cardiac branch of the *vagus nerve*.

R. cardi'acus ner'vi va'gi supe'rior. The superior cardiac branch of the *vagus nerve*.

R. cerebellar'is. Cerebellar branch. Term for a twig from the *posterior spinal artery* to the cerebellum.

R. cervica'lis. Cervical branch. Term for the ascending branch of the *transverse cervical artery*.

R. cervica'lis prin'ceps. Syn. for *Arteria princeps cervicis*.

R. cervi'co-facia'lis. Cervico-facial branch. Term for the cervico-facial part of the *facial nerve*.

R. circumflex'us. Circumflex branch. Term for that branch of the *left coronary artery* which passes along the *auriculo-ventricular groove*.

R. coch'leæ. The same as *R. cochlearis*.

R. cochlear'is. The *Cochlear nerve*.

R. collatera'lis ulnar'is. Collateral ulnar branch. Term for a twig from the *musculo-spiral nerve* to the inner head of the *triceps muscle*.

R. commu'nicans. Communicating branch. Term for any of the branches of communication between the anterior divisions of the *spinal nerves* and the *sympathetic*.

R. commu'nicans ante'rior. The *anterior communicating artery* of the brain.

R. commu'nicans facie'i profun'dus. The deep communicating branch of the face. Term for the *Deep facial vein*.

R. commu'nicans medull'æ spina'lis. Communicating branch between a *spinal nerve* and the *sympathetic*.

R. commu'nicans poste'rior. The *posterior communicating artery* of the brain.

R. commu'nicans radia'lis. Radial communicating branch. The termination of the *radial artery*, which joins the deep branch from the ulnar in the deep palmar arch.

R. crura'lis. Crural branch. A term for the *Lumbo-inguinal nerve*.

R. cubita'lis. Cubital branch. A syn. for *R. cutaneus volaris antibrachii*.

R. cucullar'is. (*L. cucullus*, a hood.) Cucullar, *i. e.* trapezial, branch. Term for a nerve-twig from the *cervical plexus* to the *trapezius muscle*.

R. cuta'neo-ulnar'is. Cutaneo-ulnar branch. Term for a branch to the skin of the ulnar side of the forearm from the *internal cutaneous nerve*.

R. cuta'neus. Cutaneous branch. Term for the following: (1) The *radial nerve*; (2) the superficial branch of the *external plantar nerve*; (3) a twig from the anterior division of the *obturator nerve* to the skin on the upper part of the inner aspect of the thigh.

R. cuta'neus ner'vi radia'lis. Cutaneous branch of the *radial nerve*.

R. cuta'neus palmar'is. Palmar cutaneous branch. Term for the cutaneous twig to the anterior surface of the forearm from the *internal cutaneous nerve*.

RAMUS

R. cutaneus palmar'is longus. A syn. for *R. palmaris longus nervi mediani*.

R. cutaneus perone'us. Peroneal cutaneous branch. A cutaneous twig from the *communicans peronei* to the outer side of the leg.

R. cutaneus ulnar'is antibrach'ii. Ulnar cutaneous branch of the forearm. A twig from the *internal cutaneous nerve* to the ulnar surface of the forearm.

R. cutaneus volar'is antibrach'ii. Volar cutaneous branch of the forearm. A twig from the *internal cutaneous nerve* to the flexor surface of the forearm.

R. deltoid'eus. Deltoid branch. Term for a twig to the deltoid muscle from the *brachial artery*; also, for a twig to the deltoid from the *acromio-thoracic artery*.

R. descen'dens. Descending branch. 1. A term for the *descending ramus* of the pubes, and also of the ischium.

2. A twig from the *transverse cervical artery*, joining the *dorsalis scapulæ artery*.

3. The *R. descendens noni*.

4. The inferior division of the *inferior maxillary nerve*.

R. descen'dens noni. Descending branch of the ninth (nerve). See *Descendens noni*.

R. descen'dens os'sis is'chii. The descending ramus of the ischium.

R. descen'dens os'sis pu'bis. The descending ramus of the pubes.

R., descend'ing. The descending ramus of the *pubes* and *ischium*.

R. dexter arte'riæ pulmona'lis. The right division of the pulmonary artery.

R. diplo'icus. Diploic branch. A twig from the *supra-orbital vein* which passes through the supra-orbital notch to join the frontal vein of the diploë.

R. dorsa'lis. Dorsal branch. Term for a twig from an *intercostal artery* to the spinal muscles.

R. dorsa'lis antibrach'ii. Dorsal branch of the forearm. The upper of the two cutaneous branches of the *ulnar nerve*.

R. dorsa'lis na'si. The dorsal artery of the nose.

R. dorsa'lis ner'vi radia'lis. Dorsal branch of the *radial nerve*.

R. dorsa'lis pol'licis radia'lis. Dorsal radial branch of the thumb. The outer (radial) of the two dorsal arteries of the thumb given off by the radial artery.

R. dorsa'lis pol'licis ulnar'is. Dorsal ulnar branch of the thumb. The inner (ulnar) of the two dorsal arteries of the thumb given off by the radial artery.

R. dorsospina'lis. Dorsospinal branch. Term for the dorsal branch of an *intercostal artery*.

R. dur'æ matr'is va'gi. Branch of the *vagus* belonging to the dura mater. Term for the meningeal branch of the *jugular ganglion* of the *vagus*.

R. du'rrior sep'timæ conjugatio'nis. Harder branch (portio dura) of the seventh conjugation or pair. Term for the *Facial nerve*.

R. epitrochlear'is. Epitrochlear branch. Syn. for *R. dorsalis antibrachii*.

R. exter'nus nar'ium. External branch of the nostrils. The *external nasal nerve*.

R. exter'nus radia'lis. External radial branch. The *dorsal radial nerve* of the thumb.

R. facia'lis. Facial branch. Term for the anterior branch of the *great auricular nerve*.

R. femora'lis. Femoral branch. A term for the *Lumbo-inguinal nerve*.

R. fibular'is. Fibular branch. A twig from the *anterior tibial artery*, or sometimes the *anterior tibial recurrent*, to the fibular region.

R. hepat'icus dex'ter. The right hepatic artery.

R. hepat'icus sinis'ter. The left hepatic artery.

R., horizon'tal. The horizontal ramus of the *pubes*.

R. horizonta'lis. Horizontal branch. 1. The horizontal ramus of the *pubes*. 2. Syn. for *R. horizontalis posterior fossæ Sylvii*.

R. horizonta'lis fissu'rae Syl'vii. Horizontal ramus of the fissure of Sylvius. A syn. for *R. horizontalis posterior fossæ Sylvii*.

R. horizonta'lis mandib'ulæ. Horizontal ramus of the mandible or *inferior maxilla*.

R. horizonta'lis os'sis pu'bis. Horizontal ramus of the *pubes*.

R. horizonta'lis pec'tinis. Horizontal ramus of the *pecten* or *pubes*.

R. horizonta'lis poste'rior fos'sæ Syl'vii. Posterior horizontal ramus of the fissure of Sylvius. The posterior limb of the fissure of Sylvius.

R. hyoid'eus. Syn. for *Hyoid artery*.

R. ili'acus. Iliac branch of the *ilio-hypogastric nerve*.

R. infe'rior. Inferior branch. Term for various structures. 1. The so-called *descending ramus* of the *pubes* and *ischium*.

2. The inferior branch of the *lacrimal nerve*.

3. The inferior portion of the *inframaxillary branch* of the *facial nerve*.

4. The inferior division of the *third cranial (oculomotor) nerve*.

5. The inferior branch of the *orbital nerve*, which goes to the cheek.

R. infe'rior os'sis is'chii. A syn. for *R. ascendens ossis ischii*.

R. infracosta'lis. Infracostal branch. Term for the upper division of an *intercostal nerve* which runs below the rib with the corresponding division of the *intercostal artery*.

R. inframaxillar'is. Inframaxillary branch. A term for the *Inferior maxillary nerve*.

R. infraspina'tus. Infraspinal branch. The branch of the *subscapular artery* to the *infraspinous fossa*.

R. interme'dius. A syn. for *R. anastomoticus*.

R. inter'nus. Internal branch. Term for various structures. 1. The posterior (internal) branch of the *great auricular nerve*.

2. The superior (internal) branch of the *lacrimal nerve*.

3. A twig from the posterior division of a *spinal nerve* to the transverse process of a vertebra.

R. intestina'lis. Intestinal branch. Term for the *visceral branch* of a *spinal nerve*.

R. latera'lis nar'ium. Lateral branch of the nares. The external branch of the *nasal nerve*.

R. lingua'lis recur'rens. Recurrent lingual branch. A syn. for *R. ascendens nervi vagi*.

RAMUS

R. magnus ner'vi media'ni. Great branch of the median nerve. Term for the *Musculo-cutaneous nerve* of the arm.

R. ma'jor ner'vi maxillar'is infe'rio'ris. Greater branch of the *inferior maxillary nerve*, i.e. the larger of the two primary branches into which that nerve divides.

R. malar'is. Malar branch. Term for the inferior branch of the *orbital nerve*.

R. margina'lis. Marginal branch. Term for the external division of the *radial nerve* to the thumb.

R. mastoïde'us. Mastoid branch. Term for several structures. 1. The *occipital branch* of the *posterior auricular artery*.

2. The *posterior branch* of the *great auricular nerve*.

3. The *small occipital nerve*.

R. maxillar'is infe'rior ner'vi tri-gem'ini. Inferior maxillary branch of the trigeminal nerve, i.e. the *inferior maxillary nerve*.

R. maxillar'is supe'rior ner'vi tri-gem'ini. Superior maxillary branch of the trigeminal nerve; i.e. the *superior maxillary nerve*.

R. media'lis. Median branch. Term for the inner twig of the *spinal branch* of the posterior division of a *spinal nerve*, which runs along the spinous process of the corresponding vertebra.

R. medul'læ spina'lis. Branch of the spinal marrow. Term for a twig to the spinal cord from the *spinal branch* of an *intercostal artery*.

R. medullar'is. Medullary branch. Syn. for *R. medullæ spinalis*.

R. meninge'us. Meningeal branch of the *ascending pharyngeal artery*.

R. meninge'us poste'rior. Posterior meningeal branch. Term for a nerve given off from the *jugular ganglion* to the meninges.

R. mi'nor ner'vi Vidia'ni. Lesser branch of the Vidian nerve. Term for *Great superficial petrosal nerve*.

R. muscular'is. Muscular branch. Twig of the dorsal branch of an *intercostal artery* to the deep back-muscles.

R. muscular'is ner'vi radia'lis. Muscular branch of the radial (in the Continental sense of musculo-spiral) nerve. The *Radial nerve*.

R. musculo-auricular'is. Musculo-auricular branch. Term for a twig to the *retrahens auriculam* from the *posterior auricular nerve*.

R. nasa'lis. Nasal branch. Twig to the nasal mucous membrane from the *anterior dental nerve*.

R. nasa'lis ner'vi ophthal'mici. Nasal branch of the ophthalmic nerve. The *Naso-ciliary nerve*.

R. ner'vi facia'lis. Branch of the facial nerve. Syn. for *R. petrosus superficialis*.

R. ner'vi saph'e'ni inter'ni. Branch of the internal saphenous nerve. Term for the small twig from the *anastomotica magna artery* of the thigh which accompanies the internal saphenous nerve.

R. nu'triens. The nutrient artery of a bone.

R. occipita'lis. Occipital branch. Term for (1) the *mastoid terminal branch* of the *posterior auricular artery*; (2) the posterior division of the *superficial temporal artery*.

R. of infe'rior maxil'la. See *Inferior maxilla*.

R. of is'chium. That part of the ischium which is directed forwards from the tuberosity. It is continuous with the pubic ramus and, with this, forms the lower boundary of the thyroid foramen.

R. of jaw. Syn. for *R. of inferior maxilla*.

R. of pu'bes, ascend'ing. The same as the superior ramus of the pubes.

R. of pu'bes, descend'ing. The same as the inferior ramus of the pubes.

R. of pu'bes, infe'rior. The part of the pubic bone which passes from the symphysis to unite with the ramus of the ischium. It is sometimes called the descending ramus, but with the body in the erect position, this ramus is nearly horizontal.

R. of pu'bes, supe'rior. The process of the pubic bone which ascends from the body of that bone to the acetabulum; the thyroid foramen is bounded by it in front and superiorly.

R. ophthal'micus. Ophthalmic branch. A term for the *Ophthalmic nerve*.

R. os'sis maxil'læ infe'rio'ris. Ramus of the inferior maxilla.

R. ovar'ii. Ovarian artery.

R. palmar'is lon'gus. Long palmar branch. The *palmar branch* of the *median nerve*.

R. palmar'is lon'gus ner'vi media'ni. Fuller term for *R. palmaris longus*.

R. palmar'is ulnar'is. Ulnar palmar branch. The *palmar branch* of the *ulnar nerve*.

R. palpebra'lis. Palpebral branch. A twig from the upper division of the *lacrimal nerve* to the upper eyelid.

R. parietal'is. Parietal branch. Term for a twig to the dura mater from the *occipital artery*.

R. patellar'is. Patellar branch. A twig to the anterior surface of the patella from the *internal saphenous nerve*.

R. perpendicular'is mandib'ulæ. Perpendicular ramus of the mandible. A syn. for *R. of inferior maxilla*.

R. petro'sus superficia'lis. Superficial petrosal branch. The *petrosal branch* of the *middle meningeal artery*.

R. pharynge'us. Pharyngeal branch. Term for the twig to the interior constrictor of the pharynx from the *superior thyroid artery*.

R. pharynge'us descendens. Descending pharyngeal branch. Term for one or two branches of the *ascending pharyngeal artery* which anastomose on the middle and inferior constrictors of the pharynx with the superior thyroid artery.

R. phren'ico-abdomina'lis dex'ter. Right phrenico-abdominal branch. Terminal branch of the *right phrenic artery* to the liver, inferior cava, &c.

R. phren'ico-abdomina'lis sinis'ter. Left phrenico-abdominal branch. Terminal branch of the *left phrenic artery* to the left crus of the diaphragm, &c.

R. poplite'us. Popliteal branch. A branch to the popliteus muscle and tibia from the *posterior tibial nerve*.

R. poste'rior. Posterior branch. Term for various structures. 1. Posterior or dorsal branch of an *intercostal artery*.

RAMUS

2. The ilio-lumbar artery.
3. Branch of the *great auricular nerve* to the back of the *pinna*.

4. The ulnar branch to the forearm from the *internal cutaneous nerve*.

5. The inferior branch of the *lacrimal nerve*.

6. A branch of the *obturator nerve* passing through the obturator externus muscle to the hip-joint and adductor magnus.

7. The posterior limb of the fissure of Sylvius.

R. prævertebra'lis. Prevertebral branch. Term for a branch of the *ascending pharyngeal artery* to the prævertebral fascia.

R. primus ner'vi trigem'ini. First branch of the trigeminal nerve. A syn. for *R. primus quinti*.

R. primus quin'ti. The first branch of the fifth (cranial nerve). The *Ophthalmic nerve*.

R. profun'dus. Deep branch. Term for the following structures. 1. The posterior terminal division of the *anterior crural nerve*.

2. The deep branch of the *external plantar nerve*.

3. The *R. profundus nervi mediani* (q. v.).

4. The posterior branch of the *obturator nerve*.

R. profun'dus ner'vi media'ni. Deep branch of the median nerve. Term for the *anterior interosseous nerve* of the arm.

R. pro stape'dio. Branch for the stapedius. A twig to the stapedius muscle from the *stylo-mastoid artery*.

R. radia'lis. Radial branch. Term for the dorsal nerve of the thumb, one of the two terminal branches of the *radial nerve*.

R. recur'rens hypoglos'si. Recurrent branch of the hypoglossal nerve. A twig to the meninges from the *hypoglossal nerve*.

R. recur'rens vag'i. Recurrent branch of the vagus. A twig to the meninges from the *jugal ganglion* of the vagus nerve.

R. scapular'is. Scapular branch (of the *transverse cervical artery*). A term for the *Dorsalis scapulae artery*.

R. secundus gan'gli Gasse'rii. Second branch of the Gasserian ganglion. The same as *R. secundus quinti*.

R. secundus ner'vi trigem'ini. Second branch of the trigeminal nerve. The same as *R. secundus quinti*.

R. secundus quin'ti. Second branch of the fifth. The *Superior maxillary nerve*.

R. sep'ti nar'ium. Branch of the septum of the nares. A twig from the *ethmoidal nerve* to the septum nasi.

R. sinis'ter arteriæ pulmona'lis. Left division of the pulmonary artery.

R. sinua'lis. Sinuous branch. Term for a recurrent twig to the tentorium cerebelli from the *ophthalmic nerve*.

R. spina'lis. Spinal branch. The twig from the dorsal branch of an *intercostal artery* which goes to the spinal canal.

R. subli'mis arte'riæ radia'lis. A term for the *superficial volar artery*.

R. subscapular'is ante'rior. Anterior subscapular branch. A twig from the *subscapular artery* to the outer (anterior) part of the venter of the scapula.

R. superficia'lis. Superficial branch. Term for the following structures—

1. The terminal branch of the *anterior crural nerve*.

2. A twig from the *brachial artery*, or from the *inferior profunda artery*, to the middle part of the brachialis anticus.

3. A twig to the skin of the fibular border of the sole of the foot from the *external plantar nerve*.

4. The superficial branch of the musculospiral nerve, i. e. the *radial nerve*.

R. superficia'lis cuta'neus. Superficial cutaneous branch. A twig to the skin of the radial side of the forearm from the *musculo-cutaneous nerve*.

R. superficia'lis ner'vi radia'lis. Superficial branch of the radial (in the Continental sense of musculospiral) nerve; a term for the radial nerve.

R. superficia'lis ner'vi Vidia'ni. Superficial branch of the Vidian nerve. A syn. for *R. minor nervi Vidiani*.

R. supe'rior. Superior branch. 1. The superior or *horizontal ramus* of the pubes and ischium.

2. A branch of the *lacrimal nerve* to the lacrimal gland and upper eyelid.

3. Branch of the *oculo-motor nerve* to the superior rectus and levator palpebræ superioris.

4. Twig from the *orbital nerve* which anastomoses with the inferior branch of the lacrimal nerve.

R. supe'rior ner'vi inframaxillar'is. Superior branch of the inframaxillary nerve. A term for the superior division of the inferior maxillary nerve.

R. supe'rior ner'vi trigem'ini. Superior branch of the trigeminal nerve. The same as *R. superior quinti*.

R. supe'rior os'sis is'chii. The superior or descending ramus of the ischium.

R. supe'rior quin'ti. Superior branch of the fifth. A term for the *Ophthalmic nerve*.

R. supracosta'lis. Supracostal branch. Term for the branch of an *intercostal nerve* which runs along the upper margin of a rib.

R. supramaxillar'is. Supramaxillary branch. A term for the *Superior maxillary nerve*.

R. supraspina'tus. Supraspinal branch. A twig to the supraspinous fossa from the *transverse cervical artery*.

R. tempora'lis. Temporal branch. A term for the superior branch of the *orbital nerve*.

R. tem'poro-facia'lis. Temporo-facial branch. The *temporo-facial* division of the *facial nerve*.

R. termina'lis ante'rior. Anterior terminal branch of the *anterior crural nerve*.

R. termina'lis poste'rior. Posterior terminal branch of the *anterior crural nerve*.

R. termina'lis radia'lis. Radial terminal branch. Term for the terminal branch of the *median nerve* to the thumb and index finger.

R. termina'lis ulnar'is. Ulnar terminal branch. Term for the terminal branch of the *median nerve* to the middle and ring fingers.

R. ter'tius ner'vi trigem'ini. Third branch of the trigeminal nerve. The *Inferior maxillary nerve*.

R. testicular'is. Testicular branch. Term for the *Cremasteric artery*.

R. thorac'icus. Thoracic branch. Term for the thoracic branch (1) of the *inferior thyroid artery*; (2) of the *transverse cervical artery*.

R. tonsillar'is. The tonsillar branch of the *inferior palatine artery*.

R. transversus. Transverse branch. A term applied to the acromial branches of the *acromio-thoracic artery*.

R. trochantericus. Trochanteric branch. A twig from the ascending branch of the external circumflex artery which supplies the hip-joint.

R. ulnar'is antibra'chii. Ulnar branch of the forearm. The cutaneous branch of the *ulnar nerve* to the forearm.

R. ulnar'is dorsalis. The dorsal ulnar branch. The dorsal branch to the hand from the *ulnar nerve*.

R. venosus profundus faciei. Deep venous branch of the face. A term for the *Internal maxillary vein*.

R. ventral'is. Ventral or anterior branch of a *spinal nerve*.

R. vertebra'lis. Vertebral branch. Term for the spinal branch of an *intercostal artery*.

R. vestibular'is. The *Vestibular nerve*.

R. viscera'lis. Visceral branch. Term for the subdivision of the anterior branch of a *spinal nerve* which joins the sympathetic.

R. volar'is nervi ulnar'is. The *palmar (volar)* branch of the *ulnar nerve*.

R. volar'is profundus. Deep volar branch. Term for the deep branch of the *ulnar artery*.

R. volar'is radialis. Radial volar branch. Term for the *superficial volar artery* which usually forms the termination of the superficial palmar arch.

R. volar'is superficialis. Superficial volar branch. Term for the termination of the ulnar artery, forming the beginning of the superficial palmar arch.

R. xiphoid'eus. Xiphoid branch. Term for an offset of one of the anterior branches of the *internal mammary artery* which ramifies over the ensiform (xiphoid) process.

Ramus'cule. (*Ramusculus*. F. *ramus-cule*; G. *Astchen*.) A small branch.

Ramus'culus. (L. Dim. of *ramus*.) A small branch.

Rana. (L. *rana*, a frog. F. *grénouille*; G. *Frosch*.) A Genus of the *Anoura* or *Anura*, Class *Amphibia*. Formerly used in medicine.

R. esculenta. (F. *grénouille verbe, ou commune*; G. *der grüne Wasserfrosch*.) The edible frog of France, where its flesh is greatly esteemed as food.

Rancid. (L. *rancidus*, musty, stale. F. *rance*; G. *ranzig*.) Epithet applied to a fatty body which, by exposure to the atmospheric air, has acquired a strong, sour odour and taste, from decomposition and the setting free of the fatty acid.

Rancidifica'tion. A becoming rancid.

Rancid'ity. The condition of being rancid.

Rand'ia. (After Isaac Rand, a London botanist of the eighteenth century, who described this genus.) A Genus of the *Cinchonaceæ*.

R. aculea'ta. The ink-berry or indigo plant of the W. Indies. Juice of fruit astringent.

R. dumeto'rum. (L. *dumetum*, a place full of bushes.) A shrub. Hab. Coromandel. The fruit, bruised and thrown on the water, is used to intoxicate or kill fish. It is an emetic, and, in smaller doses, a cardiac stimulant and antispasmodic.

R. longifo'ra. Hab. Bengal. Bark used in intermittent fever.

R. spino'sa. A syn. for *R. dumetorum*.

Range. (F. *ranger*, to dispose.) Extent, scope.

R. of accommoda'tion. See *Accommodation, range of*.

R. of sensibili'ty. See *Fechner's law*.

R. of vision. See *Vision, range of*.

Rangoon' tar. A variety of petroleum, obtained especially at Rangoon in India.

Ra'nine. (L. *rana*, a frog.) Belonging to, or shaped like, a frog. In *Anat.*, belonging to that part of the tongue liable to be affected with *ranula*.

R. artery. The terminal branch of the lingual artery which passes forwards towards the tip of the tongue between the *genio-glossus* and inferior *lingualis* muscles, giving numerous muscular branches to the tongue. Near its termination the artery is superficial. It gives off a small branch which anastomoses with its fellow of the opposite side.

R. vein. The ranine vein is the principal vein carrying blood from the tongue. It commences near the tip, where it lies beneath the mucous membrane; it then crosses the *hyoglossus* muscle in company with the *hypoglossal nerve*, and empties itself into the internal jugular vein.

Ranivorous. (L. *rana*, a frog; *voro*, to devour.) Feeding upon frogs.

Ranke, na'sal angle of. (After the anatomist Ranke.) *Cranium*. The angle included between the horizontal plane of the skull and a line passing through the mid-line of the alveolar border of the upper jaw beneath the nasal spine and the centre of the fronto-nasal suture.

Ransom's method of disinfecti'on. A special method introduced by Ransom, in which dry heat is used.

Ran'stead. A name for the toad-flax, *Antirrhinum linaria*.

Ran'tree. A name for the *Sorbus aucuparia*.

Ran'ula. (L. From *rana*, a frog, on account of the hoarseness which may accompany the disease. F. *ranule*; G. *Fröscheingeschwulst*.) A cyst under the tongue. The term *ranula* is applied to cysts developed in connection with the salivary glands or ducts in the floor of the mouth; but it has been used sometimes in a wider sense, including cysts of all kinds situated in that region. The typical form consists of an elastic swelling containing fluid, on one side of the frenum. It tends steadily to increase in size until it may greatly hinder deglutition. The cyst is lined by columnar ciliated epithelium. The fluid within is transparent, viscid, and of a yellow colour, and contains mucus and albuminate of soda, but no ptyalin or sulphocyanide of potassium. It has been demonstrated that the cyst is sometimes developed from a duct of the sublingual gland. In most cases the origin of the cyst is obscure; it has been suggested that some cases may be due to the enlargement of the sublingual bursa.

An acute *ranula* has been described, which is probably due to sudden blocking of one of the ducts of the salivary glands. It is very rare.

R. lapide'a. (L. *lapis*, a stone.) A calculus formed in the salivary ducts which may occasionally produce a form of *ranula*.

RANUNCULACEÆ—RAPE

R. pancreat'ica. A cyst formed in connection with the pancreas. The term was introduced by Virchow.

R., suprahy'oid. A term for a cystic tumour (dermoid) situated immediately above the hyoid bone.

Ranuncula'ceæ. A Natural Order of plants forming one of the thalamifloral series of polypetalous, dicotyledonous phanerogams. This Order was named by Jussieu. The calyx is polypetalous, corolla polypetalous and hypogynous, stamens numerous and hypogynous, carpels usually distinct, embryo minute, at the base of a horny albumen. This Order is often called the Crow-foot Tribe.

Ranuncula'ceous. *Bot.* Belonging to the Order *Ranunculaceæ*.

Ranuncule'æ. (De Candolle.) A Tribe of the *Ranunculaceæ*, having petals with a claw containing nectar, one-ovuled carpels which become dry achenes. The only European Genus is the *Ranunculus*.

Ranunculoï'des. Resembling the *Ranunculus*.

Ranun'culus. (Linn.) A Genus of plants of the Nat. Order *Ranunculaceæ*, commonly called buttercups. The name is derived from *L. rana*, a frog, as many species are found in damp places.

They are herbs, having a fleshy or sometimes tuberous root, with tufted, alternate leaves. The parts of the flower are inserted on the receptacle, sepals 5, petals 5 with a spur at the base containing nectar, stamens numerous, carpels numerous. The fruit consists of dry achenes. Nearly all the species have an acrid taste, and many are poisonous. This is due in part to a volatile oil present throughout the plant, but also to a bitter principle found in the perennial roots. As a class they are irritants, produce vesication when applied to the skin, and are powerful emetics.

R. aborti'vus. The small-flowered crow-foot.

R. aconitifo'lius. A European species. The root, green leaves, and juice are made use of.

R. a'cris. This species is strongly irritant to the skin; it gives rise to a form of erythema aestivum.

R. alpes'tris. The Alpine white crow-foot. Externally, vesicant; internally, purgative, in large doses. The leaves are chewed by chamois-hunters, being reputed as relieving giddiness and fatigue.

R. arven'sis. A syn. for *R. acris*.

R. bulbo'sus. Hab. Europe and North America. The root was formerly used under the name of *Radix ranunculi bulbosi*. Still used in homœopathy.

R. cre'ticus. A species used by the ancients to cure warts, ulcers, scabies, and toothache.

R. ficar'ia. The *Celandine*, lesser. The leaves are antiscorbutic, and the root has been used as a poultice for piles.

R. glac'ialis. An Alpine species. The root is sudorific, and is used in bronchial affections and rheumatism.

R. illyr'icus. A syn. for *R. bulbosus*.

R. læ'tus. A syn. for *R. bulbosus*.

R. lin'gua. A syn. for *Anemone nemorosa*.

R. longifo'lius. The same as *R. lingua*.

R. murica'tus. A European species. Stimulant and vesicant. Used in skin diseases.

R. nemoro'sus. A syn. for *Anemone nemorosa*.

R. paluden'sis. The same as *R. palustris*.

R. palus'tris. Syn. for *R. sceleratus*.

R. præ'cox. A syn. for *R. ficaria*.

R. pratens'is. Syn. for *R. acris*.

R. pubes'cens. A South African plant. The juice has been used as a stimulant to ulcers.

R. re'pens. Hab. Europe, Asia, and N. America. Formerly used in Medicine.

R. ruf'ulus. A syn. for *R. acris*.

R. scelera'tus. Marsh crowfoot. Hab. Europe, Asia, and North America. Poisonous, owing to a volatile oil, which is dissipated by cooking. The plant was called by the Romans *Sardonia*, because when eaten fresh it was supposed to produce convulsive sardonic laughter. When cooked, it is used as a pot-herb.

R. sic'ulus. A syn. for *R. acris*.

R. Steven'ii. A syn. for *R. acris*.

R. tho'ra. An Alpine plant; has powerful irritant properties, and is used to produce vesication.

R. umbella'tus. A syn. for *R. sceleratus*.

R. vernus. A syn. for *R. ficaria*.

R. virginia'nus. A syn. for *Lobelia syphilitica*.

Ran'vier. A French histologist of the present day.

R., constrict'ing band of. The ring, or disc, of cementing substance which unites the internodes at a node of Ranvier. It is situated outside the neurilemma, and can be readily stained by nitrate of silver.

R., constrict'ions of. The same as the *Nodes of Ranvier*.

R., cross'es of. The cross-shaped indications of *R.'s nodes* seen in specimens of nerve-tissue which have been stained with silver nitrate.

R.'s lem'on-juice meth'od. A method of tracing nerve-fibres in small pieces of tissue. Soak in lemon-juice for five or ten minutes, wash in distilled water, stain in 1 per cent. gold chloride solution for a quarter to one hour. Wash in water, place in 50 c.c. of water containing two minims of acetic acid, and expose to the light. If the superficial epithelium is not to be preserved after taking out of gold chloride solution, place the tissue for twenty-four hours in formic acid of sp. gr. 1.2, diluted with three volumes of water, and keep in the dark (Squire).

R., nodes of. See *Nodes of Ranvier*.

R., tac'tile discs of. Special cup-shaped tactile corpuscles which end in intercellular substance.

Ra'pa. (L.) The root of the turnip plant, *Brassica rapa*; also, the plant itself.

R. na'pus. A syn. for *Brassica rapa*.

R. rotun'da. The same as *R. napus*.

Rape. 1. (A word of Scandinavian origin, signifying a seizing by force; allied to Mid. E. *rape*, haste. F. *viol*; G. *Nothzucht*.) The legal definition of rape is as follows:—"The carnal knowledge of a woman forcibly and against her will. Also, under any circumstances in a child under fifteen." This offence is punishable by English law with penal servitude for life. It is not necessary to prove that actual physical force was employed; the offence, if committed on a woman under the influence of an anæsthetic, or

after threats or intimidation, is rape in a legal sense.

2. (*L. rapa*, the turnip.) Common name for the *Brassica napus*.

R. oil. See *Oleum rapæ*.

R. seed. The seed of the *Rape*, *Brassica napus*; also, of other species of brassica.

Raphanodon. (*Ῥαφανῶδον*, radish-like; from *ῥαφάνις*, a radish.) A transverse, unsplintered fracture of a long bone.

Raphania. (Named from *Raphanus*, the radish; because the seeds of a certain kind of radish were said to produce this disease.) A name given by Linnæus to a disease which occurs in Sweden and Germany, and which is characterised by convulsions of the limbs, accompanied by acute pain. He attributed it to seeds of *Raphanus*, *Raphanistrum*, or *Rapistrum*, which became mixed with corn. It is allied to *Ergotism* and *Pellagra*.

R. maiztica. A syn. for *Pellagra*, so named because it was believed to be caused by eating maize.

Raphanis. The same as *Raphanus*.

R. magna. A syn. for *Cochlearia armoracia*.

Raphanistrum arvense. The wild radish. The seeds have an acrid taste, and were formerly used as a condiment.

Raphanus. (*Ῥαφάνις*, the radish. F. *raifort*; G. *Rettig*.) A Genus of the *Cruciferae*.

R. hortensis. Syn. for *R. sativus*.

R. marinus. A syn. for *Cochlearia armoracia*.

R. niger. Syn. for *R. sativus*.

R. rusticus. Syn. for *Cochlearia armoracia*.

R. sativus. (F. *raifort cultivé*.) The garden radish plant. The root is the common edible radish. It is considered to be diuretic and antiscorbutic.

R. sylvestris. A syn. for *Lepidium sativum* (q. v.).

Raphē. (*Ῥαφή*, a seam. F. *raphe*; G. *Nath*.) Term applied, in Anatomy, to any prominent dividing line resembling a raised stitch.

R., exterior. Term for the *Stria longitudinalis medialis*.

R. inferior corporis callosi. Term for the median raphē on the under surface of the *corpus callosum*.

R. of ampulla. A ridge on the roof of the ampulla of a semicircular canal, formed by the union of the two folds of labyrinth capsule from which the semicircular canal is formed.

R. of medulla oblongata. See *Medulla oblongata*, *raphē* of.

R. of penis. The continuation of the raphē of the scrotum along the *corpus spongiosum* of the penis.

R. of perineum. The median raphē of the perineum along which its muscles are attached.

R. of pharynx. See under *Constrictor pharyngis inferior*, *O. pharyngis medius*, and *C. pharyngis superior*.

R. of scrotum. See *Scrotum*, *raphē* of.

R. of soft palate. See *Velum pendulum palati*, *raphē* of.

R. of Stillling. The anterior white commissure of the spinal cord.

R. of tongue. See *Tongue*, *raphē* of.

R. of urethra. See *Urethra*, *raphē* of.

R. palati duri. The raphē of the hard

palate. Term for the narrow median ridge of mucous membrane of the palate.

R., palatine. The same as *R. palati duri*.

R., perineal. See *R. of perineum*.

R. post-oblongata. Term for the posterior median fissure of the *medulla oblongata*.

R. superior corporis callosi. The longitudinal raphē on the upper surface of the *corpus callosum*.

Raphe. The *Chenopodium vulvaria*.

Raphia. A Genus of Palms possessing abundance of sap that yields sugar. When fermented, this sap forms palm-wine, or arrack or toddy.

Raphiankistron. (*Ῥαφίς*, a needle; *ἄγκιστρον*, a fish-hook.) An instrument used in the operation of forming an artificial pupil.

Raphides. (*Ῥαφίς*, a needle.) Bundles of acicular crystals found in the cells of certain plants, especially in Orchids.

Raphidophora vitien'sis. A plant, Nat. Order *Arvidæ*, indigenous in Fiji, used in the preparation of tonga.

Raphion. (*Ῥάφιον*, dim. from *ῥαφίς*, a needle.) A small needle.

Raphis. (*Ῥαφίς*. Plur. *raphides*.) A needle.

Also, one of the acicular crystals found in bundles in the cells of certain plants, especially Orchids.

Raphonticolides lutea. A name for the *Centaurea behen* (q. v.).

Raphus. (*Ῥάφους* = *ῥάφους*.) The same as *Rapus*.

Raphys. (*Ῥάφος*.) *Raphus*.

Rapistrum. (*Rapa*.) Syn. for *Raphanus*.

Raptus. (L. *rapiō*, *raptum*, to seize. F. *saisie*.) Med. A sudden and violent seizure.

R. hæmorrhagicus. A hæmorrhagic seizure, or sudden and violent hæmorrhage.

R. maniacus. A sudden attack of frenzy or mania.

R. melancholicus. A sudden and violent attack of melancholy.

R. nervorum. A seizure of the nerves. Term for an attack of cramp.

R. post-tergæneus. (L. *post*, behind, after; *tergum*, the back.) A term for *Opisthotonos*.

R. supinus. (L. *supinus*, lying on the back.) A syn. for *Opisthotonos*.

Rapum. The same as *Rapa*.

R. majus. The *Brassica rapa*.

Rapunculus corniculatus. (Dim. from L. *rapa*, the turnip.) A name for *Phyteuma orbiculare*.

R. virginianus. Name for *Lobelia syphilitica*.

Rapuntium syphiliticum. A syn. for *Lobelia syphilitica*.

Rapus. (*Ῥάπυς*, the turnip.) The same as *Rapa* or *Rapum*.

Rapys. (*Ῥάπυς*.) The same as *Rapus*.

Rarefaciens. (L. *rarus*, thin, rare; *facio*, to make.) Rarefying. Old epithet for drugs which were supposed to increase the bulk of the blood or other humours of the body.

Rarefaction. (L. *rarus*, thin, rare; *facio*, to make.) The act of rarefying, or the state of being rarefied.

Rarefied. Separated in its component parts; rendered less dense.

Rarefy. (L. *rarus*, few, far apart; *facio*,

to make.) To separate component parts; to render less dense.

Rarefying. Separating component parts; rendering less dense.

R. osteitis. See *Osteitis*, rarefying.

Rarifac'ens. See *Rarefaciens*.

Rarifo'rous. (L. *rarus*, few; *flos*, *floris*, a flower.) Bot. Having few flowers.

Rarifo'lious. (L. *rarus*, few; *folium*, a leaf.) Bot. Having few leaves.

Raritas. (L.) Scantiness, rarity.

R. dentium. Scantiness of teeth. Term applied to the condition of the jaw in which there are large spaces between the teeth.

Rasa. Med. Old term syn. with *Resina*. Chem. Old term for *Stannum*.

Rasaheti. Chem. Old term for *Æs ustum*.

Rasatio. The same as *Expuition*.

Rasceta. (L.) Anat. Old term signifying *Carpus*; also, *Brachialë*; also, *Tarsus*.

Also, the transverse lines of skin on the inner side of the wrist.

R. pedis. Old term for *Tarsus*.

Rascha. Syn. for *Rasceta*.

Raset'a. The same as *Rasceta*.

Raset'a. The same as *Rasceta*.

Rash. (Probably allied to *F. rache*, scurf, and to *S. rascar*, to scratch, which latter is derived from Low Lat. *rasicare*, a corruption of *radicare*, to scrape.) A diffuse eruption upon the skin; an efflorescence.

R., can'ker. A term for *Cynanche maligna*.

R., cat'erpillar. A localised rash believed to be consequent on irritation produced by the hairs of certain caterpillars.

R., crim'son. A name formerly given to *Measles*.

R., doctors'. Term for a transitory eruption occasionally observed in nervous people when submitted to a medical examination.

R., drug. See *R., medicinal*.

R., fe'ver. A syn. for *Scarlet fever*.

R., gum. The same as *R., tooth*.

R., liche'nous. Med. A term for *Lichen*.

R., medic'inal. A rash brought out by the exhibition of some drug.

R., mercur'ial. See *Mercurial rash*.

R., mil'let-seed. *Miliaria*.

R., mul'berry. See *Mulberry rash*.

R., net'tle. See *Nettle-rash*.

R., pur'ple. See *Purpura*.

R., red. See *Erythema*.

R., rose. See *Roseolu*.

R., scar'let. A term for *Scarlet fever*.

R., sum'mer. *Lichen tropicus*.

R., tooth. A skin rash consequent on teething; *Strophulus*.

R., ty'phoid. The rash of *Typhoid fever* (q. v.).

R., wild'fire. A name for *Ignis sylvestris*.

Rasori. An Italian physician who founded the Medical doctrine of *Controstimulus* (q. v.).

Rasor'ian. Belonging to *Rasori*.

Rasor'ism. *Rasori's* doctrine of *Controstimulus*.

Rasor'ium. (L. *rado*, to scrape.) Surg. Old term syn. with *Raspatorium*.

Rasp. Surg. The same as *Raspatory*.

R. sound. Med. The same as *Rasping sound*.

Raspato'rium. (L. *rado*, to scrape.) A *Raspatory*.

Raspatory. (F. *raspatoire*; G. *Raspel*.) Surg. An instrument for separating the periosteum from bones, or for scraping the bone.

Rasp'berry. The *Rubus idæus*.

R., black. The *Rubus strigosus*.

R., ground. The *Hydrastis canadensis*.

R. vin'egar. See *Acetum rubi idæi*.

R., wild. The *Rubus strigosus*.

Rasping sound. Med. Term for *Bruit de râpe*.

Rasseta. The same as *Rasteta* and *Rasceta*.

R. pe'dis. The same as *Rasceta pedis*.

Rasteta. The same as *Rasceta* (*Paracelsus, de Urin.*).

Rastul. Old term for *Sal.* (Ruland and Johnson.)

Rasu'ra. (L. *rado*, to scrape.) A shaving or scraping of any substance.

Rat's bane. See *Ratsbane*.

Rat-paste. A paste for the purpose of poisoning rats; it usually contains phosphorus. It is extremely poisonous when taken accidentally or wilfully administered. See *Phosphorus*.

Rat-tail su'tures. Surgical sutures made of the tendinous fibres from a rat's tail.

Rat-tooth for'ceps. A form of strong-toothed forceps used for extracting foreign bodies from wounds.

Ratafia. (L. *rata fiat*, that which is approved.) A liquid prepared by adding the flavouring of various fruits and also sugar to strong spirits.

Ratan'hia. See *Rhatania*.

Ratanhin. See *Rhatanin*.

Rat'anhy. See *Rhatany*.

Rath'kë. A German anatomist of the present day.

R.'s gland. Another name for *Jacobson's organ*.

R.'s inves'ting mass. The membranous capsule which covers the cephalic end of the notochord, and goes to form the base and vault of the embryonic skull.

R.'s lat'eral trabec'ulæ. The two thickenings in the base of *R.'s investing mass* (see above) which enclose the opening of the pituitary body or hypophysis cerebri.

R.'s pouch. The pituitary diverticulum. A minute canal which passes, in the embryo, from the pharynx to the anterior part of the pituitary body or hypophysis cerebri.

Ra'tio. (L.) The cause or reason. Also, method or means.

In Mathematics, the proportion which one magnitude bears to another.

R. meden'di. (L. *medendus*, to be healed, a healing.) A method of healing.

R., oc'ular micro'meter. The number of divisions on the ocular micrometer (see *Micrometer*, ocular) necessary to take in the image of one millimetre of the stage micrometer. See *Micrometer*, stage.

R. sympto'matum. The reason or cause of the symptoms.

R. vic'tus. (L. *victus*, sustenance.) Method of sustenance; dietary.

Rational. (L. *rationalis*, from *ratio*, reason.) Reasonable; based on reasoning.

R. for'mula. (L. *formula*, a mould, an established mode of expression.) See *Formula*, rational.

R. therapeut'ics. (Θεραπεύω, to wait upon, or cure.) Treatment by drugs based upon

pathology and pharmacology. Term used in opposition to empirical treatment, which is based upon the results of previous experience. See *Therapeutics*.

R. treatment. A term applied to a mode of treatment based upon theoretical considerations, and not upon experience. The opposing schools of Medicine were described by Celsus, who gives a detailed account of the respective views held by the rationalists and empirics.

Much of the language of Celsus is applicable to the practice of Medicine in our own day.

The rationalists endeavoured to ascertain the proximate and remote causes of disease, and to this end studied anatomy and physiology, and performed vivisections; whilst the empirics were influenced only by experience and the results of previous treatment, independently of hypothesis and speculation.

Rationalists. Term for the school of Medicine that practised rational, in opposition to empirical, treatment. See *Rational*.

Rations. (L. *ratio*, proportion.) Daily allowance of food, especially to a soldier or sailor.

Ratsbane. Common name for the seeds of *Strychnos nux vomica*; also, for *Arsenious acid*. In Sierra Leone, name for the *Chailletia toxicaria*.

Rattle. (Anglo-Sax. *hrutan*, to make a noise.) Rattle was originally the synonym of the French *râle* as used in auscultation. The latter has now been Anglicised, and is in common use. See *Râle*.

R., death. See *Death-rattle*.

Rattle-herb. A name for the *Actæa spicata*.

Rattle-weed. See *Rattleweed*.

Rattlebush. A common name for the *Sophora tinctoria*.

Rattlefern. The *Botrychium virginicum*; a species of the Genus *Botrychium*, which is astringent and vulnerary.

Rattleflag. A name for the *Eryngium yuccifolium*.

Rattles. A colloquial term for the *Death-rattle*.

Rattlesnake. (F. *crotale*; G. *Klapperschlange*.) The common name for several varieties of *Crotalus*. The *Crotalus horridus* and *C. durissus* are the most poisonous.

R. leaf. Term for the leaf of *Goodyera pubescens*.

R.'s master. A term for *Agave virginica*; also, for *Liatris scabiosa*; also, for *Nabalus albus*, which is reputed to cure snake-bites.

R. milkwort. A popular name for *Polygala senega*.

R. plantain. The *Goodyera pubescens*.

R. root. The root of *Polygala senega*; also, that of *Trillium latifolium*; also, that of *Nabalus albus*, which is reputed to cure snake-bites.

R. weed. The *Hieracium venosum*.

Rattleweed. A name for *Actæa racemosa*.

Ratula. A syn. for *Raspatorium*.

Rau, process of. (After the anatomist Rau.) A name for the *processus gracilis* of the malleus.

Rauber's convolution. (After the anatomist Rauber.) A fold of grey matter in the *Olivary body*. Also termed nuclear convolution.

R.'s layer. *Embryol.* A superficial layer

of flat cells which appears very early in the development of the embryonic layers in the centre of the embryonic area.

Rauce'do. (L.) Hoarseness.

R. catarrhalis. Catarrhal hoarseness. Hoarseness due simply to catarrh.

R. potato'rum. The hoarseness of drinkers. Due to spirit-drinking.

R. syphilitica. Syphilitic hoarseness. A chronic hoarseness due to the laryngeal affections of secondary syphilis.

Rau'citas. Syn. for *Raucedo*.

Rau'cous. (*Raucus*.) Hoarse, harsh.

Rau'cus. (L.) Hoarse, harsh.

Rauwolfia nit'ida. A plant of Tropical America. Root, emetic and purgative.

Rav'aton's amputa'tion. A method of amputation introduced by Ravaton. A circular incision is first made down to the bone, and then, by two longitudinal incisions, flaps are cut.

Raved. Old term for *Rheum*. (Castellus.)

Raw, process of. See *Rau, process of*.

Rawley's springs. Chalybeate springs. Rockingham Co., Virginia.

Rawp. The same as *Raucedo*.

Raws. The same as *Excoriations*.

Rax'ach. An old term for *Gum ammoniac*.

Ray. (Mid. Eng. *raye*.) A beam or pencil of light.

Also, one of a number of lines diverging from a common centre.

Also, in *Comp. Anat.*, a member of the Genus *Raja*.

R.s, actin'ic. Solar rays which give rise to chemical changes.

R.s, bipo'lar. Rays leading from one centre or point of divergence to another.

R.s, chem'ical. The same as *R.s, actinic*.

R.s, conver'gent. Rays which converge towards a certain point.

R.s, diver'gent. Rays which diverge from a certain point.

R., extraor'dinary. When a ray of light is polarised it becomes split up into two, the *ordinary* and *extraordinary* ray. The extraordinary ray is the one which departs the further from the ordinary law of refraction, and its vibrations are parallel to the vertical axis.

R., fin-. See *Fin-ray*.

R.-flo'ret. Syn. for *R.-flower*.

R.-flow'er. One of the marginal flowers of a composite flower or inflorescence, as distinguished from the central or disc-flowers.

R.-fun'gus. The *Actinomyces* (see in Appendix) which, when it enters the body, produces the disease *Actinomycosis*.

The disease was first described in 1877 by Israel, of Berlin. The ray-fungus consists of a dense mycelium of interlacing hyphæ, with club-shaped extremities extending radially into the tissues. The result of the presence of the fungus is a nodule or tumour, in the centre of which is the fungus, and surrounding it the products of inflammatory reaction; these may break down, and an abscess may be formed.

The method by which the fungus enters the body is at present unknown. In some cases in which the jaw is affected there is reason to suppose that access was obtained by means of a carious tooth; and in pulmonary actinomycosis it is possible that the fungus entered through the air-passages.

R.s, homocen'tric. A pencil of rays of light having a common centre or point of origin.

R., medullary. One of the vertical partitions of parenchyma in woody plants which separate the fibro-vascular bundles, and radiate from the pith to the bark.

R.s, obscure'. Term for the chemical or actinic rays of the solar spectrum.

R. of direction. Term for light starting from a luminous point and travelling in a straight line.

R., ordinary. When a ray of light is polarised, it becomes split up into two, the *ordinary* and *extraordinary* ray. The ordinary ray is that one which follows the more nearly the ordinary law of refraction, and whose vibrations are perpendicular to the vertical axis.

R., sharp-nosed. Common name for *Raja oxyrrhynchus* (q. v.).

Ray-oil. (F. *huile de foie de raie*; I. *olio di raja*; G. *Rochenthran*.) The oil expressed from the liver of the skate; it is sometimes substituted for cod-liver oil, and is said to contain more iodine.

Ray's mania. A form of general moral insanity first described by Ray, in which pathological cortical changes have been demonstrated.

Raygat's test. The *hydrostatic test* of live birth, which was first suggested by Raygat.

Raynaud's disease'. In its severest form, this disease is called *Symmetrical gangrene*; but the disease of the vasomotor system, first described by Dr. Raynaud in 1862 and named after him, consists of three principal varieties, which are termed respectively—(1) Cold pallor or local syncope; (2) Hot flushings or local asphyxia; and (3) Cold lividity. This last variety frequently results in gangrene of the parts affected, and, as it usually affects both sides of the body, it receives the name *symmetrical gangrene*.

The ætiology of the disease is obscure; it has been associated occasionally with paroxysmal hæmoglobinuria, and with ague. It may affect either sex, and is more common in women than in men.

The first variety, *local syncope*, is well described by the name cold pallor. It affects the extremities, usually the fingers, certain of which become white, numb, and cold to the touch. The attack may be caused by exposure to cold, or, rarely, by emotion, and its duration is very variable, from hours to days. It is much more frequently seen in the winter time. The familiar "dead fingers" represent an imperfect variety of this disease.

The *hot flushing* frequently attacks the legs, and may follow a transient attack of the preceding. The limb becomes flushed, hot, and very painful. The veins often stand out upon the surface of the red or purple swollen skin. In some cases this stage precedes, and in others is a stage during the recovery of, cold lividity or *local asphyxia*; in which the limbs are blueish and cold; the circulation is greatly hindered, so that the pale spot produced by pressure upon the part very slowly assumes the colour of the surrounding part. Chilblains are probably an allied affection.

Symmetrical gangrene follows the local asphyxia when the circulation of the blood is insufficient to preserve the vitality of the tissues. It is usually preceded by anæsthesia. Bullæ form upon the affected parts, the base of which

sloughs as the attack passes off, leaving cicatrices. In this way successive losses of tissue occur in repeated attacks; sometimes, however, more massive necrosis occurs. This is accompanied by intense pain. It is not a spreading gangrene. It may attack either the fingers or toes, very rarely the ears; generally both sides of the body are similarly attacked. The general health is usually but little affected, and the disease is not fatal to life.

R.'s gangrene. See under *R.'s disease*.

R.'s phenom'enon. A syn. for *Local asphyxia*. See under *R.'s disease*.

Razor. (L. *razor*, a barber or shaver.) An instrument for shaving. It is used in Surgery to remove hair that may interfere with an operation, and to ensure cleanliness. Antiseptic treatment of wounds is impossible unless the parts are properly shaved.

Re-. (L.) Prefix denoting back, again.

Reabsorption. The same as *Resorption*.

Reacquired. Acquired again or afresh.

R. move'ments. Term for movements returning after temporary cessation consequent on a lesion to any of the motor areas of the brain.

Reaction. (L. *re*, again; *ago*, actum, to act.) Mutual action.

Med. The response of the system or of an organ to a stimulus. The return of vitality after shock. The supervention of fever after traumatism.

Chem. The mutual chemical decomposition of two substances. Also, term signifying the acidity or alkalinity of a substance.

Electro-therap. Muscular contraction on the making or breaking of the current.

R., ac'id. *Chem.* Term signifying that a substance is capable of giving rise to certain chemical changes characteristic of acids; as *e.g.* reddening of blue litmus paper, or effervescing with a carbonate.

R., Ad'amkiewicz's. A test for proteids and albumins introduced by Adamkiewicz. Add to the substance one part of strong sulphuric acid and two parts of glacial acetic acid, and boil the mixture. A violet fluorescence is produced.

R., al'kaline. Term signifying that a substance is capable of giving rise to certain chemical changes characteristic of alkalies; as *e.g.* blueing of red litmus-paper, browning of yellow turmeric paper.

R., amphichro'ic. (Ἀμφί, on both sides; χρώς, the colour of anything.) Term for a double reaction (acid and alkaline) sometimes obtained from urine, consequent on its containing both acid and alkaline constituents.

R., amphi'genous. (Ἀμφί, on both sides; γένος, race, descent.) A syn. for *R., amphichro'ic*.

R., amphoter'ic. (Ἀμφοτέρως, both.) A syn. for *R., amphichro'ic*.

R., blu'ret. Used as a test for proteids. (Also termed *Ritthausen's test*.) Render the solution to be tested alkaline with solution of potash, add dilute solution of copper sulphate, and shake. A violet-red colour is produced. See also *Biuret*.

R., gal'vano-troph'ic. (Galvanic; trophic.) A phenomenon observed by L. Hermann in certain small aquatic animals when subjected to the action of a galvanic current. After giving a few spasmodic movements, they

READE—RECEPTACULUM

take up a fixed position with the head towards the positive pole of the current and the long axis in the direction of the current.

R., Gmelin's. See *Gmelin's reaction*.

R., hemiopic pupillary. First described by Wernicke. A reaction obtained in *hemianopia* or hemiopia. A pencil of light thrown on to the blind half of the retina causes no movement of the iris; but, thrown on to the healthy half, causes contraction of the iris in both eyes.

R.-im'pulse. Term for the recoil supposed to occur in the right and left ventricle of the heart immediately on their having emptied their blood into the pulmonary artery and aorta.

R., isofarad'ic. (*I'cos*, the same as; *faradic*.) First described by Adamkiewicz. A state of muscle in which it responds to the faradic electric current only.

R., myoton'ic. First described by Erb. A reaction observed in *Thomsen's disease*, in which there is an increase, both quantitative and qualitative, in faradic excitability.

R., neutral. A reaction indicating the absence of opposite qualities, in especial of acidity and alkalinity.

R. of degenera'tion. Often written abbreviated as *De. R.* A gradual diminution and final loss of faradic excitability of both nerves and muscles, consequent on degeneration and atrophy of both. The galvanic excitability of the muscles is at first either unaltered or slightly increased; finally it may become lost. At one stage there is a delay of muscular contraction, and there is also a change in the normal sequence of contraction. See also *R. of exhaustion*.

R. of exhaus'tion. A special variety of *R. of degeneration*. It consists in a condition in which a certain definite reaction of nerve and muscle to an electric current of given strength cannot be reproduced, except by an increase of strength of current.

R.-per'iod. The period of *reaction* (see main heading) or return of vitality after *shock*.

R.-time. The interval between the application of a stimulus and the beginning of the consequent muscular contraction.

R., xanthoprote'ic. See *Xanthoproteic reaction*.

Reade's hemispherical condenser. A hemispherical condensing lens introduced by Reade. See also under *Condenser*.

Ready method. Term for Marshall Hall's method of artificial respiration. See under *Hall, Marshall*.

Rea'gent. (L. *re*, again; *ago*, to act.) *Chem.* Any substance used as a test, or to produce a chemical *reaction*.

R., gen'eral. *Chem.* A reagent used to indicate the group to which a substance belongs.

R., spe'cial. *Chem.* A reagent used to indicate the presence of some special substance.

Real'gar. Native disulphide or red sulphide of arsenic. See *Arsenic, disulphide of*.

Reamer. (Mid. Eng. *remen*, to widen.) A kind of fine gouge.

R., den'tist's. An instrument used by dentists to enlarge the pulp-cavity preparatory to putting in the filling.

Reason, disorders of. A popular term for mental diseases.

Reasoning insanity. (F. *folie raisonnante*.) See *Insanity, reasoning*.

R. ma'nia. See *Mania, reasoning*.

R. melanco'lia. See *Melancholia, reasoning*.

R. mon'omania. See *Monomania, reasoning*.

Réaumur. A French physicist of this century.

R.'s thermo'meter. See *Thermometer, Réaumur's*.

Re'bis. An ancient term, which was used by Paracelsus to signify *faces*.

Rebisola. Old term for an *arcanum urinæ ad icteritium*, or nostrum obtained by boiling and straining human urine, and then letting it stand for three days, when certain crystals (*lapillos rebisoleos*) are deposited. These crystals were recommended by Dornæus for the special diseases of miners. (Ruland and Johnson, in *Lex. Paracels.*, iii, 17.)

Rebolea. *Med.* Old term syn. with *Mumia* (q. v.).

Reb'ona. *Med.* Old term for *Stercus adustum*, or dried feces; also, for *Mumia*.

Reboulleau's blue. A syn. for *Schweinfurth blue*.

Re'bus. (L. *rebus*, abl. plur. of *res*, a thing, or a matter.) Old term for the "ultima rerum materia," or ultimate principle of matter.

Récamier's caustic. A solution of gold chloride in dilute nitro-hydrochloric acid. Used as a caustic.

R.'s curette'. A double S-shaped graduated curette, looped at one end.

Recales'cence. (L. *re*, again; *caulesco*, to grow to a stalk.) Schimper's term for union of a *petiole* with a branch or a peduncle.

Receiv'er. 1. *Chem. and Pharm.* A vessel fitted to the neck of a retort to receive the products of distillation.

2. A popular term for the blanket in which a new-born infant is wrapped.

Receiv'ing tubes of kid'ney. See under *Urinary tubules*.

Recept'a. (Fem. s. *Med. L.* From L. *receptus*, received.) An old term for a medical prescription.

Recept'acle. (L. *receptaculum*.) A place or vessel to receive or keep things in.

In *Bot.*, the common base which supports the various parts of a flower. Also, in *Fungi*, the cellular mass, developed from the mycelium, which bears the reproductive organs.

Receptac'ula. Plur. of *Receptaculum*.

R. du'ræ mat'ris. The sinuses of the dura mater.

Receptac'ular. Belonging to a *Receptaculum* or to *Receptacula*.

Receptaculum. (L.) A receptacle.

R. cerebelli. Term for that portion of the *Squama occipitalis* which is in relation with the cerebellum; namely, that part below the internal occipital protuberance and sulcus transversalis.

R. chy'li. Receptacle of the chyle. The dilated commencement of the *thoracic duct* in front of the lumbar region of the vertebral column.

R. Cotun'nii. Receptacle of Cotunnus. A triangular space formed by separation of the two layers of the dura mater near the middle of the posterior surface of the petrous part of the temporal bone, just at the opening of the aqueductus vestibuli.

R. lo'bi occipita'lis. Receptacle of the

occipital lobe. That part of the *squama occipitis* which is in relation with the occipital lobe of the brain; namely, that part above the internal occipital protuberance and sulcus transversalis.

R. Pec'queti. The *R. chyli*, or *Pecquet*, reservoir of.

R. sellæ equinæ later'ibus ap'positum. The receptacle applied to the sides of the horse-saddle (*sella equina*, or *sella turcica*). A term for the *Cavernous sinus*.

Receptar'ii. (Mod. L. nom. plur. From *recepta* (q. v.).) An old term introduced by Langius (ii, ep. 23) signifying physicians who collect *recepta* wholesale from pharmacopœias, &c.

R. med'ici. (L. *medicus*, belonging to a physician.) A fuller term for *Receptarii*.

Receptive. (L. *recipio*, *receptum*, to receive.) Capable of receiving.

R. centres. Nerve-centres receiving influences which excite some form of nervous activity not associated with consciousness.

Receptiv'ity. (L. *recipio*, *receptum*, to receive.) Capability for receiving; especially, in *Physiol.*, for receiving stimuli.

Receptum. (L.) Something received; an engagement or promise. Used as a syn. for *Recepta* (q. v.).

R. acetab'uli. A syn. for acetabular fossa, or *Acetabulum*.

Recess'. (*Recessus*.) A depression or hollow. For subheadings not given below, see subheadings of *Recessus*.

R., intercrural. Syn. for *Interpeduncular space*.

R., interscap'ular. Term for the hollow between the two scapulæ.

R., postpontile. (L. *post*, after; *pons*, *pontis*, the pons Varolii.) Term for the *Foramen cecum*.

Recessus. (L. *recedo*, *recessum*, to retire.) A recess. A depression in the surface of the cerebellum just in front of the *lingula*. Also, an abscess. Also, old term syn. with *Apostasis* (q. v.). Also, a cornu of the lateral ventricle of the brain.

R. acetab'uli. Recess of the acetabulum; more commonly termed simply *acetabulum*.

R. ampulla'ceus. Ampullar recess. A term for the *ampulla* of the bony semicircular canal of the internal ear; also termed *Cavitas elliptica*.

R. chiasmatic. The same as *R. chiasmatis*.

R. chiasmatis. Recess of the chiasma. A syn. for *Lamina cinerea*.

R. cochlear'is. The *Cochlear fossa*.

R. conar'ii. Recess of the *conarium*. A depression which has been occasionally observed in the *conarium* or *pineal gland*.

R. duode'no-jejuna'lis. Duodeno-jejunal recess. A recess or fold between the duodenum and jejunum. Also termed duodeno-jejunal fold.

R. ellip'ticus. Elliptical recess. Another name for the hemielliptical recess or fossa, a depression on the inner wall of the vestibule of the internal ear, which receives the *utricle*.

R. epitympan'icus. Epitympanic recess. A name for the uppermost part of the tympanic cavity.

R. glos'so-epiglott'icus. Glosso-epiglottic recess.

R. hemi-ellip'ticus. Hemielliptical fossa. See *R. ellipticus*.

R. hemisphaer'icus. Hemispherical recess. The *Fovea hemisphærica*.

R. hepat'ico-rena'lis. Hepatico-renal recess. A term for the recess formed by the *hepato-renal ligament* (q. v.).

R. ileocæca'lis. The *Ileo-cæcal recess* (q. v.).

R. incis'ivus. Incisive recess. A depression on the *septum nasi* just above the anterior palatine canal.

R. infrapinea'lis. Infrapineal recess. Syn. for *R. conarii*.

R. infundibul'is. Recess of the infundibulum. The cavity of the third ventricle prolonged into the *infundibulum*.

R. infundibulifor'mis. Infundibuliform recess. A term for *Rosenmüller*, *fossa* of.

R. intercrura'lis. Intercrural recess. A syn. for *Interpeduncular space*.

R. jugular'is. Jugular recess. The *Jugular fossa*.

R. labyrin'thi. Recess of the labyrinth. The *Fossa sulciformis*.

R. laryngopharynge'us. Laryngopharyngeal recess. The lower pyramidal part of the pharynx out of which open the *œsophagus* and the larynx.

R. latera'lis ventric'uli. Lateral recess of the ventricle. Term for the lateral extension of the fourth ventricle of the brain between the cerebellum and medulla oblongata.

R. na'so-palati'nus. Naso-palatine recess. The same as *R. incisivus*.

R. occipita'lis. Occipital recess. The recess at the posterior part of the *lateral ventricle* in the embryo brain which afterwards develops into the posterior horn.

R. opt'icus. Optic recess. Syn. for *R. chiasmatis*.

R. peritonæ'i. Recess of the peritoneum. General term for any pouch or recess formed by the peritoneum.

R. pharynge'us. Pharyngeal recess. Syn. for *R. infundibuliformis*.

R. pharynge'us me'dius. Middle pharyngeal recess. A pouch in the mucous membrane of the pharynx at the mid-line of the posterior wall.

R. pharyng'is. Recess of the pharynx. A syn. for *R. pharyngeus*.

R. pinea'lis. Pineal recess. The same as *R. conarii*.

R. sac'ci lachryma'lis. Recess of the lachrymal sac. An anterior pouch occasionally observed in the *lachrymal sac*.

R. salpin'go-pharynge'us. Salpingopharyngeal recess. A small, occasional diverticulum of the pharynx close to the pharyngeal opening of the Eustachian tube.

R. sphaer'icus. Spherical recess. Syn. for *R. hemisphæricus*.

R. sphe'no-ethmoida'lis. Sphenothmoidal recess. A small groove on the lateral wall of the nasal fossa just above the superior turbinate bone.

R. Stensonia'nus. Stensonian recess. A syn. for *R. incisivus*.

R. subcæca'lis. Subcæcal recess or fossa. See *Subcæcal fossa*.

R. subsigmoide'us. Subsigmoid recess. The *Ligamentum mesenterico-mesocolicum*.

RECHA—RECRUDESCENTIA

R. sulciformis. Sulciform recess. Syn. for *Fovea vestibuli inferior*.

R. superior sac'ci omen'ti. Superior recess of the omental sac. A term for the cavity of the lesser omentum.

R. suprapinea'lis. Suprapineal recess. A recess between the upper part of the pineal gland and the roof of the third ventricle of the brain.

R. utric'uli. Recess of the utricle. A recess at the upper part of the *utricle* of the internal ear.

R. vesicæ urinar'is. Recess or sinus of the urinary bladder; the lower part of the bladder.

Re'cha. Old term for *Marmor*. (Ruland and Johnson.)

Recidi'va mor'bi. (L. *recidivus*, returning; *morbus*, a disease.) Relapse of a disease.

Recidiva'tion. (L. *recidivus*, returning.) Relapse of a disease (*Recidiva morbi*.) Also, relapse into crime.

Re'cidive. (L. *recidivus*, returning.) A syn. for *Relapse*.

Recidivist. (L. *recidivus*, returning.) A patient who returns to hospital for treatment, especially a lunatic.

Also, a relapsed or confirmed criminal.

Recidiv'ity. (L. *recidivus*, returning.) Tendency to relapse.

Re'cipē. (2nd pers. sing. imper. of *recipio*, to take, and signifying take thou.) A word constantly used, in the abbreviated form *℞*, at the beginning of Medical prescriptions. Formerly written *ꝛ*, the symbol for Jupiter, being an invocation to Jupiter for his aid. It corresponds with the more ancient *Sume*, which was always written in full, as seen in very old prescriptions.

Recipiomo'tor. (L. *recipio*, to receive; *motor*.) Epithet signifying receiving motor impulses.

Reciproca'tion, vibra'tions of. Another name for *Consonance* (q. v.).

Reck'linghausen. A place in Westphalia, noted for its mineral spring, the "Grullquelle." This spring contains, in 1000 parts, sodium chloride 15.32, potassium chloride 0.34, magnesium chloride 1.38, and calcium chloride 1.23 parts.

Recklinghausen, von. A German physiologist and histologist of the present day.

R.'s canals. Minute canals supposed by von Recklinghausen to exist in all connective-tissue, and to form the beginnings of the lymphatic vessels.

Recli'uate. (L. *reclino*, *reclinatum*, to unbend.) *Biol.* Bent downwards.

Reclina'tio. (Mod. L. From L. *reclino*, *reclinatum*, to unbend.) *Reclination*.

R. palpebrar'um. Reclination of the eyelids. A term for *Ectropion*.

Reclina'tion. (L. *reclino*, to stretch forth; also, to lie upon.) *Physiol.* A voluntary movement of the muscles.

Ophthal. Surg. An old operation for cataract which consists in needling the cataract into the vitreous humour in such a way that its front surface becomes uppermost; also termed *Couching*.

R., Willburg's opera'tion of. The original operation as performed by Willburg. The lens was pressed directly backwards.

Reclina'tus. (L. *reclino*, to stretch forth; also, to lie upon.) Bending downwards; reclining.

Recli'ning board. A board on which the patient reclines for a certain time daily, in order to straighten the spine. Used in cases of stooping in young and growing people, and in cases of lateral curvature.

Recli'vate. (L. *reclivis*, bending back.) *Biol.* Having a double curve.

Réclus' disease'. (After Réclus, who first described it.) Cystic disease of the mammary gland.

Recl'usor palpebrar'um. (L. *recludo*, to open.) *Anat.* Opener of the eyelids. Term applied to the *Levator palpebræ superioris*.

Recognition time. *Physiol.* Term for the time elapsing between the application of a stimulus and recognition of the kind of stimulus by the subject experimented on.

Recoil' wave. *Physiol.* A syn. for *Dicrotic wave*.

Recollection'is jactu'ra. (L.) Loss of recollection, *Amnesia*.

Recomposition. (L. *recompositus*, set in order anew.) Reunion after temporary separation or decomposition.

Reconstitution. (L. *re*, again; *constituo*, to dispose.) *Physiol.* The process of repair and restoration of tissue, which is continually making up for tissue-waste in the living organism.

Reconvalescen'tia. (L. *re*, again; *convalesco*, to regain health.) *Convalescence*.

Recorda'tio. (L.) A calling to mind; memory.

Recorporat'ivus. (Mod. L. From L. *re*, again; *corporatus*, fashioned into a body.) Undergoing recombination.

Recover. (L. *recupero*, to regain.) To return to the normal condition of health.

Recovered. (*Recover*.) Returned to the normal condition of health.

Recovery. (*Recover*.) A return to the normal condition of health.

Recrea'tio. (L.) Recovery.

Recrement. See *Recrementum*.

Recrement'a. Plur. of *Recrementum*.

R. vesicæ. (L. *vesica*, a pouch, the urinary bladder.) A term for *Urine*.

Recrement'al. The same as *Recrementitial*.

Recrement'ital. Of the nature of, or consisting of, *Recrementum*.

Recrement'itious. The same as *Recrementitial*.

Recrement'o-excrement'ital.

(*Recrementum*; *excrementum*.) Old epithet applied to fluids of the body which, after secretion, are in part excreted and in part reabsorbed.

Recrement'um. (L.) The refuse of anything. 1. *Chem.* Old term for *Scoria*. 2. *Physiol.* Old term formerly used as syn. with *Excrementum*. Also, a fluid which becomes separated from the blood, and afterwards reabsorbed into the blood, as *e.g.* saliva, or bile.

Recres'cence. (L. *re*, again; *cresco*, to grow.) Reproduction of a lost part or member.

Recrudes'cence. (L. *recrudescens*, growing afresh, breaking out anew.) The breaking out anew of the symptoms of a disease after a short interval of health.

Recrudescent'ia. (Mod. L. From L.

RECTAL—RECTOSCOPE

recrudescens, growing afresh, breaking out anew.) Recrudescence.

Rectal. Belonging to the *Rectum*.

R. alimenta'tion. Feeding per rectum, by nutritive enemata or suppositories.

R. di'aphragm. A term for the sheet of muscular tissue which supports the outlet of the pelvis, surrounding and supporting the lower part of the rectum. It consists of the sphincter ani, and the levator ani and coccygeus on each side.

R. etherisa'tion. The administration of ether per rectum. This has been used to produce anæsthesia in operations about the face and throat. The anæsthesia is necessarily more slowly produced than by inhalation.

R. expres'sion. *Obstet.* The introduction of two fingers into the rectum of a woman in labour at the last part of the expulsive stage, in order to help delivery of the child.

R. feed'ing. Nourishment of a patient by means of concentrated food administered per rectum, either by means of nutrient injections or nutrient suppositories.

The following forms of nutrient injections have been introduced by different medical men:

Flint's.—Milk, two ounces, whisky, half an ounce, mixed with half an egg.

Leube's.—To five ounces of finely scraped lean meat chopped still finer, add one and a half ounces of finely chopped pancreas without fat, then add three ounces of tepid water, and stir the mixture. Wash out the rectum with warm water one hour before giving the above.

Mayet's.—150 to 200 grammes of fresh bullock's pancreas, 400 to 500 grammes of lean meat. Bruise the pancreas with water at 37° C. in a mortar, and strain through a piece of cloth. Chop the meat and mix with the strained fluid, after removal of fat, &c.. Add yolk of one egg, and allow to stand for two hours. To be given in two doses, which are considered enough for twenty-four hours' nourishment. Rectum to be washed out with oil before giving the above.

Peaslee's.—Crush finely one pound of lean beef, add one pint of cold water, macerate for forty minutes, and then raise slowly to the boiling-point, boil for two minutes only, and then strain.

Rennie's.—To a bowl of beef-tea add half a pound of lean beef pulled to fine shreds; then add half a drachm of dilute hydrochloric acid, beef-tea and acid both at 99° F. Stir before a fire for four hours at a moderate heat. Alcohol or beaten eggs may be added before administration.

R. pouch'es. These are three of the oblique folds of mucous membrane in the rectum more prominent than the others, being half an inch or more in depth. One projects backwards from the fore part of the bowel opposite the prostate gland; the other two are placed above one another and higher up than the first. (Houston.)

R. pouch'es, inflamma'tion of. These pouches occasionally, in old people especially, become enlarged, inflamed, and sometimes ulcerated. This has also been termed sacciform disease of the rectum, and encysted rectum.

R. tube. See *Tube, rectal*.

Rectal'gia. (L. *rectum*; Gr. ἄλγος, pain.) See *Proctalgia*.

Rectangular flap amputa'tion. See *Amputation, rectangular method of*.

Rectec'tomy. (L. *rectum*; Gr. ἐκτομή, a cutting out.) See *Proctectomy*.

Recticruræ'us. (*Rectum*; *cruræus*, belonging to the leg.) A syn. for *Rectus femoris*.

Rectifica'tio. (Mod. L. From L. *rectus*, straight; *facio*, to make.) Rectification.

Rectifica'tion. (L. *rectus*, straight; *facio*, to make.) A straightening.

In *Chem.* and *Pharm.*, a method of purifying liquids by distillation, either alone, or after admixture with other substances.

R., artifi'cial. *Obstet.* Correction of a faulty position of the foetal head during labour, either manually or instrumentally.

Rectifica'tus. (Mod. L. From L. *rectus*, straight; *facio*, to make.) Rectified.

Rectified. Epithet applied to a substance which has undergone *rectification*.

R. oil of tur'pentine. See *Oleum terebinthinæ rectificatum*.

R. pyroligneous ac'id. Pyroligneous acid rectified and thus freed from the empyreumatic oil; it forms the acetic acid of commerce.

R. spi'rit. See *Spiritus vini rectificatus*.

Rectilin'ear. (L. *rectus*, straight; *linea*, a line.)

Rectilin'eus. (Mod. L.) Rectilinear.

Rectiner'vis. (L. *rectus*, straight; *nervus*, a tendon; also, a nerve.) *Bot.* Having straight *nervures*.

Rectiros'tral. (Mod. L. From L. *rectus*, straight; *rostrum*, a beak.) *Zoöl., Ornithol., Conchol.* Having a straight beak.

Rectis'chiac. The same as *Ischiorectal*.

Rectise'rial. (L. *rectus*, straight; *series*, a row.) Arranged in straight lines.

Rectit'ic. Belonging to *Rectitis*.

Rectit'is. (L. *rectum*; Gr. adj. term. -itis.) See *Proctitis*.

R. prolif'erans. Proliferating inflammation of the rectum. A chronic form associated with connective-tissue proliferation, and the formation of small granulomata.

Rectius'culus. (Mod. L. From L. *rectus*, straight; weakening suffix *ulus*.) Almost straight.

Rectoce'le. (L. *rectum*; Gr. κήλη, a tumour.) See *Proctoce'le*.

R., vagi'nal. See *Proctoce'le, vaginal*.

Rectococcyge'al. Belonging to the *rectum* and *coccyx*.

Rectococcyge'us. (*Rectum*; *coccygeus*.) A muscle arising from the anterior surface of the second and third coccygeal vertebræ, and inserted into the posterior wall of the lower part of the rectum.

Rectococypex'y. (*Rectum*; *coccyx*; πῆξις, a fastening.) The operation of suturing the rectum to the anterior surface of the coccyx.

Rec'to-colon'ic. Belonging to the *rectum* and *colon*.

Rectogen'ital. (*Rectum*; *genital*, belonging to the organs of generation.) Belonging to the rectum and genital organs.

Rec'to-la'bial. Belonging, in the female, to the rectum and labia or labium.

Rectope'ria. (*Rectum*; πῆξις, a fastening.) Artificial fixation of a prolapsed rectum.

Rectopexy. The same as *Rectope'ria*.

Rectopho'bia. (*Rectum*; φόβος, fear.) A term introduced by Kelsey to signify the dread of impending trouble often noticed in patients with rectal disease.

Rec'toscope. (*Rectum*; σκοπέω, to look at.) Term for a rectal speculum.

RECTOSCOPY—RECTUS

Recto'scopy. (*Rectum*; σκοπέω, to look at.) Visual examination of the rectum.

Rectostenosis. (*L. rectum*; stenosis.) See *Proctostenosis*.

Rectotome. See *Proctotome*.

Rectotomy. (*Rectum*; τομή, a cutting.) See *Proctotomy*.

Recto-ure'thral. Belonging to the rectum and urethra.

Recto-u'terine. Belonging to the rectum and uterus.

R.-u'terine cul-de-sac. Syn. for *R.-uterine pouch*.

R.-u'terine folds. The folds of peritoneum forming the *R.-uterine pouch*.

R.-u'terine fos'sa. Syn. for *R.-uterine pouch*.

R.-u'terine lig'aments. Syn. for *R.-uterine folds*.

R.-uterine pouch. See *Pouch, recto-uterine*.

R.-uteri'nus. Term for a band of non-striped muscle found between the recto-uterine folds.

Recto-vaginal. Belonging to the rectum and vagina.

R.-vaginal cul-de-sac. Syn. for *R.-vaginal pouch*.

R.-vaginal fis'tula. See *Fistula, recto-vaginal*.

R.-vaginal her'nia. See *Hernia, recto-vaginal*.

R.-vaginal pouch. See *Pouch, recto-vaginal*.

R.-vaginal sep'tum. See *Septum, recto-vaginal*.

Recto-vesical. (*Rectum*; vesica.) Belonging to the rectum and urinary bladder.

R.-vesical folds. The folds of peritoneum forming the *R.-vesical pouch*.

R.-vesical fos'sa. Syn. for *R.-vesical pouch*.

R.-vesical pouch. See *Pouch, recto-vesical*.

Rectrices. Plur. of *Rectrix*. The plumes or guiding feathers in the tail of a bird.

Rectrix. (*L. rego*, to rule, guide.) One of the rectrices in a bird's tail. See *Rectrices*.

Rectum. (*L. rectus*, straight.) The lowest portion of the large intestine. Termed rectum from its condition in some animals.

In Man, the rectum is not straight. It extends from the sigmoid flexure of the colon to the anus, and is situated in the posterior part of the pelvis. From its beginning at the left sacro-iliac joint it passes obliquely downwards to the middle line; it then curves forwards in front of the lower part of the sacrum and the coccyx, passing behind the bladder and the parts in relation, in the male, and behind the cervix uteri and vagina in the female. Near the neck of the bladder it makes a turn slightly backwards to the anus.

The rectum presents a lateral curve from the left to the middle line in its upper part; and it presents two antero-posterior curves, being anteriorly concave above and convex below.

The wall of the rectum is not sacculated, but smooth throughout its whole length. The rectum is about eight inches long in the adult, and is narrower at the beginning than the sigmoid flexure; but becomes dilated into an ampulla just above the anus. The upper third or so of the rectum is surrounded by peritoneum, lower

down it is covered only at the front and sides, lower still at the front only, and at the lowest portion of the gut it is uncovered by peritoneum, but is surrounded by areolar tissue and fat. The lower end is surrounded and supported by the levatores ani muscles and the internal and external sphincters.

The muscular coat is thicker than that of the rest of the intestines. The longitudinal fibres form a uniform layer, passing below between the internal and external sphincters, and ending, partly in these muscles, and partly in the skin round the anus. The circular or internal fibres increase in number towards the anus, where they form the internal sphincter.

The mucous membrane is thicker and redder than that of the colon, and moves freely on the muscular coat. It forms numerous and variable folds according to its fulness or emptiness. Near the anus the folds are mainly longitudinal, and the largest were termed by Morgagni the columns of the rectum. Houston has described three prominent oblique folds. See *Rectal folds*.

R., arteries of. These arise from (1) the superior hæmorrhoidal branches of the inferior mesenteric artery; (2) directly or indirectly by the middle hæmorrhoidal branches of the internal iliac artery; (3) the inferior hæmorrhoidal branch of the pudic artery.

R., encyst'ed. A term for a pathological sacculated condition of the lower part of the rectum. Also termed Gross' disease of the anus.

R., imperforate. A syn. for *Anus, imperforate* (q. v.).

R., lymphatics of. These either enter a mass of glands lying in the hollow of the sacrum, or else join the lumbar lymphatic glands.

R., nerves of. 1. Cerebro-spinal: branches from the sacral plexus. 2. Sympathetic: branches from the inferior mesenteric and hypogastric plexuses.

R., veins of. These form the hæmorrhoidal plexus; from this they follow a corresponding course to the arteries, and end, partly in the internal iliac vein, and partly in the inferior mesenteric vein.

Rectus. (*L. rego, rectum*, to rule.) Right; straight.

R. abdom'inis. A long flat muscle with vertical fibres, forming part of the anterior abdominal wall. It lies between the two layers into which the aponeurosis of the internal oblique splits; internally these unite to form the linea alba. A little above halfway between the umbilicus and pubes the aponeurosis remains undivided, and passes entirely in front of the rectus. The lower edge of the posterior part of the sheath forms the lunated fold of Douglas.

The rectus abdominis arises from the body and crest of the pubes by a flat tendon, and is inserted by muscular fibres into the cartilages of the fifth, sixth, and seventh ribs, and also into the bony part of the fifth rib, and also often by a few fibres into the ensiform process.

The muscular fibres are interrupted by three or more tendinous intersections, *inscriptiones tendineæ*. There is usually one opposite the umbilicus, one at the lower end of the ensiform process, and the third midway between. The intersections are confined to the anterior fibres of the muscle. Its nerve-supply is from some of the lower intercostal nerves.

RECUMBENCY—RECUTITI

R. cap'itis anti'cus ma'jor. A muscle arising from the anterior tubercles of the transverse processes of the third, fourth, fifth, and sixth cervical vertebræ, by separate tendinous bands; and inserted into the basilar process of the occipital bone in front of the foramen magnum, and at a slight interval from its fellow of the opposite side.

R. cap'itis anti'cus mi'nor. A muscle arising from the front of the root of the transverse process of the atlas, and inserted into the basilar process of the occipital bone about half an inch from its fellow of the opposite side and behind the rectus capitis anticus major; it is partly covered by the latter muscle throughout its length.

R. cap'itis latera'lis. This muscle arises from the upper and front part of the enlarged end of the transverse process of the atlas, and is inserted into the roughened under-surface of the jugular process of the occipital bone.

R. cap'itis posti'cus ma'jor. A muscle which arises by a narrow tendon from the spine of the axis, and is inserted, somewhat expanded, into and just beneath the inferior curved line of the occipital bone, to the inner side of, and below, the insertion of the superior oblique.

R. cap'itis posti'cus mi'nor. This muscle arises from the posterior arch of the atlas, and is inserted, in an expanded form, into the innermost third of the inferior curved line of the occipital bone, and into the depression between this and the foramen magnum.

R., exter'nal. A muscle of the eyeball arising, unlike the other three recti, by two heads of origin, one in common with the *R., inferior*, and the other with the *R., superior*. Fibres also spring intermediately from the tendinous arch over the middle of the sphenoidal fissure. It is attached to the sclerotic similarly to the *R., inferior* (q. v.) and the other recti.

R. fem'oris. A spindle-shaped muscle of the front of the thigh, arising from the ilium by two tendons; one attached to the anterior inferior spine, and the other to the impression on the outer surface of the ilium immediately above the acetabulum. The two tendons unite immediately below the acetabulum, and the resulting tendon passes first on the anterior surface and then in the centre of the muscle to beyond the middle of the thigh. The fleshy fibres spring from this tendon in a pinnate fashion, and are inserted on the inferior tendon which extends over the posterior surface of the lower half of the muscle. The lower tendon is inserted as a broad flat band into the upper border of the patella, joining with the tendons of the deeper parts of the *quadriceps extensor cruris*, of which the rectus forms the middle and superficial part.

R., infe'rior. A muscle of the eyeball arising above the optic foramen from part of a tendinous ring of origin common to the recti muscles, and inserted by a short membranous and slightly expanded tendon into the lower surface of the sclerotic about three or four lines from the edge of the cornea.

The common tendinous origin of the recti muscles is oval in shape, and forms a ring across the inner side of the optic foramen, the inner part of the sphenoidal fissure, and externally across the middle of the sphenoidal fissure, being attached to the bony points at the margins of these openings.

R., inter'nal. A muscle of the eyeball.

It arises from the inner side of the common tendon, see under *R., inferior*, and is inserted into the inner side of the sclerotic, in a corresponding manner to the *R., inferior* (q. v.).

R. latera'lis. The lateral rectus. Term for a few longitudinal muscular fibres, very rarely present in man, running between the internal and external oblique muscles of the abdomen, from the lower ribs to the crest of the ilium.

R. oculi exter'nus. See *R., external*.

R. oculi infe'rior. See *R., inferior*.

R. oculi inter'nus. See *R., internal*.

R. oculi super'ior. See *R., superior*.

R., super'ior. A muscle of the eyeball arising from the common tendinous origin (see under *R., inferior*), and inserted similarly to the other recti into the sclerotic.

Recum'bency. The state of being *Recumbent*.

Recum'bent. (L. *recumbo*, to lie down.) Lying down.

Recu'perate. (L. *recupero*, to regain.) To recover, to regain health.

Recupera'tion. (*Recuperate*.) Recovery of health.

Recu'perative. (*Recuperate*.) Belonging to *Recuperation*.

Recur'rence. (*Recurrere*.) A returning.

Recur'rens. (L.) Recurrent.

Recur'rent. (*Recurrere*. F. *recurrent*; G. *zurücklaufend*.) Returning.

R. branch of pneumogas'tric nerve.

It arises from the upper or jugular ganglion of the pneumogastric, and passes up through the jugular foramen to the dura mater of the posterior fossa of the skull.

R. branch of va'gus. Syn. for *R. branch of pneumogastric nerve*.

R. erysip'elas. See *Erysipelas*, recurrent.

R. fe'ver. A syn. for *Fever*, relapsing.

R. fibroid. See *Fibroid tumour*, recurrent.

R. ma'nia. The same as *Mania*, periodica.

R. nerve of va'gus. See *R. branch of vagus*.

R. pulse. See *Pulse*, recurrent.

R. sum'mer erup'tion. A term for *Hydroa vacciniiforme*.

Recur'ring. (L. *recurro*, to run back.) Occurring again, recurrent.

R. disease'. Disease that returns.

R. ut'terance. A term for the involuntary utterance of certain words or phrases. A symptom of *Aphasia*, motor.

Recur'vate. (L. *recurvatus*, crooked, bent backwards. F. *recourbé*; G. *gekrümmt*.) Bent backwards.

Recurva'tion. (L. *recurvatus*, crooked, bent backwards.) A bending backwards.

Recur'ved. (L. *recurvus*.) Bent backwards.

Recurvifol'ious. (L. *recurvus*, bent backwards; *folium*, a leaf.) Having recurvate leaves, i. e. leaves bent back at the end.

Recurviro'stral. (L. *recurvus*, bent backwards; *rostrum*, a beak.) The same as *Recurvirostrate*.

Recurviro'strate. (L. *recurvus*, bent backwards; *rostrum*, a beak. F. *recurvirostre*; G. *gekrümmtschnabelig*.) Having a recurved beak.

Recuti'ti. Plur. of *Recutitus*.

RECUTITIO—REDIA

Recuti'tio. (L. *re*, back; *cutis*, the skin.) Old term for an operation which was formerly attempted to restore a deficient prepuce, whether naturally deficient, circumcised, or lost by disease. According to D. Ammannus, the instrument used was termed *Spathester*. Johannes Rhodius, however, pointed out that a deficient or lost prepuce could not be restored, either by nature or art.

Recuti'tus. (L. *re*, back; *cutis*, the skin.) One who has the prepuce retracted from the glans. Hence used to mean one who has been circumcised.

Also, term for one who has undergone the operation of *Recutitio*.

Red. One of the primary colours of the solar spectrum. The red rays are the least refrangible of those recognised by the retina, and are found at one end of the spectrum. It is estimated that the number of vibrations of a wave of light which we term red varies from 440 to 460 billions per second.

R. an'timony. See *Antimony*, red.

R. ar'senic. See *Arsenic*, red.

R. bane'berry. The *Actæa rubra*.

R. bark. A shortened name for *Cinchona bark*, red.

R. be'hen. A common name for the *Statice limonium*.

R. blind'ness. See under *Achromatopsia*.

R. bole. A syn. for the red variety of *Ochre*.

R. braxy. Three forms of *Braxy* are recognised by shepherds as occurring in sheep:—(a) *Red braxy*, (b) *Turnip braxy*, and (c) *Wet braxy*. *Red braxy* is a form of septicæmia characterised by the uniform red staining of the tissues by the blood-pigment. For *Turnip braxy* and *Wet braxy*, see under their respective headings.

R. bud. A syn. for *Judas tree*. The bark is astringent.

R. ce'dar. Common name for the *Juniperus virginiana*.

R., Chinese'. The same as *Cinnabar*.

R. cohosh'. The *Actæa rubra*.

R., Con'go. A red dye used as a test for acids, by which it is turned blue.

R. cop'per ore. The same as cuprous oxide (Cu_2O), which occurs native.

R. corpuscles. See *Corpuscles*, red.

R.-cross Soci'ety. See *Society*, red-cross.

R. earth. Common name for the *Terra rubra*.

R. gown. A syn. for *Red gum*. So termed because the skin, covered with the characteristic red papules, was thought to resemble some printed cotton-stuff.

R.-green blind'ness. A form of colour-blindness, *Achromatopsia*, characterised by blindness for all shades of red and green.

R. gum. Popular name for *Strophulus intertinctus*.

Also, in Agriculture, name for a disease which attacks grain.

R. gum, rank. Popular name for *Strophulus confertus*. So named from the general red appearance of the raised papules.

R. hæm'atite. See *Hæmatite*.

R. indura'tion. The red, toughened condition of a lung or part of lung in chronic pneumonia.

R. in'farct. Another name for hæmorrhagic infarct. See under *Infarct*.

R. infil'tration. Term for a form of infiltration of the lung in acute pulmonary tuberculosis, characterised by a soft and granular hyperæmic condition of the part or parts of lung affected.

R. i'odide of mer'cury. The *Hydrargyri iodidum rubrum*.

R. lead. The red oxide of lead, or *Minium*.

R. ma'ple. Common name for the *Acer rubrum*.

R. marl. The same as *R. earth*.

R.-milk bacil'lus. A name for the *Bacillus prodigiosus*. See in Appendix, under *Bacillus*.

R. mix'ture. Term for a mixture, used for injecting bodies for dissection, which colours the muscles red. Also termed "Horner's mixture." It is a mixture of nitre, rock-salt, carbonate of soda, and molasses. (Gould's Dict.)

R. neural'gia. Term for a chronic affection characterised by localised burning and aching pains, usually of an extremity, accompanied by flushing and heat of the part, and increased by warmth.

Also termed *Erythromelalgia* (Ἐρυθρός, red; μέλος, a limb; ἄλγος, pain), and *Terminal neuritis*.

R. night'shade. A common name for the *Phytolacca decandra*.

R. nu'cleus. The *Nucleus tegmenti*.

R. o'sier. The *Cornus sericea*.

R. pes'tilence. A syn. for *R. plague*.

R. phos'phorus. See *Phosphorus*, red.

R. plague. A variety of the *Plague* in which the plague-spot or bubo was red in colour.

R. precip'itate. See *Precipitate*, red.

R., ret'inal. Another name for *R., visual*.

R. root. Commonly termed *Jersey tea*. The root of *Ceanothus americanus*.

R. rose. The *Rosa gallica*.

R. san'dal-wood. Common name for *Pterocarpi lignum*, the wood of *Pterocarpus santalinus*.

R. san'ders. A syn. for *R. sandal-wood*.

R. saun'ders. The same as *R. sanders*.

R. soft'ening. A variety of acute cerebral softening characterised by the occurrence of punctiform hæmorrhages.

R. sol'dier. A popular name for *Swine fever*, or hog plague.

R. sweat. See *Hæmatidrosis*.

R., Vene'tian. A name for the red oxide of iron.

R. vi'sion. See *Erythropia*.

R., vis'ual. A syn. for *Visual purple*.

R.-wa'ter. A common term for *Hæmoglobinuria* in cattle.

R.-weed of Virgin'ia. A common name for the *Phytolacca decandra*.

R. zinc ore. A variety of zinc oxide which occurs native. The colour is due to the presence of manganese.

Red'dle. Term for a kind of ochre, or dark-red argillaceous earth, which was formerly used therapeutically as an antacid and tonic.

Re'dia. (After *Redi*, a modern Italian naturalist.) *Biol.* The second larval stage in the *Trematoda*, resulting from the development of the first larval stage, *Sporocyst*, in the parthenogenetic ovum.

The Redia has a sucker-like anterior extremity, a pharynx, and a simple straight intestine. The first generation of *Rediæ* gives rise to a second parthenogenetic generation, and this to a third, which gives rise to a generation of *Cercaria*. See under *Cercaria*.

Rediæ. Plur. of *Redia*.

Redib'ia. See *Reduvia*.

Redin'tegrate. (L. *redintegratus*, renewed.) Renewed; re-formed.

Redintegration. (L. *redintegratio*, a beginning afresh. F. *réintégration*; G. *Erneuerung*.) Re-formation; complete renewal of an organ or part.

Redivia. See *Reduvia*.

Redress'er. (F. *redresseur*.) Surg. An instrument for replacing a displaced or dislocated part.

Redress'ment. (F. *redressement*.) Reduction of a dislocation, or correction of a deformity.

Redub'ia. See *Reduvia*.

Red'uc. The same as *Redux*.

Reduce'. (L. *reduco*, *reductum*, to bring back.) To bring back to a former state, or to a simpler state; to bring down.

Surg. To return a dislocated part to its former situation.

Chem. To decompose a chemical compound, either merely changing it to a simpler compound (partial reduction), or into its constituent elements (complete reduction).

Reduced eye of Don'ders. (See *Donders*.) A diagrammatic eye with a simple refracting surface proposed by Donders in order to simplify the calculations of the passage of rays through it. The result is so close to that obtained with the human eye, that it suffices for all ordinary purposes. It has the following proportions: length 20 mm.; radius of curvature of refractive surface 5 mm.; index of refraction $\frac{4}{3}$.

R. eye of Lis'ting. (See *Listing*.) A diagrammatic eye introduced by Listing which very closely corresponds with the human eye, so that magnitudes calculated by means of it are almost identical with those obtained in an average natural eye. Its dimensions are as follows: Radius of curvature of cornea 8 mm.; anterior and posterior surface of lens 10 and 8 mm. respectively; refractive index of aqueous and vitreous $\alpha \frac{103}{77}$, and of lens $\frac{16}{11}$; distance of cornea from lens 4 mm.; thickness of lens 4 mm.

R. hæm'atin. See *Hæmatin*, *reduced*.

R. hæmoglo'b'in. See *Hæmoglobin*, *reduced*.

R. i'ron. See *Ferrum redactum*.

Reduc'ible. Capable of being *reduced*.

R. her'nia. See *Hernia*, *reductible*.

Reducing flame of blow-pipe.

The inner cone of a blow-pipe flame which consists of hot, unburnt gases, and reduces certain oxides or salts to the metallic state.

Reducteur. (F.) Name for a uterine repositor invented by A. Favrot, consisting in an india-rubber bag which is introduced into the rectum, and then inflated. It is used for the reposition of a retroverted gravid uterus.

Reduction. (L. *reductio*, a bringing back.) A bringing back to a former state, or to a simpler state; a bringing down.

Surg. The returning of a dislocated part into its natural situation.

Chem. Decomposition of a chemical compound. See, more fully, under *Reduce*.

R. en bloc. The same as *R. en masse*.

R. en masse. The reduction of a strangulated hernia and its sac together, the strangulation in the neck of the sac thus continuing unrelieved.

R., false. Term for an apparent reduction of a strangulated hernia, in which the hernia is forced through a rent in the neck of the sac and beneath a piece of the parietal peritoneum.

R., La Mothe's. A method of reduction of dislocation of the shoulder by manipulation, introduced by La Mothe. The patient is placed on his back with the affected arm raised and parallel with the side of the face; the operator fixes the scapula with his hand; the manipulation is then begun from the above position.

R., Thomas's. A method, invented by Thomas, of joining and fixing the fragments in fracture of the inferior maxilla. A hole is drilled in each fragment, and a wire is passed through both and twisted up until the fragments approximate.

Reductor. (L.) A restorer or bringer back.

In *Anat.*, a muscle that acts as a *retractor*.

In *Surg.*, an instrument for effecting *reduction*.

Redu'plicate. (L. *reduplico*, to redouble.) To redouble; to bend back. Also, redoubled; bent back.

Reduplicated. (*Reduplicate*.) Redoubled; bent back.

Reduplica'tion. (L. *reduplico*, to redouble.) A redoubling.

Med. Term applied to double paroxysms of *ague*.

R. of heart-sounds. An apparent doubling of one or other of the two heart-sounds heard on auscultation, consequent on asynchronism in the contraction of the two sides of the heart, usually indicative of disease, but occasionally observed in health. Reduplication of the first sound usually occurs in cases of hypertrophy of the heart and high arterial tension. Reduplication of the second sound usually occurs in connection with lesions of the mitral valve. Asynchronism giving rise to reduplication of one or other sound is also sometimes observed in febrile disorders.

Reduplicative. The same as *Reduplicate*, in its second meaning.

Redu'via. (L.) The looseness and cleft of the skin about the nails. *Pathol.* An old term for *Paronychia*.

Red'ux. (L. *reduco*, to lead back.) A leading back or returning. *Chem.* Old term for a flux or powder by means of which calcined metals or minerals were melted and reduced to a metallic *regulus*.

R. crepita'tion. See *Crepitation*, *redux*.

Reed. (Anglo-Sax. *Hreod*.) Common name for the *Arundo phragmites*.

Also, the *paunch* of Ruminants.

Reed'y nail. A condition of the finger-nail or toe-nail characterised by very strongly-marked longitudinal striæ. It has been considered as a sign of the arthritic or gouty diathesis. Also termed "arthritic nail."

Reef-knot. A sailor's knot used in Surgery in ligaturing arteries, &c. It is a double knot in which the free ends remain parallel with the rest of the ligature when the knot is pulled

upon. The knot thus becomes tightened by traction.

Reel-foot. A syn. for *Club-foot*.

Reeling. (Mid. Eng. *relen*, to turn round and round.) Swaying of the whole body from side to side.

Refectio. (L. *reficio*, to repair.) Old term syn. with *Reconvalescentia*.

Refectivus. (L. *reficio*, *refectus*, to repair.) Syn. for *Reficiens*.

Reficiens. (L. *reficio*, to repair.) Renewing, repairing. Old epithet applied to remedies (*Remedia reficientia*).

Refine. Chem. and Pharm. To purify a substance by separation. See *Refining*.

Refined. Chem. and Pharm. Purified by separation. See *Refining*.

Refining. Chem. and Pharm. The purifying of a substance by separating it from the foreign substances with which it is mixed.

Reflected. (L. *reflecto*.) Turned back on itself.

R. light. See *Light, reflection of*.

Reflection. (L. *reflecto*, to bend back.) *Physic.* (F. *reflexion*; G. *Zurückwerfung*.) A bending back. See *Light, reflection of*; *Heat, reflection of*; and *Sound, reflection of*.

Anat. A bending back on itself, usually of a membranous structure, as, *e.g.*, the peritoneum.

Psychol. The turning over in the mind of a series of ideas or thoughts following one another.

Surg., Pathol. The bending back of an organ or part from its normal position.

R., angle of. (F. *angle de reflexion*; G. *Reflexions-Winkel*.) See under *Light, reflection of*.

Reflective faculties. The faculties brought to bear in the mental process of reflection.

Reflector. (L. *reflecto*, to turn back.) A mirror for reflecting light.

In *Anat.*, term for a muscle whose action is to turn back the part on which it acts.

R. epiglottidis. A syn. for *Depressor epiglottidis*.

Reflex. (L. *reflecto*, *reflexum*, to turn back [in a transitive sense]). A turning back, or rebounding.

R., abdom'nal. Contraction of the abdominal muscles on stimulation of the skin over the abdomen.

R. action. A movement or other active function of a peripheral organ resulting from stimulation of an afferent nerve, conduction by this nerve to a centre or central nervous organ, and transmutation of the impulse by the centre into an efferent impulse, which is conveyed to an efferent nerve and carried by it to the peripheral organ.

R., an'kle. More commonly termed ankle clonus. A series of rhythmical contractions of the calf-muscles (5 to 7 per second), causing short flexions and extensions of the foot, set up by sudden flexion of the foot at the ankle, the leg being nearly extended at the knee. This is never present in health. It is best marked in lateral sclerosis and spastic paralysis.

R. arc. The arc traversed in the course of a reflex action, beginning with the afferent impulse, and ending in the movement or other active function.

R., bone. Reflex muscular contraction produced by a blow over a bone.

R. centres. Nerve-centres in which afferent are changed into efferent impulses.

R., chin. Sudden raising of the lower jaw consequent on a blow on the lower teeth or chin.

R., chok'ing. A syn. for *R., pharyngeal*.

R., cil'io-spin'al. Dilatation of the pupil on stimulation of the skin on the corresponding side of the neck.

R., cremaster'ic. Retraction of the testicle by means of contraction of the cremaster on stimulation of the skin of the inner side of the thigh. This is well marked in boys.

R.s, cross'ed. These are certain examples of exception to the ordinary law of reflex actions, *Pflüger's law of reflexes*. If, in a frog whose cerebrum has been removed, one eye be irritated, a reflex contraction of the opposite hind-limb often occurs. In dogs or cats that have been deeply narcotised, and in certain cold-blooded animals after decapitation, stimulation of one fore-limb often gives rise to contraction of the opposite hind-limb.

R., cutaneous. A reflex excited by stimulating the skin. A series of cutaneous reflexes can be obtained as far up as the cervical region. Such are the cremasteric, abdominal, plantar, gluteal, epigastric, and interscapular reflexes. The presence of any one of these reflexes shows that the reflex arc involved is intact.

R., deep. A syn. for *R., tendon*.

R., epigas'tric. Contraction of the anterior abdominal muscles on stimulation of the skin in front between the fourth and sixth ribs.

R. ep'ilepsy. See *Epilepsy, reflex*.

R., fas'cial. Reflex muscular contraction induced by a sharp blow over a fascia.

R. function. A function performed as the result of a reflex action, which latter is then termed an organic reflex (see *R.s, organic*).

R., gen'ital. Term for reflex irritation due to any pathological condition of the genital organs.

R., glute'al. Contraction of the gluteal muscles on stimulation of the skin of the buttock.

R., gut'tural. A reflex which has occasionally been observed in cases of diseases of the genital organs in women, consisting in a desire but inability to spit.

R., interscap'ular. Contraction of the scapular muscles on stimulation of the skin between the scapulae.

R., knee. See *Knee-jerk*.

R., light. A narrow oval ring of light observed on the retina of the eye, which changes its shape according to the position of the part illuminated.

R.s, men'tal. Term for reflex stimulation of secondary portions of the brain, giving rise to secondary ideas or sets of ideas, as a consequence of stimulation of some other (primary) portion of the brain, which has given rise to certain primary ideas or sets of ideas.

R. mo'tion. A syn. for *R. movement*.

R. move'ment. The movement resulting from a reflex action.

R., mus'cle. A syn. for *R., tendon*.

R., mus'cular. The same as *R., muscle*.

R., na'sal, patholog'ical. Term for any neurosis due to a pathological condition of the nasal mucous membrane.

R. neuro'sis. A *Neurosis* originating in irritation of a part distant from that in which the symptoms are manifested.

R., oblique'. Term introduced by Geigel

REFLEXA—REFRACTION

for contraction of the lower fibres of the obliquus internus abdominis observed in women on sharp stimulation of the skin of the upper and inner part of the thigh.

R.s., organic. These include a number of *reflex functions*: micturition, defecation, erection, ejaculation of semen, and those connected with digestion, circulation, and respiration.

R., patellar. See *Knee-jerk*.

R., perios'teal. The same as *R., bone*.

R., pharynge'al. Term for the normal phenomenon of retching on tickling of the pharyngeal mucous membrane.

R., plan'tar. Drawing up of one or both legs on tickling the sole of the foot.

R., reinfor'ced. See *Reinforcement of reflexes*.

R., scap'ular. Reflex contraction of the muscles of the scapula on sharp stimulation of the skin over them.

R. spi'nal nerves. An old term for *Motor nerves*.

R., superfi'cial. The same as *R., cutaneous*.

R., ten'do-Achil'lis. The same as *R., ankle*.

R., ten'don. The contraction of a muscle consequent on a sudden blow upon its tendon. The most commonly investigated of these is the patellar tendon reflex, or *Knee-jerk*.

R., toe. Reflex flexion of foot, leg, and lastly thigh, on grasping and flexing strongly the great toe of a person lying on his back with his legs extended. It occurs only pathologically and when ankle-clonus is well-marked.

R., tri'ceps. Reflex contraction of the triceps of the arm when its tendon is sharply struck, the arm being at a right angle to the body, and the forearm hanging loosely.

R., vestig'ial. Term for a *Reflex* that occurs as a consequence of conditions which affected the ancestry of the individuals in whom the reflex occurs, but which do not affect the individuals themselves.

R., vir'ile. Term for a reflex contraction of the bulbo-cavernous on pulling the penis towards the umbilicus, and sharply tapping its urethral surface near the perineum. Said to be present in health.

R., watered-silk. Term for a marked reflex, giving somewhat the appearance of watered silk, often to be observed in the retinæ of young children; best marked along the course of the blood-vessels.

Reflex'a. (L.) Fem. sing. nom., and also nom. and acc. plur. neut. of *Reflexus*.

Reflex'ed. Term sometimes used in *Biol.* as synonymous with *Reflected*.

Reflexibility. (*Reflexible*.) Capacity for being *reflected*.

Reflexible. (L. *reflecto, reflexum*, to bend back; *habilis*, able.) Capable of being *reflected*.

Reflexio. (Mod. L. From L. *reflecto, reflexum*, to turn or bend back.) A bending back; reflection.

R. palpebrar'um. Bending back of the eyelids. A term for *Ectropion*.

Reflexogen'ic. (L. *reflecto, reflexum*, to bend back; Gr. γένος, race, offspring.) A term signifying reflex-producing.

Reflexometer. (L. *reflecto, reflexum*, to bend back; Gr. μέτρον, a measure.) Term for an instrument designed for the estimation of the force required to give rise to the so-called tendon

reflex in the case of the muscle and tendon under examination.

Reflex'us. (L. *reflecto, reflexum*.) Turned back, reflex.

Reflux. (L. *refluo, refluxus*, to flow back.) The return of any current by the same channel.

Refract'. (L. *refringo, refractum*, to break, refract, reflect.) To bend sharply, so that there is an apparent break at the bend.

Refracted. (*Refract*.) Bent sharply, so as to appear as though broken at the bend.

Refraction. (L. *refringo, refractum*, to break; also, to reflect. F. *réfraction*; G. *Strahlenbrechung*.) *Physics*. Deviation out of the straight line, whether of light, heat, or sound, in passing obliquely from one transparent medium to another of a different density.

R., angle of. The angle formed between a ray of light that has undergone refraction and the perpendicular at the point of refraction.

R., atom'ic. The atomic refraction of any element is represented by the product of its refractive index and its atomic weight.

R., coëffi'cient of. Term for the number obtained by dividing the sine of the angle of incidence by the sine of the angle of refraction.

R., doub'le. The power of dividing a ray of light, and thus producing a double image of any object.

R., dynam'ic. Term for the *R., static* of the eye, plus the refraction of the apparatus for accommodation.

R.-equi'valent. The product obtained by multiplying the specific refraction of a substance by its molecular weight. By means of the general law that the refraction-equivalent of a mixture is the mean of the refraction-equivalents of its constituents, it is often possible to estimate the proportion of two or more bodies in a solution when their refraction-equivalents are already known.

R., er'rors of. An error of refraction occurs when parallel rays of light are not brought to a focus upon the retina. If the focus of such rays is in front of the retina, the eye is myopic; if behind the retina it is hyperopic (hypermetropic). If parallel rays on passing through the eye do not converge to a single point, but to a series of points or a line, the eye is said to be astigmatic. See *Myopia*, *Hyperopia*, and *Astigmatism*.

In many cases the two eyes are unequal, and present differing errors of refraction, this is termed *Anisometropia*.

R., estima'tion of. There are three principal methods of ascertaining if any error of refraction is present:—(1) By means of test types, (2) by *ophthalmoscopy*, (3) by *retinoscopy*.

To the normal eye, the smallest of Snellen's test-types should be visible at 6 metres; and if the accommodation be previously paralysed, the error of refraction can be estimated by placing trial lenses before the eye. This subjective method is very useful, provided there is no other disease of the eye causing amblyopia. The two objective methods are often more reliable. See *Ophthalmoscopy* and *Retinoscopy*.

R., extraor'dinary. The refraction undergone by the extraordinary ray. See *Ray*, *extraordinary*.

R.-im'age. An image formed by refraction of light on entering or leaving an object.

R., in'dex of. (L. *index*, the forefinger or pointer.) The refractive index is a measure of

REFRACTIONIST—REGIO

the deviation of a ray of light in passing from one transparent medium to another. It is the ratio between the sine of the angle of incidence and the angle of refraction. From air to water it is $\frac{4}{3}$, from air to glass $\frac{3}{2}$.

R., in'dex of, absolute. The absolute index of refraction of a body is the index of refraction of a ray of light passing from a vacuum into the body.

The following are some of the absolute indices of refraction:—

Water	1.336
Air	1.00029
Crown glass	1.5
Diamond	2.75
Aqueous humour	1.337
Vitreous humour	1.336
Crystalline lens	1.454
Cornea	1.377

R., in'dex of, in gas'es. The refractive indices of gases are very small as compared with those of solids and liquids. For the same gas the refractive power is proportional to the density.

R., molec'ular. The molecular refraction of a chemical compound is identical with the sum of its atomic refractions. See *R., atomic*.

R., neg'ative. Term for the *R., static* of a *hypermetropic* eye.

R. of the eye. The action of the transparent media of the eye upon rays of light emanating from any object whereby an image of the object in the line of vision is produced upon the retina.

R., spec'ific. The specific refraction of a body is obtained by dividing the number representing the difference between its index of refraction and unity (the number one) by the number representing its density, and is a quantity nearly constant for all temperatures.

R., static. The refraction of the eye when its accommodation is paralysed.

Refractionist. Term for a person who corrects artificially errors of refraction of the human eye.

Refractive. (*Refract.*) Having a tendency, or the power, to *refract*; also, capable of being refracted.

R. equi'valent. See *Refraction-equi-valent*.

R. in'dex. See *Refraction, index of*.

R. me'dia of the eye. These are: the cornea, aqueous humour, crystalline lens, and vitreous humour.

R. power. The amount of deviation of a ray of light which passes obliquely through a transparent object depends upon the refractive power of the object. This is measured by its refractive index, or more precisely by its specific refraction. See *Refraction, specific*.

R. power, spec'ific. See *Refraction, specific*.

Refractometer. (*Refract*; Gr. *μέτρον*, a measure.) Term for an apparatus for determining the refractive indices of liquids; also, for an apparatus for measuring the refraction of the human eye.

Re-fracture. A second fracture of a bone at any spot; also, the breaking over again of a bone at the former seat of fracture to remedy union in a faulty position.

Refrangibility. (*L. re, again; frango*, to break; *habilitas*, fitness.) The state of being *Refrangible*.

Refrangible. (*L. re, again; frango*, to break; *habilis*, fit.) Capable of being bent out of the straight line, or refracted. See *Refract*.

Refresh'. (*L. re, again; friscus*, new.) To make new again.

In *Surg.*, to make a new raw surface by means of cutting.

Refrigerant. (*L. refrigerans*, making cool.) Making cool, or lowering of the body-temperature. Also, a drug or other agent having the above action.

Refrigeration. (*L. refrigero*, to make cool.) A making cool, or a lowering of the body-temperature.

Refrigerator. (*Refrigerate*.) A condensing apparatus. Also, a vessel or chamber surrounded with ice, for keeping meat, &c., at a low temperature.

Refrigeratory. See *Refrigerator*.

Refringent. (*L. refringo*, to refract, reflect.) Refracting. See *Refract*.

Refuse. (*L. refusus*, poured out, overflowing.) Waste matter.

Regard', line of. (*F. ligne de regard*; *G. Blicklinie*.) *Optics*. The line which joins the centre of rotation of the eye with the point of regard or fixation point.

R., field of, merid'ian planes of. Term for planes passing through the lines of regard and the meridians of the field of regard.

Regenerate. (*L. regenero*, to beget again.) To reproduce or repair.

Regenerated. (*Regenerate*.) Reproduced or repaired.

Regeneration. (*L. regenero*, to beget again.) Repair or new growth of tissue that has been partially lost in consequence of injury or disease.

R., patholog'ical. A term for *regeneration* following some pathological process.

Regenerative. Having a tendency to *regenerate*.

R. inflamma'tion. Term for an inflammation that is followed by cicatrisation.

Regenesis. (*L. regenero*, to beget again.) The condition of being *regenerated*.

Regimen. (*L. regimen*, government, rule. *F. régime*; *I. reggime*; *S. regimen*; *G. Lebensweise*.) A system of rules as to dietary and mode of life from a hygienic point of view.

Regina. (*L.*) A queen. *Chem.* Old term for the *Lapis philosophicus*, or philosopher's stone, which was supposed to transform the base metals—copper, tin, iron—into pure silver.

Pharm. An old term for a liquid application for the eyes, called by Galen *Reparatrix*.

R. præ'ti. Queen of the meadow. A name for the *Spiræa ulmaria*.

Regio. (*L. From rego*, to rule.) A region or district. See *Region*.

In *Anat.*, a region of the body.

R. aul'ica. (*L. aulicus*, belonging to the court.) Wilder's term for the region of the *iter a tertio ad quartum ventriculum* in the brain.

R. card'aca. The cardiac region, or *Cardiac region, superficial*.

R. coxar'um. The region of the hips. A term for the lower lumbar region.

R. germinat'iva. Germinative region. Waldeyer's term for that region of the ovum which is occupied by the germ-epithelium of the embryo.

R. glute'a. The gluteal region.

R. subthalam'ica. Subthalamie region.

REGION—REGNOLI

That area of the mid-brain lying below the optic thalamus, the body of Luys, and the nucleus tegmenti. It consists of a mass of fibres termed *Zona incerta* (q. v.).

Re'gion. (L. *regio*, from *rego*, to rule or govern; so termed because a region or district was governed, among the Romans, by an appointed officer.) A district.

In *Anat.*, any particular part of the body.

R., acro'mial. The region of the *acromion*.

R., aul'ic. See *Regio aulica*.

R., auric'ular. The region of the *auricle* or external ear.

R., bas'ilar. The region of the base of the skull.

R., cen'tral grey. Term for the medullary portion of the cerebral hemispheres.

R., cil'itary. That zone of the eyeball which bears the *ciliary body*. Also, term for the part of the eyelid which bears the *cilia* or eyelashes.

R., epigas'tric. See *Epigastric region*.

R., gas'tric. The region of the stomach.

R., glute'al. See *Gluteal region*.

R., gus'tatory. The region of the tongue more especially appropriated to the sense of taste; namely, the tip and margins, and the root of the tongue about the circumvallate papillæ.

R., hy'o-mental. Syn. for *R., suprahyoid*.

R., hy'o-ster'nal. Syn. for *R., infrahyoid*.

R., hypochon'driac. See *Hypochondriac region*.

R., hypogas'tric. See *Hypogastric region*.

R., il'iac. See *Iliac region*.

R., il'io-in'guinal. Term for the iliac region and groin together.

R., in'fra-hy'oid. That region of the front of the neck immediately below the hyoid bone.

R., in'fraspi'nous. The region of the infraspinous fossa of the scapula.

R., is'chio-rec'tal. The region between the two ischia and the rectum, corresponding to the posterior portion of the pelvic outlet. It contains the lower end of the rectum and the two ischio-rectal fossæ.

R., laryn'go-trache'al. The region of the larynx and trachea.

R., lentic'ulo-stri'ate. Term for that region of the brain which contains the anterior parts of the *caudate* and *lenticular nuclei*, and the intervening part of the *internal capsule*.

R., lentic'ulo-thalam'ic. Term for that region of the brain which contains the posterior part of the *lenticular nucleus*, the *optic thalamus*, and the intervening portion of the *internal capsule*.

R., lin'gual. The region of the *lingua* or tongue.

R. of Bro'ca. Term for *Convolution, Broca's*.

R., paraster'nal. (Gr. *παρά*, by the side of; *sternal*.) Term for that region on the surface of the thorax lying between the side of the sternum and the mid-axillary line.

R., psy'cho-mo'tor. A syn. for *Psychomotor area*.

R., pter'yo-maxil'lary. The region lying between the superior maxilla and the pterygoid processes of the sphenoid bone.

R., pul'mo-car'diac. The superficial area of the thorax corresponding to the region in which the left lung overlaps the heart.

R., pul'mo-gas'tric. The superficial area of the chest-wall corresponding to the region in which the left lung partly overlaps the stomach.

R., pul'mo-hepat'ic. The superficial area of the chest-wall corresponding to the region in which the right lung partly overlaps the liver.

R., ster'nal, infe'rior. Term for that part of the sternal region lying below the lower margins of the third costal cartilages.

R., ster'nal, supe'rior. Term for that part of the sternal region lying above the lower margins of the third costal cartilages.

R., suboc'ular. Term for the anterior end of the temporo-sphenoidal lobe of the cerebrum.

R., subthalam'ic. See *Regio subthalamica*.

R., suprascap'ular. That region of the back which lies above the spine of the scapula.

R., supraspi'nous. That region of the back which corresponds to the supraspinous fossa of the scapula.

R., tem'poro-maxil'lary. The region surrounding the temporo-maxillary joint.

Re'gional. Belonging to a region or regions.

R. ana'tomy. The anatomical study of limited regions of the body.

Reg'ister. (L. *registrum*, a note-book, register.) A tabulated list, or record; an arrangement for registration.

Also, in *Acoustics*, the whole compass of the human voice; also, a part of the whole compass of the voice the notes of which are alike in quality, and are produced in the same way; as, e.g., chest-register, head-register, &c.

Reg'istrar. (L. *registrarius*.) A person who keeps a register or record.

Reg'istrarship. The office of *Registrar*.

Registra'tion. The process of registering or keeping a register.

Reg'ius. (L.) Royal. Old epithet applied in *Pharm.* and *Pathol.* to designate eminence or uncommon qualities; also, applied to the royal or golden colour of the skin observed in some varieties of jaundice.

R. profes'sor. A professor whose "chair" or professorship has a royal endowment.

Reg'ma. (Ῥήγμα, a fracture.) *Bot.* Term for a fruit in which the carpels separate elastically from the base.

Reg'macarp. (Ῥήγμα, a fracture·κάρπος, a fruit.) *Bot.* Term for a dry, *dehiscent* fruit.

Reg'nauld's anæsthetic. An anæsthetic, introduced by Regnault, consisting of methyl alcohol 1 part, and chloroform 4 parts. It has been used as a substitute for chloroform.

R.'s li'quid. A syn. for *R.'s anæsthetic*.

Reg'nault and Reis'et, meth'od of. A method, introduced by Regnault and Reiset, for investigating the changes produced in air by respiration. The animal experimented on is placed in a closed chamber, and supplied with a definite quantity of oxygen, and the carbonic acid in the expired air is continually removed from the chamber.

Regnoli's operation. A specia

REGRESSION—REINSCH

operation, introduced by Regnoli, for excision of the tongue. A median incision is made from the symphysis of the lower jaw to the centre of the hyoid bone, and two lateral incisions along the lower border of the lower jaw as far as the anterior border of the masseter muscles.

Regression. (L. *regressio*, a returning.) *Retrogression*.

Regres'sive. (*Regression*.) *Retrogressive*.

Regres'sus. (L.) A return. In *Biol.*, syn. for *Retrogression*.

Regular. (L. *regula*, a rule.) Arranged or shaped according to a fixed rule. This epithet has several special applications in Biology.

In *Biology*, symmetrically disposed as to parts or organs.

In *Gynæcology*, it signifies menstruating always at the regular monthly times.

R. physician. A physician who is duly qualified and practises in accordance with the generally recognised rules of his profession.

Regulator. (L. *regula*, a rule or instrument for ruling; an example.) A person or thing that regulates.

R. radii. Regulator of the radius. A syn. for *Supinator radii longus*.

Reguline. (*Regulum*.) Metallic, in the sense of "the metallic state," i. e. pure, uncombined.

Regulum. (L. *regulus*, a prince.) *Chem.* Old term for a pure metal.

Regulus. (L. *regulus*, a prince.) *Chem.* Old term for a metal reduced to the metallic state from its ore.

R. jovialis. (L. *Jovialis*, belonging to Jupiter; the name Jupiter being an old symbol for tin.) *Chem.* Old term for an alloy of antimony and tin.

R. ven'eri. (L. *Venus*, an ancient symbol for copper [*cuprum*].) *Chem.* Old term for an alloy of antimony and copper.

Regurgitation. (L. *re*, back; *gurgies*, -itis, a whirlpool; a stream.) An eructation; a flowing back; a throwing back of any stream.

R., aor'tic. See *Aortic regurgitation*.

R., func'tional. Term for a form of *Mitral regurgitation* consequent on contraction of the chordæ tendinæ and musculi papillares.

R., mi'tral. See *Mitral regurgitation*.

R. of food. A flowing back of food from the stomach into the mouth without actual vomiting, which occurs in some forms of dyspepsia.

R., pul'monary. See *Pulmonary regurgitation*.

Rehman'nia. A Genus of the *Scrophulariaceæ*.

R. chinensis. The root of this plant is used as a tonic and alterative in China, where it is native.

R. lu'tea. Has the same action and uses as *R. chinensis*.

Reichenbach's operation. A variety of *Iridotomy*, introduced by Reichenbach, consisting in incision of the cornea, and division, from before backwards, of the iris.

Reichert's cartilage. (After the German anatomist Reichert, who first described it.) The embryonic cartilaginous mass which later on becomes differentiated to form the styloid process of the temporal bone, the stylo-hyoid ligament, and the lesser cornu (stylo-hyal) of the hyoid bone.

R.'s mem'brane. Syn. for Bowman's membrane. See *Membrane, Bowman's*.

Reich'mann's disease. First described by Reichmann. A chronic disease of the stomach characterised by hypersecretion, dilatation, and hypertrophy, and occasional attacks of violent pain and vomiting. It is commonly followed by the formation of gastric ulcer.

R.'s test-break'fast. A test-breakfast, first employed by Reichmann, for testing the digestive powers of the stomach in cases of disease. It consists of meat powder 30 grammes, salt 2 grammes, 1 wheaten roll, and water 200 grammes.

Reid's method. A method of reducing dislocation of the hip by means of manipulation.

Also, the application of Esmarch's bandage to the treatment of aneurisms of the extremities.

Also, a method of measuring on the skull the position of the fissure of Rolando. A base line is drawn from the infraorbital ridge through the centre of the external auditory meatus. Two perpendiculars are drawn to this from just in front of the meatus and from the posterior border of the mastoid, and passing to the midline. From the upper end of the posterior line a diagonal is drawn to meet the point where the anterior line joins the fissure of Sylvius, and gives the position of the fissure of Rolando.

Reil, Johann Christian. An anatomist and professor at Halle, died 1813.

R., an'sa of. A syn. for *Lemniscus*.

R., band of. See *R., moderator band of*.

R., fis'sure of. The *Vallecula*.

R., is'land of. The *Lobe of cerebrum, central*.

R., mod'erator band of. A fibrous band extending from the base of the anterior papillary muscle of the right ventricle to the septum. It occurs commonly, but by no means invariably, in man, in whom it corresponds to the moderator band in the heart of some other mammals.

Re-implanta'tion. (L. *re*, again; *implantation*.) *Dent. Surg.* The replacing in its socket of a tooth that has been drawn.

Rein'deer moss. The *Cladonia rangiferina*.

Re-infec'tion. (L. *re*, again; *infection*.) A second infection with the same poison.

Re-inflame'. (L. *re*, again; *inflame*.) To inflame afresh.

Re-inforce'ment. (Old F. *reinforcer*.) The act of reinforcing or strengthening.

R. of re'flexes. The increase of a reflex, whether deep or superficial, when some other, independent, muscular or mental act is performed.

Re-infu'sion. (L. *re*, again; *infusion*.) *Infusion* a second time.

Also, syn. for *Refusion*.

Re-inocula'tion. (L. *re*, again; *inoculation*.) *Inoculation* a second, third, &c., time.

Reins. (L. *renes*.) Old term for the kidneys; also, the loins.

Reinsch's test for ar'senic. This is a delicate test for the presence of arsenic introduced by Reinsch. To the liquid containing arsenic, which must be free from nitrates or chlorides, bright copper foil and an excess of hydrochloric acid are added and the mixture is boiled. The copper becomes coated with a greyish film of arsenide of copper. If the foil

be dried and heated in a test-tube, the arsenic sublimes in the form of the trioxide, which is deposited in minute octahedra on the side of the tube.

Re-inversion. (L. *re*, again; *inversion*.) *Obstet.* and *Gynæc.* Replacement of an inverted uterus.

Reiset's method. A method, introduced by Reiset, for estimating the amount of carbon dioxide in a given volume of air.

Reissner, canal of. Syn. for *Cochlea*, *membranous*.

R., mem'brane of. A very fine membrane which forms the vestibular wall of the *R.*, canal of, and separates this from the *scala vestibuli*. It is composed of three layers: a central connective-tissue, covered on one side by the epithelium of the vestibule, and on the other by the epithelium of the cochlea.

Rejectamenta. (L. *rejecto*, to cast back, cast up.) A syn. for *Ejecta*.

Rejuvenes'cence. (L. *re*, again; *juvenesco*, to grow young.) A growing young again; a renewal of strength.

Vegetable Physiol. A process, first described by Braun, in which the protoplasm of a vegetative cell is developed into a promordial cell, which becomes finally surrounded with a cell-wall, and forms a new plant.

Relapse. (L. *re*, again; *labor*, *lapsus sum*, to fall.) The return of the original symptoms of a disease during or shortly after convalescence from the same disease.

Relapsed. (*Relapsed*.) Fallen or slipped back; suffering from a *relapse*.

Relapsing. (*Relapse*.) Falling or slipping back. Characterised by a relapse or relapses.

R. fe'ver. Also termed *Famine fever*. A specific infectious disease, characterised by febrile paroxysms, usually lasting about six days, and followed by a remission similar to the first attack, this again being followed by a second paroxysm, and so on, to three or four times. It is now believed to be caused by the presence of the *Spirochæta Obermeieri*.

R. remittent fe'ver. The same as *Fever, remittent, chronic*.

Relation. (L. *relatio*, a telling.) An individual who bears a relationship to another.

Also, in *Anatomy*, connection or immediate proximity of one part to another.

Relationship. Kinship; connection by consanguinity.

Relax. (L. *relaxo*, to set free, loosen.) To loosen; also, to produce languor; also, to cause looseness of the bowels.

Relax'ation. (L. *relaxatio*, a releasing.) A loosening, or a releasing from a state of tension. Also, a state of languor.

R. of pel'vic joints. A loosening and softening of the structures in connection with the pelvic joints, sometimes occurring in pregnancy, giving rise to pain and weakness of the lower limbs.

Relax'ative. (*Relaxation*.) A syn. for *Laxative*.

Relax'ing. (L. *relaxo*, to set free, discharge.) Loosening; also, producing languor; also, causing looseness of the bowels.

Reliquiæ. (L.) Remainder; leavings. In *Bot.*, those parts covering the ovary of a flower which are *persistent*; also, withered leaves which adhere to the stem in some plants.

Re'mak. A German physician. Died in 1867.

R., band of. Another name for *Axis-cylinder*.

R.'s contrac'tions. Term for *Diplegic contractions* (q. v.) on electrical stimulation sometimes observed in progressive muscular atrophy, and occasionally also in osteo-arthritis (rheumatic gout).

R.'s fibres. Term for a variety of axis-cylinder very common in the sympathetic system and in the olfactory nerves, and constituting all the nerves of the embryo and of some Invertebrates. They are non-medullated, longitudinally fibrillated axis-cylinders, occasionally branching, and enclosed in a structureless, elastic primitive sheath.

R.'s gang'lion. Term for a nerve-ganglion situated in the wall of the sinus venosus in the frog's heart.

Reman'sio. The same as *Emansio*.

Remas'ticate. (L. *re*, again; *masticate*.) To chew again, chew the cud, or *ruminate*.

Remastica'tion. (L. *re*, again; *mastication*.) Chewing the cud, *rumination*.

Reme'dial. Belonging to, or of the nature of, a remedy.

Remedium. (L.) A remedy or cure.

R. antiphthis'icum Adair'i. Adair's antiphthisical remedy. Name for a solution of 20 centigrammes of sulphate of copper, with 10 minims of sulphuric acid, in 62 grammes of water.

R. cathol'icum. A universal remedy, or *Panacea*.

R. diacrit'icum. A diacritic or diagnostic remedy; a remedy that helps in the forming of a diagnosis.

R. divi'num. A divine remedy. Term at one time applied to the *Imperatoria ostruthium*, from its supposed efficacy.

Remedy. (*Remedium*.) Any agent used in the treatment of disease. Remedies may be conveniently divided into preventive, curative, and palliative.

Remex. (L. *remex* [plur. *remiges*], a rower.) A quill-feather or flight-feather of a bird's wing.

Remiges. Plur. of *Remex*.

Remig'ial. Belonging to a *Remex*.

Remijia. (Named after *Remijo*, a Spanish surgeon.) A Genus of the *Rubiaceæ*.

R. ferrugin'ea. Action and uses of bark the same as those of the bark of *R. pedunculata* and *R. purdiana*.

R. peduncula'ta. Affords cuprea bark which is used as a substitute for cinchona bark, and yields quinine, cinchonine, &c.

R. purdia'na. Has the same characters and uses as *R. pedunculata*.

Remiped. (L. *remus*, an oar; *pes*, *pedis*, a foot.) *Biol.* Having feet resembling oars.

Remis'sion. (L. *remissio*, an abating or slackening.) Temporary abatement. The partial lowering of temperature occurring at intervals in a febrile disorder, and especially in *Remittent fever*.

Remittent. (L. *remitto*, to send back; also, to assuage, to lessen.) Becoming assuaged, characterised by alternate periods of *remission* and *exacerbation*.

R. fe'ver. See *Fever, remittent*.

Rem'ora. (L.) A hindrance. A little fish that clings to the keel of a ship.

Also, old term for a Surgical instrument holding parts during an operation. It was used specially of two varieties of such instrument.

1. An instrument used to keep the intestines from protruding during castration.

2. An instrument, *Remora Hildani*, invented by Hildanus, and described by Scultetus (i. tab. xxiii. fig. 3), for holding in position a fractured or dislocated bone.

R. ara'tri. A syn. for *Ononis spinosa*.

R. Hilda'ni. See main heading.

Re'mulus. (Dim. from L. *remus*, an oar.) A small oar.

Anat. The posterior, narrow portion of a rib.

Ren. (L. Gen. *renis*. F. *rein*; G. *Niere*.) The kidney.

Re'nal. Belonging to the *ren* or kidney.

R. ap'oplexy. (F. *apoplexie rénale*.) An old term for *Urine, suppression of*.

R. ar'teries. These, two in number, arise from the side of the abdominal aorta about one half inch below the superior mesenteric artery, the right slightly lower than the left, and pass directly outwards each to the hilus of the corresponding kidney. Each divides into four or five branches near the hilus of the kidney, lying between the vein in front and the ureter behind. Each artery, before division, gives one or two small *inferior suprarenal arteries* to the suprarenal body.

R. cal'culus. A concretion or stone in the kidney. This is usually composed either of uric acid or of oxalate of lime. Most commonly it passes down the ureter into the bladder, giving rise, during its passage, to the symptoms of *renal colic*. In many cases one stone lodges permanently in the kidney, giving rise to the following symptoms:—sickening pain in the loin, often radiating to the testicle, aggravated by movement; there is usually tenderness on pressure over the affected kidney; there may be increased frequency of micturition; there is nearly always a trace of blood in the urine; profuse hæmaturia may occur. Pus may be present in the urine late on in the case.

R. casts. Cylindrical albuminous casts of the tubules of the kidney, formed in certain pathological conditions, and washed out by the urine with which they then become mixed. The following varieties are met with.

1. *Hyaline casts.* Pale homogeneous cylinders, derived from the albuminous transudation of the glomeruli (Cohnheim). They are divided into *mucous* and *waxy*. The mucous variety have no special significance; the waxy usually denote chronic disease.

2. *Epithelial casts.* These consist of renal epithelium; they usually denote acute disease.

3. *Blood casts.* These are generally composed of fibrin in which are entangled red blood-corpuscles.

4. *Granular casts.* These are usually hyaline (*waxy*) casts which have either undergone granular degeneration, or are filled with degenerated cells. They denote chronic disease.

5. *Fatty casts.* These are really epithelial, hyaline, or granular casts containing a large number of fat globules, which latter consist of olein with cholesterin, and some albumen.

R. col'ic. This is caused by the passage of a calculus from the kidney along the ureter. The symptoms are—agonising pain from the

loin shooting down to the groin, generally also into the testicle of the same side, and sometimes to the inner side of the thigh. There are also usually retraction of the testicle and nausea or actual vomiting. Sudden relief is experienced when the calculus passes from the lower end of the ureter into the bladder.

R. ep'ilepsy. A term for *Uræmic convulsions*.

R. glands. Syn. for *Suprarenal glands*.

R. inad'equacy. Term for a condition, probably consequent on a state of exhaustion of the renal epithelium, characterised by marked diminution of the urinary solids, and also frequently of the urinary water.

R. storm. Term introduced by Sir Roderick Murchison for a special form of nerve-storm often observed in patients with aortic regurgitation. It consists in an acute attack of pain, lasting a few hours, referred to the kidney, and resembling renal colic, except that there is no nausea and no testicular pain, and that the urine remains normal.

R. veins. These pass in front of the renal arteries to enter the vena cava inferior.

Renas'cence. (L. *renascens*, rising again. F. *renaissance*.) A second birth.

Renas'cent. (L. *renascens*, rising again.) Born, or coming into being, a second time.

Ren'culin. (Ren.) An albuminoid said to have been extracted from the *suprarenal capsules*.

Ren'culus. (Dim. from *Ren*.) A lobule of the kidney.

Renéal'mia. A Genus of the *Zingiberaceæ*.

R. cardamo'mum. See *Elettaria cardamomum*.

R. exalta'ta. Hab. S. America. Diuretic, diaphoretic, stimulant, and emetic. The bruised root-stalk and the leaves are used as an external application in rheumatism.

Ren'es. Plur. of *Ren*. The kidneys.

Renicap'sular. Belonging to a *Renicapsule*.

Renicap'sule. (Ren; capsule.) A syn. for *Suprarenal capsule*.

Renicar'diac. (Ren; cardiac.) Belonging to the renal and cardiac organs in the *Mollusca*.

Renic'ulus. (Dim. from *Ren*.) See *Reniculus*.

Re'niform. (L. *ren*, *renis*, the kidney; *forma*, shape.) Kidney-shaped.

Reniglan'dular. (Ren; glandular.) A syn. for *Renicapsular*.

Re'nin. (Renes.) An extract which has been made from the kidney and given therapeutically in renal diseases, on the analogy of the use of thyroid extract for myxædema, &c.

Ren'is. Gen. sing. of *Ren*.

Renisexual. (Renal; sexual.) A term signifying renal and sexual.

Renit'ent. (L. *renitens*, pres. part. *renitor*, to resist.) Resisting, especially resisting pressure.

Rennes-les-Bains. In the Dept. of the Aude, France, noted for its alkaline, chalybeate, and sulphur springs.

Ren'net. (Mid. Eng. *renet*. L. *coagulum*; F. *présure*; I. *presame*; G. *Lab*.) The prepared mucous membrane of the *Abomasum* or fourth stomach of Ruminants; also, an infusion of this mucous membrane. It contains

the milk-curdling ferment of the stomach, which coagulates the casein of milk. Rennet is most commonly prepared from the stomach of the calf, in which it is present in considerable quantity.

R., li'quid. See *Liquor seriparus*.

R., veg'etable. The *Withania coagulans*; also, its fruit.

Rennie's nu'trient injection. See under *Rectal feeding*.

Ren'in. (*Rennet*.) The milk-curdling enzyme which constitutes the active principle of *Rennet*.

Rennin'ogen. (*Rennin*; γένος, race, origin.) The *zymogen* which gives rise to *Rennin*.

Ren'uens. (L. *renuo*, to nod back with the head.) *Anat.* Old epithet applied to two muscles of the back of the neck, the *rectus capitis posticus major* and *rectus capitis posticus minor*.

Ren'uent. See *Renuens*.

Ren'ule. (Dim. from *Ren*.) A small kidney.

Repand'. See *Repandus*.

Repan'ditas. (L. *repandus*, bent backwards.) *Surg.* Old term for *Lordosis*.

Repandus. (L.) Bent backwards.

Repar'ative. (L. *reparo*.) Tending to repair or restore.

Repa'tency. (L. *re*, again; *patent*, in the sense of lying open.) A re-opening, or becoming open again.

Repellent. (L. *repello*, to drive back.) Driving back, causing to recede. *Med.* Old term signifying driving back disease.

Repens. (L.) Creeping.

Repent. (L. *repens*.) Creeping.

Repent'inus. (L.) Unlooked for, un-awares. Old epithet applied to certain diseases.

Repercola'tion. (L. *re*, again; *percolation*.) A second percolation.

Repercus'sion. (L. *repercussio*, *repercussum*, to strike back. F. *répercussion*; G. *Zurückschlagen*.) A term at one time proposed as a synonym and a substitute for the term *Ballotement*.

Also, a driving inwards or dispersing, as, e.g., of a rash.

Repercutiens. (L.) Beating or striking back, repelling. Old epithet applied to certain medicines which had the effect of driving inwards or dispersing skin-rashes, or tumours. These medicines were termed "*medicamenta repercutientia*."

Repercutient. (*Repercutiens*.) See *Repercutiens*.

Replanta'tion. (L. *re*, again; *plantatio*.) A planting again or afresh.

R. of teeth. Replacement of teeth that have been removed from their sockets, whether in consequence of an accident, or by ordinary extraction.

Reple'tion. (L. *repleo*, *repletum*, to fill up.) The state of being full, or gorged.

Reple'tory. (L. *repleo*, *repletum*, to fill up.) Belonging to *Repletion*.

Rep'licate. (L. *replico*, *replicatum*, to bend back.) *Biol.* Folded back.

Replica'tion. (L. *replicatio*, a bending back.) A folding back.

Replum. (L.) A leaf of a door. In *Biol.*, the frame-like or leaf-like *placenta* in the fruit of certain Natural Orders of plants (*Cruciferae*, &c.) across which the septum lies. It persists after dehiscence of the valves.

Reposi'tion. (L. *repono*, *repositum*, to

replace. F. *réposition*; G. *Wiedereinrichtung*.) Replacement; in especial, of a displaced organ or part.

Repos'itor. (L. *repono*, *repositum*, to replace.) An instrument designed for replacing a prolapsed foot or cord in labour; also, an instrument for replacing an inverted uterus.

Repres'sio. (L. *reprimo*, *repressum*, to press back.) Repression. In *Med.*, formerly used as syn. with *Suppressio*.

Reproduce'. (L. *re*, again; *produco*, to bring forth.) To procreate offspring. Also, to produce or call forth again.

Reproduc'tion. (L. *re*, again; *produco*, to bring forth.) Procreation of offspring. Also a producing or calling forth again.

R., asexual. Procreation of offspring without the union of the sexes.

R., endo'genous. A term for internal cell formation and growth.

R., meris'matic. Reproduction in which the fertilised germ divides up into a number of parts or cells.

R., mono'genous. The same as *Monogeny*.

R., oo'gamous. Reproduction by means of an *ovum* or *ova*.

R., sexual. Procreation of offspring by means of the union of the male and female germs.

Reproductive. (*Reproduce*.) Belonging to, or having the function of, *Reproduction*.

R. func'tion. The function of *Reproduction*.

R. or'gans. Those organs whose function is directly concerned in *Reproduction*. See *Generation, organs of*.

Repta'tio. (L. *repto*, to creep along.) *Reptation*.

Repta'tion. (*Reptatio*.) Term for the special creeping form of progression of Snakes and certain Invertebrata.

Reptato'rial. The same as *Reptatory*.

Rep'tatory. (L. *repto*, to creep along.) Belonging to, or having the character of, *Reptation*.

Rep'tile. (L. *reptilis*, any creeping thing.) Anything that creeps. Term for a member of the class *Reptilia*.

Reptil'ian. Belonging to, or characteristic of, the *Reptilia*.

Reptili'vorous. (L. *reptilis*, a reptile; *voro*, to devour.) Reptile-eating.

Repul'lulate. (L. *repullulo*.) To sprout forth anew.

Repullula'tion. (*Repullulate*.) A sprouting forth anew; especially used of recurrence of a pathological growth.

Repul'sion. (L. *repello*, *repulsum*, to drive back.) The influence exercised by two bodies upon one another when they tend to increase the distance between them.

R., capill'ary. Repulsion consequent on the forces which act upon liquids in small (capillary) tubes.

Repul'sive. (L. *repello*, *repulsum*, to drive back.) Tending to repel or cause repulsion.

Repulso'rium. (L. *repulsorius*, -a, -um, set to drive back. F. *repoussoir*.) Term for an instrument for extracting the roots of teeth.

Repurga'tio. (L.) A purging; also, a cleansing. *Med.* Old term, applied by Galen both to freeing of the pores of the skin and to causing expectoration.

Res. (L.) A thing; the matter in hand; a case or suit in law.

R. natura'les. Natural things; healthy life and its functions, as distinct from disease.

R. non-natura'les. Non-natural things. Old term for certain things not forming components of the body, but necessary to its existence. They were enumerated as follows: air, meat and drink, motion and rest, sleep and wakefulness, and, lastly, the *secreta* and *retenta*.

Rescis'sion. (L. *rescindo*, *rescissum*, to cut in sunder.) *Surg.* A term for repeated amputation.

Resectio. (L.) A paring away or cutting.

R. subperiostia'lis. *Resection*, *subperiosteal*.

Resection. (*Resectio*. F. *résection*; G. *Resektion*, *Wegschneiden*.) The paring away of a portion of bone, cartilage, nerve or other structure, especially the articular ends of bones.

R., Est'lander's. Operation introduced by Estlander for persistent empyæma where the lung is collapsed. It consists in the partial removal of one or more ribs to allow of the falling in of the side.

R., in'tra-epiphys'al. Resection performed within an *epiphysis* of bone.

R. of joints. See main heading.

R. of nerves. See *Neurectomy*.

R. of u'terus, subperitone'al. See *R., subperitoneal*, of *uterus*.

R., os'seous. A syn. for *Osteotomy*.

R., osteoplas'tic. A syn. for *Osteoplasty*.

R., osteoplas'tic, of tar'sus. An operation on the tarsus introduced by Wladimiroff, hence also termed *Wladimiroff's operation*. It consists in *osteoplasty* of the tarsal bones as far forward as the line for *Chopart's amputation* and the articular surface of the tibia. The tarsus is divided through the middle of the scaphoid and cuboid.

R., subcap'sulo-perios'teal. A resection of a joint in which the periosteum and the capsule of the joint are left intact.

R., subperiost'eal. A resection in which the periosteum is left intact.

R., subperitone'al, of u'terus. A method introduced by Sängér of completing the operation of *Cæsarean section* by paring away a strip of uterine muscle from either cut edge, and then applying Gely's intestinal suture to the cut edges. See *Suture*, *Gely's*.

R., temporary. A partial resection of bone done in the course of operation in order to lay open the part to be operated on. The partially resected bone is replaced at the termination of the operation.

R., ul'tra-epiphys'eal. Term for a resection performed beyond the line of the *epiphysis*.

Rese'da. (L.) Name used by the ancient Romans for the *R. odorata*. Now used to denote the Mignonette genus, a Genus of the *Toropetalæ*.

R. lu'tea. Italian or base rocket, a European species. The root was formerly used as a diuretic, aperient, and sudorific.

R. lute'ola. Wild mignonette or woad. Hab. Europe, Mid-Asia, and North Africa. Root formerly used as a diaphoretic, diuretic, and aperient.

R. odora'ta. Common garden mignonette. Hab. Syria and North Africa. The *Reseda* of

the Romans, who used it to allay irritation in wounds.

R. sesamoi'des. Hab. Europe. Detergent and vulnerary.

R. stella'ta. A syn. for *R. sesamoides*.

Reserve' air. See *Air*, *reserve*.

Res'ervoir. (F. *réservoir*.) A receptacle for storing liquid, especially water.

In *Biol.*, a receptacle in which some assimilated product is stored for future use.

R. of Pec'quet. See *Pecquet*, *reservoir of*.

Resident'ia. (L. *resideo*, to sit down.) *Med.* Old term used as synonymous with *Subsidentia*.

Resid'ua. Plural of *Residuum*.

R., mo'tor. (L. *motor*, a mover; from *moveo*, to move.) Same as *Residual contractions*.

Resid'ual. (L. *residuum*; from *resideo*, to remain behind.) Remaining behind; relating to a *Residuum*.

R. air. See *Air*, *residual*.

R. contrac'tions. (L. *contractus*, part. of *contraho*, to draw together.) The short vibrations of muscular fibre which are observed immediately after the relaxation following a contraction produced by a single induction shock transmitted to a weighted muscle through a nerve. The vibrations are probably a phenomenon of elasticity.

Res'idue. (*Residuum*.) That which remains behind. In *Pharm.* and *Chem.* that which remains after filtration.

Resid'uum. (L.) What is left behind, the residue.

Resil'ience. (L. *resiliens*, rebounding.) A rebounding or returning to the original position or shape; elasticity.

Resil'ient. (L. *resiliens*, rebounding.) Rebounding, or returning to the original position or shape; elastic.

R. stric'ture of ure'thra. See *Stricture of urethra*, *resilient*.

Res'in. (L. *resina*.) An oxidised *terpene*; either accompanying a *terpene* or *terpenes* in a crude essential oil, or occurring as an exudation from the hardening of a *terpene*, due to oxidation on exposure to air. The resins are amorphous, non-volatile, usually vitreous substances, insoluble in water, soluble in absolute alcohol, with a low melting-point, and burning readily with a smoky flame. They are largely used in varnishes, and several are used in medicine (see under *Resina*).

Resins are divided into three classes:

1. *True resins*; hard substances, made up chiefly of resin acids.
2. *Gum-resins*; resins containing a gum capable of softening in water.
3. *Oleo-resins* or *balsams*; resins mixed with essential oils, and also with benzoic and cinnamic acids and the salts of these acids.

R., ac'aroid. See *Acaroid resin*.

R.-cell. A vegetable cell that secretes resin.

R., com'mon. See *Colophony*.

R.-duct. A syn. for *R.-passage*.

R., elas'tic. A term for *Caoutchouc*.

R.-flux. A disease which attacks trees of the Order *Coniferae*, caused by the *Agaricus melleus*; there is first an excessive secretion of resin, and ultimately the tree dies.

R.-gland. Term for a large vegetable cell, or a group of smaller cells, secreting resin.

R.-pas'sage. An intercellular cavity in plants, the function of the cells lining which is to secrete resin.

R.-tube. A syn. for *R.-passage*.

Resi'na. (L. Gr. *ῥητινῆ*, from *ῥέω*, to flow.) A resin. The Pharmacopœal name for *Resin*.

R. al'ba. White resin. The inspissated juice obtained by incisions into the bark of *Pinus sylvestris* and other species. Also, the residuum from the distillation of purified turpentine, *Terebinthina*.

R. copal'bæ. A non-official preparation made from the oleo-resin (*copaiba*) by distilling off the volatile oil. It is a brownish-yellow brittle resin, soluble in alcohol.

R. fla'va. Yellow resin. The residuum from the distillation of oil of turpentine.

R. kalada'næ. Resin of *Kaladana*, or *Pharbitis nil*.

R. lac'cæ. The resin of *Lac*.

R. lu'tea. A syn. for *Resin, acaroid*.

R. ni'gra. Black resin. Term for the residuum in the retort after distilling oil of turpentine from common turpentine. Also termed *Colophony*.

R. no'vi bel'gii. Botany Bay gum. Name for a resin found in round tears, from the size of a pea to that of a marble, under the long leaves at the summit of the trunk of *Xanthorrhœa hastilis*. These tears, when softened by the heat of the sun, often fall to the ground, sticking to anything they touch. Hence the gum is often found mixed with earth, sand, wood, bark, &c.

Resina'ceus. (*Resina*.) Resinous.

Resina'lis. (*Resina*.) Resinous.

Resi'nate. (*Resina*.) Term introduced by Berzelius for a compound of a resin with a base.

Resina'tus. (*Resina*.) *Pharm.* Belonging to a resin. Formerly applied as an epithet to certain wines impregnated with odorous resins, as mentioned by Celsus and Pliny.

Resini'dæ. (*Resina*.) Guibourt's term for a class of ternary organic compounds, including the resins.

Resini'ferous. (L. *resina*; *fero*, to bear.) Resin-bearing.

Resin'iform. (L. *resina*; *forma*, resemblance.) Having the appearance of a resin.

Resinoc'e'rum. (L. *resina*; *cera*, wax.) Old term for a mixture of resin with wax, mentioned by Galen.

Resino'deus. (*Resina*.) Epithet applied to remedies that contain resin, *Remedia resinodea*.

Res'inoid. (*Resina*. *Eidos*, form.) Resembling a resin. Also, as a substantive, a substance having some of the properties of resins.

Resino'leus. (L. *resina*; *oleum*, oil.) Epithet applied by Béral to solutions of resin. *Medicamenta resinolea*.

Resinol'icus. (*Resina*.) Epithet applied by Béral to resinous dressings for wounds.

Res'inous. Belonging to, of the nature of, or made up of, resin.

Resis'tance. (L. *resistans*, withstanding.) A withstanding or standing against.

In *Electric*., the opposition offered by a conductor to the passage of a current of electricity; estimated in *ohms*.

R., essen'tial. *Electric*. Term for the resistance to the conduction of the electric current generated by a battery offered within the battery itself.

R., extraor'dinary. *Electric*. Term for the resistance to the conduction of the electric current generated by a battery offered outside the battery.

Resolu'tio. (L.) A loosening.

In *Med.*, a loosening of structure; a softening.

R. et di'abrosis ventric'uli. (Gr. *διάβρωσις*, an eating through, ulceration; L. *ventriculus*, the stomach.) A softening and ulceration of the stomach.

R. membro'rum. (L. *membrum*, a limb.) An old term syn. with *R. nervorum*.

R. mor'bi. Resolution of a disease, especially when not marked by a distinct *crisis*.

R. nervo'rum. (L. *nervus*, a tendon, or nerve.) An old term for *Paralysis*.

R. os'sium. A syn. for *Osteolysis*.

R. ventric'uli autopep'tica. (Mod. L. *autopepticus*; from Gr. *αὐτός*, self; and *πεπτός*, cooked, digested.) Self-digestion of the stomach.

R. vir'ium. (L. *vis*, plur. *vires*, strength.) A loosening of strength. A term for *Dialysis*.

Resolution. (L. *resolutio*.) *Med.* A loosening or softening; the dispersion or disappearance of a morbid process.

R. of anæsthe'sia. A term for complete anæsthesia, the reflexes being completely in abeyance.

R. of inflamma'tion. The clearing up or disappearance of inflammation. See main heading.

Res'olutive. (*Resolution*.) A syn. for *Resolvent*.

Resol'vent. (L. *resolvo*, *resolutum*, to loosen.) A syn. for *Discutient*.

Resol'ving. (L. *resolvo*, to loosen.) Loosening or softening; dispersing (of a morbid process).

R. inflamma'tions. Inflammations that undergo *resolution*.

R. pow'er. The capacity of the objective of a microscope to make clear fine points.

Res'onance. (L. *resonantia*, a sounding again, an echo.) A return of sound, a resounding or reverberating.

Med. The special quality or qualities given to sounds generated in the chest by reverberation and other modifications in passing through the various parts of the respiratory organs and the chest-walls.

Also, in general, resonance signifies a hollowness or reverberation of sound such as that heard when percussion is made on the chest-wall over the healthy lungs. See also *Resonant*.

R., amphor'ic. A variety of *R., tympanitic* in which the sound is somewhat metallic in quality; it is the *percussion* equivalent of the *amphoric breathing* heard on *auscultation*.

R., bell-met'al. A syn. for *Bell sound*.

R., cough. The resonance set up by the sound of coughing, heard over the chest during that act.

R., cracked-pot. See *Bruit de pot fêlé*.

R.-org'ans. Term for the cavities above the larynx which help to modify the quality of the voice.

R., pect'oral vo'cal. A term for the normal *pectoriloquy* heard over the bronchi and trachea.

R., skoda'ic. See *Skodaic resonance*.

R., tympanit'ic. Resonance such as that elicited over the intestines, especially when distended with gas, *tympanites*, and over large pulmonary cavities with yielding walls.

R., vesic'ular. Term for the resonance elicited on percussion of the chest over the healthy lung.

R., vesic'ulo-tympanit'ic. A reso-

RESONANT—RESPIRATION

nance intermediate in quality and pitch between vesicular and tympanitic resonance.

R., vocal. The resonance elicited by the vibration of the vocal cords in speaking.

R., whispering. The resonance elicited by whispering.

Resonant. (L. *resonans*, resounding.) Resounding; reverberating. In Medical *percussion*, a region is said to be resonant when percussion of its surface generates a hollow sound, as of a resilient, thin-walled cavity filled with air. Such a note is given by the thoracic walls on percussion over the lungs in health, where these organs come near the surface.

Resonator. (L. *re*, again; *sono*, sonatum, to sound.) Anything that has the effect of intensifying sounds. More especially, an instrument used to intensify sounds; also, an organ of the body that intensifies sounds.

R., Helmholz's. An apparatus invented by Helmholtz for investigating diminution in acoustic perception of single tones.

Resonitus. (L. *re*, again; *sonitus*, a sound, a beating.) Old term syn. with *Contrastissura* (F. *contre-coup*).

Resopyrin. Term for a compound of *resorcin* with *antipyrin*. It forms colourless crystals. Its therapeutic action is not known (1896).

Resorbens. (L.) Supping up; *absorbent*.

Resorbentia, medica'menta. (L. *resorbens*; *medicamentum*.) Old term for medicines that cause absorption.

Resorcin. $C_6H_4(OH)_2$. A derivative both of benzene and phenol, occurring in white crystalline plates, which melt at 110° F., and readily become volatilised. Soluble in slightly less than 2 parts of water and in 20 of olive oil. It is a powerful antiseptic; a one per cent. solution will prevent putrefaction. It coagulates albumen, and has a caustic action on the skin. Internally it has a specific action very similar to that of quinine, but that it is a strong sudorific, and its antipyretic action is very transient. *Dose*, 5 to 15 or 30 grains, well diluted with water. In poisonous doses it gives rise to epileptiform convulsions.

R.-blue. A blue colouring-matter sometimes present in animal and vegetable albuminous tissues. It can be obtained artificially by heating together urea and resorcin.

R.-phthalcin. This occurs in two forms—(1) in a yellow flocculent mass ($C_{20}H_{14}O_6$); (2) in a brick-red crystalline powder ($C_{20}H_{12}O_6$). Crystals having the latter composition are used for detecting lesions of, and foreign bodies in, the cornea.

R.-yel'low. A yellow colouring-matter occurring in vegetable tissues, and also in the tissues of animals fed largely on substances of the *Aromatic series*. It can be obtained artificially by the action of sulphuric acid on resorcin.

Resorcinol. A syn. for *Resorcin*.

Resorcinum. Latinised form of the word *Resorcin*.

Resorp'tio. (L. *resorbeo*, to swallow or sup again.) Absorption; resorption.

R. cutanea. See *Cutaneous absorption*.

R. cu'tis. (L. *cutis*, the skin.) A syn. for *R. cutanea*.

Resorption. (L. *resorbeo*, to swallow or sup again.) The absorption of pathological deposits, as, *e. g.*, of the products of inflammation.

R., lacu'nar. Term for resorption of bone

by means of osteoclasts which help in the formation of, and then occupy, *Howship's lacunæ*.

Resorp'tions-diabe'tes. (G.) Term for glycosuria consequent on resorption of sugar.

Resorp'tive. Capable of, or characterised by, *resorption*.

R. fe'ver. Fever produced by *resorption* of toxic material.

Respirabil'ity. The state of being *Respirable*.

Respir'able. (L. *respiro*, to breathe; *habilis*, able.) Capable of being breathed; fit to be breathed.

Respira'men. (L.) The respiratory passage, the windpipe.

Respiramen'tum. (L.) A syn. for *Respiratio*.

Respira'tio. (L.) A breathing; a respiration.

R. abol'ita. (L. *abolitus*, done away with, abolished.) Abolished respiration. A syn. for *Apnoea*.

R. anhe'lo'sa. A syn. for *Anhelation*.

R. brev'is. Short respiration. A syn. for *Dyspnœa*.

R. diffic'ilis. Difficult respiration. The same as *R. brevis*.

R. muscular'is. Muscular respiration. A term for *Respiration, muscle* (q. v.).

R. pectora'lis. Pectoral or thoracic respiration. See *Respiration, thoracic*.

R. ster'tens. Snoring respiration. A syn. for *Stertor*.

R. stertoro'sa. Stertorous respiration, *stertor*.

R. suspirio'sa. *Respiration, sighing*.

Respira'tion. (L. *respiratio*, a breathing.) The inspiration and expiration of air through the lungs, with the accompanying absorption of oxygen, setting free of carbonic acid and water, and other changes involved.

In *Biol.*, the continuous interchange between the gases of living organisms and the gases of the medium or media in which they live.

R., abdom'inal. The same as *R., diaphragmatic*.

R., aë'rial. Air-breathing. See more fully under main heading.

R., amphor'ic. See *Amphoric breathing*.

R., aquat'ic. Water-breathing, in which, by means of gills, the skin, &c., the organism absorbs oxygen and gives out carbonic acid.

R., artifi'cial. An attempt to supply by mechanical means, such as the raising and lowering of the patient's arms, &c., the place of natural respiration which is at the time in abeyance, *i. e.* the patient is suffering from asphyxia.

R., Bi'ot's. (After *Biot*.) Term for quiet regular respiration, without any variation in the size of the individual respirations, such as the normal respiration during sleep.

R., blood. Term for the taking up of oxygen and giving off of carbonic acid by the blood (*arterialisation*) in its passage through the lungs.

R., blow'ing. A term for *R., bronchial*.

R., bran'chial. Respiration by means of *branchiæ* or gills.

R., bron'chial. See *Bronchial breathing*.

R., bron'cho-cav'ernous. A pathological variety of breathing intermediate in its characters between *cavernous* and *bronchial breathing*.

RESPIRATION.

R., broncho-vesic'ular. A pathological modification of the normal respiratory (vesicular) sound which combines, to some extent, the characters of *vesicular* and *bronchial breathing*. Its presence usually signifies partial consolidation of the portion of lung over which it is heard.

R., buc'al. Breathing through the buccal cavity or mouth.

R., cavernous. See *Cavernous breathing*.

R., cen'tre for. See *Respiratory centre*.

R., cer'ebral. See *Cerebral respiration*.

R., Cheyne-Stokes'. See *Cheyne-Stokes' respiration*.

R., clavic'ular. Respiration in which the upper part of the chest is used especially, the shoulders and clavicles being elevated.

R., cog-wheel. The same as *R., cogged-wheel*.

R., cogged-wheel. See *Cogged-wheel rhythm*.

R., cos'tal. Respiration in which the movements of the ribs predominate over those of the diaphragm.

R., cos'to-infe'rior. A variety of *Respiration, costal* (normal in dogs) in which the movements are mainly confined to the lower ribs.

R., cos'to-supe'rior. A variety of *Respiration, costal* in which the movements are mainly confined to the upper ribs.

R., cuta'neous. *Biol.* Respiration by means of the skin, oxygen being absorbed and carbonic dioxide given off.

R., diaphragmatic. Respiration carried on mainly by the movements of the diaphragm.

R., direct'. Term for the direct interchange of oxygen and carbonic dioxide between the living organism and the medium in which it lives, without any specialised respiratory mechanism (as, *e.g.*, in the *Amoeba*).

R., divid'ed. A variety of respiration characterised by the existence of a noticeable interval between inspiration and the following expiration. It is observed notably in emphysema.

R., exag'gerated. Term for breathing which has become increased in intensity, but not otherwise altered.

R., exter'nal. A syn. for *R., blood*.

R., extrin'sic. F. Hewitt's term for inspiration of any gas, followed by immediate expiration, an entirely fresh quantity of the gas being inspired each time.

R., fac'ial. Term for the movements of the facial muscles during laboured breathing.

R., fee'ble. Breathing which is merely diminished in intensity, and not altered in any other way.

R., foetal. The interchange of gases between the maternal and foetal blood in the placenta.

R., forced. A syn. for *R., laboured*. Also, term for breathing induced artificially, as by blowing air from a bellows into the lungs.

R., harsh. Breathing which is unduly harsh in quality. The same as *R., broncho-vesicular*.

R., his'sing. Breathing which has a hissing character, the vesicular murmur being exaggerated, as, *e.g.*, during the paroxysms of spasmodic asthma.

R., hol'low. A syn. for *R., amphoric*.

R., indeter'minate. A term for *R., broncho-vesicular* which is much more nearly vesicular than bronchial.

R., indirect'. Respiration in which the interchange of gases is effected by means of a distinct respiratory mechanism and circulatory fluid.

R., in'ner. The same as *R., internal*.

R., inter'nal. The giving off of carbonic dioxide and absorption of oxygen by the living cells of the body for their own uses.

R., interrup'ted. The same as *R., cogged-wheel*.

R., intestin'al. The interchange of gases which goes on between the mucous membrane of the intestinal walls and the interior of the intestines.

R., in'tra-u'terine. Actual breathing by the foetus before birth.

R., intrin'sic. F. Hewitt's term for the repeated breathing of a limited volume of gas.

R., jerk'y. The same as *R., interrupted*.

R., la'boured. Respiration which is difficult from any cause, whether over-exertion, or some thoracic disease, and in which some or all of the extraordinary muscles of respiration are called into play.

R., larynge'al. A term for the widening and narrowing of the glottis during respiration.

R., lung. See *R., pulmonary*.

R., lux'us. See *Luxus breathing*.

R., metamor'phosing. Seitz's term for a pathological variety of breathing in which the first part of the inspiratory sound is tubular in character and the second part cavernous, the expiratory sound having a cavernous character. Vierordt states that its presence is diagnostic of a pulmonary cavity.

R., mus'cle. Term for the absorption of oxygen and elimination of carbon dioxide by a muscle in action.

R., mus'cles of. See *Respiratory muscles*.

R., na'sal. Normal breathing through the nostrils.

R., ner'vous. The same as *R., cerebral*.

R. of the cells. A syn. for *Respiratory murmur*.

R., o'ral. Breathing through the mouth.

R., or'gans of. The organs directly concerned in the act of breathing; namely, the larynx, trachea, and bronchi, the lungs, and, strictly speaking, also the respiratory muscles.

R., pharynge'al. Garland's term for rhythmic contraction and dilatation of the pharynx during normal respiration. The dilatation occurs immediately before, and the contraction during, inspiration.

R., placen'tal. See *R., foetal*.

R., pos'tural. See *Postural respiration*.

R., prone. The variety of *Postural respiration* (q. v.) in which the patient is placed in the prone position.

R., proof of. See *Docimasia pulmonum*.

R., pu'erile. See *Puerile breathing*.

R., pul'monary. Respiration by means of lungs.

R., rough. Breathing in which the sounds are roughened.

R., so'nile. The normal feeble breathing of old age.

R., sigh'ing. Term for the deepened breathing, accompanied by involuntary sighing, occurring in congestion of the lungs, and occasionally in dyspepsia.

RESPIRATOR—RESPIROMETER

R., sound of. A syn. for *Respiratory murmur*.

R., sounds of. Term for the varieties of respiratory sounds. See the various subheadings of *Respiration*.

R., stertorous. A variety of breathing characterised by its *stertor*, which is produced by a deep breathing through the mouth and nose together.

R., subsib'lant. Laennec's term for what is now spoken of as *Râles, sibilant*.

R., supplemen'tary. A syn. for *R., exaggerated*.

R., thoracic. The same as *R., costal*.

R., tis'sue. A syn. for *R., internal*.

R., to-and-fro. A syn. for *R., intrinsic*.

R., trache'al. The respiratory murmur heard normally over the trachea. See *Tracheal breathing*.

R., tu'bular. A syn. for *R., bronchial*.

R., uræm'ic. A syn. for *R., Cheyne-Stokes'*.

R., vagi'nal. Term for the movements of the vagina during respiration, set up by the descent and ascent of the diaphragm.

R., ven'tral. A syn. for *R., abdominal*.

R., vesic'ular. A syn. for vesicular murmur. See *Murmur, respiratory, vesicular*.

R., vesic'ulo-bron'chial. The same as *R., broncho-vesicular*.

R., wavy. The same as *R., jerky*.

Res'pirator. An apparatus applied to the mouth, for breathing through, either to exclude impurities of the atmosphere breathed, or to increase its temperature, or for the reception of some volatile substance to be inhaled.

R., char'coal. A form of respirator containing finely-divided charcoal, which acts as a filter for the air before this is breathed in.

R., orina'sal. A respirator made to cover the mouth and nose.

R.-veil. A special *respirator* in the form of a veil, invented by Lennox Browne. It is composed of a piece of ordinary veiling with a double layer of silk gossamer affixed to the lowest four inches. The part covering the mouth and nose is stiffened with thin wire gauze, for the sake of comfort.

Respirato'rium. (Mod. L. *respiratorium*; from L. *respiro*, -atum, to breathe.) *Biol.* One of the minute respiratory folds of skin in the aquatic larvae of some *Insects*, each of which is supplied with a large number of *tracheæ*.

R., ven'tris. A term for the *Diaphragm*.

Respir'atory. Belonging to *Respiration*.

R., bron'chioles. A syn. for *Lobular passages*, q. v., under *Bronchial tubes*.

R., bun'dle. A syn. for *Solitary bundle*.

R., capac'ity. A syn. for *Capacity, differential, extreme*, of thorax. Also, the capacity of the blood for absorbing oxygen in the lungs and giving it up again to the tissues, and of taking up carbon dioxide from the tissues and giving it off again in the lungs.

R., cavities. See *Cavities, respiratory*.

R., cen'tre. The co-ordinating centre for the respiratory movements, which consists in a nucleus, or mass of grey matter, in the medulla oblongata, lying between the nucleus of the vagus above and that of the spinal accessory nerve below. The *Nœud vital* of Fluorens.

R., fascic'ulus. The same as *R. bundle*.

R., gan'glia. Term for the respiratory centres in the *Medulla oblongata*.

R., glottis. See *R. portion of glottis*.

R., murmur. See *Murmur, respiratory*.

R., mus'cles. Those muscles which aid, directly or indirectly, in the act of respiration. They are divided into *Ordinary muscles of respiration*, which act during ordinary quiet breathing; and *Extraordinary muscles of respiration*, which act only in laboured breathing. Each variety can be further divided into *Muscles of inspiration* and *Muscles of expiration*; but with this one exception, that normal expiration is entirely non-muscular.

1. ORDINARY RESPIRATION.

a. Inspiration.—The diaphragm, the levatores costarum longi and breves, the intercostales externi and intercartilaginei.

b. Expiration.—None; the act being carried out by the weight of the chest-wall, and the elasticity of the lungs, costal cartilages, and abdominal walls and contents.

2. EXTRAORDINARY OR FORCED RESPIRATION.

a. Inspiration.—Certain muscles of the trunk, of the larynx, pharynx, and face.

b. Expiration.—The abdominal muscles.

R., nerve, exter'nal. Name introduced by Sir Charles Bell for the posterior or long thoracic nerve. See *Thoracic nerve, posterior*.

R., nerve, inter'nal. Sir Charles Bell's term for the *Phrenic nerve*.

R., nerve of face. Sir Charles Bell's term for the *Facial nerve*.

R., nerve, super'ior. A term for the *Spinal accessory nerve*.

R., nu'cleus. The same as *R. centre*.

R., percus'sion. See *Percussion, respiratory*.

R., period. The period of time taken up by a single respiration, i. e., inspiration, expiration, and the following pause. Taking the average rate of normal respirations to be fifteen per minute, inspiration occupies rather less than one second, expiration, rather more than one second, and the following pause, two seconds.

R., pig'ments. See *Pigments, respiratory*.

R., plate. The same as *Respiratorium*.

R., por'tion of glottis. The posterior portion of the glottis, through which the air passes in respiration.

R., por'tion of na'sal cav'ity. The inferior portion through which the air passes in respiration, as distinguished from the superior or olfactory portion.

R., pulse. See *Pulse, respiratory*.

R., quo'tient. See *Quotient, respiratory*.

R., re'gion of na'sal cav'ity. The same as *R. portion of nasal cavity*.

R., sound. Syn. for *R. murmur*.

R., sur'face. The surface of the *R. tract*.

R., tract. The whole tract, from the mouth to the air-cells of the lungs, through which the air of respiration moves.

Also, term for that portion of the grey columns of the spinal cord from which the respiratory nerves (spinal portion of spinal accessory, phrenic, and thoracic nerves) take their origin.

R., tubes. General term for any tubular organs or tubular portions of organs constituting parts of a respiratory system.

R., vesic'ular murmur. The normal respiratory murmur. See *Murmur, respiratory*.

Respire'. (L. *respiro*.) A syn. for *Breathe*.

Respiro'meter. (L. *respiro*, to breathe; Gr. μέτρον, a measure.) An apparatus for sup-

RESPONSIBILITY—RESUPINE

plying air to a diver under water. Also, syn. for *Spirometer*.

Responsibility. The condition of being *responsible*.

Respon'sible. (L. *respondeo*, *responsum*, to answer.) In *Forens. Med.*, accountable for one's act or acts. This condition of responsibility depends upon a condition of sound mind and capability of controlling one's actions.

Respurii alcahest. See *Alcahest respirui*.

Rest. (Mid. Eng. *resten*.) Suspension of all action or movement. In *Physiol.*, functional inactivity.

R.-cure. A term for *Weir Mitchell's* treatment.

R.-har'row. (So named because it 'rested or arrested the progress of the harrow through the earth. F. *arrête-bœuf*; G. *Ochsenkraut*.) Common name for the *Ononis spinosa*.

Res'ta bo'vis. (So named because of its checking the plough which was drawn by oxen. F. *arrête-bœuf*; G. *Ochsenkraut*.) An old name for the *Rest-harrow* or *Ononis spinosa*.

Restagna'tio. (L.) An overflowing. *Med.* An old term for *Eructation*.

Res'tant. (F. *restant*, remaining.) *Biol.* Syn. for *Persistent*.

Restaur'ans. (L.) Restoring. *Med.* *Analeptic*.

Restauran'tia. (Neut. pl. of L. *restaurans*.) *Analeptic* or restorative medicines.

Restaura'tio. (L.) A restoring or repairing. *Med.* Restoration to health, a return to the normal condition.

Restia'cea. A member of the *Restiaceæ*.

Restia'ceæ. A Genus of the *Enantio-blastæ*. Grass-like plants or small shrubs. Hab. the Cape and Australia.

R. vi'rum. A restoration of strength.

Restibra'chium. (L. *restis*, a rope; *brachium*, an arm.) A term for *Cerebellum*, *peduncle of inferior*.

Res'tiform. (*Restiformis*.) Rope-like, cord-like.

R. bod'ies. The inferior peduncles of the cerebellum. They are formed, on either side of the *medulla oblongata*, by the union of the *lateral cerebellar tract*, passing upwards, with the *funiculus of Rolando* and the *cuneate funiculus*. Each of the two restiform bodies thus formed passes directly into the corresponding hemisphere of the cerebellum. The term has been by some made to include the posterior column of the medulla, excluding the *funiculus gracilis*, plus the lateral cerebellar tract and the oblique fibres from the anterior pyramids. It has also been used to designate the posterior column of the medulla.

R. bod'y. Either of the two *R. bodies*.

R. pro'cess. Syn. for restiform body. See *R. bodies*.

Restiformē, cor'pus. (Neut. of *Restiformis*.) The *Restiform body*.

Restiformia, cor'pora. (Neut. pl. of *Restiformis*.) The restiform bodies.

Restifor'mis. (Mod. L. From L. *restis*, a cord or rope; *forma*, shape.) *Restiform*.

Rest'ing. (*Rest.*) Motionless, inactive.

R.-cell. Syn. for *R.-spore*.

R.-sporan'gium. Term introduced by Pringsheim for a variety of resting-cells in which zoospores are produced, formed by the mycelium of certain Fungi.

R.-spore. *Biol.* A *spore*, surrounded by a cell-wall, which remains dormant for a considerable period before germinating.

R.-stage. The period of suspended animation or suspended functional activity in an organism or germ.

R.-state. The same as *R.-stage*.

Res'tis. (L. *restis*, a cord or rope.) A term for the restiform body. See *Restiform bodies*.

Restitu'tio. (L.) A making good, a restitution. In *Surg.*, old term syn. with *Repositio*; the reduction of a displaced part.

R. ad in'tegrum. (L. *integer*, whole, entire.) Restitution or restoration to a whole, sound, or healthy condition.

R. an'imæ. (L. *anima*, breath, animal life.) A term for *Resuscitation*.

R. organ'ica. Organic restitution. A term for Plastic Surgery.

R. par'tium deperditar'um. Restitution of lost parts. A syn. for *R. organica*.

Restitu'tion. (L. *restitutio*.) A restoration or bringing back to a former position. In *Obstet.*, the movement by which, after birth of the head, the face of the child turns back towards that side to which it was directed at the beginning of labour.

Restora'tion. (*Restauratio*.) A recovering or repairing. A recovering of health.

Restor'ative. (L. *restauro*, -atum, to repair.) Restoring to health; also, a drug which restores to health, an *analeptic*.

Restraint'. (L. *restringo*, to draw back.) A drawing back or preventing; control. Also, the condition of being controlled, especially the curtailment of personal liberty of prisoners or of the insane.

R., mechan'ical. Restraint of the insane or of prisoners by mechanical means.

R., medic'inal. Term for the controlling of the violence of insane patients by means of medicines (sedatives and narcotics).

R. neuro'ses. A syn. for *Neuroses*, *inhibitory*.

Restrict'io. (L.) A restraint. *Surg* A stricture.

R. ani. Stricture of the anus.

R. intest'ini rect'i. Stricture of the rectum.

Restr'in'gent. (L. *restringo*, to restrain.) A syn. for *Astringent*.

Resublima'tion. A second sublimation, or subliming a second time.

Resuda'tion. (L. *re*, again; *sudatio*, a sweating.) A sweating again; a return of sweating.

Resump'tio. (L.) A taking again. *Med.* Old term for recovery of strength. A syn. of *Refectio*.

Resumpti'vum. (Mod. L. From L. *resumptio*, q. v.). *Med.* Term for drugs which effected a recovery of strength, or *Resumptio*.

Resu'pinate. See *Resupinatus*.

Resupina'tio. (L. *resupinatus*, lying on the back.) Old term syn. with *Hyptiasmos* (q. v.).

Resupina'tus. (L.) Lying on the back. In *Biol.*, having the ventral, or what is more commonly the lower, surface turned upwards.

Resupine'. (*Resupinatus*.) Lying on the back; supine.

RESURRECTIONIST—RETĚ

Resurrec'tionist. A body-snatcher; one who exhumes bodies to be made use of for dissection.

Resus'citant. (L. *resuscitans*, raising up again.) Any agent that resuscitates.

Resus'cite. (L. *resuscito*, to raise up again.) To restore to life the apparently dead.

Resuscita'tion. (L. *resuscitatio*, a raising up again. F. *résuscitation*; G. *Wiedererweikung*.) Restoring to life the apparently dead.

Resus'citative. (*Resuscitate*.) Having a tendency to resuscitate.

Resus'citor. (L. *resuscito*, *resuscitatum*, to raise up again.) The same as *Resus-citant*.

Retanilla. A Genus of the *Rhamnaceæ*.

R. eph'e'dra. Hab. Chili and Peru. An astringent, styptic, and tonic.

R. obcorda'ta. Hab. and therapeutic actions the same as those of *R. ephedra*.

Retarda'tio. (L. F. *retardation*; G. *Verzögerung*.) Retardation; a stopping or hindering.

Retarda'tus. (L. *retardo*, to stop, hinder.) Retarded; hindered.

Retard'ing a'gue. See *Ague*, *retarding*.

Retch. (Anglo-Sax. *hræcan*, to strain.) To make ineffectual, involuntary efforts to vomit.

Retch'ing. Ineffectual, involuntary efforts to vomit.

RetĚ. (L. F. *rets*; G. *Netz*.) A net. In *Anat.*, term for any network-like interlacement of fibres, nerves, or blood-vessels.

R. acromia'lě. Acromial network. Term for the anastomosis between the acromio-thoracic artery and the acromial branches of the transverse scapular artery.

R. arterio'sum cap'itis. Arterial network of the head. Term for an anastomosis over the vault of the skull formed by branches from the frontal, temporal, and occipital arteries.

R. arterio'sum facie'i. Arterial network of the face. Anastomosis over the face formed by the terminal branches of the ophthalmic, infraorbital, facial, and internal maxillary arteries.

R. articular'ě cu'biti. Articular network of the forearm. Anastomosis round the elbow-joint, formed by twigs from the superior and inferior profunda arteries above, and the anterior and posterior ulnar recurrent, radial recurrent, and interosseous recurrent arteries below.

R. articular'ě ge'nu. Articular network of the knee. The network of arterial twigs round the knee-joint.

R., bipo'lar. A term for a system of blood-vessels beginning with small vessels which unite to form large trunks, these again breaking up into capillary vessels.

R. calca'neum. Calcaneal network. Network over the heel formed by twigs from the malleolar and calcaneal arteries.

R. car'peum. Carpal network. Term for the anterior and posterior carpal arterial arches.

R. car'pi dorsa'lě. Dorsal network of the carpus. The posterior carpal arterial arch.

R. car'pi volar'ě. Volar network of the carpus. The anterior carpal arterial arch.

R. choroid'eum. Choroid network. Term for the choroid plexuses of the pia mater of the brain.

R. cubita'lě. A syn. for *R. articularě cubiti*.

R. dorsa'lis pe'dis. Dorsal network of the foot. Network on the dorsum of the foot, formed by twigs from the tarsal and metatarsal arteries, and joined by plantar perforating branches.

R., epider'mic. See *R. Malpighii*.

R. Hal'leri. Another name for *R. vasculosum Halleri*.

R. ma'jus. Greater network. A term for the great omentum.

R. malleolar'ě exter'num. External malleolar network. Network round the external malleolus, formed by twigs from the tarsal, external malleolar, and posterior peroneal arteries.

R. malleolar'ě inter'num. Internal malleolar network, formed by twigs from the internal tarsal and internal malleolar arteries.

R. Malpig'hil. The deeper part of the *epidermis*, cuticle, or scarf-skin. See *Epidermis*.

R. mirab'ilě. (L. *mirabilis*, -e, wonderful. F. *rets mirabile*; G. *Wundernetz*.) *Comp. Anat.* Galen's term for the network of blood-vessels at the base of the brain in quadrupeds.

Also, term for the dividing of an artery into branches, and the reuniting of these into another arterial trunk.

R. mirab'ilě conjuga'tum. A syn. for *R. mirabilě geminum*.

R. mirab'ilě du'plex. A syn. for *R. mirabilě geminum*.

R. mirab'ilě gem'inum. Term for a plexus of mixed arteries and veins.

R. mirab'ilě simplex. Term for a plexus of either arteries or veins alone.

R. mirab'ilě, unip'olar. See *R., unipolar*.

R. muc'o'sum. The same as *R. Malpighii*.

R. olec'rani. Term for the plexus of arteries over the olecranon.

R. patellar'ě. The *Patellar plexus*.

R. tar'seum dorsa'lě. Dorsal tarsal network. Network of arteries on the dorsum of the foot formed by twigs from the tarsal arteries.

R. tes'tis. (F. *rets de testicule*.) The network of the testis. Term for the arrangement of the *tubuli recti* on the dorsal surface of the *Tunica albuginea* of the testis. See *Tunica albuginea*.

R., unip'olar. Term for the ordinary arrangement of the arterial system which breaks up into a network without reuniting into arterial trunks.

R. vascular'ě. Vascular network. B. Ridge's term for a vascular membranous sac which, according to him, forms, together with the "meconic membrane," a saccular receptacle for the meconium in the fœtus.

R. vasculo'sum. Vascular network. A network of blood-vessels.

R. vasculo'sum Hal'leri. A term for the *R. vasculosum testis*, after Haller who described it.

R. vasculo'sum tes'tis. Term for the

RETECIOUS—RETINA

upper portion of the *Wolffian body*, which forms a connection between the tubuli seminiferi and the Wolffian duct.

R. veno'sum dorsa'lē ma'nūs. Dorsal venous network of the hand.

R. veno'sum dorsa'lē pe'dis. Dorsal venous network of the foot.

R. veno'sum volar'ē ma'nūs. Volar (*i. e.* palmar) venous network of the hand.

Rete'cious. (L. *rete*, a net.) A syn. for *Retiform*.

Reten'tio. (L.) Retention.

R. aër'ea. Retention of air. A term for *Dyspnœa*.

R. alvi'na. (L. *alvinus*, belonging to the belly.) A term for *Constipation*.

R. bi'llis. Retention of bile; also, suppression of bile.

R. flux'us hæmorrhoida'lis. Retention, or suppression, of the hæmorrhoidal flux.

R. fœ'tus. Retention of the fœtus. A syn. for *Dystocia*.

R. lac'tis. Retention of milk; also, suppression of the secretion of milk.

R. lochio'rum. Retention of the lochia; also, suppression of the lochia.

R. men'sium. Retention of menses.

R. sper'matis. Retention of semen; also, suppression of the semen.

R. sudo'ris. Retention of sweat; also, suppression of the secretion of sweat.

Retention. (L. *retineo*, *retentum*, to hold back.) A keeping or holding back. A holding back or stoppage of any excretion, and especially of the urine.

R. cyst. See *Cyst*, retention.

R., hys'tero-cystic. (Ἵστέρα, the womb; κύστις, the bladder.) Term for retention of urine consequent on pressure on the neck of the bladder by a gravid uterus.

R. of men'ses. The retention of the menstrual discharge within the uterus, on account of some mechanical obstruction to its flow, as in cases of imperforate hymen or imperforate vagina, or in atresia of the cervix uteri following inflammation. This term has been also used to mean postponement of the establishment of menstruation at puberty. See *Menses*, retention of.

R. of placen'ta. See *Placenta*, retention of.

R. of ur'ine. See *Urine*, retention of.

R. tu'mour. Another name for *R. cyst*.

Reten'tive. Exhibiting the action of retaining, or a tendency to retain.

Ret'ia. (L.) Plur. of *Rete*.

Ret'ial. Belonging to a *Rete*.

Ret'iary. (*Rete*.) Resembling a *Rete*.

Retic'ula. (L.) Plur. of *Reticulum*.

Retic'ular. (L. *reticulum*, a little net.) Forming a fine network or reticulation.

R. bod'y. An old term for *Mucosa*.

R. cartilage. A syn. for yellow elastic cartilage. See under *Cartilage*.

R. forma'tion. See *Formatio reticularis*.

R. lam'ina. See *Lamina reticularis*.

R. lam'ina of Kölliker. A fuller name for the *R. lamina*.

R. lay'er of skin. The *Mucosa* of the skin.

R. mem'brane. See *Membrana reticularis*.

R. pro'cess of spi'nal cord. See *Processus reticularis*.

R. sub'stance. The same as *R. tissue*.

R. tis'sue. A term for *Adenoid tissue*; also, for cellular tissue in general.

R. white sub'stance. Term for a net-like arrangement of fibres of white matter on the upper part of the *uncinate gyrus* of the brain.

Reticular'ē. (L. *reticularis*, -e, like a net.) A syn. for *Retē mucosum*.

Reticular'ia officina'lis. A syn. for *Lichen pulmonarius*.

Retic'ulate. (L. *reticulatus*.) Made like a net; having meshes like those of a net.

Retic'ulated. The same as *Reticulate*.

Reticula'tion. (L. *reticulatus*, made like a net or lattice.) An arrangement like that of a net; a network.

Reticulatoveno'sus. (L. *reticulatus*, made like a net; *venosus*.) Bot. Epithet applied to leaves whose veins are arranged in a network.

Reticula'tus. (L.) Made like a net; reticulate.

Retic'ulose. (*Reticulum*.) The same as *Reticulate*, or finely reticulate.

Retic'ulum. (L. Plur. *reticula*.) A little net.

Biol. and *Anat.* A fine network.

Comp. Anat. Term for the honeycombed second stomach of the Ruminantia.

R. cuta'neum. A syn. for *Retē mucosum*.

R., germ. See *Germ reticulum*.

R. muc'o'sum. The same as *R. cutaneum*.

Reti'ferous. (L. *rete*, a net; *fero*, to bear.) Having, or bearing, a *Rete*.

Re'tiform. (L. *rete*, a net; *forma*, shape.) Formed like a net.

R. tis'sue. A syn. for *Adenoid tissue*.

Ret'ina. (L. *retina*, one of the coats or tunics of the eye; from *rete*, a net.) The internal or third coat of the eyeball. It is composed of an expansion of the optic nerve over the internal surface of the eye. The retina is the essential peripheral organ of vision, and is composed of ten definite layers, which are, enumerated from within outwards, 1. *Membrana limitans interna*. 2. Nerve-fibre layer. 3. Ganglionic layer. 4. Inner molecular layer. 5. Inner nuclear layer. 6. Outer molecular layer. 7. Outer nuclear layer. 8. *Membrana limitans externa*. 9. The layer of rods and cones. 10. The layer of pigment-cells.

R., anæ'mia of. An anæmic pallid condition of the retina consequent on contraction of its blood-vessels. When occurring, as it has been sometimes observed to do, during an epileptic fit, this condition has been termed epilepsy of the retina. It is accompanied by temporary loss of sight.

R., ap'oplexy of. See *Retinal apoplexy*.

R., at'rophy of. In this condition there is marked shrinking of the blood-vessels with a thickening of the vessel walls. The atrophic condition may be either partial, or may extend through the whole thickness of the retina. There is often pigmentation of the retina. Atrophy of the retina follows inflammations of the structure of the eye, and is often associated with atrophy of the optic nerve.

R., bacil'lary lay'er of. A term for the layer of rods and cones.

R., cen'tral ar'tery of. A small branch of the ophthalmic artery which pierces the optic nerve a quarter of an inch behind the eyeball, and runs within it to the retina in which it

RETINACULA—RETINACULUM

branches out and which it supplies, the smallest subdivisions ending at the margin of the fovea centralis in capillary loops. The outer molecular layer and the layers external to this are destitute of blood-vessels.

R., coarctate. Term for the condition caused by an effusion of fluid between the choroid and retina.

R., detach'ment of. Detachment of the retina from the choroid readily occurs from effusion of blood or serum, whether the result of injury or disease, or from separation by new growths, or traction by fibrous bands in the vitreous.

R., embolism of central artery of. This gives rise to a characteristic form of retinitis. There is an immediate defect of sight, which may or may not amount to absolute blindness. After a few weeks white atrophy sets in. It occurs most commonly in cases of valvular heart disease, less commonly in chorea.

R., ep'ilepsy of. A temporary anæmia of the retina (see *Retina, anæmia of*) accompanied by temporary loss of sight occurring during an epileptic fit, either in *haut mal* or *petit mal*.

R., fo'vea centralis of. See *Fovea centralis of retina*.

R., ganglion'ic lay'er. See main heading.

R., gli'o'ma of. This is a disease of infancy or early childhood; it has been known to be present at birth. It originates in the granular layers of the retina, and either extends inwards into the vitreous, or outwards causing detachment of the retina. It grows rapidly, and often extends backwards along the optic nerve to the brain. Secondary growths may occur in the brain or scalp.

R., ischæ'mia of. See *Ischæmia, retinal*.

R., leo'pard. A name for the condition of the retina in *Retinitis pigmentosa*.

R., lim'bus luteus of. A syn. for *Macula lutea*.

R., membra'na lim'itans of. See *Membrana limitans*.

R., mid'dle point of, physiolog'ical. The *Fovea centralis*.

R., nu'clear lay'er of, in'ner. See main heading.

R., nu'clear lay'er of, out'er. See main heading.

R., pulsa'tion of. A general visible pulsation of the retinal arteries is often present in *aortic regurgitation*. In *Glaucoma*, there is generally visible pulsation of the arteries in the optic disc only. This pulsation is usually more marked than that in *aortic regurgitation*.

R., separa'tion of. The same as *R., detachment of*.

R., shot-silk appear'ance of. The same as *R., watered-silk appearance of*.

R., sustentacular fibres of. See *Müllerian fibres*.

R., ti'ger. The same as *R., leopard*.

R., watered-silk appear'ance of. See *Reflex, watered-silk*.

Retinacula. Plur. of *Retinaculum*.

R. cu'tis. Term for connective-tissue bundles connecting the deep layers of the true skin, *cutis vera*, with the superficial and deep fasciæ.

R. Morgagn'i. *Retinacula of Morgagni*. Another name for *R. of ileo-cæcal valve*.

R. of Barry. *Embryol.* Term for certain tense filamentous structures in the Graafian follicle, passing from the thickened part of the lining membrane to other parts of that membrane.

R. of ileo-cæ'cal valve. Commonly termed simply *Retinacula*. See under *Retinaculum*.

R. of Weit'bricht. Term for certain ligamentous bands attached to the upper and internal surface of the great trochanter of the femur.

R. os'sis bra'chii. Term for certain fibrous bands passing from the internal surface of the capsule of the shoulder-joint to the neck of the humerus.

R. patel'læ. Term for the bands of fascia passing from the lateral borders of the ligamentum patellæ to the tibia; also termed lateral patellar ligaments. The external is called *Retinaculum patellæ laterale*, and the internal, *R. patellæ mediale*.

R. patel'læ externa. Another name for *R. patellæ*.

R. ten'dinum. A syn. for *Ligamenta vaginalia digitorum manus*.

R. val'vulæ. The same as *R. valvulæ coli*.

R. val'vulæ co'li. *Retinacula of the valve of the colon*. The same as *R. of ileo-cæcal valve*.

Retinaculum. (L.) Anything by which something else is held back.

Anat. Term for the frænum or fold of membrane continued round the inner wall of the cæcum from each commissure of the ileo-cæcal valve. The two fræna together are termed *Retinacula*.

Embryol. One of the several bands in the Graafian follicle from which the ovum appears to be suspended.

Bot. L. C. Richard's term for the small globular viscous mass attached to the small pedicle which sustains the pollen-masses in the Orchideæ; also termed *proscolla*.

Surg. An instrument for keeping the bowels in place during abdominal operations.

R. cos'tæ ultima'tæ. *Retinaculum of the last rib*. A name for the *Ligament, lumbocostal*.

R. ligamen'ti arcua'ti. *Retinaculum of the arcuate ligament*. A term for the external lateral ligament of the knee.

R. muscular'è ten'dinis subscapu-lar'is major'is. Muscular retinaculum of the greater subscapular tendon. A term for the brachio capsularis muscle, a muscle rarely present, arising from the shaft of the humerus, and inserted into the capsular ligament of the shoulder-joint.

R. patel'læ inter'nium. Another name for the *Ligamentum patellæ*.

R. patel'læ latera'lë. See *Retinacula patellæ*.

R. patel'læ media'lë. See *Retinacula patellæ*.

R. peroneo'rum infe'rius. The same as *R. tendinum peroneorum*.

R. peroneo'rum supe'rius. Superior retinaculum of the peronei. A term for the external annular ligament of the ankle, which binds down the tendons of the peroneus longus and p. brevis.

RETINAL—RETINITIS

R. ten'dinum peroneo'rum. Retinaculum of the peroneal tendons. The ligamentous bands which retain the peroneal tendons in position at the outer side of the ankle.

Retinal. Belonging to the *Retina*.

R. apoplexy. See *Retinitis apoplectica*.

R. field of vi'sion. The field of vision which is perceived when the eye is at rest, and all external light is excluded.

R. hori'zon. Helmholtz's term for the horizontal plane passing through the transverse axis of the eyeball.

R. im'age. The image of external objects reflected upon the retina.

R. ischæ'mia. See *Retina, ischæmia of*.

R. mel'anin. A granular, dark-coloured pigment found in the retinal epithelium. It has also been termed fuscine.

R. pulsa'tion. See *Retina, pulsation of*.

R. pur'ple. A syn. for *Visual purple*, or *Rhodopsia*.

R. red. The same as *R. purple*.

Retiner'vate. (L. *rete*, a net; *nervate*, having nerves.) *Biol.* Epithet applied to leaves with reticulated nervures.

Retiner'ved. The same as *Retinervate*.

Retini'tis. (*Retina*; fem. adj. suffix *-itis*.) Inflammation of the retina. For varieties, see subheadings. In all varieties there is loss of transparency of the retina; the disc also very rarely escapes, unless the inflammation is very localised or the duration very short.

R., albuminur'ic. The variety consequent on any chronic nephritis, or on the albuminuria of pregnancy. The retinitis is usually one among several signs of the kidney mischief; sometimes it is the first sign recognisable.

The ophthalmoscopic changes are as follows:—First, there is a general greyish haziness of the central portion of the retina, with some hæmorrhages. Later on, white dots or sharply-defined patches form in the affected region, and especially near the macula lutea, the disc becomes hazy and swollen at the margin, and the retina becomes generally thickened. Later still, absorption and atrophy occur.

R. albuminur'ica. *R., albuminuric.*

R. apoplect'ica. Apoplectic retinitis. Also termed *Retinal apoplexy*. A form of *Retinitis* characterised by extreme tendency to extravasation of blood into the substance of the retina.

R., cen'tral punc'tate. A form of retinitis occurring usually in advanced age, characterised by the presence of white striæ or puncta over the fundus of the eye.

R., cen'tral recur'rent. A form of *R., syphilitic* confined to the region of the macula lutea, and characterised by its marked tendency to recur.

R., conges'tive. The same as *R., exsudativa*.

R., diabe'tic. Retinitis occurring during the course of Diabetes.

R., diffuse'. A syn. for *R. serosa*.

R., diffuse' parenchy'matous. See *R., parenchymatous, diffuse*.

R. exsudat'iva. Term for retinitis when characterised by considerable inflammatory exudation.

R., glycosur'ic. A syn. for *R., diabetic*.

R. gravidar'um. A variety occurring sometimes in cases of pregnancy, and closely resembling *R., albuminuric*. The prognosis in these cases is bad.

R. hæmorrhag'ica. A variety of retinitis characterised by the presence of numerous linear or flame-shaped hæmorrhages over the fundus of the eye, often with venous engorgement and œdema, usually occurring in one eye at a time, and acute in its onset. It occurs in gouty patients, and in subjects of valvular heart disease and arterial disease. In the cases characterised by venous engorgement, the direct cause is thrombosis of the vena centralis retinæ, in other cases, multiple disease of small retinal vessels.

R. hepat'ica. A rare variety which has been occasionally observed in cases of *Hepatitis, parenchymatous*.

R. leucæm'ica. See *R. leukæmica*.

R., leucocythæ'mic. The same as *R. leukæmica*.

R. leukæm'ica. A variety occurring in leukæmia, and characterised by marked pallor of the retina and disc, indistinctness of the edge of the latter, and diffused hæmorrhages and white patches.

R. macular'is. (L. *macula*, a spot.) A syn. for *R., central, recurrent*.

R., nephrit'ic. A syn. for *R., albuminuric*.

R. nyctalop'ica. A form characterised by congestion of the optic disc, diffuse, streaky opacity of the retina, and the presence of a central scotoma. The main symptoms are well-marked amblyopia, and usually also nyctalopia.

R., papill'o-. A syn. for *R., albuminuric*.

R. paralyt'ica. Klein's term for retinitis caused by paralysis involving the optic nerve. It occurs most commonly in cases of paralytic dementia or general paralysis of the insane.

R., parenchy'matous. Chronic retinitis affecting the retinal connective-tissue.

R., parenchy'matous, diffuse'. Parenchymatous retinitis which attacks the membrana limitans interna and externa, and the adventitia of the retina.

R. pigmento'sa. A slowly progressive form of proliferation of connective-tissue and pigment cells through the whole retina, usually of both eyes, with atrophy of the nervous elements.

R. post'ica. Inflammation of the outer layers of the retina.

R., proli'ferating. A connective-tissue growth through the retina, forming blueish white patches, and extending into the vitreous.

R. punctata albes'cens. A syn. for *R., central punctate*.

R., pur'ulent. Characterised by small white spots near the papilla and macula lutea.

R., re'nal. A syn. for *R., albuminuric*.

R., sep'tic. A syn. for *R., purulent*.

R. sero'sa. Characterised by a serous infiltration, causing œdema, opacity, and hyperæmia, usually best marked in the ganglionic and nerve-fibre layers.

R. sim'plex. A syn. for *R. serosa*.

R., sol'ar. A form consequent on exposure to strong sunlight.

R., sympathet'ic. Of reflex or sympathetic origin. Characterised by red disc, engorged veins, and disturbed vision.

R., syphilit'ic. A late manifestation in syphilis. It is diffused, and is chronic in its course.

RETINO.—RETROACTION

R., syphilitic, simple. A form of *R.*, syphilitic, characterised by a grey opacity round a cloudy papilla, and engorged veins.

Retino-choroiditis. (*Retina*; *choroiditis*.) Inflammation of the retina and choroid together.

R.-choroiditis pigmentosa. A form of *R.-choroiditis* characterised by an increase of pigment.

Retinogen. (*Retina*; *γένος*, race, descent.) *Biol.* The outer of the two layers of ectoderm in the embryonic eye of *Arthropoda*.

Retinoid. (*Ρητινη*, resin; *ειδος*, form, resemblance.) Resembling a resin.

Retinol. (*Ρητινη*, resin; *ελαιον*, oil.) One of the products of the dry distillation of pine-resin or fir-resin. It occurs as a yellow, oily liquid.

It is used as a solvent for carbolic acid, creasote, cocaine, certain alkaloids, &c. It is also used for its antiseptic action.

Retinoscopy. (*Retina*; *σκοπέω*, to look at.) The estimation of the refraction of an eye by observing the movements of the images and shadows thrown on the retina by means of the mirror of an ophthalmoscope.

R., phosphenic. A method of ascertaining the condition of the retina in cases of opacity of the lens. Pressure on various points of the eyeball elicits phosphenes from the corresponding portions of the retina, if they are healthy.

Retinoskiascopy. (*Retina*; *skiascopy*.) A syn. for *Retinoscopy*.

Retinula. (Dim. from *Retina*.) *Biol.* That portion of the retina of a compound eye belonging to any one of the single eyes of which the compound eye is made up.

Retinus. (L. *rete*, a net.) A term for *Reticular*.

Retort. (L. *retorqueo*, *retortum*, to turn back.) *Chem.* A vessel used in distillation to hold the liquid to be distilled. It is usually somewhat pistol-shaped, with an oval body and bent neck; it may be made of glass, earthenware, or metal, commonly iron.

Retract. (L. *re*, back; *traho*, *tractum*, to draw.) To draw back; to shorten.

Retracted. Drawn back; shortened.

Retractile. (L. *retraho*, *retractum*, to draw back. F. *rétractile*; G. *zurückziehbar*.) Capable of being retracted.

Retractility. (*Retractile*.) Capacity for being retracted.

Retraction. A drawing back; a shortening.

R., cicatricial. Retraction consequent on a cicatrix or cicatrices.

R., muscular. Term for muscular atrophy following paralysis.

R. of uterus. Term for a contraction of the uterus, and especially of the body of the uterus, without any corresponding relaxation following. This is what normally occurs at the end of labour, after expulsion of the placenta.

R.-ring. A syn. for *Bandl*, ring of.

Retractor. (L. *retraho*, *retractum*, to draw back.) *Surg.* An instrument for pulling aside the lips of a wound, or any part that has to be held aside, in an operation. The commonest form is a flat piece of metal of an L-shape.

Anat. A muscle that acts by retracting the part into which it is inserted.

R. an'gull o'ris. Retractor of the angle of the mouth. A term for the *Buccinator*.

R. bulbi. See *R. muscle of eye*.

R., Emmet's perine'al. See *R., perineal*, *Emmet's*.

R., eye'lid. An instrument for retracting the eyelids from the eyeball, for examination of, or operation on, the latter.

R. glottidis. Retractor of the glottis. A term for the *Genio-epiglotticus*.

R., Minor's trache'a. See *R., trachea*, *Minor's*.

R. mus'cle of eye. The *Choanoid muscle* of certain Vertebrata, which retracts the eyeball.

R. oculi. The *R. muscle of eye*.

R., perine'al, Emmet's. A form of self-retaining vaginal speculum invented by Emmet.

R., Pilcher's. A retractor introduced by Pilcher for use in tracheotomy. It consists of a fine stem bearing two blunt hooks.

R. recti. Retractor of the rectum. The *Rectococcygeus*.

R., Rose's. A form of steel-wire spring hooks for holding open a tracheotomy wound.

R., trache'a, Minor's. An instrument introduced by Minor as a substitute for the tracheotomy tube. It consists in a slightly curved hollow rod, retaining, by means of a screw at each end, a bent wire retractor.

R. ure'thræ. Term for an occasional muscular slip which arises from the inner border of the tuberosity of the ischium, and is inserted, similarly to the bulbo-cavernosus, on the corpus cavernosum.

R. urethra'lis. A syn. for *R. urethrae*.

R. u'teri. Term for bands of non-stripped muscle passing between the uterus and sacrum within the folds of the peritoneum.

R., Wells'. An instrument for keeping a tracheotomy wound open after the operation. It consists of two hooks made of wire which are inserted one into either lip of the wound, and tied round the neck by means of a band attached to each hook.

Re'trad. (L. *retro*, backward.) A term signifying toward or on the posterior surface or part.

Re'trahens. (L.) Drawing back.

R. auricul'am. This muscle consists of two or three fasciculi arising from the mastoid process by aponeurotic fibres, and inserted by muscular fibres into the back of the concha of the external ear. Its origin sometimes extends back along the superior curved line of the occiput. It draws back the pinna.

R. aur'is. A syn. for *R. auriculam*.

Re'trahent. (*Retrahens*.) Drawing backwards; retracting.

Re'tral. (L. *retro*, backward.) The same as *Re'trad*.

Retrench'ment. (F. *retrenchement*.) *Surg.* Term for any plastic operation which aims at producing cicatricial contraction by removal of redundant tissue.

Retriment. (L. *retrimentum*.) Excrement; refuse or dregs.

Retrimen'ta. (L. Plur. of *retrimentum*.) Excrements, refuse.

R. ves'i'cæ. Excrements of the bladder. A term for *Urine*.

Retrimentum. (L.) Excrement, refuse.

Retroaction. (L. *retro*, backward; *action*.) Backward or reversed action.

RETROANTEROGRADE—RETROPOSED

Retroan'terograde. (L. *retro*, backward; *anterior*, -us, previous; *gradior*, to go step by step.) Reversing the normal order of succession.

R. amne'sia. A variety of *Amnesia* in which recent events seem to be in the distant past, or *vice versa*.

Retrobuc'cal. (L. *retro*, backward; *buccal*.) Belonging to the posterior part of the mouth or buccal cavity.

Retrobul'bar. (L. *retro*, backward; *bulbar*.) Situated behind the bulb or eyeball.

R. neur'i'tis. Term for inflammation of the orbital portion of the optic nerve.

R. perineur'i'tis. *Perineuritis* of the orbital portion of the optic nerve.

Retroce'dent. (L. *retrocedens*, going back, retiring.) Going back; relapsing.

R. gout. See *Gout*, *retrocedent*.

Retroceps. (L. *retro*, backwards; *cipio*, to take.) A variety of obstetric forceps adapted for grasping the back of the fetal head.

Retrocerv'ical. (L. *retro*; *cervical*.) Behind the cervix, i. e. the *cervix uteri*.

Retroces'sion. (L. *retrocedo*, *retro-cessum*, to retire.) A retiring; going back; disappearing.

R. of la'bour. A rare phenomenon described by Charrier, in which, after *Labour* has begun, and before the membranes are ruptured, the uterine contractions cease entirely.

Retroces'sus. (L.) A going back; retrocession.

Retroclavicular'is. (L. *retro*, backward, behind; *clavicula*.) A syn. for *Sterno-clavicularis posticus*.

Retroclu'sion. (L. *retro*, backwards; *claudo*, *clausum*, to shut.) A closing or shutting up backwards. Term for a method of *Acupres-sure* of an artery, in which the needle is made to pass through the tissue near the vessel, then over the artery, and is then turned about a semicircle and brought out, under the artery, near the point of entry.

Retrocol'lic. (L. *retro*, behind; *collum*, the neck.) Belonging to the back of the neck.

R. spasm. Spasm of the posterior cervical muscles, *Torticollis*, *spasmodic*.

Retrodevia'tion. (L. *retro*, backwards; *deviation*.) A displacement backwards.

Retrodisplace'ment. (L. *retro*, backward; *displacement*.) Backward displacement.

Retroflex. (L. *retro*, backward; *flecto*, *flexum*, to bend.) To bend backwards. Also, bent backwards.

Retroflex'ed. Bent backwards.

Retroflex'io. Retroflexion.

R. u'teri. Retroflexion of the uterus.

Retroflex'ion. (L. *retro*, backwards; *flecto*, *flexum*, to bend.) A bending backwards.

R. of u'terus. See *Uterus*, *retroflexion* of.

Retroflex'us. Retroflexed.

Retrofract. (L. *retro*, backwards; *frango*, *fractum*, to break.) A syn. for *Re-fracted*.

Retrograde. (L. *retro*, backward; *gradus*, a step.) Going backwards.

In *Biol.*, returning to a former, simpler, condition or function; also, epithet applied to animals that walk or swim backwards.

R. carcino'ma. Term for a *Carcinoma* which, after growing to a certain size, becomes

less in size and firmer in consistence, and then remains stationary.

R. metamor'phosis. See *Metamor-phosis*, *retrograde*.

Retro'graphy. (L. *retro*, backward; Gr. *γραφη*, writing.) Writing backwards; a symptom in some nervous diseases.

Retrogres'sive. (*Retrogressus*.) Going back; degenerating; metamorphosing backwards. See *Retrograde metamorphosis*.

Retrogres'sus. (L. *retrogradior*, *retrogressus*, to go backward, to turn back.) The same as *Retrocessus*.

Re'tro-in'sular convolu'tions. (L. *retro*, behind; *insula*, the island of Reil.) Term for those temporo-parietal convolutions of the cerebrum which are behind the island of Reil, and lie within the fissure of Sylvius.

Retrojection. (L. *retro*, backwards; *jacio*, *jactum*, to throw.) A throwing backwards. Term for a washing out of a cavity from within outwards.

Re'tro-lin'gual. Behind the tongue.

Re'tro-loca'tion. A syn. for *Retro-position*.

Retromalle'olar. (L. *retro*, behind; *malleolus*.) Behind the malleolus or the malleoli.

R. fos'sæ. Term for the longitudinal grooves or depressions on either side of the tendo-Achillis.

Retromam'mary. (L. *retro*; *mamma*.) Behind, posterior to, the mamma or mamme.

Retromaxil'lary. (L. *retro*, behind; *maxilla*.) Behind the maxilla (superior).

R. re'gion. The region behind the superior maxilla, i. e. the parotid region.

Retromor'phosis. (L. *retro*, backward; Gr. *μόρφωσις*, a shaping.) A syn. for *Retrograde metamorphosis*.

Re'tro-na'sal. Behind the nose or nasal cavities.

Re'tro-oc'ular. (L. *retro*, behind; *oculus*, the eye.) Behind the eye.

Re'tro-æso'phage'al. (L. *retro*, behind; *æsophagus*.) Behind the œsophagus.

Retroperitone'al. (L. *retro*, behind; *peritoneum*.) Behind the peritoneum or peritoneal cavity.

R. glands. Those lymphatic glands of the abdomen which lie behind the peritoneal cavity.

R. her'nia. See *Hernia*, *retroperitoneal*.

R. space. See *Retroperitoneum*.

Retroperitone'um. (L. *retro*; *peritoneum*.) A term for that part of the abdominal cavity which lies posterior to and outside the peritoneal cavity.

Retroperitoni'tis. (*Retroperitoneum*; Gr. adj. term. -itis.) A term signifying inflammation of the structures contained in the *Retroperitoneum*.

Retropharynge'al. (L. *retro*, behind; *pharynx*.) Behind the pharynx.

R. ab'scess. See *Abcess*, *retropharyngeal*.

Retropharyngi'tis. (L. *retro*, behind; *pharynx*; Gr. fem. adj. term. -itis.) Inflammation of the tissues behind the pharynx.

Retropose. (L. *retro*, behind; *pono*, *positum*, to place.) To place behind. In *Med.*, to displace backwards.

Retroposed. Placed behind. In *Med.*, displaced backwards.

RETROPOSITION—REVIVIFICATIO

Retroposition. (L. *retro*, behind; *positio*.) A placing behind.

In *Med.*, a backward displacement.

R. of u'terus. See *Uterus, retroposition of*.

Retropulsion. (L. *retro*, backward; *pello*, *pulsum*, to drive.) A driving or forcing backward.

Med. The overmastering tendency to walk backwards, sometimes present in cases of paralysis agitans.

Obstet. A forcing back of the foetal head in labour.

Retrorse. (L. *retro*, behind; *versus*.) Turned backward; from *retro*; *versus*.) Turned backward.

Retrostalsis. (L. *retro*, backward; Gr. *σταλτός*, from *στέλλω*, to draw together, contract.) A syn. for *Antiperistalsis*.

Retrosternal. (L. *retro*, behind; *sternum*.) Behind the sternum.

Retrotarsal. (L. *retro*, behind; *tarsus*.) Behind the tarsus.

R. fold. A term for the fornix of the conjunctiva which lies behind the *tarsus*, or tarsal cartilage, of the eyelid.

Retrotracheal. (L. *retro*, behind; *trachea*.) Behind the trachea.

Retro-u'terine. (L. *retro*, behind; *uterus*.) Behind the uterus.

R. hæmatocele. See *Hæmatocele, retro-uterine*.

Retrovaccination. (L. *retro*, backward; *vaccination*.) Term signifying vaccination from a cow that has been vaccinated from the human subject.

Retrovaccine. (L. *retro*, backward; *vaccine*.) The vaccine obtained from a cow which has been vaccinated from the human subject.

Retroversion. (Mod. L.) Retroversion.

R. u'teri. Retroversion of the uterus.

Retroversion. (L. *retro*, backward; *versio*.) A turning backward.

R. of uterus. See *Uterus, retroversion of*.

Ret'ti. (Hindoo *ratti*.) A syn. for *Jequirity*.

Retuse. (L. *retusus*, blunted. F. *rétus*.) Blunted.

Bot. Epithet applied to a leaf that has a shallow sinus at the apex.

Retusus. (L.) *Retuse*.

Retzius, cave of. (After the Histologist *Retzius*.) See *R., cavity of*.

R., cavity of. The loose subperitoneal tissue in front of the urinary bladder; it is really composed of a number of areolar spaces, not a single cavity. Termed by Retzius the "preperitoneal cavity."

R., fibres of. Term for thread-like structures observed running longitudinally within the *cells of Deiters*.

R., ligament of. A name for the outer part of the anterior annular ligament of the ankle.

R., space of. The same as *R., cavity of*.

R., striæ of. Term for brown-coloured lines roughly parallel with the surface in the enamel of teeth, indicating the lines of deposition of the enamel.

R., stripes of. The same as *R., striæ of*.

R., veins of. A name for the minute veins which pass between the radicles of the portal vein in the mesentery and intestines, and the vena cava inferior and its radicles.

Réu'nio. (L. *re*; *unio*.) Reunion.

R. partium separatarum. Reunion of separated parts.

R. per primam intentio'nem. Union by first intention.

R. per secundam intentio'nem. Union by second intention.

R. vaso'rum. Reunion of blood-vessels. A term for *Anastomosis*.

Reuss' test. A test for *Atropine* introduced by Reuss. Heat the atropine with sulphuric acid and an oxidising agent; an odour of blossoms can be detected.

Revaccination. (L. *re*, again; *vaccination*.) A second or repeated performance of vaccination.

Revalenta arab'ica. (*Revalenta* = *Ervalenta*, from *Ervum lens*.) The same as *Ervalenta*.

Revellent. (L. *revellens*, plucking, pulling.) The same as *Revulsant*.

Reverberate. (L. *reverbero*, -atum, to beat back.) To beat back (sound); to resound.

Also, see *Reverberation*.

Reverberation. (L. *reverbero*, -atum, to beat back.) A beating back (of sound); resonance. The term has also been used to mean reflection of light or heat.

Reverberatorium. A term for the metallic reflector of a lamp.

Reverberatory. Reverberating; having a tendency to reverberate.

R. furnace. A furnace used for the purpose of distillation.

Reverdin's operation. Three distinct operations have been thus designated, all of them having been introduced by Reverdin. See subheadings.

R.'s bleph'aroplasty. The cicatricial tissue is cut away, the eyelid is then sutured to the opposite side in its natural position, and the raw surface is skin-grafted.

R.'s operation for skin-graft'ing. A small portion of skin is raised with a sewing-needle, shaved off with scissors or a sharp knife, and placed on the raw surface over any healthy granulations.

R.'s operation for symbleph'aron. The eyelid is first detached, and a small flap from the cheek is then transplanted on the newly-made raw surface.

Reverie. (F. *rêverie*.) A condition of mind in which, the controlling power of the will being temporarily removed, there is a sequence of ideas depending on subjective sensations, the result of past ideation. (Hack Tuke.)

Reversed. (L. *revert*, *reversum*.) Turned back.

R. band'age. See *Bandage, reinversed*.

Reversion. (L. *revert*, *reversum*, to turn back.) A turning back or returning. *Biol.* A returning to an ancient or former type.

Revert. (L. *revert*, to turn back.) *Biol.* To undergo *reversion*.

Revitalisation. (L. *re*, again; *vitalis*, that gives or preserves life, vital.) A putting new life into.

Revive. (L. *re*, again; *vivo*, to live.) To show undoubted signs of life after apparent death; also, to show undoubted signs of returning vigour after fainting or collapse.

Revivificatio. (Mod. L. From L. *re*, again; *vivo*, to live; *facio*, to make.) Revivification. Old term for the reduction of a

REVIVIFICATION—RHACHETRUM

metal present in a compound to the metallic state.

Revivifica'tion. (L. *re*, again; *vivo*, to live; *facio*, to make.) A making to live again; also, restoration of undoubted signs of life after apparent death; also, restoration of consciousness.

Surg. The refreshing of surfaces by means of the knife before placing them in apposition.

Revivis'cence. (L. *revivisco*.) A recovery of life. *Biol.* Re-animation after hibernation.

Re'volute. (L. *revolvere*, *revolutum*, to roll back.) *Bot.* Rolled back on itself.

Revulsant. (L. *revello*, *revulsum*, to pluck off.) *Med.* An old term syn. with *Derivative*. See also *Revulsion*.

Révulseur. (F.) An instrument furnished with fine needles, used in the special treatment of chronic rheumatism termed *Baun-scheidtism* (q. v.).

Revul'sion. (L. *revello*, *revulsum*, to pluck off.) *Med.* An old term syn. with *Derivation*.

Surg. A pulling or drawing off.

Revul'sive. (L. *revello*, *revulsum*, to pluck off.) *Med.* Drawing off; an old epithet applied to the operation of venesection.

R. bleed'ing. Venesection. See main heading.

Revul'sor. (L. *revello*, *revulsum*, to pluck off.) Term for an apparatus for the alternate application of heat and cold as a means of effecting *revulsion* or *derivation*.

Also, a *Révulseur* (q. v.).

Revulso'rius. (Mod. L.) *Revulsant*.
Rex amaro'rum. (L.) The king of bitters. Name of a shrub growing in the Moluccas, which is used for its bitter tonic action in various diseases.

R. metallo'rum. (L.) The king of metals. An old name for *Aurum*, gold.

Reybard's can'nula. (*Reybard*, a French surgeon, born 1790, died 1863. F. *canule de Reybard*.) A cannula fitted with a trochar invented by Reybard for opening empyemas. To the free extremity of the cannula is fitted a tube of goldbeater's skin, open at the opposite end. Any backward pressure of air closes the tube like a valve.

R.'s su'ture. See *Suture*, *Reybard's*.

Rha. (After *Rha*. Old name for the Volga river in Russia.) A name for *Rheum*.

Rhabarbarin. (Named from *Rhabarbarum*, on account of the members of this genus containing chrysophanic acid.) A name for *Chrysophanic acid*.

Rhabarbarologia. (*Rhabarbarum*; Gr. λόγος, a discourse.) A treatise on *Rhabarbarum* or *Rhubarb*. Title of such a treatise, by M. Tilling, published in 1679.

Rhabarbarum. (*Rha*, old name for the Volga river in Russia, from whose banks species of this genus were brought; L. *barbarus*, wild.) Name given by Linnæus to the Genus now termed *Rheum*.

R. al'bum. A name for the *Convolvulus mechoacana*.

R. antiquo'rum. The *Rhabarbarum* of the ancients. A name for the *Rheum rhaponticum*.

R. Dioscor'idis. The *Rhabarbarum* of Dioscorides. A name for the *Rheum rhaponticum*.

R. monacho'rum. *Rhabarbarum* of the monks. Another name for the *Rumex patientia*.

R. ni'grum. Black *Rhabarbarum*. Another name for the *Convolvulus jalapa*.

R. paup'erum. *Rhabarbarum* of the poor, or poor man's rhubarb. A name for the *Thalictrum anemonoides*.

R. plebeio'rum. *Rhabarbarum* of the common people. Old name for the inner yellow bark of the trunk or root of *Rhamnus frangula*, which has a purgative action.

R. siber'icum. Siberian *Rhabarbarum*. A name for *Rheum*.

R. tartar'icum. Tartar *Rhabarbarum*. The same as *R. sibericum*.

R. turc'icum. Turkish *Rhabarbarum*. The same as *R. sibericum*.

Rhab'dia. (Ράβδος, a rod.) Name for the rods situated underneath the crystalline cones in the eyes of the *Insecta*.

Rhabdi'tis. (Ράβδος, a rod.) A Genus of the *Nematoda*. They abound in decaying animal matter. Several species have been observed as parasitic in Man. See subheadings.

R. genita'lis. A small nematode worm which has been observed in human urine; it had probably lived in the genital passages.

R. intestina'lis. The same as *R. stercoralis*.

R. niel'lyi. It is found in the human skin, where it causes a dermatitis with formation of papules and vesicles, on the arms, forearms, backs of the hands and fingers, and the thighs. The parasite can be squeezed out of the papules.

R. pel'lio. A syn. for *R. genitalis*.

R. stercora'lis. A syn. for *Anguillula stercoralis*.

Rhab'dium. (Latinised dim. from ράβδος, a rod.) Term for a striped muscle-fibre.

Rhabdoce'lous. (Ράβδος, a rod; κοίλος, hollow.) *Zoöl.* Having a straight digestive tube.

Rhabdoid'al. (Ραβδοειδής.) Rod-like.

Rhabdoid'es. (Ραβδοειδής.) Rod-like. An old epithet for the *Sagittal suture*.

Rhabdomanti'a. (Ράβδος, a rod; μαντεία, divination.) Term for the supposed manifestations derived from the employment of the divining-rod.

Rhabdomyo'ma. (Ράβδος, a rod; myoma.) A rare form of *Myoma*, containing striped muscle-fibres.

Rhabdone'ma. (Ράβδος, a rod; νήμα, a thread.) A Genus of the *Anguillulidæ*, all of whose species are parasitic.

R. intestina'lē. The same as *Rhabditis stercoralis*.

R. strongyloïd'es. The same as *R. intestinalē* and *Rhabditis stercoralis*.

Rhabdonemi'asis. (*Rhabdonema*.) The morbid state consequent on the presence of parasites of the Genus *Rhabdonema*.

Rhab'dous. (*Rhabdus*.) Possessing the characters of a *Rhabdus*.

Rhab'dus. (Ράβδος, a rod.) A rod. *Biol.* A straight, unbranched spicule; also, the stem of certain of the Fungi.

Rhach'etæ. (Ράχis, the backbone.) A term for the *Musculi rachiei*, or spinal muscles.

Rhach'etron. (Ράχετρον.) The beginning or the middle of the spine; in general, the spine.

Rhach'etrum. Latinised form of the word *Rhachetron*.

Rhachiaë'i. Plur. of *Rhachiaeus*. Used, also, for *Musculi rhachiaei*, the spinal muscles.

R. mus'culi. See main heading.

Rhachiaë'us. ('Páχis, the backbone.) Belonging to the spine.

Rhachia'gra. ('Páχis, the backbone; ἄγρα, a seizure.) Old term for gout in the spine; also, for any sudden, severe attack of pain localised to the spine.

Rha'chial. ('Páχis, the backbone.) Belonging to the spine; spinal.

Rhachial'gia. ('Páχis, the spine; ἄλγος, pain.) Pain in the spine.

R. mesenter'ica. A syn. for *Tabes mesenterica*.

R. pic'tonum. A syn. for *Colica pictonum*.

Rhachialg'itis. ('Páχis, the spine; ἄλγος, pain; fem. adj. term. -ιτις.) Term for *Rhachialgia* associated with inflammation of the spine.

Rhachias'mus. ('Páχis, the spine.) Marshall Hall's term for the first symptoms of an epileptic fit; namely, spasm of the posterior cervical muscles.

Rhachidag'ra. ('Páχis, -ιδος, the spine; ἄγρα, a seizure.) The same as *Rhachia'gra*.

Rhachid'ial. The same as *Rhachidian*.

Rhachid'ian. ('Páχis, -ιδος, the spine.) Belonging to the spine; spinal.

Rhachi'lysis. ('Páχis, the spine; λύω, to loosen.) The treatment of lateral curvature of the spine by mechanical counteraction.

Rhachiocamps'is. ('Páχis, the spine; κάμψις, a bending.) Curvature of the spine.

Rhachio'chysis. ('Páχis, the spine; χύσις, a pouring out.) A syn. for *Hydrochysis* or *Hydrorhachis*.

Rhachiocypho'sis. See *Rhachio-kypnosis*.

Rhachiodyn'ia. ('Páχis, the spine; ὀδύνη, pain.) Pain in the spine.

Rhachiokypho'sis. ('Páχis, the spine; κύφωσις, a curving of the spine.) A syn. for *Gibbus*, or hump-back.

Rhachio'meter. ('Páχis, the spine; μέτρον, a measure.) An instrument for measuring spinal deformities.

Rhachiomyl'itis. ('Páχis, the spine; myelitis.) A syn. for *Myelitis*.

Rhachiomelo'phthisis. ('Páχis, the spine; μυελός, marrow; φθίσις, a wasting.) A term for *Tabes dorsalis*.

Rhachiom'yelos. ('Páχis, the spine; μυελός, marrow.) The spinal marrow, or spinal cord.

Rhachiopara'lysis. ('Páχis, the spine; paralysis.) Spinal paralysis.

Rhachio'phy'ma. ('Páχis, the spine; φῦμα, a tumour.) A tumour of the spine.

Rhachio'ple'gia. ('Páχis, the spine; πλῆγῃ, a stroke.) Paralysis of the spinal nerves.

Rhachiorrheu'ma. ('Páχis, the spine; ῥεῦμα, a flowing.) Rheumatism of the spine.

Rhachioscolio'ma. ('Páχis, the spine; σκολίωμα, a curve.) Lateral curvature of the spine.

Rhachioscolio'sis. ('Páχis, the spine; σκολίωσις, a bending.) The progress of formation of *Rhachioscolio'ma*.

Rhachio'stropho'sis. ('Páχis, the

spine; στρόφος, a twisted band.) Curvature of the spine.

Rhach'iotome. (*Rhachiotomy*.) An instrument for performing *Rhachiotomy*.

Rhachio'tomy. ('Páχis, the spine; τομή, a cutting.) *Surg.* The cutting open of a part of the spinal column.

Rhachipag'ia. ('Páχis, the spine; πάγος, anything stiff, or fixed.) The foetal monstrosity consisting in union of two fetuses at the spine.

Rhachi'pagus. ('Páχis, the spine; πάγος, anything stiff, or fixed.) A foetal monster presenting the condition of *Rhachipagia*.

Rhachipara'lysis. See *Rhachio-paralysis*.

Rhachiphy'ma. See *Rhachio'phyma*.

Rhachiple'gia. See *Rhachio'plegia*.

Rhachirrheu'ma. See *Rhachior-rheuma*.

Rhach'is. ('Páχis.) *Anat.* The spine or vertebral column.

Zoöl. The shaft of a feather; also, the middle area of the dorsal surface in *Trilobites*.

Bot. The rib or leaf-stalk of ferns; also, the receptacle of the florets in the spikelet of grasses.

R. na'si. A syn. of *Columna nasi*.

Rhachisag'ra. See *Rhachia'gra*.

Rhachi'schisis. ('Páχis, the spine; σχίσις, a cleaving.) Another name for *Spina bifida*.

Rhachi'tæ. ('Páχis, the spine.) A term for the *Musculi rhachiaei*, or spinal muscles.

Rhachi'tes. ('Páχis, the spine.) Belonging to the spine.

Rhachit'ic. Belonging to *Rhachitis*.

Rhachit'is. ('Páχis, the spine; fem. adj. term. -ιτις.) See *Rachitis*.

R. adulto'rum. See *Rachitis adultorum*.

R. spina'lis. A term for inflammation of the spine; also, pain referred to the spine.

Rhachitis'mus. A syn. for *Rachitis*.

Rhachiotome. See *Rhachiotome*.

Rhachio'tomus. See *Rhachiotomus*.

Rhacho'ma. ('Ραχώμα, to lop the young vine-shoots slantwise.) A syn. for *Rhagades*; also, the same as *Rhacoma*.

Rhach'os. ('Páχος, a thorn-bush, briar.) *Med.* A wrinkle. Also, a laceration or an ulcer of the skin. *Bot.* A briar bush; also, a twig.

Rhacho'sis. See *Rachosis*.

Rhach'us. The same as *Rhachos*.

Rhaco'dés. ('Ρακώδης, ragged; also, wrinkled.) Full of wrinkles.

Rhaco'ma. ('Ράκωμα = ῥάκος, a ragged garment; also, a wrinkle.) Term for a lax or pendulous state of the scrotum; also, for a chapped portion of the skin.

Rhaco'sis. ('Ράκωσις, a becoming ragged or wrinkled.) The progress or formation of *Rhacoma*.

Rhac'ous. ('Ράκος, a tattered garment; also, a wrinkle.) Wrinkled; also, torn.

Rhac'us. The same as *Rhachus*.

Rhæbau'chen. ('Ραιβός, crooked; αἰχμήν, the neck.) A crooked or unsymmetrical neck.

Rhæbocra'nia. ('Ραιβός, crooked; κρανίον, the skull.) A crooked or unsymmetrical cranium or skull.

Rhæboder'ë. ('Ραιβός, crooked; δέρι, Att. for δειρή, the neck.) The same as *Rhæbauchen*.

RHÆBOSCELES—RHAMNUS

Rhæbo'scelēs. ('Ραιβοσκελής.) Bandy-legged; having crooked legs.

Rhæboscel'ia. (*Rhæboscelēs.*) Crookedness of the legs.

Rhæbo'sis. ('Ραιβός, crooked.) A syn. for *Rhæboscelia*.

Rhæstocythæ'mia. ('Ραιστός, destroyed; κύτος, a cell; αἷμα, blood.) The pathological condition in which products of degeneration of the red blood-corpuscles are present in the hepatic and splenic epithelium.

Rhag'adēs. ('Ραγάδες, plur. of ράγας, a rent, chink.) *Med.* Old term syn. with *Rhagadice*.

Rhagad'ia. The same as *Rhagades*. Old term for clefts, chaps, or excoriations of the skin, especially about the anus.

Rhagad'ia. *Med.* Old term for certain *apostemata* of the pudenda, described by Dornæus (Ruland and Johnson); also, for chaps or excoriations of the scrotum.

Rhagadi'olus. A Genus of the *Cichoriaceæ*.

R. e'tullis. A species indigenous to South Europe; diuretic and aperient.

R. hedypp'nois. A species said to be aperient.

Rhag'as. ('Ραγάς, a rent, a chink.) A rent, rupture, or fissure; also, old term for a deep cutaneous fissure of a malignant character.

Rhag'ē. ('Ραγή, = ραγάς, a rent, fissure.) Old term for *Fissure*.

Rhag'ēs. ('Ράξ, ραγός, a berry, especially a grape.) Dried grapes or raisins, *uvæ passæ*. *Anat.* Old term for the tips of the fingers.

Rhag'icus. (*Rhagēs.*) Resembling a grape.

Rhag'ite. ('Ραγίς, a rent, chink.) Name for a hydrated arseniate of bismuth which forms greenish-yellow crystals.

Rhagoide'itis. (*Rhagoidēs; -itis.*) A syn. for *Uveitis*.

Rhagoid'ēs. ('Ράξ, a grape; εἶδος, form, resemblance.) Resembling a grape. *Anat.* Old epithet applied to the *Uvea*, on account of its grape-like colour.

Rhag'os. ('Ράγος = ράκος, a ragged garment.) A wrinkle.

Rhagose'. ('Ράξ, a grape.) Like a bunch of grapes; racemose.

Rhag'us. See *Rhagos*.

Rham'ma. ('Ράμμα, anything stitched.) *Surg.* Old term for *Suture*.

Rham'negin. (*Rhamnus.*) A glucoside obtained from the berries of *Rhamnus catharticus*. It resembles *Rhamnin*.

Rhamnegin'a. The same as *Rhamnegin*.

Rham'netin. (*Rhamnus.*) A yellow colouring-matter obtained from *Rhamnin* by the action of a dilute acid.

Rham'ni bac'cæ. (Gen. of *Rhamnus*; *L. bacca*, a berry.) *Rhamnus* berries. The berries of *Rhamnus cathartica*. They have a faint odour and nauseous taste. Their juice is termed *Rhamni succus* (q. v.).

R. cathart'icæ fruc'tus. The same as *R. bacca*.

R. Fran'gulæ Cor'tex. B.P. *Frangula* Bark. The dried bark of *Rhamnus frangula*. Obtained from the young trunk and moderate-sized branches, and kept for one year before being used. Action, laxative.

From it are prepared *Extractum Rhamni*

Frangulæ and *Extractum Rhamni Frangulæ liquidum*.

R. Purshia'ni Cor'tex. B.P. *Cascara sagrada*, or Sacred Bark. The dried bark of *Rhamnus purshiana*. Action, laxative; especially useful in chronic constipation.

From it are prepared:—

1. *Official.*—*Extractum Cascaræ Sagradæ.* Dose, 2 to 8 grains in a pill, with proof spirit and powdered gum acacia. *Extractum Cascaræ Sagradæ liquidum.* B.P. dose, $\frac{1}{2}$ to 2 fl. drms.; common dose, 15 to 30 min.

2. *Non-official.*—Capsules of *Cascara*, Elixir of *Cascara* (Kasak), Elixir *Cascara Sagrada* (B.P.C.), *Extractum Cascara liquidum insipidum*, *Syrupus Cascara Sagrada*.

R. suc'cus. Buckthorn juice. The juice of *Rhamnus cathartica*, q. v.

Rham'nin. (*Rhamnus.*) A yellow, crystallisable glucoside present in *Rhamni bacca*. It contains *Rhamnetin*.

Rhamnocathar'tin. (*Rhamnus; catharticus.*) The yellow, amorphous bitter substance which forms the active purging principle of *Rhamni bacca*.

Rhamnoxan'thin. (*Rhamnus; ξανθός*, yellow.) A syn. for *Frangulin*.

Rham'nus. ('Ράμνος, a kind of thorn or prickly shrub.) The only Genus of the *Rhamnaceæ*.

R. alater'nus. Leaves detergent and astringent.

R. alpi'nus. The Alpine buckthorn. Fruit and bark purgative.

R. californ'ica. Californian buckthorn. Bark purgative.

R. carolinia'na. The buckthorn of the Southern United States of America.

R. cathar'tica. Common or purging buckthorn. Hab. Europe, Asia, and North America. The berries are strongly purgative and somewhat irritant.

R. cathar'ticus. The same as *R. cathartica*.

R. cro'cea. Californian mountain holly. An extract of the bark is used as a mild tonic and laxative.

R. ellip'ticus. This species has been used in the treatment of syphilis.

R. fran'gula. Dogwood. That used for the *Rhamni frangulæ cortex*, B.P., is imported from Holland.

R. hispan'icus. The same as *R. alaternus*.

R. infecto'rius. From this species *French berries* are obtained.

R. juju'ba. A syn. for *R. zizyphus*.

R. linea'tus. Hab. China. Action diuretic.

R. lyciol'des. Hab. Spain. A decoction of its berries is used as an external application in rheumatism.

R. purshia'na. Hab. North-western coast of United States. The dried bark is termed *Rhamni purshianæ cortex* (q. v.), or *Cascara sagrada*.

R. purshia'nus. The same as *R. purshiana*.

R. sanguin'ea. Hab. Spain. Used for the treatment of scabies.

R. sanguin'eus. The same as *R. sanguinea*.

R. saxat'ilis. The Rock Buckthorn. Berries and part of the bark purgative.

RHAMPHOID—RHENXIS

R. virga'tus. Hab. India. Fruit purgative.

R. Wight'ii. Hab. Asia. The bark has an action similar to that of *Rhamni purshiana* cortex.

R. ziz'iphus. The *Ziziphus vulgaris*.

Rham'phoid. ('Ράμφος, the crooked beak of birds; εἶδος, form, resemblance.) Shaped like a bird's beak.

Rham'phos. ('Ράμφος, the crooked beak of birds.) A beak, rostrum.

Rhamphosym'physis. ('Ράμφος; σύμφυσις, a growing together.) *Synostosis* of the skull bones at the sutures.

Rhamphothe'ca. ('Ράμφος, the curved beak of birds; θήκη, a sheath.) The horny covering of a bird's beak.

Rhan'ter. ('Ραντήρ.) Something that sprinkles or suffuses. *Anat.* Ancient name given to the *canthi interni* of the eyes, *Rhanteres*, because the tears seemed to flow from them. *Cp. Fons lachrymarum.*

Rhanter'ēs. Plur. of *Rhanter*.

Rhaphag'ra. ('Ραφή, a seam; ἄγροα, a seizure.) Pain referred to the situation of the sutures of the skull.

Rhaphane'don. ('Ραφανηδόν.) Radish-like. *Surg.* Old term for a transverse fracture, from its similarity in appearance to a radish broken across.

Rhaphanelae'um. ('Ραφανέλαιον, oil of radishes.) Another name for *Oleum raphani*.

Rhapha'nia. ('Ράφανος, a radish. *F. raphanie*; *G. Kriebelkrankheit*.) See *Raphania*.

Rhaph'anis. The same as *Rhaphanus*.

Rhaphanis'mus. ('Ράφανος, a radish.) Term for a punishment of adulterers used by the ancient Romans, which consisted in thrusting a radish up the rectum.

Rhaphanus. See *Raphanus*.

Rhaph'ē. See *Raphē*.

Rhaphiancis'trum. (*Rhaphiankistrum*.) *Surg.* Term for Embden's hooked needle for raising the iris in eye-operations.

Rhaphiankis'tron. ('Ράφισ, a needle; ἄγκιστρον, a fish-hook.) See *Rhaphiancistrum*.

Rhaphidago'gus. ('Ράφισ, -ιδος, a needle; ἄγωγός, guiding.) *Surg.* Old term for a needle-holder.

Rhaphidancis'trum. See *Rhaphiancistrum*.

Rhaph'ides. See *Raphides*.

Rhaphidostix'is. See *Rhaphiostixis*.

Rhaphigast'er. ('Ραφή, a seam; γαστήρ, the belly.) A Genus of the Order *Hemiptera*, Class *Insecta*.

R. punctipennis. (*L. punctus*, pricked in; *penna*, a feather.) A green leaf-bug which exudes a very offensive fluid containing *cimicig acid*.

Rhaph'lon. See *Raphion*.

Rhaphlostix'is. ('Ράφιον, a small needle; στίξις, a pricking.) *Med.* A term for *Acupuncture*.

Rhaph'is. See *Raphis*.

Rhaphus. ('Ράφους, the turnip.) See *Rapus*.

Rhaph'ys. The same as *Rhaphus*.

Rhapon'ticin. (*Rhaponiticum*.) Horne-mann's name for a yellow substance which can be extracted by water from the root of *Rheum rhaponticum*.

Rhapon'ticum. (*Rha*, old name for the Wolga river in Russia; *Ponticus*, -a, -um, belonging to Pontus.) Specific name of the *Rheum rhaponticum*.

R. vulgar'ē. Another name for the *Centaurea centaurium*.

Rhaps. ('Ράπυς, the turnip.) The same as *Rhapyss*.

Rhapy's. ('Ράπυς, the turnip.) A name for the *Raphanus hortensis*.

Rhatan'ia. (Derivation not known.) *Rhatany*.

Rhat'any. (*F. rhatanie*; *G. Ratanhapanze*.) Name common to the *R.*, *Peruvian* and *R.*, *Savaniila*.

R., Peru'vian. The *Krameria triandra*.

R. root. See *Krameria radiz*.

R., Savanil'ia. The *Krameria ixina*.

Rha'zis al'bum. See *Album rhazis*.

Rhe'a springs. Alkaline chalybeate waters, in Rhea Co., Tennessee.

Rhe'adin. A crystalline insoluble alkaloid found in opium.

Rhecteuryn'ter. ('Ρηκτός, broken, torn; εὐρύνω, to make broad.) A bivalve vaginal speculum.

Rhe'ge. See *Rhagē*.

Rheg'ma. ('Ρήγμα.) A fracture; also, a rent or cleft; also, an abscess.

R. ligamentar'ē. Rupture of a ligament.

R. oc'uli. Rupture of the eyeball.

Rhegmat'ias. ('Ρηγματίας.) One who has an abscess.

Rhegmatod'ēs. ('Ρήγμα, a rent, chink, or fracture.) *Rhegmatous*.

Rhegmatoid'ēs. (*Rhegma*; εἶδος, form, resemblance.) Resembling a *Rhegma*.

Rheg'matous. (*Rhegmatodēs*.) Having a rent, rupture, or puncture of any part.

Rhegmochas'mus. ('Ρήγμα, a rupture or rent; χάσμα, a yawning hollow.) A pulmonary cavity originated by rupture of a blood-vessel.

Rheg'mus. ('Ρηγμός = ρηγμίν, a rent or cleft.) A laceration; also, a bruise.

Rhei. Gen. of *Rheum*.

R. ra'dix. B.P. *Rhubarb root*. The root of *Rheum palmatum* and *Rheum officinale*, and probably of other species, sliced and dried after being roughly stripped of its bark. Obtained from China and Thibet.

The *Rheum ponticum* and *R. officinale* are grown also in Banbury, Oxfordshire. *Dose*, 5 to 20 grains.

Preparations.—*Extractum rhei*, *Infusum rhei*, *Pilula rhei composita*, *Pulvis rhei compositus*, *Syrupus rhei*, *Tinctura rhei*, and *Vinum rhei*.

Rhe'ic acid. The same as *Rhein*.

Rhe'in. (*Rheum*.) A name for *Chrysophanic acid*, given on account of its presence in plants of the Genus *Rheum*.

Rhein'ic acid. The same as *Rheic acid* and *Rhein*.

Rhembas'mus. ('Ρεμβασμός, a roaming about. *F. rhembasme*; *G. Umherschweifen*.) *Somnambulism*.

Rhem'bē. ('Ρέμβη, a roaming about) Term for irregularity of recurrence in febrile attacks.

Rhem'bus. The same as *Rhembē*.

Rhen'chos. See *Rhenchus*.

Rhen'chus. The same as *Rhonchus*.

Rhen'xis. A syn. for *Rhenchus*.

RHEOCORD—RHEUMARTHROSIS

Rhe'ocord. ('Péos, anything flowing; χορδή, a string of gut.) An instrument for graduating the strength of a galvanic electric current.

Rheo'meter. ('Péos, anything flowing; μέτρον, a measure.) 1. A *galvanometer*.

2. An instrument for estimating the velocity of the blood-flow in an artery.

Rheometric. Belonging to the *Rheometer*.

Rheometry. (*Rheometer*.) A syn for *Galvanometry*.

Rheomo'tor. ('Péos, anything flowing; motor.) Term for any apparatus for generating an electric current.

Rhe'on. An old name for *Rheum*, or rhubarb.

Rhe'onom. (G. From Gr. *ῥέος*, anything flowing.) Von Fleischl's apparatus for estimating the effect of irritation of a nerve.

Rhe'ophore. ('Péos, anything flowing; φέρω, to bear. F. *rhéophore*; G. *Rheophor*.) An *Electrode*.

Rhe'oscope. ('Péos, anything flowing; σκοπέω, to look at.) An apparatus designed to demonstrate the presence of an electric current.

R., physiological. See *Rheoscopic frog*.

Rheoscopic. Belonging to the *Rheoscope*.

R. frog. A frog prepared to demonstrate the *rheoscopic limb*.

R. limb. A fresh nerve-muscle preparation for demonstration of the presence of an electric current in muscle.

Rhe'ostat. ('Péos, anything flowing; στατός, -η, -ον, standing.) An instrument for measuring the resistance offered by an electric current.

R., water. A *rheostat* in which the resistance is exercised by a mass of water of fixed volume.

Rheostatic. Belonging to the *Rheostat*.

Rheostatics. ('Péos, anything flowing; στατικός, -η, -ον, causing to stand.) The study of the *Statics* of fluids.

Rheotannic acid. A variety of tannic acid found in the members of the Genus *Rheum*, in which it occurs as a yellowish-brown powder.

Rhe'otome. ('Péos, anything flowing; τομή, a cutting.) An instrument specially designed for making and breaking the constant electric current.

R., differen'tial. A rheotome adapted for indicating the negative variation in muscle-currents. It consists in a rotating rod, which alternately opens and closes the circuit of a galvanometer, and stimulates, at the same time, the nerve of a nerve-muscle preparation.

R., mer'cury. An arrangement for rapidly making or breaking a galvanic circuit. It consists of a cup containing mercury into which two wires dip, one of which is moveable on an axis so that it may be plunged into or moved out of the mercury instantaneously; they are connected with the wires of the battery.

Rhe'otrope. ('Péos, anything flowing; τροπή, a turning. F. *rhéotrope*.) A syn. for *Commutator*.

Rheotropism. ('Péos, anything flowing; τροπή, a turning.) *Biol.* Term introduced by Jönsson for the effect of a current of water on the growth of plants. The growth of the plant

in the direction of the current is termed *Positive rheotropism*; that against the current, *Negative rheotropism*.

Rhestocythe'mia. See *Rhæstocythæmia*.

Rhe'tinë. ('Ρητίνη.) Resin.

Rhetin'itès. The same as *Resinatum*.

Rhetinoc'e'ron. ('Ρητίνη, resin; κηρός, wax.) The same as *Rhetinitès* and *Resinatum*.

Rhetino'dès. ('Ρητίνη, resin.) Resinous.

Rhetoran'ché. ('Ρήτωρ, a public speaker; ἀγχω, to strangle.) Old term for a disease sometimes affecting the throat of orators or public speakers; probably identical with "Clergyman's sore throat," *Pharyngitis, follicular*.

Rhe'um. (From *Rha*, old name for the Volga river, in Russia, from whose banks rhubarb was first obtained.) A Genus of the *Polygonaceæ*; the Rhubarb genus.

R. compac'tum. A variety whose root is used in Medicine.

R. in'dicum. The *R. officinalë*.

R. muscovit'icum. A syn. for *R. rus-sicum*.

R. officina'lë. The Chinese or Indian rhubarb. Root used in Medicine. See *Rhei radix*.

R. palma'tum. One of the varieties whose roots are used in Medicine.

R. rhabar'barum. Linneus' name for the *R. undulatum*.

R. rha'pon'ticum. The *Rhaponticum antiquorum*, or rhubarb of the ancients. The root is more astringent and less purgative than the *Rhei radix* of the B.P.

R. rus'sicum. The Russian rhubarb. Root used in Medicine.

R. sinen'së. The Chinese rhubarb, or *R. officinalë*. Root used in Medicine.

R. tur'cicum. The Turkish or Turkey rhubarb. Root used in Medicine.

R. undula'tum. One of the species whose roots are used in Medicine.

R. us'tum. (L. *ustus*, part. of *uro*, to burn up.) Powdered rhubarb heated in an earthen vessel till it is of a dark brown colour.

Rheum. See *Rheuma*.

R., salt. An old colloquial term for chronic *Eczema*.

Rheu'ma. ('Ρεύμα, that which flows.) The discharge from the respiratory passages when these are inflamed, as in an ordinary catarrh, or cold.

R. catarrha'lë. An old term for chronic bronchitis.

R. epidem'icum. Epidemic catarrh.

R. pec'toris. Bronchial catarrh.

R. u'teri. Catarrh of the uterus. A term for *Leucorrhœa*.

R. ven'tris. (L. *venter*, -ris, the belly.) A term for *Dysentery*.

Rheumangiokeratod'i'tis. ('Ρεύμα, that which flows; *angiokeratoditis*.) Rheumatic *Keratitis*.

Rheuma'pyra. ('Ρεύμα, that which flows; πῦρ, fire.) An old term for *Acute rheumatism*.

Rheumarthri'tis. ('Ρεύμα, that which flows; *arthritis*.) Rheumatic inflammation of joints.

Rheumarthro'sis. ('Ρεύμα; ἀρθρώω, to fasten by joints.) Articular rheumatism.

RHEUMATALGIA—RHEUMATISM

Rheumatalgia. (ῤεῦμα, -ατος, that which flows; ἄλγος, pain.) Pain due to rheumatism.

R. arthrit'ica. An old term for *Acute rheumatism*.

Rheumatan'chē. (ῤεῦμα, -ατος; ἀγγω, to strangle.) Rheumatic sore-throat.

Rheumatic. (ῤεῦμα, -ατος, that which flows.) Belonging to rheumatism; also, suffering from rheumatism.

R. ap'oplexy. A term for stupor or coma when occurring in *Acute rheumatism*.

R. a'trophy. See *Atrophy, rheumatic*.

R. dia'thesis. See *Diathesis, rheumatic*.

R. endocarditis. See *Endocarditis, rheumatic*.

R. fe'ver. See *Rheumatism, acute*.

R. gout. A name for *Osteo-arthritis*.

Rheumatics. A popular name for Rheumatism in general.

Rheumatism. (ῤευματισμός, liability to ῤεῦμα.) A constitutional disease, especially characterised by the occurrence of inflammation, associated with much pain and tenderness, of the fibrous structures of the joints, and supposed to depend upon a special *diathesis* (see *Diathesis, rheumatic*). For the varieties of *Rheumatism*, see subheadings.

R., acute. Rheumatic fever. An acute non-infectious febrile disease, characterised by synovitis of many joints, one after another, and by a special tendency to inflammation of the fibrous structures of the heart, and depending upon some specific infection.

It is commonest in temperate, moist climates, and most usually attacks young adults or children.

Three theories have been brought forward as to its causation.

1. The *Metabolic Theory*.—This supposes a "materies morbi" consequent on defective assimilation.

2. The *Nervous Theory*.—This theory has been put forward by H. K. Mitchell. This supposes, either that the nerve-centres are affected by cold and the lesions are trophic, or that the nervous disturbance gives rise to faulty metabolism and an accumulation of lactic acid.

3. The *Germ Theory*.—That the disease is caused by a specific microbe.

Symptoms.—The disease begins with chilliness, joint-pains, and often sore throat. The fever rises, and the joints become swollen and very painful; the tongue becomes furred, and there are the usual symptoms of fever. Profuse acid sweats, with a characteristic sour odour, generally occur from time to time.

The joints usually become affected one after another. The fever, which is irregular, subsides gradually; hyperpyrexia is occasionally present. Endocarditis is the commonest complication, the mitral valve being most commonly attacked.

Complications.—Hyperpyrexia, endocarditis, pericarditis, myocarditis, pleurisy, pneumonia; cerebral complications—delirium, convulsions, coma, chorea, meningitis (very rare); cutaneous affections—purpura, erythema; rheumatic nodules.

R., apoplec'tic. Acute rheumatism complicated by the so-called *Rheumatic apoplexy* (q. v.).

R., arthrit'ic. A term for *R., acute*.

R., artic'ular. Rheumatism which attacks chiefly the joints.

R., blennorrhagic. A syn. for *R., gonorrhæal*.

R., cap'sular. The same as *R., articular*.

R., cer'ebral. Term for *R., acute* complicated by meningitis, or by marked cerebral symptoms in general.

R., chron'ic. This may (rarely) follow an acute rheumatism, but usually comes on slowly of itself in middle-aged or old people. The main symptoms are stiffness and pain in certain joints, a number being usually affected, or, in some cases, one joint only. The health is not impaired in all cases. The affected joints tend to become stiff and misshapen. Sclerotic changes in the valves of the heart sometimes occur; but they are not directly dependent upon the joint-disease.

R., del'toid. A form of *R., muscular*, confined to the deltoid muscle.

R., diaphragmat'ic. A form of rheumatism specially attacking the diaphragm.

R., encephal'ic. A syn. for *R., cerebral*.

R., epidem'ic muscular. See *R., muscular, epidemic*.

R., fib'rous. A form of *R., chronic*, in which the symptoms are most marked in the fibrous structures round the joints.

R., gonorrhœ'al. See *Synovitis, gonorrhœal*.

R., gout'y. A syn. for *Rheumatic gout*.

R., hæmorrhagic. Term for a variety of rheumatism characterised by a tendency to the occurrence of hæmorrhages.

R., Heb'erden's. A term for Heberden's nodosities. See under *Rheumatoid arthritis*.

R., infec'tious. Term for any pyæmic condition in which there are well-marked joint-symptoms.

R., intercos'tal. The same as *Pleurodynial* (q. v.).

R., lead. See *Lead rheumatism*.

R., metastat'ic. A complication of *R., acute*, in which the rheumatic inflammation, after affecting the joints, attacks some internal organ, e.g. the heart.

R., mus'cular. An affection characterised by pain in the muscles, fasciæ, and the periosteum in relation with them, greatly increased by movement, and accompanied by considerable tenderness. It is usually due to exposure to cold or damp, and occurs more usually in gouty or rheumatic patients. By some it is looked upon as a neuralgia affecting the sensory nerves of the muscles. The commonest varieties of this complaint are *Torticollis*, *Pleurodynia*, and *Lumbago*.

R., mus'cular, epidem'ic. A form of *R., muscular* occurring epidemically.

R., neural'gic. A variety of *R., muscular* consisting in neuralgia of the sensory nerves of the muscles.

R., nod'ular. A syn. for *Rheumatoid arthritis*.

R. of gul'tet. See *R. of œsophagus*.

R. of heart. 1. Rheumatic endocarditis.

2. A syn. for *Angina pectoris*.

R. of œso'phagus. Term for a functional disorder of the œsophagus, the main symptom of which is dysphagia.

R. of spi'nal cord, up'per part of. A name for *Tetany*.

R. of spine. 1. Term for a mild form of *Meningitis, spinal*.

2. A term for *Spondylitis deformans*.

RHEUMATISMAL—RHEUMATOID

R. of u'terus. A condition believed by some to be true muscular rheumatism of the uterus, by others to be uterine neuralgia.

R., perios'teal. A name for *Syphilitic periostitis*.

R., puer'peral. A pyæmic condition presenting joint-symptoms resembling those of acute rheumatism, occurring in lying-in women, and originating in pyæmic infection from the genito-urinary tract.

R. root. A name for the root of *Jeffersonia Bartoni*.

R., scarlati'nal. See *Scarlatinal rheumatism*.

R., scorbu'tic. A rheumatism-like enlargement of the joints sometimes occurring in cases of *Scurvy*.

R., spi'nal. See *R. of spine*.

R., subacute'. A milder variety of *R.*, acute, the fever and joint-symptoms being less marked. It may be prolonged or may finally pass into the chronic condition. It is occasionally, in children, complicated by endocarditis or pericarditis.

R., syno'vial. A form of articular rheumatism characterised by large effusions into the synovial cavities.

R., syphilitic. The same as *R.*, *perio'steal*.

R., top'ical. A term for a localised rheumatism.

R., ure'thral. A name for *Fever, urethral*. Also, a syn. for *R.*, *gonorrhæal*.

R., vene'real. A syn. for *R.*, *gonorrhæal*.

R., ver'tebro-meninge'al. Another name for *R. of spine*, in the sense of spinal meningitis.

R., vis'ceral. Rheumatism attacking especially the muscular or fibrous tissue of the viscera.

R. weed. Name for the *Pyrola maculata*; also, for the *P. umbellata*.

Rheumatis'mal. A syn. for *Rheumatic*.

Rheumatis'moid. (*Rheumatism*; εἶδος, form, resemblance.) Resembling rheumatism.

Rheumatis'mus. (Ρευματισμός, liability to ρεῦμα.) Rheumatism.

R. abdom'inis. Abdominal rheumatism. A term for rheumatism of the abdominal muscles.

R. acu'tus. *Rheumatism, acute*.

R. articulo'rum acu'tus. Acute articular rheumatism. A fuller term for *R. acutus*.

R. bra'chii. Rheumatism of the arm.

R. cal'idus. A syn. for *Rheumatism, acute*.

R. cancro'sus. A term for facial neuralgia.

R. cervi'cis. Rheumatism of the neck. A name for *Torticollis*.

R. col'li. The same as *R. cervicis*.

R. cor'dis. Rheumatism of the heart.

R. cox'æ. A syn. for *Coxalgia*.

R. crur'is. Rheumatism of the leg.

R. dorsa'lis. Rheumatism of the back. A name for *Lumbago*.

R. dor'si. The same as *R. dorsalis*.

R. extremita'tum. Rheumatism of the extremities.

R. facie'i. Facial rheumatism.

R. febrico'sus. A term for *Rheumatism, acute*.

R. febr'ilis. Febrile rheumatism. A name for *Dengue*.

R. febr'ilis exanthemat'icus. A fuller term for *R. febrilis*.

R. flatus'o'sus. A term for *Emphysema*.

R. frig'idus. Cold rheumatism. A name for *Rheumatism, chronic*.

R. gonorrh'o'icus. *Rheumatism, gonorrhæal*.

R. habitua'lis. Habitual rheumatism. A name for *Rheumatism, chronic*.

R. hypersthen'icus. Hypersthenic rheumatism. A name for *Rheumatism, acute*.

R. inflammato'rius. Inflammatory rheumatism. A name for *Rheumatism, acute*.

R. intestino'rum. Rheumatism of the intestines, or *Enterorrhæma*.

R. intestino'rum cum ul'cerè. Rheumatism of the intestines with an ulcer. A name for *Dysentery*.

R. invetera'tus. Inveterate or chronic rheumatism.

R. larva'tus. Masked rheumatism. A name for facial neuralgia.

R. loca'lis. Local or localised rheumatism.

R. lon'gus. A syn. for *R. inveteratus*.

R. lumbo'rum muscular'is. Muscular rheumatism of the loins. A term for *Lumbago*.

R. membro'rum singulo'rum. Rheumatism of single members or limbs.

R. met'allicus. A syn. for *Tremor metallicus*.

R. muscular'is. Muscular rheumatism.

R. musculo'rum. The same as *R. muscularis*.

R. nodo'sus. *Rheumatism, nodular*.

R. odontal'gicus. A term for *Odontalgia*.

R. partia'lis. Partial rheumatism. A syn. for *R. localis*.

R. pec'toris. Rheumatism of the chest. A term for *Pleurodynia*.

R. phlegmono'dès. Phlegmonous rheumatism. A term for *R. muscularis*.

R. spu'rius nervo'sus. Spurious, nervous rheumatism. A term for *Neuralgia*.

R. subacu'tus. *Rheumatism, subacute*.

R. synovia'lis. *Rheumatism, synovial*.

R. universa'lis febr'ilis. Universal febrile rheumatism. A term for *Rheumatism, acute*.

R. vulgar'is. Common rheumatism. The same as *R. inveteratus*.

Rheumatoce'lès. (Ρεῦμα, anything that flows; κήλη, a tumour.) A term for *Rheumatic purpura*.

Rheumatocol'ica. (Ρεῦμα, -ατος; colica.) Rheumatic colic.

Rheumatodyn'ia. (Ρεῦμα, -ατος, anything that flows; ὀδύνη, pain.) Rheumatic pain.

Rheum'atoid. (*Rheuma*, in the sense of rheumatism; εἶδος, form, resemblance.) Resembling rheumatism.

R. arthri'tis. A chronic, incurable joint-disease, which is characterised by changes in the synovial membranes and cartilages, formation round the joints of bony nodes, with great consequent deformity, and partial or almost total loss of mobility.

RHEUMATOIDAL—RHINALGIA

This disease was long thought to be associated with gout and rheumatism; it appears, however, to have no very distinct connection with either. The joint-changes are different from those, either of gout or rheumatism, there being no deposits of urate of soda, and there being also extensive alterations of structure. The joint-cartilage becomes fibrillated and soft, and then absorbed or else thinned out. The bone becomes smooth and eburnated, and irregular nodules form round the joint, and later on become ossified. The muscles become atrophied, and contractures often occur.

Charcot makes a classification into three varieties.

1. *Heberden's nodosities or nodes*.—The fingers only are affected. Small hard nodules slowly develop at the sides of the distal finger-joints, the cartilages soften, and the ends of the bones become eburnated. They are not curable, but the affection usually remains confined to the fingers.

2. *General progressive variety*.—It may be acute or chronic. The *acute variety* begins somewhat like acute rheumatism. It often occurs in women shortly after delivery, or at the menopause; it sometimes occurs in children. It may become quiescent for a time.

The *chronic variety* is by far the commoner. The joints are usually symmetrically affected. It runs the course described above under the general heading. There is much pain in the affected joints. Most cases become quiescent, the patients losing the pain, and again enjoying good health, though of course remaining much crippled.

3. *Mono-articular or partial form*.—This usually affects old people, and, more commonly, men. The symptoms as regards the affected joints are similar to the *general progressive variety*.

The variety when affecting the hip is also termed *Morbus coxæ senilis*, and when affecting the vertebræ, *Spondylitis deformans*.

Rheumatoid arthritis is also termed *Arthritis deformans* and *Osteo-arthritis*. It is popularly termed Rheumatic Gout.

R. arthri'tis, acute'. See main heading.

R. arthri'tis, chron'ic. See main heading.

Rheumatoid'al. The same as *Rheumatoid*.

Rheumatoke'lis. ('Ρεύμα, anything that flows; κηλίς, a spot.) Fuchs' term for *Purpura* occurring as a complication of rheumatism.

Rheumatophthal'mia. ('Ρεύμα, -ατος; ophthalmia.) *Rheumatic ophthalmia*.

Rheumatophthis'is. ('Ρεύμα, -ατος; φθίσις, wasting.) A term for *Pulmonary phthisis* following on rheumatism.

Rheumatopneumonia. Rheumatic pneumonia. Pneumonia dependent on the rheumatic poison.

Rheumato'pyra. ('Ρεύμα, -ατος, anything that flows; πύρ, fire.) Acute rheumatism.

Rheumato'sis. ('Ρεύμα, -ατος, anything that flows.) A term for *Rheumatism*.

Rheumatospas'mus. ('Ρεύμα, -ατος, anything that flows; σπασμός, a convulsion.) Spasm or cramp due to rheumatism.

Rheum'ic. Belonging to *Rheum*, or *rhubarb*.

R. ac'id. An acid obtained by treatment of rheotannic acid with dilute acids; formula

$C_{20}H_{16}O_9$. An old name for *Oxalic acid*. (Littre.)

Rhe'umin. The same as *Rhein*.

Rheumodonta'lgia. ('Ρεύμα, anything that flows; ὀδούς = ὀδόντος, a tooth; ἄλγος, pain.) Toothache of rheumatic origin.

Rheumolymphokeratodi'tis. ('Ρεύμα; lymphā; keratoditis = keratitis.) Term for a rheumatic inflammation of the cornea, or rheumatic keratitis, characterised by marked effusion of lymph.

Rheumoparotidi'tis. ('Ρεύμα; parotiditis.) The same as *Rheumoparotitis*.

Rheumoparoti'tis. ('Ρεύμα, anything that flows; parotitis.) Rheumatic parotitis.

Rheumoperitona'lgia. ('Ρεύμα; peritoneum; ἄλγος, pain.) Peritoneal pain consequent on rheumatism.

Rheumophthal'mia. ('Ρεύμα; ophthalmia.) See *Rheumatophthalmia*.

Rheumophthalmorrhœ'a. ('Ρεύμα; ophthalmorrhœa.) Rheumatic *Blenorrhœa*.

Rheumorchi'tis. ('Ρεύμα, anything that flows; orchitis.) Rheumatic *Orchitis*.

Rheumotorrhœ'a. ('Ρεύμα; otorrhœa.) Rheumatic *Otorrhœa*.

Rheumo'tylus. ('Ρεύμα, anything that flows; τύλος, a knot or callus.) Old term for a *callus* of the skin, cellular tissue, or periosteum, of rheumatic origin.

Rheum'y. *Med.* A subject of, or giving rise to, the symptom termed *Rheum* or *Rheuma*.

Rheu'sis. ('Ρεύσις, a flowing.) A flow or discharge; especially a discharge from the female organs of generation.

Rhe'xis. ('ῤῥῆξις, a breaking.) A syn. for *Rhegma*.

Rhico'nsis. ('ῤῖκνωσις, a shrivelling, especially of the skin.) The same as *Corrugatio*.

Rhig'olene. ('ῤῖγος, frost, cold.) The most volatile of the liquid products of the distillation of *Petroleum*. It is used in the form of a spray for producing local anæsthesia. According to Bigelow, it is superior, as a local anæsthetic, to ether, in the greater rapidity of its vaporisation, and its odourlessness; but its extreme inflammability is a great drawback to its use.

Rhi'gos. ('ῤῖγος, frost, cold.) The same as *Rigor*.

Rhin. ('ῤῖν = ρίς, the nose.) The nose. In the plur. (*Rhines*), syn. for *Nares*.

Rhinacan'thin. See *Rhinacanthus communis*.

Rhinacanthus commu'nis. An East Indian plant, Order *Acanthaceæ*. The root and bruised leaves are used in India for the cure of parasitic skin diseases. The active principle, *Rhinacanthin*, resembles hydroquinone.

Rhinæsthe'sia. The same as *Rhinæsthesia*.

Rhinæsthe'sis. ('ῤῖς, the nose; αἴσθησις, a sensation.) A syn. for *Osphresis*.

Rhinæ'us. Belonging to the *Rhin*. Epithet applied to the *Compressor naris*.

Rhinal. Belonging to the *Rhin*, or nose.

Rhinal'gia. ('ῤῖς, the nose; ἄλγος, pain.) Pain in the nose.

R. ab intru'sis. Pain in the nose from things thrust in, i. e. from the presence of foreign bodies.

R. vermino'sa. Rhinalgia as a reflex symptom of the presence of worms.

RHINANCHONĒ—RHINOCANTHECTOMĒ

Rhinnan'chonē. ('Pis, the nose; ἀγχόνη, a strangling.) Nasal obstruction; also, in a special sense, snuffles.

Rhinang'ia. A syn. for *Rhinanchonē*.

Rhinan'thus. A Genus of the Rhinanthaceæ, which are now incorporated with the *Scrophulariaceæ*.

R. alecto'lophus. Syn. for *R. crista galli*.

R. cris'ta gal'li. Cock's comb or hen-penny grass. A weed indigenous to Europe and North America. The seeds are poisonous, and are used in decoction as a vermin-killer.

Rhinantral'gia. ('Pis, the nose; ἄντρον, a cave; ἄλγος, pain.) Pain in the nostril or nostrils.

Rhinarium. ('Ρινάριον, a small nose. Pl. *Rhinaria*. F. *rhinarion*; G. *eine bestimmte Nasensalbe*.) Med. Old term for a certain salve which was applied to the nose.

Zoöl. Illiger's term for the end of the nose in certain of the Mammalia, in which this part is moist and devoid of hairs. (F. *rhinarion*; G. *Näschchen*.)

Entomol. Kirby's term for the space between the anterior border of the nose and the labrum or lip. (F. *rhinarion*; G. *Näschchen*.)

Rhinel'cos. ('Pis, the nose; ἔλκος, an ulcer.) An ulcer of the nose.

Rhinel'cus. The same as *Rhinelcos*.

Rhine'ma. ('Ρινέω, to polish.) Syn. for *Ramentum*.

Rhinen'cephal. A shortened form of the word *Rhinencephalon*.

Rhinenceph'al'ia. The same as *Rhinencephalus* and *Rhinocephalus*.

Rhinenceph'al'ic. ('Pis, the nose; ἐγκέφαλος, the brain.) Belonging to the nose and brain. Also, belonging to, or having the characters of, *Rhinencephalus*. Also, belonging to the *Rhinencephalon*.

R. arch. That arch bearing the same relation to the *Rhinencephalon*, according to the "vertebral homology" of the skull, that the *Prosencephalic arch* does to the *Prosencephalon*.

Rhinenceph'al'on. ('Pis, the nose; ἐγκέφαλος, the brain.) The *Olfactory lobe* of the brain.

Rhinenceph'alus. ('Pis, the nose; ἐγκέφαλος, the brain.) The same as *Rhinencephalus*.

Rhinenchys'ia. ('Pis, the nose; ἐγχέω, to pour in.) The same as *Rhinenchysis*.

Rhinen'chysis. ('Pis; ἐγκυσις.) An injecting of liquid into the nostrils.

Rhinen'chyta medicamen'ta. (Neut. plur. of *Rhinenchytus*.) Medicines injected into the nose. See *Rhinenchytus*.

Rhinen'chytēs. ('Pis, a nose; ἐγχέω, to pour in.) Old term for a nasal syringe.

Rhinen'chytus. (Latinised adj. *rhinenchytus*, -a, -um; from *pis*, the nose; ἐγχέω, to pour in.) That is injected up the nose. Epithet applied to medicines so used, *Rhinenchytia medicamenta*.

Rhines. Plur. of *Rhin* (q. v.).

Rhineurn'y'ter. ('Pis, the nose; εὐρύω, to widen.) An apparatus for plugging the anterior nares in epistaxis. It is in the form of a small bag which is inflated after introduction.

Rhinia'try. ('Pis, ρινός, the nose; λατρεία, medical treatment.) A syn. for *Rhinology*.

Rhi'nic. The same as *Rhinal*.

Rhi'nicus. A syn. for *Rhinæus*.

Rhi'nion. ('Ρινίον, a little nose.) Med. Old term for a certain collyrium described by Galen, *de C. M.*, sec. Loc. iv, 7; also, for another described by Celsus, vi, 6, t. 30.

Anat. The lower end of the median longitudinal suture between the two nasal bones.

Rhinis'mus. ('Pis, ρινός, the nose.) A syn. for *Rhinophonia*.

Rhini'tis. ('Pis, the nose; fem. adj. term. -itis. F. *rhinite*; G. *Nasenentzündung*.) Inflammation of the mucous membrane of the nose.

R., acute'. Acute nasal catarrh. An ordinary catarrh or cold in the head. It begins with chilliness and sneezing, and a profuse watery discharge from the nose soon becomes established. Frontal headache is very commonly present, from inflammation of the frontal sinuses. The discharge gradually becomes thicker, and the attack subsides usually in about a week.

R., atroph'ic. Chronic atrophic nasal catarrh.

Also termed *Ozæna* (q. v.).

R. caseo'sa. A rare variety, characterised by gradual blocking of the nostrils, and the occasional discharge of extremely fetid gelatinous masses by the anterior or posterior nares.

R. catarrha'lis. Catarrhal rhinitis. A syn. for *R., acute*.

R., chron'ic atroph'ic. A fuller term for *R., atrophic*.

R., chron'ic catar'rh'al. The same as *R., chronic hypertrophic*.

R., chron'ic hypertroph'ic. A fuller term for *R., hypertrophic*.

R., cirrho'tic. A syn. for *R., atrophic*.

R., fibrinous. A rare variety, characterised by the formation of a fibrinous false membrane in the nose.

R., hypertroph'ic. A form of chronic nasal catarrh characterised by hypertrophy of the mucous membrane, causing some amount of nasal obstruction, with hypersecretion. Attacks of sneezing are common, and there is often a feeling of heaviness in the head. The sense of smell is impaired or lost.

R. poste'rior. Post-nasal catarrh.

R., prurig'inous. A name for *Hayasthma*.

R., pseu'do-mem'branous. See *R., fibrinous*.

R., sclerot'ic. The same as *R., cirrhotic*.

R. sic'ca. A syn. for *R., atrophic*.

R., sim'ple. Rhinitis in which no hypertrophic or atrophic changes have begun.

R., sympathet'ic. A general term for reflex nasal neuroses.

R. ulcero'sa. A syn. for *R., atrophic*.

R., va'so-mo'tor. A syn. for *Hayasthma*.

Rhinoblennorrhœ'a. ('Pis, the nose; blennorrhœa. F. *rhinoblennorrhée*; G. *Nasenschleimfluss*.) A mucous discharge from the nose.

Rhino'byon. ('Pis, the nose; βίω, to plug. F. *rhinobyon*; G. *Nasenstopper*.) A plug for the anterior nares.

Rhino'byum. The same as *Rhinobyon*.

Rhi'nocacé. ('Pis, ρινός, the nose; κακός, bad, evil.) A syn. for *Ozæna*.

Rhinocanthectomē. ('Pis, the nose; κάνθος, the corner of the eye; ἐκτομή, a cutting out. F. *rhinocanthectomie*; G. *Nasenwinkel-*

RHINOCANTHECTOMIA—RHINOPLASTY

ausschnitt.) Old term for excision of the inner canthus of the eye.

Rhinocanthectom'ia. The same as *Rhinocanthectomē*.

Rhinocarcino'ma. ('Pis, the nose; carcinoma.) Carcinoma of the nose.

Rhinocatar'rhus. ('Pis, the nose; catarrhus.) Nasal catarrh.

Rhi'nocaul. ('Pis, ρινός, the nose; καυλός, a stalk.) A term for the *Olfactory tract* of the brain.

Rhinoceph'alus. ('Pis, the nose; κεφαλή, the head.) A foetal monster which has a long, snout-like nose and a single orbit, or, more correctly, the two orbits fused into one, containing the two eyes.

Rhino'ceros. ('Pis, the nose; κέρας, a horn. *F. rhinoceros*; *G. Nashorn*.) A Genus of pachydermatous, perissodactylous Mammalia, characterised especially by having one or two horns on the upper part of the nose.

The horn of the rhinoceros was formerly recommended as a remedy against poisons and epilepsy; from it a spirit was prepared which was believed to act as a remedy in the above cases.

R. leg. A name for *Elephantiasis arabum*.

Rhinocleis'is. ('Pis, the nose; κλείσις, a shutting up.) A closing or blocking of the nostrils.

Rhinocnes'mus. ('Pis, the nose; κνησμός, a tickling.) Itching of the nose.

Rhi'nocœle. The same as *Rhinocœlia*.

Rhinocœ'lia. ('Pis, the nose; κοιλία, a hollow.) Wilder's term for the *Olfactory ventricle*.

Rhinocop'rion pen'etrans. ('Pis, the nose; κόπριος, filthy.) A syn. for *Pulex penetrans*.

Rhinodac'ryolith. ('Pis, ρινός, the nose; dacryolith.) A syn. for *Rhinolith*.

Rhinoder'ma. ('Pis, the nose; δέρμα, the skin.) A syn. for *Keratosis pilaris*.

Rhinodyn'ia. ('Pis, the nose; ὀδύνη, pain.) Pain in the nose.

Rhinogram'ma. ('Pis, the nose; γράμμα, a writing.) The nasal line of the face; a fold, slightly convex outwards, which passes from the upper border of the ala of the nose on either side to the angle of the mouth.

Rhinola'lia. ('Pis, the nose; λαλία, speech.) A syn. for *Dyslalia nasalis*.

R. aperta. *Dyslalia* in cases where there is the normal communication of the nasal cavity with the pharynx.

R. Claus'a. *Dyslalia* consequent on a shutting off of the nose, or of the naso-pharynx from the pharynx.

Rhinolaryngi'tis. Simultaneously occurring *Rhinitis* and *Laryngitis*.

Rhinolaryngo'logy. (*Rhin*; *laryngology*.) The scientific study of the nose and larynx in health and disease, together with the treatment of diseases of both.

Rhinolere'ma. ('Pis, the nose; ληρέω, to be foolish.) A syn. for *Parosphresis*.

Rhinolere'sis. ('Pis, the nose; ληρέω, to be foolish.) The same as *Rhinolere'ma*.

Rhinoleth'ron. ('Pis, the nose; ὀλεθρος, destruction.) Extensive destruction of the substance of the nose, as from syphilis, cancer, or frost-bite.

Rhinoleth'rum. The same as *Rhinolethron*.

Rhi'nolite. The same as *Rhinolith*.

Rhi'nolith. ('Pis, the nose; λίθος, a stone.) A calcareous deposit in the nasal cavity. The commoner variety is the *False Rhinolith*, in which a calcareous deposit takes place round a foreign body; the rarer variety is the *True Rhinolith*, in which the deposit takes place round a mass of blood or of mucus. (Cozzolini.)

Rhinolithi'asis. ('Pis, the nose; λιθί-άσις.) The pathological condition constituted by the formation of *Rhinoliths*.

Rhinolith'os. A *Rhinolith*.

Rhino'logist. ('Pis, the nose; λόγος, speech.) A specialist in the study and treatment of diseases of the nose.

Rhino'logy. ('Pis, the nose; λόγος, speech.) The scientific study of the anatomy, physiology, pathology and therapeutics of the nose.

Rhino'meter. ('Pis, the nose; μέτρον, a measure.) An instrument used in the investigation of obstructive diseases of the nose.

Rhinomme'ctomē. ('Pis, the nose; ὄμμα, the eye; ἐκτομή, a cutting out.) A syn. for *Rhinocanthectomē*.

Rhinonecro'sis. ('Pis, the nose; necrosis.) Necrosis of bone in diseases of the nose.

Rhinopharyngi'tis. (*Rhinopharynx*; *Gr.* adj. term. -ιτις.) Inflammation of the *Rhino-pharynx*.

Rhi'no-phar'ynx. ('Pis, ρινός, the nose.) The same as *Naso-pharynx*.

Rhinopho'nia. ('Pis, the nose; φωνή, a sound.) Speaking through the nose.

Rhinophore. ('Pis, ρινός, the nose; φέρω, to bear.) *Biol.* An external olfactory organ.

Also, used in a narrower sense to mean either member of the posterior pair of tentacles in certain of the Mollusca; these are believed by some to have an olfactory function.

Rhinophy'ma. ('Pis, the nose; φῦμα, a tumour.) A nasal tumour.

Also, in a narrower sense, a form of *Hyper-trophic rosacea* of the nose, cheeks, and lobes of the ears, sometimes seen in subjects of alcoholism.

Rhinoplas'tic. ('Pis, the nose; πλαστικός, -ή, -όν, belonging to moulding.) Belonging to *Rhinoplastica*, or to the plastic surgery of the nose.

Rhinoplas'tica. ('Pis, the nose; πλαστικός, -ή, -όν, belonging to moulding.) *Rhinoplasty*.

Rhi'noplasty. ('Pis, the nose; πλαστικός, -ή, -όν, formed, moulded.) The plastic operation for forming a new nose. For the different modifications, see subheadings.

R., English. Another name for *R.*, *Syme's* (q. v.).

R., German. Von Graefe's modification of *R.*, *Tagliacotian*, in which the whole is done in one operation.

R., heteroplas'tic. That variety of the operation in which the skin-graft is taken from another person.

R., In'dian. The skin-flap is taken from the forehead. This modification of the operation was first performed in India.

R., Italian. The same as *R.*, *Tagliacotian*.

R., Lang'enbeck's. A modification of *R.*, *Indian* in which the periosteum is taken up in the flap from the forehead.

R., osteoplas'tic. A variety of the opera-

RHINOPOLYPUS—RHIZOMA

tion in which a cartilaginous flap is transplanted to do duty for the septum nasi.

R., perios'teal. The same as *R., Langerbeck's*.

R., Post's. A modification of *R., Tagliacotian*, in which the flap is taken from a finger of the patient.

R., Syme's. Introduced by Syme. The flaps are taken from the cheeks.

R., Tagliacotian. The variety introduced by Tagliacozzi, in which the flap is taken from the patient's arm.

R., Tagliacozzi's. See *R., Tagliacotian*.

R., von Graefe's. Another name for *R., German* (q. v.).

R., Wood's. A variety introduced by Wood, in which a flap is taken from the upper lip, inverted, and elongated by separation of the mucous from the cutaneous layer. Lateral flaps are then taken from the cheeks to cover the upper lip.

Rhinopol'ypus. ('Pís; *polypus*.) A nasal polypus.

Rhinop'tia. ('Pís, the nose; *όπτός*, -ή, -όν, seen, to be seen.) A squinting over the nose; internal strabismus.

Rhinorrh'gia. ('Pís, the nose; *ράγή*, a rent, rupture, a breaking forth.) A syn. for *Epistaxis*.

Rhinorr'haphē. ('Pís, the nose; *ράφή*, a suture.) *Rhinorrhaphy*.

Rhinorrhaphia. The same as *Rhinorr'haphē*.

Rhinorr'haphy. (*Rhinorr'haphē*.) A plastic operation to remedy the congenital malformation termed *Epicanthis* (q. v.). A longitudinal fold of skin is pinched up, and removed by means of two elliptical incisions, and the cut surfaces are sutured together by means of hare-lip pins.

Rhinorrhœ'a. ('Pís; *ρίω*, to flow.) Term for a nasal discharge; usually a discharge of blood.

Rhí'nos. ('Pwós, the skin.) A syn. for *Cutis*; also, for *Bursa*, according to Heyschius. Also, a shield.

Rhinosclero'ma. ('Pís, the nose; *σκληρώω*, to harden.) A term for chronic tuberculous infiltration and induration of the nose and upper lip. It may also grow backwards into the larynx and pharynx. It forms smooth, flattened masses of growth.

Rhinoscope. ('Pís, the nose; *σκοπέω*, to look at.) An instrument for the examination of the nasal cavity.

Rhinoscopy. Examination of the nasal cavity by means of the *Rhinoscope*.

R., ante'rior. Examination through the anterior nares.

R., poste'rior. Examination through the posterior nares.

Rhino'sis. The same as *Rhcnosis*.

Rhinostegno'sis. ('Pís, the nose; *στέγνωσις*, a making close or costive.) A narrowing or blocking of the nose.

Rhinoth'e'ca. ('Pís, the nose; *θήκη*, a box.) Illiger's term for the horny covering of the beak in birds.

Rhino'trichēs. Plur. of *Rhinotrix*.

Rhinotrix. ('Pís, the nose; *τριξ*, *τριχός*, the hair of the head; plur., *Rhinotrichēs*. *R. rhinotrichie*.) One of the vibrissæ or hairs just inside the anterior nares.

Rhipid'ium. ('Pιπίδιον, dim. from *πί-*

πίς, a fan. *G. Fächel*.) *Bot.* Eichler's term for an inflorescence consisting of a fan-shaped *cyme*, in which the successive branches all lie in the same plane.

Rhiptas'mus. ('Pιπτασμός, a tossing about.) A syn. for *Ballismus*.

Rhiptolu'sia. ('Pιπτω, to throw; *λούω*, to wash.) *Affusion*.

Rhis. ('Pís, *ρινός*.) The nose.

Rhi'za. ('Pίζα.) A root.

Rhizag'ra. ('Pίζα, a root; *ἄγρα*, a seizure.) An ancient form of stump-forceps for teeth, described by Scultetus.

Rhizan'thea. ('Pίζα, a root; *ἄνθος*, a flower.) *Bot.* A syn. for *Cytinaceæ*.

Rhizan'theous. ('Pίζα, a root; *ἄνθος*, a flower.) *Bot.* Epithet applied by Blume to the *Cytinaceæ*, on account of their habit of growing on the roots of other plants.

Rhizan'thous. ('Pίζα, a root; *ἄνθος*, a flower.) *Bot.* Having flowers growing from the roots.

Rhiz'ias. ('Pίζias, made from roots.) Term for a medicine prepared from roots.

Rhizi'na. ('Pίζα, a root.) *Bot.* The inferior appendage of the *thallus* in *Lichenes*.

Also, the radicles covering the underground stem in Mosses.

Rhiz'ine. ('Pίζα, a root.) A syn. for *Rhizoid*.

Rhizoblas'tous. ('Pίζα, a root; *βλαστός*, a shoot.) *Bot.* Epithet applied by Willdenow to embryos that have a root.

Rhizocar'pic. ('Pίζα, a root; *καρπός*, fruit.) See *Rhizocarpous*.

Rhizocarp'ous. ('Pίζα, a root; *καρπός*, fruit.) *Bot.* Epithet applied to herbs that have perennial roots.

Rhiz'ocaul. ('Pίζα, a root; *καυλός*, a stem.) *Biol.* The stem of a *Polyp*, or part by which it is attached to its support.

Rhizoceph'alous. ('Pίζα, a root; *κεφαλή*, the head.) *Biol.* Rooted or fixed by the head or cephalic extremity.

Rhizodon'tropy. ('Pίζα, a root; *δδους*, *δδόντος*, a tooth; *τροπή*, a turning.) Pivoting an artificial crown on the root of a tooth.

Rhizodon'tr'py. ('Pίζα, a root; *δδους*, *δδόντος*, a tooth; *τρυνάω*, to pierce through.) Perforation of the fang of a tooth; usually for the letting out of pent-up pus.

Rhiz'ogen. ('Pίζα, a root; *γενής*, bringing forth.) *Bot.* Term for a plant which is parasitic on the roots of another plant; also, any part from which a root or roots grow.

Rhizogen'ic. ('Pίζα, a root; *γενής*, bringing forth.) *Bot.* Producing a root or roots.

Rhizograph'ia. ('Pίζα, a root; *γραφή*, a writing.) *Bot.* A description of roots. The title of a work on the roots of plants, by Preiss, published in 1824.

Rhizo'graphy. ('Pίζα, a root; *γραφή*, a writing.) A systemic description of the roots of plants.

Rhiz'oid. ('Pίζος, a root; *είδος*, form, resemblance.) Like a root. Also, a root-like filament.

Rhizo'logy. ('Pίζα, a root; *λόγος*, a narrative.) *Bot.* A treatise on, or the scientific study of, roots.

Rhizo'ma. A *Rhizome*.

R. ar'i. The rhizome of the *Arum maculatum*.

RHIZOMANIA—RHODODENDRON

R. ar'nicæ. A name for *Arnica* root.
R. as'ari. The rhizome of the *Asarum europæum*.
R. cal'ami. *Calamus*.
R. car'icis. The rhizome of *Carex arenaria*.
R. caryophylla'tæ. The rhizome of *Geum urbanum*.
R. curcu'mæ. Curcuma rhizome, turmeric.
R. fil'icis mar'is. The rhizome of *Aspidium filix mas*.
R. galang'æ. *Galanga*.
R. gram'inis. The rhizome of *Triticum repens*.
R. imperato'riæ. The rhizome of *Imperatoria ostruthium*, the Masterwort.
R. i'ridis. *Orris* root.
R. podophyl'li. The rhizome of *Podophyllum peltatum*.
R. serpentar'ia. The rhizome of *Aristolochia serpentaria*.
R. tormentil'læ. The rhizome of *Potentilla tormentilla*.
R. vera'tri. The rhizome of *Veratrum album*.
R. zedoar'ia. The rhizome of *Curcuma zedoaria*.
R. zingib'eris. Ginger, the rhizome of *Zingiber officinalis*.
Rhizoma'nia. ('Pízza, a root; *μανία*, madness.) *Bot.* Abnormal development of adventitious roots or rootlets.
Rhizo'matoid. ('Pízza, a root; *εἶδος*, form.) Resembling a *Rhizome*.
Rhí'zome. ('Pízza, a root or stem. *F.* rhizome; *G.* Wurzelstock.) *Bot.* The horizontal or underground stem of a perennial plant, with root-bearing nodes and a bud-bearing apex.
Rhí'zomorph. ('Pízza, a root; *μορφή*, form.) *Bot.* The flocculent *mycelium* of certain species of *Agaricus*.
Rhizomorphoid. ('Pízza, a root; *μορφή*, form; *εἶδος*, resemblance.) The same as *Rhizomorphous*.
Rhizomorphous. ('Pízza, a root; *μορφή*, form.) Having the form of a root.
Rhizonych'ia. ('Pízza, a root; *ὄνυξ*, the nail.) *Anat.* The root of a finger-nail or toe-nail.
Surg. A syn. for *Onychia*.
Rhizonych'ial. Belonging to the *Rhizonychium*.
Rhizonych'ium. ('Pízza, a root; *ὄνυξ*, the nail.) *Comp. Anat.* Illiger's term for the distal phalanx, that is, the nail-bearing phalanx.
Rhizo'phagous. ('Pízza, a root; *φάγω*, to devour.) Feeding on roots.
Rhizo'phagus. ('Pízza, a root; *φάγω*, to devour.) Term for an individual that feeds on roots.
Rhizo'philous. ('Pízza, a root; *φιλέω*, to love.) *Bot.* Root-loving; living upon roots.
Rhizophlœ'ina. ('Pízza, a root; *φλοιός*, bark.) See *Phlœorrhizina*.
Rhizophlœ'um. The same as *Rhizophlœina*.
Rhizo'phora. ('Pízza, a root; *φορός*, bearing.) A Genus of the *Rhizophoraceæ*, a Family of the *Myrtifloræ*, the members of which are tropical trees or shrubs.
R. man'gle. The Mangrove. Its stem yields a gum.
R. gymnorhe'xia. The Mangrove-tree.

The juice of its root is applied in the East to snake-bites.

Rhizo'phorous. ('Pízza, a root; *φορός*, bearing.) Root-bearing.

Rhizophy'to-alope'cia. ('Pízza, a root; *φυτόν*, a plant.) A syn. for *Trichomycosis circinata*.

Rhí'zopod. ('Pízza, a root; *πούς*, *ποδός*, a foot.) *Biol.* An organism belonging to the Subclass *Rhizopoda*.

Rhizo'poda. (Neut. pl. 'Pízza, a root; *πούς*, *ποδός*, a foot.) A Subclass of the *Protozoa*, the members of which move and ingest food by means of *pseudopodia*.

Rhizopo'dium. ('Pízza, a root; *πούς*, *ποδός*, a foot.) The *mycelium* of *Fungi*.

Rhizo'sis. ('Pízza, a root.) A taking root; also, the growth or formation of roots.

Rhizo'sporous. ('Pízza, a root; *σπορά*, seed.) *Bot.* Epithet applied by H. K. Schultz to plants that propagate themselves by their roots.

Rhizotax'is. ('Pízza, a root; *τάξις*, arrangement.) The mode of growth or arrangement of the roots in a plant.

Rhí'zotaxy. The same as *Rhizotaxis*.

Rhizotom'ia. ('Pízza, a root; *τομή*, a cutting.) A cutting and gathering of roots. This term was used in old times as synonymous with *Pharmacacia* and also with *Pharmacopœia*.

Rhizotom'icē. ('Pízza, a root; *τομικός*, -ή, -όν, belonging to, or fit for, cutting.) A syn. for *Rhizotomia*.

Rhizo'tomist. ('Pízza, a root; *τομή*, a cutting.) One who practises *Rhizotomia*.

Rhizotomu'mena. ('Pízzotomíew, to cut and gather roots, especially for medical purposes.) *Pharm.* A collection of cut roots, especially for medical purposes.

Rhizo'tomus. ('Pízza, a root; *τόμος*, a cutting.) Old term syn. with *Apothecary*.

Rho'a. ('Ρόα = *ροία*.) A pomegranate; also, a pomegranate tree.

Rhodac'nē. ('Ρόδον, a rose; *acnē*.) A syn. for *Acnē rosacea*.

Rhodelæ'on. ('Ρόδον, a rose; *έλαιον*, oil.) Rose-oil.

Rhodelæ'um. The same as *Rhodelæon*.

Rhodeorrh'e'tin. A syn. for *Convolutin*.

Rhodi'acon. ('Ρόδον, a rose.) Name for an ancient compound plaster (*ρόδιον*) described by Galen, *de C. M. per Gen.* ii, 17, *fin.*

Rho'dii lig'num. See *Lignum Rhodii*.

Rhodinac'nē. ('Ρόδον, a rose; *acnē*.) The same as *Rhodacnē*.

Rhod'inon. ('Ρόδιος, -η, -ον, made of roses.) Oil of roses.

Rho'dis. ('Ρόδισ.) An unguent or powder made from roses. (Diosc.)

Rhodit'es. ('Ροδίτης.) Wine flavoured with roses. (Diosc.)

Rho'dium lig'num. See *Lignum Rhodii*.

Rho'dius. ('Ρόδιος = *ρόδιος*, made of roses.) Rose-red; also, a syn. for *Rosaceus*.

Rhododaph'ne. The *Nerium oleander*.

Rhododaph'nis. The same as *Rhododaphnē*.

Rhododen'dron. ('Ρόδον, a rose; *δένδρον*, a tree.) A Genus of the *Ericaceæ*.

R. campanula'tum. Bell-flowered rhododendron. Leaves, *errhine*.

R. chrysan'themum. The oleander, or

RHODOMEL—RHOMBOIDEUS

yellow rhododendron. It has been used in the treatment of gout, rheumatism, and syphilis. In very large doses it is a narcoto-irritant.

R. dahur'icum. The Dahurian rhododendron. The leaves are used in the treatment of rheumatism and gout.

R. ferrugin'eum. Hab. Europe and Asia. An infusion of the flower-buds has been used in rheumatism.

R. maxim'um. The Great Laurel, or American Rose-bay. Stimulant and astringent.

R. officina'lē. A syn. for *R. chrysanthemum*.

R. pon'ticum. Hab. Asia Minor, Armenia, and Spain. Action and uses the same as those of *R. dahuricum*.

R. puncta'tum. Hab. North America. Stimulant and astringent.

Rhodomel. The same as *Rhodomeli*.

R. cydonia'tum. Honey 7 parts, honey of roses 30 parts, mucilage of quince seeds 180 parts, mixed together.

Rhodomeli. ('Ρόδον, a rose; μέλι, honey.) *Pharm.* A syn. for *Mel rosæ*.

Rhodomel'on. ('Ρόδον, a rose; μήλον, an apple.) *Bot.* A rose-apple.

Pharm. A confection of roses and quinces.

Rhodomelum. The same as *Rhodomelon*.

Rhodomyc'es. ('Ρόδον, a rose; μύκης, a fungus.) A species of Fungus closely resembling the *Oidium albicans* ("The Lancet," 1886, i, p. 221 [a. 50]).

R. Koch'ii. Von Wettstein's term for a pink mould-fungus, producing a large number of conidia, which has been found in the gastric juice in cases of *Pyrosis*.

Rhod'on. ('Ρόδον.) A rose. Also, the pudenda muliebria, or *vulva*.

Rhod'ophan. ('Ρόδον, a rose; φανός, bright.) Term for a rose-coloured pigment found in the retinal cones of Birds, Reptiles, and Fishes.

Rhod'ophyll. ('Ρόδον, a rose; φύλλον, a leaf.) Schütt's term for the compound pigment present in red *Algæ*.

Rhodops'in. ('Ρόδον, a rose; ὄψ, the eye.) Visual purple.

Rhodorrh'iza. ('Ρόδον, a rose; ῥίζα, a root.) A syn. for *Convulvulus*.

Rhodosac'charum. ('Ρόδον, a rose; σάκχαρον, sugar.) *Pharm.* Old term for confection of roses; also, for a preparation of the juice of roses with sugar.

Rhodostact'on. ('Ρόδον, a rose; στακτός, -ή, -όν, dropping.) A syn. for *Rhodosaccharum*.

Rhodostact'um. The same as *Rhodostacton*.

Rhodostag'ma. ('Ρόδον, a rose; στάγξ, that which oozes out, a drop.) An old term for rose-water, *Aqua rosæ*.

Rhodyme'nia palma'ta. ('Ρόδον, a rose; ὑμήν, a membrane.) A marine parasitic *Alga*. It bears a form of mucilage containing iodine, which is used in the treatment of scrofula. Used as food in the west of Ireland and on the shores of the Mediterranean.

Rhœ'a. ('Ροία.) A pomegranate; also, a pomegranate tree.

Rhœad'ic ac'id. (*Rhœas*.) A red colouring-matter present in the petals of *Papaver rhœas*.

Rhœ'adin. (*Rhœas*.) An alkaloid occur-

ring in the form of white prisms in the *Papaver rhœas*, the ripe capsules of *Papaver somniferum*, and in *opium*.

Rhœ'ados. Gen. of *Rhœas*.

R. pet'ala. B.P. Red-poppy petals. The fresh petals of *Papaver rhœas*. Used as a colouring-agent. *Preparation*.—*Syrupus rhœados*.

Rhœ'as. ('Ρέω, to flow; name given on account of the way in which the juice of this species flows from incisions in the stem. Gen. *rhœados*.) Specific name of the *Papaver rhœas*.

Rhœbde'sis. ('Ροιβήσις, a whistling, piping, a sucking down.) *Physiol.* An old term for *Absorption*.

Rhœ'zos. ('Ροῖζος, a whizzing or whistling noise.) A syn. for *Stridor*.

Rhœ'zus. The same as *Rhæzos*.

Rhœ'gma. ('Ρῶγμα = ῥήγμα.) The same as *Rhegma*.

Also, syn. for *Suture, sagittal*.

Rhœgmē. ('Ρωγμή.) A kind of fracture.

Rhœgm'os. ('Ρωγμός = ῥωγμή.) The same as *Rhogmē*.

Rhoidar'ion. ('Ροιδάριον = ῥοίδιον, a small pomegranate.) Name for a certain ancient dry pharmaceutical preparation, described by Aëtius, ii, 68.

Rhoidar'ium. See *Rhoidarion*.

Rhoid'ion. ('Ροίδιον, a small pomegranate.) The same as *Rhoidarion*.

Rhoi'tes. ('Ροιτης [οἶνος], pomegranate wine.) Term for wine made from pomegranates.

Rhomb. In *Geom.*, a four-sided figure, having all four sides but only its opposite angles equal to one another.

Rhom'bo-atloid'eus. A small supernumerary muscle described by Macalister. It arises from the spines of some of the lower cervical or upper dorsal vertebræ, and is inserted into the transverse process of the atlas.

Rhom'bocœle. See *Rhombocœlia*.

Rhombocœ'lia. ('Ρόμβος, a rhomb; κοιλία, a hollow.) A syn. for *Rhomboidal sinus*.

Rhom'boid. ('Ρόμβος, a rhomb; εἶδος, form.) Having the shape of a *Rhomb*.

R. fos'sa. See *Rhomboidal fossa*.

R. impres'sion. The rough impression on the under surface of the clavicle, near its sternal end, to which the rhomboid ligament is attached.

R. lig'ament. See *Ligament, rhomboid*.

R. lig'ament of wrist. The same as *Rhomboidal ligament of wrist*.

R. mus'cles. The *Rhomboides*.

Rhomboid'al. The same as *Rhomboid*.

R. fos'sa. The same as *R. sinus*.

R. lig'ament of radio-carpal articulation. See *Ligament, rhomboidal, of radio-carpal articulation*.

R. lig'ament of wrist. The same as *R. ligament of radio-carpal articulation*.

R. si'nus. A name for the fourth ventricle of the brain. See *Ventricle, fourth*.

Rhomboid'eī. Plur. of *Rhomboideus*. A name for the *Rhomboideus major* and *R. minor* together.

Rhomboid'es. The same as *Rhomboideus*.

R. inf'e'rior. The *Rhomboideus minor*.

R. supe'rior. The *Rhomboideus major*.

Rhomboid'eus. *Rhomboid*.

R. ante'rior. The *Rhombo-occipitalis*.

R. cap'itis. The *Rhombo-occipitalis*.

R. cervi'callis. The *Rhombo-occipitalis*.

R. major. A muscle arising from the first five dorsal spines, and inserted into the root of the spine of the scapula. It raises or retracts the scapula. Its nerve is from the fifth cervical.

R. minor. A muscle lying above the *R. major*, arising from the spines of the last cervical and first dorsal vertebræ, and inserted into the vertebral border of the scapula just above the insertion of the *R. major*. Its action is similar to that of the *R. major*, and its nerve comes also from the fifth cervical.

Rhombo-occipitalis. An occasional muscle in man, constant in some animals. It arises just below the middle third of the superior curved line of the occiput, and is inserted into the vertebral border of the scapula above the rhomboideus major.

Rhom'bos. (Ρόμβος.) A *Rhomb*. Name for an ancient bandage, described by Galen, which was rhomboid in shape.

Rhom'bus. A *Rhomb*.

R. lumbalis. A syn. for *Tetragonum lumbale*.

Rhom'ma. (Ρόμμα = ρόφημα.) The same as *Rhophe'ma*.

Rhon'cal. See *Rhonchal*.

Rhon'chal. Belonging to, or of the nature of, *Rhonchus*.

R. frem'itus. The fremitus appreciable to the touch when the hand is placed on the thorax of a patient the subject of *rhonchus*.

Rhon'chus. (Ρόγκος, a snoring.) A snoring, more or less musical, sound produced in one of the bronchial tubes by the passage of air in a series of rhythmical puffs through a part narrowed, either by thickening of the wall of the tube, or by the presence of a plug of tenacious mucus.

Rhonchus may have either a deep snoring tone, as described above, *Sonorous rhonchus*, or it may have a high-pitched hissing or whistling tone, *Sibilant rhonchus*. The term *Rhonchus* is very commonly limited to the former variety, the latter being termed *Sibilus*. *Rhonchus* is sometimes, but erroneously, used as synonymous with *Râle*.

R., bub'bling. A syn. for *Râles, bubbling* (q. v.).

R., cav'ernous. A syn. for *Râles, cavernous*.

R., click'ing. See *Râles, clicking*.

R. crep'itans. *Rhonchus, crepitant*.

R. crep'itans re'dux. See *Râles, crepitant re'dux*.

R., crep'itant. See *Râles, crepitant*.

R., dry. A term for *Rhonchus* as defined above, the term *Rhonchus* being then used as syn. with *Râle* (see main heading).

R., mu'cous. See *Râles, mucous*.

R. sib'ilans. *R., sibilant*.

R., sib'ilant. See *Râles, sibilant*.

R. sib'ilus. *R., sibilant*.

R., son'orous. See *Râles, sonorous*.

R., subcrep'itant. See *Râles, subcrepitant*.

Rhoô'des. (Ρωôδης, watery, running.) *Med.* Having, or characterised by, discharges. Old epithet applied to a *Fever*.

Rhopalis'mus. (Ροπαλισμός, a striking with a club; also, priapism.) Priapism. Also, used as a syn. for *Plica polonica*.

Rhopalocephalus carcinoma-to'sus. (Ρόπαλον, a club; κεφαλή, the head.) Name for a parasitic microbe, described

by Korotneff as existing in the cells of carcinoma. It is classed as intermediate between the *Gregarinæ* and *Coccidia*. These organisms occasionally form the nuclei of cancer-pearls.

Rhopalo'sis. (Ροπαλωτός, club-shaped.) The same as *Rhopalismus*.

Rhop'alum. (Ρόπαλον, a club; also, the penis.) An old term for *Penis*.

Rho'pë. (Ροπή, a sinking or falling.) *Pathol.* Gravitation of fluid into any part.

Rhophe'ma. (Ρόφημα.) That which is supped up, especially, according to Hippocrates, a kind of thick gruel or porridge. Also, an old term syn. with *Haustus*.

Rhophe'sis. (Ρόφησις, a supping up.) Absorption.

Rhophe'tic. (Ροφητικός, -ή, -όν, given to, or belonging to, supping up.) Term for an absorbent drug.

Rhos'aton. (Ρόδον, a rose.) *Pharm.* Old term for a confection of roses "for purging vicious humours," described by Aëtius (iii).

Rho'tacism. (*Rhotacismus*.) The too frequent or too accentuated sounding of "r." The term has also been used to mean substitution of "r" for some other letter-sound, and substitution of some other letter-sound for "r."

Rhotacis'mus. (Ρωτακισμός, overmuch or wrong use of ρ.) *Rhotacism*.

Rhothon'es. (Ρώθωνες.) The nostrils or nasal cavities.

Rhox. (Ρώξ, a cleft.) A syn. for *Rhagoides*, according to Gorraeus; for *Fissura* and *Papilla*, according to Moschion.

Rhu'barb. (*Rhabarbarum*. F. *rhubarbe*; G. *Rhabarber*.) The common name for all members of the Genus *Rheum*.

R., Chi'nese. The *Rheum officinale*.

R., Crime'a. The *Rheum rhaponticum*.

R., French. The *Rheum rhaponticum*.

R., In'dian. The same as *R., Chinese*.

R., Malabar. A variety from the Malabar coast.

R., monk's. Common name for the *Rumex alpinus*.

R., off'cial. The *Rheum palmatum*.

R., offic'nal. The same as *R., official*.

R., pie. The *Rheum rhaponticum*.

R., poor man's. The *Thalictrum flavum*.

R., rha'ponti'c. The *Rheum rhaponticum*.

R., Rus'sian. The *Rheum russicum*.

R., Sibe'rian. The same as *R., Russian*.

R., Tur'key. The *Rheum turcicum*.

R., un'dulated. The *Rheum undulatum*.

R., wild. The *Convolvulus panduratus*.

Rhubar'baric ac'id. A syn. for *Chrysophanic acid*.

Rhubar'barin. The same as *Rhubarbaric acid*.

Rhu'ma. See *Rheuma*.

Rhus. 1. (Ρούς, a small tree, probably the Sumach.) *Bot.* A Genus of the *Tirebinthineæ*.

2. (Ρούς = ρόος, a flux, a discharge of humours.) *Med.* A flow or discharge.

R. aromati'ca. The sweet sumach. The root-bark is astringent. Used in cystitis, &c., for its local astringent action.

R. bel'gica. The *Myrica gale*.

R. copalli'na. The mountain sumach. Action similar to that of *R. glabra*.

R. cortar'ia. The elm-leaved sumach, a small tree, native of South Europe; the only

non-poisonous species of the genus. The leaves and berries are astringent and tonic. See *Erythrus*.

R. cotinus. The purple-fringed sumach. Hab. South Europe. The bark has an antiperiodic action, and the leaves are astringent.

R.-dermatitis. Term for a form of dermatitis consequent on poisoning by the *R. toxicodendron* or other species.

R. diversiloba. The "Hiedra," or poison oak of California. It is a strong local irritant to the skin.

R. glabra. Smooth or Pennsylvanian sumach. An infusion of the root has been used as an astringent gargle and as a cooling drink. An infusion of the inner part of the root-bark has been given in the treatment of mercurial salivation. Its actions are due to the presence of tannin and calcium and potassium malates.

R., metopium. A species indigenous to Tropical America.

R.-poisoning. See *R.-dermatitis*.

R. pu'ila. Action similar to that of *R. toxicodendron*.

R. radicans. The poison-vine. It has a powerful irritant and vesicant action on the skin. It has been used similarly to *R. toxicodendron* in the treatment of nervous diseases, especially paralysis.

R. semialta. Hab. China and Japan. This species produces Chinese galls.

R. succedanea. This species yields Wax. Japan.

R. sylvestris. The same as *R. belgica*.

R. tiphin'ium. The Virginian sumach. The seeds are said to be hæmostatic.

R. toxicodendron. (Τὸ τοξικόν, poison for smearing arrows with; δένδρον, a tree.) The poison-oak or sumach, a native of South America. The leaves are stimulant in small doses, narcotic in larger. It is an irritant and vesicant to the skin and mucous membranes.

R. typhina. Stag's horn sumach. Action similar to that of *R. glabra*.

R. venenata. The poison sumach or poison-ash. Hab. North America and Japan. Action similar to that of *R. toxicodendron*.

R. venic'fera. The Japan lacquer-tree. A very poisonous species, from which a varnish is prepared.

R. ver'nix. A syn. for *R. radicans*.

Rhusin. (*Rhus*.) A precipitate obtained from a tincture of the bark of the root of *Rhus glabra*. Action antiseptic, tonic and astringent; given internally in doses of 1 to 2 grains.

Rhus'ma. (Turk.) Name for a depilatory made up of orpiment, lime and water, mixed together to form a paste.

Rhyas. ('Ρυάς, running; also, falling off.) *Pathol.* A condition of *Epiphora* consequent on defect or absence (whether congenital, traumatic, or the result of operation) of the *caruncula lachrymalis*.

Rhy'ma. ('Ρύμα, deliverance.) Old term for *Remedium*, according to Gorræus.

Rhym'ma. ('Ρύμμα, anything used for washing; soap, lye, &c.) Old term for a detergent medicine.

Rhymnoplasicë. See *Rhinoplastic*.

Rhynchanthe'ra. ('Ρύγχος, the snout; ἀνθρός, blooming.) A Genus of the *Melastomaceæ*.

R. grandifo'ra. Hab. West Indies. The

flowers are used for their sedative expectorant action.

Rhyncho'prion pen'etrans. See *Rhinoop'ion penetrans*.

Rhyncho'sia. ('Ρύγχος, the snout.) A Genus of the *Phuseoleæ*.

R. diversifo'lia. This species is used therapeutically as an expectorant.

Rhyncho'tus. ('Ρύγχος, a snout.) *Entomol.* Epithet applied to Insects that have a long trunk or proboscis.

Rhynen'chytus. See *Rhinenchytus*.

Rhynophy'ma. See *Rhinophyma*.

Rhyophthalmu'ria. (*Rhyas*; *ophthalmos*; οὖρον, urine.) Term signifying excretion of the constituents of urine by the lachrymal gland.

Rhypar'ia. ('Ρυπαρία, dirt, filth.) A term for *Rupia*.

Rhy'parus. (*Rhyparia*.) Belonging to *Rhyparia*.

Rhy'pia. *Rupia*.

Rhy'podes. ('Ρυπώδης, foul, dirty.) Having, or covered with, *Sordes*.

Rhy'pophobia. ('Ρύπος, filth; φόβος, fear.) A morbid or insane dread of dirt.

Rhy'pos. ('Ρύπος, dirt, filth.) A syn. for *Rhyparia*; also, for *Sordes*; also, for *Scab*.

Rhy'ptic. ('Ρυπτικός, cleansing from dirt.) See *Rhypticos*.

Rhy'ptica, medicamen'ta. (Neut. plur.) See under *Rhypticos*.

Rhy'pticos. ('Ρυπτικός, cleansing from dirt.) *Med.* Cleansing away filth; old epithet formerly applied to medicines having such an action (*Rhyptica, medicamenta*). It was used in two senses, namely *Detergent* and *Cathartic*.

Rhy'pus. See *Rhypos*.

Rhy'se'ma. ('Ρύσημα.) A wrinkle.

Rhy'sis. ('Ρύσις, a flowing.) *Med.* Old term applied generally to any kind of discharge, as, e.g., hæmorrhage, diarrhœa, &c.

Rhysostomatu'ria. (*Rhusis*; στόμα, the mouth; οὖρον, urine.) Term signifying excretion of the constituents of the urine by the salivary glands.

Rhytel'mins. ('Ρυτίς, a wrinkle; ἔλμυς, a worm.) The same as *Rhythelminthus*.

Rhythelmin'thus. ('Ρυτίς, a wrinkle; ἔλμυς, a worm.) A syn. for *Bothriocephalus* (Zeder); also, for *Tænia* (Olfers).

Rhythm. ('Ρυθμός, any motion, especially a regularly recurring vibratory motion. *F. rhythme*; *G. Rhythmus*.) The repeated recurrence at regular intervals of any action, function, or sound.

Rhyth'mic. Belonging to, or having the qualities of, rhythm.

Rhyth'mical. (*Rhythm*.) The same as *Rhythmic*.

Rhyth'mus. (Latinised term, from ῥυθμός.) *Rhythm*.

Rhytido'sis. ('Ρυτίδωσις, a wrinkling.) Old term signifying atrophy of the eyeball, or *phthisis bulbi*, accompanied by a corrugation of the pupil. Also, a wrinkling or corrugation of the cornea.

Rhy'tis. ('Ρυτίς.) A wrinkle; *ruga*.

Rib. (Anglo-Sax. *rib*. *F. côte*; *I. costa*; *G. Rippe*.) *Anat.* One of the long, flat, curved bones forming the lateral bony framework of the thorax, attached behind to the vertebral column, and in front, directly or indirectly, to the sternum, except in the case of the floating ribs.

RIB. — RICHFIELD

In Man, each rib has a *head* articulating by two facets with the bodies of two contiguous vertebrae; a short constriction or *neck* which separates the head from the *tubercle*, the latter bearing a facet articulating with the transverse process of the lower of the two vertebrae with which the head articulates; a prolonged curved *body*, marked near its posterior end by the *angle*, and attached in front directly to the sternum in the case of the *true ribs*, indirectly in the case of the three *false ribs*, and free at the anterior end in the case of the last two or *floating ribs*. There are twelve pairs of ribs. The eighth rib is the longest.

Bot. The principal or primary *vein* of a leaf.

R.s, false. See main heading.

R.s, floating. See main heading.

R.s, ligaments of. 1. *The costo-central articulation.* a. The anterior costo-central or stellate ligament unites the rib to two vertebrae and the intervening fibro-cartilage. b. The interarticular ligament passes from the ridge on the head of the rib between its articular surfaces to the intervertebral substance.

2. *The costo-transverse articulation.* a. The posterior costo-transverse ligament, from the summit of a transverse process to the external part of the tubercle of a rib. b. The middle or interosseous costo-transverse ligament, from the neck of the rib to the transverse process. c. The superior costo-transverse ligament, from the neck of the rib to the lower margin of the transverse process next above.

3. *The costo-sternal articulations.* Anterior and posterior ligaments, with the exception of the first rib which has its cartilage directly united with the sternum. In the second articulation, there is an interarticular ligament, dividing the synovial cavity into two. Sometimes the succeeding joints are similarly divided up.

The *costo-xiphoid ligament* is a fasciculus of fibres joining the seventh cartilage, and sometimes also the sixth, with the xiphoid cartilage.

R.s, ligaments of, interarticular. See under *R.s, ligaments of*.

R.s, short. The same as *R.s, floating*.

R.s, ster'nal. A syn. for *R.s, true*.

R.s, true. See under main heading.

Rib-grass. A syn. for *Rib-wort*.

Rib-wort. Common name for the *Plantago lanceolata*.

Riband of Vicq d'Azyr. See *Ribbon of Vicq d'Azyr*.

R.-shaped. See *Ligulate*.

Rib'ail's ban'dage. See *Bandage, Rib'ail's*.

Ribbed. Having ribs.

Ribbon of Vicq d'Azyr. A syn. for *Vicq d'Azyr's line* (q. v.).

R. sections. Term for a series of sections, made with a *microtome*, remaining attached to one another so as to form a ribbon or chain.

R. stric'ture. See *Stricture, ribbon*.

Ribes. The Currant Family. The only Genus of the Tribe *Ribesiceæ*, Nat. Order *Saxifrageæ*.

R. glossular'ia. A syn. for *R. uva crispa*.

R. ni'grum. The black currant. It is often used as a demulcent in sore-throat, and also as a diuretic.

R. officina'lë. The *R. nigrum*.

R. ol'idum. The *R. nigrum*.

R. ru'brum. The red currant.

R. u'va cris'pa. The gooseberry.

R. vulgar'is. The *R. rubrum*.

Ribes, gan'g'lion of. A ganglion of the sympathetic system, described by Ribes as lying upon the anterior communicating artery at the base of the brain, where the sympathetic nerves of the two sides meet.

Ribe'sin. (*Ribes*.) Term for the juice of *Ribes nigrum*, used as a staining reagent for microscopic sections.

Ribless. *Bot.* Without ribs. See *Enervis*.

Riblet. (Dim. from *rib*.) Term for any *Pleurapophysis* which remains rudimentary, not developing into a rib.

Rice. Common name for the decorticated seeds of the *Oryza sativa*.

R. bod'ies. Term for *Corpora oryzoidea*.

R., Can'ada. Common name for the *Zizania aquatica*.

R., wild. Another name for *R., Canada*.

Rice-water stools. Name for the characteristic stools in *Cholera, Asiatic*.

Rich-leaf. A name for the *Collinsonia canadensis*.

Rich-weed. A common name for the black snake-root, or *Actæa racemosa*; also, the *Collinsia canadensis*; also, the *Ambrosia trifida*; also, the *Pilea pumila*.

Richar'dia. 1. A Genus of the *Aroideæ* (Kunth).

2. A syn. for *Richardsonia* (Linnæus).

R. æthio'pica. A syn. for *R. africana*.

R. africa'na. Lily of the Nile, or Egyptian lily. The tuberos root has the same action and formerly had the same uses as the corm of the *Arum maculatum* (q. v.).

Richardsonia. A Tropical American Genus of the *Rubiaceæ*.

R. emet'ica. Root emetic, like that of *R. scabra*.

R. ro'sea. Hab. Brazil. Similar to *R. emetica* and *R. scabra*.

R. sca'bra. White ipecacuanha or Mexican coca. Root emetic, like that of ipecacuanha.

Richardson's bellows. An apparatus for the injection of vapour into the middle ear.

R.'s flu'id. A neutral blue staining fluid used for injecting animal tissues. Ferrous sulphate .648 gramme is dissolved in 15 cub. cent. of glycerine; and the solution is mixed with 2.07 grammes of potassium ferrocyanide dissolved in 1 litre of water, to which are added 15 cub. cent. of glycerine.

R.'s mixture. A mixture for producing anæsthesia, introduced by the late Dr. B. W. Richardson. It consists of alcohol 2 parts, chloroform 2 parts, ether 3 parts.

R.'s tests. A summary by Dr. B. W. Richardson of the most important signs of death — (1) Absence of heart-beat, (2) absence of respiratory murmurs, (3) post-mortem staining from pressure on veins, (4) electric test of muscular irritability, (5) coagulation of venous blood, (6) ammonia hypodermic test (*Monte-verde's sign*), (7) rigor mortis, (8) decomposition of tissues.

Richet's ban'dage. A stiff apparatus for fractures of the lower limb, made of plaster of Paris with a little gelatine, this being spread on a bandage in the usual way.

Rich'field. A place situated in Oswego

County, New York, noted for its sulphur mineral spring.

Rich'ter's her'nia. (After Richter, the surgeon who first described it.) The same as *Enterocoele, parietal*, or *Littre's hernia*.

Ri'cin. (*Ricinus*.) The active principle of castor-oil, a vegetable albuminoid, powerfully poisonous when isolated. When injected under the skin, in animals, it gives rise to multiple hæmorrhages in the stomach and intestines, and a breaking down of the red blood-corpuscles.

Ri'cinate. A salt of *Ricinic acid*.

Ricinela'idic ac'id. An acid obtained by the saponification of *Ricinelaidin*.

Ricinela'idin. A body obtained by the action of peroxide of nitrogen on castor-oil.

Ri'cini. Gen. of *Ricinus*.

R. o'leum. B.P. Castor oil. The oil expressed from the seeds of *Ricinus communis*. It is pale yellow or colourless, and has scarcely any odour. Entirely soluble in absolute alcohol, oil of turpentine, ether, and glacial acetic acid; soluble 1 part in 3½ of rectified spirit. It is a mild and quickly-acting aperient; but is apt to cause or increase constipation afterwards. Useful in inflammatory states of the bowels, and for removing hard scybala. *Dose*, 1 to 8 fl. drms. From it is prepared *Mistura olei ricini*.

Ricin'ic. (*Ricinus*.) Belonging to *Ricinus*.

R. ac'id. An acid obtained from castor oil, *Ricini oleum*.

Ri'cinine. A crystallisable substance, possibly alkaloid, present in castor-oil.

Ricinoid'es. (*Ricinus*; *ēidos*, form, resemblance.) A name for the *Jatropha curcas*.

Ricinoleate. A salt of *Ricinoleic acid*.

R. of glyc'eryl. The full chemical name for *Ricinolein*.

Ricinole'ic ac'id. A fatty acid, liquid at ordinary temperatures, formed by saponification of castor-oil.

Ricino'lein. (*Ricinus*; *olein*.)

Ricinoleate of glyceryl, a variety of *Olein*, which is the main constituent of castor-oil.

Ricinostear'ic ac'id. Also termed *Margaritic acid*. An acid obtained by saponification of *Ricini oleum*.

Ri'cinus. (L. *ricinus*, a tick, which the castor-oil seed is supposed to resemble.) A Genus of the *Euphorbiaceæ*.

R. america'nus. Another name for the *Cataputia maxima*.

R. commun'is. The castor-oil plant. A native of Southern Asia; cultivated in many countries. The oil is obtained from the seeds of the plant. The decorticated seeds are bruised, and the oil is then expressed without the aid of heat (cold-drawn).

R. liv'idus. A species from which castor-oil is obtained at the Cape of Good Hope.

R. ma'jor. Another name for the *Jatropha curcas*.

R. mi'nor. Another name for the *Jatropha manihot*.

R. vir'idis. A syn. for *R. communis*.

R. vulgar'is. A syn. for *R. communis*.

Rick'ets. (*Rachitis*. F. *rachitisme*; I. *rachitismo*; G. *Rhachitis, englische Krankheit*.) A constitutional disease of the first and second year of life, rarely beginning in a child younger than six months old. Jenner describes a late variety beginning about the ninth or even twelfth year.

The disease occurs all over the world, but is commonest by far in large cities, and especially among the children of the poor; want of pure air and sunlight, and improper feeding being the two main factors in its causation. There appears to be also a form of fetal rickets. The parts mainly affected are the bones, and the liver and spleen. There is imperfect and delayed ossification at the junction of the epiphysis and shaft of long bones, and the calcareous salts of the bones are markedly below the normal. The liver and spleen are enlarged, as are sometimes also the mesenteric glands.

The disease usually begins gradually about the same time as the first dentition; slight fever, digestive trouble and irritability are often the first symptoms. There is general tenderness, especially of the bones, sleep is usually disturbed, and nocturnal sweating, especially of the head, takes place. There is usually marked malnutrition, sometimes to such an extent as to give rise to pseudoparalysis. The bone-changes gradually become noticeable; beading of the ribs consisting of a thickening at the junction of bone and cartilage, presence of Harrison's sulcus, projection of the lower end of the sternum, delayed union of the fontanelles, a prominence of the frontal and parietal regions, and, occasionally, cranio-tabes. *Cranio-sclerosis* has also been thought to be a result of rickets. Dentition is delayed and irregular. The long bones become thickened at the junction of the shaft and epiphyses, and often increased in their curvature. The pelvis becomes altered in shape (see *Pelvis, rickety*). Infantile convulsions and laryngismus stridulus are relatively common; tetany is not uncommon. Severe rickets greatly stunts the child's growth.

R., acute'. Term for a variety of scurvy occurring in children. See under *Scurvy*.

Rick'ety. Belonging to, or affected with, rickets, *Rachitic*.

R. ros'ary. The beading of the ribs in *Rickets*.

Ric'ord's syringe. See *Syringe, Ricord's*.

Ric'tal. Belonging to *Rictus*.

Ric'tus. (L.) A grinning; also, yawning. Also, the *Risus sardoniacus*.

R. lupi'nus. (L. *lupinus*, belonging to a wolf.) A name for *Cleft palate*.

Ri'der's bone. Term for a sesamoid bone sometimes developed in the adductor muscles of the thigh in horsemen, secondarily to the pressure of the saddle.

R. bur'sa. An adventitious bursa in the groin, sometimes occurring in horse-riders.

Ridge. (Mid. Eng. *rigge*, the back of a man or animal.) A prolonged elevation, or crest.

R.s, bicip'ital, of hu'merus. The margins of the *bicipital groove*. See under *Humerus*.

R.s, dor'sal. A syn. for *R.s, medullary*.

R., gen'ital. The ridge anterior and internal to the Wolffian body in the fœtus, from which the internal generative organs develop.

R., glute'al, of fe'mur. A rough ridge forming part of the external lip of the *linea aspera* at the back of the femur, to which the *gluteus maximus* is attached. It represents the third trochanter of the horse and some other animals.

R., interos'seous, of fib'ula. The ridge on the inner side of the fibula, to which

RIDING—RIGOR

the interosseous membrane is attached. See *Fibula*.

R., intervertebral. Term for the ridge on the articular surface of the head of a rib, dividing it into two parts.

R., lambdoid'al. See *Lambdoidal ridge*.

R.s., lat'eral, of blas'toderm. *Embryol.* Two ridges at the posterior or caudal extremity of the embryonic area of the ovum, which lie on either side of the *primitive groove*, and subsequently enclose the latter by their coalescence.

R., maxill'ary. See *Maxillary ridge*.

R.s., medul'ary. See *Medullary ridges*.

R., my'lo-hy'oid. See *Mylo-hyoid ridge*.

R., neu'ral. See *Neural ridge*.

R., occip'ital, infe'rior. See *Occipital ridge, inferior*.

R., occip'ital, supe'rior. See *Occipital ridge, superior*.

R.s. of skin. See *Skin, ridges of*.

R.s., pal'atine. See *Palatine ridges*.

R., pari'etal. The curved longitudinal ridge on the outer surface of the parietal bone, continuous with the temporal ridge of the temporal bone.

R.s., pec'toral. A syn. for *R.s., bicipital, of humerus*.

R., pterot'ic. Name for a cartilaginous or bony ridge which passes along the superior and external portion of the capsule of the ear. It represents the pterotic bone of certain animals.

R., pter'ygo'id. See *Pterygoid ridge*.

R., supercilli'ary. See *Superciliary ridge*.

R.s., supracon'dylar, of hu'merus. See under *Humerus*.

R.s., supracon'dyloid, of hu'merus. The same as *R.s., supracondylar, of humerus*.

R., temp'oral. See *Temporal ridge*.

R.s., vill'ous, of cho'rion. Name for ridge-like chorionic villi observed during development of a *Placenta, diffuse*.

R., Wolf'ian. A syn. for *R., genital*.

Rid'ing of bones. Overlapping of one fragment over the other in fracture of a bone.

R. hag. A term for *Incubus*, or nightmare.

Ridley, sinus of. See *Sinus of Ridley*.

Ri'ga bal'sam. A balsam obtained by distillation from the shoots of *Pinus cembra*.

Ri'ga's disease'. A disease described by Riga, in which an aphthous eruption develops beneath the tongue, unaccompanied by pain; but accompanied by emaciation, an earthy pigmentation of the skin, and proceeding to exhaustion and death. The liver and spleen become enlarged and undergo fatty degeneration in the course of the disease.

Ri'gal's suture. See *Suture, Ri'gal's*.

Ri'gg's disease'. A name for *Pyorrhæa alveolaris*.

R.'s meth'od. Term for a method of radical cure for hernia, in which a large seton is passed through the hernial sac.

Right and wrong cas'es, meth'od of. See under *Psycho-physical methods*.

Rig'id os. See *Rigidity of cervix uteri*.

Rigid'itas. (L.) Stiffness, Rigidity.

R. articulo'rum. Rigidity of the limbs. A term for spurious ankylosis.

Rigidity. (L. *rigiditas*, stiffness.) Stiffness, immobility.

R., cadaver'ic. The rigidity of the corpse, *Rigor mortis* (q. v.).

R., cerebell'ar. Term for rigidity of the muscles of the spine consequent on the growth of a tumour in the middle lobe of the cerebellum. The head is drawn back, the spine over-extended, and the limbs rigid.

R., hemiple'gic. Term for the spastic rigidity of the paralysed limbs in cases of *Hemiplegia*.

R., mus'cular. See *Thomsen's disease*.

R. of cer'vix u'teri. Two conditions come under this heading.

1. *Spasmodic contraction of the cervix uteri during labour*.—In labour at full time it is usually spasmodic contraction of the external os only that occurs; but in some cases of premature labour there may be also spasm of the internal os. Minor degrees of the former condition are very common in the first stage of labour, in association with feeble pains. An extreme form, termed *Trismus uteri*, has been observed, but is very rare; it may cause serious symptoms from delay. Spasm of the cervix is usually a reflex result of some source of irritation, such as a full bladder or rectum, premature rupture of the membranes, extreme sensitiveness to the pains, &c. It may simply arise from inertia of the body of the uterus.

2. *Organic rigidity of the cervix uteri*.—In primiparæ the cervix is often somewhat rigid. In multiparæ, rigidity is generally due to fibrous induration and hyperplasia from previous traumatism in labour. A special variety sometimes occurs from previously existent prolapse of the second degree. In this case there is elongation also of the cervix.

R. of cer'vix u'teri, anatom'ical.

A term for that variety of spasmodic contraction of the cervix uteri during labour in which the internal as well as the external os remains contracted. See under *R. of cervix uteri*.

R. of cer'vix u'teri, patholog'ical.

A term for organic rigidity of the cervix uteri. See under *R. of cervix uteri*.

R., post-mortem. The same as *R., cadaveric*.

Ri'gor. (L. *rigor*, cold, stiffness, the cold fit of ague.) Coldness, stiffness, or rigidity. Also (used more commonly in the plur., *rigors*), a strongly-marked shivering fit at the beginning of a febrile attack. There are violent trembling movements of all parts of the body, chattering of the teeth, and duskiness or pallor of the surface. The internal temperature is considerably raised; but the patient feels intensely cold. The sensation of cold appears to be due to the extreme contraction of the peripheral arteries and arterioles. In children, convulsions often occur under conditions that would produce rigors in adults.

R. ar'tuum. (L. *artus*, a joint.) Stiffness of joints. A term for *Contracture*.

R. cadavero'sus. A syn. for *R. mortis*.

R. congesti'vus. A term for *Rigor*.

R. cor'poris mor'tul. Stiffness of the dead body. A syn. for *R. mortis*.

R. emortual'is. A syn. for *R. mortis*.

R. maxill'æ infe'rioris. Stiffness of the under-jaw. A term for *Trismus*, or lock-jaw.

R. mor'tis. The temporary rigidity of the muscles coming on after death, due to chemical changes in the muscle, which result

RIMA—RING

in the formation of *myosin*. It begins, on an average, within six hours after death, and lasts for sixteen or twenty-four hours. In cases of violent and sudden spasm, it has been known to set in immediately after death (cadaveric spasm). It sets in early after long, wasting diseases; late, where death has occurred in a previously vigorous, healthy person, after most rapidly fatal diseases, after asphyxia, apoplexy, hæmorrhage, &c. In some cases where rigor mortis sets in early it disappears in one or two hours; where delayed, it may persist for several days. In strychnine poisoning, and sometimes in cadaveric spasm, though appearing early, it lasts a considerable time.

Also, in Physiology, rigidity of a muscle due to changes following loss of muscular irritability, the muscle becoming inelastic, opaque in appearance, its natural electric currents disappearing, and its acid reaction increased.

R. nervo'rum. A name for *Tetanus*.

R. nervo'sus. The same as *R. nervorum*.

Ríma. (L.) A cleft, fissure.

R. ad infundib'ulum. A syn. for *Vulva cerebri*.

R., antérior. A name for the *Calamus scriptorius*.

R. aqueduc'tus vestib'uli. The fissure or opening of the aqueduct of the vestibule, on the posterior surface of the petrous portion of the temporal bone.

R. cana'lis orbita'rii. Fissure of the orbital canal. A name for the infra-orbital fissure.

R. cer'ebrí transver'sa. The transverse fissure of the brain.

R. clu'nium. (L. *clunis*, the buttock.) The longitudinal cleft between the *nates*.

R. glot'tidis. The opening of the glottis, or, more strictly, the *glottis* itself, which is the upper opening of the larynx. See *Glottis*.

R. glot'tidis cartilagin'æ. The opening of the cartilaginous or respiratory glottis.

R. glot'tidis membra'nac'æ. The opening of the membranous or vocal glottis.

R. glut'æa. The gluteal fissure, or furrow between the *nates*.

R. he'licis. A fissure occasionally present in the cartilage of the *auricle*, or external ear, between the *helix* and *crus helicis*.

R. hyperglot'tica. The same as *R. glottidis*.

R. labio'rum. The fissure or opening of the lips.

R. laryn'gis. The same as *R. glottidis*.

R. mag'na vul'væ. A term for the *Vulva*.

R. muscular'is. The same as *R. glottidis membranac'æ*.

R. o'ris. The fissure or opening of the mouth.

R. palpebrar'um. The fissure or opening of the eyelids.

R. puden'di. The same as *R. magna vulvæ*.

R. puden'di conn'vens. (L. *connivens*, closing.) Term for *R. pudendi* when the labia majora completely conceal the labia minora.

R. transver'sa cerebel'li. The fissure between the peduncles of the cerebellum.

R. transver'sa mag'na cer'ebrí. The (great) transverse fissure of the brain.

R. ventric'uli laryn'gis. The fissure or opening of the ventricle of the larynx.

R. voca'lis. The vocal fissure. A syn. for *Glottis*.

R. vul'væ. The same as *R. magna vulvæ*.

Rímaæ. (Plur. of *Rima*.) A syn. for *Rhagades*.

R. cæ'cæ he'patis. The blind fissures of the liver. A term for the fissures of the liver which contain the branches of the portal vein.

R. cut'is. The fissures or furrows of the skin.

Rí'miform. Having the shape of a *Rima*.

Rí'mose. See *Rimosus*.

Rimo'sus. (L.) Full of clefts or fissures.

Rímous. Having *Rimæ*.

Rímula. (L. Dim. from *Rima*.) A small cleft or fissure. Also, term applied in particular to the median ventral fissure of the spinal cord, and to one of the interfoliar clefts of the cerebellum.

R. glot'tidis. A syn. for *Rima glottidis*.

R. laryn'gis. The same as *R. glottidis*.

Rímule. See *Rimula*.

Rinæ'us. (Pis, *ῥινός*, the nose.) A name for the *Compressor naris*.

Rí'nar. An old term synonymous with *Limatura*. (Ruland and Johnson.)

Rind. (Mid. Eng. *Rind*.) *Biol.* An outer coat; the integument or bark.

Rin'derpest. German name for the *Cattle plague*.

Ring. (Anglo-Sax. *hring*. F. *anneau*; I. *anello*; G. *Ring*.) In *Anat.*, a rounded or circular opening in any structure, having a well-marked circumference or rim.

R.s., Abbe's. Catgut rings introduced by Abbe, for establishing an artificial communication between the stomach and small intestine, or between two pieces of intestine.

R., abdom'inal, external. See *Abdominal ring, external*.

R., abdom'inal, inter'nal. See *Abdominal ring, internal*.

R., annual. *Bot.* Term for one of the successive yearly rings of woody tissue in the trunk of an *Exogen*.

R., antimo'nial. Term for the dark metallic ring formed by volatilised antimony on glass.

R.s., apposi'tion. See *R.s., Abbe's*.

R., arsen'ical. Term for the bright metallic ring formed by volatilised arsenic on glass.

R., arthrit'ic. A syn. for *Sclerotic zone*.

R., Ban'dl's. A line of depression sometimes to be felt on digital pressure over the hypogastrium, just above the pubes, during labour. By Bandl this is believed to correspond to the position of the internal os uteri; by others it is thought to be above the internal os, and to correspond to the demarcation between the upper stretched portion and the lower thickened, contracted portion of the body of the uterus.

R.-bone. Term for a ring-like exostosis formed as a result of inflammation of one or of both pastern-bones in the horse. It may extend and cause stiffness, with consequent lameness.

R., contrac'tion. A syn. for *R., Bandl's*.

R., cramp. See *Cramp ring*.

R., cru'ral. A syn. for *R., femoral*.

R., fem'oral. See *Femoral ring*.

R.s., festoon'ed, of heart. Term for the fibrous rings which surround the auriculo-ventricular and arterial openings of the heart,

and to which the muscular fibres of the heart are attached.

R.s., fi'bro-cartilag'inous, of heart. The same as *R.s., festooned, of heart.*

R.s., fi'brous, of heart. The same as *R.s., festooned, of heart.*

R.-infiltration of cor'nea. Term for an infiltration of circular cells between the corneal layers, which sometimes follows a septic perforating wound of the cornea.

R., in'guinal. The *Abdominal ring, internal.*

R.-like cartilage. A name for the *Cricoid cartilage.*

R., Marsh's. A term for *R., arsenical*, this being formed in Marsh's test for arsenic.

R., Max'well's. Term for a faint halo round the fovea centralis retinæ, observed when the eye is looking at a homogeneous grey or blue surface. It is probably an image of the macula lutea.

R., Mül'ler's. A muscular ring formed at the upper orifice of the canal of the cervix uteri in the later months of pregnancy. In multiparæ, at any rate, this is identical with the true internal os uteri.

R.-mus'cle of Mül'ler. See *Ring, Mül'ler's.*

R. of Ban'dl. See *R., Bandl's.*

R.s of bron'chi. The incomplete cartilaginous bands partly surrounding each bronchus. See *Bronchus.*

R. of oc'ular mus'cles. The tendinous ring of origin of the muscles of the eyeball at the back of the orbit. See under *Rectus, external, of eye.*

R.s of trache'a. See *Trachea.*

R., omphal'ic. A syn. for *R., umbilical.*

R. pes'sary. See *Pessary, ring.*

R.-scoto'ma. See under *Scotoma.*

R., spermatorrhœ'a. Term for an apparatus consisting of a metal ring fitted with sharp points, worn on the penis at night to prevent seminal emissions.

R., trache'al. See under *Trachea.*

R., tympan'ic. In man, a ring of bone forming part of the temporal bone at birth, and afterwards developing into the tympanic plate of the temporal bone.

R., umbil'cal. The umbilical opening in the abdominal wall of the fœtus, through which pass the umbilical vessels.

Ringed. Marked with, or exhibiting, rings.

R. hair. Term for a very rare variety of *Canities*, in which the hair is white in rings.

Ring'ent. (L. *ringor*, to grin, show the teeth.) Irregularly gaping or open.

Ring'worm. Common name for the parasitic Genus *Tinea*, in general. Most commonly, the *Tinea capitis*.

R., Bur'mese. A skin-disease of Burmah. Probably the same as that form of *Tinea circinata* which is termed *Eczema marginatum*.

R., Chi'nese. Caused by the *Tinea imbricata*.

R., herpet'ic. Common name for *Herpes circinatus*.

R., hon'eycomb. A name for *Favus*.

R. of the beard. The *Tinea sycosis*.

R. of the bod'y. The *Tinea corporis*.

R. of the eye'lashes. The *Tinea tarsi*.

R. of the scalp. Common name for *Tinea capitis*.

R. of the thighs and gen'ital or'gans. A name for *Eczema marginatum*.

R., To'kelan. Due to the *Tinea imbricata*.

R., ul'cerative. A name for *Herpes exedens*.

R., vesic'ular. A name for *Herpes præputialis*.

Rinne's test. A method, introduced by Rinne, of testing by means of the tuning-fork, the condition of the hearing through the air and through the bones of the skull.

Rinolite. See *Rhinolith*.

Ri'o Ne'gro sarsapil'la. See *Sarsaparilla, Rio Negro*.

Riolan's bouquet'. Term for the mass of muscles and ligaments attached to the *styloid process*.

R.'s mesocol'ic arch. Term for the arched *transverse mesocolon*.

R.'s mus'cle. Term for that portion of the *orbicularis palpebrarum* which passes among the roots of the eyelashes. First described by Riolan.

R.'s nose'gay. The same as *R.'s bouquet*.

Ripa. (L. *ripa*, a bank.) *Anat.* Term for any reflection of the *ependyma* lining the cavities of the brain upon the pia mater, or any plexus of vessels formed by the latter.

Ripar'ial. The same as *Riparius*.

Ripar'ious. (L. *riparius*, belonging to the banks.) *Biol.* Growing or living on, or frequenting, the banks of rivers.

Rip'ault sign. One of the signs of death. The normal roundness of the pupil can, post-mortem, be permanently changed by external pressure.

Ripe. (Mid. Eng. *ripe*.) Mature, fully developed.

Rip'ening. Becoming ripe.

R. of cata'ract. See *Cataract, ripening of*.

R. of cream. Allowing cream to become sour before churning, thus obtaining a larger quantity of butter.

Rip'ple-grass. A common name for the *Plantago lanceolata*.

Rip'ples. A popular name in Scotland for *Locomotor ataxia*.

Ris'agon. A syn. for *Cassumuniar*.

Rish'teh. A name for *Dracunculus*.

Risidon'tropy. See *Rhizodontropy*.

Risidon'trypy. See *Rhizodontrypy*.

Risigall'um. Old term synonymous with *Auripigmentum*, or *Orpiment*.

Risi-labialis. (L. *risus*, a laugh.)

Coues' term for the *Risorius* muscle.

Rising. A colloquial term for any inflammatory swelling.

R. of the lights. An old colloquial term for pleurisy; also, for croup.

Risipo'la. (I.) Erysipelas.

R. lombar'da. A name for *Pellagra*.

Risodon'trypy. See *Rhizodontrypy*.

Riso'rius. (L. *risor*, a laugh.) Belonging to laughing. Term for a muscle of the face, the risorius, or *musculus risorius Santorini*.

R. no'vus. Term for a strip of the platysma myoides which passes from the cheek to the commissure of the lips. (Dunghlison.)

R. Santori'ni. A fuller name for *Risorius*.

Rissigall'um. See *Risigallum*.

Ristorum. (I. *ristoro*?) Old name for

a nutritious preparation made from the yolks of eggs.

Risus. (L.) A laugh, laughter.

R. apium. A name for the *Ranunculus sceleratus*.

R. caninus. A syn. for *R. sardonius*.

R. involuntarius. Involuntary laugh. A syn. for *R. sardonius*.

R. sardonius. Sardonic grin. The involuntary, convulsive drawing down of the angles of the mouth in *Tetanus*.

R. sardonius. A syn. for *R. sardonius*.

R. spasticus. Spastic laugh. A syn. for *R. sardonius*.

Ritgen's method. *Obstet.* Pressure per rectum upon the fetal head during the latter part of the second stage of labour, in order to obviate excessively rapid stretching of the perineum and consequent danger of laceration. First suggested by Ritgen.

Ritter's disease. A name given to *Dermatitis exfoliativa*, also termed *Dermatitis exfoliativa neonatorum*, after Ritter, who first described it.

R.'s law of contraction. "A nerve is stimulated both at the moment of the occurrence and that of the disappearance of electrotonus:—1. When the current is closed, the stimulation occurs only at the kathode; 2. When the current is opened, stimulation occurs only at the anode." (Landois and Stirling.)

R.'s tetanus. See *Tetanus*, *Ritter's*.

R.-Valli law. In any nerve detached from a living nerve-centre, either by section of or other injury to the nerve, or by death of the nerve-centre, there is an increase of irritability beginning centrally and travelling peripherally, followed by fall and gradual disappearance of irritability, the fall of irritability also beginning centrally and travelling peripherally. (Landois and Stirling.)

Rivalis. (L.) Belonging to a river or running stream.

Rivallie's caustic. A form of caustic introduced by Rivallie. It consists of a gelatinous mass prepared by adding the strongest nitric acid to lint in an earthenware vessel. It is applied for fifteen or twenty minutes to the part to be cauterised.

Rivalry of colours. (F. *antagonisme des couleurs*; G. *Wettstreit der Farben*.) A kind of rivalry of the visual fields of the two eyes when a different colour is presented to each, either colour-sensation alternately overmastering the other.

R. of contours. A kind of rivalry of the contours of two objects, one of which is presented to each eye, when these contours overlap one another in the binocular field of vision. Either contour alternately overmasters the other in the binocular visual field.

R. of visual fields. The rivalry, or alternate mastery of the one or other sensation, occurring when dissimilar sensations are developed in the two eyes; as, e.g., in *R. of colours* and *R. of contours*.

R. strife. The same as *R. of visual fields*.

Riverius, salt of. Old term for citrate of potash, *Potassii citras*.

Riverweed. Common name for the *Conserva rivalis*.

Rivi. (L. Plur. of *rivus*, a stream.) Term applied by Duret to the smallest channels in the subarachnoid space.

Rivini, ducts of. The same as *Rivinus, ducts of*.

Rivinian ducts. A syn. for *Rivini, ducts of*.

Rivinus. A physician and professor of Leipzig, born 1652 or 1676 (?), died 1723.

R., ducts of. The ducts of the sublingual gland. See *Sublingual gland*.

R., foramen of. An opening said by Rivinus to be present in the upper part of the tympanic membrane.

R., glands of. Term for the *Sublingual glands*.

R., notch of. The notch in the upper and anterior part of the bony tympanic ring, which becomes bridged over by *Shrapnell's membrane*.

R., segment of. The same as *R., notch of*.

Rivolta's disease. A syn. for *Actinomyces*. [See APPENDIX.]

Rivose. (L. *rivus*, a stream.) *Biol.* Marked with sinuous furrows.

Rivularis. (L. *rivulus*, a little brook.) *Biol.* Living in, on, or near, streams.

Rivulose. (L. *rivulus*, a little brook.) *Biol.* Marked with minute sinuous furrows.

Rivus. (L.) A stream. *Anat.* One of the minuter channels in the subarachnoid space.

R. lachrymalis. (L. *rivus*, a stream.) Lachrymal stream. Term for the triangular interval between the contiguous edges of the eyelids and the subjacent eyeball.

Also, termed the canal of Ferrein.

R. lachrymarum. The same as *R. lachrymalis*.

Riziform. (F. *riziforme*.) Resembling a grain or grains of rice.

Rizzo's Es-march operation. The operation of section of the ramus of the inferior maxilla in cases of ankylosis at the temporomaxillary joint.

R. M. A. Abbreviation for *Right mento-anterior position*.

Roads, animal. See *Zoërema*.

Roan tree. See *Rowan tree*.

Roanoke red sulphur springs. Near Salem, Roanoke County, Virginia. Chalybeate and sulphur springs.

Roaring. (Mid. Eng. *roren*.) A disease in horses, consisting in a narrowing of the glottis from paralysis and wasting of some of the laryngeal muscles, more commonly on the left side, which gives rise to a characteristic roaring noise in breathing, more noticeable, of course, the more the animal exerts itself.

Roasting. (Mid. Eng. *rosten*.) The application of a slightly less degree of heat to a substance than that which will cause charring.

Rob. (Arab. *robbe*, which is derived from Pers. *robb*. F. *rob*; I. *rob*; G. *Muss*, *Obstaft*.) Term for an inspissated juice, the juice of fruits concentrated by boiling before fermentation. See *De-frutum* and *Sapa*.

R. antisiphilitique. (F.) A kind of syrup composed of aniseed, the common reed (*Arundo phragmites*), corrosive sublimate, and sarsaparilla, recommended empirically for syphilis.

R. Boyveau-Laffeteur. Another name for *R. antisiphilitique*.

R. ex moris. A syn. for *Diamorum*.

R. nucum. *R. of nuts*.

R. of nuts. A term for *Diacaryon*.

Robert, herb. A common name for the *Geranium robertianum*.

Robert's pel'vis. See *Pelvis, Robert's*.
Roberts' differential density meth'od. Another name for *R.s' test*.

R.s' macula. Macula formed in a red blood-corpuscle by a heaping up of pigment in one part of the corpuscle on the addition of a dilute solution of tannin.

R.s' reagent. Used as an improvement on nitric acid in *Heller's test*. To five parts by volume of a filtered saturated solution of sulphate of magnesia, add one of concentrated nitric acid.

R.s' test. The yeast test for sugar in the urine. To about 60 cub. cent. of urine of ascertained specific gravity, a pinch of yeast is added, and the mixture is allowed to ferment for twenty-four hours. The specific gravity is then taken again. Every degree of specific gravity lost by the urine after fermentation has been found to represent 1 grain of sugar per ounce, i. e. 23 per cent.

Robertson's pupil. The same as *Argyll-Robertson pupil*. See under *Pupil*.

Robes. An old name for vinegar.

Robin's eye. A syn. for *R.s' rye*.

R.s' fluid. A fluid consisting of distilled water containing one per cent. of common salt and one half per cent. of corrosive sublimate; used for the microscopic examination of the blood.

R.s' gelatin injecting fluid. A fluid used for injecting tissues. One part of gelatin is soaked in 7 to 10 parts of water, according to dilution required, and then melted on the water-bath. Any colouring matter required is then added in the proportion of 1 part to 3 of the fluid.

R.s' plan'tain. Common name for the *Erigeron bellidifolium*.

R.-run'away. A common name for the *Glechoma hederacea*.

R.-run-the-hedge. A common name for the *Galium aparine*.

R.s' rye. A common name for the hair-cap moss, *Polytrichum juniperinum*.

Robin'ia. (After Jean Robin, royal gardener at Paris; born 1550, died 1629.) A Genus of the *Leguminosæ*, all the species of which were originally North American shrubs.

R. amar'a. A stomachic tonic. Used in China, where it is grown.

R. pseudaca'cia. The locust-tree. The bark is said to be purgative and emetic, and the flowers antispasmodic. In reported cases of poisoning from chewing the root, the symptoms were like those of poisoning with belladonna.

Robinin. $C_{25}H_{20}O_{16}$. A glucoside occurring in the flowers of *Robinia pseudacacia*.

Robiquet's paste. Equal parts of zinc chloride, gutta-percha, and flour. Used as a caustic.

Roborans. (L.) Strengthening. A syn. for *Corroborant*.

Roborant. See *Roborans*.

Roborant'ia. (Nom. pl. neut. of L. *roborans*.) Tonics.

Robub. A syn. for *Rob*.

Roburite. An explosive made up of chloronitrobenzene, dinitrobenzene, and nitrate of ammonium. It is used for blasting in mining operations, and its fumes have been found to give rise to headache, vomiting, and giddiness.

Roccel'la. A Genus of the *Lichenes*.

R. fusiformis. Like *R. tinctoria*, a source of *Litmus* and *Orchil*.

R. tinctor'ia. One of the sources of *Litmus* and *Orchil*.

Roche al'um. (From *Rocca*, in Syria, where it was first made.) See *Alum, roche*.

Rochelle' salt. *Soda tartarata*.

Rock al'um. See *Alum, rock*.

R.-but'ter. Common name for *Alumen liquidum*.

R. cress. Common name for the *Aralis lyrata*.

R. fern. The *Adiantum pedatum*.

R. fe'ver. A name for *Intermittent fever*.

R. ma'ple. The *Acer saccharinum*.

R. milk. Common name for *Agaricus mineralis*.

R. oil. Common name for *Petroleum*.

R. rose. The *Helianthemum corymbosum*.

R.-salt. See *Salt, rock-*.

R. sam'phire. A common name for the *Crithmum maritimum*.

R.-tripe. The *Gyrophora cylindrica*.

R. weed. A name for the *Geranium robertianum*.

Rock'ambole. A name for the *Allium scorodoprasum*.

Rock'brake. A name for the *Pteris atropurpurea*.

Rock'bridge al'um springs. In Rockbridge County, Virginia. Chalybeate, astringent springs.

Rock'dale sys'tem. See under *Sewage disposal of*.

Rock-E'non springs. In Frederick County, Virginia. Chalybeate and sulphur springs.

Rock'et, gar'den. A common name for the *Brassica eruca*.

R., gen'tle. A syn. for *R., garden*.

R., Ro'man. A syn. for *R., garden*.

R., wild. Common name for the *Eruca sylvestris*.

Rock'ingham springs. Near McGaheysville, Rockingham County, Virginia. Chalybeate springs.

Rock'y Moun'tain fe'ver. See *Fever, mountain*.

Rod, bacte'rium. The same as *Bacillus*.

R.-fibres. Term for the minute fibrils attached to the rods of the retina. They pass through the outer nuclear layer to become connected with the *R.-granules*.

R.-gran'ules. Term for granules situated in the outer nuclear layer of the retina, and connected with the rods of the retina.

Rods, acous'tic. The *R.s of Corti*.

R.s, aud'itory. The same as *R.s acoustic*.

R.s, intracel'lular. The fibrillæ of the *Rods of Heidenhain*.

R.s, mus'cle. The *sarcous elements* of the contractile disc of a muscle-fibre. Also, the rod-shaped bodies forming the non-contractile portion of a muscle-fibre. (Schäfer.)

R.s of Corti. See *Corti, rods of, external, and Corti, rods of, internal*.

R.s of Heid'enhain. Term for the rod-shaped cells of the tubules of the kidney.

R.s of Kön'ig. Term for steel sounding-rods for producing high-pitched tones; used for testing acoustic perception for high tones.

R.s of retina. See *Retina*.

Rod-wax. The accumulation of wax forming upon machinery in the neighbourhood

RODEN—ROOT

of oil-wells. It has been used therapeutically, in bronchitis, &c.

Roden tree. A name for the *Sorbus aucuparia*.

Ro'dens. (L.) Gnawing. Used as syn. with *Rodent*.

Rod'ent. (L. *rodens*, gnawing.) As an adj., gnawing, eating away. As a substant., a member of the Class *Rodentia*.

R. can'cer. See *Cancer*, rodent.

R. ul'cer. See *Ulcer*, rodent.

Rodent'ia. (Nom. pl. neut. L. *rodens*, gnawing.) A Class of the *Mammalia*, characterised by their gnawing habits, and their large curved incisors separated from the molars.

Rœderer's obliquity. *Obstet.* The extreme chin-flexion of the foetal head in labour.

Rohab. A syn. for *Rob*.

Ro'hob. The same as *Rohab*.

Rohun. The *Soymida febrifuga*.

R. bark. See *Rohun*.

Rokitan'sky's disease'. A name for acute yellow atrophy of the liver.

R.'s the'ory of inflamma'tion. A supposition that inflammation begins by an exudation of fluid from the blood-vessels, cells being formed in this fluid.

Rolando. An anatomist of Piedmont, born 1773, died 1831.

R., arc'iform fi'bres of. See *Arciform fibres*.

R., col'umn of. A syn. for *R., tubercle of*.

R., fis'sure of. See *Fissure of Rolando*.

R., funic'ulus of. See *Funiculus of Rolando*.

R., fur'row of. The same as *R., fissure of*.

R., lines of. See *R., arciform fibres of*.

R., tubercle of. See *Tubercle of Rolando*.

Roll sul'phur. Term for crude sulphur which has been melted and run into cylindrical moulds.

Rolle, plane of. See *Plane of Rolle*.

Roller. A shorter term for *R. bandage*.

R. ban'dage. See *Bandage*, roller.

Roller, delomorphous cells of. A syn. for *Oxyntic cells*.

Roman al'um. See *Alum*, Roman.

R. cam'omile. See *R. chamomile*.

R. cement'. A special variety of commercial cement, somewhat similar to Portland cement.

R. cham'omile. The *Anthemis nobilis*.

R. fen'nel. A variety of *Feniculum vulgare*, grown in Rome, characterised by its large fruit.

R. fe'ver. See *Fever*, Roman.

R. o'chre. A name for *Ochre*.

R. rock'et. See *Rocket*, Roman.

R. the'ory. See *Theory*, Roman.

R. vit'riol. A name for sulphate of copper.

R. white. A name for *Lead*, white.

R. worm'wood. See *Wormwood*, Roman.

Romberg's sign. See *R.'s symptom*.

R.'s sympt'om. The symptom of unsteadiness of gait in the dark, manifested by patients suffering from *Ataxia*, first pointed out by Romberg.

R.'s trophoneuro'sis. A syn. for *Hemiatrophy*, facial, progressive.

Rome. The climate of this city is mild, soft, and equable. In winter, it is specially suitable for patients with various chest affections.

Ron'chus. See *Rhuncus*.

Rone. The same as *Rowan*.

Ron'guer. (F. From *ronguer*, to gnaw.) A form of bone-forceps with sharp semicircular extremities.

Ron'nachs. A name for the *Triticum repens*.

Rono'bea emet'ica. A syn. for *Psychotria emetica*.

Roob. See *Rob*.

R. junip'eri. Term, in the Austr. Ph., for the inspissated juice of fresh juniper berries.

R. sambu'ci. Term for the inspissated juice of the fruit of the *Sambucus nigra*.

Roof-nucleus. A term for the *Nucleus fastigii*.

Root. (Mid. Eng. *rote*; Anglo-Sax. *rot*. F. *racine*; L. *radice*; G. *Wurzel*.) Bot. That part of the axis of a plant which is mainly beneath the ground, and which takes origin from the *radicle* of the embryo. It acts, both as a support, and as a surface for absorption.

In general, the origin or basis of anything. Zool. and Anat. The base or point of origin of any organ or part.

For sub-headings not given below, look under their respective headings, *e.g.*, for Root of hair, see *Hair-root*. Also, see under *Nucleus*; *e.g.*, for Root of pneumogastric nerve, see *Nucleus of pneumogastric nerve*.

R.s, adventitious. Bot. Roots springing from the stem above ground.

R.s, aër'ial. The same as *R.s, adventitious*.

R., a'gue. See *Ague root*.

R., ante'rior, of aud'itory nerve. See *Auditory nuclei*.

R., ante'rior, of op'tic tract. See under *Optic tract*.

R., ante'rior, of zygo'ma. See *Zygoma*, root of, anterior.

R., an'tero-lat'eral, of op'tic tract. The same as *R., anterior, of optic tract*.

R., bit'ter. A common name for the *Apocynum androsæmifolium*.

R., Brazil'. An old name for *Ipecacuanha* root.

R., Can'ada. The *Asclepias tuberosa*.

R.-cap. The epidermic mass covering the growing point of the root.

R., col'ic. Another name for *R., ague*.

R.-fillings. Term for various kinds of fillings used for the pulp-cavities of teeth.

R.-form. Term for that form or variety that infests roots, in the case of species of insects which have two forms; as, *e.g.*, is the case with the *Phylloxera vastatrix*.

R.-hairs. Bot. Slender hair-like epidermic filaments, growing from the younger roots and increasing their absorptive power.

R., monocotyle'donous. Bot. The kind of root characteristic of the *Monocotyledoneæ*.

R., na'pliform. Bot. A root resembling that characteristic of the Genus *Napium*.

R.-neck. The line of union of the radicle and plumule of an embryo plant.

R., nor'mal. Bot. A simple, unbranched root.

R. of mes'en'tery. Term for the base, or line of attachment, of the *mesentery* to the posterior wall of the abdomen.

R.s of olfac'tory nerve. See *Olfactory tract*.

R. of scar'city. A name for the *Beta hybrida*.

ROOTLET—ROSARY

R.-par'asite. Term for a plant that is parasitic on the roots of another.

R.-pres'sure. Term for the upward pressure upon the sap in the stem of plants exerted by the water absorbed by the roots, when this is in excess of that required by the plant.

R., red. A common name for the root of *Ceanothus americanus*; also, for the root of *Lachnanthes tinctoria*.

R., rough. A common name for the *Liatris scabiosa*.

R.-sheath. The thick sheath of tissue which covers the radicle of the embryo plant in *Gramineæ* and some other plants, and which is ruptured when the plant germinates.

R.-sheath of hair. See *Hair, root-sheath of*.

R., squaw. A name in America for the *Actæa racemosa*.

R.-stock. Bot. A Rhizome; also, a Corm. Zool. A Rhizocaul.

R., sweet. The *Acorus calamus*.

R.-symp'toms. Gowers' term for symptoms indicative of interference with the functions of nerve-roots at the seat of the lesion, in compression of the spinal cord.

R.-trim'mer. Dentistry. An instrument for shaping the roots of teeth to which artificial crowns are to be fitted.

R., u'nicorn. A name for the *Aletris farinosa*.

R., white. A name for the *Ligusticum actæifolium*.

R., yellow. A name for the *Jeffersonia diphylla*; also, for the *Xanthorrhiza apiifolia*.

R.-zone, ante'rior. A zone (considered in horizontal section), or column (considered longitudinally) of the spinal cord, including all fibres from the anterior columns, except the pyramidal tract.

R.-zone, poste'rior. Another name for the *Funiculus cuneatus*.

Rootlet. (Dim. from root.) A little root.

R.O.P. Obstet. Abbreviation for *Right occipito-posterior position*.

Rope-bark. A common name for the bark of *Dirca palustris*.

Rorella. (L. *ros, dew*.) A name for the sundew, *Drosera rotundifolia*.

Ror'ifer. (L. *ros, dew*; *fero, to bear*.) The same as *Roriferus*.

Roriferous. See *Roriferus*.

R. duct. A name for the *Thoracic duct*. See *Roriferus*.

Ror'iferus. (L. *ros, dew*; *fero, to bear*.) Dew-bearing. Old epithet for the thoracic duct; also, for the lymphatic vessels.

Rorulent. (L. *rorulentus, dewy*.) Bot. Powdered over with bloom.

Ros. (L. Gen. *roris. F. rosée*; G. *Thau*.) Dew; also, any liquor.

R. calabr'inus. A syn. for *Manna, Calabrian*.

R. so'llis. The sun-dew, *Drosera rotundifolia*.

R. syri'acus. A name for the *Frazinus ornus*.

Ro'sa. (L.) A rose. Bot. A Genus of the *Rosaceæ*. Med. An old term for *Erysipelas*, given on account of the rosy colour of the skin in that disease.

R. afzella'na. A syn. for *R. canina*.

R. al'ba. The white rose. Its flowers have an action similar to but weaker than that of the flowers of *R. centifolia*.

R. arma'ta. A syn. for *R. canina*.

R. astu'rica. (Span. *Mal de la rosa*.) A disease endemic in the Asturias, believed to be a variety of *Pellagra*. Also termed *Leptra asturica*.

R. austri'aca. A syn. for *R. gallica*.

R. calyci'na. A syn. for *R. canina*.

R. cani'na. The dog-rose or wild briar. Its fruit, the hip, is made into a confection, *Confectio rosæ caninæ*, and used as a basis for other substances.

R. centifo'lia. The damask or cabbage rose. Its petals are aromatic, slightly acid, and have a laxative action. They are used in the distillation of *Aqua rosæ*, and are a constituent of otto of roses.

R. damasce'na. A syn. for *R. centifolia*.

R. gal'lica. The red or French rose. Its petals are astringent, and are used in preparing *Infusum rosæ acidum*, *Confectio rosæ gallicæ*, and *Syrupus rosæ gallicæ*.

R. leucan'tha. A syn. for *R. alba*.

R. pal'lida. A syn. for *R. centifolia*.

R. ru'bra. A syn. for *R. gallica*.

R. rubra vulgar'is. A syn. for *R. canina*.

R. sal'tans. (L. *salto, to leap*.) A name for *Essera*.

R. sentico'sa. A syn. for *R. canina*.

R. so'llis. Rose of the sun. Name for a liqueur flavoured with orange-flowers and cassia-bark.

R. swartzia'na. A syn. for *R. canina*.

R. sylvest'ris. A syn. for *R. canina*.

R. usitatis'sima. A syn. for *R. alba*.

Rosa'cea. (L. *rosaceus, -a, -um*, belonging to roses.) Med. A shortened term for *Acne rosacea*.

R. erythemato'sa. General erythematous redness of the skin of any part.

R. hypertroph'ica. Hypertrophic rosacea. A term for an erythematous condition consequent on dilatation of the cutaneous capillaries.

R. papulo'sa et pustulo'sa. Term for papulous and pustulous rosacea. An erythema accompanied by the presence of papules and pustules.

Rosa'ceæ. Bot. An Order of Dicotyledonous plants, most of them trees or shrubs, whose flowers have five spreading, short-clawed or clawless petals.

Rosa'ceous. Bot. Belonging to, or having the characters of, a rose; also, belonging to the *Rosaceæ*.

Ro'sæ cani'næ fructus. B.P. The hip. The ripe fruit of the dog rose, *Rosa canina*, and other species. Mildly refrigerant and astringent. Used as a basis for pills and linctuses. Preparation.—*Confectio rosæ caninæ*.

Rosago. A term for the *Nerium oleander*.

Rosalia. (L. *rosa, a rose*.) An old term for *Scarlatina*; also, for *Measles*; also, for *Erythema*.

Rosan'iline. (Rose; aniline.) A syn. for *Fuchsin*.

Rosary, rhachit'ic. See *Rhachitic rosary*.

R., rick'ety. See *Rickety rosary*.

ROSATUS—ROSEOLA

Rosa'tus. (*L. rosa*, a rose.) Belonging to roses.

Ros'cidus. (*L. roscidus*, -a, -um; from *ros*, dew.) Moistened with dew.

Rose. (*L. rosa*.) *Bot.* Common name for members of the Genus *Rosa*.

Med. A popular name for *Erysipelas*, from the rosy colour of the eruption.

R.-an'ilin. See *Rosanilin*.

R. ap'ple. Common name for the fruit of *Jambos vulgaris*.

R. balm, scarlet. The *Monarda coccinea*.

R., bay. Common name for the *Nerium oleander*.

R. bay, Amer'ican. The *Rhododendron maximum*.

R., cab'bage. The *Rosa centifolia*.

R., cam'pion. The *Lychnis githago*.

R. catarrh'. See *Catarrh, rose*.

R., Christ'mas. A common name for the *Helleborus niger*.

R. cold. The same as *R. catarrh*.

R., cop'per. A name for the *Papaver rhæas*.

R., corn. The same as *R., copper*.

R., dam'ask. The *Rosa centifolia*.

R., dog. The *Rosa canina*.

R., dog, confec'tion of. See *Confectio rosæ caninæ*.

R. drop. The *Gutta rosea*.

R.-fe'ver. A variety of hay-fever brought on by the aroma of roses.

R.-gar'land, rhachit'ic. The *R.-garland, rickety*.

R.-gar'land, rick'ety. See *Rickety rose-garland*.

R.-gera'nium. Common name for the *Pelargonium roseum*.

R., guel'der. Common name for the *Viburnum opulus*.

R., hun'dred-leav'ed. The *Rosa centifolia*.

R. laur'el. Name for the *Nerium oleander*. Also, the *Kalmia centifolia*.

R., marine'. The *Rosmarinus officinalis*, or rosemary.

R., pale. The *Rosa centifolia*.

R.-rash. A name for *Erythema*; also, for *Roseola*; also, for *Measles*; also, for *German measles*; also, for *Erysipelas*.

R., red. The *Rosa gallica*.

R., rock. The *Helianthemum corymbosum*.

R.-root. A common name for the root of the *Rhodiola rosea*.

R.-sick'ness. A name for *Pellagra*.

R., South Sea. A name for the *Nerium oleander*.

R. spots. The rose-coloured spots constituting the rash of *Enteric fever* (q. v.).

R.-vin'egar. A vinegar infusion of rose-leaves. Used locally for headache.

R.-water. See *Aqua rosæ*.

R., white. The *Rosa alba*.

R. willow. A name for the *Cornus sericea*.

R.-wort. A syn. for *R.-root*.

Rose'ine. Name for acetate of rosaniline.

Rosell'a. In *Med.*, a syn. for *Rubeola*; also, in *Bot.*, a syn. for *Drosera*.

Roselli'na. (*L. rosa*, a rose.) A syn. for *Roseolæ*.

Rosello. A place in Siena, Italy, noted for its sulphur springs.

Rose'mary. (*Rosmarinus*.) Common name for the *Rosmarinus officinalis*.

R., marsh. The *Statice limonium*; also, the *Statice caroliniana*.

R., wild. The *Eriocephalus umbellulatus*.

Ro'senbach's bacil'lus. The bacillus saprogenes. It is found on fetid feet, and in the white plugs from the follicles of the pharynx.

R.'s sign. Absence of contraction of the abdominal muscles in inflammatory diseases of the intestines.

Rosenmül'ler, J. C. Anatomist and professor of Leipzig; born 1771, died 1820.

R., bod'y of. The *Parovarium*.

R., fold of. A semilunar fold in the mucous membrane of the lachrymal sac.

R., fos'sa of. A shallow depression on the lateral wall of the naso-pharynx, immediately behind the pharyngeal orifice of the Eustachian tube.

R., gland of. Term for the lower portion of the lachrymal gland.

R., or'gan of. The *Parovarium*.

Ro'senthal, canal of. The *Canal, central, of modiolus*, described by Rosenthal.

R.'s paste. Tannin 75 grains, precipitated sulphur 2½ drachms, powdered starch 1½ drachm, zinc oxide 1½ drachm, vaseline 1½ ounce. Used externally in *Sycosis*. It is applied at night.

R.'s test. For detecting commencing disease of the vertebræ. One electrode of a faradic battery is pressed against the anterior (ventral) surface of the body, and the other electrode is drawn slowly down the spine. Pain is felt over the seat of disease, when the current passes through that spot.

R.'s vom'iting, hyperac'id. A syn. for *Rosbach's disease*.

Rose'ola. (*L. roseolus*, -a, -um, dim. from *roseus*, rose-coloured.) A name for rose-rash, or *Erythema*; also, for German measles (see *Roseola, epidemic*).

R. acnosa. A syn. for *Gutta rosea*.

R. æstiva. The same as *R. æstivalis*.

R. æstiva'lis. A form of *Erythema* developing in summer weather.

R. annula'ta. A form of *Erythema* occurring in rings.

R. autumn'a'lis. A variety of *Erythema* developing in autumn.

R. choler'ica. A syn. for *Erythema papulatum*.

R. circina'ta. A syn. for *Pityriasis rosea*.

R., epidem'ic. (*G. Rötheln*.) German measles, *Rubella*. Propagated by contagion. Neither scarlatina nor measles offers any protection against it. Incubation, ten to twelve days. Symptoms, mild headache and chills, muscular pains; there may be some coryza. The rash appears usually on the first day on the face, chest, and afterwards over the body. It consists of raised pinkish red spots, sometimes coalescing in places. The cervical lymphatics are usually swollen. The rash is brighter than that of measles, and the patches are not markedly crescentic. The rash fades after two, three, or more days, and a slight branny desquamation occurs, the skin remaining, for a time, slightly stained. Complications, which are very rare, include albuminuria, nephritis, jaundice, colitis, and pneumonia.

ROSEOLAR—ROSTRULUM

R. febrilis. The same as *R. miliaris*.
R. ficos'a. A syn. for *Sycosis*.
R., herpetic. A variety in which vesicles are formed.
R. infantilis. A form of *Roseola* (see main heading) occurring in young children.
R., iod'ic. A name for *Iodide rash*, when, as sometimes happens, it is roseolous.
R. miliar'is. A roseolous rash accompanying *Miliary fever*.
R. punc'tata. A variety of *Roseola* characterised by its minute red spots or punctæ.
R. rheumat'ica. *Roseola* occurring as a symptom of rheumatism.
R., secundary. The same as *R. symptomatica*.
R. symptomat'ica. Symptomatic roseola. Roseola occurring as a secondary symptom in some other complaint, as, e.g., *R. rheumatica*, *R. miliaris*, &c.
R. syphilit'ica. Syphilitic roseola. Term for a roseolous rash in secondary syphilis.
R. typho'sa. Another name for the *Rose spots* of enteric fever.
R. vaccin'ia. A roseola occurring from three to eighteen days after vaccination, and manifesting itself round the vaccination-pustules, and sometimes spreading over the body.
R. variolo'sa. A roseolous rash occasionally observed in the prodromal stage of smallpox (*Variola*).
Rose'olar. Belonging to *Roseola*.
Rose'oloid. (*Roseola*; Gr. *idos*, form.) The same as *Roseolous*.
Rose'olous. Having the characters of *Roseola*.
Ro'seous. (L. *roseus*.) Rose-coloured.
Rose'pink. Common name of the *Chironia angularis*.
Roser's line. A syn. for *Nélaton's line*.
R.'s meth'od. See *R.'s position*.
R.-Nélaton line. The same as *R.'s line*.
R.'s posit'ion. A dependent position of the head as recommended by Roser, during operations on the respiratory passages, so as to obviate the passage of blood down the trachea.
R.'s the'ory of inflammation. See *Theory of Inflammation, Roser's*.
Rosette'. (F. *rosette*.) Another name for the monaster formed during karyokinesis. See *Nucleus, cell-, division of*.
Ro'seus. (L. *roseus*, -a, -um, from *rosa*, a rose.) Rose-coloured.
R. pallidë. (F. *rose-pâle*.) Of a pale rose-colour.
Rose'wood. The wood of *Physocalymnia floribunda*. See *Rhodium lignum*.
Rosicruc'ian springs. At Rosicrucian, in Lincoln County, Maine, U.S. Alkaline saline springs. (Billings.)
Ros'in. Another name for *Resin*.
R., black. A name for *Colophony*.
R., brown. The same as *R., black*.
R.-grease. A syn. for *R.-oil*.
R.-oil. A fluorescent, violet-blue, liquid obtained by dry distillation of common resin (*colophony*). It is used as a lubricant, and also instead of linseed-oil in the manufacture of printer's ink. (Gould's Dict.)
R. plant. The *R. weed*.
R. weed. The *Silphium tancinia*
R., white. The resin obtained from the *Pinus sylvestris*.
R., yellow. The same as *Resin, yellow*.

Ros'in'al. A commercial term for *Storax*.
Ros'inol. A syn. for *Retinol*.
Ros'io. (L.) A gnawing, griping.
R. stom'achl. The same as *R. ventriculi*.
R. ventric'ull. A term for *Cardialgia*.
Rosmar'ini oleum. B.P. (Gen. of *Rosmarinus*.) Oil of rosemary. Distilled from the flowering tops of *Rosmarinus officinalis*. Used chiefly for its pleasant odour, in lotions, &c. From it is prepared *Spiritus Rosmarini*.
Rosmar'inus. (L. *ros*, dew; *marinus*, belonging to the sea; so named because growing on the sea-shore, it was said to appear early in the morning, like dew.) A Genus of the *Labiatæ*.
R. hortens'is. A syn. for *R. officinalis*.
R. latifolius. A syn. for *R. officinalis*.
R. officina'lis. The Rosemary. The leaves are aromatic and bitter. The active principle consists in an essential oil combined with camphor. The oil is termed *Rosmarini oleum* (q. v.).
R. stoe'chadis fa'cie. A name for the *Teucrium creticum*.
R. sylvest'ris. A syn. for *Sedum palustre*.
Ro'solene. (*Rosin*; *oleum*.) The oily substances forming the distillate in distilling *Colophony*.
Rosolic acid. $C_{20}H_{16}O_3$. A derivative of phenol, prepared by acting upon rosaniline (*fuchsin*) with nitric acid. It is a crystalline body, soluble in alcohol and ether. Used as a dye in the arts; and in Histology, for staining microscopic sections.
Rossalia. See *Rosalia*.
R. squamo'sa. The same as *Rossalia*.
Rossania. The same as *Rossalia*.
Rossbach's disease'. A neurosis of the stomach described by Rossbach and Rosenthal, in which there are headache, gastralgia, and paroxysms of vomiting of an extremely acid fluid. The hydrochloric acid of the gastric juice is increased in quantity.
Rostel. *Rostellum*.
Rostellar. Belonging to a *Rostellum*.
Rostellate. Furnished with a *Rostellum*.
Rostella'tus. (Mod. L. *rostellatus*, -a, -um, from L. *rostellum*, a little beak.) Bot. Prolonged into a small, beak-like process.
Rostelliform. Having the shape of a *Rostellum*.
Rostellum. (L. dim. from *rostrum*, a beak.) A little beak. Zool. The hook-bearing part of the head in certain of the *Vermes*. Bot. A viscid modification of the uppermost stigma which holds the disc bearing the pollen-masses, in the flower of certain of the *Orchideæ*.
Ros'tral. Belonging to, or resembling, a *Rostrum*. Also, a syn. for *Cephalic*.
Ros'trate. (L. *rostratus*.) Beaked, having a beak or a beak-like process.
Rostriferous. (L. *rostrum*; *fero*, to bear.) Bearing a *Rostrum*.
Rostriform. See *Rostriformis*.
Rostriformis. (Mod. L. *rostriformis*, -e. From L. *rostrum*, a beak; *forma*, shape, resemblance.) Beak-shaped. This term was formerly a syn. for *Coracoid*.
Ros'trular. Belonging to a *Rostrulum*.
Ros'trulate. Having a *Rostrulum*.
Rostrulum. (Dim. from *Rostrum*.) Biol. Term for the mouth-parts in the fleas, the Genus *Pulex*.

ROSTRUM—ROUGET

Ros'trum. (L.) A beak; also, any beak-like organ or process. Also, name for a certain ancient kind of forceps, the blades of which were shaped like a bird's beak.

R. cochlear'ë. A syn. for *Hamulus cartilagineus*.

R. cor'poris callo'si. Term for the narrowed, beak-like anterior extremity of the *Corpus callosum*.

R. exter'num. (L. *externus*, -a, -um, outer.) A term for the *Olecranon*.

R. olec'ranî. The beak-like extremity of the *olecranon*.

R. porci'num. (L. *porcinus*, -a, -um, belonging to a pig.) A term for the *Acromion*.

R. poster'ius. The same as *R. externum*.

R. sphenoida'lë. The rostrum of the sphenoid. See under *Sphenoid bone*.

Ros'ula. (Dim from L. *rosa*, a rose.) Bot. Syn. for rosette.

Ros'ular. Bot. Having the leaves arranged in the form of a rosette.

Ros'ulate. The same as *Rosular*.

Ros'y Bet'ty. A name for the *Erigeron bellidifolium*.

R. bush. A name for the *Spiræa tomentosa*.

R. drop. A popular term for *Acnë*.

R. whelk. A name for *Gutta rosea*.

Rot. (Mid. Eng. *rot*.) As an *adj.* To putrefy. As a *substant.* 1. Decomposition in general; putrefaction. 2. A disease of sheep caused by the *Fasciola hepatica*, or liver-fluke.

R.-dry. A form of dry decay of wood due to fungoid changes.

R., grinder's. A syn. for *Phthisis, grinder's*.

R., pota'to. A disease of potatoes caused by the *Phytophthora infestans* (q. v.).

Rotacism. See *Rhotacism*.

Rotacismus. See *Rhotacismus*.

Rotang. See *Calamus rotang*.

Rotate'. (L. *roto*.) To move any body round upon its long axis.

Rotat'io. (L.) A wheeling or turning about. *Anat.* A term for *Diarthrosis*.

R. spi'næ. Revolving or rotating spine. Term for the congenital condition of rotation of the spine in some animals, such as the calf.

Rotat'ion. The turning of any body on its long axis.

R. in la'bour, exter'nal. In head cases, the rotation of the fetal head immediately after its expulsion from the vaginal outlet corresponding to, and as a result of, the internal rotation of the shoulders. In breech cases, the rotation of the breech outside the mother's body corresponding to the internal rotation of the shoulders.

R. in la'bour, inter'nal. The rotation of the fetus occurring during descent to the floor of the pelvis. The rotation of the presenting part, whether head or breech, is through one-eighth of a circle in the first and second positions, and through three-eighths of a circle in the third and fourth positions. See *Presentation, vertex*.

R. of pro'toplasm. Rotation of the fluid protoplasm with the granules contained in it round the central axis in a vegetable cell.

Rotat'or. (L. *F. rotateur*; *I. rotatore*; *G. Dreher*.) One who whirls or turns anything round. In *Anat.*, a muscle that effects rotation.

Rotato'res. Plur. of *Rotator*.

R. dor'si. Eleven small, deeply-placed

muscles on each side of the spine in the dorsal (thoracic) region. Each muscle arises from the upper and anterior part of the transverse process of a vertebra, and is inserted into the lower edge of the lamina of the vertebra above.

R. fem'oris. A term for the obturator muscles (*externus* and *internus*).

R. oc'uli. A term for the superior and inferior oblique muscles of the eyeball.

R. spi'næ. A syn. for *R. dorsi*.

Rot'coll. A name for the *Cochlearia armoracea*. (Dunglison.)

Röth'eln. (G.) *Roseola, epidemic*.

Roti'ferous. (L. *rota*, a wheel; *fero*, to carry.) *Biol.* Carrying a wheel-like structure.

Roti'form. (L. *rota*, a wheel; *forma*, shape.) Wheel-shaped.

Rotispina'les. Coues' term for the *Rotatores spineæ*.

Rot'ten. (Mid. Eng. *roten*.) Decomposed.

Rot'terin. Name for a soluble non-poisonous antiseptic, consisting of a mixture of nine different antiseptics, introduced by Rotter of Munich.

Rottle'ra. A Genus of the *Euphorbiaceæ*.

R. schim'peri. An Abyssinian tree. The bark has been termed *Cortex muscua* (as well as the bark of *Albizia anthelmintica*), and has been used, mixed with kusso, as a tæniifuge.

R. tincto'ria. A syn. for *Mallotus philippensis*.

Rot'ula. (L.) A little wheel. The kneecap or *Patella*.

Rot'ulad. A term introduced by Barclay to signify toward the *Rotular* or patellar aspect.

Rot'ular. Belonging to the *Rotula*.

R. as'pect. That aspect which is towards the *Rotula*.

Rotulen. Belonging to the *Rotula* in itself.

Rotu'lian. (*Rotula*.) The same as *Rotular*.

Rotu'liform. (L. *rotula*; *forma*, shape.) Shaped like the *Rotula*.

Rotund'. (L. *rotundus*.) Round; circular.

Rotun'date. (L. *rotundus*, round.) Rounded at the edge.

Rotundifo'liate. (L. *rotundus*, round; *folium*, a leaf. *F. rotundifolië*; *G. rundblättrig*.) Bot. Round-leaved.

Rotundifolious. The same as *Rotundifoliolate*.

Rotund'us. (L. *rotundus*, -a, -um, from *rota*, a wheel.) Round, circular.

Rou'cou. A syn. for *Annotto*.

Rouge. (F.) A cosmetic made of a red dye from the *Carthamus tinctorius*. Also, term for any red cosmetic.

Also, syn. for *Colcothar*.

R. vegetal. (F.) A syn. for *Carthamin*.

Rouge's opera'tion. An operation introduced by Rouge to expose the nasal cavities for facilitation in nasal operations. The upper lip and lower part of the nose are freed from the upper jaw, and the flap thus formed is then raised.

Rou'get, bacil'lus of. Also termed *Bacillus erysipelatus suis*. The bacillus of hog erysipelas.

R., bulb of. A name given to the bulb of the ovary, after the anatomist Rouget.

R.'s mus'cle. Name for the circular part of the *Ciliary muscle*.

ROUGHROOT—RUBETA

Rough'root. A name for the *Liatris scabiosa*.

Roulette'. (F. *roulette*, a roller.) Term for a light roller used in massage, and in the application of labile electric currents.

Round. *Anat.* Epithet applied to many fibrous and other structures which are arranged in rounded bundles or fasciculi, or have a circular cross-section. See also *Teres*.

R. cardamoms. The fruit of *Anomum cardamomum*.

R. fora'men. The *Foramen rotundum*.

R.-leaved dog'wood. See *Dogwood*, round-leaved.

R. lig'ament. See under *Ligament* (various subheadings, *Ligament*, round, of hip, L., round, of womb, &c.).

R. tree. See *Rowan tree*.

R. ul'cer. A name for simple ulcer of the stomach.

R. win'dow. See *Fenestra rotunda*.

R. worm. The *Ascaris lumbricoides*.

Roun'del. (Mid. Eng. *roundel*.) Term for the button-like circle of bone separated by a trephine. (Gould.)

Round'heart. Name for the *Thapsium atropurpureum*.

Roup. A contagious affection of poultry, probably tuberculous, the symptoms of which are offensive discharge from the nostrils, and swelling of the eyes and round the base of the beak. It is commonly fatal.

Rous'seau, Laud'anum Abba'tis. See *Laudanum Abbatis Rousseau*.

Rous'selot's arsenical pow'der. (F. *poudre arsenicale de Rousselot*.) Arsenious acid 6 parts, mercuric sulphide and dragon's blood, of each 47 parts. Mix. (P. Belg.)

Rous'sin's flu'id. A fluid used in the microscopic examination of blood. Glycerine 3 parts, sulphuric acid 1 part, and water to bring the sp. gr. down to 1.028.

Routine' practitioner. Term for a medical practitioner who follows an unvarying routine in his treatment of patients.

Routin'ist. A syn. for *Routine practitioner*.

Rouvieux'. (F.) See *Roux-vieux*.

Roux's amputa'tion. (After the surgeon *Roux*, who introduced it.) Amputation of the whole foot with division of the tibia and fibula as in Syme's operation, a flap being taken mostly from the tibial side of the foot.

Roux-vieux'. (F.) Term for an eruption which occurs at the roots of the mane in horses. Also, *Psoriasis* in dogs. (Billings.)

Rou'zat. In the Department Puy-de-Dôme, France. Saline springs.

Row'an tree. The *Sorbus aucuparia*.

Rowland's springs. In Cass County, Georgia. Chalybeate springs.

Royal fern. The *Osmunda regalis*.

R. green. A syn. for *Schweinfurth green*.

R. stitch. *Surg.* Old name for an operation for inguinal hernia, which consisted in placing a ligature round the neck of the sac, and thereby exciting adhesive inflammation.

R. su'ture. See *R. stitch*.

R. touch. See *Touch*, royal.

Roy'at. A place in the Department Puy-de-Dôme, France, noted for its saline, alkaline, and gaseous springs.

Rub'ber. The attendant in a Turkish

bath who rubs down those taking the bath. Also, a shortened term for India-rubber.

Also, syn. for India-rubber.

R.-dam, Bar'num's. A small piece of sheet india-rubber used in dentistry to prevent the saliva and the breath of the patient interfering with the operation of filling teeth.

R.-dam clamps. Flexible steel clamps for getting into position and holding in position the *R.-dam*.

R.-dam hol'der. A ribbon of elastic fitted on to two oval plates with spring catches, to keep in position the *R.-dam*.

R.-dam punch. A punch for perforating the *R.-dam* over the tooth or teeth to be filled.

R.-dam weights. Small metal weights fitted on to the edge of the *R.-dam*, so that they may hang out of the way of the operator.

R., hard. Another name for *Vulcanite*.

R., in'dia-. See *Caoutchouc*.

R., Indian-. The same as *R., India-*.

Rub'bing. Friction of the skin by means of rubbing with the hands. One of the movements in *Massage*.

R., dry. Friction of the skin with dry hands, or with a flannel or brush.

R., moist. Friction of the skin with liniments, ointments, &c.

R. sound. A syn. for *Friction-sound*.

Rube'do. (L.) Redness. Term for any kind of diffused redness of the skin, including ordinary blushing.

Rubefa'cient. (L. *rubefacio*, to make red, to make to blush. F. *rubéfiant*.) Causing redness of the skin. Also, any drug that causes redness of the skin.

Rubefac'tion. (L. *rubefacio*, to make red, to make to blush.) The redness of the skin produced by a *Rubefacient*.

Rubella. (L. *rubellus*, -a, -um, somewhat red.) A syn. for *Roseola epidemic*. The term has also been loosely used for other conditions presenting somewhat similar eruptions.

Rube'ola. (L. *rubeo*, to be red, to redden, to blush.) A name for *Measles*.

R. con'fluens. A name for *Scarlet fever*.

R. German'ica. German measles, or *Roseola epidemic*.

R. maligna. The same as *R. nigra*.

R. nig'ra. Black measles. See under *Measles*.

R. no'tha. Another name for *R. Germanica*.

R. scarlatino'sa. A syn. for *Scarlet fever*.

R. scorbu'tica. The same as *R. nigra*.

R. spu'ria. Another name for *R. Germanica*.

R. vulgar'is. A syn. for *Measles*.

Rube'olar. Belonging to *Rubeola*.

Rube'oline. Name proposed by Dr. W. Farr for the specific poison of *Rubeola* or measles.

Rube'oloid. (*Rubeola*; Gr. *εἶδος*, resemblance.) A syn. for *Roseola epidemic*. Also, resembling *Rubeola*.

Ru'ber. (L.) Red, ruddy; also, of a deep yellow colour.

Rubes'cence. (*Rubescens*.) Blushing, redness of the face.

Rubes'cens. (L.) Growing red, reddish.

Rubes'cent. See *Rubescens*.

Rube'ta. (L.) A toad that is reddish in colour. Used, in ancient times, in Medicine.

RUBIA—RUDIMENT

Ru'bia. (L. *ruber*, red, a plant having a red root.) The typical Genus of the *Rubiaceæ*. Also, the old pharmacopœial name for the root of *Rubia tinctorum* (q. v.).

R. cordifo'lia. Munjeet, or Bengal madder. Root used as a deobstruent.

R. icteric'a. (L. *icterus*, jaundice.) A term used by Paracelsus for *Erysipelas*.

R. mangis'ta. The same as *R. cordifolia*.

R. peregrin'a. Wild madder. Hab., Europe and South-Western Asia. Its root is one source of commercial madder.

R. tinctorum. (F. *garance*.) A perennial herbaceous plant of South Europe and the Levant. It is cultivated for its root, madder, from which is prepared a red dye.

Rubia'ceæ. An Order of the *Rubiales*.

Rubia'les. Bot. A Cohort of the *Dicotyledons*, including the two Orders *Caprifoliaceæ* and *Rubiaceæ*.

Ru'bicund. (L. *rubicundus*.) Having red cheeks, ruddy.

Ru'bidin. A syn. for *Orseillin*.

Rubid'ium. Rb = 85.3. One of the rare members of the alkaline group of metals. It resembles *potassium*, physically and chemically.

R. ammon'ium bromide. Rb Br (NH₄Br)₄. A white, crystalline powder, with a cool saline taste; very soluble in water. It has been used as a substitute for bromide of potassium. Dose, 1 to 2 drachms, in divided doses.

R. bromide. This can also be used as a substitute for bromide of potassium; but it is very expensive.

R. chloride. Given internally, this salt slows the pulse and raises its tension. It has been given in doses of 2 to 5 grains.

Ru'bidus. (L. *ruber*, red.) Reddish.

Ru'biform. (L. *rubus*, the raspberry; *forma*, shape.) Having the shape of a raspberry.

Rubig'inose. (L. *rubiginosus*, rusty.) The same as *Rubiginous*.

Rubig'inous. (L. *rubiginosus*, rusty.) Rusty. Epithet applied to the rusty sputa characteristic of lobar pneumonia.

Rubi'go. (L.) Rust.

R. fer'ri. Iron rust. See *Rust*.

Rubijervine. C₂₆H₄₃NO₂. An alkaloid present in *Hellebore*, white.

Ru'bin. A syn. for *Rosaniline* or *Fuchsin*.

Rubinus. (L.) A ruby.

R. ver'us. (L. *verus*, true.) *Pathol.* A name for carbuncle, or *Anthrax*.

Rubor. (L.) Redness. A syn. for *Rubedo*.

R. labio'rum. The red part of the lips.

R. neuroticus. Neurotic redness; redness of the skin as a reflex nervous system.

Rubores. (L. Pl. of *rubor*, redness.) A syn. for *Scarlatina*.

Rubrica. (L. *ruber*, red.) *Minium*, or red lead.

Also, red chalk, red stone, or ruddle.

R. fabril'is. Red chalk or ruddle.

R. sinop'ica. A heavy red earth obtained in Sinope; formerly used as an astringent in diarrhœa.

Ru'bricose. (L. *rubricosus*, full of ruddle or red ochre.) Marked with red.

Ru'brin. (*Ruber*.) A syn. for *Hæmatin*.

Ru'bula. (Dim. from L. *rubus*, a bramble, or blackberry bush.) Specific name, in Good's Nosology, for the yaws, *Anthraxia rubula*.

Ru'bus. (L. *rubus*, a bramble, or blackberry bush.) A Genus of the *Rosaceæ*.

Also, name for the root-bark of *R. canadensis*, *R. trivialis*, and *R. villosus*.

R. affin'is. The *R. fruticosus*.

R. alpinus hu'milis anglicus. A name for the *Chamæmorus*.

R. arc'ticus. The shrubby strawberry. The fruit is refrigerant and antiscorbutic. The berries, according to Linnæus, were antiseptic, antiscorbutic, and refrigerant.

R. ba'tus. A syn. for *R. cæsius*.

R. cæ'sius. The dewberry plant. The fruit is similar to the blackberry.

R. canadensis. Canadian sub-variety of *R. cæsius*. Root bark astringent.

R. chamæ'morus. The cloudberry tree. The fruit is pleasantly refrigerant, and is also antiscorbutic.

R. flagellar'is. A syn. for *R. cæsius*.

R. framboesia'nus. A syn. for *R. idæus*.

R. frondo'sus. A syn. for *R. fruticosus*.

R. fructico'sus. The common bramble, or blackberry bush. The root-bark of the American variety is astringent.

R. idæ'us. The raspberry bush.

R. ni'ger. A syn. for *R. fruticosus*.

R. occidenta'lis. A syn. for *R. strigosus*.

R. palus'tris hu'milis. A syn. for *R. chamæmorus*.

R. panicula'tus. A syn. for *R. fruticosus*.

R. procum'bens. A syn. for *R. cæsius*.

R. saxat'ilis. The stone-bramble. Hab., Europe. In Russia an intoxicating beverage is made from the juice of the fruit.

R. sent'is. (L. *sentis*, a bramble or blackberry-bush.) A syn. for *R. fruticosus*.

R. strigo'sus. Wild red raspberry bush of the United States. The leaves are slightly astringent.

R. trivia'lis. A syn. for *R. cæsius*.

R. villo'sus. The American blackberry.

R. vulgar'is. A syn. for *R. fruticosus*.

Ructa'men. (L.) The same as *Ructus*.

Ructa'tio. (L.) The same as *Ructus*.

Ructa'tion. See *Ructatio*.

Ructuos'itas. (*Ructuosus*.) Excessive *ructus*, or eructation.

Ructuos'us. (*Ructus*.) Belching or eructating to an excessive extent.

Ructus. (L.) A belching, eructation, or discharge of wind from the stomach through the mouth.

R. ac'idus. Acid *Ructus*.

R. hyster'icus. Hysterical *ructus* or belching.

Rudbeck'ia. (After the *Rudbeck* family of Upsal.) A Genus of the *Compositæ*.

R. lancinia'ta. The coneflower. Hab., North America. Action, diuretic.

R. purpu'rea. The comb-flower of the western and southern parts of North America. Root is alterative and diuretic.

Ruddle. (? *Ruddy*.) Common name for a kind of red chalk. See *Rubrica*.

R., hard. See *Rubrica fabrilis*.

Ruddy. (Mid. Eng. *ruddy*.) Reddish coloured.

Ru'deral. (L. *rudus*, rubbish.) *Biol.* Growing among rubbish.

Ru'diment. (L. *rudimentum*, the first

RUDIMENTAL—RUMINATION

rules; a beginning.) *Biol.* Any part or organ in an early or primary stage; also, any part or organ which remains permanently at such a stage.

Rudimental. See *Rudimentary*.

Rudimentary. (*Rudiment*.) Having the characters of a *Rudiment*; undeveloped.

Rudimen'tum. (L.) A beginning.

R. proces'sus vagina'lis peritone'i. The rudiment of the processus vaginalis of the peritoneum. See *Processus vaginalis*.

Ru'dius. An Italian physician who died in 1611.

R., extract of. An aperient pill composed of colocynth, agaric, jalap, black hellebore, socotrine aloes, cinnamon, mace, cloves, and alcohol.

Rudol'phia frondo'sa. (After C. A. Rudolphia, a botanist of Jena.) A syn. for *Butea frondosa*.

Rue. Common name for the *Ruta graveolens*.
R., Assyrian wild. Common name for the *Peganum harmala*.

R., goat's. Common name for the *Galega officinalis*.

R., wall. Common name for the *Asplenium murale*.

Rufes'cens. (L.) Becoming or bordering upon red, reddish.

Rufes'cent. (L. *rufescens*.) See *Rufescens*.

Ruf'ous. (L. *rufus*.) Reddish.

Rufus. (L.) Reddish, or yellowish red.

Ruga. (L.) A fold, a wrinkle.

Rugæ. Nom. plur., and also gen. sing., of *Ruga*.

R. of bones. Term for the roughened elevations on bones for tendinous and ligamentous attachment.

R. of vagina. See *Vagina*, *rugæ* of.

R. penniformes. A syn. for *Palmæ uteri plicatæ*.

R. seni'les. (L. *senilis*, belonging to an old man.) A syn. for *R. transversæ frontales*.

R. transver'sæ fronta'les. The transverse wrinkles of the forehead.

Ru'gine. (L. *rugosus*, to have wrinkles.) Old name for a surgeon's rasp.

Rugitus. (L.) A roaring of lions; also, a loud gurgling noise in the intestines, *borborygmus*.

Rugose. (L. *rugosus*.) Full of wrinkles; wrinkled.

Rugosity. (L. *rugosus*, full of wrinkles.) The condition of being *Rugose*.

Rugous. (L. *rugosus*.) The same as *Rugose*.

Ruhm'korff's coil. A form of electric induction-coil invented by Ruhmkorff, by means of which all the tension of the induced current is utilised.

Rul'zia fra'grans. A syn. for *Boldoa fragrans*.

Rum. A spirituous liquor prepared in the West Indies and United States by distillation, from fermented molasses.

R., bay. See *Spiritus myrciæ*.

R.-blos'som. A name for *Acnë rosacea*.

R. buds. A name for *Gutta rosea*.

R. cherry. The *Prunus virginiana*.

Ruma. (L.) A teat; also, the breast; also, the cud of *Ruminants*.

Rumen. (L.) The paunch or first stomach of the *Ruminantia*. Also, the cud of a *Ruminant*.

Rumeno'tomy. (*Rumen*; Gr. *τομή*, a cutting.) The operation of cutting into the *rumen*.

Ru'mex. (L. From *ruma*, a teat; so named because the Romans used to suck the leaf to allay thirst.) The herb called sorrel. A Genus of the *Polygonaceæ*.

R. acetosella. The field or sheep sorrel. Action, diuretic, refrigerant, and antiscorbutic.

R. aceto'sus. The English sorrel. Action, antiscorbutic. The inspissated juice is escharotic.

R. acu'tus. The sharp-pointed wild-dock. A decoction of the root is used in Germany for the cure of scabies. It was used in the time of Dioscorides, both alone and also boiled with vinegar, for the cure of leprous and impetiginous affections.

R. ætnen'sis. A syn. for *R. scutatus*.

R. alpi'nus. A syn. for *R. patientia*.

R. aquat'icus. A syn. for *R. hydrolapathum*.

R. britan'nica. A syn. for *R. hydrolapathum*.

R. confer'tus. A syn. for *R. patientia*.

R. cris'pus. Curled, yellow or sour dock. Properties similar to those of *R. obtusifolius*.

R. di'gynus. A syn. for *Oxyria reniformis*.

R. gigan'tea. Vegetable mercury. The root-bark is used in the East Indies in the treatment of elephantiasis, leprosy, and other diseases.

R. glau'cus. A syn. for *R. scutatus*.

R. hasta'tus. A syn. for *R. scutatus*.

R. hastifo'lius. The same as *R. scutatus*.

R. hydrolap'athum. The water dock. Leaves, slightly acid, and laxative; root, antiscorbutic, astringent, and tonic.

R. interme'dius. A syn. for *R. acetosus*.

R. obtusifol'ius. Blunt-leaved or bitter dock. Root tonic, astringent, and antiscorbutic.

R. oxyo'tus. A syn. for *R. scutatus*.

R. paludo'sus. A syn. for *R. acutus*.

R. patien'tia. Patience dock or Monk's rhubarb. The root is similar in properties to the root of the rhubarb (*Rheum palmatum*).

R. pusill'us. A syn. for *R. acutus*.

R. sanguin'eus. Bloody dock. Root astringent.

R. scuta'tus. Roman, French, or garden sorrel. Similar in properties to the *R. acetosus*.

R. tubero'sus. A syn. for *R. acetosus*.

Rumicin. (*Rumex*.) A name for *Chrysophanic acid*.

Rumin. (*Rumex*.) A name for a dry alcoholic extract prepared from the *Rumex crispus*. It is antiscorbutic and laxative.

Ruminant. (L. *ruminans*, chewing the cud.) Chewing the cud, ruminating. Also, a member of the group *Ruminantia*.

Ruminan'tia. (L. *ruminans*, chewing the cud.) A group of the Class *Mammalia*, including all those chewing the cud. They have a complicated stomach partly divided into four compartments; the *rumen* or paunch, the *reticulum* or honeycomb bag, the *psalterium* or manyplies, and the *abomasum* or reed.

Rumination. (L. *ruminatio*, a chewing of the cud; also, meditating on a thing.) Chewing the cud; a regurgitation of food from the stomach back into the mouth and a second chewing of it; the act may be once or twice repeated. This is a natural function in the *Ruminantia*. It very occasionally occurs as a pathological symptom (also, termed *Merycism*) in human beings; namely, in some hysterical,

RUMIS—RUPTURE

neurasthenic, and epileptic patients, and in some idiots.

Also, metaphorically, to turn any subject of thought over and over in the mind.

Rumis. (L.) A teat; also, the breast, *Mamma*.

Rum'met. A syn. for *Pityriasis*. (Dun-glison.)

Rump. (Mid. Eng. *rumpe*. G. *Rumpf*.) The end of the backbone or sacro-coccygeal region; also, the nates or buttocks.

R.-bone. A name for the *Coccyx*; also, for the *Sacrum*.

Run. *Pathol.* To discharge a fluid, whether pus or serum, from the surface.

R.-around'. A popular name for the slighter varieties of *Paronychia*.

Runches. A name for the *Sinapis arvensis*.

Runcina. (L.) A large saw; also, a plane. *Surg.* A syn. for *Raspatorium*.

Runcinate. *Bot.* Epithet applied to leaves which are a modification of the pinnatifid leaf, having the points of the large central lobes reflected.

Runcin'ula. (Dim. from *L. runcina*.) *Surg.* Term used as syn. with *Runcina*.

Rundle. *Bot.* An old term syn. with *Umbel*.

Rundlet. (Dim. from *Rundle*.) *Bot.* Old term syn. with *Umbellule*.

Runge's method. A method of dressing the stump of the umbilical cord in newborn infants, introduced by Runge, consisting in powdering it with a mixture of one part of boric acid with three parts of starch.

Run'ner. *Biol.* An animal that runs. Also, in *Bot.*, a stem or branch that runs along the ground having roots or rootlets at intervals.

Run'net. The same as *Rennet*.

Run'ning. Proceeding by a series of rapid leaps with alternate feet, one foot leaving, before the other touches, the ground.

Also, in *Surg.*, a discharge of pus, mucus, or serum.

R. amuck'. (Malay, *amuck!* kill!) A term originally used by Anglo-Indians to denote the condition of frenzied intoxication caused by excessive doses of Indian hemp, *Cannabis indica* or *sativa*, taken by the natives of India, Arabia, Western Africa, and the Malay Archipelago. The subjects of this inebriation rush madly about shouting amuck! amuck! (kill! kill!), and attack anyone they meet. The term is also now used colloquially, in a metaphorical sense, to express discussion of a subject of which the person discussing is ignorant, or a running foul of public opinion. (Hack Tuke.)

R., paroxys'mal. Paroxysmal attacks characterised by purposeless running. A symptom occasionally present in cases of morbid cerebral excitement.

R. scall. An old term for *Eczema*. See *Scall*.

Run'round. Term in common use in the United States for the mildest form of *Paronychia*.

Rupellar'ius. A syn. for *Rupestris*.
Rupellen'sis, sal. (L. *Rupella*, Rochelle, where this salt was first made.) Rochelle salt.

Rupes. (Nom. pl. of *L. rupe*, a rock.) An old term for *Labia pudendi*.

Rupestra'lis. The same as *Rupestris*.

Rupes'trine. See *Rupestris*.

Rupes'tris. (L. *rupe*, a rock.) Growing on, or frequenting, rocks.

Rup'ia. ('Ρύπος, filth.) A pustular eruption characterised by the formation of thick brown, stratified, limpet-shell-like crusts. It is a variety of late secondary eruption in syphilis.

R. cachec'tia. A syn. for *Pompholyx*.

R. escharotica. A syn. for *Varicella gangrænosa*.

R. prom'inens. *Rupia* in which the crusts formed are large and prominent.

R. sim'plex. *Rupia* in which the crusts formed are small.

R. syphilit'ica. See main heading.

Rup'ial. Belonging to, or having the characters of, *Rupia*.

Rupicap'ra. (L. *rupe*, a rock; *capra*, a goat.) A name for the *Capra sylvestris*.

R. tra'gus. Systematic name for *Chamois*.

Rup'icolus. (L. *rupe*, a rock; *colo*, to inhabit.) *Bot.* Growing on rocks. *Ornith.* Living among rocks.

Rupin'colus. (L. *rupina*, a craggy ground; *colo*, to inhabit.) *Bot.* Growing on rocks.

Rupopho'bia. ('Ρύπος, filth; φόβος, fear.) A syn. for *Mysophobia*.

Ruptibilis. (L. *rumpe*, *ruptum*, to break; *habilis*, able.) Breakable.

Ruptibil'itas. (L. *rumpe*, *ruptum*, to break; *habilis*, able.) The same as *Ruptilitas*.

Rup'tilis. (L. *rumpe*, *ruptum*, to break.) *Bot.* Breaking open, or opening of itself.

Ruptil'itas. (*Ruptilis*.) *Bot.* The condition to which is applied the epithet *Ruptilis*.

Rupt'io. (L.) A rupture.

Ruptor'ium. (Neut. of *ruptorius*, from *L. ruptor*, one who breaks anything.) A syn. for *Canterium*.

R. commu'nē. A term for *Potassa fusa*.

R., reme'dium. Opening or breaking remedy. An old name for *Potassa cum calce*, which was applied to the skin over an abscess in order to open the latter by sloughing. Hildanus strongly advised its application to gangrenous or sloughing parts.

Ruptor'ius. (Mod. L. *ruptorius*, -a, -um, from *L. ruptor*, one who breaks anything.) Breaking or opening.

Ruptu'ra. (L.) Rupture.

R. arte'riæ. Rupture of an artery. A term for *Aneurysm*.

R. cor'neæ. Rupture of the cornea.

R. hernio'sa. A syn. for *Hernia*.

R. ovar'ii. Rupture of an ovary.

R. u'teri. Rupture of the uterus. See *Uterus*, *rupture of*.

R. vagin'æ. Rupture of the vagina. See *Vagina*, *rupture of*.

Rupt'ure. (L. *ruptura*.) A breaking, bursting, or tearing; also used in the special sense of *Hernia*.

R. in the groin. An inguinal hernia.

R. of the heart. This condition is rarely found without a penetrating wound of the chest. In such cases the most frequent seat of rupture is the right ventricle, and the next most frequent, the left auricle. Death is generally immediate, but has been known to be prolonged to fourteen hours after the accident. The injury is usually direct violence; but indirect violence has been known to cause rupture of the heart. (Erichsen.)

R.-wort. Common name for the *Herniaria glabra*.

RUPTURED—RUTULA

Rup'tured. Burst or broken; also, suffering from a rupture or *Hernia*.

Rusconi, a'nus of. A name given to *Protostoma*, after the comparative anatomist *Rusconi*.

Ruscus. (*L. ruscum*, the butcher's broom plant.) A Genus of the Order *Asparaginaceæ*.

R. aculeatus. The butcher's broom, a European shrub. The rhizome has a diuretic action.

R. hypoglossum. Action similar to that of *R. aculeatus*.

R. hypophyllum. Action similar to that of *R. aculeatus*.

Rush. Common name for plants of the Genus *Juncus*.

R.-nut. Common name for the fruit of *Cyperus esculenta*.

R., sweet. Common name for the *Andropogon schœnanthus*.

R., u'terine. A term for uterine soufflé. See *Soufflé, uterine*.

Rusma. The same as *Rhusma*.

R. tartarorum. Name for a depilatory which was formerly used, and was said to consist of honey very highly concentrated by boiling.

R. turcorum. Rusma of the Turks. See main heading.

Ru'sot. See *Ruzot*.

Ruspi'ni's styptic. A secret remedy, which was said to be composed of zinc sulphate, opium, and gallic acid dissolved in alcohol diluted with aqua rosæ.

R.'s tincture. A preparation of ambergris, cloves, and orris root, digested in alcohol, in use formerly to preserve the teeth.

Rus'sell and West's method. See under *Urea, tests for*.

Rus'sia ash'es. Common name for impure potash imported from Russia.

Russian bath. See *Bath, Russian*.

R. castor. *Castoreum sibiricum*.

R. disease'. A syn. for *Influenza*.

R. influen'za. A term for *Influenza*, first used to distinguish it from the so-called influenza-cold.

R. i'singlass. See *Isinglass, Russian*.

R. li'quorice. See *Liquorice, Russian*.

R. mus'tard. Name for the mustard obtained from the seeds of *Sinapis juncea*, cultivated in South Russia.

R. pest. A syn. for *Influenza*.

R. rhu'barb. See *Rhubarb, Russian*.

Rus'so-Pol'ish fe'ver. A name for *Typhus*.

Rus'sow's pot'ash-al'cohol. Term for an alcoholic solution of caustic potash introduced by Russow for dissolving *suberin* and some other vegetable substances.

Rus'sula. A Genus of *Agarics*, some of which are poisonous, and others, eatable.

R. emet'ica. A poisonous species. Hab., Europe.

R. heterophyll'a. An edible species. Hab., Europe.

R. sardo'nia. A Sardinian species.

Rust. (Mid. Eng. *rust*.) General term for the mixture of oxides, hydrates, and carbonates of the metal which gradually form upon the surface of a metal which is exposed for any long time to moist air.

In *Bot.*, term for a plant-disease due to Fungi of the Class *Uredineæ*, in which masses of rusty-

looking dust form in the plant-tissues. It is a disease of the *Cereals*.

In *Zoöl.*, term for the water-weevil, an insect of the Order *Coleoptera*, which feeds upon the rice plant.

Rust's disease'. A variety of *Pott's disease* which is confined to the cervical region, described by Rust.

Rusty. Belonging to, covered with, or having the appearance of, rust.

R. expectora'tion. See *Expectoration, rusty*. It is a characteristic symptom in *Pneumonia, lobar*.

Rus'wut. (Hind.) A syn. for *Ruzot*.

Rut. (*L. rugitus*, a roaring.) A periodical congestion and increased functional activity of the female generative organs, accompanied by sexual desire, occurring in certain animals. Also termed *Estriation*.

Ruta. A genus of the *Rutaceæ*.

R. al'tera. A syn. for *R. graveolens*.

R. caprar'ia. A syn. for *Galaga officinalis*.

R. grav'olens. Common or garden rue. The πήγανον of Hippocrates, and πήγανον κηπευτόν of Dioscorides. Hab., S. Europe and the East. The volatile oil (*Oleum rutæ*) is a narcoto-irritant. The ancients believed rue to be a prophylactic against certain contagious diseases, and especially the plague.

R. hortens'is. A syn. for *R. graveolens*.

R. murar'ia. The *Asplenium ruta muraria*.

Rutab'ulum. (*L. rutabulum*, an oven-rake; also, a slice; also, the penis.) A term for *Penis*.

Ruta'ceæ. The rueworts, an Order of Dicotyledonous plants.

Ruta'ceous. (*L. rutaceus*, of rue.) Belonging to, or resembling, the Genus *Ruta*; also, belonging to the Order *Rutaceæ*.

Ruta'ceum. (*L. rutaceus*, of rue.) Pharm. Term for an infusion of rue in vinegar, vinegar of rue.

Ru'tæ. Gen. sing., also nom. pl., of *Ruta*.

R. o'leum. See *Oleum rute*.

Rute'ta. An old term for *Tarantula*.

Ruthen'ium. (*Ruthenia*, a Russian province.) A rare metal belonging to the platinum group. Symbol, Ru; atomic weight, 103.5.

Rutherford's solution. A solution introduced by Rutherford for hardening and decalcifying bone. Its composition is—chromic acid 1 gramme, water 200 cub. cent., to which is added nitric acid 2 cub. cent.

Ru'tic a'cid. (*Rutic*, belonging to or obtained from *Ruta*, or rue.) A syn. for *Caproic acid*.

Rutidoma. (*Ῥυτίδωμα*, anything wrinkled.) Something wrinkled.

Rutido'sis. (*Ῥυτίδωσις*, a wrinkling.) The act of wrinkling. Also, a wrinkling or shrivelling of the cornea.

Ru'tilin. A resinoid body obtained by heating salicin with sulphuric acid. Probably an impure salirrhethin. Also termed *Olivin*.

Rut'ilus. (*L.*) Fiery red.

Ru'tine. An acid, crystallisable, odourless, yellow body obtained from *Rue*, readily soluble in boiling water and alcohol.

Rutin'ic a'cid. A syn. for *Rutine*.

Rut'is. (*Ῥυτίς*, *L. ruga*.) A wrinkle.

Rut'ing. The state of sexual excitement of female animals during the period of *Rut*.

Ru'tula. (Dim. from *Ruta*.) A small species of *Rue*.

RUYSCH—SABURRA

Ruysch. A Dutch anatomist; born 1638, died 1731.

R., glomer'ules of. A syn. for *Malpighian corpuscles*.

R., mem'brane of. The *Tunica Ruyschiana*.

R., u'terine mus'cle of. Term for the muscular tissue of the fundus uteri, which was considered by Ruysch to have an action separate from that of the rest of the uterine muscle.

Ruyschia'na, membra'na. (After Ruysch.) A syn. for *R., tunica*.

R., tu'nica. See *Tunica Ruyschiana*.

R., tu'nica cellulo'sa. A syn. for *Ruyschii tunica cellulosa*.

Ruys'chii tu'nica cellulo'sa. Cellular tunic of Ruysch. A name for the subperitoneal areolar tissue of the stomach.

Ru'zot. (Hind.) A similar preparation to *Lycion* (q. v.).

Rychenotrepan'. (G.) Name for an instrument which acts as a combined perforator and lever for removing compact bone. (Foster.)

Rye. (Mid. Eng. *rye*. L. *secale*; F. *seigle*; I. *segale*; G. *Roggen*.) Common name for the grain or seed of *Secale cereale*.

R.-asth'ma. A variety of hay-asthma which develops at the time of the flowering of the rye plant.

R., er'got of. See *Ergot*.

R., horn'ed. The same as *R., spurred*.

R.-plant. Common name for the *Secale cereale*.

R., Rob'in's. The *Polytrichum juniperinum*.

R., spur'ed. Common name for *R., ergot of*.

Rypia. See *Rupia*.

Rytido'sis. See *Rutidosis*.

Ryt'is. See *Rutis*.

S.

S. Abbreviation for *Signa*; also, for *Spherical lens*; also, Chemical symbol for *Sulphur*.

S. a. Abbreviation for *Secundum artem*.

S. a. l. Abbreviation for *Secundum artis leges*.

S. Ac. Abbreviation for *Sine acida*, without acid.

S. Alk. Abbreviation for *Sine alkali*, without alkali.

S. K. Abbreviation for *Sine kali*, without an alkali.

S. N. Abbreviation for *Secundum naturam*, according to nature, in the natural course of things.

S. roma'num. The *Sigmoid flexure* of the colon, which is curved somewhat like the Roman letter S.

S. S. S. Pharm. Abbreviation for *Stratum super stratum*, layer upon layer.

Sabadil'la. B.P. The dried ripe seeds of the *Schœnocaulon officinale*, sometimes with their pericarps. The seeds are about a quarter of an inch long, fusiform, wrinkled, and of a shining brownish-black, with an acrid, bitter taste. When powdered, they cause sneezing. From sabadilla is made *Veratrina*, B.P. (q. v.).

S. officinar'um. The *Schœnocaulon officinale*.

Sabadil'lic ac'id. A syn. for *Cevadic acid*.

Sabadil'lin. (*Sabadilla*.) A syn. for *Veratrina*.

Sa'bal serrula'ta. The saw palmetto of the Southern States of North America. It is expectorant, sedative, and diuretic.

Sa'balol. (*Sabal*.) A substance prepared from the *Sabal serrulata*, and containing the active principles of this plant.

Sabatier's suture. See *Suture*, *Sabatier's*.

Sabatil'la. See *Sabadilla*.

Sab'atrine. $C_{102}H_{86}N_2O_{34}$. Weigelin's name for an alkaloid obtained by him in 1871 from *Sabadilla*.

Sabbat'ia. (After Liberatus *Sabbati*, an Italian botanist.) A Genus of the *Gentianaceæ*. The species of this genus resemble those of the Genus *Gentiana* in their bitter tonic action.

S. angular'is. The American centaury. A bitter tonic.

S. campest'ris. Used in the form of a fluid extract as a remedy for sick-headache consequent on gastric disorder.

S. chloroid'es. Action similar to that of *S. angularis*.

S. El'ioti. The quinine-flower; an American species. Action, bitter tonic.

S. grac'ilis. Action similar to that of the other species.

S. panicula'ta. Action and uses the same as those of *S. angularis*.

Sabi'na. Specific name of the *Juniperus sabina*.

Sabi'næ cacu'mina. B.P. Savin tops. The tops, fresh and dried, of the *Juniperus sabina*, collected in spring. Action, a powerful irritant, locally and generally; said to be also emmenagogue. B.P. dose, 4 to 10 grains.

Preparations.—*Oleum sabinae*, *Tinctura sabinae*, *Unguentum sabinae*.

Sab'ine. See *Sabina*.

Sa'bon. Old term for *Lixivium*; also, for *Sapo*. (Ruland and Johnson.)

Sabu'cus. See *Sambucus*.

Sabuli'colus. (L. *sabulum*, sand; *colo*, to inhabit.) Living in sand.

Sabulose. (L. *sabulosus*, sandy.) The same as *Sabulous*.

Sabulos'ity. (L. *sabulosus*, sandy.) Sandiness.

Sabulous. (L. *sabulosus*, sandy.) Sandy, gritty like sand. Also, growing in sandy places.

Sab'ulum. (L.) Fine gravel.

S. conar'ii. The sabulous matter contained in the *Conarium*, or pineal gland.

Sabura. The same as *Saburra*.

Sabur'ra. (L.) Ballast for ships, composed of coarse sand or gravel.

Med. Old term for foulness of the stomach, from decomposed substances supposed to be retained in it in cases of faulty digestion. This condition was considered by the *Humorists* to be the cause of many diseases.

S. vermino'sa. A syn. for *Helminthiasis*.
Sabur'al. Belonging to *Saburra*.
S. fe'ver. A term for fever accompanied with much gastric disorder, coated tongue, and formation of sordes on the lips. (Dunglison.)
Saburra'tio. (*Saburra*.) A syn. for *Arenation*.
Saburra'tion. See *Saburratio*.
Sac. (*L. saccus*, a sack or bag.) Any bag-like cavity, with its covering.
S., air-. Another name for an *air-cell* of the lungs.
S., allan'toid. The *Allantois*.
S., amniot'ic. The *Amnion*.
S.s., aud'itory. Term for the sac-like rudimentary organs of hearing of some of the *Vertebrata*.
S., den'tal. See *Dental sac*.
S., embryon'ic. See *Embryonic sac*.
S., fœ'tal. A syn. for *S., gesta'tion*.
S., gesta'tion. Term for the sac in which an embryo is enclosed in cases of extra-uterine pregnancy.
S., her'nial. See *Hernial sac*.
S., her'nial intrapari'etal. The sac of an intraparietal hernia. See *Hernia, intra-parietal*.
S., lach'rymal. See *Lachrymal sac*.
S., lac'teal. See *Lacteal sac*.
S.s., la'tex. See *Latex sacs*.
S. of omen'tum. See *Omentum, sac of*.
S., peritone'al. The cavity of the peritoneum.
S., pleur'al. The cavity of the pleura.
S., se'rous. See *Serous sac*.
S., vitel'line. See *Vitelline sac*.
S., yolk-. See *Yolk-sac*.
Sacatra. Term for an individual who is seven eighths a negro and one eighth white. (Gould.)
Sac'cade. (F.) A jerk. In *Physiol.*, the involuntary jerking movement in the act of swallowing.
Saccaneurys'ma. (Σάκκος, a bag; *aneurysma*.) A sacciform or sacculated aneurysm.
Sac'cate. The same as *Saccated*.
Sac'cated. (*Saccus*.) Shaped like a sac.
Sac'char. A shortening of the word *Saccharum*.
Saccharate. A salt of *Saccharic acid*; also, of cane-sugar or *Saccharose*. Also, containing sugar.
S. of i'ron. The *Ferrum oxydatum saccharatum soluble*.
S. of lead. Used to prepare nitro-saccharate of lead, which has been recommended as a solvent of urinary calculi.
S. of lime. *Calcaria saccharata*.
Sac'charated. (*Saccharum*.) Made with, or containing, sugar.
S. car'bonate of i'ron. See *Ferri carbonas saccharata*.
S. fer'rous i'odide. See *Ferrum iodatum saccharatum*.
S. i'ron. See *Iron, saccharated*.
S. pep'sin. See *Pepsina saccharata*.
S. solu'tion of lime. The *Liquor calcis saccharatus*.
S. tar. Tar 4 parts, sugar 96 parts.
Saccharephidro'sis. (Σάκχαρον, sugar; *ephidrosis*.) A variety of *Hyperidrosis* in which the sweat contains sugar.
Sac'chari fæx. (Gen. of *saccharum*;

fæx, dregs.) Term for *Treacle* or molasses, the uncrystallisable juice of *Saccharum officinarum*.
Sacchar'ic acid. $C_6H_{10}O_8$. A dibasic acid prepared by the action of nitric acid on sugar and several other carbohydrates. It is deliquescent, and dissolves readily in alcohol. Also, a syn. for *Tetraoxycaproic acid* (q. v.).
Saccharide. An ether formed by the combination of *Saccharose* with an acid radical.
Sacchari'ferous. (*L. saccharum*; *fero*, to bear.) Sugar-bearing, yielding sugar.
Saccharifica'tion. (*L. saccharum*; *facio*, to make.) The conversion of starch into sugar.
Sacchari'meter. Σάκχαρον, sugar; μέτρον, a measure.) An apparatus for the estimation of the amount of sugar in a solution. There are two kinds of saccharimeter. One is a form of *Hydrometer*, which indicates the amount of sugar by the specific gravity of the solution. The other is a form of *Polarimeter*, which indicates the amount by the number of degrees of rotation of the plane of polarisation in a ray of light passed through the solution.
S., fermenta'tion. A special form of saccharimeter for collection of the carbon dioxide evolved in fermentation of saccharine urine, and estimation of its percentage.
Sacchari'metry. (*Saccharimeter*.) The process of estimating the amount of sugar in any solution.
Sac'charin. (*Saccharum*.)
 $C_6H_4<\overset{CO}{SO_2}>NH$. A derivative of coal-tar, occurring in white six-sided tablets melting at 224° C. It is said to be 280 times as sweet as cane-sugar. It has an antiseptic action. Taken as a substitute for sugar in diabetes.
 Also, $C_6H_{10}O_5$, the anhydride of *Tetraoxycaproic acid* (monobasic saccharic acid).
Sac'charine. Having the properties of *Saccharum* or sugar, sugary. Also, as a subst., an old term for *Oxalic acid*.
S. diabe'tes. See *Diabetes, saccharine*.
Sacchari'nin. The same as *Saccharin*, first definition.
Saccharo'blose. A syn. for *Saccharose*.
Saccharocol'loid. (*Saccharum*; *colloid*.) General term for the colloid members of the *Carbohydrate* group (starch gum, &c.).
Saccharogalactorrhœ'a. (Σάκχαρον, sugar; *galactorrhœa*.) The secretion of milk containing an excess of sugar.
Sac'charogen. (Σάκχαρον, sugar; γεννάω, to produce.) A glucoside present in milk, which can be converted into *lactose*.
Saccharogen'esis. (Σάκχαρον; *genesis*.) The formation of sugar.
Saccharogummi'ta. (*L. saccharum*, sugar; *gummi*, gum.) A gum-like sugar found in liquorice root, *Glycyrrhiza glabra*.
Sac'charoid. (Σάκχαρον; *ēidos*, resemblance.) Resembling *Saccharose*.
Saccharolac'tate. See *Saccholactate*.
Saccharo'leus. (*L. saccharum*, sugar; *oleum*, oil.) *Surg.* An epithet formerly applied by Beral to dressings consisting of powdered sugar and ethereal oils.
Saccharol'icus. Syn. for *Saccharoleus*.
Saccharolo'gia. (Σάκχαρον, sugar; λόγος, a discourse.) A treatise on sugar. Title of a work published by A. Sala in 1637.

SACCHAROMETER—SACCOCYSTIS

Saccharo'meter. (Σάκχαρον; μέτρον.) See *Saccharimeter*.

S., fermenta'tion. See *Saccharimeter*, *fermentation*.

Saccharomy'ces. (Σάκχαρον, sugar; μύκης, a fungus.) A Genus of ascomycetous *Fungi*, including the varieties of *Yeast*.

S. al'bicans. A syn. for *Oidium albicans*.

S. apicul'atus. A species found upon gooseberries and some other plants.

S. capillit'i. A species sometimes found on the human scalp, and believed to be the cause of *Pityriasis capitis*.

S. cerevis'iæ. (L. *cerevisia*, beer.) The yeast of beer, brewer's yeast. It consists of minute spherical or oval cells, either solitary or in branched chains.

S. conglomerat'us. A species present in *grape-must* at the end of fermentation.

S. copro'genus. A species found in human faeces.

S. ellipsoideus. The common vinous ferment.

S. exig'uus. A species found at the end of fermentation in beer.

S. glutinis. A rose-coloured species growing on potatoes and gelatin.

S. guttula'tus. A species growing in the digestive canal, in various kinds of animals.

S. mesenter'icus. A species which neutralises the acids of fruits. It forms a scum on fermented liquids, termed by Nägeli the mesenteric skin.

S. mi'nor. The fungus of baker's yeast. (Engel.)

S. mycoder'ma. The same as *S. albicans*.

S. pasteuria'nus. A species very closely allied to *S. ellipsoideus*.

S. psori'asis. A species growing round the hairs of the human scalp.

S. rees'si. Believed to be a variety of *S. ellipsoideus*.

S. tyri'cola. A species growing in fermenting cheese, and closely resembling *S. minor*.

Saccharon. Name for the lactone of *Saccharonic acid*.

Saccharonic ac'id. $C_6H_{10}O_7$. An acid formed by oxidation of saccharin by means of nitric acid. It forms large crystals, which are readily soluble in water.

Saccharorrhœ'a. (Σάκχαρον, πῑω, to flow.) A syn. for *Glycyrrhœa*.

S. cuta'nea. Cutaneous saccharorrhœa. See *Ephidrosis saccharata*.

S. lactea. Excretion of milk containing an abnormally large proportion of sugar.

S. pulmona'lis. The expectoration of sputa containing sugar.

S. urino'sa. A syn. for *Saccharine diabetes*.

Saccharose. $C_{12}H_{22}O_{11}$. Cane-sugar, a carbohydrate of characteristic sweet taste, obtained from the sugar-cane, beet, maple, &c. It occurs in small amount in many fruits, flowers, and roots. It melts at $160^{\circ}C$., and at 200° is converted into caramel. Its solution is dextrorotatory.

Sac'charous. A syn. for *Saccharine*.

Sac'charum. (L. *saccharum*; Gr. σάκχαρ, σάκχαρι, or σάκχαρον; Sanser. çarkara.) Sugar. Also, a Genus of the Gramineæ.

S. acer'num. Maple sugar. It is obtained from the *Acer saccharinum*. Used as a demulcent.

S. al'bum. White, loaf, or refined sugar.

S. alumina'tum. A mixture of equal parts of powdered alum and powdered white sugar. Used as a styptic.

S. alu'minus. The same as *S. alumi-natum*.

S. canaden'së. A syn. for *S. acernum*.

S. can'didum. Sugar-candy.

S. can'dum. The same as *S. candidum*.

S. can'thum. The same as *S. candidum*.

S. can'tum. The same as *S. candidum*.

S. chinen'së. A species of sugar-cane which is cultivated in China.

S. commu'në. Raw, or moist sugar. See *Sugar*, *moist*.

S. hordea'tum. Barley-sugar.

S. lactis. B.P. Sugar of milk. $C_{12}H_{22}O_{12}$. Obtained by evaporation of milk-whey. *Dose*, 60 to 120 gr., or more, in water. Used in the preparation of *Pulvis elaterini compositus* and *Extractum euonymi siccum*.

S. man'næ. The sugar of manna, *mannite*.

S. non-purifica'tum. A syn. for *S. communë*.

S. officina'lë. The sugar-cane. Hab., Southern Asia. Cultivated in various hot countries for its sugar.

S. officinar'um. The same as *S. officina'lë*.

S. perid'ium. A syn. for *S. hordeatum*.

S. purifica'tum. B.P. $C_{12}H_{22}O_{11}$. Refined, loaf, lump, or white sugar. In conical loaves. Demulcent. Used as a sweetening agent and a preservative. From it is prepared *Syrupus*.

S. pu'rum. The same as *S. purificatum*.

S. rosa'ceum. A term for *Confectio rosæ gallicæ*.

S. satur'ni. (Saturn.) Sugar of lead, lead acetate.

S. sinen'së. A syn. for *S. chinensë*.

S. us'tum. Burnt sugar, or caramel. Used as a colouring agent.

Sac'charure. Shortened form of the word *Saccharuretum*.

Saccharure'tum. (*Saccharum*, F. *saccharure*.) Term for a preparation made by saturation of a tincture with sugar, with subsequent evaporation and powdering of the product.

Saccharu'reus. (*Saccharum*.) A syn. for *Saccharoleus*. (Béral.)

Sacch'lactate. See *Saccholactate*.

Sacch'lactic ac'id. See *Saccholactic acid*.

Sacchogummi'ta. See *Saccharogummita*.

Sacchola'ctate. A salt of *Saccholactic acid*.

Sacchola'ctic ac'id. (L. *saccharum*, sugar; *lac*, *lactis*, milk.) A term applied to *Mucic acid*, because this acid was first prepared from sugar of milk.

Sacci. (L.) Nom. pl. of *Saccus*.

S. peritonea'les. The peritoneal sacs or cavities.

Sacci'ferous. (L. *saccus*; *fero*, to bear.) Sac-bearing.

Sac'ciform. (L. *saccus*; *forma*, shape.) Sac-shaped.

S. disease' of a'nus. A disease consisting in distension and inflammation of the *Rectal pouches*.

Saccocys'tis. (L. *saccus*; Gr. κύστις, a box.) A syn. for *Parurocystis*.

Sac'cular. (*Sacculus*.) Having or resembling a saccule, or saccules.

S. aneurysm. See *Aneurysm, saccular*.

S. glands. See *Glands, saccular*.

Sac'culate. The same as *Sacculated*.

Sacculated. Divided up into saccules; made up of saccules.

Saccula'tion. Division into *Sacculi*.

Sac'cule. (*L. sacculus*.) A little *Sac*.

S. of larynx. A syn. for *Ventricle of larynx*.

S. of vestibule. See *Vestibule, sac-cule of*.

Sac'culi. Nom. pl. of *Sacculus*.

S. adipo'si. Fatty sacculi or globules, fat-globules.

S. chalice'phori. (Χάλιξ, rubble; φορός, bearing.) A term for *Bone-lacunæ*.

S. ductuum lactifero'rum. The sacculi or ampullæ of the *Lacteal ducts*.

S. larynge'i. The sacculi or ventricles of the larynx.

S. medicina'les. Term for medicinal bags, or bags containing medicinal substances.

S. medullar'es. Medullary sacculi. The cells formed by the *Medullary membrane*.

S. of co'lon. See under *Colon*.

Sac'culose. (*Sacculus*.) Full of, or furnished with, *Sacculi*.

Sac'culo-utric'ular duct. The constriction which forms between the *Sacculi* and *Utricle* of the otic vesicle of the embryo.

Sac'culus. (*L.*) A little sack or bag.

Anat. A little *Sac*.

S. adipo'sus. A fat-cell, or cell of adipose tissue.

S. cæca'lis. Blind saccule. A name for *Laryngeal pouch*.

S. cephal'icus. Cephalic saccule. A syn. for *Cucupha*.

S. chyl'ifer. Chyliferous saccule. A syn. for *Receptaculum chyli*.

S. comm'unis. A syn. for *S. ellipticus*.

S. cor'dis. The saccule of the heart. A name for the *Pericardium*.

S. ellipt'icus. See under *Semicircular canals*.

S. hemiellip'ticus. A syn. for *S. ellipt'icus*.

S. intest'ni cras'si. Saccule of the thick intestine. A name for the *Cæcum*.

S. labyrin'thi. The saccule of the labyrinth. Another name for *S. vestibuli*.

S. lachryma'lis. The lachrymal sac. See *Lacrimonial sac*.

S. lacti'ferus. Lactiferous saccule. A syn. for *Lacteal sac*.

S. laryng'is. The *Laryngeal pouch*.

S. medicina'lis. A medicinal or medicated pillow, such as the *Hop pillow* (q. v.).

S. muco'sus. Mucous saccule. A name for the bursa under the rectus femoris.

S. oblon'gus. A syn. for *S. ellipticus*.

S. pro'prius. A syn. for *S. rotundus*.

S. ro'rifer. *Roriferous* saccule. A syn. for *Receptaculum chyli*.

S. rotun'dus. See under *Semicircular canals*.

S. semiova'lis. The same as *S. hemi-ellipticus*.

S. sphæ'ricus. The same as *S. rotundus*.

S. vesica'lis. A sacculus of the urinary bladder. See *Bladder, sacculated*.

S. vestib'uli. See *Vestibule, membranous*.

Saccurocys'tis. (*L. saccus*; Gr. οὖρον, urine; κύστις, a box; also, the urinary bladder.) The same as *Saccocystis* and *Pururocystis*.

Sac'cus. (*L.*) A sack; a large scrip.

In *Biol.*, a *Sac*.

S. cæ'cus. The blind sac. A term for the *Stomach*.

S. cæ'cus co'li. The blind sac of the colon. A syn. for *Cæcum*.

S. cæ'cus ster'no-clei'do-mastoi-de'us. Grüber's term for a diverticulum of the supra-sternal aponeurotic space, situated behind the clavicular origin of the sterno-cleido-mastoid muscle on each side.

S. cæ'cus ventric'uli. The blind sac of the stomach. A term for the fundus of the stomach.

S. co'li. The sac of the colon. The same as *S. cæcus coli*.

S. conjuncti'væ. The conjunctival sac.

S. cor'dis. The sac of the heart. A syn. for *Pericardium*.

S. endolymphat'icus. Endolymphatic sac. Syn. for *Labyrinth, membranous*.

S. epididym'idis. Sac of the epididymis. The covering given to the epididymis by the visceral layer of the tunica vaginalis.

S. epiplo'icus. Epiploic sac. A term for *Omentum, sac of*.

S. hemiellip'ticus. A syn. for *Utriculus*.

S. hernio'sus. *Hernial sac*.

S. intest'ni cras'si. Sac of the thick intestine. The same as *S. cæcus coli*.

S. lachryma'lis. The lachrymal, or lacrimonial, sac.

S. lac'teus. A *Lacteal sac*. Also, syn. for *Receptaculum chyli*.

S. liena'lis. The *Splenic pouch*.

S. muco'sus. A syn. for *Bursa mucosa*.

S. omenta'lis. Omental pouch. A name for the *Omentum, lesser, sac of*.

S. peritonæa'lis mag'nus. Greater sac or cavity of the peritoneum.

S. peritonæa'lis mi'nor. Lesser peritoneal sac. A syn. for *Omentum, lesser, sac of*.

S. peritonæa'lis retroventricular'is. Retroventricular sac of the peritoneum. A syn. for *Omentum, lesser, sac of*.

S. pleur'æ. The sac or cavity of the *Pleura*.

S. tu'bo-tympan'icus. Tubo-tympanic sac. The diverticulum of the primitive gut which develops into the tympanic cavity and Eustachian tube.

S. venar'um cavar'um. Sac of the venæ cavæ. A term for the right auricle of the heart.

S. venar'um pulmona'lis. The same as *S. venarum pulmonatum*.

S. venar'um pulmona'tium. Sac of the pulmonary veins. A term for the left auricle of the heart.

S. ventric'uli. A name for the fundus of the *Stomach*.

S. vitelli'nus. The vitelline sac or yolk-sac.

Sa'cer. (*L. sacer, -ra, -um*.) Holy, sacred.

S. ignis. The sacred fire. An old name for "St. Anthony's fire," or *Erysipelas*.

Also, term formerly applied to *Herpes exedens*.

S. mor'bus. The sacred disease. An old name for epilepsy.

S. musculus. A name for the *Longissimus dorsi*.

Sacerdotis penis. (L. *sacerdos*, *sacerdotis*, an augur, a priest; *penis*, the male organ.) An old term for the flower of the *Arium maculatum*.

Sachet. (F.) *Med.* A small bag containing medicated substances.

S. resolutif. Name for a special form of sachet, containing equal parts of sulphate of iron, sulphate of calcium, and sal ammoniac. (Gould.)

Sachs' theory of inflammation. See under *Theory*.

Sachse's solution. A solution introduced by Sachse for the quantitative estimation of sugar in urine. Red iodide of mercury 18 grammes, iodide of potassium 25 grammes, aqueous solution of caustic potash 80 grammes; the mixture to be diluted to 1 litre. The sugar is reduced by this solution. The occurrence of complete reduction is ascertained by adding solution of stannous chloride supersaturated with caustic soda. 40 cub. cent. of the solution used correspond to a reduction of 0.1342 grammes of glucose.

S.'s test. A quantitative test for sugar in urine by means of *S.'s solution*.

Sack. (L. *siccus*, dry.) A syn. for *Sac*. Also, a dry wine formerly in common use. It was probably a kind of sherry.

Saclactate. See *Saccharolactate*.

Saclactic. See *Saccharolactic*.

Sacoche. (F.) An ambulance satchel such as is used in the army, containing first-aid dressings.

Sacra fistula. (L. *fistula*.) An old term for the vertebral column.

S., herba. See *Herba sacra*.

S. media, arteria. The *Sacral artery*, middle.

S., tinctura. See *Tinctura sacra*.

Sacrad. A term of Dr. Barclay's signifying towards the sacral aspect.

Sacral. (*Sacrum*.) *Anat.* Belonging to the *Sacrum*.

S. artery, middle. This artery arises from the posterior surface of the abdominal artery just above its bifurcation. It passes down the front of the sacrum to the coccyx, where it forms anastomotic arches with the lateral sacral arteries, and is continued as a small vessel through the aponeurosis of the levatores ani, to end in the coccygeal gland on the front of the coccyx. It gives small branches to the mesorectum, and others anastomosing with the lateral sacral arteries, and sometimes sending twigs through the anterior sacral foramina.

S. arteries. These are the *S. artery*, middle, and the *S. arteries*, lateral.

S. arteries, lateral. Two on each side, usually. They arise from the posterior division of the internal iliac, and descend internally to the anterior sacral foramina. The inferior pair anastomose with offsets of the middle sacral.

S. aspect. That aspect which faces towards the position of the sacrum.

S. bone. The *Sacrum*.

S. canal. The sacral portion of the vertebral canal.

S. cornua. The cornua of the sacrum. See under *Sacrum*.

S. extremities. A term for the lower extremities.

S. flexure of rectum. The first of the longitudinal curves of the rectum, corresponding to the hollow of the sacrum.

S. foramina. See under *Sacrum*.

S. ganglia. The ganglia of the sacral portion of the sympathetic system.

S. grooves. Two slightly marked longitudinal grooves, one on either side of the midline, on the posterior or dorsal surface of the sacrum, continuous with the vertebral grooves of those parts of the vertebral column which lie above the sacrum.

S. index. Term for the number obtained by dividing the number representing the breadth of the sacrum, multiplied by 100, by the number representing the length of the sacrum.

S. nerves. These are five in number. They are divided into anterior and posterior divisions before leaving the spinal canal. The anterior divisions of the first four pass out by the anterior sacral foramina, the fifth passes between the sacrum and coccyx. The sacral nerves below the second diminish in size to the fifth. The anterior divisions communicate with the sympathetic by short branches. The first three nerves and part of the fourth go to form between them the *Sacral plexus*. The fifth ends separately on the back of the coccyx. The part of the fourth nerve not joining the plexus gives branches to viscera and muscles in the pelvis, and sends a twig downwards to join the fifth nerve. The anterior division of the fifth sacral nerve is joined by the twig from the fourth and also by the anterior division of the coccygeal nerve, and passes downwards over the front of the coccygeus, which it supplies, ending in the integument over the back of the coccyx.

S. nucleus. A mass of grey matter in the spinal cord at the level of the origins of the second and third sacral nerves, and in that part of the cord corresponding to the position of Clarke's column.

S. parasites. Term for congenital tumours of the sacrum, consisting either of attached dermoid cysts, or of tumours containing rudiments of a second or parasitic foetus.

S. plexus. This is a nerve-plexus formed by the union of the lumbo-sacral cord (from the fifth and part of the fourth lumbar nerves), and the anterior divisions of the first three sacral nerves and part of the fourth sacral. The lumbo-sacral cord, and the first and second and greater part of the third sacral nerves unite to form an upper, larger cord, which is continued into the great sciatic nerve; the lesser part of the third sacral, and part of the fourth, and occasionally also a twig from the second, unite and are continued into the pudic nerve. The sacral plexus also gives off collateral offsets:—the superior and inferior gluteal nerves, the small sciatic, and the perforating cutaneous, and muscular branches to the obturator internus, gemelli, pyramiformis, and quadratus femoris.

S. plexus, lymphatic. A mass of lymphatic glands lying on the front of the sacrum, and receiving the lymphatics from the rectum.

S. plexus, posterior. Term for the series of anastomotic loops formed on the upper part of the posterior surface of the sacrum by the external branches of the posterior divisions of the first four sacral nerves and the last lumbar nerve. The branches of this plexus end in the skin of the buttocks.

S. ribs. Term for the separate points of ossification of the lateral parts of the sacrum.

S. terato'ma. See *Teratoma, sacral*.

S. veins. There are two middle sacral veins, which accompany the middle sacral artery and anastomose with the lateral sacral veins and with the veins of the rectum.

S. vertebræ. The five vertebræ (in man) which unite to form the adult sacrum.

Sacrar'thro'cacē. (L. *sacrum*; Gr. ἄρθρον, a joint; κακός, evil.) An old term for *Sacro-iliac disease*.

Sacra'to. The same as *Sacatra*.

Sac'cred bark. *Cascara sagrada*.

S. bean. The *Nelumbium luteum*.

S. mal'ady. A syn. for Epilepsy, *Sacer morbus*.

Sac'ren. Term signifying belonging solely to the sacrum.

Sac'ri-lumba'lis. Coues' term for the *Erector spinæ*.

Sac'riplex. (*Sacrum*; *plexus*.) The *Sacral plexus*.

Sacriplex'al. Belonging to the *Sacriplex*.

Sacro. (*Sacrum*.) Prefix denoting connection with the *Sacrum*.

Sacro-caud'al. Belonging to the *Sacrum* and *Cauda* or tail.

Sacro-coccyge'al. (*Sacrum*; *coccyx*.) Belonging to the *Sacrum* and *Coccyx*.

S.-coccyge'al articula'tion. The *sacrum* and *coccyx* are united by an inter-vertebral disc and by anterior and posterior inter-articular and lateral ligaments. In the male, after middle life, there is usually bony union between these two bones.

S.-coccyge'al joint. See *S.-coccygeal articulation*.

S.-coccyge'al lig'aments. See *S.-coccygeal articulation*.

S.-coccyge'al notch. The lateral concavity or notch at the junction of the *sacrum* and *coccyx*.

S.-coccyge'al re'gion. That part of the posterior wall of the pelvis corresponding to the anterior surface of the *sacrum* and *coccyx*.

Sacrococcyge'us anti'cus. Also termed *Curvator coccygis* (q. v.).

S. post'icus. Also termed *Extensor coccygis*. In man, a few longitudinal muscular slips extending from the posterior surface of the *sacrum* to that of the *coccyx*.

Sacro-cos'tal. Belonging to the *sacrum*, and presenting the characters of a rib.

Sacrocosta'lis. (L. *Sacrum*; *costa*, a rib.) A syn. for *Sacrolumbalis*.

S.-cotyloid. Belonging to the *sacrum* and *cotyloid cavity* or *acetabulum*.

S.-coxal'gia. (*Sacro-*; L. *coxa*, the hip; Gr. ἄλγος, pain.) A syn. for *Sacro-iliac disease*.

S.-cox'i'tis. The same as *Sacro-coxal'gia*.

S.-fé'moral. (F.) A term for the *Gluteus maximus*.

S.-il'iac. Belonging to the *Sacrum* and *Ilium*.

S.-il'iac articula'tion. The flattened, somewhat kidney-shaped surfaces of the *ilium* and *sacrum* are united by means of ligaments in an immoveable synchondrosis. Each bony surface is covered with a layer of cartilage, the *sacral cartilage* being the thicker. The bones are kept in position by the anterior and posterior *sacro-iliac ligaments*, and are supported also by the great and small *sacro-sciatic ligaments*.

S.-il'iac disease'. A chronic inflammation, probably always tuberculous, of one *sacro-iliac joint*. It usually begins in young adult life, runs a slow course, and is practically incurable. There are pain, tenderness, and swelling over the joint, weakness, going on to complete uselessness, of the corresponding limb, with elongation, from loosening of the joint, and with consequent deformity of the hip. Suppuration usually occurs late in the disease.

S.-il'iac joint. See *S.-iliac articulation*.

S.-il'iac lig'aments. See *Ligaments, sacro-iliac*.

S.-il'iac sym'physis. A syn. for *Sacro-iliac synchondrosis*.

S.-il'iac synchondro'sis. The *S.-iliac articulation*.

S.-ischiat'ic. The same as *Sacro-sciatic*.

S.-lat'eral ar'teries. A syn. for *Sacral arteries, lateral*.

S.-lumba'lis. The first part of the outer column into which the *Erector spinæ* is divided. It arises from the outer and superficial part of the common muscular mass, and ends in a number of tendons which are inserted into the angles of the lower six or seven ribs, usually sending also a fasciculus which joins the *musculus accessorius*.

S. lum'bar. Belonging to the *sacrum* and the loins.

S.-lum'bar an'gle. A syn. for *S.-vertebral angle*.

S.-lum'bar lig'ament. The *Lumbo-sacral ligament*.

S. lum'bar mus'cle. The *Sacro-lumbalis*.

S.-me'dian ar'tery. A syn. for *Sacral artery, middle*.

S.-pectine'al dia'meter. Another name for the oblique diameter of the inlet of the pelvis. See *Pelvis, diameters of*.

S.-pu'bic. Belonging to the *sacrum* and *pubes*.

S.-rec'tal. Belonging to the *Sacrum* and *Rectum*.

S.-sciat'ic. Belonging to the *Sacrum* and *Ischium*.

S.-sciat'ic fold. A name for the "white line" of the pelvis, which is the curved line of origin of the recto-vesical from the obturator fascia, extending from the upper part of the obturator foramen to the spine of the ischium.

S.-sciat'ic fora'men, great. The foramen bounded below by the small *sacro-sciatic ligament*, and above, by the innominate bone. Through it pass the *pyriformis muscle*, and the *sciatic, gluteal, and pudic vessels and nerves*.

S.-sciat'ic fora'men, small. The small foramen bounded in front by the smooth surface of the ischium between the spine and tuberosity, and above and below by the small and great *sacro-sciatic ligaments*, respectively. Through it pass the *obturator internus muscle* and the *pudic vessels and nerve*.

S.-sciat'ic lig'ament, ante'rior. A syn. for *S.-sciatic ligament, lesser*.

S.-sciat'ic lig'ament, great. Also termed *posterior sacro-sciatic ligament*. It is broad and triangular, and is attached by its base to the side of the *sacrum* and *coccyx* and the posterior inferior spine of *ilium*, and by its apex to the inner margin of the tuberosity of the ischium, from which passes inwards an extension, the *falciform process*, the border of which

forms part of the inferior attachment of the obturator fascia.

S.-sciatic lig'ament, small. Also termed anterior sacro-sciatic ligament. It lies in front of the great sacro-sciatic ligament, is triangular in shape, and is attached, by its base, to the side of the sacrum and coccyx in common with the great sacro-sciatic ligament, by its apex to the spine of the ischium. Its deep surface is blended with the coccygeus muscle.

S.-sciatic ligament, poste'rior. A syn. for *Sacro-sciatic ligament, great*.

S.-sciatic notch, great. A syn. for *Sciatic notch, great*.

S., sciatic notch, lesser. A syn. for *Sciatic notch, small*.

S.-spinal. Belonging to the sacrum and also to another part or parts of the spine.

S.-spinal muscle. See *Sacrospinalis*.

Sacrospinalis. (*Sacro-*; *spinal.*) A syn. for *Erector spinæ*.

S.-subpu'bic dia'meter. A syn. for *Diagonal conjugate*. See under *Pelvis, diameters of*.

S.-vertebral. Belonging to the sacrum and other vertebræ.

S.-vertebral an'gle. The obtuse angle formed between the sacrum and the lumbar portion of the spinal column.

S. vertebral articula'tion. The articulation between the last lumbar vertebra and the sacrum.

S.-ver'tebral lig'ament. A syn. for *Lumbo-sacral ligament*.

Sacrum. (L. *sacrum*, anything dedicated to the gods; the *os sacrum*, because this bone was offered in sacrifices. F. *sacrum*; I. *sacro*; G. *Kreuzbein*.) The os sacrum or sacral bone. In the human subject this bone is formed by the union in the adult of the elements of the five sacral vertebræ. The sacrum is roughly triangular, from side to side, with its base upwards. It is concave and smooth in front, convex and rough behind. The ventral surface looks forwards and downwards, and is crossed by four transverse ridges, indicating the places of union of its vertebræ. At the extremities of these ridges are the rounded anterior sacral foramina, outside which the lateral part of the bone is grooved. The dorsal surface is slightly narrower than the ventral, and present four small spinous processes along the mid-line, connected together by a continuous ridge. Below the last spine is a triangular opening which forms the lower end of the spinal canal. Its lateral margins are produced downwards into the two sacral cornua.

On either side of each spine is a groove, at the outer end of which is the corresponding posterior sacral foramen. Internal to the foramen is a small tubercle representing the articular and mamillary processes. An elevation outside the foramen represents the transverse process. The part of the sacrum external to the foramina is termed the *lateral mass*, the outer or lateral surface of which forms the rough, flattened auricular surface, which articulates with the corresponding surface of the ilium. Behind this, the sacrum is rough for the attachment of ligaments. Below, the lateral mass narrows to end in the inferior lateral angle, below which the sacrum is suddenly narrowed, to form, with the coccyx, a notch. The upper surface of the sacrum resembles that of the last lumbar vertebra, and articulates with the lower surface of this vertebra. The lower surface is oval, and articulates with the coccyx.

The sacral canal is curved, and narrows from above downwards.

Each of the vertebræ making up the sacrum presents three primary centres of ossification, for the body and the two arches. In the first three (or four) vertebræ the anterior part of the lateral mass is formed from a separate centre of ossification. In the lower two vertebræ the lateral mass is formed by extension downwards of the primary lateral nuclei. Epiphyses are formed on each vertebral body at puberty, and two flat bony plates, an upper and a lower, are added to each of the lateral surfaces of the sacrum. The last bodies to unite are those of the first and second sacral vertebræ; this union takes place about the twenty-fifth year.

S. a'læ of. A syn. for *lateral masses* of sacrum. See main heading.

Sactim. An old term for *Vitriol*. (Ruland.)

Saddle, Turk'ish. See *Sella turcica*.

S.-joint. Also termed *Peronarthrosis*. A joint in which the articulating bony surfaces are convex in one direction and concave in the other, being thus somewhat saddle-shaped.

S.-nose. A nose the bridge of which has sunk, in consequence of necrosis of the nasal bones.

Sad'ir. Old term for *Scoria*. (Ruland and Johnson.)

Sadism. (After the Marquis de Sade, who wrote novels dealing much with obscenity, sexual cruelty, and vices in general.) Term for a form of sexual perversion in which a person of one sex has gratification in abusing, and behaving with excessive cruelty towards, persons of the other sex. Cases of *Rape* are often perpetrated by individuals of this kind.

Sadist. An individual affected with *Sadism*.

Sadistic. Belonging to *Sadism*.

Sä'misch's ul'cer of cor'nea. See under *Cornea, ulcers of*.

Sæ'pæ. Old term for certain large pustules mentioned by Pöësius.

Sæ'pes. See *Sepes*.

Sæpimentum. (L. *sæpio*, to fence round.) Term for the dense central tissue of the *Umbilical cord*, which surrounds its three blood-vessels.

Also, term applied by Bartholin to the *Pons Varolii*, from the manner in which it covers the fourth ventricle.

Sæpto'meter. See *Septometer*.

Sæp'tum. See *Septum*.

Safety lamp. Ordinary name for *Davy's lamp* (q. v.).

Saf'flower. The *Carthamus tinctoria*.

Saf'franin. See *Safranin*.

Saf'rol. See *Safrol*.

Saffron. (Mid. Eng. *saffron*.) Common name for *Crocus* (q. v.).

S., Amer'ican. The *Carthamus tinctoria*.

S., bas'tard. The same as *S., American*.

S., dyer's. The *Carthamus tinctoria*.

S. flower. The *Carthamus tinctoria*.

S., mead'ow. The *Colchicum autumnale*.

S. of an'timony. *Crocus of antimony*. See *Crocus antimonii*.

S. of steel. An old name for red oxide of iron.

S.-tea. An infusion of the flowers of *Carthamus tinctoria*, used as a diuretic in febrile disorders.

S.-yellow. A yellow pigment obtained from the *Carthamus tinctoria*.

Safranin. (F. *safranine*.) An aniline dye, soluble in alcohol, and to a less extent in water, which stains animal or vegetable tissues a rose-colour, the nuclei being more deeply stained than the cell-substance.

Safranophile. (*Safranin*; Gr. *φιλέω*, to love). Having an affinity for, or staining readily with, *safranin*.

Safranum. The *Carthamus tinctoria*.

Saf'rene. $C_{10}H_{16}$. A volatile compound obtained by the fractional distillation of sassafras oil.

Safrol. $C_{10}H_{10}O_3$. The steareptene of sassafras-oil, from which latter it separates in the cold. It is used therapeutically in neuralgic affections; and is used also as a perfume for soaps.

Safrosin. A syn. for *Daphnin*.

Sa'ga. (L.) A wise woman; also, a sorceress; also, a midwife. Also, original Malayan name for *Sago*.

Sag'aban. The *Apios tuberosa*.

Sagapenum. (*Σαγάπηνον*.) A gum-resin supposed to have been obtained from the *Ferula persica*. It has an alliaceous odour, and a nauseous pungent taste. Formerly used as an antispasmodic and emmenagogue.

Sag'apin. A syn. for *Sagapenum*.

Sage. (Mid. Eng. *sage*.) Bot. Common name for the *Salvia officinalis*; also, for the Genus *Salvia* in general.

Also (L. *sagus*, knowing, presaging). A wise man.

S.-brush. The *Artemisia tridentata*. A common shrub in Western North America. It contains a volatile oil which is anthelmintic.

S.-brush, dwarf. Term applied to two shrubs, the *Artemisia arbuscula* and the *Artemisia trifida*, both of which have an anthelmintic action.

S., gar'den. The *Salvia officinalis*.

S., In'dian. The *Eupatorium perfoliatum*.

S., infu'sion of. See *S. tea*.

S., Jeru'salem. The *Pulmonaria officinalis*.

S., moun'tain. The *Serra salvia*.

S. of vir'tue. The same as *S., small*.

S., small. Common name for the *Salvia hortensis minor*.

S. tea. A hot infusion of the leaves of *Salvia officinalis*.

S. tree. The *Lantana salvifolia*.

S., wild. A name for the *Salvia africana*; also, for the *Salvia lyrata*.

Sage'na. (L. *sagena*, a drag-net.) Anat. A term for the Omentum.

Sagi'men vit'ri. (L. *sagimentum* = *saginamentum*, fatness, grossness; *vitrum*, wood.) An old name for an *Alkali*.

Sagittæfolious. (L. *sagitta*, an arrow; *folium*, a leaf.) Bot. Having arrow-like leaves.

Sagit'tal. (L. *sagitta*, an arrow. F. *sagittal*; I. *sagittale*; G. *pfeilartig*.) Belonging to the median longitudinal antero-posterior plane of the body, or to any plane parallel with this.

S. circum'ference of skull. The circumference exposed in the cut surface when a sagittal section is made of the skull. In *Cranium*, it is measured from *nasion* to *opisthion*, by means of a steel tape, and from *opisthion* to *basion*, and from *basion* to *nasion* again by means of a sliding rule.

S. fur'row. The median furrow or channel on the inner surface of the skull which lodges the superior longitudinal sinus. (See *Sinus, longitudinal, superior*.) It forms a median groove on the inner surface of the frontal bone, beginning at the crista galli, in the contiguous portions of the two parietal bones, and along the centre of the squamous portion of the occipital bone, ending at the internal occipital protuberance.

S. groove. A syn. for *S. furrow*.

S. lines. Lines running directly antero-posteriorly.

S. nu'cleus. A name for the nucleus of the oculomotor or third cranial nerve.

S. plane. The median longitudinal antero-posterior plane of the body, or any plane parallel to this.

S. sec'tion. A section made through a sagittal plane of the body.

S. semicir'cular canal. A name for the *Semicircular canal, posterior*.

S. si'nus. A term applied to the superior longitudinal sinus, because this is lodged in the sagittal furrow.

S. su'ture. The median antero-posterior suture between the two parietal bones on the vertex of the skull.

Sagittalis. (L.) Belonging to an arrow; also, belonging to the seam or suture on the top of the skull.

Sagittar'ia. (L. *sagitta*, an arrow; so named from the shape of the leaves.) A Genus of the *Alismaceæ*.

S. alexiphar'mica. A West Indian plant the root of which is considered to be efficacious as an antidote in wounds from poisoned arrows.

S. sagittofo'lia. A syn. for *S. variabilis*.

S. variab'ilis. The arrow-weed, growing in marshy places in Europe and America. Root acrid and astringent, contains starch; leaves used locally as antialactagogues.

Sagittar'ium alexiphar'macum. The same as *Sagittaria alexipharmica*.

Sagit'tate. (L. *sagitta*, an arrow.)

Biol. Shaped like an arrow-head.

Sagitta'tus. *Sagittate*.

Sagittifolius. (L. *sagitta*, an arrow; *folium*, a leaf.) See *Sagittæfolious*.

Sago. (Sago, Malay name for several plants.) The starch obtained from the pith of several varieties of sago-palm, Genus *Metroxylon* (q. v.). It is nutritious and demulcent, and is used as a common article of food.

S., French. A syn. for *Arrowroot, common*.

S.-grain. Term for a granule on the eyelid in granular ophthalmia.

S. meal. Finely powdered sago.

S.-palm. Common name for several species of the Genus *Metroxylon* (q. v.).

S., Port'land Is'land. A name for the starch prepared from the root of *Arum maculatum*.

S. spleen. See *Spleen, sago*.

Sagra'da. See *Cascara sagrada*.

Sagu. *Sago*.

S., Rum'phil. The same as *S. saccharifer*.

S. sacchar'ifer. The *Arenga saccharifera*.

Sa'gus. Latinised form of the word *Sago*.

S. farini'fera. One of the sources of *Sago*.

SAGZENE—SAINT

S. genu'na. A syn. for *Metroxylon Rumphii*.

S. le'vis. A syn. for *Metroxylon saga*.

S. Rum'phii. A syn. for *Metroxylon Rumphii*.

Sagzen'ea. Old term for a certain carminative medicine.

Sahafa'ti. Old term used by Avicenna for a form of eczema in infants.

Sahafa'tum. The same as *Sahafati*.

Sahara. *Med.* An old term syn. with *Pervigilium*.

Saic. An old term of the alchemists for *Mercury*.

Saidschütz. A place in Bohemia, noted for its sulphur mineral spring.

Saignes. In the Department Cantal, France, a place noted for its gaseous chalybeate spring. (Foster.)

Sail-les-Bains. In the Department Loire, France, a place noted for its hot chalybeate and sulphur springs. (Foster.)

S.-les-Chateau morand. A syn. for *Sail-les-Bains*. (Foster.)

Sail-sous-Couzan. In the Department Loire, France. Chalybeate and gaseous spring. (Foster.)

Sailor's colic. Term for a form of colic not uncommon among seafaring men.

Saim. (*I. saime*, lard.) A term for *Adeps suillus*, or hog's lard.

Saint Agatha's disease'. An old name for *Magistis*.

St. Al'gnon's disease'. An old name for *Tinea* in general.

St.-Al'ban. A place in the Department Loire, France. Noted for its cold alkaline spring.

St.-Am'and. A place in the Department Nord, France. Noted for its saline spring, temperature 28° C.; used internally or for baths.

St. Andrew's cross. The *Ascyrum crux Andree*.

St. Anthony's dance. A syn. for *St. Vitus' dance*.

St. Anthony's fire. See *Anthony's fire*, *St.*

St. Appolo'nia's disease'. An old name for toothache and pain in the jaw.

St. Avertin's disease'. An old name for *Epilepsy*.

St. Avid'us' disease'. A name for deafness.

St. Bar'naby's thistle. A common name for the *Centaurea solstitialis*.

St. Bartholomew's tea. A name for *Paraguay tea*.

St. Bathel'emy. In the Department Maine-et-Loire, France. Gaseous and chalybeate spring.

St. Blaise's disease'. A name for *Quinsy*.

St. Bla'sius disease'. The same as *St. Blaise's disease*.

St. Cath'arine's wells. Saline springs, in Ontario, Canada. Lime springs and iodobromated springs.

St. Charles' root. See *Carlo sancto*.

St.-Chris'tan. In the Department Basses-Pyrénées, France. Noted for its chalybeate and gaseous springs.

St. Clair's disease'. A name for *Ophthalmia*.

St. De'nis-les-Blois. In the Depart-

ment Loir-et-Cher, France. Gaseous chalybeate spring.

St. Dié. In the Department Vosges, France. Noted for its chalybeate spring.

St. Di'zier. In the Department Haut-Maine, France. Noted for its gaseous, chalybeate, and sulphur spring.

St. Dym'phna's disease'. A name for *Insanity*.

St. Eras'mus' disease'. A term for *Colic*.

St. Fla'cre's disease'. A term for *Hæmorrhoids*.

St.-Flo'ret. In the Department Puy-de-Dôme, France. A warm alkaline and chalybeate gaseous spring.

St. Francis' fire. A syn. for *St. Anthony's fire*.

St.-Gal'mier. A place in the Department Loire, France. Noted for its cold alkaline spring.

St.-Ge'nis. In Piedmont, Italy. A saline sulphur spring.

St.-Georges-des-Monts. In the Department Puy-de-Dôme, France. A chalybeate spring.

St.-Ge'raud. In the Department Cantal, France. An alkaline and chalybeate gaseous spring.

St. Ger'main tea. A mixture of senna, fennel, anise, elder flowers, and acid tartrate of potash. Action, aperient. Also termed *Species laxantes*.

St. Ger'vais. A place in the Department Haute-Savoie, France, which has a warm saline spring, temperature 41° C., used internally and for baths.

St. Gerva'sius' disease'. A name for *Rheumatism*.

St. Giles' disease'. A name for *Cancer*.

St. Goth'ard's disease'. A name for *Anæmia*.

St. Guy's dance. The same as *St. Vitus' dance*.

St. Hele'na tea. A kind of tea made in the island of St. Helena by infusing the leaves of the plant *Beatsonia portulacifolia*.

St. Hilaire', angle of. (After the anatomist Geoffroy St. Hilaire, who described it.) A syn. for *Facial angle*.

St.-Hip'polyte-D'en'val. In the Department Puy-de-Dôme, France. Chalybeate springs.

St. Honore. In the Department Nièvre, France. Warm, gaseous, alkaline, sulfurous spring, temperature 33° C. Used internally and for baths.

St. Hu'bert's disease'. (After *St. Hubert*, the patron Saint of huntsmen.) A name for *Hydrophobia*.

St. Ignatius' bean. See *Faba Sancti Ignatii*.

St. James' wort. A name for the *Senecio Jacobæa*; also, for the *Bursa pastoris*.

St. Job's disease'. A name for *Syphilis*.

St. John's bread-tree. The *Ceratonía siliqua*.

St. John's dance. A name for *Mania*, dancing.

St. John's e'vil. A name for *Epilepsy*.

St. John's gir'dle. The *Artemisia vulgaris*.

St. John's head. A name for the fruit of *Ceratonía siliqua*; demulcent and expectorant.

St. John's wort. A name for the *Hypericum perforatum*.

St. John's wort, bas'tard. The *Hypericum coris*.

St. John Long's lin'iment. See *Liniment, St. John Long's*.

St. Kilda cold. (From the island of St. Kilda.) Also termed *Stranger's cold*. A variety of *Influenza* occurring in the Hebrides, believed to be brought by strangers from ships touching at the islands.

St. Laur'ent-les-Bains. In the Department Ardèche, France. Hot alkaline springs.

St. Lazarus' disease'. A name for *Leprosy*.

St. Lou'bouer. In the Department Landes, France. Sulphur springs.

St. Lou'is spring. An alkaline, weakly chalybeate spring in St. Louis, Gratiot County, Michigan.

Ste. Magdelaine'-de-Flour'ens. In the Department Haute-Garonne, France. An alkaline and chalybeate saline spring.

St. Main's disease'. A name for *Scabies*.

St. Mard-les-Role. In the Department Somme, France. A chalybeate spring.

Ste-Mar'ie. A place in the Department Cantal, France. Noted for its gaseous chalybeate spring.

Also, a place in the Department Hautes-Pyrénées. Noted for its alkaline and chalybeate saline spring. (Foster.)

St. Martin's evil. A name for *Alcoholism*.

St. Mar'tin-Val'meroux. In the Department Cantal, France. A gaseous chalybeate spring.

St. Mary's this'tle. The *Carduus Marianus*.

St. Math'urin's disease'. This name has been applied both to *Insanity* and to *Epilepsy*.

St. Maur'ice. In the Department Puy-de-Dôme, France. Saline, alkaline, and chalybeate springs.

St. Modes'tus' dance. A syn. for *St. Vitus' dance*.

St. Mor'itz. A mountainous health resort in the Engadine, Switzerland. There are chalybeate springs in the place.

St. My'on. In the Department Puy-de-Dôme, France. A gaseous, alkaline, chalybeate spring.

St. Nec'taire. In the Department Puy-de-Dôme, France. Warm, gaseous, alkaline, saline, and sulphur waters; temperature 38° C.

St. Ours. In the Department Puy-de-Dôme, France. A gaseous mineral spring.

St. Par'doux. In the Department Allier, France. Cold, gaseous, chalybeate waters.

St. Parize'. In the Department Nièver, France. An alkaline sulphur spring.

St. Paul's nap'kin. See *Sudarium Sancti Pauli*.

St. Peter's wort. The All-heal, *Hypericum Androsæmum*.

St. Pierre-D'Argen'ton. In the Department Hautes-Alpes, France. A cold, gaseous chalybeate spring.

St. Priest-de-la-Roche. In the Department Loire, France. A cold chalybeate spring.

St. Quen'tin. In the Department Aisne, France. A cold, gaseous chalybeate spring.

St. Re'my-la-Varenne'. In the Department Maine-et-Loire, France. A cold, gaseous chalybeate spring.

St. Roch's disease'. A name for *bubo* in general.

St. Ro'main-le-Puy. In the Department Loire, France. A cold, gaseous, alkaline spring.

St. Ro'n'an's well. A saline spring in Boone Township, Warrick County, Indiana. (Billings.)

St. San'tin. In the Department Orne, France. A cold chalybeate spring.

St. Sau'veur. A place in the Department Hautes-Pyrénées, France. Noted for its warm sulphur spring; temperature 35° C.

St. Se'ment's disease'. A name for *Syphilis*.

St. Si'mon. In the Department Savoie, France. A cold, chalybeate spring.

St. Tho'mas. In the Department Pyrénées-Orientales, France. A hot sulphur spring.

St. Val'entine's disease'. A name for *Epilepsy*.

St. Vin'cent. In Piedmont, Italy. A gaseous mineral spring.

St. Vi'tus' dance. Common name for *Chorea*.

St. Vi'tus' dance of the voice. A name for *Stammering*.

St. With's dance. A syn. for *St. Vitus' dance*.

St. Yor're. In the Department Allier, France. A cold, alkaline spring.

St. Zachary's disease'. (After *Zacharias*, the father of St. John the Baptist.) A name for *Dumbness*.

Saire. A syn. for *Essera*.

Sak'ë. The same as *Saki*.

Sak'ee. The same as *Saki*.

Sa'ki. (Jap.) A spirituous liquor of Japan, distilled from rice.

Sakitlak'ar. A syn. for *Palmus*. (Gould.)

Sakmu'nium. Arabic name for *Scammonium*.

Sal. (L., mas., rarely neut.) *Salt*.

S. absin'thi. (*Absinthium*.) Salt of wormwood. A variety of commercial potash obtained by burning wormwood to ashes, dissolving the residue in water, filtering, and evaporating.

S. acetosell'æ. Salt of acetosella. A name for oxalate of potassium.

S. aceto'sus ammoniac'al'is. Acetous ammoniacal salt. A name for *Liquor ammonii acetatis*.

S. ac'idum ben'zoës. A name for *Benzoin*.

S. ægypti'acum. Egyptian salt. Old term for *Nitre*.

S. aëra'tus. Aërated salt. A name for potassium bicarbonate in powder; also, for sodium bicarbonate.

S. al'bus. White salt. A name for chloride of sodium.

S. alem'broth. A double chloride of mercury and ammonium, containing one molecule of corrosive sublimate with two molecules of sal ammoniac.

From it are prepared the following:—

Alembroth gauze.—1 per cent. of sal alembroth, and tinted with aniline blue.

Alembroth wool.—2 per cent. Tinted blue as above.

Alembroth gauze and cotton-wool tissue.—2 per cent. Tinted blue. Used in eye cases.

Eucalembroth gauze.—In pieces six yards long, each containing 4 drachms of oil of eucalyptus, with castor-oil and 1-1000th of the whole weight of sal alembroth. Tinted with magenta. (Martindale and Westcott.)

S. alem'broth, insol'uble. A name for *Mercury, ammoniated*.

S. alem'broth, sol'uble. Name for a mixture of equal parts of perchloride of mercury and chloride of ammonium.

S. al'kali. Old term for *Alkali*.

S. alkali'nus. The same as *S. alkali*.

S. alkali'nus fix'us fos'silis. A name for *Soda*.

S. amar'um. Bitter salt. A name for sulphate of magnesium.

S. ammo'niac. (Mod. L. *ammoniacus*, -a, -um, ammoniacal.) A name for chloride of ammonium, *Ammonii chloridum*.

S. ammo'niac volat'ilë. A name for ammonium carbonate.

S. ammoni'acum. (Mod. L. *ammoniacus*, -a, -um, belonging to ammonium, ammoniacal.) *Sal ammoniac*.

S. ammoni'acum aceto'sum. A syn. for *Ammonium aceticum solutum*.

S. ammoni'acum li'quidum. The same as *S. ammoniacum acetosum*.

S. ammoni'acum Martia'lë. A term for *Ammonio-chloride of iron*.

S. ammoni'acum secre'tum Glaub'eri. Secret ammoniacal salt of Glauber. Term for ammonium sulphate, found native in the vicinity of some volcanoes. Action and uses, the same as those of chloride of ammonium.

S. ammoni'acum tartar'eum. Ammoniacal tartar salt. A name for *Ammonium tartrate*.

S. ammoni'acum vegetab'ilë. Vegetable ammoniacal salt.

S. ammoni'acus. Ammoniacal salt. The same as *S. ammoniacum*.

S. ammoni'acus fix'us. Fixed sal ammoniac. An old term for *Lime, chloride of*.

S. ammoni'acus nitro'sus. Nitrous ammoniacal salt. A name for ammonium nitrate.

S. ammo'niæ. Salt of ammonia. A name for ammonium chloride.

S. anglica'num. English salt. The same as *S. anglicum*.

S. anglicum. English salt. A name for magnesium sulphate.

S. antiepilepticus. Antiepileptic salt. Weissman's term for ammonio-sulphate of copper.

S. antimo'ni. Salt of antimony. A name for tartar emetic, *Antimonium tartaratum*.

S. aperiti'vum friedericia'num. A name for sulphate of sodium prepared from the Friedrichshall mineral waters.

S. argen'ti. Salt of silver. A name for silver nitrate, *Argenti nitras*.

S. armeni'acum. Armenian salt. A name for ammonium chloride.

S. arsenica'lë ex Mac'quer. A name for arseniate of potassium.

S. art'is. (L. *ars, artis, art.*) A syn. for *S. alembroth*.

S. asphalti'tis. See *Asphaltitis*.

S. ben'zoïn. Salt of benzoïn. A name for *Benzoic acid*.

S. Bertholet'ti. A name for chlorate of potassium.

S. bro'malide. Name for a mixture of bromine, salicylic acid, and acetanilide. It is antipyretic, hypnotic, and antiseptic.

S. carlsbaden'së facti'tium. Artificial Carlsbad salt. See under *Carlsbad water, artificial*.

S. caroli'num facti'tium. A syn. for *S. carlsbadensë factitium*.

S. cathar'ticus amar'us. Bitter cathartic salt. A name for sulphate of magnesia, *Magnesiæ sulphas*.

S. cathar'ticus anglica'num. English cathartic salt. A syn. for *S. catharticus amarus*.

S. cathar'ticus Glaub'eri. Glauber's cathartic salt. See *Glauber's salt*.

S. chal'ybis. Salt of steel. A name for sulphate of iron.

S. commu'në. The same as *S. communis*.

S. commu'nis. Common salt, sodium chloride.

S. cor'nu cer'vi. Salt of hartshorn. A name for carbonate of ammonia, *Ammonii carbonas*.

S. cor'nu cer'vi volat'ilë. The same as *S. cornu cervi*.

S. culinar'ë. See *S. culinaris*.

S. culinar'is. Culinary salt. A name for sodium chloride, or common salt.

S. de duo'bus. Salt from two. A name for sulphate of potash, *Potassii sulphas*.

S. digesti'vus. Digestive salt. A name for chloride of potash, *Potassii chloridum*.

S. digesti'vus Syl'vii. Sylvius' digestive salt. A name for acetate of potash, *Potassii acetas*.

S. diuret'icus. Diuretic salt. A name for acetate of potash, *Potassii acetas*.

S. ebsdamen'së. A name for *Epsom salt*.

S. enix'um. A name for acid sulphate of potash.

S. epsomen'sis. *Epsom salt*.

S. essentia'lë ben'zoës. A name for *Benzoin*.

S. essentia'lë cor'ticis peruvia'ni. Essential salt of Peruvian bark. A name for *Quinine*.

S. essentia'lis tartari. Essential salt of tartar. A name for *Tartaric acid*.

S. febrifu'gus, of Lem'ery. Febrifuge salt of Lemery. A name for acid sulphate of potash.

S. febrifu'gus Syl'vii. Sylvius' febrifuge salt. A name for chloride of potassium.

S. fon'tium. Fountain salt, *Rock salt*.

S. fos'silis. Fossil salt. The same as *S. fontium*.

S. gem'mæ. (L. *gemma*, a precious stone; name given from the glittering of the rock-salt crystals.) The same as *S. fontium*.

S. Glaub'eri. *Glauber's salt*.

S. herbar'um. Salt of herbs. A name for carbonate of potash, *Potassii carbonas*.

S. in'dus. A name for *Saccharum album*.

S. kissingen'së. Kissingen salts.

S. lixivio'sum. A syn. for *Lixivium*.

S. lu'cidum. Clear salt. A name for sodium chloride.

S. mari'nus. Sea-salt.

S. mart'is. (L. *Mars, martis*, the symbol for iron.) A syn. for *S. chalybis*.

S. mart'is muriaticum sublima'tum. Sublimed muriatic salt of iron. A name for *Ammonio-chloride of iron*.

S. microcos'micus. *Microcosmic salt*.

S. mirab'ile Glauberi. The same as *S. mirabile perlatum*.

S. mirab'ile perlatum. Marvellous pearly salt. A name for sodium phosphate.

S. mirab'ilis Glauberi. Wonderful salt of Glauber. A syn. for *S. Glauberi*.

S. muriaticum baroticum. A name for chloride of barium.

S. muriaticus. Muriatic salt. A syn. for *S. marinus*.

S. nitri. The same as *S. nitrum*.

S. nitrum. A name for potassium nitrate.

S. osium. Bone-salt. A name for carbonate of ammonium.

S. panchrestum. A name for potassium tartrate.

S. perlatum. Pearly salt. A name for phosphate of soda.

S. petræ. Rock-salt, one of the forms of nitrate of potassium found native.

S. plantarum. Salt of plants. A name for carbonate of potash.

S. plumbi. Salt of lead. A name for acetate of lead.

S. polychrestum Seignet'ti. The same as *S. polychrestus Seignetti*.

S. polychrestus. Polychrest salt. A name for sulphate of potash.

S. polychrestus Glauberi. The same as *S. polychrestus*.

S. polychrestus Seignet'ti. A name for potassio-tartrate of soda.

S. prunellæ. A term for nitre fused and poured into moulds so as to form small globules.

S. rupellensis. A name for potassio-tartrate of soda.

S. sapientiae. Salt of wisdom. A syn. for *S. alembroth*; also, a name for potassium sulphate.

S. saturni. (*Saturn*, the symbol for lead.) A name for acetate of lead.

S. scientiae. Salt of knowledge. A name for *Sal alembroth*.

S. secretus Glauberi. A name for ammonium sulphate.

S. sedativus. Sedative salt. A name for boric acid.

S. sedativus Hombergi. The same as *S. sedativus*.

S. sedlicensis. The same as *S. sedlensis*.

S. sedlensis. Salt of sedlitz. A name for sulphate of magnesium.

S. Seignet'ti. A name for sodium tartrate.

S. senner'ti. A name for potassium acetate.

S. seydshützen'se. The same as *S. sedlensis*.

S. sodæ. Salt of soda. A name for sodium carbonate.

S. sodomenus. A term for *Bit-loban*.

S. succini. Salt of amber. A name for succinic acid.

S. tab'ri. An old name for *S. alembroth*.

S. tartari. Salt of tartar. A name for carbonate of potash.

S. tartari essentia'le. Essential salt of tartar. A name for tartaric acid.

S. tartarisulphuratum. Sulphurated salt of tartar. A name for potassium sulphate.

S. thermarum carolinensium factitium. A syn. for *S. carlsbadensë factitium*.

S. urinæ. Salt of urine. A syn. for *S. microcosmicus*.

S. urinosum. Urinous salt. A name for *Urea*.

S. vegetab'ilis. Vegetable salt. A name for potassium tartrate.

S. vichyanum. Vichy salts.

S. vitæ. Salt of life. A syn. for *S. alembroth*.

S. vitri'oli. Salt of vitriol. A name for zinc sulphate.

S. vitri'oli narcoticum. Narcotic salt of vitriol. A name for boric acid.

S. volatilë. The volatile salt. Common name for the *Spiritus ammoniæ aromaticus*. Also, term for ammonium carbonate.

S. volatilë ben'zoës. Volatile benzoic salt. A name for benzoïn.

S. volatilë bora'cis. Volatile salt of borax. A name for boric acid.

S. volatilë oleosum Syl'vii. Oily volatile salt of Sylvius. Another name for *S. volatilë*.

S. volatilë sic'cum. A name for *Ammonium carbonate*.

S. volatilë suc'cini. Volatile salt of amber. A name for succinic acid.

S. volatil'is. The volatile salt. The same as *S. volatilë*.

S. volatil'is sal'is ammoni'aci. The volatile salt of *Sal ammoniacum*. A term for carbonate of ammonia.

S. vomitorium vitri'oli. Emetic salt of vitriol. A name for zinc sulphate.

Sala. In Department Isère, France; a place noted for its sulphur spring.

Salaam' convulsion. See *Eclampsia nutans*.

S. spasm. The same as *S. convulsion*.

S. tic. A syn. for *S. convulsion*.

Sal'ab. See *Salep*.

Salabre'da. A term for *Gum, brittle*.

Salac'etol. (*Salix*; *acetum*.) A proposed substitute for salol and salicylate of soda. It is the salicylic acid ester of acetone-alcohol. An intestinal and genito-urinary antiseptic. (Gould.)

Salac'ious. (*L. salax*.) Lustful.

Salac'itas. (*L. salax*, lustful.) Lust, or a strong desire for the venereal act; the venereal orgasm. Also, term for *Satyriasis*.

S. vulvæ. A term for *Nymphomania*.

Salac'ity. (*Salacitas*. *F. salacitë*; *I. salacità*; *G. Geilheit*.) See *Salacitas*.

Sal'ad, corn. Common name for the *Valeriana dentata*.

S. oil. Common name for *Oleum olivæ*.

Salæra'tus. (*L. sal*, salt; *air*, air.) Word more commonly written *Saleratus* (q. v.).

Sal'ahin. An Algerian mineral spring.

Salaman'drine. $C_{68}H_{60}N_2O_2$. An amorphous, alkaline, poisonous leucomaine, soluble in water and alcohol, obtained from the viscous secretion of the temporal glands of the common salamander.

Sal'ap. Another spelling for *Salep*.

Salappa. An old term for *Jalapa*.

Salbro'malide. A syn. for *Salicylbromanilide*.

Saldatura. Old term for *Stannum*.

Salem'pien. A syn. for *Serempion*.

Salep. A farinaceous and mucilaginous powder made from the tuber of the *Orchis morio*. *Orchis mascula*, and other species; also, the tubers themselves. Preparation, *Mucilago salep* (q. v.).

SALERATUS—SALICYLIC

S. otahel'te. A name for *Arrowroot*, *Tahiti* (q. v.).

Salera'tus. (L. *sal*, salt; *aër*, air.) A syn. for *Sal aë'ratus*.

Sal'er'num, school of. An ancient school of Medicine at Salernum, now called Salerno, in Italy, established by Charlemagne in 802. It was the first Christian school of Medicine, and was very celebrated in the twelfth century, being termed "Civitas Hippocratica." (Dunglison.)

Salica'ceæ. Bot. A Family of the Nat. Order *Amentaceæ*.

Salicar'ia. (L. *salix*, the willow; from the resemblance between their leaves.) Specific name of the *Lythrum salicaria*.

Salic'ifrice. Name for an antiseptic tooth-paste consisting of a soapy basis impregnated with salicylic acid. (Martindale and Westcott.)

Sal'icin. See *Salicinum*.

Salic'num. B.P. Salicin. $C_{13}H_{18}O_7$. A crystalline glucoside from the bark of *Salix alba* and other species, and several species of *Populus*, obtained mainly from Germany and America. It is prepared by making a decoction of the bark, removing tannin and colouring matter, evaporating, purifying, or re-crystallising. Soluble in the proportion of 1 in 1 of boiling, 1 in 28 of cold water, and 1 in 60 of rectified spirit. A small quantity heated with bichromate of potash, water, and a few drops of sulphuric acid, gives vapours smelling of meadow sweet. Salicinum is turned red by sulphuric acid. It is antipyretic and tonic. Dose, 3 to 20 grains. Especially useful in acute rheumatism and influenza; in the former disease, now usually replaced by salicylate of soda.

Sal'icol. A syn. for *Phenol*.

Salicor'nia. The only Genus of the *Salicorniæ*.

S. arab'ica. One of the sources of the soda of commerce.

S. europæ'a. Grasswort, marsh samphire. A source of soda. Sold in the country for *Samphire*, which it resembles in its properties, being antiscorbutic.

S. fructico'sa. Hab., Cape of Good Hope. Used in salad and as an antiscorbutic.

S. herba'cea. The same as *S. europæ'a*.

Salicor'niæ. A Tribe of the *Chenopodiaceæ*, the species of which yield soda.

Sal'icyl al'dehyde. Another name for *Salicylous acid*.

Sal'icylage. (F. *salicylage*.) A term to express the preserving of articles of food by means of the antiseptic action of salicylic acid.

Salicyl'amide. (*Salicyl*; *amide*.) $C_6H_4(OH)CONH_2$. A substance used as a substitute for salicylic acid. Prepared by the action of an alcoholic solution of ammonia on salicylate of methyl.

Salicylan'ilide bromacetan'ilide. A syn. for *Salicylbromanilide*.

Sal'icylas. (Mod. L.) Salicylate.

S. bismu'thi. Salicylate of bismuth.

S. lith'icus. Salicylate of lithium.

S. na'tricus. Salicylate of sodium.

S. physostig'minæ. Salicylate of physostigmine.

S. qu'nicus. Salicylate of quinine.

S. so'dicus. Salicylate of sodium.

S. zin'ci. Salicylate of zinc.

Sal'icylate. A salt of *Salicylic acid*.

S. of bis'muth, bas'ic. A white or pinkish-white powder, insoluble in water, alcohol, and glycerine. Obtained by the reaction between salicylate of sodium and nitrate of bismuth. Has been used in diarrhoea, typhoid fever, &c. Dose, 5 to 20 grains.

S. of cam'phor. A syn. for *Salicylated camphor*.

S. of cre'sol. Syn. for *S. of para-cresol*.

S. of iron. Ferri salicylas. A purple-brown powder sparingly soluble in water. Antiseptic and astringent. Dose, 3 to 10 grains in pills.

S. of lith'ium. See *Lithium salicylate*.

S. of mer'cury. (*Hydrargyri salicylas*.) A white powder, sparingly soluble in water.

Has been given in syphilis internally and externally. Dose, $\frac{1}{4}$ grain.

S. of para-cre'sol. White granular crystals with the odour of salol. Action antiseptic. It has been given in acute rheumatism.

S. of phe'nocoll. See *Salocoll*.

S. of physostig'mine. See *Eserine salicylate*.

S. of quinine. Quininæ salicylas. Occurs in white silky needles; soluble 1 in 900 of water. Administered in pills with glycerine of tragacanth and acacia, or suspended in water. Dose, 2 to 6 grains.

S. of so'dium. See *Sodii salicylas*.

S. of zinc. See *Zinc salicylate of*.

Sal'icylated cam'phor. (Mod. L. *camphora salicylata*. F. *camphre salicylé*; G. *salicylirter Kampfer*.) A preparation made by slowly heating together 65 parts of salicylic acid with 84 of camphor. It is an oily liquid, which solidifies in crystalline form. Action antiseptic.

S. cam'phor wool. Cotton wool impregnated with 8 per cent. of salicylated camphor. Used as a surgical dressing.

S. collo'dion. Commonly termed colloidum salicylicum. Salicylic acid 100 grains, collodium flexile 1 ounce. Used as a solvent for corns and warts. (Martindale and Westcott.)

S. cot'ton. A preparation made by impregnating pure cotton with salicylic acid. Used as a surgical dressing.

Salicylbroman'ilide. A mixture of bromacetanilide and salicylanilide. Given in cases of neuralgia.

Also termed *Antinervine*, and *Salbromalide*.

Salicyl'ic acid. See *Acidum salicylicum*.

S. ac'id oint'ment. See *Unguentum acidi salicylici*.

S. al'cohol. Another name for *Saligenin*.

S. al'dehyde. See *Aldehyde, salicylic*.

S. cream. A mixture of powdered salicylic acid 2 drachms, carbolic acid 1 drachm, and glycerine 10 drachms. Used as an antiseptic application for painting on skin irritated by discharge from wounds, &c.

S. plas'ter mulls. Plaster mulls containing 38 and 50 per cent. of salicylic acid, the weaker being used first. Used to remove hypertrophied epidermis.

S. silk. (McGill's.) Silk waste impregnated with 10 per cent. of salicylic acid and a small quantity of glycerine. Used as a dressing.

S. su'et. One part of salicylic acid dissolved in 49 of melted mutton suet. Used in the German army for various sores. (Martindale and Westcott.)

SALICYLISM—SALIVARY

S. wool. Cotton wool impregnated respectively with 4 and 10 per cent. of salicylic acid and an equal quantity of glycerine.

Salicylism. (*Salicylic acid.*) A toxic condition characterised by giddiness, tinnitus aurium, nausea or vomiting, and weakened heart's action, often accompanied by copious perspirations, occasionally produced by the salicylates or salicylic acid, when given internally, either in large or frequent doses, or to patients unusually susceptible.

Salicylous ac'id. $C_7H_5O_2$. Also termed salicyl aldehyde. A fragrant-smelling oily liquid. It is prepared by the distillation of salicin with sulphuric acid and bichromate of potash.

Salicylu'rate. A salt of *Salicyluric acid*.

Salicylu'ric ac'id. $C_{18}H_9NO_9$. An acid secreted in the urine by those taking salicylates; produced by decomposition of salicylic acid in the body. It is a non-volatile, bitter substance, very soluble in boiling water, and in alcohol and ether, and is a product of the combination of salicylic acid and glycol.

Saliferous. (L. *sal*, salt; *fero*, to bear.) Chem. Salt-bearing.

Salifiable. (L. *sal*, salt; *fio*, to make; *habilis*, able.) Chem. Having the property of forming a salt by combination with an acid element or radical.

Saligenin. $C_7H_5O_2$. A body produced by the action of a dilute acid on *salicin*, or of sodium amalgam on *salicylic aldehyde*. It occurs in colourless, shiny tables, melting at $82^\circ C$.

Sal'igenyl. (F. *saligényle*.) The hypothetical radical of *Saligenin*. (Littre.)

Sal'meter. (L. *sal*, a salt; Gr. μέτρον, a measure.) A variety of *Hydrometer* for estimating the strength of saline solutions.

Salinaph'thol. A syn. for *Naphthalol* (q. v.).

Sal'ine. (L. *sal*, salt. F. *salin*; I. *salino*; G. *salzig*.) Chem. Belonging to, or of the nature of, a salt. Also, a hydragogue purgative salt of the alkaline metals or magnesium.

S. pur'gative. See main heading, second definition.

Salines. See *Saline*, second definition.

Salino'meter. A syn. for *Salimeter*.

Sal'inous. A syn. for *Saline*.

Sal'ins. A place in Jura, noted for its cold saline springs.

Salipy'rine. $C_{11}H_{12}N_2O.C_7H_5O_3$. Salicylate of antipyrine; a white, crystalline powder. It has been used in neuralgia and joint affections.

Salire'tin. See *Salirrhetin*.

Salirrhe'tin. (*Salix*; ρυρίνη, a resin.) A substance obtained by the action of dilute acids on *saligenin* under the action of heat. It is a resinous body, soluble in alcohol, ether, acetic acid, and the alkalies.

Sal'is. Gen. sing. of *Sal*.

S. ammoni'aci flo'res. Flowers of ammoniacal salt. A name for ammonium carbonate.

Sal'iswitch frac'ture. See *Fracture, Saliswitch*.

Salitu'ra. (L.) A seasoning with salt. Term for brine used for pickling.

Sal'itus. Salted, pickled. A syn. for *Saline*.

Salun'ca. A name for the *Valeriana celtica*.

Sal'iva. (L.) Spit. The mixed secretions of the salivary glands—the parotid, sub-maxillary, and sublingual glands, and the small mucous glands of the mouth. Mixed saliva is a tasteless, opalescent, alkaline fluid, with a sp. gr. of 1004 to 1009. The average quantity secreted in the twenty-four hours by an adult is approximately 1500 cub. centim. Saliva is composed of water; inorganic salts, including sulphocyanide of potassium; and organic bodies, namely, globulin, serum-albumin, mucin, urea, an amylolytic ferment *ptyalin*, and also two other ferments, one proteolytic, the other liptolytic. It contains, also, salivary corpuscles, epithelial cells, and bacteria. Saliva moistens the bolus of food to be swallowed, converts its starch into grape-sugar and dextrin; it aids also in taste. Its proteolytic and liptolytic actions are slight and unimportant. The parotid gland secretes *serous saliva*; the sub-maxillary and sub-lingual, *mixed saliva*; and the mucous glands, *mucous saliva*.

S., cho'rda. Saliva secreted on stimulation of the chorda tympani nerve. See *Saliva*, secretion of.

S., ganglion'ic. Term for saliva secreted on stimulation of the submaxillary glands.

S., secre'tion of. The secretion of saliva is directly under the influence of the nervous system. Stimulation of the facial nerve at its origin, or of its branch, the chorda tympani, gives rise to local vascular dilatation and secretion of a thin, watery saliva, relatively poor in solids, *chorda saliva* (serous saliva). Stimulation of the sympathetic nerve gives rise to a secretion of thick, viscid, opaque saliva, relatively rich in mucin and the other solids of saliva, *sympathetic saliva* (mucous saliva). The chorda tympani nerve contains two sets of fibres, vaso-dilator and secretory; the sympathetic also contains two sets of fibres, these being vaso-constrictor and secretory.

S., sympathet'ic. Saliva secreted on stimulation of the sympathetic nerve. See *S.*, secretion of.

Saliv'ae. Gen. sing. of *Saliva*.

S. flux'us cibo vi'so. Flow of saliva at the sight of food.

Salival. (*Saliva*.) A syn. for *Salivary*.

Saliv'ans. (Mod. L. From L. *saliva*.) *Salivant*.

Saliv'ant. (L. *saliva*.) Salivating; a syn. for *Sialagogue*.

Salivar'ia. (L. *saliva*, spittle; name given on account of this plant's sialagogue action.) A name for the *Anthemis pyrethrum*.

Salivar'is. Salivary.

S., her'ba. A name for the *Anthemis pyrethrum*.

Salivary. Belonging to *Saliva*.

S. cal'culus. See *Calculus*, salivary.

S. cells. Syn. for *S. corpuscles*.

S. corpuscles. Nucleated, globular, protoplasmic cells without cell-wall, existing in the saliva. The particles within these cells exhibit Brownian movement during the life of the cells. In size, these cells are slightly larger than white blood-corpuscles.

S. cyst. A cyst of one of the ducts of a salivary gland, forming one variety of *Ranula*.

S. di'astase. A name for *Ptyalin*.

S. diges'tion. The action of saliva on the food. See *Saliva*, secretion of.

SALIVARY—SALPINGITIS

S. fistula. See *Fistula, salivary*.
S. glands. See *Glands, salivary*.
S. tubes of Pflüger. See *Pflüger, salivary tubes of*.

Salivate. To produce *salivation*.
Salivated. Affected with *salivation*.
Saliva'tio. (Mod. L.) *Salivation*.
S. mercuria'lis. *Salivation, mercurial*.
Saliva'tion. (*Saliva*.) An abnormally large secretion of saliva. See also under *Sialogogues*.

S., mercur'ial. *Salivation* produced by the administration of mercury or its salts. It is accompanied by chronic stomatitis, the gums become swollen and spongy, the breath is foul, and the teeth loosen.

Saliva'tum. (Mod. L.) *Salivating*.
Saliva'tus. (Mod. L.) *Salivated*.
Saliv'ine. (*Saliva*.) A name for *Ptyalin*.
Salivo'sus. (Mod. L.) *Salivous*.
Saliv'ous. A syn. for *Salivary*.
Salix. (*L. salix*, the willow.) The only Genus of the *Salicaceæ*.

S. ægypti'aca. Egyptian willow. The male catkins of this plant are used in the East to prepare a distilled liquid called *Calaf* or *Kalaf*, which is tonic, carminative and diaphoretic.

S. alba. White willow. Hab., Europe. The bark is a mild tonic and febrifuge. A distilled liquid was formerly prepared from the male catkins, similar to that prepared from the catkins of *S. ægyptiaca*.

S. amygdali'na. The almond-leaved willow. Bark similar in properties to that of *S. alba*.

S. babylon'ica. The weeping willow. Hab., Greece and Asia. Catkins, young branches and leaves, tonic and anthelmintic.

S. cap'rea. The goat-willow. The bark contains *salicin*. From the catkins is prepared a scented water.

S. erioceph'ala. A syn. for *S. fragilis*.
S. frag'ilis. The common crack-willow, the bark of which has been recommended as a substitute for Peruvian bark in the treatment of intermittent fevers, &c.

S. he'lix. A variety of *S. purpurea*, containing a large amount of *salicin*.

S. hermaphrodit'ica. A syn. for *S. pentandra*.

S. ni'gra. Bark used as a sexual and general sedative (B. M. J., 1887, ii, 237.) Action due to the presence of *salicin*.

S. pentan'dra. The bark of the branches of this species has the same properties as the bark of *S. fragilis*.

S. polyan'dra. A syn. for *S. pentandra*.
S. purpu'rea. Properties similar to those of *S. fragilis* and *S. pentandra*.

S. russellia'na. A variety of *S. fragilis* containing a large amount of *salicin* and tannin.

S. vimina'lis. The common osier or withy. Its bark contains *salicin*.

S. vitelli'na. The yellow osier. Similar in properties to *S. alba*.

Salkows'ki-Lud'wig meth'od. A method for the quantitative estimation of uric acid in solution. To the solution of uric acid add magnesic and ammonic chlorides, and then ammoniacal solution of silver nitrate, when the uric acid is precipitated as a double urate of silver and magnesium. The precipitate, after washing, is decomposed by sulphate of potassium into urate of potassium, which passes into solu-

tion. An excess of hydrochloric acid is added, and the uric acid which separates out is collected and weighed. (Gould.)

Salkows'ky's magne'sia mix'ture. Crystallised sulphate of magnesium, one part, ammonium chloride two parts, ammonia solution of sp. gr. 0.924, four parts, and water eighty parts. Used in the estimation of uric acid in urine.

Sallena. A Paracelsian name for a kind of nitre.

Sallenders. Term applied to *Mallenders*, when this disease affects the hind leg.

Sallis. A term for *Adeps*.

Sally-switch fract'ure. The same as *Saliswitch fracture*.

Sal'miac. (G. *Salmiak*.) A contraction of the term *Sal ammoniac*.

Sal'mon-disease'. A disease of certain fishes including the salmon, produced by the *Saprolegnia ferox*.

S.-patch. Hutchinson's term for a salmon-coloured patch on the cornea developing in the later stage of *Keratitis, interstitial*.

Salni'trum. (*L. sal*, a salt; *nitrum*, nitre. I. *salnitro*.) Old term syn. with *Nitrum*.

Sal'ocoll. Salicylate of phenocoll, a synthetic substance. A white, tasteless powder, slightly soluble in cold water. Action, antipyretic and antineuralgic. *Dose*, 15 to 30 grains, in powder or capsules.

Sal'ol. $C_7H_5O_3.C_6H_5$. A white, crystalline, aromatic powder, splitting up on warming with an alkali into salicylic acid 60 per cent., and carbolic acid 40 per cent.

Soluble in the proportions of 4 in 3 of ether, 8 in 3 of chloroform, 1 in 20 of rectified spirit. Insoluble in cold water.

Antipyretic and antiseptic. It is specially useful as an intestinal antiseptic, as it passes through the stomach unchanged, becoming split up, as above, by the alkaline pancreatic juice in the duodenum. *Dose*, 5 to 15 grains in powder, or made up in cachets, or with mucilage.

S. cam'phor. Salol 3 parts, camphor 2, heated together to a viscid liquid. It has been used as an antiseptic instead of iodoform. P. J. 1889, 862, 62.

S. cum cam'phora. Salol camphor.

Sal'olum. Latinised term for *Salol*.

Saloop'. A syn. for *Salep*. Also, sassafras tea with milk and sugar.

Salop'. A syn. for *Salep*.

Sal'ophen. A derivative of salicylic acid which has been given in acute rheumatism.

Salpe'tra. (*L. sal*, a salt; *petra*, a rock.) *Saltpetre*.

Salpingec'tomy. (*Salpinx*; *ἐκτομή*, a cutting out.) Excision of the Fallopian tube.

Salpingemphrax'is. (*Salpinx*; *εμφραξις*.) Term for a stoppage in the *Salpinx*, or Eustachian tube.

Salpin'ges. Plur. of *Salpinx*.

Salping'ian. Belonging to the *Salpinx*.

S. drop'sy. A syn. for *Hydrosalpinx*.

Salping'ic. The same as *Salpingian*.

Salpingi'tis. (*Salpinx*; fem. adj. term. -itis.) A. Inflammation of the Fallopian tube. Hart and Barbour give the following classification of cases:—

I. *Forms produced by known microbes.*

1. Salpingitis gonorrhoeica, gonorrhoeal salpingitis.
2. Salpingitis tuberculosa.

3. Salpingitis actinomycotica, produced by the *Actinomyces bovis*.
- II. Forms produced by the specific microbes of traumatic infection.
4. Salpingitis septica.
- III. Forms of infectious salpingitis produced by as yet unknown microbes.
5. Salpingitis syphilitica.
- Salpingitis may pass on to a condition of *Pyosalpinx* or *Hydrosalpinx*.
- B. Inflammation of the Eustachian tube.
- Salpin'go-**. (*Salpinx*, the Fallopian tube; also, the Eustachian tube.) Prefix denoting either *Fallopian tube*, or *Eustachian tube*.
- Salpingocatheteris'mus**. (*Salpingo-*; *catheterismus*.) Catheterism of the Eustachian tube.
- Salpingocye'sis**. (*Salpingo-*; *cye'sis*.) Pregnancy in a Fallopian tube. See *Pregnancy*, *tubal*.
- Salpingomallear'is**. A syn. for *Salpingomalleus*.
- Salpingomall'eu's**. (*Salpingo-*; *malleus*.) Belonging to the *Salpinx*, or Eustachian tube, and to the *malleus*. A term applied to the *Tensor tympani*.
- Salpingona'sal fold**. (*Salpingo-*; *nasal*.) Term for the fold of mucous membrane which passes from the edge of the pharyngeal opening of the Eustachian tube to the posterior nares.
- Salpingo-oöphorec'tomy**. Excision of the Fallopian tube and ovary.
- Salpin'go-oöphori'tis**. Salpingitis and oöphoritis (ovaritis) occurring together.
- Salpin'go-ovar'iotomy**. The same as *Salpingo-oöphorectomy*.
- Salpingopal'atal fold**. (*Salpingo-*; *palatal*.) Term for a fold of mucous membrane which covers the levator palati.
- Salpingopharynge'al**. Belonging to the *Salpinx*, or Eustachian tube, and *pharynx*.
- Salpingopharynge'us**. Belonging to the *Salpinx*, or Eustachian tube, and to the *pharynx*. Name for a muscular slip which passes vertically between the Eustachian tube and the constrictors of the pharynx.
- Salpingopter'ygoid lig'ament**. (*Salpingo-*; *pterygoid*.) Term for a band of fascia which passes from the spine of the sphenoid to the hamular process.
- Salpingor'haphy**. (*Salpingo-*; *ῥαφή*, a stitch.) Suturing of the Fallopian tube.
- Salpingostaphyli'nus**. Belonging to the *Salpinx*, or Eustachian tube, and to the *Staphylē*, or uvula.
- S. exter'nus**. A syn. for *Tensor palati*.
- S. inter'nus**. A syn. for *Levator palati*.
- Salpingostenoch'o'ria**. (*Salpingo-*; *stenochoria*.) A narrowing or stricture of the Eustachian tube.
- Salpingo'stomy**. (*Salpingo-*; *στόμα*, any mouth-like opening.) The operation of establishing an artificial fistula of the Fallopian tube.
- Salpingo'tomy**. (*Salpingo-*; *τομή*, a cutting.) Excision of, or incision into, the Fallopian tube.
- Salpingysterocye'sis**. (*Salpingo-*; *ὑστερα*, the womb; *κύνσις*, conception.) Tubo-uterine pregnancy. See *Pregnancy*, *tubo-uterine*.
- Sal'pinx**. (Σάλπιγξ, a trumpet.) *Anat.*

Term for the *Eustachian tube*; also, for the *Fallopian tube*.

S. tu'ba. Trumpet-like. The *Eustachian tube*.

Sal'safy. An old name for the *Tragopogon pratense*.

Salsamen'tum. (L.) Salt meat or fish. Old term for anything that is preserved by salt, but especially fish.

Salsaparil'la. See *Sarsaparilla*.

Salse'do. (L. *sal*, salt.) Saltiness. This *salsedo* was considered by Paracelsus, *Paramir. tr. iii. s. 10*, to be the cause of the sanguine temperament.

S. mu'crum. Old term syn. with *Salpetra*.

Salse'parin. A syn. for *Parillin*.

Sal'sifi. The same as *Salsafy*.

Sal'sify. The same as *Salsafy*.

Salsila'go. (L. *sal*, salt.) A salt liquid.

Salsitu'do. (L. *sal*, salt.) The same as *Salsedo*.

Salso'la. (L. *sal*, salt; *solus*, -a, -um, only.) A Genus of the Tribe *Salsolæ*, Order *Chenopodiaceæ*.

S. decum'bens. A syn. for *S. kali*.

S. ka'li. The prickly saltwort, or soda plant. Said to be stimulant, emmenagogue, and purgative. It yields *Barillin*.

S. longifo'lia. A syn. for *S. kali*.

S. sati'va. One of the species yielding soda.

S. so'da. One of the species yielding soda.

Salsol'æ. A Tribe of the *Chenopodiaceæ*.

Salsu'ginous. (*Salsugo*.) Bot. Epithet applied to plants that grow in a soil that is impregnated with common salt.

Salsu'go. (L.) A salt liquor at the bottom of salt-pits. Old term for a kind of pickle or brine, in which anything was preserved, especially flesh or fish. See *Salsamentum*.

Sal'sus. (L.) Salted, salt.

Salt. (L. *sal*.) Ordinary name for common salt, sodium chloride.

In *Chem.*, a compound formed by the union of a base or basic radical with an acid or acid radical.

S., ac'id. A salt in which the acid radical is dibasic or polybasic, and has only a portion of its replaceable hydrogen replaced by the base or basic radical.

S., al'kaline. A syn. for *S., basic*.

S., ape'rient, of Fred'erick. A name for sodium sulphate.

S., ba'ker's. A name for sodium bicarbonate.

S., bas'ic. A salt formed by union of a normal or neutral salt with a basic oxide or hydroxide.

S., bay-. A name for sodium chloride.

S., bit'ter, purg'ing. A name for magnesium sulphate.

S.-cake. Commercial name for crude sulphate of sodium formed in the manufacture of carbonate of sodium by Leblanc's process.

S., Chel'tenham. Name for a mixture of equal parts of sulphates of sodium and magnesium, and chloride of sodium.

S., com'mon. Common name for sodium chloride.

S., diuret'ic. A name for acetate of potassium.

S., doub'le. A salt in which two acid

SALTANS—SALUBRITY

hydrogen atoms are replaced by two metals or basic radicals.

S., Ep'som. See *Epsom salts*.

S., flour. A name for nitrate of potassium in minute crystals.

S., Gla'ser's polychrest. See *Sal polychrestus Glaseri*.

S., Glaub'er's. A name for sodium sulphate.

S., Glaub'er's Lym'ington. The same as *S., Glauber's*.

S., Horn'berg's sed'ative. A name for *Acid, boric*.

S. Lake hot springs. Some hot sulphur springs situated near Salt Lake City, Utah. (Billings.)

S., Le'mery's. A name for sulphate of potassium.

S., marine' Ep'som. A name for chloride of magnesium.

S., mar'tial sea. A name for chloride of iron.

S., microcos'mic. See *Microcosmic salt*.

S., Mon'sel's. A name for subsulphate of iron.

S., neutral. A salt formed by replacement of all the hydrogen of an acid or acid radical by a base or basic radical, and having a neutral reaction, being neither acid nor alkaline.

S., nor'mal. A syn. for *S., neutral*.

S. of bar'il'la. A name for sodium carbonate.

S. of bones. A name for ammonium carbonate.

S. of Col'cothar. A name for sulphate of iron.

S. of lem'ons. Popular name for potassium binoxalate.

S. of Rive'rius. A name for potassium citrate.

S. of so'da. A name for sodium carbonate.

S. of sor'rel. Potassium binoxalate, prepared from different species of *Oxalis* and *Rumex*.

S. of tar'tar. A name for pure carbonate of potash prepared from cream of tartar.

S. of vit'riol. Term for sulphate of zinc.

S. of wine. A name for *Ammonium carbonate*.

S. of wis'dom. An old term for *Sal alembroth*.

S. of worm'wood. Name for impure potash prepared from wormwood. See *Sal absinthi*.

S., oxy-. A syn. for *S., oxygen*.

S., oxygen. A salt of an acid that contains oxygen.

S.s, Pres'ton. A form of smelling salts consisting of a mixture of coarsely powdered ammonium carbonate with a small quantity of aqua ammoniæ and a volatile oil.

S., purg'ing, tasteless. A name for sodium phosphate.

S. rheum. See *Rheum, salt*.

S., Rochelle'. Name for tartarated soda.

S., rock-. See *Rock-salt*.

S., Schlip'pe's. A name for sulphantimoniate of sodium.

S., sea. Sodium chloride obtained from sea-water.

S.s, sec'ondary. Term for neutral salts.

S., sed'ative. A name for *Acid, boric*.

S., Seignet'te's. The same as *S., Rochelle*.

S.s, smel'ling. Pungent salts used for

stimulating the nasal mucous membrane, and thus acting reflexly as a respiratory and cardiac stimulant. Most of them contain carbonate of ammonia.

S. solu'tion, nor'mal. A 0.6 per cent. aqueous solution of sodium chloride; used in Histology and Physiology.

S., sore throat. Name for *Potassæ nitræ fusus sulphatis paucillo mixtus*.

S.s, spir'it of. A term for hydrochloric acid.

S. sul'phur springs. Name for some aperient sulphur springs in Monroe County, W. Virginia. (Billings.)

S., table. A syn. for *S., common*.

S., wall. Name for nitrate of calcium.

S., white. Name for common salt.

S. wort. See *Saltwort*.

Saltans. (L.) Dancing.

S., ro'sa. Dancing rose. A name for *Urticaria*.

Salta'tio. (L.) A dancing or leaping.

S. Sanc'ti Viti. *St. Vitus' dance*.

Salta'tion. (*Saltatio*.) A dancing or leaping. Especially applied to the leaping sometimes noticed in cases of chorea.

Saltator'ial. (L. *saltator*, a dancer.) Epithet applied to those animals whose mode of progression is by leaps.

Saltator'ic. (L. *saltator*, a dancer.) Belonging to, or characterised by, dancing.

S. cramp. Syn. for *S. spasm*.

S. spasm. A rarely-occurring and transient clonic spasm coming on when the patient tries to stand, causing him to give a jump.

Saltatory. Progression by leaping.

S. the'ory of evolu'tion. Term for that offshoot of the theory of *evolution* which states that the evolution of species is characterised by marked and sudden variations.

Salter's incremen'tal lines. Term for markings occurring on teeth, roughly parallel with the outer surface of the dentine, and consequent on imperfect calcification of the dentine.

S.'s swing-cra'dle. A form of moveable cradle from which the splints are suspended in leg-fractures, invented by Salter.

Saltpe'tre. (F. *salpêtre*.) Common name for nitrate of potassium. Also termed *Nitre*.

S., Chil'i. A name for sodium nitrate.

S., lead. A name for lead nitrate.

S., lime. A name for calcium nitrate.

S. lye. The liquid obtained by the treatment of saltpetre with water.

Salt'us. (L.) A leap. *Med.* A springing or leaping. Used as syn. for *Subsultus*. Also, a term for the *Vulva*.

S. ten'dinum. A syn. for *Subsultus tendinum*.

Salt'wort. General term for the members of the Genus *Salsola*. Also, the *Glaux maritima*.

S., prick'ly. Common name for the *Salsola kali*.

Saltz'brunn. A place in Prussia, noted for its cold alkaline spring, which is used for drinking and in baths.

Salu'ber. (L. Fem. *-bris*, neut. *-bre*.) Sound, healthy.

Salu'br'ious. (L. *saluber*.) Wholesome; health-giving.

Salu'br'iousness. (*Salubrious*.) The same as *Salubrity*.

Salu'brity. (L. *salubritas*, healthfulness.)

F. salubrité; *I. salubrità*; *G. Salubrität*.) Healthfulness; wholesomeness.

Sal'ufer. (*L. salus*, health; *fero*, to carry.) A name for neutral silico-fluoride of sodium. A white inodorous solid, used as a disinfectant and deodorant, in the form of a 1 gr. to 1 oz. aqueous solution.

Sal'umin. (*Salicylate*; *aluminium*.) Name for salicylate of aluminium. Used in nose- and throat-diseases.

Sal'us. (*L. Gen. salutis*.) Health of body or mind.

Sal'utary. (*Salus*.) Health-promoting.

Saluti'ferous. (*L. salutifer*.) Bringing health; healthful.

Salvado'ra. (From *Salvador*, a Spanish botanist.) The most important Genus of the *Salvadora*ceæ.

S. oleo'ides. The Indian tooth-brush tree. Action and uses similar to those of *S. persica*.

S. per'sica. The jhāla of India, *adai* of Abyssinia. Bark tonic and stimulant; root-bark vesicant; leaves purgative and anthelmintic; branches used for making a tooth-wash.

Salvadora'ceæ. *Bot.* An Order of gamopetalous Dicotyledons.

Salvatel'la. (*L. salveo*, to be well.) Shortened term for *Salvatella*, *vena*.

S., ve'na. *Anat.* Old name for a vein on the back of the hand near its ulnar edge, taking origin from the plexus on the back of the hand and fingers. It ascends to the ulnar side of the forearm, where it takes the name of posterior cubital vein. The ancients believed that blood-letting from this vein was of great efficacy in the cure of diseases.

Salve. (*L. salvo*, to heal.) A common term for ointment.

S., blis'tering. A name for *Unguentum lytta*.

S., Desh'ler's. A name for *Ceratum resinæ compositum*.

S., eye. An eye-ointment; specially applied to the *Unguentum oxidî zinci impuri*, and the *Unguentum hydrargyri nitrico-oxidî*.

Salver-shaped. *Bot.* Shaped like a salver or flat plate; epithet applied to the corollas of certain flowers.

Sal'via. (*L. salvus*, in good health; so named from the reputed healing virtues of the Genus.) A Genus of the *Labiata*æ; the *Sage* Family.

S. africa'na. The wild sage, a South African species. Properties similar to those of *S. officinalis*.

S. axillar'is. Mexican hyssop. Properties similar to those of European *hyssop*.

S. chi'an. *Hab.*, Mexico. Leaves used in infusion as a drink, and used externally as a poultice.

S. colora'ta. A syn. for *S. horminum*.

S. hispan'ica. The Spanish sage. One source of sage leaves, which are stimulant to the intestinal canal.

S. hispano'rum. Syn. for *S. hispanica*.

S. horminum. Properties and uses the same as those of *S. officinalis*.

S. horte'nsis mi'nor. The small sage, or sage of virtue; a variety of the *S. officinalis*, and having similar properties.

S. lyra'ta. The cancer-weed, the radicle leaves of which were formerly used as an application to cancers and to warts.

S. mi'nor. A syn. for *S. officinalis*.

S. officina'lis. The common or garden sage-plant. Said to be antiseptic; used by the Chinese as a tonic; in England, for culinary purposes.

S. polystach'ya. A syn. for *S. chian*.

S. sclar'ea. The common or garden clary. Leaves and seeds, antispasmodic.

S. verbenace'a. Vervain sage, wild clary. *Hab.*, South Europe. Properties similar to but weaker than those of *S. officinalis*. Seeds mucilaginous; used to remove foreign substances from the eye.

S. vitæ. A name for the *Asplenium murale*, or wall-rue.

S. vulgar'is. A syn. for *S. officinalis*.

Sal'viol. (*L. salvia*; *oleum*, oil.) Name for a liquid body present in oil of sage.

Salviol'i, micrococ'cus of. A name for the *Bacillus septicus sputigenus*. See *APPENDIX*.

Samade'ra. A Genus of the *Simarubaceæ*.

S. ind'ica. A tree of the East Indies. *Nat. Order* *Simarubaceæ*. Bark, bitter and febrifuge.

Samandu'ra. A syn. for *Samadera*.

Sam'ara. (*L. samara* = *samera*, the seed of the elm.) *Bot.* Term for an indehiscent, dry fruit, with a wing-like appendage.

Samar'iform. (*L. samara*; *forma*, shape.) Shaped like a *Samara*.

Samar'itan. (After the good Samaritan.) Term now applied to one who engages in charitable work for the poor and sick; a philanthropist. Also, epithet applied to such work done.

S.'s bal'sam. Term for a mixture of wine and oil used in old times as a balsam for application to wounds.

S. hos'pital. A hospital specially devoted to the sick poor.

S. schools. Common name in the United States for ambulance classes.

Samar'itanism. Philanthropy.

Samati'to. Mexican name for the *Ficus complicata*.

Samba'iba. Specific name of *Curatella sambaiba*.

Sambaïbin'ha. A name for the *Davila rugosa*.

Sam'bo. A syn. for *Mulatto*; also, the offspring of a negro and a North American Indian.

Sambuca'ceæ. See *Sambuceæ*.

Sambu'ceæ. *Bot.* A section of the *Caprifoliaceæ*.

Sambu'ci a'qua. See *Aqua sambuci*.

S. flo'res. *B.P.* Elder flowers. The fresh flowers of *Sambucus nigra*. Preparation, *Aqua sambuci* (q. v.). Used for lotions.

Sambuci'næ. Baltsch's term for the *Sambuceæ*, which he classes as a Family of the *Polymorphæ*.

Sambu'cus. (*L. sambucus*, an elder tree.) A Genus of the *Caprifoliaceæ*.

S. arbo'rea. A syn. for *S. nigra*.

S. canaden'sis. Properties and uses identical with those of *S. nigra*.

S. chamæac'te. A syn. for *S. ebulus*.

S. eb'ulus. The dwarf elder. The inner bark, leaves, flowers, berries, seeds and root have all been used for their deobstruent and, in larger doses, cathartic action.

S. he'llon. A syn. for *S. ebulus*.

S. herba'cea. A syn. for *S. ebulus*.

S. hu'milis. A syn. for *S. ebulus*.
S. ni'gra. The common elder. The flowers are stimulant and diaphoretic. Used, together with those of *S. canadensis*, under the name *Sambuci flores*, to prepare *Aqua sambuci*.

S. pu'bens. The same as *S. pubescens*.
S. pubes'cens. The red-berried elder; a North American plant. The bark has a hydragogue cathartic action.

S. racemo'sa. A syn. for *R. pubescens*.
S. vulgar'is. Syn. for *S. nigra*.

Same'ch. (Arab.) Paracelsian term syn. with *Sal tartari*.

Sam'en. Old term for *Hordeum*, or barley. (Rulland and Johnson.)

Sam'era. (L. *samera*, the seed of the elm.) See *Samara*.

Sam'ia ter'ra. Samian earth. An argillaceous earth found in Samos. It was considered to have similar virtues to the *Terra Lemnii*. See also under *Samos*.

Sam'ios. (Σάμος, an island of Ionia.) Belonging to the island of Samos.

Chem. Formerly applied as an epithet to argillaceous earth of two kinds, one called *Terra Samia*, mentioned by Galen, *de Simp. Fac.* ix, and Dioscorides; the other called *Lapis samius*, used for polishing gold, mentioned by Dioscorides.

Sam'ius. The same as *Samios*.

S. lap'is. See under *Samios*.

Sam'phire. Common name for the *Crithmum maritimum*, or sea-fennel.

Samp'son, black. Name for the *Echinacea purpurea*.

Sampsu'chine. Syn. for *Sampsuchon*.

Sampsu'chinos. (Σαμψύχινος; belonging to σάμψυχον, marjoram.) Belonging to the plant *Sampsuchon*. Epithet formerly applied to an oil and ointment (σαμψύχινον ἔλαιον, &c.) obtained from this plant.

Sampsu'chon. (Σάμψυχον, marjoram.) Old name for the *Origanum marjorana*, or sweet marjoram.

Sampsu'chum. The same as *Sampsuchon*.

Sampsu'chus. Name for the *Thymus mastichina*.

Sampsy'chum. See *Sampsuchon*.

Sam'shu. (Chinese.) An alcoholic beverage made in China from rice or millet.

Sam'son's snake-root. Name for the *Psoralea melilotoides*.

San Bernadi'no. In the Grisons, Switzerland; a place noted for its alkaline and sulphur spring.

San Bernadi'no hot springs. Name for some hot lime springs, temperature 110° to 170° F., near Los Angeles, San Bernadino County, California.

San Giac'omo. A place in Tuscany noted for its hot sulphur spring.

San Ju'an de Cam'pos. In Majorca; a place noted for its hot sulphur spring.

San Ju'an hot springs. In San Bernadino County, California; hot sulphur springs.

San Mar'cos. In Santa Barbara County, California; a place noted for its hot sulphur springs.

San Marti'no. A place in Sondrio, Italy, noted for its sulphur spring; also, in Sardinia, noted for its chalybeate spring. (Foster.)

San Pellegri'no. In Bergamo, Italy; a place noted for its chalybeate spring.

San Re'mo. A winter resort in Porto Maurizio, Italy. The climate is very mild and equable.

Sanabil'is. (L.) Curable.

San'able. (*Sanabilis*.) Curable.

Sanamun'da. Name for the *Geum urbanum*.

Sana'tio. (L.) A healing, or restoring to health.

Sanat'ion. (L. *sanatio*.) See *Sanatio*.

San'ative. (L. *sano*, to cure.) Syn. for *Sanatory*.

San'atol. Commercial name for a disinfectant consisting of a mixture of sulphuric acid and certain phenol derivatives.

Sanato'rium. (L. *sano*, to heal.) A private hospital. Also, used very generally in the sense of *Sanitarium*.

San'atory. (L. *sano*, to heal.) Having power to heal or cure diseases; curative.

Sanctum se'men. (L.) Holy seed. Name for the seed of *Artemisia santonica*.

Sand. Fine, rounded granules composed of silica.

Also, in *Anat.*, any granules resembling these, e. g., brain-sand.

S. bath. See *Balneum arenæ*.

S.-blind. Term for defect or disturbance of vision characterised by the appearance of sand-like grains before the eyes.

S.-box tree. Common name for the *Hura crepitans*.

S., brain. See under *Pineal gland*.

S.-crack. Term for a crack which forms in a horse's hoof.

S.-flea. Name for the chigoe, *Pulex penetrans*.

S., pine'al. The same as *S., brain*.

S.-sedge. Common name for the *Carex arenaria* (q. v.).

S. tu'mour. Name for *Psammoma*.

San'dal, red. See *Red Sandal*.

San'dalos. See *Santalum*.

San'dalum. See *Santalum*.

S. coëru'leum. Syn. for *Guilandina moringa*.

S. ru'brum. Syn. for *Pterocarpus santalinus*.

San'dalwood. The *Pterocarpus lignum*.

S., oil of. See *Oleum santali*.

S., red. The wood of *Pterocarpus santalinus*.

San'darac. (Σανδαράκη. F. *sandaraque*; I. *sandaraca*; G. *Sanderak*.) Term for a gum-resin obtained in white tears by exudation from the *Juniperus communis*. Dissolved in alcohol, it forms a white drying varnish. Reduced to powder it constitutes *pounce*.

S., Ger'man. Name for juniper resin.

S., min'eral. Name for *Realgar*.

San'darach. (Σανδαράχη = σανδαράκη.) *Sandarac*.

Sandarac'ha. *Sandarac*.

S. ar'abum. *Sandarac* of the Arabs. A name for the gum *sandarac*.

S. græco'rum. *Sandarac* of the Greeks. Name for *Realgar*.

Sand'ed gum. Term for powdered *gum arabic*.

San'ders, red. *Red sanders*.

Sand'stone, new red. *Geol.* A formation consisting mainly of sandy and argil-

laceous strata, brick-red, or in parts, greenish-grey, the latter colour occurring in stripes or spots. It has been divided into Upper New Red, including the Nunchelkalk, and Lower New Red, including the Magnesian Limestone.

S., old red. *Geol.* A formation directly below the carboniferous strata. The formation contains mainly organic remains. It has also been termed Devonian, from its wide occurrence in Devonshire.

Sandwich springs. Name for some alkaline sulphur springs, containing a large quantity of chloride of magnesium, sulphate of calcium, and sulphuretted hydrogen, at Sandwich, near Detroit, in Canada. (Billings.)

Sandwort. Common name for the herb *Arenaria*.

Sand'yx. (Σάνδυξ, a bright red colour.) *Chem.* Old term for *Cerussa usta*.

Sane. (*L. sanus*, healthy, either in body or mind.) Healthy in mind; of sound mind.

Saneness. *Sanity*.

Sanford's mixture. A syn. for *Chloranmyl*.

Sangaree'. (Span. *sangria*.) A flavoured alcoholic beverage of sweetened and diluted wine or porter.

Sänger's opera'tion. Sänger's modification of the operation of *Cæsarean section*, in which the uterus is brought out through a long median abdominal incision, and the fœtus is then extracted after incision into the uterus.

Sangra'do. (*L. sanguis*, blood.) Term, taken from the name of a character in Le Sage's "Gil Blas," applied to a medical man who makes a very extensive use of venesection.

Sanguicolous. (*L. sanguis*, blood; *colo*, to inhabit.) Living in the blood. Epithet applied to certain parasites.

Sanguiductus. (*L. sanguis*, blood; *duco*, *ductum*, to lead.) A blood-canal or blood-sinus. Also, applied especially to the venous sinuses of the dura mater, *S. duræ matris*.

S. duræ matris. A venous sinus of the dura mater.

Sanguiferous. (*L. sanguis*, blood; *fero*, to bear.) Blood-bearing.

Sanguifica'tio debil'ior. (Mod. *L. sanguificatio*; *L. debilior*, weaker, diminished.) Diminished sanguification or hæmatosis.

Sanguifica'tion. (*L. sanguis*, blood; *facio*, to make. *I. sanguificazione*; *G. Sanguificierung*.) Formation of blood; also, a change or conversion into blood.

Sanguifluous. (*L. sanguis*, blood; *fluo*, to flow.) Flowing or running into blood.

Sanguifluxus. (*L. sanguis*, blood; *fluo*, *fluxum*, to flow.) A flow of blood, hæmorrhage.

S. uterinus. A uterine flow of blood, metrorrhagia.

Sanguigenous. (*L. sanguis*, blood; *γίvos*, descent.) *Hæmatogenous*.

Sanguimotion. (*L. sanguis*, blood; *moveo*, *motum*, to move.) The circulation of the blood.

Sanguimotory. (*L. sanguis*; *moveo*, *motum*, to move.) Belonging to the circulation of the blood, circulatory.

Sanguinalis. (*L. sanguis*, blood.) Belonging to *sanguis*, or blood. Also, as a substantive, used as a Generic term (see *S. corrigiola*).

S. corrig'ola. A syn. for *Polygonum aviculare*.

Sanguinar'ia. (Fem. sing. *L. sanguis*, blood; name given because certain species were employed as hæmostatics.) A Genus of the *Papaveraceæ*. Also, name for the rhizome of *S. canadensis*. Also (nom. pl. neut.), in *Comp. Anat.*, old term applied by Illiger and Goldfuss to the *Carnivora*.

S. canadensis. The rhizome of this plant, termed blood-root, is used as an expectorant. Its action is due to the presence of an alkaloid, *Sanguinarin*.

Sanguinarin. (*Sanguinaria*.) $C_{17}H_{15}NO_4$. The alkaloid of blood-root, the rhizome of *Sanguinaria canadensis*. In small doses it is expectorant, in large doses it causes vomiting, purging, and convulsions, followed by paralysis, and death, in fatal cases, from respiratory failure. Dose, 1-12th to 1-8th grain; as an emetic, $\frac{1}{2}$ to 1 grain.

Also, $C_{34}H_{15}NO_8$, a brown, resinoid substance obtained by precipitation from a tincture of the root of *Sanguinaria canadensis*. Stimulant and tonic in small doses, a sedative expectorant in large doses, in still larger, emetic and convulsant. Dose, $\frac{1}{2}$ to 1 grain.

S., ni'trate of. A nauseant and expectorant. Dose, 1-10th to $\frac{1}{4}$ grain.

S., sul'phate of. An emetic. Dose $\frac{1}{2}$ to 1 grain.

Sanguinarina. (*Sanguinarin*.)

Sanguinar'ius. (*L.*) Blood-thirsty. *Comp. Anat.* Term applied formerly in the neut. pl. (*Sanguinaria*, q. v.) to the *Carnivora*.

Sanguine. (*L. sanguineus*.) Bloody; also, full of blood, hence brisk, hopeful.

S. tem'perament. An energetic, hopeful temperament. An old name for one of the varieties into which human temperaments or dispositions were divided, for the purpose of description, the other main varieties being the phlegmatic and the nervous.

Sanguinea. (*L. sanguineus*, bloody, blood-coloured.) A name for *Potassium, nitrate of*.

San'guineness. A syn. for *Plethora*.

Sanguineous. (*L. sanguineus*.) *Sanguine, plethoric*.

S. ap'oplexy. See *Apoplexy, sanguineous*.

S. cyst. A cyst containing blood, whether it be primarily a blood-cyst, or one into which hæmorrhage has secondarily occurred.

Sanguineus. (*L.*) Bloody, belonging to blood; also, of the colour of blood.

Sanguinicolous. (*L. sanguis*, -inis, blood; *colo*, to inhabit.) The same as *Sanguicolous*.

Sanguinifica'tion. (*L. sanguis*, -inis, blood; *facio*, to make.) The same as *Sanguification*.

Sanguin'olum. (*L. sanguis*, blood.) Old term, employed by Paracelsus for blood in the urine, occurring as a sign of commencing ulceration or abscess.

Sanguinis. (*L.*) Gen. sing. of *sanguis*.

S. absorp'tio. Absorption of blood.

S. conges'tio. Congestion, or engorgement, with blood.

S. dissolu'tio. Dissolution or absorption of blood.

S. flu'or. A flow of blood. Term for *Hæmoptysis*.

S. flu'or vesi'cæ. A flow of blood from the bladder. Vesical hæmaturia.

S. ic'tus. A hæmorrhagic stroke or apoplexy. Cerebral hæmorrhage.

S. mis'sio. A blood-letting. Venesection.

S. profu'vium copio'sum. Copious rush of blood, any considerable hæmorrhage.

S. profu'vium ex o're. A rush of blood, or hæmorrhage, from the mouth.

S. stagna'tio. Stagnation of blood.

Sanguinity. (L. *sanguis*, -inis, blood.) The quality of likeness or unlikeness between parents. A moderate degree of unlikeness is considered to be the most favourable for the production of healthy offspring.

Sanguinivorous. (L. *sanguis*, -inis, blood; *voro*, to devour.) The same as *Sanguivorous*.

Sanguinol. (L. *sanguis*, blood; *oleum*, oil.) A therapeutical preparation of hæmoglobin and evaporated blood, in a liquid form, consisting of blood-salts 46 parts, ox hæmoglobin 10 parts, peptonised muscle-albumin 44 parts. Used as a hæmatinic. (Gould.)

Sanguinolent. (L. *sanguis*, blood. F. *sanguinolent*; I. *sanguinolento*; G. *blutig*.) Resembling, or tinged with, blood.

Sanguinosus. (L. *sanguis*, -inis, blood.) Sanguinous.

Sanguinous. A syn. for sanguinary, or bloody.

Sanguipur'gium. (L. *sanguis*, blood; *purgo*, to purge.) A purging of the blood. Old term for a mild fever, which, by its discharges, was supposed to purify the blood.

Sanguis. (L. Gen. *sanguinis*.) Blood.

S. bovi'nus. Ox blood. The dried blood of the bullock. Formerly given internally for its supposed analeptic and hæmatinic actions.

S. concre'tus. Coagulated blood.

S. draco'nis. Dragon's blood.

S. hir'ci sicca'tus. Dried goat's blood. Formerly given internally from its supposed sudorific and antipleuritic actions.

S. in uri'na. Blood in the urine, hæmaturia.

S. men'struus. Menstrual blood, menses.

Sanguisor'ba. (L. *sanguis*, blood; *sorbeo*, to sup up. F. *sanguisorbe*; G. *Blutkraut*.) A Genus of the *Rosaceæ*.

S. canaden'sis. The Canadian burnet. Root, bitter and emetic. Fruit said to be narcotic.

S. officina'lis. The great burnet. Hab., Europe. Root astringent.

Sanguisor'bæ. A section of the *Rosaceæ*.

Sanguisuc'tion. (L. *sanguis*, blood; *sugo*, *suctum*, to suck.) Blood-sucking.

Sanguisuga. (L. *sanguis*, blood; *sugo*, to suck.) The Genus *Hirudo*.

S. medicina'lis. The speckled leech, an aquatic species of Northern Europe. This species and *S. officinalis* are used in Medicine for the abstraction of blood. See *Leeching*.

S. officina'lis. The green leech, an aquatic species of Southern Europe, by some considered to be a variety of *S. medicinalis*. Used in Medicine, like the latter.

Sanguisug'ent. (*Sanguisuga*.) Blood-sucking; performing sanguisuction.

Sanguisug'ous. (*Sanguisuga*.) Blood-sucking.

Sanguisug'um. (L. *sanguis*, blood; *sugo*, to suck.) Old term signifying a condition

of over-engorgement of the heart with blood, according to Bonettius. *Anat. Praet.* ii, i, Obs. 91, *Schol.*

Sanguivorous. (L. *sanguis*, blood; *voro*, to devour.) Feeding on blood.

San'icle. (*Sanicula*.) Common name for the Genus *Sanicula*.

S., Amer'ican. Common name for the *Heuchera corymbosa*.

S., York'shire. Common name for the *Pinguicula vulgaris*.

Sanic'ula. A Genus of the *Saniculeæ* or *Saniculidæ*, which are a Tribe of the *Umbelliferae*.

S. eboracen'sis. The *Sanicle*, York'shire.

S. europæ'a. The woodmarch. A mild astringent.

S. marilan'dica. The Maryland sanicle. Action tonic. The powdered root is popularly used in intermittent fever, and in chorea; it is also used in Veterinary Medicine.

S. mas. (L. *mas*, male.) Syn. for *S. europæa*.

S. monta'na. Syn. for *Pinguicula vulgaris*.

S. officinar'um. Syn. for *S. europæa*.

S. sec'tum. Syn. for *Saxifraga granulata*.

Sanicu'leæ. A Tribe of the *Umbelliferae*.

Saniculi'dæ. Syn. for *Saniculeæ*.

Sanido'dès. (*Σανιδῶδης*, like a plank.) Anat. Having a chest flat like a plank or board.

San'ies. (L. F. *sanie*; I. *sanie*; G. *Jauche*.) Surg. A thin fetid pus mixed with serum or blood, secreted by any wound or ulcer.

S. gangræno'sa. Sanies formed in gangrene or destruction of tissues.

San'ious. (F. *sanieux*; I. *sanioso*; G. *jauchig*.) Composed of, or having the characters of, *Sanies*.

S. pus. See *Pus*, *sanious*.

Sanitarian. (L. *sanitas*, health.) A person specially skilled in the science of sanitation.

Sanitar'ium. (L. *sanitas*, health.) An institution in which the surroundings and conditions are specially adapted for promoting health. The term is often used in the sense of *Sanatorium*.

San'itary. (L. *sanitas*, health. F. *sanitaire*; I. *sanitario*; G. *sanitärisch*.) Relating to health, especially to public health, or sanitation.

S. cor'don. A circular line of guards surrounding an infected locality to prevent or control ingress or egress.

S. police'. See *Police*, *sanitary*.

S. sci'ence. The science of *Hygiene*.

San'itas. (L.) Health, whether of body or mind. Also, name for a commercial preparation consisting of an aqueous solution of oxidised oil of turpentine, the active principle of which is peroxide of hydrogen. Used as an antiseptic.

Sanita'tion. (L. *sanitas*. F. *assainissement*; G. *Assanierung*.) A making sound or healthy. The carrying out in practice of the laws of *Hygiene*.

San'ity. (L. *sanitas*.) Health, soundness, of mind or body. Now-a-days always used to mean soundness of mind.

Sanki'ra. A name for the *Smilax china*. (Dunglison.)

Sankt Mor'itz. (G.) In the Grisons, Switzerland; a place noted for its sulphurous spring.

San'nion. (*Σαννιον*.) Old term for a tail, *cauda*; also, for *penis*.

San'som's inha'ler. A modification of

Snow's inhaler for the administration of chloroform, introduced by Sansom. It has a gutta-percha covering instead of a cold-water jacket.

San'son-Purkinje's images. See *Purkinje-Sanson's images*.

San'son's experiment. The same as *Purkinje-Sanson experiment* (q. v.). This was formerly widely used in Ophthalmic practice as a confirmation of the presence of *Cataract*.

Santa A'na bark. Syn. for *Cusco bark*.

S. Bar'bara springs. Warm sulphur mineral springs, at a temperature of 65° to 125° F., in Santa Barbara county, California.

Santala'ceæ. The sandalworts, an Order of the *Achlamydosporææ*.

Santali'oleum. B.P. Oil of sandalwood, pale yellow in colour, distilled from the wood of *Santalum album*. Soluble in less than its own weight of rectified spirit. Given internally as a disinfectant to the genito-urinary tract, especially in gonorrhœa. Dose, 10 to 30 minims in capsules, or suspended with mucilage. Two non-official preparations are made from it:—*Capsules of sandal oil*, and *Mistura olei santali*.

Santalin. $C_{15}H_{14}O_5$. The red colouring-matter of red sandal-wood.

Santalum. (Mod. L.) A Genus of the *Leguminosæ*. Also, *S. album*.

S. album. The yellow or white sandalwood or sanders. The young wood is white and the old yellow. It contains a resin and a fragrant volatile oil. Stimulant and astringent to the respiratory and urinary passages.

S. citri'num. Syn. for *S. album*.

S. myrtifo'lum. Syn. for *S. album*.

S. ru'brum. Syn. for *Pterocarpus santalinus*.

Santal-wood. Syn. for *Sandal-wood*.

Santoli'na. (Named after *Santalum*, sandal-wood, because resembling it in odour.) A name for the *Artemisia Santonica*.

S. chamæcyparissus. A European mountain plant, Nat. Ord. *Compositæ*. Action, stimulant, aromatic, and anthelmintic. Official in the French Codex under the name *Santoline*.

Santoline. Name in the French Codex for the *Santolina chamæcyparissus*.

Santoli'neæ. Bot. A subdivision of the *Anthemideæ*.

Santonas so'dicus. Name in the Portuguese Pharmacopœia for *Sodium Santoninate* (q. v.).

Santon'ic ac'id. An acid obtained by prolonged boiling of *santonin* in strong baryta-water. It is an isomer of *Santoninic acid*.

Santon'ica. B.P. (Mod. L. From *Santonica*, its native place. F. *santonine*; I. *santonina*; G. *Wurmsamen*.) The dried unexpanded flowering tops of *Artemisia maritima*, variety *Stechmanniana*. Dose, 10 grains to 1 drachm. They are used to prepare *Santoninum*.

Santon'icum. (*Santonica*, the native place of this plant. The *Artemisia santonica*.)

Santonin. See *Santoninum*.

Santonin'as so'dicus. (Mod. L.) Term for *Sodium Santoninate*.

Santoninate. A salt of *Santoninic acid*.

Santonin'ic ac'id. $C_{15}H_{20}O_4$. An acid obtained by the action of an alkali on *Santonin*.

Santoninox'in. Derivative of *Santonin* prepared by the action on the latter, in alkaline solution, of hydroxylamine. It is non-poisonous, but has an action similar to that of *santoninum*.

Santon'ium. B.P. (Mod. L. From *Santonica*.) $C_{15}H_{18}O_3$. *Santonin*. A neutral bitter substance, occurring in flat rhombic prisms, prepared from *Santonica*. Soluble, 1 in 4 of boiling rectified spirit, 1 in 40 of cold; and 1 in 22 of chloroform. Treated with a dilute acid, it splits up into *Santoniretin* and glucose. Action, anthelmintic; useful both for round-worm and thread-worm. It often affects the vision, causing everything to appear green or yellow, and is therefore given at night. Dose, 2 to 6 grains. From it are prepared *Trochisci santonini*.

Santonire'tin. (*Santonin*; Gr. *ἄντιον*, a resin.) See under *Santoninum*.

Santorini. A Venetian anatomist, born 1681, died 1737.

S., canal' of. Name for *Pancreas, accessory duct of*.

S., car'tilages of. The *Cornicula laryngis*.

S., circ'ular mus'cle of. Those circular fibres of the *Constrictor urethræ* which surround the membranous portion of the urethra. By some they are described as consisting of involuntary muscular tissue.

S., duct of. The same as *S., canal of*.

S., fis'sures of. Term for fissures in the upper and back part of the fibro-cartilage of the *pinna* or external ear.

S., mus'cle of. Name for the *Risorius*.

S., plex'us of. Name for the *Pubo-prostatic plexus*.

S., tu'bercles of. Syn. for *S., cartilages of*.

S., veins of. Name for the *emissary veins* passing between the sinuses of the dura mater and the veins of the outside of the skull.

Santorinus. Latinised form of the name *Santorini*.

Sao'ria. Guiana name for the dried ripe fruit of *Bæobotrys picta*, which is also termed *Mæsa picta*.

Sap. (*Sapa*.) The nutritive circulating fluid of plants.

S.-cavity. A sap-containing sac in the leaf of a plant.

S., descent'ing. See *S., descent of*.

S., descent' of. The descent of the sap in the wood-vessels of a plant, occurring when the roots and surrounding soil are dry, or drier than the stem and leaves. It often occurs after absorption of water by the leaves.

S. wood. Common name for *Alburnum*.

Sapa'. (I. *sapa*.) Syn. for *Rob*.

Sapha'da. Term introduced by Paracelsus for red or reddish coloured scales which adhered to the hair in certain affections of the scalp.

Saphæ'na. See *Saphena*.

Sapha'ti. The same as *Saphatum*.

Sapha'tum. Syn. for *Fævs*.

Saphe'na. (Σαφηνίς, plain, distinct.) Name for saphenous vein; the "long saphena" being the *Saphenous vein, long*, and the "short saphena," the *Saphenous vein, short*.

Saphe'nal. Syn. for *Saphenar* and *Saphenous*.

Saphe'nar. Syn. for *Saphenous*.

Saphe'no-tib'ial vein. A vein arising just above the internal malleolus, from the *Saphenous vein, internal*, and passing along the border of the soleus muscle, to open into one of the tibial veins. (Braune.)

Saphe'nous. (Σαφηνίς, plain, distinct. F. *saphène*; I. *safeno*.) Belonging to certain distinctly marked and superficial structures of

the thigh and leg, the saphenous opening, veins, &c.

S. nerve, external. A nerve formed by the union of the tibial communicating branch of the internal popliteal nerve with the peroneal communicating branch of the external popliteal nerve about the middle of the outer side of the leg. It lies subcutaneously, and passes behind the external malleolus, to end on the outer side of the foot and little toe. It communicates, on the dorsum of the foot, with the musculo-cutaneous nerve.

S. nerve, internal. The largest branch of the anterior crural nerve. It lies deeply on the outer side and then passes over to the inner side of the femoral vessels, as far as the knee, below which it is subcutaneous. It passes to the inner side of the knee beneath the sartorius, giving a branch over the patella, and then lies subcutaneously on the inner side of the leg, terminating over the inner side of the dorsum of the foot. It communicates with the obturator and internal cutaneous nerves in the thigh, and with the posterior branch of the internal cutaneous nerve in the leg.

S. nerve, long. Syn. for *S. nerve, internal*.

S. nerve, short. Syn. for *S. nerve, external*.

S. opening in fascia lata. A rounded opening in the fascia lata of the thigh, just below and external to the inner end of Poupart's ligament, through which the internal saphenous vein passes to join the femoral vein.

S. peroneus. Syn. for *Communicans peronei*.

S. vein, external. A vein arising from the outer end of the venous arch on the dorsum of the foot, and passing up behind the external malleolus, and superficially along the leg, to pierce the fascia and open into the popliteal vein at the lower part of the popliteal space.

S. vein, internal. This vein arises from the inner side of the venous plexus on the dorsum of the foot, passes up in front of the internal malleolus, lying superficially in the leg, behind the inner border of the tibia, over the inner condyle of the femur, and then obliquely upwards and outwards over the sartorius muscle, to pass through the saphenous opening of the fascia lata, and join the femoral vein. It communicates with the deep plantar veins, anterior and posterior tibial veins, and by one or two twigs with the femoral vein in the thigh. It is joined by cutaneous branches from the sole, leg, and thigh, and also by the superficial circumflex iliac, superficial epigastric, and external pudic veins, and sometimes by a large anterior branch and a similar posterior branch in the thigh.

Saphe'nus. Latinised term for *Saphe-nous*.

Saph'ism. See *Sapphism*.

Sap'id. (L. *sapio*, to taste. F. *sapido*; I. *sapido*; G. *schmackhaft*.) Having a smell or taste, savoury. Epithet applied to substances that stimulate the nerves of taste.

Sapid'ity. The quality of having taste, or being *sapid*.

Sapient'ia den'tes. (L.) The wisdom teeth.

Sapinda'ceæ. Bot. A Family of poly-petalous, hypogynous *Dicotyledons*, many of them large trees, whose fruit is a capsule of one, two, or three compartments.

Sapin'deæ. Syn. for *Sapindaceæ*. Also, a Tribe of the *Sapindaceæ*.

Sapin'dus. (L. *sapo indus*, Indian soap; so named from the use of the rind as a soap.) A Genus of the *Sapindaceæ*.

S. emargina'tus. The Indian soap-nut tree. The capsules, containing *Saponin*, are expectorant.

S. laurifo'l'ius. Hab., the East Indies. The berries are saponaceous, and are given in colic and flatulency; the leaves are used in baths for joint-troubles, rheumatism, &c.

S. saponar'ia. The soap-nut or soap-berry-tree of the West Indies and Tropical America. The fruits (termed *Saponariae nucleæ*) contain a tonic pulp. The root and bark are also tonic.

Sa'pium. A Genus formerly classed under the *Euphorbiaceæ*, now under the *Crotonææ*.

S. aucupar'ium. Hab., West Indies and Surinam. The juice yields a kind of india-rubber which is vesicant, and is also used for bird-lime.

S. hippo'manë. Hab., West Indies. The juice and an extract of the leaves are caustic.

S. in'dicum. Hab., East Indies. Juice and leaves caustic.

S. laurifo'l'ium. Hab., West Indies. The Jamaica milkwood. Juice, caustic.

S. sebi'ferum. Syn. for *Stillingia sebi-fera*.

S. sylvaticum. Syn. for *Stillingia sylvatica*.

Sa'po. (L. Gen. *saponis*.) Soap.

S. ac'idus. Acid soap. A compound consisting of a fixed oil combined with an acid.

S. al'ba. White soap or Castile soap; prepared from olive oil.

S. ammoniaca'lis. Ammoniacal soap. A name for *Linimentum ammoniæ fortius*.

S. ammo'niæ. A syn. for *Linimentum ammoniæ*.

S. ammo'niæ olea'ceus. Oily soap of ammonia. A syn. for *S. ammoniacalis*.

S. amygdali'nus. Almond soap. A syn. for *S. medicinalis*.

S. anima'lis. B.P. Animal soap, curd soap; a soap manufactured from soda and a purified animal fat consisting mainly of stearin. Used for compounding pharmacopœial preparations; such as *Emplastrum saponis* and *E. saponis fuscum*.

S. aromaticus solidus. Solid aromatic soap. A syn. for *Opodeldoc*.

S. butyri'nus. Butter soap; soap made by the saponification of butyric acid.

S. cacaoti'nus. A syn. for *S. coco'neus*.

S. calcar'ius. Calcareous soap. A name for *Linimentum calcis*.

S. cal'cis. Lime soap, *Linimentum calcis*. Also termed *S. alba* (q. v.).

S. car'bol. A tar-oil soap-solution of unknown chemical composition. Action, disinfectant. (Gould.)

S. castillen'sis. Castile soap.

S. coco'neus. Coconut-oil soap. Used in Germany for herpes. (Dunghlison.)

S. cum medul'la bovi'na. Name in the F. Codex for marrow soap, which is manufactured by the saponification of bullock's marrow by means of soda.

S. domes'ticus. Domestic soap. A name for *S. animalis*, or curd soap.

S. du'rus. B.P. Hard soap, white Cas-

tile soap. Made with soda and olive oil. Soluble 1 in 1½ of boiling water, 1 in 2 of boiling rectified spirit. It is laxative and antacid. It is given, combined with rhubarb, in dyspepsia with constipation. Wrapped in wafer paper, it is given in cases of gall-stone.

Used in preparing a number of official pills. Dose, 5 to 15 grains. Preparations, *Linimentum saponis* and *Pilula saponis composita*.

S. gualaci'nus. Guaiac soap. Manufactured from *guaiacum* and liquor potassæ.

S. guajaci'nus. Name in the Pharmacopœia Helvetica for *S. guaiacinus*.

S. hispan'icus. Spanish soap. A syn. for *S. castiliensis*.

S. kali'cus. Kalic or potassic soap. A syn. for *S. mollis*.

S. kali'nus. The same as *S. kalicus*.

S. li'quidus. Liquid soap. Term for a cosmetic made up of oleum tartari per deliquium, aqua rosarum, and oleum olivæ. (Dunglison.)

S. medica'tus. Medicated soap. The same as *S. medicinalis*. (See B.P.)

S. medica'nalis. Medicinal soap. A syn. for *S. durus*.

S. mol'lis. B.P. Soft soap. Made with olive oil and potash. Soluble 1 in 1 of boiling water, 1 in 4 of cold; almost 1 in 1 of rectified spirit. It is contained in *Linimentum terebinthinæ*.

S. ni'ger. Black soap. A soap made by saponification of train-oil by means of an alkali.

S. olea'ceus. Oleaceous soap. The soap of the U.S.P., which is manufactured from olive oil and soda.

S. pi'ceus. Five parts of tar and 5 of black pitch boiled with a solution of 2 of fused caustic potash in 8 of water; with the addition of 42 parts of sapon animalis in 42 of water. Several other somewhat similar preparations have the same name.

S. plum'bi oxidi. Soap of lead oxide, lead soap. See *Emplastrum plumbi*.

S. sapient'iæ. Alchemical term for a preparation of common salt. (Ruland.)

S. seba'ceus. A syn. for *S. animalis*.

S. sebaci'nus. The same as *S. sebacus*. A syn. for *S. terebinthinæ*.

S. Starkeya'nus. Starkey's soap.

S. stibia'tus. Antimoniated soap. Made with caustic potash and "golden sulphur of antimony."

S. sulfura'tus. Sulphurated soap. Made with sulphur and sapon animalis.

S. sul'furo-ce'ratus. Sulphuro-cerate soap. A soap made with yellow wax and liver of sulphur.

S. szegeden'sis. A syn. for *S. animalis*.

S. tartar'eus. A syn. for *S. Starkeyanus*.

S. terebin'thinæ. Turpentine soap. A mixture of carbonate of potash and oil of turpentine, formerly used as an application to indolent swellings. Also termed *Starkey's soap*, *Sapo starkeyanus*.

S. vegetab'ilis. Vegetable soap. A name for *Pulvis gummosus alkalinus* (q. v.).

S. vegeta'lis. Name in the Portuguese Pharmacopœia for *S. medicinalis*.

S. vir'idis. Green soap. Prepared from caustic potash and a fixed oil. Useful in skin diseases.

S. vulgar'is. Common soap. Formerly official in the U.S.P. Manufactured from soda and oil of almonds.

Sap'odil. Syn. for *Sapodilla*.

Sapodil'la. Name for the *Achras sapota*.

S. plum. Syn. for *Sapodilla*.

Sapo'genin. (L. *sapo*, soap; Gr. γένος, descent.) $C_{14}H_{22}O_2$. A body obtained by treatment of *Saponin* with fuming hydrochloric acid.

Sapona'ceous. (L. *sapo*, soap. F. *saponacé*; G. *seifig*.) Of the nature or appearance of soap; soapy.

S. bal'sam. See *Balsamum saponaceum*.

Saponar'ia. (L. *sapo*, soap; so-named because the juice is used, like soap, for cleaning clothes. F. *saponaire*; G. *Seifenkraut*.) A Genus of the *Caryophyllaceæ*.

S. nu'cula. A saponarious or saponaceous berry. Plur. *Saponariæ nuculæ* (q. v.).

S. officina'lis. Common soapwort. The root, and, to a less extent the herb, contains *Saponin*. Action, depurative and demulcent.

S. vaccar'ia. A syn. for *Vaccaria vulgaris*.

Saponariæ nu'culæ. Saponarious or saponaceous berries. A name for the fruits of *Sapindus saponaria* (q. v.).

Saponari'us. (Mod. L. *saponarius*, -a, -um.) Of the nature of soap. Epithet applied to certain plants.

Sapo'nea. (L. *sapo*, soap.) Old term for a medicine made of oil of almonds and sugar, with water of violets. (Claudinus.)

Saponic acid. A syn. for *Sapogenin*.

Sapon'ifiable. Capable of undergoing *Saponification*.

Saponifica'tion. (L. *sapo*, -onis, soap; *facio*, to make.) A making into soap. The process of splitting up a neutral fat, by means of an alkali, into glycerine and its corresponding fatty acid, the alkali then combining with the acid to form a soap.

S. equi'valent. Term signifying the number of grammes of any oil saponified by one gramme of an alkali.

S., fermenta'tion. Term for saponification brought about by a ferment.

Sapon'iform. (L. *sapo*, soap; *forma*, shape, resemblance. F. *saponiforme*; G. *seifenförmig*.) Having the appearance and consistence of soap.

Sapon'iment. (*Sapo*.) Term for any medicinal compound of soap. (Gould.)

Sap'onin. $C_{32}H_{54}O_{18}$. A glucoside present in *caulophyllum*, *Sapindus saponaria*, in the root of *Polygala senega*, in *Quillaya*, and some other plants. A solution of saponin forms a frothy mass, like that formed by soap. Saponin in powder is an errhine. Dose, 1-10th to 1-5th grain.

Sapo'nis. (L.) Gen. sing. of *Sapo*.

S. emplastrum. See *Emplastrum saponis*.

S. linimen'tum. See *Linimentum saponis*.

Sapo'nule. (L. *sapo*, soap.) Term for an imperfect and partial soap formed by incomplete saponification of volatile or essential oils by means of various bases.

Saponu'lea. (L. *sapo*, soap.) Bérals' term for soap dissolved in spirit of wine, or in an ethereal oil, &c., as in *opodeldoc*.

Saponulus. (Mod. L.) A *saponule*.

S. ammoniaca'lis. Syn. for *Linimentum ammoniacæ*.

Sap'or. (L.) A flavour, taste.

Sapore'tin. Syn. for *Sapogenin*.
Sapori'fic. Exciting the nerves of taste.
Saporo'sity. Syn. for *Sapidity*.
Saporous. (*Sapor.*) Syn. for *Sapid*.
Sapo'ta. (West Indian name for several sorts of fruit of the plum kind.) Specific name of the *Achras sapota*.

S. ach'ras. The *Achras sapota*.
S. Mülleri. The bullet-tree of Dutch Guiana. It produces *Balata* (q. v.).

Sapota'ceæ. An Order of the *Ebenales*.
Sapotilla. Syn. for *Sapota*.

Sapotox'in. A poisonous glucoside obtained from *Saponin*.

Sappan. Specific name of the *Cæsalpinia sappan*.

S. lig'num. *Sappan-wood*.

S.-wood. The wood of *Cæsalpinia sappan*. Used as a dye and as a substitute for hæmatoxylin.

Sap'pey. A French anatomist of the present day.

S.'s nerve. Name for the *Mylo-hyoid nerve*.

S.'s por'tal sys'tem, ' *access'ory.* Term for the compensatory circulation established in cases of *cirrhosis* of the liver, by enlargement of the small vessels round the liver and gall-bladder, in the omentum, and suspensory ligament.

Sapphism. (*Sappho*, a Greek poetess.) The unnatural sexual passion of woman for woman. Also termed *Tribadism*.

Sapræ'mia. (*Σαπρός*, putrid; *αἷμα*, blood.) Septic intoxication, or poisoning by means of septic or putrefactive organisms. The symptoms are proportional to the dose of the poison, this being incapable of multiplying within the living organism.

Sapræ'mic. Belonging to, or affected with, *Sapræmia*.

Saprine. (*Σαπρός*, putrid.) $C_5H_{14}N_2$. A non-poisonous ptomaine, formed during putrefaction of the liver, spleen, &c. It is isomeric with cadaverine.

Saprodon'tia. (*Σαπρός*, rotten, putrid; *ὀδούς*, *ὀδόντος*, a tooth.) Dental caries.

Sapro'genés. Saprogenic.

Saprogen'ic. (*Σαπρός*, putrid; *γενός*, origin.) Giving rise to *putrefaction*.

Sapro'genous. Syn. for *Saprogenic*.

Saprol. (*Σαπρός*, rotten, putrid.) Name for a crude mixture of creosols with carbohydrates and pyridine, used for rough disinfection.

Saproleg'nia. (*Σαπρός*, putrid; *λέγων*, an edge.) A Genus of Fungi of the *Saprolegniæ*, which is a subdivision of the *Phycomycetes*. The species of this Genus are aquatic, and infest the dead bodies of fish and aquatic insects, and also living fish, &c. Carbonate of soda is said to destroy them.

S. fe'rax. A species infesting fish, and causing in salmon an epidemic cutaneous affection.

Sapro'phagous. (*Σαπρός*, rotten; *φάγω*, to eat.) Feeding on garbage or decomposing animal or vegetable matter.

Sapro'philous. (*Σαπρός*, rotten; *φιλέω*, to love.) Filth-loving. A syn. for *Saprophytic*.

Saprophyte. (*Σαπρός*, rotten; *φυτόν* a plant.) A plant, containing no chlorophyll, which lives on decomposing organic substances.

Saprophyt'ic. Belonging to, or of the nature of, a *Saprophyte*.

Sap'rophytism. (*Saprophyte*.) The property of being *Saprophytic*.

Saproporphyroty'phus. (*Σαπρός*, rotten; *porphyrotyphus*.) Term for a form of putrid scarlet fever, with typhous symptoms.

Sapro'pyra. (*Σαπρός*, rotten; *πῦρ*, fire, fever.) Putrid fever. A name for *Typhus*.

Sapros'ma. (*Σαπρός*, putrid.) A Genus of the *Rubiaceæ*. Hab., Tropical Asia. The shrubs of this Genus all have a fœtid odour.

S. arbo'reum. Hab., Java. The wood (lignum fœtidum) has a fœcal odour, and is used in Java as an antispasmodic, especially in hysteria.

Sapro'stoma. (*Σαπρός*, rotten; *στόμα*, any mouth-like opening. F. *saprostome*.) A foul or foul-smelling state of the mouth or breath.

Saprostom'atous. (*Σαπρός*, rotten; *στόμα*, -*ατος*, any mouth-like opening.) Having foul-smelling breath.

Sapro'stomous. *Saprostomatous*.

Sap'rotēs. (*Σαπρότης*.) Rottenness, decay.

Saproty'phus. (*Σαπρός*, rotten; *typhus*.) Putrid or malignant typhus fever.

Sapuca'ya nuts. The fruits of the *Lecythis zabacajo*.

Sar'aca in'dica. The asak or jasundi of India. The bark is astringent and sedative; used as a uterine astringent.

Sar'acen's con'sound. Common name for the *Solidago virgaurea*.

Sar'apus. (*Σαράπους*.) One who has turned-out or flat feet, which drag in walking.

Sarato'ga springs. In Saratoga County, New York. Several alkaline, gaseous springs, containing free carbonic acid. Also, warm (120° F.) chalybeate, saline springs, in Saratoga. Carbon County, Wyoming. (Billings.)

S. Vich'y spring. Name of one of the New York Saratoga springs, which is effervescing and alkaline. (Billings.)

Sar'ca. (? *Σαρκώω*, to make fleshy or strong.) Old term for *Ferrum*.

Sarcancycloproc'tia. The same as *Sarcancycloprocton*.

Sarcancycloproc'ton. (*Σάρξ*, flesh; *anycycloprocton*.) Old term for a fleshy closure or imperforate condition of the anus.

Sarcancycloproc'tum. The same as *Sarcancycloprocton*.

Sarcen'tomē. (*Σάρξ*, flesh; *entomē*.) Name for a modified form of *Entomē*.

Sarcepi'locele. See *Sarcoëpiplocene*.

Sarcepiplom'phalus. (*Σάρξ*, flesh; *epiplomphalus*.) See *Sarcoëpiplomphalus*.

Sarchy'drocele. (*Σάρξ*, flesh; *hydrocele*.) See *Sarcohydrocele*.

Sarcid'ium. (*Σαρκίδιον*, dim. from *σάρξ*, flesh.) Syn for *Carunculus*.

Sarcimina'lis. (L. *sarcimen*, a seam or patch.) Belonging to a patch, patchy. Old epithet applied to the *Allantois*.

Sar'cin. (*Σάρξ*, flesh.) Syn. for *Hypo-xanthin*.

Sar'cina. (L. *sarcina*, a truss, pack.) A Genus of the *Schizomycetes*, characterised by their forming cubic masses of spherical or ovoid cells.

S. auranti'aca. The orange sarcina. It is both aërial and aquatic.

S. aur'ea. Golden sarcina. It has been found in the pulmonary exudations from a case of bastard pneumonia with empyema. (Gould.)

S. botuli'na. Found in some cases of sausage-poisoning; believed to be the morbid agent.

S. fusces'cens. This variety has been found in the human stomach.

S. intestina'lis. Found mainly in the cæcum of the common fowl and turkey.

S. lu'tea. This species occurs both in air and in cultures of fungi.

S. mo'bilis. A species occurring in old ascitic fluid.

S. pulmo'num. The sarcina of the lung. It has been found in the sputa.

S. re'nis. This species has been found in the lungs after death from pulmonary tuberculosis. (Gould.)

S. ro'sea. A species found in milk and other foods.

S. uri'næ. Sarcina of the urine. A species found in the human bladder.

S. ventric'u'li. Sarcina of the stomach; a species found in the stomach of human beings and some animals.

S. Wel'ckeri. This species has been found occasionally in urine, usually in phosphatic urine.

Sarcinæ. Plur. of *Sarcina*.

Sarcine. Another spelling of *Sarcin*.

Sarcin'ic. Belonging to a *Sarcina* or to *Sarcinæ*.

Sarcion. (Σαρκίον, a dim. from σάρξ, flesh.) The same as *Sarcidion*.

Sarci'tēs. (Σάρξ, flesh.) Old term syn. with *Anasarca*.

S. flatus'sus. (L. *flatusus*, full of wind.) Term for *Emphysema*.

Sarci'tis. (Σάρξ, flesh; fem. adj. termination, -itis.) Syn. for *Myositis*.

Sarcium. (Σάρξ.) Old term formerly used as syn. with *Caruncula*, and also, with *Sarcidium*.

Sarco-. (Σάρξ, flesh.) Prefix signifying flesh.

Sarco-adenoma. A fleshy adenoma.

Sarcoba'sis. (Sarco-, βάσις, a foot.) Bot. Term for an indehiscent pericarp, which has many cells and contains many seeds.

Also termed *Curcerule*.

Sarcoblast. (Sarco-; βλαστός, a germ.) Biol. A germinal mass of protoplasm.

Sarcoblast'ic. Belonging to, having the characters of, a *Sarcoblast*.

Sarcocarp. (Sarco-; καρπός, fruit.) Term for a soft, fleshy *Mesocarp*.

Sarcocar'pium. A *Sarcocarp*.

Sarcocar'pus. The same as *Sarcocar'pium*.

Sarcoce'lē. (Sarco-; κήλη, a tumour.) A *Sarcocoele*.

S. Egypti'aca. Syn. for *Elephantiasis scro'ti*.

Sarc'cocele. (Sarco-; κήλη, a tumour.) A solid tumour of the testis.

S., cyst'ic. Any cystic tumour of the testis.

S., Egypt'ian. See *Sarcoce'lē Egyptiaca*.

S., malign'ant. A malignant tumour of the testis.

S., syphilit'ic. A syphilitic tumour of the testis.

S., tuber'culous. A tuberculous tumour of the testis.

Sarcoceph'alus. A Genus of the *Rubiaceæ*.

S. edu'lis. A syn. for *S. esculentus*.

S. esculen'tus. The Guinea peach. The bark is tonic and astringent, and is used as a substitute for Cinchona, in West Africa, where this species is native.

Sarc'ocol. The same as *Sarcocolla*.

Sarcocoll'a. (Sarco-; κόλλα, glue; so termed because it was considered to be useful in gluing together the lips of wounds. F. *sarcocolle*; I. *sarcocolla*; G. *Fleischleimgummi*.) The juice which exudes from *Penæa mucronata* and *P. sarcocolla*; action purgative. Formerly used as a vulnerary.

Also, a gummy substance, used in Arabia and India, believed to be obtained from several species of *Astragalus*.

Sarcocoll'in. (*Sarcocolla*.) $C_{22}H_{19}O_{10}$. A brown, sweet substance, which has been obtained from *Sarcocolla*.

Sarcocopt'a. (Sarco-; κόπτω, to pierce.) Syn. for *Sarcoptes*.

Sarcocopt'es. The same as *Sarcocopt'a*.

Sarcocyst'is mie'scheri. A species of the Sub-class *Sarcocystidia*, of the *Sporozoa*. A common parasite in beef and pork; believed to be harmless to meat.

Sar'code. (Σαρκώδης, flesh-like.) Dujardin's term for cellular protoplasm.

Sar'coderm. (Sarco-; δέρμα, skin.) Bot. A fleshy layer present in the outer coating of the seeds of some plants.

Sarco'dēs. (Σάρξ, flesh.) Fleshy; car'neous.

Sarco'dic. Belonging to, or having the characters of, *Sarcode*.

S. sub'stance. Syn. for *Sarcode*.

Sarco'dous. Syn. for *Sarcodic*.

Sarcoëpip'locele. (Sarco-; epiplocele.) An omental hernia complicated, either by a *Sarcocoele*, or by a great amount of thickening of the omentum.

Sarcoëpiplom'phalus. (Sarco-; epiplocephalus.) An umbilical hernia with great thickening of the omentum, forming a fleshy mass.

Sarcogen'ic. (Sarco-; γεννάω, to produce.) Flesh-forming.

Sarcogli'a. (Sarco-; γλία, glue.) Syn. for *Sarcoplasm*.

Sarcohy'drocele. See *Hydrosarcocoele*.

Sar'coid. (Σάρξ, flesh; είδος, resemblance.) Flesh-like.

Sarcolact'ic ac'id. (Sarco-; lactic. F. *acide sarcolactique*; I. *acido sarcolattico*; G. *Fleischmilchsäure*.) $C_3H_5O_3$. A form of lactic acid present in muscle, to which the acid reaction of the latter is due. It is present also in blood, and in the urine in cases of poisoning from phosphorus.

Sarcolem'ma. (Sarco-; λέμμα, that which is peeled off, peel, husk.) The fine connective-tissue membrane which encloses a muscle-fibre.

Sarcolem'mic. Belonging to *Sarcolemma*.

Sarcolem'mous. The same as *Sarcolemmic*.

Sar'colobe. (Sarco-; λοβός, a lobe.) Bot. A large or fleshy *Cotyledon*.

Sarcolog'ic. Belonging to *Sarcology*.

Sarcologist. One who makes a special study of *Sarcology*.

SARCOLOGY—SARCOMA

Sarcology. (Σάρξ, flesh; λόγος, a discourse.) That division of Anatomy which deals with the soft parts, and includes *Myology*, *Neurology*, *Angiology*, and *Splanchnology*. Also, the ancient doctrine that each part of the body nourishes a part of the body.

Sarcolyte. (*Sarco-*; λύω, to loosen.) A cell which aids in the retrograde metamorphosis of tissues.

Sarcoma. (Σάρκωμα, a fleshy excrescence. Plur. *sarcomata*. *F. sarcome*; *G. Sarkom*.) A tumour composed of embryonic tissue, or a connective-tissue tumour in which the cells greatly preponderate over the intercellular substance. It is malignant, recurring in remote organs, after removal, and the malignancy is greater in the softer and the smaller-celled varieties. It infects through the blood-current. *Sarcomata* commonly appear at an earlier age than *carcinomata*. They are usually very vascular, containing blood-sinuses lined by endothelium. They often occur mixed with other neoplasms. Their commonest seats of growth are:—the connective-tissue of the skin, various septa, periosteum, tendons, eye and subserous tissues. Their origin is not known.

S., adipose, of Ab'ernethy. See under *Adipose sarcoma*.

S., albuminous. Abernethy's term for *S., myeloid*.

S., alveolar. Syn. for *S., round celled, large*.

S. alveolar'ë. *S., alveolar*.

S., angio-. A highly vascular variety in which the walls of the blood-vessels are infiltrated with sarcomatous tissue.

S., angio-lith'ic. Syn. for *Psamomma*.

S. carcinomato'dës. Carcinomatous sarcoma. Old term syn. with *S. alveolare*.

S., chloro'matous. Name for a form of round-celled sarcoma growing in the cranial periosteum.

S., com'mon or'ganised, of Ab'ernethy. A variety of sarcoma which is fairly transparent, has a uniform lobular or fibrous structure, and is vascular.

S., common vas'cular, of Ab'ernethy. Syn. for *S., common organised, of Abernethy*.

S., cylindro'matous. Syn. for *S., plexiform, or Cylindroma*.

S., enceph'aloid. Syn. for *S., round-celled, small*.

S., endotheliom'atous. A variety of sarcoma growing in the endothelial cells of the lymphatic spaces.

S., epu'lis. Syn. for *Epulis*.

S., fascic'ular. Syn. for *S., spindle-celled*.

S., fascic'ulated. The same as *S., fascicular*.

S., fibrocellular'ë. Old term syn. with *Tumour, fibrocellular*.

S., gelat'inous. Syn. for *S., myxo-*.

S., gi'ant-celled. Syn. for *S., myeloid*.

S., glan'dular. Old term for *Hodgkin's disease*.

S., granula'tion. Syn. for *S., round-celled, small*.

S., hæmorrhag'ic. An angiosarcoma (see *S., angio-*) in the substance of which hæmorrhage has taken place.

S. lipomato'dës. Lipomatous sarcoma. Syn. for *S. lymphadenoides*.

S., lipo'matous. See *S. lipomatodës*.

S. lymphadenoi'dës. A *Sarcoma, lympho-*.

S., lym'pho-. A variety of round-celled sarcoma, the cells of which are contained within a network or reticulum.

S., mas'toid. Syn. for *Mammary gland, sarcoma of*.

S. medullar'ë. *S., medullary*.

S., medull'ary. Syn. for *S., encephaloid*.

S., mel'ano-. Syn. for *S., melanotic*.

S., melanotic. Usually a variety of spindle-celled sarcoma, the cells of which, not separated by any fibrous stroma, contain the pigment *melanin*; but often containing also a number of round or oval cells. It occurs most commonly primarily in the choroid coat of the eye, and secondarily in the liver, intestines, and skin. It is of rapid growth, and is one of the most malignant varieties of sarcoma, and the secondary deposits occur in every tissue and organ. The local malignity is not great.

S., mixed. A sarcoma containing structures belonging to several varieties of growth. According to the growth with which the sarcoma is mixed, it is termed:—fibro-sarcoma, lipo-sarcoma, chondro-sarcoma, myxo-sarcoma, or adeno-sarcoma.

S., mixed-celled. A sarcoma containing several varieties of cells, *e.g.* round and spindle-shaped, &c.

S. mol'lë. Syn. for *S. lymphadenoides*.

S. mollus'cum. A syn. for *S., multiple*.

S., mu'cous. Syn. for *S. myxomatodës*.

S. mul'tiple. Multiple clustered sarcomata of the deeper portions of the skin, of fleshy consistence and various sizes, becoming, after a time, brownish or blackish.

S., my'eloid. A sarcoma containing *myeloid* or *giant-cells*, embedded in masses of spindle-shaped or roundish cells, without intercellular substance. The myeloid cells are somewhat similar to the cells of the marrow in the bones of the fœtus; they are sometimes 1-100th to 1-50th inch in diameter, and are multinuclear, the nuclei of each cell being from ten to forty or so in number, and containing highly refracting nucleoli. This variety of sarcoma is very vascular, and may pulsate very distinctly; it often contains cysts. It usually grows from bone either from the medullary cavity, or the cancellous tissue of the ends of a long bone. It usually does not recur.

S., myx'o-. A sarcoma, part of which has undergone myxomatous degeneration.

S. myxomato'dës. A *Sarcoma, myxo-*.

S., nest-celled. Syn. for *Psamomma*.

S., net celled. Syn. for *S., myxo-*.

S. of skin. A syn. for *S., multiple*.

S., os'sifying. Syn. for *S., osteo-*.

S., os'teo-. See *Osteo-sarcoma*.

S., os'teoid. Syn. for *S., osteo*.

S., o'val celled. A very rapidly growing and malignant sub-variety of spindle-celled sarcoma, the spindle-cells becoming replaced by large oval cells with two or more nuclei. It is soft, and of a pinkish colour.

S., pigmen'ted. Syn. for *S., melanotic*.

S., plex'iform. A rare variety consisting of small polygonal cells arranged in cylinders, which communicate in a plexiform manner. There is a small amount of hyaline connective-tissue between the cylinders. These appearances are believed to be due to hyaline degeneration

SARCOMATA—SARCOSPORIDIA

of the vessel-walls and neighbouring cells. It does not reach a large size; it occurs most commonly in the orbit, brain, and salivary glands.

S., polymor'phous. Syn. for *S., mixed-celled.*

S., pul'py. Syn. for *Fungus hæmatodes.*

S., round-celled, large. A rare variety in which the cells are large, rounded, and clearly defined, and contain a large round nucleus. There is an abundant fibrous stroma. It occurs in the cutis, muscles, and bones, and, in some cases, closely resembles *Scirrhus*.

S., round-celled, small. This variety is composed of small round cells like those of wound-granulations, each about the size of a leucocyte. The intercellular substance varies in amount. The tumour is soft and greyish in colour, often infiltrates surrounding parts, and is very vascular. It occurs mainly in the skin, subcutaneous tissue, muscles, bones, and, occasionally, glands. It is highly malignant, giving rise to secondary deposits, and often infecting the lymphatic glands.

S., scro'ti. Sarcoma of the scrotum. Syn. for *Sarcocele*.

S., spin'dle-celled. A variety composed of spindle-shaped or fusiform cells, separated by a varying amount of fibrous or homogeneous intercellular substance. The cells vary in size in different tumours; thus these growths have been divided into *large*, and *small*, spindle-celled sarcoma. The intercellular substance is usually in greater amount in the small-celled variety, which has been termed by Paget "recurrent fibroid tumour." This variety is circumscribed and may be encapsuled; it runs an innocent course, but shows a liability to local recurrence after removal. The large-celled variety, also termed a fibro-plastic tumour, is softer than the above, it tends to invade surrounding parts, and often contains cysts. It is often very malignant, and it has a strong tendency to local recurrence.

Sarco'mata. Plur. of *Sarcoma*.

Sarcomato'des. Sarcomatous.

Sarcomatos'cheocele. (*Sarcoma*; *oscheocele*.) Old term syn. with *Sarcoma, scro'ti*.

Sarcomato'sis. A formation of multiple sarcomata.

S. genera'lis. Syn. for *Granuloma fungoides*.

Sarcomato'sus. (Latinised term from *Sarcoma*.) *Sarcomatous*.

Sarcomatous. Belonging to, of the nature of, *Sarcoma*.

S. blood-cyst. A soft sarcoma broken down by hæmorrhage into its substance. Its walls are composed of a layer of sarcomatous-tissue, with either spindle-shaped or round cells.

Sar'come. Syn. for *Sarcoma*. (Gould.)

Sar'comere. (*Sarco*-; *μερός*, a part.) A term for a *Sarcous* element.

Sarcomos'cheocele. See *Sarcomatoscheocele*.

Sarcom'phaloccele. (*Sarco*-; *omphaloccele*.) Syn. for *Sarcomphalon*.

Sarcom'phalon. (*Σάρξ*, flesh; *ὀμφαλός*, the navel.) An umbilical fleshy tumour.

Sarcom'phalum. See *Sarcomphalon*.

Sarcom'phalus. See *Sarcomphalon*.

Sarcomy'cēs. Old term, introduced by Ritgen, for the *Mushroom*.

Sarcomy'cētēs. Plur. of *Sarcomy'cēs*; more especially used to denote the *Mushroom* Family.

Sarcopep'tone. (*Sarco*-; *peptone*.) Commercial name for a variety of artificially digested meat-extracts.

Sarco'phagous. (*Σάρξ*, flesh; *φαγῖν*, to devour.) Flesh-devouring.

Sarco'phagy. The habit of devouring flesh.

Sarco'phila. (*Sarco*-; *φιλέω*, to love.) A Genus of the *Muscidæ*.

S. carna'ria. The eggs of this species, when deposited on a mucous surface, give rise to *Myiasis mucosa*.

S. carno'sa. The larva has been found in the skin of South American Indians.

S. Wohlfar'ti. Hab., Russia. Fatal to human beings and the domestic animals.

Sarco'philous. (*Sarco*-; *φιλέω*, to love.) Flesh-loving. Syn. for *Sarcophagous*.

Sarcophy'ia. (*Σαρκοφύια*. Hippocrates.) A growth of flesh, an excrescence.

Sarcophyll. (L. *F. sarcophylle*.) Bot. The cellular portion of a leaf. (Littre.)

Sarcophy'ma. (*Σαρκοφύειω*, to produce flesh.) A fleshy tumour.

Sarcophyte. (*Sarco*-; *φυτόν*, a plant.) Syn. for *Bioplast*.

Sarc'oplasm. (*Sarco*-; *πλάσμα*, anything moulded.) The interfibrillar connective tissue, finely granular or hyaline, of muscle.

Sarcoplas'ma. The same as *Sarcoplasm*.

Sarcoplast. (*Sarco*-; *πλαστός*, moulded.) The primordial embryonic cell of a muscle-fibre.

Also, syn. for *Sarcolyte*.

Sarcoplas'tic. (*Sarco*-; *πλαστική*, belonging to moulding.) Flesh-forming.

Sarcope'us. (*Sarco*-; *ποιέω*, to make.) *Sarcopoietic*.

Sarcopoie'tic. (*Sarco*-; *ποιέω*, to make.) Flesh-producing, muscle-producing.

Sarcopsylla pen'etrans. Syn. for *Pulex penetrans*.

Sarcopteryg'ium. (*Σάρξ*, flesh; *pterygium*.) Petrequin's term for a vascular Pterygium, or *Pterygium carnosum*.

Sarcop'tes. A Genus of the *Ascarides*.

S. gal'lei. Syn. for *S. scabiei*.

S. hom'inis. Syn. for *S. scabiei*.

S. scabie'i. The itch-insect. See under *Scabies*.

Sarcopti'dæ. The Family of Mites to which the Genus *Sarcoptes* belongs.

Sarcopyo'des. (*Sarco*-; *pyodes*, from *πύον*, pus.) Old term signifying full of purulent, flesh-like matter.

Sarcopyoi'des. (*Sarco*-; *πύον*, pus; *εἶδος*, resemblance.) Old term signifying resembling flesh and pus together.

Sarcosin. $C_3H_7NO_2$. Methyl-glycin. Produced by the heating of creatin and caffeine with baryta. It crystallises in rhombs, and melts at a temperature varying from 210° to 220° C.

Sarco'sis. (*Σάρκωσις* = *σάρκωμα*, a fleshy excrescence.) The formation of flesh or muscle.

Also, a syn. for *Sarcomatosis*.

S. bul'bi. Old term for *fungus* of the conjunctiva.

S. u'teri. Old term for uterine fibroid or fibro-myoma of the uterus.

Sarcospon'gus. (*Σάρξ*, flesh; *σπόγγος*, a fungus.) An old term syn. with *Sarcomyces*.

Sarcosporid'ia. (*Σάρξ*, flesh; *σπόρος*, seed.) A Group, according to Balbiani, of the *Sporozoa*; being endoparasites of the mus-

SARCOSTIGMA—SARSAPARILLA

cular tissue of the pig, sheep, and other animals. They consist of ovoid or cylindrical sacs containing spores which produce reniform masses of protoplasm which, after becoming amœboid, again produce spores. The bodies known as *Rainey's corpuscles* or *Miescher-His's cylinders* belong to the group.

Sarcostig'ma. Bot. A Genus of the *Olaceæ*.

S. Klein'il. Hab., Malabar. Seeds yield "adul oil," which is used externally in rheumatism.

Sarcosto'sis. (Σάρξ, flesh; *ostosis*.) Syn. for *Osteo-sarcoma*.

Also, formation of bony tissue in muscles.

Sarcostro'ma. (*Sarco-*; στρώμα, a covering.) Term for a fleshy false membrane.

Sarcostyle. (*Sarco-*; στῦλος, a pillar.) A muscle-fibril or -column.

Sar'co-therapeutic's. The Therapeutics of animal extracts.

Sarcothla'sia. (*Sarco-*; θλάσις, a crushing.) A bruise of the flesh.

Sarcothla'sis. (*Sarco-*; θλάσις, a crushing.) The same as *Sarcothlasia*.

Sarcothlas'ma. Syn. of *Sarcothlasia* and *Sarcothlasia*.

Sarcot'ic. (*Sarcoticus*. F. *sarcotique*; I. *sarcotico*; G. *Fleisch bildend*.) Flesh-forming. Also, belonging to *Sarcosis*, in either sense of the term.

Sarcot'ica. Nom. pl. neut. of *Sarcoticus*.

S. medicamen'ta. Flesh-forming medicines.

Sarcot'icum. Neut. of *Sarcoticus*.

S. medicamen'tum. A flesh-forming medicine.

Sarcot'icus. (Σάρξ, flesh.) Flesh-forming, *Sarcotic*.

Sarcotome. (*Sarco-*; τομή, a cutting.) Surg. An instrument for dividing soft parts.

Sarcotrip'teur. (F. From *sarco-*; τριπτήρ, a rubber, or instrument for rubbing with.) Syn. for *Ecraseur*.

Sar'cous. (Σαρξ, flesh.) Belonging to flesh or muscle.

S. el'ements. The dark-coloured prismatic portions of the ultimate fibrillæ of the fibres of striped muscle. They were originally regarded by Bowman, who first described them, as the elements or units of muscle.

Sar'da. Syn. for *Sardius lapis*.

Sardi'asis. (Mod. L. From the island *Sardinia*; because a species of *Ranunculus* which grew there was said to produce *Sardiasis*, when chewed.) Syn. for *Risus sardonius*.

Sardin'ian a'corn. A common name for the *Fagus castanea*.

Sardius lap'is. (F. *sarde*; G. *Carneol*.) The Sardinian stone. An old name for Cornelian stone, because it was found in Sardinia. It was formerly used in medicine as a cordial.

Sardo'nia. The same as *Sardonia, herba*.

S. herba. (From Σαρδῶ, the island *Sardinia*.) Sardinian herb. The *Ranunculus sceleratus*.

Sardon'iasis. Syn. for *Sardiasis*.

Sardon'ic. (Σαρδῶ, the island *Sardinia*.) Resembling the spasmodic grin or grimace which was said to be produced by eating the herb *Sardonia*.

S. laugh. See *Risus sardonius*.

Sardon'icus. (From the herb *Sardonia*.) See *Risus sardonius*.

S., ri'sus. See *Risus sardonius*.

Sardon'ius. Syn. for *Sardonius*.

Sar'ë. Syn. for *Essera*.

Sarep'ta. Name for *Russian mustard* (q. v.).

Sar'far. Alchemical name for *Ferrum*.

Sargas'sum bacci'ferum. Syn. for *Fucus natans*.

Sar'kin. The same as *Sarkine* or *Sarcine*.

Sar'kine. See *Sarcine*.

Sar'koblast. See *Sarcoblast*.

Sar'kolyte. See *Sarcolyte*.

Sarma'tia lu'es. (L.) *Sarmatian* pestilence. Syn. for *Plica polonica*.

Sarment. Shortened, Anglicised form of the word *Sarmentum*.

Sarmen'ta. Plur. of *Sarmentum*.

Sarmenta'ceous. Having, or furnished with, *Sarmenta*.

Sarmenti'ferous. (L. *sarmentum*; fero, to bear.) Bearing *Sarmenta*.

Sarmen'tous. The same as *Sarmenta-ceous*.

Sarmen'tum. (L.) A twig or runner. A long slender twig or branch.

Sarotham'nus scopari'us. Syn. for *Cytisus scoparius*.

Sarracen'æ. Bot. The pitcher-worts or pitcher-plants. An Order of polypetalous *Dicotyledons*, indigenous to North America, all the species of which are insectivorous, and are characterised by their trumpet- or pitcher-shaped leaves.

Sarrace'nia. (After Dr. *Sarrazin*, of Quebec.) A Genus of the *Sarraceneæ*.

S. fla'va. The trumpet-leaf; a North American plant. Root used therapeutically in dyspepsia and gout.

S. purpurea. The pitcher-plant, or side-saddle flower; a North American plant. It was formerly given as a remedy for smallpox, and is considered tonic and diuretic.

S. variolar'is. Hab., the Southern United States. Action and uses of the root the same as those of the root of *S. purpurea*.

Sarracen'ine. A substance extracted by Martin from the *Sarracenia purpurea*, and considered by him to be an alkaloid. (Foster.)

Sarram'pio. Old term syn. with *Picota*.

Sar'razin. (F. *sarrasin*.) Name for *Buckwheat*.

Sar'sa. Syn. for *Sarsaparilla*.

Sar'sæ ra'dix. B. P. (F. *salsepareille*; I. *salsapariglia*; S. *zazaparrilla*.) Jamaica sarsaparilla, the dried root of the *Smilax officinalis*. Formerly shipped from Central America, *viâ* Jamaica. Action, alterative and tonic; it has been given in secondary syphilis.

Preparations.—*Decoctum sarsæ*, *D. sarsæ compositum*, and *Extractum sarsæ liquidum*.

Sarsaparill'a. (Origin unknown. F. *salsepareille*; I. *salsapariglia*; G. *Sassaparille*.) The root of *Smilax officinalis*. See *Sarsæ radix*.

S., false. Common name for the *Aralia nudicaulis*.

S. german'ica. A European plant, growing near the sea. It has been given internally in gout, rheumatism, &c.

S., Guatema'la. A kind, resembling *S. Honduras*, obtained from *Smilax papyracea*. (Bentley.)

S., Hon'duras. The bark of this species is whiter than the Jamaica variety, and is very amylaceous.

SARSAPARILLIN—SATUREIA

S., In'dian. Name for the *Hemidesmus indicus*.

S., Jama'ca. Fuller name for *Sarsaparilla*. See *Sarsæ radix*.

S., Mexican. A dull-brown, shrivelled variety from the Mexican Andes. Said to be obtained from *Smilax media*.

S. nos'tras. Name in the Port. Ph. for the root of *Smilax aspera*.

S., wild. The *Aralia nudicaulis*.

Sarsaparillin. Syn. for *Smilacin* (q. v.).

Sartian disease'. A cutaneous disease, endemic in Tashkent, believed to be identical with the *Aleppo boil* or *Pendjeh sore*.

Sarticuræus. (L. *sartor*, a tailor; *cruræus*.) Coues' term for *Sartorius*.

Sarticulture'. The same as *Sarticuræus*.

Sartorius. (Name given from L. *sartor*, a tailor, because this muscle comes into action in crossing the legs, as tailors do at work.) A long, narrow muscle of the front of the thigh, arising from the anterior superior spine of the ilium and passing obliquely downwards and inwards to be inserted into the upper end of the inner side of the shaft of the tibia. It flexes and adducts the thigh and leg, crossing one thigh over the other. Its nerve-supply is from the anterior crural.

Sar'za. Spanish name for *Sarsa*.

Sas'sa gum. A gum resembling tragacanth, brought from the East. Its origin is uncertain (The *Albizzia fastigiata*?).

Sas'safras. (Span. *sasafras*.) The root of *Sassafras officinale*; *S. radix*.

Also, a Genus of the *Laurineæ*.

S., Austr'lian. The *Atherosperma moschata*.

S. infu'sion. *S. tea*.

S. medulla. Syn. for *S. pith*.

S. nut. Syn. for *Pichurim bean*.

S. officina'le. (L. *officina*, a shop.) The only species of the Genus *Sassafras*. The North American ague-tree. Several parts of the plant are aromatic, but the root and root-bark especially so. See *Sassafras radix*.

S. officinar'um. (L. *officina*, a shop.) Syn. for *S. officinale*.

S. partheno'xylon. A syn. for *Cinnamonum parthenoxylon*.

S. pith. The pith of *S. officinale*.

S. ra'dicls cor'tex. *Sassafras* root-bark. The root-bark of *S. officinale*. For action, &c., see *S. radix*.

S. ra'dix. B. P. *Sassafras* root, the dried root of *S. officinalis* reduced to chips or shavings. It contains a volatile oil, consisting mainly of *Sassafröl* or *Saffrol*, $C_{10}H_{10}O_2$, and a terpene; also, it contains a resin, and a neutral crystalline substance, *Sassafrin*. Physiological action unknown. It is believed to act therapeutically as an alterative. In the B. P., it is contained in the *Decoctum sarsæ compositum*.

S., swamp. The *Magnolia glauca*.

S. tea. See *Saloop*.

S. tree. Name for the *Atherosperma moschata*.

S. wood. The wood of the stem or root of *Sassafras officinale*. Official in the French Codex and Roum. Ph. Action similar to that of *S. radix*.

Sas'safrin. See *Sassafras radix*.

Sas'safröl. See *Sassafras radix*.

Sasseparilla. See *Sarsaparilla*.

Sas'solin. (*Sasso*, an Italian town, near Florence.) Name for native *Boric acid* obtained from the town of *Sasso*.

Sas'sy bark. A name for the *Erythrophileum*.

Sat'anas devo'rans. (L. *Satan* or *Satanas*, an adversary, the devil; *devoro*, to devour.) The devouring adversary. Old name for *Antimony*.

Satanoph'o'bia. (L. *Satan* or *Satanas*, the devil; Gr. *phóbos*, fear, dread.) A morbid or insane dread of the devil.

Sat'ellite. (L. *satelles*, an attendant.) An attendant. In *Astron.*, a secondary planet which moves round a primary planet. In *Anat.*, applied to *S. veins*.

S. veins. Veins that accompany arteries, *Venæ comites*.

Satell'ites, ve'næ. Satellite veins.

Sa'ter. Chem. Old name for *Mercury*.

Sa'thē. (Σάθη.) The penis.

Sa'thon. The same as *Sathē*.

Sa'tias. (L.) Satiety.

Sa'ties. (L.) Satiety.

Sati'etas. (L.) Satiety.

Sati'ety. (L. *satietas*.) Over-fulness, a fulness beyond wish.

Sat'in flow'er. Common name for the *Lunaria rediviva*.

Sati'vus, -a, -um. (L. *sero, satum*, to sow, plant.) That may be sown or planted, or that grows in a garden. Specific name for certain plants.

Sat'terthwaite's meth'od. A method of artificial respiration introduced by Satterthwaite. It consists in alternate pressure upon and relaxation of the abdomen, to effect descent of the diaphragm.

Sat'urable. (L. *saturo*, to fill.) Capable of *Saturation*.

Sat'urans. (L. *saturo*, to fill.) Saturating. Med. Epithet formerly applied to medicines, *medicamenta saturantia*, which neutralise acid in the stomach, *antacids*. Also, formerly used as syn. with *Absorbent*.

Sat'urant. (L. *saturans*, filling.) Saturating.

Saturan'tia, medicamen'ta. (Plur. neut. of L. *saturans*, *medicamentum*.) See under *Saturans*.

Sat'urated. In a state of *Saturation*.

S. solu'tion. A solution which is *saturated*, or in a state of *saturation*.

Sat'urating. (L. *saturo*, to fill.) Producing *Saturation*.

Satura'tion. (L. *saturo*, to fill. I. *saturazione*; G. *Sättigung*.) A chemical combination in which each molecule is fully combined, or has its valency completely satisfied, so that it is incapable of combining with any fresh atom or molecule. Also, the state of any fluid which holds the greatest possible amount of any solid substance in solution.

Sature'ia. (Σατύριον. Genus so named because of the supposed power of its species of exciting venereal desire.) A Genus of the *Satureæ* which are a Suborder of the *Lamiaceæ*.

S. capita'ta. Syn. for *Thymus creticus*.

S. horten'sis. The garden-savory. Stimulant and carminative.

S. monta'na. Mountain-savory. A shrub indigenous to South Europe. Action aromatic.

S. sat'iva. Syn. for *S. hortensis*.

S. thym'bra. The Θύβρα of Hippocrates

and Dioscorides. Hab., the shores of the Mediterranean; an evergreen shrub. Action, aromatic; smelling like thyme.

S. variegata. Hab., Europe. Action, antispasmodic.

Saturitas. (L.) Satiety.

Saturn. (L. *Saturnus*.) *Astron.* One of the planets.

Saturnicinabar. Syn. for *Minium*.

Saturni dulcedo. (L. *Saturnus*, the symbol for the metal lead; *dulcedo*.) Old name for sugar of lead, *Plumbi acetat*.

Saturnian. (Saturn.) *Geol.* Syn. for *Antediluvian*.

Saturnine. (L. *Saturnus*, the symbol for the metal lead.) *Chem.* Belonging to the metal lead. *Astron.* Belonging to the planet Saturn.

S. arthralgia. The joint-pains of lead-poisoning.

S. breath. The peculiar sweet breath noticed in cases of lead-poisoning.

S. cerebritis. See *S. encephalitis*.

S. colic. Lead colic.

S. encephalitis. Encephalitis consequent on lead-poisoning.

S. encephalopathy. Term for a sudden onset of acute cerebral symptoms in lead-poisoning.

S. neuritis. The neuritis of lead-poisoning.

S. palsy. Lead palsy.

S. paralysis. The same as *S. palsy*.

S. poisoning. Lead-poisoning.

S. red. The same as *Saturn cinnabar*.

Saturninus. Saturnine.

Saturnism. Syn. for *Plumbism*, or lead-poisoning.

Saturnismus. (Mod. L.) Saturnism.

Saturnus. (L.) *Astron.* Saturn.

Chem. Old term for the metal Lead.

Satyria. (*Σάτυρος*, a satyr.) An old term for *Elephantiasis græcorum*. See under *Satyriasis*.

Satyriasis. (*Σατυρίασις*. I. *satiriasi*; G. *Geilheit*.) Excessively great venereal desire in the male. Also, syn. for *Priapism*.

Also, old term applied to a variety of *Elephantiasis græcorum*, or *Leprosy*, on account of its hideous appearance, the mythical satyrs having been represented as very ugly.

S. fulrens. Syn. for *Satyriasis*.

Satyriasmus. Syn. for *Satyriasis*.

Satyrion. (*Σατύριον*. Name given on account of the aphrodisiac action of the plant.) Name for the *Orchis mascula*.

Satyrismus. Syn. for *Satyriasis*.

Satyrion. The same as *Satyrion*.

Satyromania. (*Σάτυρος*, a satyr; *mania*, madness.) Syn. for *Satyriasis*.

Satyromaniac. A person suffering from *Satyromania*.

Satzé. Name for the fruit of *Myrsine africana*. It has a tœniacuge action.

Sauarja. Name for *Saoria*.

Sauce-alone. Popular name for the *Erysimum alliaria*.

Sauce, green. Popular name for the *Rumex scutellatus*.

Saucy bark. Popular name for *Erythrophloeum*.

Saugh. A name for the Genus *Salix*.

Saunders, red. See *Santalum rubrum*.

S. tree. The *Pterocarpus santalinus*.

S., white. See *Santalum album*.

S., yellow. See *Santalum album*.

Saun'ia. *Pharm.* Old term for a certain confection made of sweet almonds, sugar, starch, oil of sweet almonds, and water of violets. It was made up in the form of square cakes, each about an ounce in weight.

Saur'ia. (*Σαύρα*, a lizard.) The Lizards; an Order of the *Reptilia*.

Saur'ian. Belonging to, or characteristic of, the *Sauria*.

Saur'asis. (*Σαύρα*, a lizard.) Syn. for *Ichthyosis*.

Sauriderma. (*Σαύρα*, a lizard; *δέρμα*, skin.) Syn for *Sauriosis*.

Saurioï'des. (*Σαύρα*, a lizard.) Lizard-like.

Sauriosis. (*Σαύρα*, a lizard.) Syn. for *Ichthyosis sauroderma*.

Sauroderma. (*Σαύρος* = *σαύρα*, a lizard; *δέρμα*, skin.) The same as *Sauriderma*.

Sauropsida. (Nom. plur. neut. From *σαύρος*, a lizard; *ὄψις*, eye-sight.) Huxley's term for a Class of the Animal Kingdom including the *Reptilia*, *Aves*, and *Mammalia*; used in contradistinction to the term *Ichthiopsida*.

Saururus. *Bot.* A Genus of the *Piperaceæ*.

S. cer'nuus. The lizard's-tail or breast-weed. Hab., North America. The bruised root is used as a discutient and emollient.

Sausage-poisoning. See *Botulismus*.

Sausaris'mus. (*Σαυσαρισμός*.) Old term for dryness and roughness of the tongue; also, for paralysis of the tongue.

Sauter's operation. Sauter's method of vaginal hysterectomy, in which the ovaries and Fallopian tubes are left *in situ*.

Sauter-Récamier operation. The same as *Sauter's operation*.

Sauterne. A light white wine from Sauterne in France.

Sav'akin gum. Syn. for *Suakin gum*.

Savanilla rhat'any. See *Rhat'any*, *savanilla*.

Savan'nah. (Span. *savana*, a sheet.) A wide plain, devoid of trees.

S.-flower. The *Erechites suberecta*.

Savin. Common name for the *Juniperus sabina*.

S. ce'rate. Savin ointment. See *Unguentum sabinae*.

S. tops. The flowering tops of *Savin*. See *Sabinae cacumina*.

Sav'ine. Another spelling for *Savin*.

Saviotti's canals. Fine canals or passages between the cells of the pancreas, described by Saviotti. They are now considered to be of artificial origin.

Savo'nea. An ancient pectoral confection used for the cure of coughs.

Savory, cil'iated. Common name for the *Satureia capitata*.

S., summer. Common name for the *Satureia hortensis*.

Savoy. Common name for the *Brassica sabauda*, or *B. lacturria*.

Savoy'an. A name for the *Galium verum*. (Dunghlison.)

Saw. (Mid. Eng. *sawe*.) A tool or instrument with a wide thin blade and toothed cutting-edge.

Also, colloquial Scotch name for salve or ointment.

S., amputa'tion. A Surgical saw specially made for amputations.

S.-box. See *Macrotome*.

S., Butcher's. A Surgical saw devised by Butcher, in which the blade is moveable, and can be fixed at any angle on the handle.

S., chain. A Surgical saw in which the teeth are set on moveable links, a handle being fitted on at each end, by alternate traction on which the saw is worked.

S., crown. Term for *Trephine*.

S., hemp. A cord used as a saw in *Embryotomy*, and in removal of deep-seated soft parts.

S., Hey's. A small disc-shaped saw fitted with a handle, used for removing pieces of bone, &c.

S., metacar'pal. A small saw for amputation of metacarpal bones.

S. palmetto. The *Serenoa serrulata*.

S.-wort. Common name for any species of the Genus *Serratula*.

Sawyer's cramp. See *Cramp, sawyer's*.

Sax'atile. See *Saxatilis*.

Saxatilis. (L. *saxum*, a rock.) Growing upon rocks.

Saxifraga. A Genus of the *Saxifragaceæ*. Also, in *Med.*, neut. plur. of *Saxifragus*.

S. al'ba. Syn. for *S. granulata*.

S. an'gica. Syn. for *Peucedanum silaüs*.

S. au'rea. Name used as a syn. both for *Chrysosplenium alternifolium* and *Chrysosplenium oppositifolium* (q. v.).

S. bronchia'lis. Hab., Siberia. Used therapeutically in pleurisy, &c.

S. cotyle'don. Pyramidal saxifrage. Hab., the Alps. Aperient and diuretic. Believed by some to be identical with the *κυμβάλιον* of Dioscorides. (Foster.)

S. crassifolia. The thick-leaved saxifrage. Hab., Siberia. Leaves, astringent; root, antiseptic. Its stem contains *Bergenin*. See *S. sibirica*.

S. granula'ta. The meadow saxifrage. Hab., Europe. Leaves and root-bulbs formerly used as *lithontriptics*.

S. granulo'sa. Syn. for *S. granulata*.

S. ligula'ta. The great strap-leaved saxifrage. Hab., the Himalayas. Rhizome used for coughs and in dysentery.

S. ru'bra. Syn. for *Spiræa filipendula*.

S. sibir'ica. This species, like *S. crassifolia*, contains *Bergenin*, a bitter crystalline substance, which has a tonic action.

S. stellar'is. The starry saxifrage. Hab., Europe. Formerly esteemed as being *lithontriptic*.

S. tridactyl'ites. The rue-leaved saxifrage. Hab., Europe. Formerly used in liver diseases.

S. vulgar'is. Syn. for *Peucedanum silaüs*.

Saxifraga'ceæ. An Order of polypetalous *Dicotyledons*, closely allied to the *Rosaceæ*. (Foster.)

Saxifrage. Common name for plants of the Genus *Saxifraga*.

S., bur'net. Common name for the *Pinpinella saxifraga*.

S., En'glish mead'ow. Common name for the *Peucedanum silaüs*.

S., gold'en. Common name for the *Chrysosplenium*.

S., white. Common name for the *Saxifraga granulata*.

Saxifrag'æ. Syn. for *Saxifragaceæ*. Also, a Suborder of the *Saxifragaceæ*.

Saxifra'gia. Syn. for *Saxifraga*.

Saxifragin. (L. *saxum*, a rock; *frango*, *fractum*, to break.) Name for an explosive substance made up of 76 parts of barium nitrate, 2 of potassium nitrate, and 22 of carbon.

Saxifragium. (L. *saxum*, a rock; *frango*, *fractum*, to break.) That which breaks up or dissolves calculi. Old term for a drug that dissolves or expels calculi or gravel.

Saxifragus. -a -um. (L. *saxum*, a rock; *frango*, to break.) Old epithet syn. with *Lithontripticus*, and formerly applied to all medicines (*Saxifraga*) which dissolved or expelled calculi or gravel.

Saxon-les-Bains. A place in the Canton of Valais, in Switzerland, noted for its warm alkaline iodo-bromated spring, temperature 24° C. Used for baths.

Saxo'nicus, pul'vis. Old term for a powder which was reputed to be *alexipharmic*, and was composed of angelica, marsh-mallow, nettle, polypody of the oak, valerian, and vinetoxicum.

Sayre, Lew'is A. A New York surgeon of the present day.

S.'s appara'tus. Syn. for *S.'s jacket*.

S.'s jack'et. A plaster-of-Paris jacket introduced by Sayre, for support of the spine in spinal disease, especially in Pott's disease of the vertebræ.

S.'s meth'od. A method of treatment of lateral curvature of the spine introduced by Sayre, in which the patient is suspended by an apparatus which fits under the head and chin, during the application of a *Sayre's jacket*.

Sbes'ter. Old alchemical term for quicklime.

Scab. (L. *scabo*, to scratch.) The adherent crust formed by the drying up of the secretion over the surface of an ulcer or any open wound.

Also, in *Zoöl.*, a form of scabies in domestic animals, produced by various species of *Psoroptes*. Also termed ray, or the rays.

Bot. A scabby condition in plants produced by a parasitic Fungus.

S.-weavers. Syn. for *Scabies*. (Gould.)

Scab'bed. (*Scab.*) Affected with *Scabies*.

Scab'by. The same as *Scabbed*; also, having, or covered over with, scabs.

Scab'er. (L.) Rough, uneven; *scabrous*.

Scaber'ulous. (Dim. from *scaber*.) Somewhat roughened or rough.

Scab'ies. (L. *scabies*, a scab; also, the mange or murrain.) The itch; a skin-disease caused by a parasite termed the Itch-insect or mite, the *Sarcoptes* (or *Acarus*) *scabiei*. The female insect burrows into the skin, where she lays her eggs, forming minute black, linear burrows, which are commonest between the fingers, on the buttocks, in the axillæ, and on the flexor surface of the wrists. The main symptom is an intolerable itching, and skin-eruptions, papular, vesicular, &c., are common. The male insect crawls over the skin, and is found in the folds of the clothing. The only method of cure is thorough disinfection of the skin and clothes.

S. ag'ria. Syn. for *Lichen*.

S. cap'itis. Syn. for *Porrigo lupinosa*; also, for *P. scutulata*. (Dunghison.)

S. cap'itis favo'sa. Syn. for *Porrigo favosa*.

SCABIOLA—SCALENE

S. crusto'sa. Syn. for *Radesyge* (q. v.).
S. fe'ra. Syn. for *Ecthyma*.
S. feri'na. The *Mange*.
S. hu'mida. Syn. for *Eczema*.
S. millar'is. The same as *S. humida*.
S. norwe'gica. The *Itch*, Norway.
S. norwe'gica Boeck'ii. Syn. for *Radesyge* (q. v.).
S. papulifor'mis. Syn. for *Prurigo*.
S. papulo'sa. The same as *S. papuli-formis*.
S. sic'ca. Syn. for *Lichen*; also, for *Psoriasis*.
S. vene'rea contagio'sa. Syn. for *Scherlievo*.
Scabi'ola. Syn. for *Scabies*.
Scabiopho'bia. (*Scabies*; Gr. φοβός, fear.) An excessive or insane dread of scabies, or the delusion that one is affected with scabies when such is not actually the case.
Scabio'sa. (L. *scabiosus*, rough.) A Genus of the *Dipsacæ*.
S. arven'sis. The field scabious. Hab., Europe. The roots of this herb and of *S. succisa* are said to be used to adulterate Valerian root.
S. carduifo'lia. Syn. for *Echinops sphærocephalus*.
S. centauroi'des. Hab., South Europe and Western Asia. Fruit and root laxative and alterative.
S. columbar'ia. Small scabious. Formerly used in the same way as *S. arvensis*.
S. succi'sa. The "morsus diaboli," or devil's bit. A European herb. Formerly given in cases of syphilis and abscesses. Root, a mild bitter astringent, now used in Veterinary Medicine; said to be used in France for adulterating valerian root.
Scab'ious. (*Scabiosa*.) Common name for the *Erigeron philadelphicum*; also, for the *Scabiosa succisa*.
Also, epithet signifying scaly or scabby.
S., field. Common name for the *Scabiosa arvensis*.
S., sweet. The *Erigeron heterophyllum*.
Scab'ish. A name for the *Eriogonum biennis*.
Scab'rate. (L. *scaber*.) Syn. for *Scabrous*.
Scabre'do. (L. *scaber*.) Syn. for *Scabies*.
Scab'rid. (L. *scaber*.) Biol. Somewhat rough.
Scabrit'ia. The same as *Scabrities*.
Scabrit'ies. (L. *scaber*, rough.) A roughness or scabby condition of the skin, as in *Scabies* or *Plica*.
Also, a syn. for *Granular ophthalmia*.
S. un'guis. Scabrities of the nails. Term for a thickening of the finger-nails.
Scab'rous. (L. *scaber*.) Bot. Roughened; having an irregular surface, from the presence of hairs or from mere inequalities.
Scab'wort. Common name for the *Inula helenium*.
Scæ'vola. (L. *scævus*, left handed.) A Genus of the *Scævolacæ*, which is a Tribe of the *Goodenoviæ*.
S. bella-mo'dagam. A Malabar tree, the leaves of which are considered diuretic and emmenagogue, and are also used as an application to abscesses, &c. (Foster.)
S. chloran'tha. The rice-paper plant of Malay, or taccada of India and Ceylon. The juice of the leaves and fruit is a bitter, and is

used in ophthalmia. The pith is considered to be astringent and aphrodisiac. (Foster.)
S. lobe'lia. A syn. for *S. chlorantha*.
S. senegalen'sis. A syn. for *S. chlorantha*.
S. seric'ea. A syn. for *S. chlorantha*.
S. tacca'da. A syn. for *S. chlorantha*.
Scala. (L. *scala*. F. *échelle*; I. *scala*; G. *Treppe*.) A ladder or staircase. In Anat., any ladder-like or staircase-like structure.
S. ante'rior coch'leæ. A syn. for *S. vestibuli*.
S. claus'a. (L. *clausus*, -a, -um, sheet.) A syn. for *S. tympani*.
S., collat'eral. A syn. for *Canal, cochlear*.
S. exter'na coch'leæ. The same as *S. anterior cochleæ*.
S. infe'rior coch'leæ. A syn. for *Scala tympani*.
S. inter'na coch'leæ. The same inferior cochleæ.
S. me'dia. A syn. for *Canalis cochlearis*.
S. of Löw'enberg. A syn. for *Canal, cochlear*.
S. poste'rior coch'leæ. A syn. for *S. tympani*.
S. rhyth'mica. Syn. for *Ala alba media* (q. v.).
S. supe'rior coch'leæ. Syn. for *S. vestibuli*.
S. tym'pani. See under *Cochlea*.
S. vestib'uli. See under *Cochlea*.
Scalabo'ta. See *Ascalabota*.
Scal'æ of coch'lea. These are the *S. media*, *S. tympani*, and *S. vestibuli*.
Scalar'iform. (L. *scalaris*, belonging to a ladder; *forma*, shape.) Biol. Shaped like or resembling a ladder.
S. ves'sels. See *Vessels, scalariform*.
Scald. (Mid. Eng. *scalden*.) As a subst., a burn caused by a hot liquid or vapour. Also, a skin-disease forming scabs, especially of the scalp. As a verb, to effect a burn or burns by means of a hot liquid or vapour.
S.-head. See *Scalped head*.
Scald'ricks. A name for the *Sinapis arvensis*. (Dunglison.)
Scald-weed. The *Cuscuta americana*.
Scale. (Mid. Eng. *scale*.) Zool. One of the opaque, shell-like plates of modified epidermis which cover the surface of the body in Fishes.
Pathol. One of the opaque or partly opaque laminæ of epidermis formed in various diseases of the skin (*Squama*). Also, an exfoliated plate or lamina of bone.
S., dry. A name for *Psoriasis*. (Dunglison.)
S., epider'mic. One of the scales formed by the *Stratum corneum* of the epidermis.
S.s, hair. Term for the imbricated laminar cells covering the shaft of a hair.
S.s of i'ron. A mixture of metallic iron and its oxides collected from about a blacksmith's anvil. Formerly used in medicine, after purification and pulverisation.
Scale. (L. *scala*, a ladder.) An arrangement of transverse lines or marks placed in a straight line at regular distances from one another, so as to form an index or standard for measurement.
S., cen'tigrade. See *Centigrade*.
S., Fahr'enheit. See *Fahrenheit*.
S., Ré'aumur. See *Réaumur*.
Scalene'. (Σκαληνός, uneven.) Geom. Having unequal sides. Anat. A *Scalenus*, one of the *Scaleni*.

S. tu'berele. A slight elevation, often terminating on the inner edge in a spinous process, situated on the upper surface of the first rib, forming the surface of origin of the scalenus anticus muscle.

Scale'ni. (Nom. pl. of *Scalenus*.) The scalene muscles; namely, the *Scalenus anticus*, *S. medius*, and *S. posticus*.

Scalenus. (Σκαληνός, uneven.) Term applied to certain muscles of the lateral region of the neck, somewhat triangular in shape, and having sides of unequal length; namely, the *S. anticus*, *S. medius*, and *S. posticus*. (Also the *S. accessorius*.)

S. accesso'rius. A bundle of muscular fibres having a common origin with the *Scalenus medius*, but separately inserted into the first rib. (Macalister.)

S. ante'rior. A syn. for *S. anticus*.

S. anti'cus. A deep lateral muscle of the neck arising by muscular slips from the anterior tubercles of the transverse processes of the third, fourth, fifth, and sixth cervical vertebræ, and inserted by means of a flattened tendon into the *Scalene tuberele* on the first rib.

S. anti'cus accesso'rius. Syn. for *Cleido-cervicalis*.

S. anti'cus pro'prius col'li. Syn. for *Longus colli accessorius*.

S. intermediar'ius. An occasional muscle (it was found by L. Testut in a South African bushman) arising from the anterior tubercles of the transverse processes of the sixth and seventh cervical vertebræ, and inserted into the concave margin of the first rib. It is analogous to a muscle normally present in the *Simiæ*.

S. latera'lis. A bundle of muscular fibres arising in common with the scalenus posticus, but inserted separately into the second rib. (Albinus.)

S. lumbo'rum. Syn. for *Quadratus lumborum*.

S. me'dius. A deep lateral muscle of the neck, arising by muscular slips from the posterior tubercles of the transverse processes of all the cervical vertebræ, or all but the first, and inserted into a rough mark on the first rib between the scalene tubercle in front and the groove for the subclavian artery behind.

S. min'imus. An occasional muscle which arises from the anterior tubercles of the transverse processes of the fifth, sixth, and seventh cervical vertebræ, and is inserted into the second rib.

S. post'icus. This muscle arises from the transverse processes of the lowest two or three cervical vertebræ, and is inserted into the second rib behind the tubercle and in front of the angle.

S. pri'mus. Syn. for *S. anticus*.

S. pri'or. The same as *S. pri'mus*.

S. quar'tus. Syn. for *Levator anguli scapulæ*.

S. secun'dus. Syn. for *S. medius*.

S. ter'tius. Syn. for *S. posticus*.

Scaler. A dental instrument for scaling i.e. removing tartar from, teeth.

Scalesi'asis. A name for *Measles*.

Scaling. The dental operation of removing the tartar (salivary calculus) from teeth.

Also, forming scales, desquamating. (Gould.)

Scall. (Mid. Eng. *skalle* = scab.) Old name for certain skin-diseases characterised by the formation of scabs, such as eczema, psoriasis, impetigo, ecthyma, &c.

S. asbes'tos. A name for *Eczema capitis*; also, for *Seborrhæa capitis*.

S.-blad'der. Term for a vesicle of *Eczema*.

S., crus'ted. A name for *Impetigo*.

S., dry. A name for *Psoriasis*.

S., hon'eycomb. A name for *Porrigo favosa*.

S., hu'mid. A name for *Eczema*.

S., mil'ky. A name for *Porrigo larvalis*.

S., moist. The same as *S., humid*.

S., pap'ulous. A name for *Ecchyma*.

S., run'ning. A name for *Eczema*; also, for *Impetigo*.

S., vesic'ular. A name for *Eczema vesiculosum*.

S., wash'erwoman's. Another name for washerwoman's itch, *Eczema lotricum*.

Scall'ard. Syn. for *Porrigo*. (Dunglison.)

Scall'ed. Suffering from *Scall*.

S. head. A popular name for *Favus*.

Scallop. (F. *escallop*.) Common name for the *Ostrea maxima*.

Scal'ma. (Old Ger. *scalmo*.) An infectious febrile disease of the horse, characterised by cough consequent on lesions of the larynx, trachea, and bronchi, and by the development of a vicious temper. The prognosis is good.

Scalp. (Mid. Eng. *scalp*. F. *cuir chevelu*; I. *cuoio capelluto*; G. *Schädelhaube*.) The integuments of the skull-cap or cranium.

S., hairy. That portion of the scalp which is normally covered with hair.

S., tu'mours of. See *Tumours of scalp*.

Scalpa'tion. (F.) The act of *scalping*. (Littre.)

Scal'pel. (*Scalpellum*.) A small knife, usually with a bone or wooden handle, a convex cutting-edge, and a fairly broad blade terminating in a sharp point.

Scalpel'lum. (L.) A surgical knife. In *Zoöl.*, a scalpel-like organ in the *promusculis* of the Hemiptera.

Scal'per. A *Scalprum*.

Scalpeum. (Dim. of *scalprum*.) An old term for *Bistoury*.

Scalp'ing. The operation of removing the scalp with the knife, as practised formerly by the North American Indians upon their enemies.

Surg. See *Aposcynthitis*, and *Periscyphitis*.

Scal'prum. (L. *scalpo*, to cut.) A strong form of knife; also, a *Raspatory*.

S. chirur'gicum. A *Lancet*.

S. dentar'ium. A dental file.

S. raso'rium. A *Raspatory*.

Scalp'tor a'ni. (L. *scalpo*, to cut; *ani*, gen. of *anus*.) A name for the *Latissimus dorsi*.

Scalptu'ra. (L.) A scraping with a knife or any sharp instrument.

Scalpturi'go. (L. *scalpturo*, to engrave.) Syn. for *Scalptura*.

Scalpur'igo. (L. *scalpurio*, to scratch.) The same as *Scalpturigo*.

Scaly. Covered with, or characterised by bearing, *scales*.

S. diseas'es. Skin-diseases characterised by the formation of *scales* or *squamæ*.

S. epithe'lum. Syn. for *Pavement epithelium*.

S. tet'ter. A name for *Psoriasis*.

Scam'ma. (Σκάμμα, a trench.) Syn. for *Fossa*.

Scammo'nea. Another spelling for *Scammonia*.

SCAMMONEUM—SCAPHIUM

Scammo'neum. Another spelling for *Scammonium*.

Scammo'nia. (L. From Gr. σκαμνία.) *Scammony*; also, specific name of the *Convolvulus scammonia*.

Scammo'niæ radix. B.P. (Gen. of *scammonia*.) The dried root of *Convolvulus scammonia*, from Asia Minor and Syria. From it is prepared *Scammoniaæ resina*.

S. resi'na. B.P. Scammony resin; obtained from *S. radix* by a similar process to that employed in the extraction of *Resina jalapæ* from *Jalapa*. Extremely soluble in rectified spirit and ether, soluble in liquor potassæ. It does not emulsify with water. Action, a powerful purgative; produces griping if given alone. Dose, 3 to 8 grains. From it are prepared *Confectio scammonii*, *Pilula scammonii composita*, and *Pulvis scammonii compositus*.

Scammo'nic acid. An acid obtained from *Scammony*, apparently identical with *Jalapic acid*.

Scam'monin. $C_{34}H_{56}O_{16}$. A glucoside, the active principle of *Scammony*. According to Wurtz, it is not only isomeric but identical with *Jalapin*.

Scammo'nium. (L. From Gr. σκαμνιον.) B.P. Scammony. A gum-resin obtained as an exudation from the living roots of *Convolvulus scammonia* by means of incision, with subsequent hardening by exposure to the air. Extremely soluble in boiling rectified spirit. It, unlike *Scammoniaæ resina*, emulsifies with water. Action, the same as that of the resin. Dose, 5 to 10 grains. Preparation, *Mistura scammonii*.

S. syri'acum. Syrian scammony. Old name for the gum-resin exuded by the incised root of the *Convolvulus scammonia*.

Scammonolic acid. An acid of *Scammony* identical with *Jalapinolic acid* (q. v.).

Scam'mony. See *Scammonium*.

S., Alep'po. Term formerly applied only to a pure kind of scammony from Aleppo; now applied also to scammony from Smyrna.

S., Bour'bon. The juice of *Periploca mauritiana*.

S., facti'tious. Imitation, such as *S. Montpellier*.

S., French. A syn. for *S. Montpellier*.

S., Ger'man. A name for the *Convolvulus sepium*.

S., lac'rima. (L. *lacrima*, a tear.) Term for the drug as it is prepared near Smyrna, consisting of a mixture of shell scammony with partly dried drops of juice of the cut-root, and calcareous earth.

S., lac'ryma. The same as *S. lacrima*.

S. mix'ture. See *Mistura scammonii*.

S., Montpel'lier. The *Cynanchum monopeliacum*.

S. res'in. See *Scammoniaæ resina*.

S. root. See *Scammoniaæ radix*.

S., shell. Term for the pure drug dried in mussel-shells, into which it was received from the cut root. Not now occurring in commerce. (Foster.)

S., Smyr'na. Term formerly applied only to inferior kinds of the drug from Smyrna; now also, to *S. factitious*.

S., vir'gin. Term for the pure drug; applied also in commerce to adulterated scammony.

Scam'num. (L. *scannum*, a bench.) Old term syn. with *Bathron*.

S. Hippocrat'icum. An ancient apparatus for reducing dislocations or displacement in fractures, invented by Hippocrates. Extension and counter-extension were made by means of a windlass, the limb being attached by means of straps above and below the seat of injury.

Scandalar'ius. (L. *scando*, to climb.) Old epithet formerly applied to the *Transversus pedis* muscle (*Scandalarius, musculus*), because this is specially exerted in climbing.

S., mus'culus. Old term syn. with *Transversus pedis*. See main heading.

Scan'dens. (L.) Climbing. *Scandent*.

Scand'ent. (L. *scandens*.) Bot. Climbing. Epithet applied to stems that have special prehensile organs to assist in climbing.

Scandicin'æ. A Tribe of the *Umbelliferae*.

Scan'dix. A Genus of the *Umbelliferae*.

S. austra'lis. Hab., South Europe. Edible; also, aperient and diuretic. The σκάνδιξ of Dioscorides. (Winkler.)

S. bulbocas'tanum. Syn. for *Bunium bulbocastanum*.

S. cerefo'llum. The chervil. Edible, aperient, and diuretic.

S. odora'ta. The sweet cicely. Properties similar to those of *S. cerefolium*.

S. pec'ten Ven'eris. Venus' comb or wild chervil. Hab., Europe. Properties similar to those of *Anthriscus cerefolium*.

Scandular'ius, mus'culus. See *Scandalarius, musculus*.

Scan'dyx. See *Scandix*.

Scan'ning speech. A peculiar measured speaking, with more or less regular pauses, characteristic of certain nervous diseases, and especially of *Multiple sclerosis*. It is compared (hence its name) to the speech of one who is "scanning" lines of poetry.

Scanso'rius. (L.) A muscle of apes, and occasionally present in man, lying in front of the gluteus minimus. It arises from the anterior part of the ilium below the anterior superior spine, and is inserted into the great trochanter of the femur.

Scan'ton. Med. Old term for *Fætor urinæ*. (Johnson.)

Scape. (L. *scapus*, the stem of a herb.) Bot. A radicle *Peduncle*, which bears no leaves.

Scap'el. (L. *scapellus*, dim. from *scapus*.) Bot. The *caudicle* or neck of the germinating embryo plant.

Scapella'tum. (*Scapellus*, dim. from *L. scapus*, in the sense of penis.) An old term for *Paraphimosis*.

Scapha. (Σκάφη.) A trough.

Scaphan'der. (Σκάφη, a skiff; ἀνὴρ, ἀνδρὸς, a man.) A swimming-belt made of thick cord.

Scaphan'drus. The same as *Scaphander*.

Scaphid'ium. (Σκαφίδιον, a small tube, a small skiff.) Bot. The receptacle for the spores in some of the Algæ.

Scaph'ion. (Σκαφίον, dim. from σκάφη. See *Scapha*.) Syn. for *Cranium*; also, a name for a poppy capsule.

Scaph'ium. (See *Scaphion*.) Entomol. Any paired appendage in the *Lepidoptera*.

Bot. The *carina* or heel of the flower in the *Papilionaceæ*.

S. ocular'ë. A small glass, porcelain, or metal cup used for the application of lotions to the eye.

Scaphocarpusuperphalangeus pollicis. (Σκάφη, a boat; *L. carpus*; *super*, over; *phalangeus*.) A name for the *Abductor pollicis brevis*.

Scaphocephalic. (Σκάφη, a boat; *cephalic*.) Epithet applied to a skull that is somewhat boat-shaped or *scaphoid*, from abnormal growth, or from premature synostosis of the sagittal suture. Also, having such a skull as described above.

Scaphoceph'alism. Syn. for *Scaphocephaly*.

Scaphoceph'alous. Syn. for *Scaphocephalic*.

Scaphoceph'alus. (Σκάφη, a boat; κεφαλή, the head.) The boat-shaped appearance of the skull to which is applied the epithet *Scaphocephalic*.

Scaphoceph'aly. The condition of being *Scaphocephalic*.

Scapho'cerite. (Σκάφος, a bowl; κέρασ, a horn.) The hollowed scaly appendage of the second pair of antennæ in the *Crustacea*.

Scapho-cu'boid. Belonging to the *Scaphoid* and *Cuboid* bones.

Scaphogna'thite. (Σκάφος, a bowl; γνάθος, the jaw.) The hollowed scaly appendage of the second *maxilla* in the *Crustacea*.

Scaphoid. (Σκάφη, a boat; εἶδος, form. *F. scaphoïde*; *G. kahnhähnlich*.) Boat-shaped. Also, term often used to mean *S. bone*.

S. abdomen. The sunken, somewhat boat-shaped abdomen characteristic of emaciation from progressive, wasting diseases, and especially from meningitis.

S. bone of car'pus. The largest and external of the first or proximal row of bones in the *carpus* or wrist. It articulates with the radius and the semilunar bone, trapezium, trapezoid, and os magnum. It is ossified in cartilage from a single nucleus appearing at the sixth or seventh year.

S. bone of foot. See *S. bone of tarsus*.

S. bone of hand. See *S. bone of carpus*.

S. bone of tar'sus. See *Navicular bone*.

S. bone of wrist. See *S. bone of carpus*.

S. fos'sa. See *Fossa, scaphoid*.

Scaphoi'des. (Σκάφη, a boat; εἶδος, form.) The *Scaphoid bone of carpus*, or *bone of tarsus*.

Scaphoid'eum. The same as *Scaphoides*.

Scaphoi'do-astrag'alan. (*F. scaphoïde-astragalien*; *L. scafoïdo-astragalico*.) Belonging to the *Scaphoid (Navicular) bone* and the *Astragalus*.

Scaphoi'do-cu'boid. (*F. scaphoïdo-cuboidien*; *L. scafoïdo-cuboideo*.) Belonging to the *Scaphoid* and *Cuboid* bones.

Scaphoid'o-cu'nean. (*F. scaphoïdo-cunéen*.) The same as *Cuneoscaploid*.

S. cu'neiform amputa'tion. Amputation of the foot at the level of the scaphoid (navicular) and the cuneiform bones.

Sca'pho-lu'nar. Belonging to the *Scaphoid* and *Semilunar* bones.

Sca'phula. (Dim. from *Scapha*.) Syn. for *Fossa navicularis of vulva*.

Scap'ula. (*L.*) The shoulder-blade. This bone, lying on the upper and lateral part of the dorsal surface of the thorax, forms the

posterior part of the shoulder-girdle. It is only attached indirectly to the trunk, articulating by its acromion process with the clavicle. From it is suspended the arm by means of the ligamentous and tendinous attachments of the humerus at the shoulder-joint. The scapula consists of a roughly triangular body with two processes, the *coracoid* and the *acromion* process. The anterior surface of the body gives attachment to certain muscles, its large concavity or venter being taken up by the subscapularis, and lies upon the dorsal wall of the thorax. The remaining portions of the venter are covered by other muscles. The posterior surface or dorsum of the scapula also gives attachment to muscles, and is divided roughly into an upper triangular third and a lower triangular two thirds by the spine, which passes obliquely outwards and upwards from the internal or vertebral border to become continued externally into the thickened free process termed the acromion process. The outer or axillary border of the scapula is rounded and thick, and at its upper extremity presents the thickened glenoid process, the outer, oval, slightly hollowed glenoid surface of which articulates with the head of the humerus in the shoulder-joint. From the upper surface of the glenoid process springs the coracoid process, irregular in shape and compared in its curved outline to a crow's beak. The coracoid process takes a sharp turn near its base, and its curved free portion, with the convexity upwards, passes outwards and forwards, and gives origin to certain ligaments and muscles. The scapula is ossified from two primary centres, for the body and coracoid process (this latter corresponding to the coracoid bone of the *Monotremata* and some other vertebrates), the former nucleus appearing at the seventh or eighth week of foetal life, and the latter in the first year after birth. Of the secondary centres, the acromion is ossified from two or three nuclei appearing at about the fourteenth year; the cartilage of the base or vertebral border (corresponding to the *suprascapular* bone of some animals) ossifies from a single nucleus appearing about the sixteenth year. A thin layer of bone is also added about the twenty-fifth year along the upper border of the coracoid process, and sometimes one also at the margin of the glenoid cavity.

Scapulacro'mial. (*Scapula*; *acromion*.) Belonging to the acromion process of the *Scapula*.

Scap'ulæ. Gen. sing., and also nom. pl. of *Scapula*.

S. na'si. Term for the lateral portions of the nose.

Scapula'gia. (*L. scapula*; *Gr. ἄλγος*, pain.) Pain referred to the *Scapula*, or scapular region.

Scap'ular. *Anat.* Belonging to the *Scapula*.

Ornithol. The *Scapulars* or scapular feathers of a bird's wing are the smaller feathers attached to the humerus.

S. aponeuro'sis. A broad band of aponeurosis attached above to the spine of the scapula, below to the space between the origins of the *teres major* and *infraspinatus* at the axillary border of the scapula, and internally along the vertebral border of the scapula.

S. arch. The *Shoulder-girdle*.

S. artery, dor'sal. A branch of the *subscapular artery* which arises about one inch

from the origin of the latter, passes through the triangular space between the subscapularis above, the teres major below, and the long head of the triceps externally, and ramifies over the infraspinous fossa of the scapula, anastomosing with the suprascapular and posterior scapular arteries.

S. artery, posterior. A branch either of the *Transverse cervical* artery or of the *Subclavian*, which passes backwards to the upper angle of the scapula beneath the levator anguli scapulae, and then passes down beneath the rhomboides to the inferior angle of the scapula. It anastomoses with branches of the suprascapular and subscapular arteries, and gives off a suprascapular branch, and muscular branches to the surrounding muscles.

S. line. An imaginary line drawn vertically through the inferior angle of the scapula; used as a line of reference in Surface Anatomy.

S. notch, great. Term for the notch formed between the anterior border of the spine or spinous process, and the neck, of the *Scapula*.

S. point. A tender point situated at the lower angle of the scapula, usually present in cases of neuralgia of the brachial plexus.

S. reflex. One of the deep or muscular reflexes (see *Reflex, deep*), consisting in a contraction of the scapular muscles on sharp stimulation of the superjacent skin.

S. region. The region about the *Scapula*. In *Ornithol.*, a longitudinal area from which a patch of feathers arises, lying over the scapula in Birds.

S. veins. These correspond with the scapular arteries which they accompany. See *S. artery, dorsal*, and *S. artery, posterior*.

ScapularĒ. (L. *scapularis*.) A *Scapulary*.
Scapular'ia. (L. *scapularis*.) A *Scapulary*.

Scapular'is. (L.) Belonging to the *Scapula* or shoulder-blade.

Scapularthro'cacē. (L. *scapula*; Gr. *arthrocacē* [q. v.]). Hybrid word signifying *Tumor albus* of the shoulder-joint. (Littre.)

Scap'ulary. (L. *scapula*.) A bandage for the shoulder.

Scap'ulated. (L. *scapula*.) *Ornithol.* Having well-developed or well-marked feathers over the *Scapular region*.

Scap'ulen. (L. *scapula*.) Belonging exclusively or intrinsically to the *Scapula*.

Scapulo-. Prefix denoting belonging to, or connection with, the *Scapula*.

Scapulo-clavicular. Belonging to the *Scapula* and *Clavicle*.

S. lig'aments. The ligaments which pass between the *scapula* and *clavicle*, namely the coraco-clavicular and acromio-clavicular ligaments.

Scapuloclavicular'is. (*Scapulo-; clavicularis*.) An occasional fasciculus of muscular fibres arising from the upper border of the clavicle to the outer side of the attachment of the subclavius, and inserted into the upper border of the scapula.

Scapulo-cor'acoid. Belonging to the *Scapula* and *Coracoid process*.

S. arch. Syn. for *Scapular arch*.

Scapulocosta'lis. Another name for the *Sternoscapular muscle* (q. v.).

Scapulodyn'ia. (*Scapula*; Gr. *ὁδύνη*.) Syn. for *Scapulalgia*.

Scapulo-hu'meral. Belonging to the *Scapula* and *Humerus*.

S. amputa'tion. Amputation at the shoulder-joint.

Scapulohumera'lis digas'tri-cus. Syn. for *Deltoides accessorius* (q. v.).

Scapulo-ra'dial. Belonging to the *Scapula* and *Radius*.

Scapulo-ul'nar. Belonging to the *Scapula* and *Ulna*.

Scapulo-ver'tebral. Belonging to the *Scapula* and the *Spinal column*.

Scap'ulum. Syn. for *Scapula*.

Scapus. (L.) The upright stem of a herb.

Zoöl. The *Scape* of a feather; also, of an antenna.

Bot. The *Scape* of a flower.

S. pe'nis. The stem or body of the penis.

S. pi'll. The shaft of a hair.

Scar. (*Eschar.*) *Surg.* See *Cicatrix*.

Bot. The mark on the stem of a plant at the place where a leaf has separated; also, the mark on a seed where it has become detached from the *funiculus*.

Scarabæ'olus hemisphæ'ricus. Syn. for *Coccus cacti*.

Scardamyg'mus. (Σκαρδαμυγμός.) A winking or blinking.

Scaren'zio's treat'ment. The treatment of syphilis with calomel by the hypodermic method, introduced by Scarenzio. The calomel is suspended in glycerine, with mucilage of acacia. The amount of calomel injected is from $\frac{1}{4}$ to 2 grains once or twice a week.

Scarf'skin. (Anglo-Sax. *scorfe*, clothing; *skin*.) Common name for the *Epidermis* or *Cuticle*.

Scarifica'tion. (L. *scarifico*, to make an incision, to lance.) The operation of making a number of small, closely set incisions or punctures into the skin, to allow of exudation of serum, &c.

Scar'ificator. (L. *scarifico*, to lance.) An instrument used for *Scarification*, consisting of a number of small lancets set in a flat metal plate, and protruded together by means of a spring.

Scarificato'rium. A *Scarificator*.

Scari'ola. A name for the *Cichorium endivia*.

Scar'iose. The same as *Scarious*.

Scar'ious. (L. *scaria*, a kind of thorny shrub.) *Bot.* Dry and membranous.

Scarla'ta. (L.) Syn. for *Scarlatina*.

Scarlaticephlog'iois. (*Scarlata; cephlogiois*.) Term for *Variola, scarlatinous*.

Scarlati'na. (L. *febris scarlatinus*, the scarlet fever.) Scarlet fever. A specific infectious fever, characterised by a diffuse scarlet rash and sore throat.

Sydenham was the first to distinguish scarlatina from measles. A large proportion of the cases occur in children under the tenth year; but young infants are rarely attacked. Epidemics appear to be more intense in autumn and winter.

The contagion appears to develop with the eruption, and to last throughout desquamation. The poison clings with great tenacity to clothing, bedding, &c.; it may be conveyed in milk. A second attack is rare; but even a third attack has sometimes occurred.

Incubation probably lasts from three to twelve days. The onset is usually sudden, with vomiting and, in children, often with convulsions. The temperature rises rapidly, often to 104° or even to 105°. The skin is dry and harsh, the tongue first of all furred, and, later on, strawberry-like

SCARLATINAL--SCARLATINIFORM.

from enlargement of the papillæ, the throat is dry and the face flushed.

The rash usually appears on the second day, and takes the form of scattered red points with a subcuticular flush, first on the neck and chest, and rapidly spreading over the whole surface, forming usually a uniform scarlet flush, which disappears entirely on pressure. Sudamina may develop, and the whole skin is in some cases covered with minute yellow vesicles (*Scarlatina miliaris*). Petechiæ occasionally develop, and in *S. maligna* are many and large. The rash gradually fades after two or three days. The rash is often present on the soft palate, tonsils, and inner surface of the cheeks. The breath has occasionally a sweet smell.

As regards the throat, there may be mere redness of the pharynx, follicular tonsillitis, or membranous sore-throat, with great swelling even into the tissues of the neck. The fever exhibits slight morning remissions, and gradually falls with the fading of the rash. Slight albuminuria is not uncommon during the eruption.

After disappearance of the rash, desquamation or peeling begins, usually lasting for ten or even twenty days. Slight attacks sometimes occur in epidemics, without rash (*S. sine eruptione*); these may, however, be followed by severe nephritis.

The severest variety, malignant scarlatina (*Scarlatina maligna*), may conveniently be classed in several sub-varieties:—

1. The *Ataxic variety*. This takes the form of an acute septic intoxication, and the patient may die within twenty-four hours. It sets in with high fever, great restlessness, and delirium, followed by coma, and accompanied by dyspnoea. The rash may be dusky or badly developed.

2. The *Hæmorrhagic variety*. Characterised by hæmorrhages into the skin, epistaxis, and hæmaturia.

3. The *Anginose variety*. The symptoms of sore-throat begin early and become extremely severe, with great swelling, formation of a membrane of variable extent, and enlargement of the cervical glands. Extensive sloughing may occur. The Eustachian tube and middle-ear are generally involved, and the membrane may even extend to the trachea and bronchi.

Complications and sequelæ:—

1. Nephritis. Commonest in the second and third week. It is a glomerular inflammation of the kidneys, and may take on almost any degree of intensity.

2. Arthritis. Resembling acute rheumatism, but sometimes going on to suppuration. It appears to be septic in origin.

3. Heart complications. Simple endocarditis, or (rarely) malignant endocarditis.

4. Pneumonia.

5. Pleurisy, usually empyema.

6. Ear complications, including inflammation of the middle ear, giving rise to perforation of the drum, and sometimes causing deafness from extension to the labyrinth; suppuration in the mastoid cells; thrombosis of the lateral sinus; meningitis; cerebral abscess.

7. Inflammation of lymphatic glands, in some cases passing on to abscess, or even to considerable sloughing.

8. Nervous complications. Convulsions, followed by hemiplegia; chorea; progressive paralysis, with wasting, of the limbs; insanity.

9. Affections of the eye; enteritis; noma; symmetrical gangrene of the extremities.

S. angino'sa. (*Angina*.) A form of scarlatina characterised by very marked sore-throat or *Angina*.

S. benig'na. Benignant scarlatina. Syn. for *S. simplex*.

S. cynan'chia. The same as *S. cynan-chica*.

S. cynan'chica. Syn. for *S. Anginosa*.

S., fe'bris. Scarlet fever.

S. gas'trica. Term for scarlatina complicated by the occurrence of gastro-enteritis.

S. gra'vior. Syn. for *S. maligna*.

S. hæmorrhag'ica. Hæmorrhagic scarlet fever; a variety characterised by the occurrence of hæmorrhages into the skin and other tissues. A variety of *S. maligna*. See under main heading.

S. læ'vis. Light or mild scarlet fever.

S. la'tens. Latent scarlet fever; term for a variety occurring without any rash.

S. malig'na. Malignant scarlet fever. See under main heading.

S. millar'is. Miliary scarlet fever. See under main heading.

S. mit'ior. Syn. for *S. simplex*.

S. morbillo'sa. Syn. for *Rötheln*.

S. nervo'sa. Nervous scarlatina. That variety of malignant scarlatina which is attended with grave nervous symptoms. See under main heading.

S. papulo'sa. Papular scarlet fever. A form characterised by the special involvement of the hair-follicles in the inflammatory process, with a consequent formation of papules.

S. paristhmít'ica.

S. petechia'lis.

S. prurigino'sa. Pruriginous scarlet fever. Term for *Urticaria*.

S. puerpera'lis. See *Scarlet fever, puerperal*.

S. pustulo'sa. A variety characterised by the occurrence of a pustular rash.

S. pu'trida. Putrid scarlatina. A sub-variety of *S. anginosa*, in which extensive slow putrid sloughs are formed.

S. rheumat'ica. Syn. for *Dengue*.

S. sep'tica. Syn. for *S. maligna*.

S. sim'plex. Simple scarlet fever. Term for cases in which the attack is mild, and there are no complications.

S. sinè ang'ina. Scarlet fever without sore-throat.

S. sinè eruptio'nè. Scarlet fever without eruption. Syn. for *S. latens*.

S. sinè exanthem'atè. The same as *S. sinè eruptionè*.

S. traumat'ica. Traumatic scarlet fever. The scarlatiniform febrile rash sometimes following wounds and surgical operations.

S. typho'sa. Typhous scarlet fever; a term for *S. maligna* accompanied by serious nervous symptoms.

S. urtica'ta. Term for *Urticaria*.

Scarlatin'al. Belonging to *Scarlatina*.

S. ang'ina. The characteristic sore-throat of *Scarlatina*.

S. nephri'tis. See *Nephritis, scarlatinal*.

S. tongue. Term for the characteristic strawberry-like tongue of *Scarlatina*.

S. vari'ola. The same as *Scarlatinous variola*.

Scarlatin'iform. (*L. scarlatina*; *forma, shape, resemblance.*) Like *Scarlatina*.

Scarlati'nin. (*Scarlatina*.) Name formerly proposed for the supposed zymotic principle of *Scarlatina*.

Scarlatino'dés. *Scarlatinous*.

Scarlatin'oid. (L. *scarlatina*; Gr. εἶδος, resemblance.) Like *Scarlatina*.

Scarlatinoi'des. *Scarlatinoid*.

Scarlatino'sus. *Scarlatinous*.

Scarlatin'ous. Syn. for *Scarlatinal*.

S. vari'ola. See *Variola*, *scarlatinous*.

Scarlati'nus. *Scarlatinous*.

Scarlet ber'ry. Common name for the berry of *Solanum dulcamara*.

S. fe'ver. Common name for *Scarlatina*.

S. pim'pernel. See *Pimpernel*, *scarlet*.

S. rash. Term for *Scarlatina*; also, for the scarlatiform rash sometimes observed in septicæmia.

S. straw'berry. Common name for the *Fragaria virginiana*.

Scarli'e'vo. See *Scherlievo*.

Scar'pa. An Italian anatomist and surgeon. Born 1747, died 1832.

S.'s applatis'sement. (F.) Term for a variety of ligature devised by Scarpa for temporarily stopping the circulation through a blood-vessel by mechanical pressure, without causing any rupture of the vessel-wall.

S.'s fas'cia. Name for the deep layer of the superficial fascia of the anterior abdominal wall.

S.'s foram'en. See *Foramen*, *Scarpa's*.

S.'s foram'ina. Term for one pair of the four small foramina into which the *palatine foramen*, anterior, is divided, the other pair being termed *Stenson's foramina*.

S.'s gang'lion. Syn. for *Gasserian ganglion*. See *Ganglion*, *Scarpa's*.

S.'s hia'tus. A name for the *Helicotrema*.

S.'s lig'ature. See *Ligature*, *Scarpa's*.

S.'s li'quor. A name for the *Endolymph* of the internal ear.

S.'s nerve. See *Nerve*, *Scarpa's*.

S.'s need'le. A curved cataract needle, with a compressed triangular point, introduced by Scarpa; somewhat longer in the stem than Hey's cataract needle.

S.'s shoe. See *Shoe*, *Scarpa's*.

S.'s tri'angle. See *Triangle*, *Scarpa's*.

Scarred. Having, or covered with, scars.

Scat'acrasia. (Σκῶρ, σκατός, dung; ἀκρασία, incontinence.) The same as *Scat'acratia*.

Scat'acratia. (Σκῶρ, σκατός, dung; ἀκρατία, incontinence.) See *Scoracratia*.

Scat'alogia. (Σκῶρ, σκατός, dung; ἀλογία, senselessness.) Insanity that is characterised by extremely filthy habits.

Scate'a. (Σκῶρ, σκατός, dung.) Old term for fetid urine.

Scati'atri'a. (Σκῶρ, σκατός, dung; λαρρία, a healing.) Medical treatment directed to the condition of the alvine evacuations or fæces.

Scatocol'ica. (Σκῶρ, σκατός, dung; κωλικός, having the colic.) Syn. for *Stercoraceous colic*.

Scatodiarrhœ'a. (Σκῶρ, σκατός, dung; diarrhœa.) Syn. for *Stercoraceous diarrhœa*.

Scatoglis'chrotēs. (Σκῶρ, σκατός, dung; γλισχροτής, stickiness.) Viscosity of the alvine excrements or fæces.

Sca'tol. See *Skatol*.

Scatolo'gia. *Scatology*.

Scatolog'ic. Belonging to *Scatology*.

Scat'ology. (Σκῶρ, σκατός, dung; λόγος, a discourse.) The scientific study of *Excreta*.

Sca'tomancy. (Σκῶρ, σκατός; μαντεία, divination.) Syn. for *Scatoscopy*.

Scatopha'gia. (Σκῶρ, σκατός, dung; φαγεῖν, to devour.) The eating of excrement.

Scato'phagous. (Σκῶρ, σκατός, dung; φαγεῖν, to devour.) Excrement-eating.

Scato'scopy. (Σκῶρ, σκατός, dung; σκοπέω, to look at.) The inspection of *Excreta*.

Scatt. The *Anthrax malignus sibiricus*, or Siberian or Northern carbuncle.

Scat'tered. Bot. Epithet applied to leaves that are separated from one another along the stem, in contradistinction to whorled or opposite.

Scat'ula. (For L. *scapula*?) Pharm. A flat, oblong box for holding pills or powders.

Scat'um. A term for the *Sternum*.

Scaur'us. (L. *scaurus*, Gr. σκαῦρος.) Having projecting ankles. A syn. of *Sarapus*.

Scav'enger. (Mid. Eng. *scavager*.) Any one who cleans; more especially, one who cleans the streets, privies, &c.

S.-cells. Term for certain lymphoid cells observed in the brain, which are said to develop and become prominent in cases of general paralysis and chronic alcoholism, and to give rise in their growth to degeneration of the brain substance. These cells have individually a short life.

S. ser'vice. A name for *Scavenging*.

Scav'enging. The removal of refuse, including the cleaning of the streets, privies, sewers, &c.

Sc. D. A. Abbreviation for *Scapula dextra anterior*.

Sc. D. P. Abbreviation for *Scapula dextra posterior*.

Scail'en ve'na. Old term used by Avicenna (l. fen. i, doct. 5, c. 4) as synonymous with *Salvatella*, *vena*.

Scel'al'gia. (Σκέλος, the whole leg and foot; ἄλγος, pain.) Pain in the leg.

S. anti'ca. A syn. for *Neuralgia femoropratibialis*.

S. post'ica. A syn. for *Neuralgia femoropoplitea*.

S. puerperar'um. A syn. for *Phlegmasia alba dolens*.

Scelana'spasis. (Σκέλος, the whole leg and foot; ἀνάσπασις, a drawing up.) Spasmodic drawing up of the leg.

Scele'teuma. (Σκελετεύμα, anything dry or withered.) A syn. for *Mummification*.

Scele'teuisis. (Σκελετεύω, to make dry.) An embalming. Also, the preparation of a skeleton.

Scele'tography. (Σκελετόν; γραφή, a writing, engraving.) A detailed description of the skeleton.

Scele'tology. The systematic study of the *Skeleton* or *Skeleton*.

Scele'ton. (Σκελετόν.) See *Skeleton*.

Scele'topœ'ia. (Σκελετόν; ποίεω.) The making of a skeleton.

Scele'tum. The same as *Skeleton*.

S. artifi'cial'le. See *Skeleton*, *artificial*.

S. natura'l'le. See *Skeleton*, *natural*.

Scele'cambo'sis. (Σκέλος; κάμπτω, to bend, curve.) Crookedness of the legs; also, term applied specially to *Genii varum*.

Scelocop'ia. (Σκέλος; κοπή, a cutting in pieces.) Removal or amputation of the legs.

Scelocoxal'gia. (Σκέλος; coxalgia.) Old term signifying coxalgia complicated by a special disorder of the legs.

Scelodes'mus. (Σκέλος; δεσμός, a band.) A bandage for the knee. Also, gout affecting the knee.

Scelodid'yumus. (Σκέλος; δίδυμος, double, twofold.) A syn. for *Ischiopagus*.

Scelo'meter. (Σκέλος; μέτρον, a measure.) An instrument, in the form of a double square, for measuring the lower extremities, especially in cases of fractures and dislocations.

Scelon'cia. The same as *Sceloneus*.

Scelon'cus. (Σκέλος; ὄγκος, a tumour.) A tumour or swelling of the knee.

Also, an old term for *Phlegmasia alba dolens*.

Scelorrheu'ma. (Σκέλος; ῥεύμα, a flux or rheum.) Rheumatism affecting the leg.

Scel'os. (Σκέλος.) The whole leg and foot.

Sceloscambo'sis. See *Scelocambosis*.

Scelotyr'bē. (Σκέλος; τῦρβη, disorder. F. *scelotyrbe*; I. *scelotirbe*; G. *wankender Schenkel*.) Instability or weakness in walking. A term for *Chorea*.

Also, a disease described by Latin authors, which attacked the Roman armies, and resembled *Scurvy* in many of its symptoms. (Strabo, xvi, p. 1127; Pliny, xxv, 6.) Galen describes it as a kind of paralysis in which the patient is forced, in walking, to turn the body to one side, whether left or right; often also the patient drags one foot after the other, as though climbing a steep place. There is a sort of trembling of the limbs as a whole, with some loss of control over co-ordination of the muscular movements. (Littre.)

S. ag'itans. A syn. for *Paralysis agitans*.

S. febr'ilis. A term for *Subsultus tendinum*.

S. festi'nans. (L. *festinans*, hastening, falling forward.) A syn. for *Paralysis agitans*.

S. pituito'sa. A syn. for *Pseudo-membranous enteritis*. See under *Enteritis*.

S. spas'tica. Term for chronic spasms affecting the lower extremities, and causing lameness and tremulousness.

S. tarantis'mus. (Gr. *ταράσσω*, to throw into disorder?) A syn. for *Chorea*.

Scem'psis. (Σκῆψις, dubious form for *σκήψις*, from *σκήπτω*, to lean upon or against.) An old term syn. with *Decubitus*.

Scenograph'ia. (Σκηνή, a covered place; *γραφή*, writing.) A detailed description of covered or closed places.

Scenome'ninx. (Σκηνή, a covered place; *μήνιγξ*, a membrane.) Old term for the cell-membrane; also, for cellular tissue in general.

Scenometamor'phosis. (Σκηνή, *metamorphosis*.) The metamorphosis of cells.

Scenos. (Σκῆνος, any covered place; the body as a tabernacle for the soul.) The body. (Hippocrates, *de Resect.*)

Scenotho'ria. (Σκῆνος, any covered place; *θεωρία*, speculation, theory.) *Biol.* An old term for the cell theory.

Scent. (Mid. Eng. *senten*, to smell.) An odour or smell; any effluvium capable of exciting the sense of smell.

S.-bag. The same as *S.-organ*.

S.-gland. An odoriferous gland. See *Gland*, *odoriferous*.

S.-organ. See *Osmeterium*.

S.-pore. Term for the orifice of a *S.-gland*.

S.-vesicle. Term for any vesicle which contains odoriferous matter of any kind.

Scepar'non. (Σκέπαρνον, a carpenter's axe; also, a surgical bandage.) A triangular surgical bandage, so named from its likeness to a carpenter's axe.

Scepar'nos. (Σκέπαρνος.) The same as *Sceparnon*.

Scepar'num. (Σκέπαρνον.) The same as *Sceparnon*.

Also (*σκεπάζω*, to cover), a term for the *Amnion*.

Scepar'nus. (Σκέπαρνος = σκέπαρνον.) The same as *Sceparnum*.

Scepaste'rium. (Σκεπαστήριος, -a, -on, fitted for covering.) The same as *Scepastron*.

Scepaste'rium. Latinised form of the word *Scepaste'rium*.

Scepas'tra. (Σκεπάζω, to cover.) The same as *Scepastrum*.

Scepas'trum. (Σκεπαστρον, contr. for *σκεπαστήριον*, a covering, veil.) Old term for a head-bandage.

Sceps'is. (Σκέψις, a viewing; also, reflection, inquiry.) Term formerly used in Medicine for hesitation or doubt.

Scept'rum. (L. *scep'trum*, a sceptre, or commander's staff.) An old term for *Penis*.

Scey-sur-Saône. A place in the Department Haut-Saône, in France, noted for its saline spring. (Foster.)

Schach'er's gang'lion. A name for the *Ophthalmic ganglion*.

Schachow'a's spir'al tub'ule. See *Tubule*, *spiral*, of *Schachowa*.

S.'s tub'ule. The same as *S.'s spiral tubule*.

Schäfer's dumb-bells. *Histol.* Dumb-bell shaped, dark-coloured structures, described by the histologist Schäfer as constituting the basis of striped muscular tissue.

Schallphotis'men. (G. From G. *Schall*, sound; Gr. *φωτισμός*, an enlightening.) Term introduced by Bleuler and Lehmann for the phenomenon ("audition coloree" of Barotoux) observed as a neurosis in certain individuals, and consisting in an association in them between the optic and auditory nerves, such that the hearing of a certain tone gives rise invariably to the subjective sensation of a certain colour.

Schan'dau. A place in Saxony noted for its ferruginous spring. There are here also pine-needle, salt-water, and mud-bathing establishments. (Foster.)

Schar'ling and Pet'tenkofer, meth'od of. *Physiol.* A method introduced by the two physiologists Scharling and Pettenkofer for studying the changes produced in atmospheric air by respiration.

The animal whose respiration is investigated is placed in a chamber through which atmospheric air of known composition is passed; the air being analysed again after passing through the chamber.

Scha'sis. (Σχάσις.) *Scarification*.

Schaste'rium. (Σχαστήριον.) A lancet.

Schaste'rium. (Σχαστήριον.) See *Schasterion*.

Schatz's meth'od. *Obstet.* A method introduced by Schatz for changing a face—into a vertex—presentation. External manipulation is

employed to flex the trunk of the foetus, this allowing of the head spontaneously resuming the normal position as it sinks down into the pelvis. This method cannot be employed after rupture of the membranes.

Scheba ar'abum. A name for the *Artemisia santonica*.

Sche'de's method. *Surg.* A method introduced by Schede for effecting the healing of cavities which cannot be obliterated, left after operations on bones and other structures. Pads of sublimate cotton wrapped in mull are used instead of sponges. The wound is washed out every five minutes during the operation with corrosive sublimate solution. Bleeding vessels are tied, and the wound is then washed out, first with 5 per cent. carbolic acid, and then with corrosive sublimate solution, and then closed by means of relaxation sutures of silk or silver and a continuous catgut suture. The wound is then dressed with some form of protective tissue, 10 per cent. iodoform gauze wrung out of 5 per cent. carbolic acid, and a moss pillow is placed over this. (Gould.)

Sche'dia. (Σχέδια, a light boat or raft.) Old term syn. with *Bathron*.

Sched'ula. (Dim. from *Scheda*.)

Scheel'ate. A syn. for *Tungstate*.

Scheel's green. (*Scheele*, a Swedish chemist; born 1742, died 1786.) Copper arsenite.

Scheel'ium. (After *Scheele*, its discoverer.) *Chem.* A syn. for *Tungsten*.

Scheelization. (After *Scheele*.) A method for improving the flavour of wines. It consists in the addition of a certain amount of glycerin to the finished wine.

Schehenden'gi. An old term for the hemp-plant, or Genus *Cannabis*, or for the seeds of the plant. (Ruland and Johnson.)

Schein'er's experiment. An experiment in Optics used for testing eyesight. A diaphragm perforated by two holes at a less distance from one another than the length of the diameter of the pupil of the eye is held before the eye, and a lighted candle is placed on the further side of this diaphragm. If the eye be *emmetropic*, the candle flame appears to be single, but if *ametropic*, double.

S.'s test. The same as *S.'s experiment*.

Sche'ma. (Σχῆμα.) The form or outward appearance. Hence, a diagram or plan. The outline or headings of a subject.

Schematic. (*Schema*.) Belonging to a *Schema* or diagram.

S. eye. A diagrammatic eye planned to exhibit the relations and proportions of the real eye.

Sche'mograph. (*Schema*; γραφή, a writing, tracing.) An instrument for tracing the *Schema* of the field of vision, the measurement of the field being made with the perimenter.

Scherbet. See *Sherbet*.

Scherlie'vo. (After *Scherlievo*, a village in Fiume, at which this disease was first noticed. *L. frambesia illyrica, radesyge istrica*.) A contagious malady, characterised by inflammation followed by ulceration of the fauces, together with various forms of skin affection, squamous, tubercular, ulcerative, &c., and with an inflammatory affection of the bones. It is now believed to be merely a virulent variety of syphilis. The disease appeared at the end of last century in Croatia and Istria, and was be-

lieved to have been carried there by sailors from Turkey.

Scherlje'vo. The same as *Scherlie'vo*.

Schero'ma. (Σχερός, dry.) A syn. for *Xerophthalmia*.

Sche'sis. (Σχέσις.) Any state or habit of the body which is temporary and alterable; as opposed to *diathesis*, a permanent, unalterable habit of body.

Schet'icus, -a, -um. (*Schesis*.) *Med.* Transient, curable. Epithet applied to certain fevers in contradistinction to *hecticus*, or habitual.

Scheur'len's bacillus. A bacillus believed by Scheurlen to be intimately connected with the development of carcinoma. It is not peculiar to carcinomatous growths.

Schi'as. *Ischias*, or *Sciatica*.

Schiat'icus. *Sciatic*.

Schidace'don. See *Schidakedon*.

Schidake'don. (Σχιδακηδόν.) Splinter-wise; epithet applied especially to fractures of long bones.

Schief ferdecker's flu'id. *Histol.* An artificial staining-fluid used for separating and distinguishing nervous tissue. Its composition is: Methyl alcohol 5 cub. cent., glycerin 50 cub. cent., distilled water 100 cub. cent. The tissues are kept in this fluid for two or three days. Used especially for the central nervous system and the retina.

Schiff's test for carbohy'drates in u'rine. The urine is warmed with sulphuric acid, and a filter-paper dipped in a mixture of equal parts of glacial acetic acid and oxylidin, with a little spirit, is held in the fumes from the urine. A red colour is produced.

S.'s tests for cholest'erin. These are two. 1. Add a mixture of two parts of sulphuric acid with one of solution of perchloride of iron to the solution to be tested. A violet colour is produced.

2. Evaporate the solution to be tested with nitric acid, and then add ammonia. A red colour is produced, not alterable by fixed alkalies.

S.'s test for sul'phurous ac'id. Expose mercurous nitrate paper to the vapour rising from the solution to be tested. A grey stain is produced, if sulphurous acid is present.

S.'s test for ure'a. To the solution to be tested add solution of furiurol and hydrochloric acid. If urea is present, a purple colour is developed, turning to brownish black.

S.'s test for ur'ic ac'id. Into an alkaline solution of the substance to be tested dip a piece of silver-nitrate paper. A brown stain is produced in the presence of uric acid.

Schi'ha. (Arab.) An Arabian drug, consisting of the herb with the flowers, believed to be obtained from a species of *Artemisia*. It is a stomachic, and has the odour and taste of *Santonica*. (Foster.)

Schimberg'bad. A place in Lucerne, Switzerland, noted for its sulphur spring. (Foster.)

Schim'per's the'ory. *Bot.* A theory formulated by the botanist Schimper as to the arrangement of leaves in a plant, by which all relations of position are referred to one principle of growth. "This principle lies in the idea that growth in a stem has an upward direction in a spiral line, and that the formation of leaves is a local exaggeration of this spiral growth." (Sachs.)

Schindace'dum. (Σχίζω, to cleave?) A longitudinal fracture of bone. (Dunglison.)

Schindala'mos. (Σχινδάλαμος, Att. for σκινδάλαμος, a splinter.) A fissure. (Hippoc. and Diosc.)

Schindale'sis. See *Schindylesis*.

Schindal'mos. (Σχινδαλμός, Att. for σκινδαλμός, which is contr. for σκινδάλαμος.) A contraction for *Schindalamos*.

Schindyle'sis. (Σχινδόλησις, a cleaving into small pieces. F. *schindylèse*; I. *schindylesi*.) Anat. A variety of *Synarthrosis* in which one bone fits into a groove in another, as e.g., the vomer into the sphenoid.

Also, a splitting up into small fragments.

Schindyle'tic. (*Schindylesis*.) Belonging to, or having the characters of, *Schindylesis*.

Schinelæ'on. (Σχίνος, the mastich-tree [also, the squill]; ἔλαιον, oil.) Old term for oil of *Mastic*.

Schinelæ'um. The same as *Schinelæon*.

Schinoceph'alus. (Σχίνος, the squill; κεφαλή, the head.) A syn. for *Scillocephalus*.

Schínus. (Σχίνος, the squill; also, the mastich-tree. Bot. A name for *Scilla*; also, for *Pistacia lentiscus*.

S. arve'ra. The Arveira. Hab., Brazil. Bark, aromatic and astringent.

S. mollë. The Peruvian mastich-tree, or false pepper. A native tree of tropical America. Nat. Order *Anacardiaceæ*. Fruit, diuretic and stomachic; the gum-resin is used for the removal of corneal opacities. The leaves are used for making a laxative *mastic*. Bark, astringent.

S. mul'l. A syn. for *S. mollë*.

Schinz'nach. In the Canton Aargau, Switzerland. A place noted for its warm mineral spring and baths.

Schir'rhus. See *Scirrhus*.

Schis'ma. (Σχίσμα, a cleft.) A fissure (L. *rima*).

Schist. (Σχιστός, split, divided.) Geol. Term sometimes used as synonymous with slate; more strictly speaking, a primary schist, or hypogene, is a form of rock which differs from a slate in that it cannot be split into an indefinite number of parallel laminae.

Schista'ceous. (*Schist*.) Biol. Resembling *Schist* in colour; bluish-grey.

Schisto-. (Σχιστός, split.) Prefix signifying cleft, divided.

Schistoceph'alus. (*Schisto*-; κεφαλή, the head. F. *schistocéphale*; I. *schistocephalo*.) A foetal monster characterised by its fissured or cleft cranium. Also, having such a cranium as above.

Schistocœ'lia. (*Schisto*-; κοιλία, the belly.) A congenital monstrosity consisting in fissure of the abdomen with extroversion of viscera.

Schistocor'mus. (*Schisto*-; κορμός, the trunk.) A foetal monster with a fissured trunk, whether in the thoracic, cervical, or umbilical region.

Schistocys'tis. (*Schisto*-; κύστις, a box; also, the urinary bladder.) The same as *Cystoschisis* (q. v.).

Schistoglos'sia. (*Schisto*-; γλῶσσα, the tongue.) Congenital fissure of the tongue.

Schist'oid. (*Schist*; εἶδος, form.) Geol. Having the characters of a *Schist*.

Schistomella. (*Schistomelus*.) The state or condition of *Schistomelus*.

Schisto'melus. (*Schisto*-; μέλος, a limb.) A foetal monster characterised by cleft or fissured limbs.

Schistoproso'pia. (*Schistoprosoptus*.) A congenitally defective development of the face, in consequence of which it is cleft or fissured.

Schistoproso'pus. (*Schisto*-; πρόσωπον, the face.) A foetal monster characterised by *Prosopia*.

Schistor'hacis. (*Schisto*-; ράχis, the spine.) Fissured spine. A syn. for *Spina bifida*.

Schis'tose. (*Schist*.) Geol. Having the characters of a *Schist*.

Schistoso'mus. (*Schisto*-; σῶμα, the body. F. *schistosome*; I. *schistosomo*.) A foetal malformation consisting in a fissure extending the entire length of the abdomen, with consequent eversion of viscera. The lower extremities are absent or rudimentary. Also, a foetal monster having the above structure.

Schistoster'nia. (*Schisto*-; στήρνον, the breast-bone.) A syn. for *Schistothorax*.

Schisto'stoma. (*Schisto*-; στόμα, any mouth-like opening.) The congenital malformation of a cleft mouth, that is, harelip and cleft palate.

Schistotho'rax. (*Schisto*-; thorax. F. *schistothorax*; I. *schistotorace*; G. *Brustspalte*.) A foetal malformation consisting in a fissure extending along part of the whole length of the thorax, usually dividing the sternum longitudinally.

Schistotrachelus. (*Schisto*-; τράχηλος, the neck.) A foetal malformation consisting in a fissure in the cervical region.

Schiz'a. (Σχίζα.) A cleft or fissure (L. *rima*).

S. vul'væ. The vulval opening.

Schizan'dra. (Σχίζω, to cleave; ἀνήρ, ἀνδρός, a man.) A Genus of aromatic shrubs of the Order *Magnoliaceæ*.

S. ni'gra. The Japanese "gome-see." Fruit, aromatic. Used in medicine.

Schizatrich'ia. See *Schizotrichia*.

Schizo-. (Σχίζω, to cleave.) Prefix signifying split, or cleft.

Schizoblephar'ia. (*Schizo*-; βλέφαρον, the eyelid.) A cleft of the eyelid, *Coloboma palpebrae*.

Schizocarp. (*Schizo*-; καρπός, a fruit.) Bot. A pericarp producing by its dehiscence two or more indehiscent mericarps.

Schizocar'pic. The same as *Schizocarpous*.

Schizocar'pous. Belonging to, or having the characters of, *Schizocarp*.

Schizocœ'le. (*Schizo*-; κοῖλος, hollow.) Biol. A *cœlom* or body-cavity developed by simple division of the *mesoderm*.

Schizodyn'ic. (*Schizo*-; δόνη, pain.) Biol. Epithet applied to the birth of offspring by a rupture of part of the body of the parent organism, as in certain of the *Mollusca*.

Schizogen'esia. (*Schizo*-; genesis.) Biol. Reproduction by means of *fission*.

Schizogenet'ic. (*Schizogenesis*.) A syn. for *Schizogenic*.

Schizogen'ic. (*Schizogenesis*.) Biol. Formed by fission or cleavage.

Schizo'genous. The same as *Schizogenic* and *Schizogenetic*.

Schizogna'thism. (*Schizo*-; γνάθος,

the lower jaw.) *Ornith.* A condition of the upper jaw in some Birds in which the maxillo-palatine bones are separate from one another, or from the vomer.

Schizognathous. (*Schizo-*; γνάθος, the lower jaw.) *Ornith.* Presenting *Schizognathism*.

Schizo'gony. (*Schizo-*; γονή, offspring.) A syn. for *Schizogenesis*.

Schizomyces. (*Schizo-*; μύκης, a mushroom.) A member of the Order *Schizomycetes*.

Schizomyceta. The same as *Schizomycetes*.

Schizomycetæ. The same as *Schizomycetes*.

Schizomycetes. (*Schizo-*; μύκης, a mushroom. *F.* *schizomycète*; *G.* *Spaltpilze*.) *Biol.* An Order of the Fungi, the fission-fungi. They are microscopic, chlorophyll-less organisms, and either parasitic or saprophytic. The Order is generally made to include *Bacteria*, *Bacilli*, *Micrococci*, and *Spirilla* (according to Cohn's classification).

Schizomycosis. (*Schizo-*; μύκης, a fungus.) The development of *Schizomycetes* in the body of their host.

Schizophyta. (*Schizo-*; φυτόν, a plant.) A Division of the *Thallophyta* among plants, consisting of those that multiply by means of *fission*. This division includes the chlorophyll-containing *Cyanophyceæ*, and the chlorophyll-less *Schizomycetes*.

Schizophytæ. The same as *Schizophyta*.

Schizophytes. The same as *Schizophyta*.

Schizorrhinal. (*Schizo-*; ρίς, the nose.) Epithet applied to Birds whose nasal bones are divided as far as or beyond the pre-maxillary bones.

Schizothorax. (*Schizo-*; thorax.) A syn. for *Schistothorax*.

Schizotrichia. (*Schizo-*; τρίχ, a hair.) A syn. for *Trichiasis*.

Schlang'enbad. A health resort in Nassau-Hesse, Germany, noted for its alkaline mineral waters, temperature 28° to 32° C. Used as baths. There is also one chalybeate spring.

Schlemm, canal of. (After the German anatomist *Schlemm*, who lived in the earlier half of this century. *Mod. L.* *canalis Schlemmii*; *I.* *canale di Schlemm*; *G.* *Schlemm'scher Kanal*.) A flattened, ring-like canal in the *sclerotic* coat of the eyeball close to the junction of the latter with the cornea, by means of which the aqueous humour passes into the general circulation. It is also termed the *Circular venous sinus*.

S., ligament of. One of the ligaments of the shoulder-joint. (Gould.)

Schlippe's salt. (After the chemist *Schlippe*.) $\text{Na}_2\text{SbS}_4 + 9\text{H}_2\text{O}$. Sulphantimoniate of sodium.

Schmide'lia. (*Schmide'l*, a contemporary German botanist.) A Genus of the *Sapindaceæ*.

S. africa'na. Hab., tropical Africa. Leaves, bitter tonic; fruit, tænifuge. (Foster.)

S. serra'ta. Hab., Bengal and Coromandel. Root, astringent.

Schmidt, E'mil. A German anthropologist of the present day.

S., arrow-markings of. Name for certain lines, first described by Schmidt, seen on the axis-cylinders of some nerves. It is un-

certain whether they consist of protoplasm or connective tissue.

S., horizon'tal plane of. *Craniom.* A tangent drawn to the superior root of the zygomatic arch and the inferior border of the orbit. (Billings.)

S., incl'sions of. The oblique marks of loss of continuity in a nerve-sheath observed under the microscope. Probably only due to post-mortem changes.

S., incl'sures of. Syn. for *S., incisions of*.

S., mod'ulus of. *Craniom.* A number from which can be estimated the volume of a cranial cavity. Obtained as follows:—Multiply number representing metopic antero-posterior diameter or maximum length of cranium by number representing breadth by number representing height, and divide multiplicand thus obtained by the number three. The approximate volume is then as follows:—

$$\left(\frac{\text{Modulus} \times 11,996}{15,239} \right) 3 \times 1,089. \text{ (Billings.)}$$

S.'s nodes. The portions of a medullated nerve-fibre which lie between the *Nodes of Ranvier*.

S.'s test. A name for the *Static test of live-birth*. See *Test of live-birth, static*.

S.'s the'ory of coagulation. See *Theory of coagulation, Schmidt's*.

S.-Lautermann incis'ures. A syn. for *S.-Lautermann segments*.

S.-Lautermann seg'ments. (After the contemporary physiologists *Schmidt* and *Lautermann*.) Name for the elongated segments of medullary substance surrounding the axis-cylinder of medullated nerve-fibres.

Schmie'del's ganglion. A name for the *Carotid ganglion, inferior*. (Gould.)

Schnapps. (*G.*) A spirituous liquor which is a variety of *Geneva* or *Hollands*.

Schneider. A Saxon anatomist; born 1610, died 1680.

Schneide'rian mem'brane. (After *Schneider*.) The pituitary membrane or mucous membrane lining the nasal cavities. It is highly vascular, and closely adherent to the subjacent periosteum and perichondrium. It varies much in thickness in different parts, being thickest over the turbinate bones and septum nasi. The epithelium also varies in character, consisting of stratified squamous cells in the external or lower part as far up as the lower border of the nasal bone; ciliated and columnar in the respiratory portion of the remainder, or that part in the region of the inferior turbinate bone and lower parts of the fossæ; and non-ciliated and columnar in the uppermost or olfactory portion.

Schoenanthus. (Σχοῖνος, a rush; ἄνθος, a flower.) *Bot.* Specific name of the *Andropogon schoenanthus*.

Schoenocaul'on. *Bot.* A Genus of the *Liliaceæ*.

S. officina'lë. From the seeds of this species is obtained the alkaloid *Veratrina* (q. v.).

Schoenolagu'rus. (Σχοῖνος, a rush; λαγός, a hare; οὐρά, a tail.) *Bot.* A name for the hare's-tail, *Trifolium arvense*.

Schoen'us. (Σχοῖνος.) *Bot.* A syn. for *Juncus*.

Schola. (*L.*) A school, as *e. g.* "Medicine Schola," a School of Medicine.

Scholeci'asis. (*Scholex* = *Scolex*.) Hope's term (1840) for the pathological condition

induced in the organism by the presence of the larvæ of certain of the *Lepidoptera*.

Scholl's meth'od. *Med.* A method of percussion introduced by Scholl.

Schöller's meth'od. A method of induction of premature labour introduced by Schöller, consisting in plugging the vagina with a tampon of charpie, which is allowed to remain *in situ* till the pains begin. (Gould.)

Schöller's oxycoccus. A syn. for *Vaccinium oxycoccus*.

Schönlein's disease'. (After Schönlein, who described it.) A syn. for *Purpura*, or *Peliosis rheumatica*.

School-made chore'a. Term for *Chorea* induced by excessive strain at school. (Dunglison.)

School's mountain springs. In Morris Co., New Jersey. Chalybeate mineral springs.

Scho'tia. (Van der Schot, a Dutch traveller.) *Bot.* A Genus of the *Leguminosæ*.

S. afra. A bush of S. Africa. Bark, sudorific and astringent.

S. speciosa. The *S. afra*.

S. tamarindifolia. The *S. afra*.

Schou, bacillus of. The *Bacillus pneumonicus agilis*. A bacillus found in the tissues of rabbits that have died from pneumonia induced by section of the pneumogastric nerves.

Schousbø's coccin'ea. (Named after Schousbø, a Danish botanist.) A name for the *Caconcia coccinea*.

Schräger's lines. (After the anatomist Schräger.) The concentric undulating lines presented by the curves of the *dentinal tubules* in the dentine of teeth, when seen under a low magnifying power.

Schrapnell's mem'brane. (After the anatomist Schrapnell.) The *Membrana flaccida*, or lower part of the tympanic membrane. See under *Tympanic membrane*.

Schre'ger. Another spelling of the name Schräger.

S.'s lines. See Schräger's lines.

Schrein'er's base. A name for *Spermin*.

Schroeder's meth'od. A method of performing artificial respiration on infants, introduced by Schroeder. The infant is placed in a bath, the operator's hand supporting the back and allowing the head and pelvis to fall backwards. The infant's head and shoulders are then bent firmly forward over the abdomen, thus giving rise to a strong expiration. This process is repeated at intervals.

S.'s opera'tions. Three operations on the female pelvic organs, introduced by Schroeder, bear his name. A form of *Colporrhaphy*, in which a strip of vaginal wall is removed and the cut edges approximated; a form of abdominal *Hysterectomy*, in which the pedicle is treated intra-peritoneally; a form of *Trachelorrhaphy*. See *Trachelorrhaphy*, *Schroeder's*.

Schroth's cure. Name for a treatment of pleural effusion introduced by Schroth, in which the patient is not allowed to drink any fluid for several days.

Schrötter's bougies'. Bougies introduced by Schrötter for dilating the cavity of a stenosed larynx.

S.'s cath'eters. Hard rubber, graduated catheters of triangular section, for dilating strictures of the larynx.

S.'s for'ceps. A form of laryngeal forceps which close from below upwards.

S.'s reflect'or. The ordinary reflector of a laryngoscope as now used, fixed round the forehead by a band, and adjusted so that it can be turned to the desired angle.

S.'s tin plugs. A form of tin plug devised by Schrötter for dilating a stricture of the larynx after the performance of tracheotomy. They are introduced *per os*, with the aid of the laryngoscope, by means of a hollow handle.

Schubert's dist'icha. (After G. H. von Schubert, of Munich.) A name for the *Taxodium distichum*.

Schuet'zia. (*Schuetz*, a German bacteriologist.) *Biol.* A Genus of the *Schizomycetes*, closely resembling *Streptococcus*. The spherical or oval cocci occur in encapsuled chains.

S. Dis'sel. (After J. Disse, who described them.) A species said to be found, in Japan, in the blood of patients suffering from syphilis.

S. Laughlini. A species found by McLaughlin, in the Southern United States, in patients suffering from *Dengue*.

S. Weis'sil. Found in the exudation from the lungs of cattle suffering from contagious pleuro-pneumonia.

Schultze's callipers. (After B. Schultze, a contemporary obstetrician.) A form of obstetric callipers for external pelvic measurements, with a moveable scale passing across from one arm of the instrument to the other, so arranged that the arms can be opened out or folded together.

S.'s meth'od. A method of performing artificial respiration in cases of *Asphyxia neonatorum*, introduced by Schultze. The operator holds the infant by means of each of his index fingers in the corresponding axilla of the infant, his thumbs lying over the clavicles and his other fingers resting against the child's back. He then raises his arms and hands and gradually pushes up the child's lower extremities and nates, until its abdomen and thighs rest on its chest. The child is gradually lowered so that the abdomen and feet fall backwards again. This is repeated from fifteen to twenty times a minute.

S.'s pes'sary. See *Pessary*, *Schultze's*.

S.'s phan'tom. A variety of obstetric doll devised by Schultze.

S.'s sickle knife. (B. Schultze.) A sickle-like obstetric knife for performing decapitation of the fetus. It allows of sawing movements, as well as a downward pull.

Schultze's cells. (After the contemporary physiologist and histologist Max Schultze.) A name for the *Olfactory cells*.

S.'s fold. *Embryol.* Name for a sickle-shaped fold in the *Amnion* of the fetus, passing from the placenta to the remnant of the umbilical vesicle.

S.'s gran'ules. Minute particles in the blood, first described by Schultze, formed by the breaking up of the *blood-platelets*.

S.'s gran'ule-mas'ses. A syn. for *S.'s granules*.

S.'s rea'gent. Iodine dissolved to the point of saturation in a solution of zinc chloride of sp. gr. 1.8, to which 6 parts of iodide of potassium have been added. (Gould.)

Schuster's treatment. A method of treatment of *Syphilis*, introduced by Schuster, consisting of inunction with mercurial soap.

Schutz's antero-posterior forceps. A form of nasal forceps with fenestrated blades, used for the removal of polypi.

Schuyler spring. In Schuyler County, Illinois, U.S. A sulphur mineral spring.

Schwalbach. A place in the province of Nassau, noted for its cold chalybeate mineral waters.

Schwalbe, convolution of. (The contemporary surgeon and anatomist *Schwalbe*.) Another name for the superior occipital convolution, being the superior convolution on the upper surface of the *Occipital lobe* of the cerebrum.

S., fissures of. Name for the *Anterior occipital fissure* and the *Supercentral fissure* of the cerebrum.

S.'s method. A method of treatment of reducible herniæ by injecting alcohol into the sac by means of a Pravaz syringe.

Schwalheim. A place in the Hesse-Nassau, noted for its ferruginous spring.

Schwann. A Belgian anatomist of the present day.

S., sheath of. The *Neurilemma* of a nerve-fibre.

S., white substance of. (So named on account of the white appearance of nerves consequent on its presence.) The *Medullary sheath* of a medullated nerve-fibre.

Schwein furth green. A name for *Emerald green*, aceto-arsenite of copper.

Schweininger cure. A treatment introduced by Schweininger for obesity. It is similar to Oertel's method, except that no fluids are to be drunk at meals. The diet is carefully regulated, systematic exercise, including mountain climbing, is practised, and the circulation is further stimulated by massage and passive movements.

Schweitzer's reagent. (After *Schweitzer*, a chemist of the present day.) Ammoniacal oxide of copper. An ammoniacal solution of copper sulphate. It dissolves cellulose, cotton, &c. It precipitates from solution strong alkalies, gum, and dextrin. It dissolves entirely or in part fibrin, albumin, gelatin, &c. (Littre.)

Schweizerhall. A place in the canton Basle or Basel, Switzerland, noted for its sulphur and saline mineral spring.

Schwelle. (G. Lit. a threshold.) German term for the borderland of sensation; stimulation of a nerve or of nerve-tissue of intensity just insufficient to give rise to sensation.

Schwelm. A place in Westphalia, noted for its chalybeate and gaseous mineral waters.

Schwendener. A contemporary German botanist, born 1829.

S.'s theory. Bot. The theory suggested by De Bary, and formulated more distinctly by Schwendener, that the *Lichenes* are parasitic Fungi growing upon *Algæ*.

Schwendenerism. A syn. for *Schwendener's theory*.

Schwenningen. A place in Würtemberg, noted for its saline mineral spring.

Schwimmer's ointment. An ointment recommended by Schwimmer for the local treatment of *Variola* pustules. Composition, carbolic acid 15 grains, olive oil 1 drachm, prepared chalk to $\frac{1}{2}$ ounce.

Sciaca. A place in Girgenti, Sicily, noted for its hot chalybeate and sulphur mineral springs.

Sciado'phytum. (*Σκίας*, a canopy, hence, the *umbel* of plants; *φύτον*, a plant.) Bot. Old term, introduced by Necher, for a member of the *Umbelliferae*.

Sci'age. (F.) Sawing. Term for a variety of massage characterised by sawing movements made with the ulnar edge or back of the hand.

Sciagraphic. (*Σκίας*; *γραφία*.) Belonging to *Sciagraphia*.

Sci'agraphy. (*Σκίας*, a shady covering; *γραφία*, a drawing.) Drawing or painting in light and shade.

Sciama'chia. (*Σκίαμαχία*, a fighting with a shadow, a sham-fight.) A fighting with shadows; an occasional symptom in insanity.

Sciascopia. *Sciascopy*.

Sci'ascopy. The estimation of the refraction of the eye by observing the direction taken by the images of a plane reflected by the eye, and their rate of movement.

Sciath'ras. (*Σκιάθρας*.) A sun-dial.

Sciath'eron. (*Σκιάθηρον*.) The same as *Sciatheras*.

Sciatic. (L. *ischiadicus*, belonging to the *Ischium*; F. *sciatique*; I. *sciatico*.) Belonging to the *Ischium*.

S. aneurism. See *Aneurism, sciatic*.

S. ar'tery. The larger of the two terminal branches of the anterior division of the *Internal iliac artery*. It supplies the muscles of the gluteal region, emerging from the pelvis at the lower part of the great sacro-sciatic foramen, in relation with the pudic artery and sciatic nerves. Its branches are:—*Muscular* branches; a *coccygeal* branch; an *anastomotic* branch, anastomosing with twigs from the gluteal artery; the *comes nervi ischiadici*; *cutaneous* branches. The main trunk ends as a small vessel passing down the back of the thigh with the small sciatic nerve.

S. fora'men, great. A syn. for *Sacro-sciatic foramen, great*.

S. fora'men, infe'rior. The same as *S. foramen, lesser*.

S. fora'men, les'ser. A syn. for *Sacro-sciatic foramen, lesser*.

S. fora'men, supe'rior. The same as *S. foramen, great*.

S. her'nia. See *Hernia, sciatic*.

S. nerve, great. (L. *nervus ischiadicus major*.) This is the largest nerve in the body, and is a continuation of the great part of the *Sacral plexus*. Beginning at the lower border of the pyriformis muscle within the pelvis, it passes out by the great sacro-sciatic foramen and ends at the middle of the back of the thigh by dividing into the *internal popliteal* nerves and the *external popliteal* (or *peroneal*) nerve. Branches.—Twigs to the hamstring muscles, and a twig to the inner part of the adductor magnus.

S. nerve, les'ser. The same as *S. nerve, small*.

S. nerve, small. (L. *nervus ischiadicus minor*.) The posterior cutaneous nerve of the thigh, supplying sensory branches only. It arises usually by two roots, one from the second and one from the third sacral nerve, being joined also by a branch from the inferior gluteal nerve. It passes out of the pelvis below the pyriformis, resting on the great sciatic nerve, ending below by piercing the fascia lata and becoming subcutaneous in the skin of the calf, where it communicates with the external saphenous nerve. Branches.—*Gluteal cutaneous branches*;

the inferior pudendal nerve; femoral cutaneous branches.

S. notch, great. The notch at the back of the *Os innominatum*, extending from the posterior inferior spine of the ilium above to the spine of the ischium below.

S. notch, les'ser. The notch at the back of the *Os innominatum*, extending from the spine of the ischium above to the tuberosity of the ischium below.

S. plex'us. A name for the upper part of the *Sacral plexus*, consisting of the lumbo-sacral cord and anterior branches of the first two sacral nerves with part of the third and fourth. (Billings.)

S. re'gion. The region of the great and small sacro-sciatic foramina.

S. scoliosis. See *Scoliosis, sciatic*.

S. spine. A syn. for *Ischium, spine of*.

S. veins. These run with the sciatic arteries.

Sciatica. (L. *ischiadicus*, belonging to the *Ischium*.) A disease, usually a neuritis, of the great sciatic nerve or its roots of origin; sometimes merely a functional neurosis or neuralgia, usually occurring in adults, and more commonly in men. There is often a rheumatic or gouty history. Cold and wet are the usual exciting causes. The disease may be symptomatic of intra-pelvic pressure on the nerve. Symptoms.—Pain, constant or paroxysmal, gradually increasing and extending down the back of the thigh, with slight pyrexia. In long-standing cases the muscles waste, but hardly ever degenerate.

S. cres'ses. Bot. A name for the *Lepidium iberis*.

S., scoliot'ic. The same as *Sciatic scoliosis*.

Sciatriph'ia. (Σκιατραφία = σκία-τροφία.) The same as *Sciatrophia*.

Sciatroph'ia. (Σκιατροφία, a rearing in the shade, or tenderly.) A tender or effeminate upbringing.

Science. (L. *scientia*; F. *science*; I. *scienza*; G. *Wissenschaft*.) "Science is that knowledge which enables us to demonstrate, as far as our limited faculties permit, that the appearances which we recognise in the world around us are dependent in definite ways on certain properties of matter; science is that knowledge which enables or tends to enable us to assign to its true place in the series of events constituting the universe, any and every thing which we can perceive." (E. Ray Lankester.)

Scientia. (L.) Knowledge, science.

S. hermet'ica. (L. *hermetica*, belonging to the god Hermes, an old epithet applied to the science of alchemy.) The hermetic science or science of *Alchemy*.

S. meden'di. (L. *medendus*, meet for healing.) The science of healing; medical science.

S. med'ica. Medical science.

Scientif'ic. Belonging to, or based upon, *Science*. Also, having an adequate knowledge of, making a special study of, science.

S. man. The same as *Scientist*.

Sci'entist. (*Scientia*.) One who makes a special and systematic study of science.

Sciero'pia. (Σκίερός, shady; ὄψις, the eye.) A defect of vision in which all objects appear dark or shady.

Scilla. (Σκίλλα.) A Genus of the *Liliaceæ*. Also, in the B.P., the sliced and dried

bulb of *Urginea scilla*. Dose, 1 to 2 grains of the powdered bulb. Preparations.—*Acetum Scillæ*, *Oxymel Scillæ*, *Pilula Scillæ Composita*, *Syrupus Scillæ*, and *Tinctura Scillæ*. Also, old name for the *Hedysarum coronarium*.

S. autumn'a'lis. The winter hyacinth. The bulb is considered diuretic; it is used as a rat-poison in Barbary.

S. esculen'ta. The wild hyacinth. Used for making bread; also, used therapeutically for making poultices.

S. hispan'ica. The Spanish squill.

S. in'dica. The *Urginea indica* (q. v.).

S. lil'lo-hyacin'thus. Lily hyacinth. Hab., Spain and the south of France. Action, purgative.

S. marit'ima. The *Urginea scilla*.

S. m'i'nor. A syn. for *Pancratium maritimum* (q. v.).

S. non-scrip'ta. A name for *S. nutans*.

S. nu'tans. Common bluebell, or wild hyacinth. The bulb yields a gum resembling gum-arabic.

S. peruvia'na. The Cuban lily, a species originally imported into tropical America from Spain. The bulb is tonic, diuretic and expectorant; poisonous in large doses.

Scill'æ. Gen. of *Scilla*.

S. ace'tum. See *Acetum scillæ*.

S. oxymel. See *Oxymel scillæ*.

Scilla'in. A yellow, inodorous glucoside present in *Urginea scilla*, probably identical with *Scillitoxin*.

Scill'in. A light-yellow substance present in *Squill*.

Scillipic'rin. A yellowish-white, bitter, hygroscopic substance, present in *Squill*. It is a cardiac depressant.

Scillit'es. (*Scilla*.) Old name for a wine impregnated with *Squilla*.

Scillit'ic. Belonging to, or containing, *Scilla*.

Scill'itin. A bitter, acrid, yellowish or white resinous substance, present in *Squill*. Action, diuretic and expectorant.

Scillitox'in. A substance obtained from *Squill* as a brown, amorphous powder. It is a powerful cardiac poison.

Scilloceph'alous. (*Scillocephalus*.) Having the malformation *Scillocephalus*.

Scilloceph'alus. (*Scilla*, the squill, from its bulbous shape; κεφαλή, the head.) A congenital malformation of the cranium, in which this is small and conical, being shaped somewhat like the bulb of the *Squill* (*Urginea scilla*).

Also, a person with the above malformation.

Scillopic'rin. See *Scillipicrin*.

Scillotox'in. See *Scillitoxin*.

Scimpo'dium. (Σκίμπος, a small couch.) The same as *Scimpus*.

Scim'pus. (Σκίμπος, a small couch.) A partial bed or couch for reclining on, as during the midday sleep.

Also, term for the chair on which women used to be delivered.

Scin'cus officina'lis. The *Skink*. A species of lizard (*Lacerta*) common in Egypt. The ancients believed that its flesh acted as an alexipharmic and aphrodisiac.

Scindal'amus. See *Schindalamus*.

Scindaps'us. (Σκινδᾶψός.) Bot. A Genus of the *Aroidæ*.

S. officina'lis. Hab., India, &c. Fruit, stimulant, diaphoretic, and anthelmintic.

S. pertus'us. Indian ivy. Fruit used in skin diseases and in rheumatism.

Scinde boil. An endemic disease occurring in Scinde; identical with *Aleppo button* and *Penjdeh sore*.

Scin'den. An old term for *Cerussa*.

Scintilla ven'eris. (L. Lit. "a spark of Venus.") Term for *Paraplegia* and impotence consequent on syphilitic disease.

Scintilla'tion. (L. *scintillare*, to sparkle.) A sparkling; the emission of sparks.

Med. The subjective sensation of the presence of sparks in the visual field. This occurs sometimes as a symptom of *Migraine*.

Sciograph'ia. See *Sciagraphia*.

Scio'machy. (Σκιά, a shadow; μάχη, a fight.) A gymnastic exercise among the ancients, consisting in boxing and jumping with one's shadow.

Sciomanti'a. (Σκιά; μαντεία, divination.) A foretelling by studying shadows.

Sciomet'ria. (Σκιά; μέτρον, a measure.) The reckoning of time by the observation of the movement of shadows.

Scion. (Mid. Eng. *sion*. F. *scion*; I. *bacchetta*; G. *Schoss*.) An offshoot or twig.

Sciothe'ras. (Σκιοθήρας = σκιαθήρας.) See *Sciatheras*.

Sciotheron. (Σκιοθήρον = σκιαθήρον.) See *Sciatheron*.

Sciotherum. Latinised form of the term *Sciatheron*.

Scir'pus. See *Scirrhus*.

Scirpi'colous. (*Scirpus*, a bulrush; *colo*, to inhabit.) *Bot.* Growing among bulrushes.

Scir'pus. (L.) The bulrushes. A Genus of the *Cyperaceæ*.

S. articula'tus. Hab., India. Root, laxative.

S. capsular'is. Used in the East Indies as a menstruum; the pith is used in Cochin-China for *moza*; the ashes of the plant are given in India to children as a calmative. (Foster.)

S. lacustris. Common bulrush. The stock of the plant was formerly used medicinally as a diuretic and astringent.

S. palustris. A syn. for *Eleocharis palustris*.

S. tubero'sus. Hab., China. Tubers used by the Chinese medicinally, and also to make a kind of arrowroot. (Foster.)

Scirrhencan'this. (*Scirrhus*; *encanthis*.) *Scirrhus* of the lachrymal gland.

Scirrhoblephar'oncus. (Σκίρρος; *blepharonecus*.) A syn. for *Scleriosis palpebrarum*.

Scirrhoblepharo'sis. (Σκίρρος; *blepharosis*.) A syn. for *Scirrhoblepharonecus*.

Scir'rhocele. (Σκίρρος; κήλη, a tumour.) A *Scirrhus* of the testis.

Scirrho'des. *Scirrhous*.

Scirrhoid. (Σκίρρος; εἶδος, form.) Resembling *Scirrhus*.

Scirrho'ma. (Σκίρρος, a hardening.) *Scirrhus*.

S. caminari'um. (L. *caminarius*.) Chimney-sweep's cancer, epithelioma of the scrotum.

S. ebur'neum. A syn. for *Sclerema*.

S. tubero'sum. A syn. for *Carcinoma tuberosum*.

Scirrophthal'mia. (Σκίρρος; *ophthalmia*.) Old term for *Cancer* of the eyeball.

S. palpebrar'um. A syn. for *Scleriosis palpebrarum*.

Scirrhosar'ca. (Σκίρρος; σάρξ, flesh.) A syn. for *Scleroderma*.

S. neonato'rum. A syn. for *Sclerema neonatorum*.

Scirrho'sis. (Σκίρρσις.) A hardening or induration; also, the development of *Scirrhus*.

Scirrhous. (*Scirrhus*. F. *squirrheux*; I. *scirroso*.) Belonging to, or having the characters of, a *Scirrhus* or *Scirrhous cancer*. Formerly used to mean tough, indurated.

S. can'cer. *Scirrhus*.

S. carcino'ma. *Scirrhus*.

S. sarco'ma of Ab'ernethy. A hard, indolent, glandular tumour, with the characters of the less malignant of the sarcomata, growing slowly, and often shrinking and becoming harder.

Scirrh'us. (Σκίρρος. F. *squirrhe*; I. *scirro*; G. *Faserkrebs*.) A scirrhous cancer. See *Cancer, scirrhous*.

S., atroph'ic. A form of very slowly-growing scirrhous of the breast, occurring sometimes in old women, in which considerable atrophy and shrinking both of the breast and the tumour gradually takes place.

S., cuirass'-like. A form of chronic mammary scirrhous in which the whole breast and side of the thorax become covered with a cuirass-like mass of the growth.

S. et carcino'ma ventric'uli. An old term for scirrhous of the stomach associated with narrowing of either orifice.

S. glandular'is. A syn. for *Adeno-scirrhous*.

S. he'patis. (L. *hepar*, -atis, the liver.) Old term signifying *Scirrhous* of the liver.

S. intestino'rum. Old term for a scirrhous condition of the intestines.

S. of blad'der. See *Bladder, scirrhous of*.

S. of breast. See *Breast, scirrhous of*.

S. of oesoph'agus. See *Oesophagus, scirrhous of*.

S. of or'bit. See *Orbit, scirrhous of*.

S. of pros'tate. See *Prostate, cancer of*.

S. of pylor'us. See under *Stomach, cancer of*.

S. of rec'tum. This variety of cancer is rare in the rectum. It gives rise to induration and contraction of the rectal walls.

S. of tes'tis. See *Testis, scirrhous of*.

S. of u'terus. See *Uterus, scirrhous of*.

S. palpebrar'um. See *Scirrophthalmia palpebrarum*.

S. testic'uli. An old term for *Sarcocoele*.

S. u'teri. Old term signifying *Scirrhous* of the uterus.

S. ventric'uli. A general induration and thickening of the gastric wall, more especially about the pylorus. The general hyperplasia of the gastric coats is partly fibrous and partly cancerous. (Ziegler.) Also, term for a variety of *chronic gastritis* which is associated with a growth of firm connective tissue in the mucosa of the gastric walls.

Scis'sile. (L. *scindo*, *scissum*, to divide, cut. F. *scissile*.) Capable of scission.

Scis'sion. (L. *scindo*, *scissum*, to cut.) A cutting or dividing.

Scissipar'ity. The condition of being *Scissiparous*.

Scissiparous. (L. *scindo*, *scissum*, to divide; *pario*, to bring forth.) A syn. for *Fissiparous*.

Scis'sor-leg. A syn. for *Cross-leg*.
Scissors. (L. *scindo*, *scissum*, to cut.)
S. and direc'tor, Allingham's. A form of scissors with a probe-pointed blade running in a grooved director. Used for fistula in ano.
S., ar'tery. In this kind of scissors one blade is probe-pointed, so that it can be passed into the lumen of an artery.
S., canalic'ular. A form of curved narrow-bladed scissors, one blade being probe-pointed. Used for slitting up the *canaliculi* of the eyelids.
S., can'nula. A form of surgical scissors specially designed for slitting up a canal lengthwise.
S., cranio'tomy. A large scissor-shaped obstetric instrument, used as a perforator and for cutting away pieces of bones in the operation of *Craniotomy*.
S., Da'vid's. Two pairs, one left-handed and one right-handed, used for enlarging the opening in the *flap extraction* of cataract.
S., Du'bois' bone. A form of bone-scissors used in *Spondylotomy*, *decapitation*, &c.
S., Guy's open-ring. Scissors with open, hooked rings in the handles.
S., Heywood Smith's. A form of laryngeal scissors with moveable points.
S., iris. Also called *de Wecker's scissors*. See *S., de Wecker's*.
S., Nae'gele's. A form of *Scissors*, *craniotomy*, introduced by Naegele. The ends of the handles are furnished with a hook which can be clamped, thus closing the instrument.
S., Noyes'. Scissors with springs in place of the ordinary loops of the handles, the blades being opened by pressure.
S., perforator. A syn. for *S., cranio'tomy*.
S., Scu'tin's. Large, strong scissors specially designed for cutting plaster-of-Paris splints, &c.
S., Skene's hawk-bill. Scissors used for cutting away cicatricial tissue in the operation of *Trachelorrhaphy*. Each blade is pointed and has two cutting edges, and one blade lies within the other when they are closed.
S., skin-grafting. A combination of scissors and forceps used in *Skin-grafting*.
S., Smellie's. A form of *perforator* invented by Smellie for use in *craniotomy*. The outer edges of the blades are sharp, and cut when the blades are separated.
S., Tar'dieu's trache'a. Used for operations within the trachea. They are curved, with sharp-pointed blades of unequal length.
S., Tay'lor's phimo'sis. Used for slitting up the prepuce. One blade is probe-like, the other scissor-like.
S., transplanta'tion. The same as *S., skin-grafting*.
S. u'vula. A form of scissors specially designed for cutting off the uvula.
S., de Wecker's. Forceps-like scissors with rounded ends to the blades, for cutting through the iris in the operation of *Iridotomy*.
S., Weiss', for closed pu'pil. A form of ophthalmic scissors designed by Weiss for opening an occluded pupil. They have a combined pressure and hinge action, and one blade is sharp and the other blunt.
Scissu'ra. (L. *scindo*, *scissum*, to divide, cut.) Fission, cleavage.

S. aur'is. See *Incisura auris*.
S. longitudina'lis. The great longitudinal fissure of the brain.
S. perpendicular'is. Gratiolet's term for the *Sulcus centralis*.
S. pillo'rum. (L. *pilum*, a hair) See *Distriz*.
S. postrolan'dica. See *Incisura postrolandica*.
S. prærolan'dica. See *Incisura prærolandica*.
S. tra'go-hellic'ina. See *Incisura trago-helicina*.
S. vul'væ. The vulval opening.
Scissu'rae. (Pl. of *Scissura*.) A syn. for *Rhagades*.
Sc. L. A. Abbrev. for *Scapula læva-anterior*, or left scapulo-anterior position.
Sc. L. P. Abbrev. for *Scapula læva-posterior*, or left scapulo-posterior position.
Sclafa'ni. A place in Palermo, Sicily, noted for its sulphur springs.
Sclare'a. (Σκληρός, hard; plant so named from its hard stalks.) Bot. Specific name of the *Salvia sclarea*.
S. hispan'ica. Syn. for *Salvia sclarea*.
Sclera. (Σκληρός, hard.) A syn. for *Sclerotica*.
S. tes'tis. The *Tunica albuginea testis*.
Sclerac'né. (Σκληρός; acnè.) A term for *Acnè indurata*.
Scleradenitis. (Σκληρός; adenitis.) The same as *Adenosclerosis*.
Scler'al. (*Sclera*.) Belonging to the *Sclera*.
S. extrac'tion. Von Graefe's method of extraction of cataract. He makes a linear incision with its base at the sclerotic, and then performs iridectomy.
Scleranthus. Bot. A Genus of the Illecebraceæ.
S. an'nuus. German knot-grass. Astringent and diuretic.
S. peren'nis. Knapel. Astringent and diuretic.
Sclerati'tis. See *Scleratitis*.
Sclerectasia. (Σκληρός; ἑκτασις, a stretching.) A term for *Staphyloma* of the sclerotic.
S., poste'rior. A term for *Staphyloma, posterior*.
Sclerectasis. The same as *Sclerectasia*.
Sclerectomy. (Σκληρός; ἑκτομή, a cutting out.) Excision of a piece of the *Sclerotic*. Also, the operation of excision of the sclerosed bones, &c., of the middle ear in cases of chronic otitis media.
Sclere'ma. (Σκληρός, hard.) A syn. for *Scleroderma*.
S. adipo'sum. One of the two forms of *S. neonatorum*, in which the skin is extremely hard, atrophic, and adherent to the subjacent tissues. Usually fatal. It is, according to Saltmann, always symptomatic.
S. adulto'rum. Sclerema of adults. A syn. for *Scleroderma*.
S. atroph'icum. A term for the chronic variety of *Sclerema neonatorum*, corresponding to *S. adiposum*.
S. cu'tis. The same as *Scleroderma*.
S. eleva'tum. A term for the acute variety of *Sclerema neonatorum*, corresponding to *S. œdematosum*.
S. neonato'rum. The so-called hide-

SCLEREMIA—SCLEROGEN

bound disease of new-born children. It is divided into two varieties, *S. adiposum* and *S. œdematosum*.

S. œdematosum. In this variety of *S. neonatorum* the skin is universally œdematous, and is also indurated, muscular movement becoming impaired. It usually begins below and spreads upwards; the temperature is subnormal, and the disease generally proves fatal.

Scleremia. (Σκληρός, hard.) A syn. for *Sclerema*.

Scleremus. (Σκληρός.) The same as *Scleremia*.

Sclerencephalia. (Σκληρός; ἐγκέφαλος, the brain.) Sclerosis of cerebral tissue.

Sclerenchyma. (Σκληρός, hard; ἔγχυμα, a pouring in, an infusion.) *Bot.* A name for bast-fibres. See *Bast*.

Zoöl. The calcareous tissue of *Corals*.

Sclerenchymatous. Belonging to, or having the properties of, *Sclerenchyma*.

Sclerenchyme. The same as *Sclerenchyma*.

Sclererythrin. (*Sclerotium*; ἐρυθρός, red.) Name for the red colouring-matter of *Ergot* of rye.

Sclereunia. (Σκληρός; εὐνή, a couch or bed.) A hard bed, or a sleeping upon a hard bed.

Scleria. (Σκληρός.) The same as *Scleriosis*. Also, in *Bot.*, a Genus of the *Cyperaceæ*.

S. lithospermifolia. A species given in India in cases of Bright's disease.

Scleriosis. (Σκληρός.) A syn. for *Scleroderma*; also, for *Sclerema*.

S. neonatorum. A syn. for *Sclerema neonatorum*.

S. palpebrarum. Old term for cancer of the eyelids; more recently, term for any indurated condition of the eyelids. (Foster.)

Sclerirrhomy. (*Sclera*; iris; τομή, a cutting.) An operation performed in cases of secondary glaucoma and in staphyloma of the cornea, consisting in incising the conjunctiva, sclerotic, and iris, with excision of part of the iris and anterior capsule of the lens.

Sclerite. (Σκληρός.) *Biol.* A separate element or joint in the exoskeleton of the *Arthropoda*. Also, a calcareous spicule in some *Actinozoa*. (Foster.)

Scleritic. (Σκληρός.) A syn. for *Sclerous*. Also (*Scleritis*), belonging to *Scleritis*.

Scleritis. (Σκληρός; fem. adj. term. -itis.) A syn. for *Sclerolitis*.

Sclero. (Σκληρός, hard.) Prefix signifying toughness or induration; also, relation to, or connection with, the *Sclera*, or *Sclerotic*.

Scleroblast. (*Sclero*; βλαστός, a shoot) *Bot.* A syn. for *Stone-cell* (q. v.).

Sclerobronchiorrhonchus. (*Sclero*; bronchiorrhonchus.) Old term for a dry râle generated in a *bronchus*.

Sclerocataracta. (*Sclero*; καταράκτης. *Pathol.* A hard *Cataract*.

Sclerochoroiditis. (*Sclero*; choroiditis.) A combination of *Sclerolitis* and *Choroiditis*.

S., anterior. A localised inflammation which begins in or about the uveal tract, accompanied by thickening of the affected sclerotic, often relapsing, giving rise to increased intra-ocular tension. Thinning out of the uvea occurs from the first, and, later on, the thickening of the sclerotic gives way to atrophy

S., posterior. A form of inflammation accompanied by atrophy, affecting the region round the optic disc, generally occurring in cases of high myopia.

Sclerocnissorrhonchus. (*Sclero*; κνισσάω, to crackle.) An old term for a dry crackling râle. See *Râles*, dry crackling.

Sclerocœtia. (*Sclero*; κοίτη, a couch.) A syn. for *Sclereunia*.

Scleroconjunctival. (*Sclero*; conjunctiva.) Belonging to the *Sclerotic* and *Conjunctiva*.

Scleroconjunctivitis. (*Sclero*; conjunctivitis.) A combination of *Sclerolitis* and *Conjunctivitis*.

Sclerocorneal. (*Sclero*; cornea.) Belonging to the *Sclerotic* and *Cornea*.

SclerocrySTALLIN. (*Sclero*; crystal-*lin*, from crystal.) $C_7H_7O_3 + H_2O$. A colourless, inert, crystalline substance obtained by Dragendorff from *Ergot* of rye.

Sclerocystorrhonchus. (*Sclero*; cystorrhonchus.)

Sclerodactyle. (*Sclero*; δάκτυλος, a finger.) The same as *Sclerodactylia*.

Sclerodactylia. A form of *Scleroderma* occurring only in women, usually following exposure, affecting the hands and feet, or the hands only. The fingers become deformed, shortened, atrophied, and of a waxy colour.

Sclerodactyly. The same as *Sclerodactylia*.

Scleroderm. (*Sclero*; δέρμα, the skin.) *Biol.* Term for the calcareous framework or skeleton of the *Madrepora*.

Scleroderma. (*Sclero*; δέρμα, the skin. *F.* *sclerodermie*; *G.* *Hautscleren*.) A chronic process of induration, with accompanying loss of mobility, of the skin, without inflammation, often accompanied by discoloration, and affecting variously-sized areas, being in some cases *circumscribed*, in others *diffuse*. Considerable pressure on subjacent parts may result, from contraction of the affected skin. A form of this disease sometimes occurs after *Cholera infantum*, giving the patient the appearance of a half-frozen corpse.

S. adultorum.

S. circumscrip'tum. *Circumscribed* scleroderma. See main heading.

S. diffusa. *Diffuse* scleroderma. See main heading.

S. localis. A syn. for *S. circumscripta*.

S. neonatorum. A syn. for *Sclerema neonatorum*.

Scleroder'matous. Having a tough or hard outer covering or skin.

Scleroder'mia. The same as *Scleroderma*.

Scleroder'mic. A syn. for *Scleroder'matous*.

Scleroder'mite. (*Sclero*; δέρμα, the skin.) *Biol.* A calcareous or chitinous *Sclerite* in the *Arthropoda*.

Sclerodermi'tic. Belonging to, or suffering from, *Sclerodermi'tis*.

Sclerodermi'tis. (*Sclero*; dermati'tis, for dermatitis.) An inflammatory skin disease, associated with general induration of the skin.

Scleroder'mous. The same as *Scleroder'matous*.

Sclero'dès. (*Sclero*; εἶδος, form.) *Sclerotic*.

Sclero'gen. (*Sclero*; γένεις, begetting.)

SCLEROGENOUS—SCLEROSIS

Bot. The hard substance produced in *Sclerotic*- or *stone-cells* of fruits.

Sclero'genous. (*Sclero-*; γενής, begetting.) *Biol.* Giving rise to hard tissue, *e. g.* chitinous or calcareous substance.

S. meth'od. *Surg.* Name for a method of treatment of tuberculous disease of joints, consisting in injections of solution of chloride of zinc.

Sclero'geny. (*Sclero-*; γενής.) The development of *sclerous* tissue. (Laurent.)

Sclerohymen'i'tis. See *Sclerymenitis*.

Sclerohys'tera. See *Sclerystera*.

Scler'oid. (*Sclero-*; εἶδος, form.) *Biol.* Hard, indurated.

Sclero'i'odin. (*Sclero-*; iodine.) Name for a brownish colouring-matter obtained from *Ergot* of rye. (Gould.)

Scleroi'r'i'tis. (*Sclero-*; iritis.) A combination of *Scleritis* and *Iritis*.

Sclerokerati'tis. (*Sclero-*; keratitis.) A combination of *Scleritis* and *Keratitis*.

Sclerolith'us. (*Sclero-*; λίθος, a stone.) Old term for a skin indurated and tense from inflammation.

Sclero'ma. (Σκληρός, hard.) Pathological hardness or induration of any part. Also, a hard, dense new growth occurring in the nose and larynx, believed to be set up by a certain bacillus. (Gould.)

S. adulto'rum. A syn. for *Scleroderma*.

S. neonato'rum. The same as *Scleroderma neonatorum*.

Scleromatocys'tis. (*Scleroma-*; κύστις, the bladder.) Term for induration of any *cyst*; also, more especially, of the urinary bladder or gall-bladder.

Scleromeningo'mycus. (*Scleromeninx*; μυκίς, a fungus.)

Sclerome'ninx. *Sclero-*; μῆνιγξ, a membrane.) The *Dura mater*.

Scleromu'cin. (*Sclero-*; mucin.) A nitrogenous, gummy, tasteless substance, obtained from *Ergot* of rye. It is said to have an ecboic action.

Scleronyx'is. See *Scleroticonyxis*.

Scleroophori'tis. (*Sclero-*; οὐφори- tis.) A term for *Sclerosis* of the ovary.

Scleropath'ia. (*Sclero-*; πάθος, disease.) Term for *Scleroma*; also, for *Scleriasis*; also, for *Scleritis*.

Sclerophthal'mia. (*Sclero-*; ophthal'mia.) A syn. for *Scirrhopthalmia*; also, for *Hordeolum*, or "stye"; also, for *Xerophthalmia*.

Sclerophthal'mus. (*Sclero-*; ὀφθαλμός.) A term for *Staphyloma* of the *Sclerotic*; also, an individual suffering from *Sclerophthalmia*.

Sclerorrhon'chus. (*Sclero-*; rhonchus.) A syn. for *Sclerobronchiorrhinchus*.

Scler'os. (Σκληρός.) Hard, tough. Also, as a prefix, used to signify the *Sclerotic*.

Sclero'sal. Having the characters of *Sclerosis*.

Sclerosarco'ma. (*Sclero-*; σάρξ, flesh.) Old term for a kind of hard, fleshy *Euphis*.

Scler'ose. (Σκληρός.) To give rise to *Sclerosis*; also, to undergo *Sclerosis*.

Sclerosed. Affected with *Sclerosis*.

Sclero'sing. Pres. partic. of the verb to *Sclerose*.

Sclero'sis. (Σκληρός, hard. F. *sclérose*;

I. *sclerosi*; G. *Sclerose*.) *Pathol.* Induration of a part or tissue from overgrowth of its connective tissue; especially applied to the arteries and the nervous system. *Bot.* The induration of the cell-wall of a plant by the development in it of *lignin*.

S., amyotroph'ic lat'eral. A sclerosis of the pyramidal tract of the spinal cord, and of several of the nerve-centres in the medulla. There is loss of power with great wasting of muscles.

S., an'nular. Vulpian's term for chronic peripheral *Myelitis*.

S., an'tero-lat'eral. A syn. for *S., lateral*.

S., arte'rio- See *Arterio-sclerosis*.

S., arte'rio-capill'ary. Term for a general *Sclerosis* of the arteries and capillaries (Foster.)

S., atroph'ic. *Sclerosis* accompanied by atrophy of the affected part.

S., cer'ebral, diffus'ed. See *S., diffused cerebral*.

S., cer'ebro-sp'inal. A name for *S., multiple*.

S., combin'ed. Term for a *Sclerosis* of the lateral and posterior columns of the spinal cord.

S. combus'ta. (L. *comburo*, *combustum*, to burn up.) Term for the *sclerosis* occurring round an inflamed *Chancre*.

S., com'pound lat'eral. Any form of spinal *Sclerosis* affecting two or more of the columns.

S. co'ril. Induration of the *corium* of the skin.

S., cor'tical. Vulpian's term for *Myelomeningitis*.

S., degen'erative. Any form of *Sclerosis* of the central nervous system accompanied by degenerative changes. It includes toxic varieties (*e. g.* from lead or ergot), *sclerosis* from separation from trophic centres, and *sclerosis* from changes in the small arteries and capillaries.

S. der'matis. *Sclerosis* of the *derma*. A syn. for *S. corii*.

S., diffuse'. *Sclerosis* in which wide tracts of the central nervous system are involved.

S., diffus'ed cer'ebral. A form of *Sclerosis* of a part of the brain, accompanied by diffuse hypertrophy and induration of the neuroglia of the affected part.

S., dissem'inated. A syn. for *S., multiple*.

S., fo'cal. Term for a localised *Sclerosis* of some part of the spinal cord or brain.

S., gen'eral. Term for general overgrowth of connective tissue, giving rise to *sclerosis* of an organ.

S., ini'tial. Term for the *Hunterian chancre* of syphilis.

S., in'sular. A syn. for *S., multiple*.

S., lat'eral. *Sclerosis* of the lateral columns of the spinal cord, characterised by paralysis, muscular spasms, and increased reflexes.

S., lat'eral, prim'ary. Another name for primary spastic paraplegia. See under *Paraplegia*.

S., lat'eral, symmet'rical. Double lateral *sclerosis* of the spine.

S., lo'bar. Term for *Sclerosis* of a whole lobe of the brain.

SCLEROSKELETAL—SCLEROTIC

S., mil'itary. A form of sclerosis of the spinal cord, characterised by the presence of greyish-red patches at the junction of the grey and white matter. (Dunglison.)

S., multiloc'ular. A syn. for *S., disseminated*.

S., mul'tiple. (F. *sclérose en plaques*.) A chronic form of sclerosis of the brain and spinal cord in which the nervous elements become replaced by connective tissue in isolated patches throughout the nervous system. The onset is slow; weakness of the legs with pain and stiffness are followed by symptoms of spastic paraplegia, with superadded volitional tremors of the arms, head, and legs, a peculiar "scanning," clipped kind of speech, and nystagmus. Sensation is rarely affected; mental weakness is fairly common, as is also vertigo. Attacks of coma sometimes come on. The course is slowly from bad to worse.

S., mul'tiple cer'ebral. A variety of *S., multiple*, affecting only the brain.

S., mul'tiple cer'ebro-sp'inal. The commoner variety of *S., multiple*, which affects both the brain and spinal cord.

S., mul'tiple sp'inal. A variety of *S., multiple*, which affects only the spinal cord.

S., neu'ral. A sclerosis accompanying chronic inflammation of a nerve.

S. of bone. A syn. for *Osteitis, condensing*.

S. of brain. A pathological process of induration followed by atrophy of the cerebral substance.

S. of cor'pora caverno'sa. Term for an interstitial fibrous hypertrophy of these bodies. (C. Maurice.)

S. of liv'er. A name for *Hepatitis, chronic*.

S. of lung. A syn. for *Pneumonia, interstitial*.

S. of mid'dle ear. (Of von Trötsch.) A syn. for *Otitis media hypertrophica*.

S. of placen'ta. Indurated, greyish masses found in the placenta. Ercolani considers them to be consequent on cellular hypertrophy of the foetal villi. (Bustamente and Neumann.)

S. of poste'rior root-zones of sp'inal cord. A syn. for *S., posterior spinal*.

S. of stom'ach. Another name for *Gastritis, chronic interstitial*.

S. os'sium. *S. of bone*.

S., poste'rior sp'inal. A name for *Tabes dorsalis*, or *Locomotor ataxia*. See under *S., spinal*.

S., pos'tero-lat'eral. See under *S., spinal*.

S., pri'mary lat'eral. See *S., lateral, primary*.

S., progres'sive mus'cular. A syn. for *Pseudohypertrophic paralysis*.

S., pul'monary. *S. of lung*.

S., re'nal. A syn. for *Nephritis, chronic interstitial*.

S., ring-shaped. See *S., annular*.

S., sp'inal. There are two varieties:—*S., lateral* (or *antero-lateral*), and *S., postero-lateral* or *posterior spinal*, usually termed *Tabes dorsalis*.

S., syphilit'ic arterio-. See *Syphilitic arterio-sclerosis*.

S. telæ cellular'is et adipo'sæ. Another name for *Scleroderma*.

S. tes'tis. A syn. for *Sarcocele*.

S., tu'berous. A hypertrophic form of *Sclerosis of the brain*.

Scleroskel'etal. Belonging to a *Sclero-skeleton*.

Scleroskel'eton. (*Sclero-*; *skeleton*.) Collective term for those parts of the skeleton that are developed in tendons, ligaments, or aponeuroses.

Sclerostenosis. (*Sclero-*; *stenosis*.) Induration combined with contraction of a tissue or part. Also, syn. for *Scleroderma*.

S. cuta'nea. (L. *cutaneus*, belonging to the skin.) Term for an induration of the areolar connective tissue.

Scleros'teous. (*Sclero-*; *ὀστέον*, a bone.) Belonging to ossification in a tendon.

Sclero'stoma. (*Sclero-*; *στόμα*, any mouth-like opening.) *Biol.* A Genus of *Strongylidæ*.

S. duodena'lē. Found in Egypt and in Northern Italy. By its presence in the human duodenum and jejunum, to the walls of which it takes a firm hold, it gives rise to *Egyptian chlorosis*.

S. equin'um. This has been found in the intestines of the horse, and also in aneurysms of the mesenteric arteries. (Foster.)

S. syn'gamus. A syn. for *Syngamus trachealis*.

Sclero'sus. (Σκληρός.) Hard, tough, indurated.

Sclerosyphilidoch'thus. (*Sclero-*; *syphilidoch'thus*, a syphilitic tubercle, or tubercular syphilide.) Old term for an indurated tubercular *Syphilide*.

Sclero'tal. (Σκληρός.) Epithet applied by Owen, in his *Homologies*, to the substance that forms the sclerotic of the eye in Vertebrates.

Scle'rote. Shortened form of the term *Sclerotium*.

Sclerothrix. (*Sclero-*; *θρίξ*, a hair.) Term for abnormal dryness and toughness of the hair.

Also, term introduced by Metschnikoff for the *Bacillus tuberculosis*, or *Tubercle bacillus*.

Sclerot'ic. (Σκληρός, hard. F. *sclérotical*; I. *sclerotico*; G. *sklerotisch*.) Literally, tough, resisting. In common use as a substantive to signify the *Sclerotic* coat or tunic of the eyeball. See *Sclerotic tunic*.

Also, belonging to the *Sclerotic* tunic of the eyeball.

Also, belonging to, or affected with, *Sclerosis*.

Also, epithet formerly applied to drying or astringent medicines ("Medicamenta exsuantia").

Also, belonging to *Ergot* of rye.

S. ac'id. $C_{12}H_{19}NO_2$. An amorphous, feebly acid substance obtained from *Ergot* of rye. It is given hypodermically as an ecboic, in doses of $\frac{1}{2}$ to $\frac{3}{4}$ grain, and is preferable to *Ergotin* hypodermically, as it causes no inflammation at the seat of puncture. Given in the form of *Injectio Acidi Sclerotici Hypodermica*, 1 grain dissolved in 6 minims of water.

Hypodermic lamellæ are also prepared, each containing 1-16th grain of sclerotic acid made up with gelatine.

S. arteri'tis. A syn. for *Arterio-sclerosis*.

S. cells. *Bot.* A term for the stone-cells of fruits.

S. coat. The same as *S. tunic* (q. v.).

S. endocarditis. See *Endocarditis*, *sclerotic*.

S. myocardi'tis. See *Myocarditis*, *sclerotic*.

S. paren'chyma. See *Parenchyma*, *sclerotic*.

S., staphylo'ma of. See *Staphyloma of sclerotic*.

S. tu'nic. The posterior four-fifths of the outermost tunic of the eyeball. It is tough and inelastic, and is composed of strong connective-tissue fibrils made up into interlacing bundles. Behind, it is pierced by the optic nerve, and is covered by the capsule of Tenon; in front it is continuous with the cornea, and is covered by the ocular conjunctiva.

S. zone. A zone or ring of arterial anastomosis of conjunctival vessels round the circumference of the cornea, joining, through the sclerotic, the vessels of the iris and choroid. This is a condition found in some cases of *Iritis*.

Scleroti'ca. (Latinised term *scleroticus*, -a, -um.) The *Sclerotic*, or *Sclerotic coat* of the eyeball.

S. cerato'i'des. (Κέρας, -ατος; εἶδος, form.) A term for the *Cornea*.

Scleroti'cal. Belonging to the *Sclerotic coat* of the eye. The word *Sclerotic* is in common use in the above sense.

Scleroticec'tomy. (*Sclerotica*; ἐκτομή, a cutting out.) Formation of an artificial pupil to the eye by means of partial excision of the *Sclerotic*.

Sclerotici'tis. See *Sclerotitis*.

Scleroti'co-choroidi'tis. Inflammation of the *sclerotic* and *choroid* coats of the eyeball, generally at the posterior part (*S.-choroiditis, posterior*). Occasionally it occurs in the anterior part of the eyeball (*S.-choroiditis, anterior*).

S.-choroidi'tis, ante'rior. See main heading.

S.-choroidi'tis, poste'rior. See main heading.

Scleroticconyx'is. (*Sclerotica*; νύξις, a pricking.) *Surg.* An old operation for cataract, in which the *sclerotic* was punctured with a broad needle, and the lens was depressed into the vitreous.

Scleroticostaphylo'ma. (*Sclerotica*; *staphyloma*.) *Staphyloma* of the *Sclerotic*.

Scleroticotom'ia. (*Sclerotica*; τομή, a cutting.) Incision of the *Sclerotic*.

Scleroticot'my. (*Sclerotica*; τομή, a cutting.) Incision of the *Sclerotic tunic* of the eyeball.

Scleroti'cus. (Latinised term *Scleroticus*, -a, -um.) The *Sclerotic*.

Sclerotidec'tomy. (*Sclerotica*; ἐκτομή, a cutting out.) A syn. for *Scleroticconyx'is*.

Sclerotin'ic. (Σκληρός, hard.) Belonging to *Ergot* of rye.

S. aci'd. A syn. for *Sclerotic acid*.

Sclero'tis. (Σκληρός, hard.) A syn. for *Sclerotica*; also, for *Sclerotium*.

Sclerotisecto'mia. (*Sclerotis*; ἐκτομή.) Removal of a piece of the *Sclerotic*.

Scle'rotised. A syn. for *Sclerosed*.

Sclerotiti'c. Belonging to, or affected with, *Sclerotitis*.

Sclerotiti'tis. (*Sclerotic*; fem. adj.

termin. -ιτις; 'Η σκληρότιτις νόσος, the disease of the sclerotic.) Inflammation of the *Sclerotic tunic* of the eyeball. Two kinds are described: a superficial inflammation or *episcleritis*, in which painful nodules are formed near the cornea; and a deep inflammation, in which ciliary staphylomata are formed.

S. atten'uans. A syn. for *Sclerochoroiditis, posterior*.

Sclero'tium. (Σκληρός, hard.) *Biol.* A resting-stage in the development of certain *Fungi*, acting as a store of material for subsequent development. It consists in a close feltwork of *hyphæ*.

S. cla'vus. A syn. for *S. ergot*.

S. er'got. The *Ergot* of rye.

S. gigan'teum. A syn. for *Lycoperdon tuber*.

S. ma'ldis. The *Ergot* of maize.

S. stipita'tum. The *Sclerotium* of a fungus found in India in white ants' nests. Used, according to some, as a febrifuge and vermicide, and in cholera.

Sclero'tome. (*Sclero*-; τομή, a cutting.) The knife used in *Sclerotomy*. Also, a section of the skeleton. (Dunglison.)

Also, in *Biol.*, a hard, tough tissue lying between the *myotomes* of some of the lower *Vertebrata*.

Sclero'tomy. (*Sclero*-; τομή, a cutting.) The operation of incising the *Sclerotic* immediately posterior to the cornea. Used to relieve intra-ocular pressure in glaucoma.

S., ante'rior. The incision is made into the anterior chamber in front of the ciliary body, through the anterior part of the sclerotic.

S., poste'rior. The incision is made just behind the ciliary body, into the vitreous chamber.

Sclerotonyx'is. A syn. for *Scleroticconyx'is*.

Sclerotrich'ia. (*Sclero*-; θρίξ, the hair.) Abnormal dryness of the hair.

Scle'rous. (Σκληρός.) Tough, hard, indurated.

Scleroxan'thin. (*Sclero*-; ξάνθος, yellow.) A yellow crystalline substance obtained from *Ergot* of rye.

Sclerun'ticus. A syn. for *Scleroticus*. (Dunglison.)

Sclerurethri'tis. (Σκληρός; urethritis.) Term for an indurated condition of the urethra consequent on urethritis.

Sclerus. (Σκληρός.) A hardening or induration. Also, syn. for *Scirrhus*.

Sclery'men. (Σκληρός; ἑμὴν, a membrane.) The *Sclerotic*, or sclerotic coat of the eye.

Sclerymeni'tis. (*Sclerymen*; fem. adj. termin. -ιτις.) A syn. for *Sclerotitis*.

Scleryn'ticus. (Σκληρύνω, to harden.) A syn. for *Scleroticus*.

Sclerys'ma. (Σκλήρυσμα.) A syn. for *Sclerosis*.

Sclerys'mus. The same as *Sclerysma*.

Sclerys'tera. (*Sclero*-; ὑστέρα, the womb.) Induration of the uterus; used more especially to mean cancerous induration.

Sclerophthal'mia. See *Sclerophthalmia*.

Sclopetar'ia, a'qua. (From *Sclopetarius*, -a, -um; so named because believed to heal gunshot wounds.) *Pharm.* A name for

the *Eau d'arquebuse*, or water for bathing gunshot wounds.

S., vul'nēra. (L.) Gunshot wounds.

Sclopētar'ius. (L. From *sclopus*, a gun.) Belonging to a gun.

Sclopētica, aqua. (*Sclopeticus*, -a, -um.) A syn. for *Sclopētaria, aqua*.

S., vul'nēra. A syn. for *Sclopētaria, vulnēra*.

Sclopēticus. (L. From *sclopus*, a gun.) The same as *Sclopētarius*.

Sclopētopla'ga. (L. *sclopus*, a gun; *plaga*.) Old term for a gunshot wound.

Scobicula'tus. (L. *scobs*.) A syn. for *Scobiformis*.

Scob'iform. (L. *scobiformis*, resembling sawdust.) *Bot.* Epithet applied to the very minute, dust-like seeds of some plants (e. g. the *Orchideæ*).

Scobifor'mis. (L.) Resembling sawdust, *Scobiform*.

Scob'inate. (L. *scobina*, a file.) *Biol.* Having a rough, file-like surface.

Scob'is. (L.) The same as *Scobs*.

Scobs. (L.) Sawdust or filings.

Scoda'ic. See *Skodaic*.

Scod'elle. Old term for a cup-shaped calcification formed in the eyeball; probably identical with ossification of the choroid. (Foster.)

Scoke. A name for the *Phytolacca decandra*. (Billings.)

Scolec'esis. The same as *Scoleciasis*.

Scolec'iasis. (Σκωληκίασις.) A syn. for *Helminthiasis*.

Scolec'iform. (*Scolex*; L. *forma*, shape.) Having the shape of a *Scolex*.

Scolec'ion. (Dim. from Σκώληξ.) A small worm.

Scolec'isis. The same as *Scoleciasis*.

Scolec'ium. The same as *Scolecion*.

Scolec'izon. (Σκωληκίζω, to move like a worm.) *Med.* Old term for an unequal, vermicular pulse. See *Pulse, vermicular*.

Scolec'oid. (Σκώληξ, a worm; εἶδος, form, resemblance.) *Vermiform*.

Scolecology. A syn. for *Helminthology*.

Scolecophagous. (*Scolex*; φαγεῖν, to devour.) *Biol.* Worm-eating, living on worms.

Scolec'isis. A syn. for *Scoliosis*.

Scolex. (Σκώληξ, a worm) *Biol.* The short, rounded head of a member of the *Cestoda*. By its budding, it forms the *proglottides*.

Also, old term for a Genus of *Vermes*.

Scolia'sis. See *Scoliosis*.

Scolices. Plur. of *Scolex*.

Scolio'ma. (Σκολίωμα.) Spinal curvature.

Scolio'meter. The same as *Scoliosio-meter*.

Scolioneiro'sis. (Σκολιός, bent, crooked; δνεῖρος, a dream.) Unpleasant, disagreeable dreaming.

Scolio-rachit'ic. Suffering from *Scoliosis* consequent on *Rickets*.

Scoliosio'meter. (*Scoliosis*; μέτρον, a measure.) An instrument for measuring the degree of *Scoliosis* in any case.

Scoliosio'metry. (*Scoliosis*; μέτρον, a measure.) Measurement of *Scoliosis*, or of spinal curvature in general.

Scolio'sis. (Σκολίωσις. F. *scoliose*; I.

scoliosi; G. *Skoliosis*.) *Lateral curvature of the spine.*

S., cicat'ri'cial. *Scoliosis* consequent on cicatricial contraction of one side.

S., empyemat'ic. *Scoliosis* occurring as a result of falling in of one side of the thorax after *Empyema*.

S., hab'it. *Scoliosis* consequent on the habit of sitting and; to a less degree, standing bent towards one side; occurring especially in young, growing people with weak muscles.

S., inflam'matory. Term for *Scoliosis* consequent on vertebral caries.

S. ischiad'ica. *S., sciatic*.

S., myopath'ic. A form of *Scoliosis* consequent on paresis of some of the spinal muscles.

S., osteopath'ic. (Ὄστίον, a bone; πάθος, suffering.) *Scoliosis* consequent on vertebral disease.

S., paralyt'ic. A syn. for *S., myopath'ic*.

S., pel'vic. See *Pelvis, scoliotic*.

S., rachit'ic. *Scoliosis* consequent on *Rickets*.

S., rheumat'ic. A temporary *Scoliosis* consequent on muscular rheumatism, the latter affecting especially the spinal muscles of one side.

S., sciat'ic. *Scoliosis* consequent on *Sciatica*. The convexity is towards the affected side, and there is often a compensatory curve above the primary one.

S., stat'ic. *Scoliosis* consequent on inequality in the length of the legs.

Scolioso'meter. See *Scoliosio-meter*.

Scoliotic. (*Scoliosis*.) Belonging to, or affected with, *Scoliosis*.

S. pel'vis. See *Pelvis, scoliotic*.

S. rick'ety pel'vis. See *Pelvis, scoliotic rickety*.

Scolloped. (Ang.-Sax. *scalu*, the shell of a shell-fish.)

Scol'opax. (Σκολόπαξ, a woodcock.) A Genus of the *Grallæ*, including the woodcocks and curlews.

S. gallina'go. The snipe. The flesh resembles that of *S. rusticola* in flavour, but is less tender.

S. rusti'cola. The woodcock. Flesh, tender and nutritious.

Scolopen'dra. *Bot.* A syn. for *Asplenium scolopendrium*.

Scolopen'dria. *Bot.* Term for the *Asplenium ceterach*; also, for the *Asplenium scolopendrium*.

Scolopen'drium. *Bot.* The hart's-tongue. A Genus of *Filices*. Also, a name for the *Mandragora*.

S. hemlon'tis. (The ἡμιονίτις of Dioscorides.) The male fern. Hab., South Europe. It resembles *S. vulgare* in its action.

S. linguae. Syn. for *Asplenium scolopendrium*.

S. officina'lē. The same as *S. linguae*.

S. officinar'um. A syn. for *S. officinalē*.

S. phyllit'is. The same as *S. linguae*.

S. ru'ta murar'ia. A syn. for *Asplenium ruta muraria*.

S. vulgar'ē. The same as *S. linguae*.

Scolopomachæ'rion. (Σκολοπομαχαίριον.) A sharp-pointed surgical knife.

Scolopomachæ'rion. Latinised form of the term *Scolopomachæ'rion*.

Scolops'ia. (Σκόλοψ, anything that is pointed.) Term for a suture between two bones which allows of reciprocal movement. (Schultz.)

Scolymus. (Σκόλυμος.) A Genus of the *Compositæ*.

Also, specific name of the *Cynara scolymus*, or artichoke plant.

S. hispanicus. The Spanish oyster-plant. Root, diuretic.

S. maculatus. The Mediterranean spotted golden thistle.

S. pectinatus. A syn. for *S. maculatus*.

S. sativus. A syn. for *Cynara scolymus*.

Scoop. (Mid. Eng. *scope*. F. *curette*; I. *cucchiaio*.) *Surg.* A spoon-shaped instrument for extracting foreign bodies from passages or cavities.

S., ear-. A steel instrument with a slender handle and small shallow bowl, used for removing wax and loose epidermis from the external auditory meatus.

S. extraction of cat'aract. In this operation the crystalline lens is removed with a lens-scoop.

S., Hebra's bone. A form of sharp-edged or cutting curette for clearing granulations, &c., from bony cavities.

S., Leroy d'Etiolle's. A scoop invented by the French surgeon Leroy d'Etiolle for removing urethral calculi. It is shaped like a lithotrite.

S., lithotomy. A metal scoop used for the removal of calculi in the operation of *Lithotomy*.

S., placental. A sort of long-handled curette, used to remove portions of adherent placenta.

S., Schaffer's throat. A scoop for removing growths, &c., from the fauces and pharynx. It is so made that it can be introduced closed, and then opened *in situ*.

S., Simon's. A form of fenestrated uterine curette, introduced by Simon.

Scoopers' pneumo'nia. A form of chronic *Pneumoconiosis* occurring among grain-scoopers.

Scopa regia. (L. *scopa*, a broom; *regius*, regal.) *Bot.* A name for the *Ruscus aculeatus*, or butcher's broom.

Scoparia. *Bot.* A Genus of the *Digitalæ*. Also, the *Spartium scoparium*.

S. dulcis. The tropical sweet broom. Action, febrifuge, vulnerary, and deobstruent.

S. terna'ta. A syn. for *S. dulcis*.

Scoparii cacumina. B.P. Broom tops. The fresh and dried flowering tops of the *Cytisus scoparius* (indigenous). Action, diuretic and purgative. Preparations.—1. **Official**—*Decoctum Scoparii*, *Succus Scoparii*. 2. **Non-official**—*Sparteina*, *Sparteinae sulphas*, *Sparteine periodide*.

Scoparin. A yellow colouring-matter contained in the flowers of *Spartium scoparium*. Action, in moderate doses, purgative and diuretic; in large doses, emetic.

Scoparium. Specific name of *Spartium scoparium*.

Scoparius. (L. *scopa*, a broom.) Specific name of the *Sarothamnus scoparius*, now usually termed *Spartium scoparium*.

Scopemphragma. (Σκοπός, a watcher; ἔμφραγμα, a barrier.) Old term for the stopper or distal end of the stethoscope.

Scopola. The same as *Scopolia*.

Also, the dried rhizome of *Scopolia carniolica* (vel *atropoides*). Used in America for the preparation of so-called belladonna plaster.

Scopo'leine. The same as *Scopoline*.

Scopo'letine. A fluorescent, crystalline substance present in the roots of *Scopolia japonica* and *S. atropoides*.

Scopolia. (Named after *Scopoli*, an Austrian naturalist.) A Genus of the *Atropaceæ*.

S. atropoi'des. Hab., Europe. Rhizome, anhydrotic. It is not mydriatic nor antisialogogue.

S. carni'ola. The same as *S. carniolica*.

S. carniol'ica. A syn. for *S. atropoides*.

S. japon'ica. Hab., Asia. Action, similar to that of belladonna.

Scopoline. (*Scopolia*.) A poisonous alkaloid, obtained from the *Scopolia japonica*. It is a powerful *mydriatic*. Its effects are quicker and more lasting than those of atropine; they are neutralised by eserine. It is said to be a mixture of hyoscyine, hyoscyamine, and atropine.

Scopometrum. See *Metroscopium*.

Scopopho'bia. (Σκοπέω, to look at; φόβος, fear.) A morbid dread or dislike of being seen.

Scoptula. (L.) *Anat.* Old term syn. with *Scapula*.

Scopula. (L.) A brush.

Scopulate. (*Scopula*.) *Biol.* Broom-shaped.

Scopuliform. A syn. for *Scopulate*.

Scor. (Σκῶρ, faeces.) *Offal*, excrement.

Scoracra'sia. (Σκῶρ.) Syn. for *Scalacrasia*.

Scoracra'tia. (Σκῶρ, faeces; ἀκρατία, want of control.) Involuntary passage of faeces.

Sco'ramis. (Σκωραμῖς.) *Med.* A night-stool.

Scorbu'tic. (L. *scorbuticus*. F. *scorbutique*; I. *scorbutico*; G. *skorbutisch*.) Belonging to, or affected with, *Scorbutus*.

S. can'cer. A term for *Cancerum oris*.

S. fe'ver. *Scorbutus*.

S. indurations. The large masses of effused blood or sanguineous fibrin which form hard swellings in the sheaths of the muscles in cases of *Scurvy*.

Scorbutus. (L.) *Scurvy*.

S. alpi'nus. A syn. for *Pellagra*.

S. naut'icus. A name for *Scurvy*.

S. o'ris. A syn. for *Cancer aquaticus*.

Scor'dein. An aromatic yellow substance present in the *Teucrium scordium*.

Scordine'ma. (Σκορδίνημα.) *Med.* Old term syn. with *Pandiculation*.

Scordinis'mus. The same as *Scor-dinema*.

Scordium. (Σκόρδιον.) Specific name of the *Teucrium scordium*.

Scordolas'arum. An old name for *Asafœtida*.

Scordola'ser. The same as *Scordolasarum*.

Scor'don. *Bot.* Shortened form of the term *Scorodon*.

Scoria. (L. Plur. *scoriæ*. F. *scorie*; I. *scoria*; G. *Schlacke*.) See *Scoriæ*.

Scoriæ. (L. Plur. of *Scoria*.) The refuse or useless part of any substance; dross.

Scoriform. (L. *scoria*; *forma*, shape.) Having the appearance of *Scoriæ*.

Scorith. Old alchemical term for *Sulphur*.

Scorium. *Anat.* An old term used as syn. with *Scrotum*.

Scorodolas'arum. (Σκόροδον, garlic;

SCORODON—SCOUR

λάσκαρον, asafetida.) An old term for *Asafoetida*.

Scorodon. (Σκόροδον, garlic.) A name for the *Allium sativum*.

Scorodoprasum. (Σκόροδον, garlic; πρίσον, a leek.) Old name for the *Allium ampeloprasum*; also, the Genus *Porrum*, wild garlic.

Scorodosma. (Σκόροδον; όσμή.) Specific name of the *Ferula scorodosma*.

S. foetidum. The *Ferula scorodosma*.

Scorodosmine. (Σκόροδον; όσμή.) A name for *Cystic oxide*.

Scorodum. Same as *Scorodon*.

Scorpiaca. (Σκορπιακός, belonging to a scorpion.) Old epithet applied to an antidote that was said to heal the bite of scorpions. (Galen, *de Antid.* ii, 12.)

Scorpio. (L.) A scorpion. A Genus of the *Scorpionidae*, which are an Order of the *Arachnida*. They have a venomous sting.

An oil of scorpions (*Oleum scorpionum*) has been made by drowning 230 parts of live scorpions in 1035 parts of olive oil or bitter-almond oil, adding a small quantity of water, and heating, straining, and filtering. It has been used in cases of renal colic. (Foster.)

S. europæus. Formerly given, in powder, as a diuretic and sudorific.

Scorpiodexis. (Σκορπίος, a scorpion; όήξις, a bite.) The bite of a scorpion.

Scorpioid. (*Scorpioides*.) Scorpion-like. Epithet applied, in *Botany*, to certain cymose flower-heads which are curved like a scorpion's tail.

Scorpioides. (Σκορπίος; είδος, resemblance.) Scorpioid.

Scorpion. See *Scorpio*.

S. sen'na. A common name for the *Coronilla emerus*.

Scorpiostigma. (Σκορπίος; στίγμα, a prick with a pointed instrument.) A syn. for *Scorpiodexis*.

Scorpiurus. (Σκορπίος; ούρα, a tail.) *Bot.* A name for the mouse-tail, *Myosurus scorpioides*.

Scorpius. The same as *Scorpio*.

Scorrapestilentialis. (L.) A term for *Syphilis*. (Foster.)

Scorteum. (L. *scorteum*, a leather coat.) A syn. for *Scrotum*.

Scorzoneria. (Old Span. *scurzo*, a viper.) The viper's grass genus. A Genus of Old-World *Compositæ*.

Also, name for the roots of the various species.

S. delicio'sa. Root edible.

S. hispan'ica. Root edible.

S. hu'milis. Diaphoretic and stimulant.

S. lana'ta. A syn. for *S. humilis*.

S. latifo'lia. A syn. for *S. humilis*.

S. nervo'sa. A syn. for *S. humilis*.

S. tubero'sa. Root edible.

Scotas'ma. (Σκοτασμός, a making dark.) The same as *Scotoma*.

Scotas'mus. (Σκοτασμός, a making dark.) The same as *Scotosis*.

Scotch fiddle. A colloquial term for *Scabies*, from a fancied resemblance of the movements of the sufferer to those of a performing fiddler.

S. meth'od. Another name for the *Lister method* of administration of chloroform.

S. pine. The *Pinus sylvestris*.

Scoto'des. (Σκοτώδης = σκοτοιείδης, dark-looking.) Affected with *Scotodia*.

Scoto'dia. The same as *Scotasma*.

Scotodine. (Σκότος, darkness; όινος, dizziness.) The same as *Scotodinia*.

Scotodinia. (Σκότος; όίνος.) Vertigo, accompanied by the appearance of black spots in front of the eyes.

Scotodinos. The same as *Scotodinia*.

Scotodinus. The same as *Scotodinia*.

Scotograph. (Σκότος; γραφή, a writing.) An instrument designed for helping the blind in writing.

Scotoma. (Σκότωμα [plur. σκοτώματα], dizziness.) A spot or region in the field of vision which corresponds to some lesion of the retina, or of the ophthalmic centres in the brain. Plur., *Scotomata*.

S., ab'solute. A *scotoma* in which there is entire absence of perception of light.

S., cen'tral. A *scotoma* which is limited to the region of the yellow spot (*macula lutea*) of the retina.

S., col'our. Colour-blindness in a certain part of the field of vision. Perception of white light in the colour-scotoma is usually unimpaired.

S., flit'tering. Syn. for *S., scintillating*.

S., neg'ative. A *scotoma* occurring as the result of destruction of the retinal centre. This is, of course, unappreciable by the patient himself.

S., pos'itive. A *scotoma* which gives rise to the subjective appearance of a dark spot in front of the eyes.

S., rel'ative. A *scotoma* in which the perception of light is impaired, not lost.

S., ring. A *scotoma* in the shape of a ring surrounding the centre of the field of vision.

S., scin'tillating. Term for a *scotoma* of considerable area, and with irregular, serrated edges. It gives rise to a large defect in the field of vision.

Scotomata. Plur. of *Scotoma*.

Scotome. The same as *Scotoma*.

Scotometer. See *Scotomometer*.

Scotom'meter. See *Scotomometer*.

Scotomometer. (*Scotoma*; μέτρον, a measure.) An instrument designed for the detection, localisation, and measurement of *Scotomata*.

Scotomy. (Σκότωμα, dizziness.) A term for imperfection of vision, associated with dizziness.

Scotops'ia. (Σκότος, darkness; όψις, vision.) The subjective appearance of *musca volitantes* in front of the eyes. Also termed *Myiodesopsia*.

Scotos. (Σκότος, darkness.) Old term for darkness. Formerly used as synonymous with *Caligo*; also, with *Scotoma*.

Scotoscop'ia. (Σκότος; σκοπείω, to look at.) The shadow test. A syn. for *Retinoscopy*.

Scoto'sis. (Σκότος.) The same as *Scotoma*.

Scott's dres'sing. A mixture of *Unguentum hydrargyri compositum* with *Emplastrum picis* spread on leather. Used for chronic joint diseases.

Scot'us. Latinised form of the word *Scotos*.

Scour. (Mid. Eng. *scouren*.) A colloquial term for *Diarrhœa*.

SCOURGE—SCROFULA

Scourge. (Mid. Eng. *scourge*.) *Med.* A severe and fatal epidemic.

Also, to produce counter-irritation by flagellation of the skin.

Scour'ing. Flagellation. See *Scourge*.

S. ma'nia. A form of *Mania*, religious, common during the thirteenth and fourteenth centuries, the subjects of which used to scourge themselves.

Scour'ing. (Mid. Eng. *scouren*.) Colloquial term for *Purgation*. Also, used as synonymous with *Diarrhæa*.

S. rush. A common name for the *Equisetum hymenale*.

Scoutet'ten's meth'od. Another name for *Sculletus*, *method of*, or the oval method of *amputation*.

Scrape. (Mid. Eng. *scrapien*.) To produce abrasion of a surface by means of either a sharp-edged or rough metal instrument.

Also, popular term for a kind of white fir-resin.

Scra'per. An instrument used for scraping. See *Scrape*.

S., tongue. A small instrument with a rough surface, for cleaning the tongue.

Scrat. (Mid. Eng. *scrat*, a monster.) Colloquial term for *Hermaphrodite*.

Scratch. A syn. for the *Itch*.

Scratch'ed skin. Popular term for an excoriated condition of skin consequent on frequent scratching with the finger-nails. This condition often forms a marked symptom in scabies, urticaria, &c.

Scratch'es. *Veterinary Med.* A syn. for *Grease*.

S., Oh'i'o. A syn. for *Prairie itch*.

Scre'able. (L. *screo*, to hawk or spit; *habilis*, able.) Capable of being spat out or expectorated, capable of *Screation*.

Scream'ing fits. This term is sometimes used to mean not mere fits of screaming in infants, but actual infantile convulsions.

Screa'tio. (L. *screo*, to hawk or spit.) Old term for the act of expectorating; also, for the sputum or expectoration got rid of by expectorating.

Screa'tion. (*Screatio*.) See *Screatio*.

Screa'tus. (L. *screo*, to hawk or spit.) A syn. for *Screatio*.

Also, term applied by Agnew to a nasal neurosis, consisting in paroxysms of short, snorting inspirations, occurring involuntarily and frequently, each paroxysm lasting for two or three minutes. The cause is usually some form of local irritation. (Gould.)

Screw-bean. A common name for the *Prosopis pubescens*, one of the species of *Prosopis* yielding mesquite gum. See *Prosopis* and *Mesquite gum*.

S.-driver teeth. The screw-driver-like incisors of some patients with congenital syphilis.

S.-hook. A small screw-shaped instrument, with a terminal hook, devised by Elsberg for the extraction of foreign bodies from the external auditory meatus.

S.-joint. See *Cochlearthrosis*.

S., micro'meter. See *Micrometer screw*.

S., o'ral. *Surg.* A hard rubber or bone screw placed between the teeth in order to keep the mouth open.

S., Pan'coast's. A form of screw, in-

vented by Pancoast, for drilling the fragments of an ununited fracture.

Scribe pal'sy. A syn. for *Scrivener's palsy*.

Scrip'lum. See *Scrupulum*.

Scrip'tium. See *Scrupulum*.

Scrip'tulum. See *Scrupulum*.

Scrip'tulus. The same as *Scriptulum*.

Scrip'ulum. See *Scrupulum*.

Scrip'ulus. See *Scrupulum*.

Scrivener's cramp. A syn. for *Writer's cramp* (q. v.).

S.'s pal'sy. The same as *S.'s cramp*.

Scrobic'ula. (L. *scrobiculus*, a little ditch or furrow.) *Biol.* The smooth space which surrounds the tubercle of the *testa* in the *Echinodermata*.

Scrobic'ular. *Biol.* Belonging to a *Scrobicula* or *Scrobiculæ*.

Scrobic'ulate. (*Scrobiculatus*.) See *Scrobiculatus*.

Scrobicula'tus. (L. *scrobiculus*.) *Biol.* Hollowed out, having deep holes, depressions, or grooves.

Scrobiculos'us. (L. *scrobiculus*.) The same as *Scrobiculatus*.

Scrobic'ulus. (L. dim. of *scrobs*, a ditch.) A small ditch or hollow.

S. cor'dis. (L. *cor*, *cordis*, the heart.) Lit., the "pit of the heart." Term for the pit of the stomach.

S. vari'olæ. A pit or pock mark of small-pox (*Variola*).

Scro'fa. (L.) A sow. See *Sus scrofa*.

Scrof'fæ. A syn. for *Scrofula*. (Dunglison.)

Scrof'ula. (L. *scrofa*, a sow; because swine were said to be subject to this disease.) A syn. for *Struma*.

S. abdom'inis inter'na. Internal abdominal scrofula. An old term for *Phthisis abdominalis*.

S., benign'. Term introduced by Bazin for certain inflammations, not dangerous to life, occurring in subjects of the lymphatic diathesis; e. g. *Strophulus*, *Lupus erythematosus*, &c.

S., fix'ed prim'itive. A term for *Scrofula* in which the symptoms remain the same throughout the course of the disease.

S. fug'ax. (L.) *S., fugitive*.

S., fug'itive. Cullen's term for suppurative inflammation of the cervical lymphatic glands, accompanying eczema capitis.

S., ganglion'ic. A term for scrofulous or strumous *Adenitis*.

S., malig'nant. A term for *Lymphadenoma*.

S., mask'ed. Bazin's term for a form of *Scrofula* which has anomalous symptoms, as, e. g., symptoms like those of enteric fever.

S. mesenter'ica. A syn. for *Tabes mesenterica*.

S. molucca'na. (From the *Moluccas*, where this disease is prevalent.) A syn. for *Frambæsia* or *Yaws*.

S., muc'ous. Old term for a supposed condition of *Scrofula* of the mucous membranes.

S., phagedænic. Bazin's term for a form of *Scrofula* in which phagedænic ulceration is very apt to occur.

S. plant. A syn. for *Figwort*.

S., prim'itive. Old term for *Scrofula* in an early stage.

SCROFULARIA—SCROTOCELE

S., pulmonary. A term for *Pulmonary tuberculosis*.

S., quater'nary. A syn. for *S., visceral*. (Gould.)

S. root. A common name for the root of *Erythronium americanum*.

S., sen'ile. A syn. for *Struma, senile* (q. v.).

S., ter'tiary. A name for *Rickets*.

S., vis'ceral. *Tuberculosis* of the viscera.

S. vulgar'is. *Scrofula*.

Scrofular'ia. See *Scrophularia*.

Scrofulari'us. (Mod. L.) *Scrofulous*.

Scrofuloleco'sis. (*Scrofula*; ἔλκωσις, ulceration.) A term for *Scrofulous ulceration*.

Scrofulide. (F.) *Scrofuloderma*.

Scrofulism. (*Scrofula*.) A term for the *Scrofulous diathesis*.

Scrofuloderm. See *Scrofuloderma*.

Scrofuloderma. (*Scrofula*; δέρμα, the skin.) Suppurating dermatitis, occurring in the neighbourhood of cæsating lymphatic glands, commonly about the face and neck.

S. gummato'sum. Gummatus scrofuloderma. A syn. for *S. tuberculosum*.

S. papulo'sum. Papular scrofuloderma. A syn. for *Lichen scrofulosus*.

S., pus'tular, large. A form of scrofuloderma characterised by large rounded or oval pustules with a red areola.

S., pus'tular, small. A form of scrofuloderma characterised by small pustules, generally on the forearms and hands. They form crusts, and leave a depressed scar on healing.

S. squamo'sum. Squamous scrofuloderma. A variety, characterised by branny desquamation, occurring in *scrofulous* subjects.

S. tuberculo'sum. Tuberculous scrofuloderma. A variety characterised by the formation of freely moveable subcutaneous nodes, which later become adherent to the skin, and eventually either become absorbed, or break down and give rise to undermined, sluggish ulcers.

S., ul'cerative. A syn. for *Granuloma fungoides*.

S. ulcero'sum. *S., ulcerative*.

S. ungua'lë. A form of chronic inflammation of the matrix of the finger-nails, sometimes occurring in *scrofulous* people.

S. verruco'sum. A term for *Tuberculosis verrucosa cutis* (Kiehl and Paltauf); also, for *Lupus verrucosus*, and for *Verruca necrogenica*. (Unna.)

S. vesiculo'sum. A syn. for *Lichen scrofulosorum*.

Scrofulome. (*Scrofula*.) A scrofulous tumour.

Scrofulonych'ia. (*Scrofula*; *onych'ia*.) A term for *Onychia maligna*.

Scrofulophy'ma. (*Scrofula*; φύμα, a growth.) A syn. for *Scrofuloderma tuberculosum*.

S. diffus'um. Diffuse scrofulophy'ma. A syn. for *Elephantiasis scrofulosa*.

Scrofulo'sis. (*Scrofula*.) The *Scrofulous diathesis*.

S. ereth'ica. (Ἐρυθθαίω, to redden.) Term for that variety of the scrofulous diathesis in which there is a strong tendency towards suppurative inflammation of lymphatic glands.

S. tor'pidus. Torpid scrofulosis. Term for the scrofulous diathesis when manifested by the characteristic scrofulous or strumous ap-

pearance—the thick upper lip and nose, prominent abdomen, weak limbs, &c.

Scrofulo'sus. (Mod. L.) *Scrofulous*.

Scrofulous. (*Scrofula*.) Belonging to, having the nature of, or affected with, *Scrofula*.

S. dia'thesis. A syn. for *Strumous diathesis*.

S. pneumo'nia. Term for the secondary inflammatory processes going on in the lungs in pulmonary tuberculosis (*Scrofula, pulmonary*).

S. teeth. Syn. for *Strumous teeth* (q. v.).

S. ulcera'tion. See *Strumous ulceration*.

Scrofulousness. A term for *Scrofulosis*.

Scroph'ula. See *Scrofula*.

Scroph'ulæ. The same as *Scrophula*.

S. gonorrh'oicæ. A syn. for *Gonorrhæa*.

Scrophular'ia. (*Scrophula* = *Scrofula*; from the tuberculous appearance of the roots in plants of this Genus.) The figwort, a Genus of flowering plants, the type of the Order *Scrophulariaceæ*.

S. aquat'ica. The water betony, or greater figwort. Formerly considered to be stomachic, carminative, and antiscorbutic.

S. cani'na. Dog's rue. This species is used for the cure of scabies in dogs and pigs. (Foster.)

S. chrysanthemifo'lia. A syn. for *S. canina*.

S. foet'ida. A syn. for *S. nodosa*.

S. lanceola'ta. A syn. for *S. nodosa*.

S. marilan dica. A syn. for *S. nodosa*.

S. me'dia. A syn. for several species of *Sedum*.

S. mi'nor. A name for the *Ranunculus ficaria*.

S. nodo'sa. The figwort or heal-all. Root and leaves popularly believed to be antiphlogistic, both locally and internally.

S. officina'lis. A syn. for *S. nodosa*.

S. peregr'ina. Hab., South Europe. Formerly used locally for inflammations, &c.

S. vulgar'is. A syn. for *S. nodosa*.

Scrophular'ius. See *Scrophularius*.

Scrophulelco'sis. See *Scrofulolecosis*.

Scrophuloder'ma. See *Scrofuloderma*.

Scrophulonych'ia. (*Scrophula*; *onych'ia*.) See *Scrofulonychia*.

Scrophulophy'ma. See *Scrofulophy'ma*.

Scrophulo'sis. See *Scrofulosis*.

Scrophulo'sus. See *Scrofulous*.

Scro'tal. Belonging to the *Scrotum*.

S. arteries. General name for the arteries supplying the scrotum. They are, anterior offshoots from the inferior external pudic, and posterior offshoots from the transverse perineal.

S. fis'tula. A *Urethral fistula* opening externally through the scrotum.

S. her'nia. A *hernia* through the external inguinal ring, into the scrotum.

S. nerves, long. A name given to the superficial perineal and the inferior pudendal nerves, on account of their distribution.

Scro'tiform. (L. *scrotum*; forma, shape.) Biol. Shaped like a double or two-chambered pouch.

Scro'titis. (L. *scrotum*; Gr. adj. term. -itis.) A term for inflammation of the scrotum.

Scro'tocele. (*Scrotum*; Gr. κύλη, a tumour.) A *Scrotal hernia*.

SCROTOSARCIA—SCUTULA

Scrotosar'cia. (*Scrotum*; Gr. σάρξ, flesh.) An old term for *Elephantiasis scroti*.

Scro'tum. (L. *scrotum*, a skin.) The bag-like covering of the testicles and spermatic cords. Its thin, dark-coloured covering of skin, thrown into numerous rugæ in the natural condition, is continuous with the skin of the abdomen, perineum, and thighs. The layers composing the scrotum beneath the skin are *dartos*, *spermatic fasciæ*, and *tunica vaginalis testis*.

S. cordis. A name for the *Pericardium*.

S., elephanti'asis of. See *Elephantiasis scroti*.

S., epithe'lial can'cer of. The same as *S., epithelioma of*.

S., epithello'ma of. See *Cancer, chimney-sweeper's*.

S. lapillo'sum. (L. *lapillus*, a small stone.) Vanizetti's term for a condition of "multiple cretaceous atheroma of the scrotum."

S., lymph. See *Lymph scrotum*.

S., milk. A syn. for *S., lymph*.

S., pen'dulous. A relaxed state of the scrotum which allows of the testicles lying lower than is usual.

Scrub'grass. A syn. for *Scouring rush*.

Scrub'legrass. A name for the *Cochlearia officinalis*. (Dunglison.)

Scrup'le. (L. *scrupulus*.) See *Scrupulus*.

Scrupulosity. Excessive and undue sensitiveness and conscientiousness in one's speech and actions. It occurs occasionally as a symptom in some varieties of *Melancholia*.

Scrup'ulus. (L.) *Pharm.* A scruple; a weight of twenty grains, or one-third of a *drachm*, apothecaries' weight.

Skull. An old spelling of *Skull*.

Sculte'tus, ban'dage of. A bandage, originally devised by Scultetus, for use in compound fractures, made of short pieces arranged in the manner of a spiral reversed bandage, so that it could be removed without moving the limb.

S., me'thod of. See *Amputation, oval method of*.

Scurf. (Ang.-Sax. *sceorfa*; Mid. Eng. *scurf*.) The bran-like desquamation of the epidermis, especially that of the scalp.

S. skin. See *Scarf-skin*.

Scurf'y. Abounding in *Scurf*, furfuraceous.

Scur'vy. (L. *scorbutus*; Mid. Eng. *scurvy*.) A disease occurring in people whose diet has been insufficient, especially as regards the salts contained in fresh meat and vegetables. The symptoms are spongy gums, subcutaneous and other hæmorrhages, fœtid breath, livid patches of the skin, and progressive debility and emaciation.

S., Alp'ine. A name for *Pellagra*.

S., but'ton. See *Button scurvy*.

S.-grass. The *S.-grass*, common; also, the *Sisyrinchium bermudianum*.

S.-grass, com'mon. Common name for the *Cochlearia officinalis*.

S.-grass, lem'on. The same as *S.-grass*, common.

S.-grass, wild. Common name for the *Cochlearia coronopus*.

S., land. A name for *Purpura hæmorrhagica*.

S., Norweg'ian. A name for *Radesyge*.

S. of Alps. See *S., Alpine*.

S. rick'ets. A variety of *Scurvy* some-

times occurring, associated with *Rickets*, in young children.

Scu'tala. (Σκυτάλη, a staff.) *Anat.* Old term synonymous with *Phalanx*.

Scuta'lis. (L. *scutum*, a shield.) Belonging to a *scutum*.

Scu'tate. (L. *scutatus*, armed with a shield.) *Biol.* Shield-shaped.

Scuta'tus. (L.) See *Scutate*.

Scute. (L. *scutum*, a shield.) *Biol.* A scale or plate, whether of the exoskeleton of Invertebrates, or of the epidermis of Vertebrates.

Scutella. Plur. of *Scutellum*.

Also, in the sing. (L. *scutella*), a dish.

Scutellar. Belonging to a *Scutellum*.

Scutellar'ia. A Genus of the *Labiata*.

S. altis'sima. Hab., Asia. Said to be emmenagogue and vulnerary.

S. carolinia'na. A syn. for *S. integrifolia*.

S. galericula'ta. The skull-cap. This plant has been used in ague (especially tertian). It is bitter, and smells like garlic.

S. havanen'sis. Hab., Havana. Tonic and antispasmodic.

S. hyssopifolia. A syn. for *S. integrifolia*.

S. integrifo'lia. This species is a powerful bitter.

S. laterifo'lia. Leaves and twigs formerly believed to be useful in hydrophobia.

S. mi'nor. Hedge hyssop. Hab., Europe. Properties closely similar to those of *S. galericulata* (q. v.).

Also reputed to be a nervine tonic.

Scutellar'in. (*Scutellaria*.) Name for a precipitate obtained from a tincture of the leaves of *Scutellaria laterifolia* (q. v.).

Scutellate. (Mod. L. *scutellatus*.) *Biol.* Having the shape of a *scutella* or dish. Also, furnished with *Scutella* (plur. of *Scutellum*).

Scutella'tus. (L. *scutella*, a kind of dish.) *Scutellate*.

Scutelli'form. (L. *scutella*; forma, shape.) Having the shape of a *Scutella* or dish.

Scutelli'gerous. (L. *scutellum*; gero, to carry.) *Biol.* Provided with a *Scutellum* or with *Scutella*.

Scutelloi'des. (*Scutellum*; Gr. εἶδος, form.) *Scutelliform*.

Scutel'lum. (L. Dim. from *scutum*, a shield.) *Med.* A syn. for *Scutulum*.

Biol. (a) A tarsal plate in *Birds*; (b) a sclerite of the tergum in *Insecta*; (c) the cotyledon of the embryo in the *Graminaceæ*; (d) the sessile apothecium of the *Lichenes*.

Scu'tia. (L. *scutum*.) A Genus of the *Rhamnaceæ*.

S. circumcis'sa. A shrub indigenous to Asia. Leaves used in India to make an oxytocic ointment.

S. in'dica. The same as *S. circumcissa*.

Scutic'ula digito'rum manus. (L.) Term for the phalanges of the fingers; sometimes shortened to *Scuticula*.

Scu'tiform. (L. *scutum*, a shield; forma, shape.) *Biol.* Shield-shaped.

Scuti'gerous. (L. *scutum*; gero, to carry.) *Biol.* Bearing a *Scute* or *Scutes*.

Scutoi'des. (L. *scutum*; Gr. εἶδος, form.) *Scutiform*.

Scu'tula. (Plur. of L. *scutulum*, a small shield.) Term for the small, somewhat shield-

shaped crusts left by the drying up of vesicles on the skin.

Also, in the sing. (L. *scutula*, a cylinder), the same as *Scutala*.

S. digito'rum ma'nus. (L. *digitus*, a digit; *manus*, the hand.) A phalanx of the fingers.

Scu'tulæ. (L.) Plur. of *Scutula*, a cylinder.

S. digito'rum ma'nus. The phalanges of the fingers. See *Scutula digitorum manus*.

Scutula'tio. (L. *scutum*.) A syn. for *Ichthyosis congenita*.

Scu'tulum. The same as *Scutellum*.

Scu'tum. (L. Plur. *Scuta*.) A shield or disc.

Anat. An old term for the *Thyroid cartilage*.

Zoöl. A plate of the exoskeleton in Invertebrata; also, a scute or epidermal plate in Birds and Reptiles.

Bot. The round disc surrounding the column of stamens in the *Asclepiadaceæ*.

S. cor'dis. (L. *cor*, *cordis*, the heart.)

Anat. An old name for the *Sternum*; also, for the *Scapula*.

S. ge'nu. (L. *genu*, the knee.) An old term for the *Patella*.

S. pec'toris. (L. *pectus*, *pectoris*, the breast.) An old term for *Sternum*; also, for the *Thorax* as a whole.

S. pro umbil'co. Syn. for *Emplastrum asafetidæ matricale*.

S. stomach'icum. Old name for a plaster applied to the stomach.

S. thora'cis. (*Thorax*; *-acis*.) An old name for the *Scapula*.

S. tympan'icum. (L. *tympanicus*, *-a*, *-um*.) **Anat.** Tympanic shield. Term for the thin plate of bone which lies between the upper part (*attic*) of the tympanic cavity in the petrous bone, and the outer cells of the mastoid bone.

Scyb'ala. (Plur. of *Scybalum*.) Dry, constipated fæces, formed into detached, hard masses either rounded or irregular in shape.

Scyb'alous. Having the characters of *Scybala* or of a *Scybalum*.

Scyb'alum. (Σκυβαλον, fæces.) One of a number of scybala. Term used generally in the plural. See *Scybala*.

Scyla'cion. (Σκυλάκιον; dim. from σκύλαξ, any young animal.) Term for a certain *Collyrium* described by Galen and Aëtius.

Scylla. See *Scilla*.

Scyllite. C₆H₁₂O₆. Name for a variety of *Glucose* which has been obtained from the liver, kidney, and other viscera of certain fishes.

Scyphis'toma. The same as *Scyphostoma*.

Scypho'stoma. (Σκύφος, a cup; στόμα, any mouth-like opening.) **Zoöl.** The simple tube- or hydra-stage of the *Medusæ*. It is developed out of the *Scyphula*, and itself develops into a free *Medusa*. The remaining stem sometimes undergoes *strobilation* (q. v.).

Scyph'ula. (Dim. from Gr. σκύφος, a cup.) **Zoöl.** The fixed, coralliform stage in the development of the *Medusæ* previous to the *Scyphostoma*.

Scyphus. (Σκύφος, a cup.) Old term synonymous with *Cyathus*.

S. audito'rius. **Anat.** Auditory cup. A name for the *infundibulum* of the cochlea of the internal ear.

S. cer'e'bri. The *infundibulum* of the cerebrum.

S. coch'leæ. A syn. for *S. auditorius*.

S. lapide'us in oc'ulo. **Anat.** Stony cup in the eye. A term for a cup-shaped calcareous concretion which sometimes forms in the choroid coat of the eye.

S. Vieussen'ii. (After the anatomist *Vieussens*.) A syn. for *S. auditorius*.

Scy'ros. (Σκυρός = σκιρρός, hard.) Old term used by Hippocrates as synonymous both with *Callus* and *Porus*.

Scy'rus. The same as *Scyros*.

Scyta'lë. (Σκυτάλη, a staff.) A syn. for *Scutala*.

Scytal'idës. Plur. of *Scytalis*. A syn. for *Internodia*.

S. digito'rum ma'nus. (L. *digitus*, a digit; *manus*, the hand.) The phalanges of the fingers.

Scyta'lis. The same as *Scytalë*.

Scyte'chus. (Σκύτος, a skin; ἦχος, sound. F. *bruit de cuir neuf*; G. *Neuledergeräusch*.) **Med.** Old term for "new leather sound." See *Bruit de cuir neuf*.

Scyth'ian disease'. Term for atrophy of the male generative organs, accompanied by loss of masculine attributes and of physical strength. It occurs in cases of *Sexual perversion* (q. v.). This disease has been prevalent in the regions of the Caucasus since the time of Herodotus.

S. insan'ity. The mental perversion occurring in the *S. disease*, and leading to the assumption by the subjects of the disease of the dress and general habits of women.

S. lamb. See *Agnus scythicus*.

Scyth'ica, rad'ix. (L. *scythicus*, *Scythian*.) The *Scythian* root. A name for *Liquorice* root.

Scyth'icus. (L. *scythicus*, *-a*, *-um*.) *Scythian*.

Scythropas'mus. (Σκυθροπασμός. F. *scythropasme*.) A sad or tired expression of face.

Scyti'tis. (Σκύτος, skin; fem. adj. term. *-itis*.) An old term for inflammation of the skin, *Dermatitis*.

Scytoblas'ta. The same as *Scytoblastema*.

Scytoblaste'ma. (Σκύτος; βλάστημα, a germ.) The embryonic stage of the skin.

Scytoblaste'sis. (*Scytos*; βλάστησις, a budding.) The progress of *Scytoblastema*.

Scytodeps'ic. (Σκυτοδεψίω, to dress leather.) Belonging to *Scytodepsium* or *Tannin*; also, belonging to *Gallie acid*.

Scytodeps'ium. (Σκυτοδεψίω, to dress leather.) An old term for *Tannin*.

Scytomorpho'sis. (Σκύτος; μόρφωσις, a shaping.) Abnormal or pathological development of the skin.

Scy'tos. (Σκύτος, the skin.) Old term for the skin in general (*Corium*), but restricted by Galen to the skin of the head.

Se defenden'do. (L.) In defending one's self. In *Med. Jurisp.*, an expression used of justifiable homicide, or causing death in self-defence.

Sea ash. A common name for the *Xanthoxylum carolinianum*.

S. belts. (So named from the likeness of the leaves to belts.) Common name for the *Fucus saccharinus*.

S. bath. See *Bath, sea*.
S. bur'dock. Common name for the *Xanthium strumarium*.
S. cabbage. Common name for the *Brassica oleracea*.
S. chit'terling. Common name for the *Enterophytum*.
S.-cole. A common name for the sea-kale, *Crambè maritima*.
S. convolvulus. Common name for the *Convolvulus soldanella*.
S. fen'nel. A common name for the samphire, *Crithmum maritimum*.
S. girdles. A common name for the *Laminaria digitata*.
S. girdle and han'gers. The same as *Sea girdles*.
S. grape. Common name for the *Salsola kali*.
S. hedge'hog. The sea urchin, *Echinus marinus*.
S. holly. Common name for the *Eryngium maritimum*.
S. kale. Common name for the *Crambè maritima*.
S. lav'ender. Common name for the *Statice limonium*.
S. len'til. Common name for the *Fucus natans*.
S. moss. Common name for the *Fucus helminthocorton*; also, for the *Corallina officinalis*.
S. oak. A name for the common seaweed or sea wrack, *Fucus vesiculosus*.
S. on'ion. A name for the squill, *Urginea scilla* (*Scilla maritima*).
S. sedge. Common name for the *Acorus calamus*.
S. sick'ness. Nausea and vomiting induced by the motion of the sea, or by any similar undulating motion. Sir J. Crichton Browne believes the vomiting to be a reflex act induced by visual disturbance, and has prevented it in a number of cases by blindfolding the patient. The blindfolding must be done before any visual disturbance has been set up. Of drugs, the most useful in sea sickness have been generally considered to be cocaine, bromides, and chlorobrom.
S. spurge. Common name for the *Euphorbia paralius*.
S. tangle. Common name for the *Laminaria digitata* (q. v.).
S. thrift. A syn. for *S. lavender*.
S. ur'chin. Common name for the *Echinus marinus*.
S. ware. The same as *S. wrack*.
S. water. See *Doridis humor*.
S.-water bath. See *Bath, sea-water*.
S.-weed. A general term for marine *Algæ*. See *Fucus vesiculosus*.
S.-weed bath. A sea-water bath to which is added an infusion of sea-weed.
S.-weed poul'tice. See *Cataplasma fuci*.
S. wrack. A name for the common seaweed, *Fucus vesiculosus*.
Seal. Comp. Anat. The Genus *Phoca*.
Hygiene. The water in the trap of a house-drain, which acts as a seal against the entrance of sewer gas.
S., gold'en. Common name for the *Hydrastis canadensis*.
S., Sol'omon's. The *Convallaria polygonatum*.

S., Sol'omon's great. The *Convallaria canaliculata*.
S., Sol'omon's smal'ler. The *Convallaria pubescens*.
Seal'ed earths. See *Terræ sigillatæ*.
Seal'ing. Surg. The sealing or covering up of a healing wound from access of air.
S.-wax. A substance made by the addition of Venice turpentine and some mineral colouring matter to shellac.
Seam. A line of joining.
Search'er. A surgical instrument designed for detecting stone in the bladder. Also, old term for a *Body-snatcher*.
Search'ing. An old term for *Probing*.
S., oc'ular. See *Ocular, searching*.
Sea'side grape. Common name for the *Coccoloba uvifera*.
Season. One of the four divisions of the year. Also (verb), a term for *Acclimatise*.
Seas'oning. A term for *Acclimatisation*. Also, addition of spiced substances to food to give it a flavour; also, the mixture of spiced substances thus added.
S. fe'ver. A syn. for *Stranger's fever*.
Seat. (Mid. Eng. *sete*.) Anat. A common colloquial term for the *Nates*; also, for the *Anus*. See *Sedes*.
S.-bone. The *Ischium*.
S.-worm. The thread-worm, *Oxyuris vermicularis*.
Seb. Old alchemical term for *Aurum*; also, for *Alumen*. (Ruland and Johnson.)
Sebaceofollicular. Belonging to a *Sebaceous follicle*.
Seba'ceous. (*Sebum*.) Pertaining to *Sebum*, and especially to that secreted by the sebaceous glands of the true skin.
S. crypt. A syn. for *S. gland*.
S. cyst. Also popularly termed a wen. A cystic tumour of the skin, most commonly on the face, scalp, or back, formed by the continued secretion of a ductless sebaceous gland. These cysts vary in size from that of a millet seed to that of an ordinary apple.
S. flux. A term for *Seborrhæa*.
S. fol'licle. A syn. for *S. gland*.
S. gland. A small, simple pyriform gland of the true skin, with a single duct opening through the epidermis. The gland secretes *Sebum*.
Seba'cic. Belonging to *Sebum*.
S. ac'id. $C_{10}H_{18}O_5$. A dibasic acid prepared by the action of sodium hydrate on castor oil, and also by the dry distillation of oleic acid.
Seba'cin. (*Sebum*.) Bot. A fatty substance contained in the fruit of *Myristica sebifera*.
Chem. A hydrocarbon prepared by distillation of calcium sebate with an excess of calcium carbonate.
Sebadilla. See *Cevadilla*.
Sebastoma'nia. (Σιβαστός, revered; μανία, madness.) A term for *Insanity, religious*.
Se'bate. (*Sebum*.) A salt of *Sebacic acid*.
Se'bel. (Arab.) Pathol. An old term for *Pannus*.
Sebes'ten. (Egyptian.) Bot. A name for the *Cordia myxa*; also, for the *C. obliqua*.
S. plums. The edible, demulcent fruits of *Sebesten*.
Sebeste'na. The same as *Sebesten*.
Sebesti'na. The same as *Sebestena*.

Se'bic. The same as *Sebacic*.

Sebiferous. (L. *sebum*; *fero*, to bear.) Fat-bearing. *sebum*-bearing.

Sebiparous. (L. *sebum*; *pario*, to bring forth.) Producing or secreting fat or *sebum*.

Sebolith. (*Sebum*; Gr. *λίθος*, a stone.) A calculus formed in a sebaceous gland.

Seborrhæ'gia. (L. *sebum*; Gr. *παγή* = *πήγμα*, a breaking, a bursting forth.) Another name for *Pimelorrhœa*.

Seborrhœ'a. (*Sebum*; Gr. *πόας* = *πόας*, a flowing.) Excessive secretion of sebum by the sebaceous glands of the skin, a waxy or scaly layer accumulating over the surface.

S. adipo'sa. A syn. for *S. oleosa*.

S. amiantha'cea. A syn. for *S. capitis*.

S. capilli'tii. A syn. for *S. capitis*.

S. cap'itis. *Seborrhœa* of the scalp. See *S. furfuracea* and *S. sicca*.

S. cer'ea. Term for the more greasy variety of *S. sicca*.

S. congest'iva. A syn. for *Lupus erythematosus*.

S. cor'poris. Flannel rash. *Seborrhœa* of the body, occurring in rings of papules, often serpiginous, having a greasy surface, and scaling readily. *S. capitis* often occurs associated with it.

S. crusto'sa. A syn. for *S. sicca*.

S. dermat'itis. Term for the various forms of *Seborrhœa* when associated with active inflammation of the skin (dermatitis).

S. ec'zema. Unna's term for *Seborrhœa* associated with an eczematous condition of the skin.

S. eczem'atoid. A form of *S. capitis* associated with active dermatitis of the scalp.

S. facie'l. A form of *seborrhœa* affecting the face, especially the forehead and sides of the cheeks and nose, often associated with *Rosacea*, and commonly a sequela of one of the *Exanthemata*.

S. flaves'cens. Yellowish *seborrhœa*. A syn. for *S. nasi*.

S. flu'ida. A syn. for *S. oleosa*.

S. furfura'cea. A term for *S. sicca* when characterised by the formation of branny scales. Popularly termed scurf or dandruff.

S. genital'ium. Term for an accumulation of the special kind of sebum termed *Smegma*, about the prepuce in the male, or the clitoris, and labia majora and minora in the female.

S. ichthy'o'sis. A variety characterised by the formation of large plates, resembling those of *Ichthyosis*.

S. lichenoid'es. A syn. for *S. corporis*.

S. loca'lis. Localised *seborrhœa*.

S. na'sl. *Seborrhœa* about the tip of the nose, characterised by its yellow crusts.

S. ni'gra. *Seborrhœa* in which dark crusts form, usually from an admixture with dirt.

S. nig'ricans. A syn. for *S. nigra*.

S. oleo'sa. A variety of *seborrhœa* in which the surface of the skin is excessively oily or greasy. It is most marked usually in the face.

S. papulo'sa. A syn. for *S. corporis*.

S. pityriasisfor'mis. A syn. for *S. furfuracea*.

S. psoriasisfor'mis. Psoriasis-like *seborrhœa*. A rare form usually occurring in the body and in the axillæ. It occurs in bright red patches, with scaly, fatty crusts.

S. sic'ca. The common form of *seborrhœa*.

It occurs in the scalp, and is a common cause of baldness. Characterised by greasy, branny scales, the subjacent skin being pale.

S. sic'ca neonato'rum. A syn. for *S. squamosa neonatorum*.

S. squamo'sa. A syn. for *S. sicca*.

S. squamo'sa neonato'rum. A syn. for *Ichthyosis congenita*.

S. syphilit'ica. A term for *S. capitis* occurring together with syphilides of the scalp.

S. tabescen'tium. Also termed *Pityriasis tabescentium*. A variety of *S. furfuracea*, universal in its distribution, occurring in subjects of chronic wasting diseases.

S. universa'lis. The same as *S. tabescentium*.

Seb'sten. Shortened form of the word *Sebesten*.

Se'bum. (L.) The fatty secretion of the sebaceous glands of the skin.

Also, syn. for *Sevum*.

S. cac'ao. A syn. for *Oleum theobromæ*.

S. cutan'eum. The *sebum* secreted by the sebaceous glands of the skin.

S. ovill'è. (L. *ovillus*, from *ovis*, a sheep.) Mutton suet.

S. palpebra'lè. The dried secretion of the sebaceous glands of the eyelids.

S. præputia'lè. A syn. for *Smegma præputii*.

Seca'lè. (L. *seco*, to cut; because cut with the sickle.) A Genus of the *Graminacæ*.

S. barba'tum. A syn. for *S. cerealè*.

S. cerea'lè. The common rye. Rye flour, either alone or with bran, is used locally as an absorbent and emollient.

S. clava'tum. A syn. for *S. cornutum*.

S. cornu'tum. A name for *Ergot* of rye.

S. mater'num temulen'tum. A syn. for *S. cornutum*.

S. mater'num tur'gidum. The same as *S. maternum temulentum*.

Seca'lia. The same as *Secalin*.

Seca'lin. A name formerly given to *Trimethylamin* (q. v.) on account of its being then prepared by acting on rye (*Secalè cerealè*) with a caustic alkali.

Secali'nus. (Mod. L.) Belonging to *Secalè cerealè*; also, belonging to *Secalè cornutum*.

Seca'lis ma'ter. A name for *ergot*, *Secalè cornutum*.

Secamo'nè. Bot. A Genus of the *Secamoneæ*, which are a Tribe of the *Asclepiadæ*. (Foster.)

S. emet'ica. Hab., East Indies. A shrub which has an emetic root, with an action like that of *ipecacuanha*.

Secan'iabin. Pharm. Old term synonymous with *Oxymel*.

Secer'nent. *Secerning*.

Secer'ning. (L. *secerno*, to separate.) *Secreting*, especially of a gland.

Secernment. *Secretion*, especially by a gland.

Seces'sio. (L. *secedo*, to go apart.) A syn. for *Ezeretio*.

S. fæ'cum. (L. *fæces*.) A term for *Defæcation*.

Seces'sus. (L.) A going apart or retiring; a privy.

S. ni'ger. (L. *niger*, black.) Term for *Melæna*.

Se'cha. Bot. An old name for *Santonium*.

Sec'la. *Bot.* An old name for *Secalë*.
Secluso'rium. (L.) A place in which anything is shut up, a coop.

Biol. An old term for *Sac*.

Second inten'tion, healing by. See *Intention, second*.

Secondaries. *Med.* A term for *Syphilis, secondary*; primary syphilis being termed "primaries."

Astron. A term applied to the satellites of the planets.

Secondary. (L. *secundarius*.) Following on a first.

S. amputa'tion. See *Amputation, secondary*.

S. cat'aract. See *Cataract, secondary*.

S. den'tine. See *Dentine, secondary*.

S. fe'ver. See *Fever, secondary*.

S. hæm'orrhage. See *Hæmorrhage, secondary*.

S. sub'stance of Rol'let. See *Substance of Rollet, secondary*.

S. syph'ilis. See *Syphilis, secondary*.

S. ter'tiary. *Chem.* Term for a divalent *Alcohol* in which one hydroxyl is united with an atom of carbon, this atom being also united to two other carbon atoms; the other hydroxyl being united with an atom of carbon, which is also united with three other carbon atoms.

Secre'ta. (L. *secerno, secretum*, to separate.) Those substances which are secreted by any secreting organ.

Secrete'. (L. *secerno, secretum*, to separate.) To effect *Secretion*.

Secret'ing. *Secrete*.

Secret'io. (L. *secerno, secretum*, to separate.) *Secretion*.

S. lac'tis. (L.) The secretion of milk.

S. lo'tii. A syn. for *S. urinæ*.

S. urinæ. The secretion of urine.

S. vicar'ia. See *Vicarious secretion*.

Secre'tion. (L. *secretio*.) The function of certain organs, especially glands, of elaborating and separating from themselves certain substances in a fluid or partly fluid form.

Also, the substance thus elaborated and separated.

S., antily'tic. Langley's term for saliva secreted by a salivary gland with intact innervation, in contradistinction to that secreted by a gland the nerves of which have been divided.

S., disor'dered. See *Pareccrasis*.

S., inter'nal. Term for a secretion which is not discharged from the secreting organ.

S., paraly'tic. The continued secretion by a gland after division of its nerves. This product of secretion is usually excessive in quantity, but defective in solid constituents.

Secreti'tious. (*Secretio*.) Having the characters of a *Secretion*.

Secre'tiveness. (L. *secerno, secretum*, to put apart.) *Phrenol.* Term for a faculty said to be peculiar to man and the lower animals, consisting in the power and tendency to conceal those thoughts, desires, and emotions, whose outward expression is, in some way, inexpedient. Its so-called "organ" is said to be at the lower edge of the parietal bones.

Secretodermato'sis. (*Secretory*; Gr. *dípsa, -ατος*, the skin.) Term for disease of the secretory structures of the skin (*derma*).

Secre'to-mo'tor. (*Secretory*; *motor*.) *Physiol.* Epithet applied to *Secretory nerves*.

Secre'tory. (*Secrete*.) Effecting *Secretion*.

S. fi'bres. Those centrifugal nerve-fibres stimulation of which sets up secretion.

S. nerves. See *Nerves, secretory*.

Secre'tum. (L. *secerno, secretum*, to separate.) The substance secreted, a secretion.

Sect'ile. (L. *seco, sectum*, to cut.) Capable of being cut.

Sect'io. (L.) A section or cutting.

S. abdomina'lis. Abdominal section.

S. agrippi'na. A term for *Cæsarean section*.

S. al'ta. High section. Term for the high or supra-pubic operation for *Lithotomy*.

S. al'ta subpub'ica. High subpubic section. Term for transverse section in *Lithotomy*, under the arch of the pubes.

S. anatom'ica. Anatomical section. A term for *Dissection*.

S. bilateral'is. Bilateral section. A term for *Bilateral cystotomy*.

S. cadav'eris. The section of the dead body. *Dissection*.

S. cadaver'is lega'lis. Legal section of the dead body. A name for *Post-mortem examination*.

S. cæsare'a. *Surg.* Cæsarean section.

S. cor'neæ. Section of the cornea. *Keratotomy*.

S. fistular'um. Section of fistulæ. Term for the thorough opening up of a complete anal fistula.

S. fræn'uli præput'ii. Section of the frænulum of the prepuce. A term for section of the *frænum præputii*, performed in cases of too sudden emissions, and of curvature of the penis.

S. franconia'na. A name for the high or supra-pubic operation of *Lithotomy*, first performed by Peter Franco, in the sixteenth century.

S. hypogas'trica. Hypogastric section. The same as *S. franconiana*.

S. latera'lis. Lateral section. The *Lateral operation* of lithotomy.

S. lectia'na. (L. *lego, lectum*, to choose.) Le Cat's operation of *Lithotomy*, partly by means of cutting and partly by means of dilating.

S. lega'lis. See *S. cadaveris legalis*.

S. maria'na. The original median operation (*apparatus major*) of *Lithotomy*, introduced in 1520 by John de Romani, and communicated by him to Mariano Santo di Barletta.

S. media'na. Median *Lithotomy*.

S. musculo'rum. Section of muscles. *Myotomy*.

S. nervo'rum. Section of nerves. *Neurotomy*.

S. nympha'rum. *Surg.* Section of the nymphæ. *Nymphotomy*.

S. perinæa'lis. Perineal section.

S. postroland'ica. Term for a transverse section of the cerebrum at the posterior border of the gyrus (post-central) immediately posterior to the fissure of Rolando.

S. præroland'ica. Term for a transverse section of the cerebrum at the anterior border of the gyrus (præcentral) immediately anterior to the fissure of Rolando.

S. rena'lis. Renal section. A name for *Nephrotomy*.

S. roland'ica. Term for a transverse

SECTION—SEDES

section of the *Cerebrum* through the fissure of Rolando.

S. ten'dinum. Section of tendons. *Tenotomy.*

S. urethral'is. Urethral section. *Urethrotomy.*

S. vaginal'is. Vaginal section. *Elytrotomy.*

S. vag'ino-vesical'is. Vagino-vesical section. A name for *Vaginal lithotomy.*

S. ventral'is. Ventral section. A term for *Cystotomy, supra-pubic.*

S. vesicæ felleæ. Section of the gall-bladder. *Cholecystotomy.*

S. vesical'is. Vesical section, *Cystotomy.*

Section. (L. *seco, sectum*, to cut.) A separation or dividing by means of cutting; also, the cut surface thus obtained; also, a thin slice of any tissue for microscopical examination.

S., abdom'inal. See *Laparotomy.*

S., Cæsar'ean. See *Cæsarean section.*

S.-cut'ter. See *Microtome.*

S., fron'tal. Term for a longitudinal section of the body parallel with the anterior and posterior surfaces.

S., longitud'inal. A section of the body in its long axis. It may be either *frontal*, *sagittal*, or *oblique*, i. e. in some plane between the antero-posterior (sagittal) and lateral (frontal) sections.

S., op'tic. Term for the appearance represented by a more or less transparent microscopic section when some plane of it deeper than the near surface is in focus.

S., perine'al. See *Cock's operation.*

S., sagit'tal. Term for an antero-posterior longitudinal section of the body, i. e. one parallel with the sagittal suture of the skull.

S.s., ser'ial. Microscopic sections cut and arranged in series.

S., Sigaul'tian. A name for *Symphysiotomy.*

Sector. (L. *seco, sectum*, to cut.) That part of the area of a circle included between any two radii and the part of the circumference between their distal or circumferential ends.

S.s., craniomet'ric. Term for certain artificial sectors made use of in *Craniometry.* See sub-headings.

S., cerebel'lar. See *Cerebellar sector.*

S. for cav'um nasopharynge'um. *Cranium.* That sector which lies between radii drawn respectively to the basion and posterior nasal point.

S., fron'tal. *Cranium.* That sector lying between a radius drawn to the nasion and one which would, if produced, pass through the junction of the sagittal and frontal sutures.

S., maxil'lary. *Cranium.* That sector lying between a radius drawn to the nasion, and one through the point of the posterior nasal spine.

S., medul'lary. *Cranium.* That sector which lies between a radius drawn to the basion, and one passing through the centre of the posterior border of the foramen magnum.

S., nas'al. *Cranium.* That sector which lies between a radius drawn to the rhinion and one which would, if prolonged, pass through the nasion.

S., occip'ital. *Cranium.* That sector which lies between radii drawn respectively to the occipital point and the summit of the external occipital protuberance.

S., pal'atine. *Cranium.* That sector which lies between radii drawn respectively to the posterior nasal point and the premaxillary point.

S., pariet'al. *Cranium.* That sector which lies between radii drawn, one to the bregma, and the other to the occipital point.

S., premaxill'ary. *Cranium.* That sector which lies between radii drawn respectively to the rhinion and to the premaxillary point.

Sec'und. (L. *secundus*, following.) *Bot.* Arranged in a series on one side of a stem.

Secundæ. See *Secundinae.*

Secun'dina. (L. *secundus*, second.) Anything that follows upon something else.

S. cer'ebri. (L. *cerebrum*.) A term for the *Pia mater.*

Secun'dinae. (L.) The same as *Secundinæ.*

Secun'dine. The same as *Secundinæ.*

Secun'dinæ. (L. *secundus*, following.) The after-birth, or placenta with the membranes and umbilical cord.

Also, in *Bot.*, a syn. for *Mesosperm.*

Secun'dum ar'tem. (L.) According to art. Denoted in prescriptions by the initials S. A.

S. ar'tis leg'is. (L.) According to the rule of art.

S. natu'ram. (L.) According to Nature.

S. par tuberculo'rum. (L. *secundus*, -a, -um.) *Anat.* The second pair of tubercles. A name for the *Optic thalami.*

Secun'dus. (L. *secundus*, -a, -um.) Second.

S. proprio'rum auric'ulæ. (L.) The second of the muscles proper to the ear. A term for the *Retrahens auriculum.*

Se'cur. An old name for *Aurum.*

Secur'iform. (L. *securis*, an axe; *forma*, shape.) *Bot.* Axe-shaped.

Se'cus. (L.) Sex.

Sedalia, va'sa. See *Vasa sedalia.*

Sedans. (L. *sedans*, plur. *sedantia*, soothing.) A syn. for *Sedatives.*

Sedantia. (L.) Plur. of *Sedans.* Sedatives.

Seda'tion. (L. *sedo*, to soothe.) A term for the action produced by a *Sedative.*

Sed'ative. (L. *sedo*, to soothe.) Soothing. Also, a soothing agent or drug, something that has the therapeutic effect of diminishing functional activity.

S. salt. An old name for *Boric acid.*

Sedati'vus. (Mod. L. From L. *sedo*, *sedatum*, to soothe.) *Sedative.*

Sedem attollens. (L. *sedes*, the seat or anus; *attollens*, pulling up.) *Anat.* A name for the *Levator ani.*

Sedentar'ia, os'sa. (*Sedentarius*.) The sedentary bone or bones on which one sits, namely the two *Ischia* and the *Coccyx*.

Sedentar'ius. (L.) Sedentary.

Sed'entary. (L. *sedentarius*.) Belonging to sitting or the habit of sitting; necessitating sitting.

Se'des. (L.) A seat. Term for the *Anus*; also, for motions or stools.

S. cruen'tæ. (L.) Bloody stools. A term applied to *Dysentery.*

S. lactescen'tes. (L. *lactescens*.) A syn. for *Diarrhæa alba.*

S. proci'dua. (L. *prociduus*, falling forward or forth.) A term for *Proctocele.*

Sedge. (Ang.-Sax. *sæg*.) *Bot.* Common name for the Genus *Carex*.

S., sea. Common name for the *Carex arenaria*.

Sedig'itate. (L. *sex*, six; *digitus*.) Having six digits.

Sedilia. (Plur. of L. *sedile*, a seat.) A syn. for *Nates*.

Sedillot's amputa'tion. A form of amputation in the middle or upper third of the leg, introduced by Sedillot. Lateral flaps are taken, the outer being much the longer of the two. (Dunglison.)

Sediment. (L. *sedimentum*.) That which settles to the bottom of any liquid.

Sedimentary. (L. *sedimentum*.) *Geol.* Formed by deposition of constituent particles out of suspension or solution in a liquid; as, e. g., the Sedimentary Rocks, which have been formed in this way.

Sedimenta'tion. (L. *sedimentum*.) Production of quick deposition of a sediment, whether in sewage, or urine, &c., by means of some centrifugal apparatus.

Sedimentum. (L.) A *Sediment*.

S. urinæ lateritium. (L. *lateritius*, made of brick.) The brick-dust-like sediment of urine. A term for the deposit of amorphous urates from urine, more especially febrile urine.

S. urinæ pityroides. (*Pityroides*.) The bran-like sediment of urine. See *Furfuraceous urine*.

Sedina. Old term for *Sanguis draconis*. (Ruland and Johnson.)

Sedlitz powder. See *Seidlitz powder*.

Sedum. (L. *sedes*, to sit; plant so named on account of its growing on walls, stones, &c.) *Bot.* A Genus of the *Crassulaceæ*.

S. ac'rë. *Bot.* The stonecrop or wall-pepper. Cultivated in Europe. It has a local irritant action on the skin and mucous surfaces.

S. al'bum. A syn. for *S. glaciale*.

S. glaciale. Stonecrop or wall pepper. Internally, emetic and purgative; externally, vesicant.

S. ma'jus. The house-leek. Leaves, mildly astringent.

S. mi'nus. A syn. for *S. glaciale*.

S. teleph'ium. This species was formerly used to make a poultice.

S. telephoïdes. A syn. for *S. telephium*.

S. vermicularë. A syn. for *S. glaciale*.

Sée's treat'ment. A method of treatment of obesity by dieting, introduced by Germain Sée. Albuminoids and fats are taken, with a large amount of warm, aromatic fluids, especially hot tea. No alcohol is allowed.

See-saw eczema. Term for *Eczema* when it occurs, as it sometimes does, alternately with some other disease or pathological condition.

Seed. (Ang.-Sax. *sæd*.) A fertilised ovule of plants.

Also, the seminal fluid of animals.

Also, the fertilised ovum of certain animals, as, e. g., of the silkworm-moth.

Also, the young or offspring.

S.bud. *Bot.* A common name for *Germen* (q. v.).

S. coat. The *testa* of the seed of plants.

S.s, cold. *Pharm.* Old term applied to certain plant seeds on account of their supposed refrigerating action. The seeds of the cucumber, gourd, melon, and water-melon were termed the

"four cold seeds;" while those of endive, lettuce, purslane, and succory were termed the "four lesser cold seeds."

S. down. *Bot.* Common name for *Pap-pus*.

S.s, hot. *Pharm.* Old term applied to certain plant seeds on account of their hot taste, all of them being to some extent sialogogue and carminative. The seeds of anise, caraway, cum-min, and fennel were termed the "four greater hot seeds;" those of bishop's weed, stone parsley, smallage, and wild carrot the "four lesser hot seeds."

S. lac. See under *Lac*.

S. lobe. *Bot.* Common name for *Cotyle-don*.

S. ves'sel. *Bot.* A common term for *Peri-carp*.

Seedy-toe. Common term for a disease of the hoof of horses and the *Equidæ* in general, believed to be set up by the *Achorion keratophagus*. (Ercolani.)

Seege'n's dietet'ic reg'imen. Term for a diet-table for diabetics, drawn up by Seege'n. It consists of meat, eggs, green vegetables, corn, gluten bread, and cheese.

See'man and Hehner's meth'od. A method of estimating the quantity of acids in the stomach, by neutralisation by means of titration with caustic soda, evaporating to dryness, and incinerating, extraction of the ash with water, and estimation of the alkali in the remaining extract by titration with an acid.

See'sel, pouch of. A pouch or hollow in the base of the embryo brain, immediately behind the summit of the pituitary body, first described by the anatomist Seesel.

Seg'ax. An old term synonymous with *Sedina*.

Seges'tor. (L. *se*, one's self; *gero*, to bear or carry.) Name for a proprietary mixture for embalming corpses. (Gould.)

Segetalis. (L. *segetalis*, sword-grass; from *seges*, standing corn.) *Biol.* Living or growing in fields of grain.

Segilli. Old term for *Vitriolum*. (Ruland and Johnson.)

Segment. (L. *segmentum*; from *seco*, to cut.) A small portion cut out from the circumference or surface of anything.

Biol. A subdivision; a division or part arising from segmentation; that part of a limb between any two joints.

S., interan'nular. Term for the part of a nerve-fibre between two nodes of Ranvier.

S., low'er, of ut'erus. That part of the uterus which lies below the *S. of Bandl*.

S.s, medullary. The oblique markings in the medullary sheath of a nerve-fibre; also termed incisures of Schmidt and Lautermann.

S. of Ban'dl. See *Bandl*, ring of.

S., prim'itive. Term introduced by Minot for one of the primitive divisions of the *Cælom* or body-cavity in the Vertebrata.

S., pub'ic, of pel'vic floor. That segment of the pelvic floor in the female which lies immediately behind the pubes, and between it and the anterior wall of the vagina. This space is almost entirely taken up by the bladder.

S., Rivin'ian. See *Rivini*, notch of.

S., sac'ral, of pel'vic floor. That segment of the pelvic floor in the female which lies between the sacrum and the posterior wall of the vagina.

SEGMENTA—SEIZURE

S., Schmidt-Laut'ermann's. Term for one of the cylindrical portions of the medullary substance of a nerve-fibre.

S.s., vertebral. A term synonymous with *Somatomes*.

Also, term for the *cusps* of the valves of the heart.

Segmen'ta. (L.) Plur. of *Segmentum*.

S. cartilagin'ea. Cartilaginous segments. A name for the *Tracheal cartilages*.

Segmental. (*Segment.*) Belonging to *Segmentation*. Pertaining to, or having the characters of, a segment. Also, made up of segments.

S. ar'teries. Arteries distributed to the embryonic *Segments* in which they become developed.

S. duct. *Embryol.* The duct of the *Pro-nephros*.

S. or'gan. *Zoöl.* An organ consisting of a primitive epithelium-lined tubule opening at one end on the body-surface, and at the other into the *cælom* or body-cavity. It is the type of the primitive kidneys.

S. sense-organs. Term for a series of sense-organs formed by the union of *sensory ganglia*.

S. spheres. The spherical cells resulting from the segmentation of the nucleus of the ovum.

S. tube. A syn. for *S. organ*.

Segmen'tary. (*Segment.*) Made up of *Segments*.

Segmentation. (L. *segmentum*.) *Biol.* The process of cleavage.

Embryol. Merogenesis.

S. cavity. *Embryol.* The central space in the *Blastula* stage.

S. cells. *Zoöl.* The mass of homogeneous cells formed by cell-division of the fertilised ovum, and constituting the *Morula* stage.

S., cen'tro-lec'ithal. (*Lecithin.*) *Zoöl.* Term for a variety of segmentation of the fertilised ovum, in which there is a central food-yolk.

S., complete'. A syn. for *S., holoblastic*.

S., direct'. *Zoöl.* Direct cell-division. Also termed *Amitosis*.

S., discoid'al. *Zoöl.* A variety of segmentation confined entirely to the *germinal disc* of the ovum.

S., dup'licative. A form of segmentation characterised by the separation of two segments by an appreciable space; it is a formation peculiar to the *Gonococcus*.

S., free. The segmentation of free or naked cells.

S., germ. *Zoöl.* The segmentation of the fertilised ovum.

S., holoblas'tic. *Zoöl.* A form of segmentation of the fertilised ovum in which its entire substance undergoes segmentation or cleavage.

S., incomplete'. A syn. for *S., meroblastic*.

S., meroblast'ic. *Zoöl.* A form of segmentation of the fertilised ovum in which only a part, the formative yolk, becomes divided up, the remainder, the food-yolk, remaining as a store of nutriment.

S., metamer'ic. *Zoöl.* A form of segmentation of the fertilised ovum in which the embryo becomes split up into *Metameres*.

S. nu'cleus. See *Nucleus, segmentation*.

S., par'tial. The same as *S., incomplete*.

S., protovert'ebral. Segmentation of the mesoblast into *protovertebra* on either side of the notochord.

S., reg'ular. Segmentation of the fertilised ovum into equal and regular cells.

S. sphere. One of the cells of a fertilised ovum that has undergone segmentation.

S., to'tal. The same as *S., holoblastic*.

S., une'qual. A form of segmentation of the fertilised ovum in which the cells at one pole of the ovum are larger and fewer than those at the other.

Segmentellum. (Dim. from *Segmentum*.) A syn. for *Blastula*.

Segmen'tum. (L.) A segment.

Segni'tia. (L. *segnis*, sluggish.) *Med.* Old term for sluggishness.

S. al'va. Sluggishness of the bowels.

S. vir'ium. (L. *vires*, -ium, strength.) Sluggishness of strength. An old term for languor.

Segni'ties. The same as *Segnitia*.

Segond, angles of. (The contemporary anatomist *Segond*.) *Craniom.* Angles lying between lines drawn from the basion to various other points.

S., cer'ebral angle of. *Craniom.* Angle formed between a line from the basion to the ophryon, and one from the basion to the opisthion.

S., fac'ial angle of. *Craniom.* Angle formed between a line from basion to mental point, and one from basion to ophryon.

Seg'regate. (L. *segrego*, to separate out.) To separate or set apart.

S. fecun'dity. Gulich's term for *Homogamy*.

Seg'regated. (*Segregate*.) Separated or set apart.

S. fecun'dity. See *Segregate fecundity*.

Segu. A syn. for *Sago*.

Seguin's signal symp'tom. Term for the prodroma of an epileptic attack, consisting in movements, &c., of the muscles that are, as a rule, first affected in the fit.

Sei'bert's treat'ment. A treatment for diphtheria introduced by Seibert. It consists in the application twice daily to the false membrane of pulverised common salt.

Seid'litz pow'der. Acid tartrate of potash 120 grains mixed with bicarbonate of soda 40 grains in a blue paper, and tartaric acid 35 grains in a white paper. The contents of both papers are mixed and stirred up in water, and the mixture is drunk during effervescence. A useful effervescing saline purgative.

Seignette' salt. $\text{KNaC}_4\text{H}_4\text{O}_6 + 4\text{H}_2\text{O}$. Potassio-sodic tartrate.

Seiler's treat'ment. A treatment of pulmonary tuberculosis introduced by Seiler. It consists in the inhalation of fumes of hydrofluoric acid.

Seiri'asis. (*Σειρίασις*.) Sunstroke or *Insolatio*; also, *Phrenitis*.

Seis'is. (*Σείσις*.) The same as *Seismus*.

Seismus. (*Σεισμός*.) A shaking, a concussion.

Seiz'ure. (Mid. Eng. *seisen*, to seize.) *Med.* A sudden onset of any disease or symptoms.

S.s., hid'den. A term for obscure epileptiform attacks, usually consequent on *Trachelismus*. (Dunghlison.)

Seju'gous. (L. *sex*, six; *jugum*, a yoke.) *Bot.* Furnished with six pairs of leaflets.

Sekiskaya vod'ka. Name for a kind of spirit made at Seio from the lees of wine and fruit. (Dunglison.)

Sel. See *Sul.*

Sela'a. *Surg.* Old term for an encysted abscess.

Sela'go. (L. *se*, by one's self; *lego*, to choose. So named because the Druids selected this plant for certain of their rites.) Specific name of the *Lycopodium selago*.

Sela'tus. *Chem.* Old term for quicksilver, *Argentum vivum*.

Selec'tion. (L. *seligere*, *selectum*, to choose.) *Biol.* Choosing one or more out of a number.

S., artif'cial. The artificial choosing out of certain plants or animals so that they may by differentiation develop and afterwards reproduce certain special characters.

S., nat'ural. "The preservation of favourable individual differences and variations, and the destruction of those which are injurious." (Darwin's "Survival of the fittest.")

S., physiolog'ical. The same as *Homogamy*, and *Segregate fecundity*. "The selection of those varieties the individuals of which are fertile among themselves, but sterile or less fertile with other varieties, and with the parent stock" (De Varigny.)

S., sex'ual. The choice by the females of a species of the strongest and handsomest males.

Seldo'nium al'kali. Old term of uncertain meaning used by Paracelsus. Costellus supposed it to mean that which is easily soluble in a liquid, and yields a tincture.

Selenè. (Σελήνη, the moon.) *Anat.* Another name for the *lunula* of the finger-nails.

Seleni'acus. (Σεληνιακός.) Moon-struck, lunatic.

Seleni'asis. (Σελήνη.) A term for *Lunacy*; also, for *Somnambulism*.

Selenias'mus. (Σελήνη.) The same as *Seleniasis*.

Seleni'ate. An oxygen salt of *Selenic acid*.

Selen'ic. (*Selenium*.) *Chem.* Epithet applied to a compound in which one atom of selenium is directly united with three of oxygen.

S. acid. H_2SeO_4 . This acid has chemical properties very similar to those of sulphuric acid.

Selen'ide. (*Selenium*.) *Chem.* A compound containing selenium united with a base.

Seleni'ferous. *Chem.* Selenium-containing.

Selen'ion. The same as *Selenium*.

Selen'ite. (*Selenium*.) A salt of selenious acid.

Also, a transparent form of sulphate of calcium.

Seleni'tes. A kind of *Lapis specularis* of which windows were formerly made.

Selenit'ic. Epithet applied to water holding in solution *selenits*, i. e. a form of sulphate of calcium.

Selenium. (Σελήνη, the moon.) *Chem.* $Se = 79.4$. A rare element having chemical properties very similar to those of sulphur. It can be bivalent, quadrivalent, or hexavalent in its combinations.

Selenoble'tus. (Σελήνη; βλητός,

stricken.) Old term signifying diseased from exposure to the moon's influence; *lunatic*.

Selenodont. (Σελήνη, ὀδούς, ὀδόντος, a tooth.) *Zoöl.* Epithet for animals with crescentic edges to the crowns of the molar teeth.

Selenogamia. (Σελήνη; γαμός, marriage.) A term for *Somnambulism*.

Selenognos'tics. (Σελήνη; γνωστικός, sagacious.) The study of the physical constitution of the moon.

Seleno'graphy. (Σελήνη; γραφή, a delineation.) A scientific description of the moon.

Selenople'gè. (Σελήνη; πληγή, a stroke.) Old term for *Apoplexy*, which was formerly believed to be consequent on exposure to the moon's influence.

Selenople'gia. The same as *Selenoplegè*.

Selenoplexia. (Σελήνη; πλήξις, a stroke.) The same as *Selenoplegè*.

Selenotopography. (Σελήνη; τοπός, a place; γραφή, a delineation.) A scientific description of the surface of the moon.

Selenotrop'ic. (Σελήνη; τροπή, a turning round.) *Bot.* Turning towards the moon. Epithet applied to plants that so turn as they grow.

Self-abuse'. Common term for *Masturbation*.

S.-differentia'tion. *Biol.* The theory, first propounded by His, that the growth of living cells is controlled by some power inherent in the cells themselves.

S.-dige'stion. See *Auto-digestion*.

S.-esteem'. In *Phrenol.*, term for a faculty the "organ" of which is supposed to be situated at the vertex of the cranium near the postero-superior angle of the parietal bones.

S.-fertilisa'tion. *Bot.* The fertilisation of a flower by means of its own pollen.

S.-heal. *Bot.* A common name for the *Prunella vulgaris*.

S.-incase'ment. *Pathol.* Term introduced by J. S. Thatcher for an abnormal condition of the mesentery in which its two layers enclose the small intestine in a sort of pouch.

S.-infec'tion. See *Auto-infection*.

S.-infla'tion. A method of rendering one's self buoyant in water when in danger of drowning, suggested by Silvester. A puncture is made in the mucous membrane of the mouth at its inflection from the lower jaw, and, the mouth and nose being tightly closed, repeated blowing efforts are made, causing air to pass into the subcutaneous tissue of the neck.

S.-lim'ited. Epithet applied to diseases which run of themselves a definite course in a definite time.

S.-pollu'tion. A syn. for *Self-abuse*.

S.-repos'itor, pneumatic. *Gynaecol.* An instrument by which the patient herself can replace a prolapsed uterus. It consists in a curved glass bulb, and acts by atmospheric pressure.

S.-sugges'tion. See *Auto-suggestion*.

S.-suspen'sion. *Surg.* Term for suspension of the whole body in order to extend the vertebral column, as in fitting on supporting apparatus in spinal disease.

S.-suspen'sion, axil'lo-cephalic. *Self-suspension* from the head and axillæ.

S.-suspen'sion, cephalic. *Self-suspension* from the head alone.

Selib'ra. (L. *semi*, half; *libra*, a pound.) *Pharm.* Half a pound.

Selin'ææ. A tribe of the *Umbelliferae*, whose type is the Genus *Selinum*.

Selin'ic acid. An acid obtained by Peschier from the roots of *Selinum palustre*.

Selini'tes. (Σελινίτης.) *Med.* Old name for wine impregnated with parsley.

Selin'um. (Σέλινον, a sort of parsley.) A Genus of perennial herbs of the Order *Umbelliferae*. Also, the *Carum petroselinum*.

S. angel'icus. The *Angelica sylvestris*.

S. gal'banum. The *Bubon galbanum*.

S. imperato'ria. The *Imperatoria ostruthium*.

S. lates'cens. The *Peucedanum palustre*.

S. opop'onax. The *Pastinaca opoponax*.

S. oreosell'num. The *Athamanta oreoselinum*.

S. ostru'thium. The *Imperatoria ostruthium*.

S. palus'trë. The *Peucedanum palustre*.

S. pastina'ca. The *Pastinaca sativa*.

S. peuce'danum. The *Peucedanum palustre*.

S. pubes'cens. The *Angelica sylvestris*.

S. sylves'trë. A syn. for *S. pubescens*; also, for *Peucedanum palustre*.

S. thyssell'num. The same as *S. peucedanum*.

Sella. (L.) A saddle. In *Anat.*, a structure that is saddle-shaped.

S. equi'na. (L., *equinus*, belonging to the horse.) A syn. for *S. turcica*.

S. familiar'ica. A night-stool.

S. obstetri'cia. The obstetric chair.

S. sphenoida'lis. A syn. for *S. turcica*.

S. tur'cica. (The Turkish saddle.) *Anat.* The saddle-like *Pituitary fossa* of the sphenoid.

Sellanders. The same as *Sellenders*.

Sellenders. A syn. for *Mallenders*.

Selliform. (L. *sella*, a saddle; *forma*, shape.) Saddle-shaped.

Seltess. See *Seltzer*.

Seltzer. A place in Hesse-Nassau, in Prussia, noted for its gaseous mineral springs. Also, shortened term for *S. water*.

S. water. The natural mineral waters of Seltzer, which are acid soda waters. Also, artificial water manufactured to imitate closely the natural waters.

Sema. (Σῆμα, a token.) *Med.* A syn. for *Semeion*.

Sema'sia. (Σῆμα, a token.) *Med.* Old term for the *accession* or *invasion* of a disease.

Sematic. (Sema.) Belonging to a sign or token. Epithet applied in *Biol.* to the occurrence of colour-mimicry in nature as a protection against natural enemies.

Sembella. (L. *semi*, half; *libella*, a pound.) *Pharm.* Old term synonymous with *Selibra*.

Semecarpus. (Σημεῖον, a sign; καρπός, a fruit.)

S. anacard'ium. Another name for the *Aricennia tomentosa*.

Semeio'graphy. (Σημεῖον; γραφή, a writing.) *Med.* A description of symptoms.

Semeiology. (Σημεῖον; λόγος, a description.) A syn. for *Symptomatology*.

Semeion. (Σημεῖον.) *Med.* Old term for *sign* or *symptom*.

S. boethemat'icum. (Boethema.) A sign or indication for treatment.

Semeio'sis. (Σημεῖον.) The same as *Semeiology*.

Semeiot'ic. Belonging to *Semeiology*, symptomatic.

Semeiot'ica. The same as *Semeioticæ*.

Semeiot'icë. A syn. for *Symeiology*.

S. facie'l. *Semeiology* of the face. A term for *Physiognomy*.

Semeiotics. A syn. for *Semeiology*.

Semel'um. The same as *Semeion*.

Semelin'cident. (L. *semel*, once; *incidens*, occurring.) Occurring once. Epithet applied to diseases that attack the same individual only once.

Se'men. (L. *semen*, *seminis*, a seed.) *Zoöl.* The fertilising fluid of the male, secreted by the cells of the tubules of the testis, and consisting of liquor seminis, seminal granules, and spermatozoa.

S. abelmos'chi. *Musk* seed.

S. a'bri. The seed of the *Abrus precatorius*; *jequirity*.

S. adjow'an. The seed of the *Ammi capticum*. Carminative and stimulant.

S. aga'vë. The seed of the *Agave* from India, used in atonic gout.

S. alexandri'num. Alexandrian seed. A name for *Santonica*.

S. amo'nil. A name for *Pimento*. (Dunglison.)

S. an'isi stella'ti. The seed of the *Illicium anisatum* or star-anise.

S. an'isi vulgar'is. Aniseed.

S. are'cæ. The *Areca-nut*.

S. Ba'dian. A syn. for *S. anisi stellati*.

S. cac'ao. See *Cacao*.

S. Cal'abar. The *Calabar bean*.

S. calcitrippæ. The seed of the *Larkspur*.

S. cardamo'mi mino'ris. A name for *Cardamom* seed.

S. catapu'tiæ mino'ris. Name for the seed of the *Euphorbia lathyris*.

S. ci'næ. A name for *Santonica*.

S. ci'næ Halepen'së. The same as *S. cinæ*.

S. co'la. The *Cola*, or *Kola*, *nut*.

S. col'chici. *Colchicum* seed.

S. consolidæ. The same as *S. calcitrippæ*.

S. con'tra ver'mes. (L. *contra*, against; *vermes*, worms.) A name for *Santonica*.

S. cydo'niæ. The seed of the *Pyrus cydonia*.

S., defici'ency of. See *Aspermasia*.

S. eru'cæ. The seed of the *Brassica eruci*.

S. genita'lë. A syn. for *Semen masculinum*.

S. Igna'tiæ. *St. Ignatius' bean*.

S. lycopo'dii. *Lycopodium* seed.

S. masculi'num. (L. *masculus*, belonging to the male.) Another name for the *Semen* of male animals, and especially of man.

S. mul'tiplex. *Bot.* A compound *spore*.

S. myris'ticæ. The *Nutmeg*.

S. nu'cis vom'icæ. *Nux vomica* seed, the seed of *Strychnos nux vomica*.

S. papa'veris. *Poppy* seed.

S. pedicular'is. A name for *stavesacre* or *Staphisagria* seed.

S. petroselli'ni macedon'ici. *Bot.* The seed of the *Bubon macedonicum*.

S. quer'cus. The seed or acorn of *Quercus robur*.

S. quer'cus tost'um. (L.) The cooked

seed or acorn of *Quercus robur*. Name for a sort of coffee made from the acorn.

S. sabadill'æ. *Sabadilla* seed.

S. sanc'tum. (Sacred seed.) *Bot.* Name for the seed of the *Artemisia santonica*.

S. santoni'ci. *Santonica* seed.

S. sina'pis. A shortened name for *S. sinapis nigrae*.

S. sina'pis alb'æ. White-mustard seed.

S. sina'pis nigrae. Black-mustard seed.

S., slow emis'sion of. See *Bradyspermatismus*.

S. stramon'ii. *Stramonium* seed.

S. strych'n'æ. The seed of *Strychnos nux vomica*.

S. tig'lii. *Croton-oil* seed, the seed of *Croton tiglium*.

S. Ven'eris. (Seed of Venus.) Old term for scales of brass. (Ruland and Johnson.)

S. viril'è. A syn. for *S. masculinum*.

S. zedoar'æ. The same as *S. santonica*.

Semester. (L. *semestris*, half-yearly.) A period of six months.

Sem'i. (L.) Prefix denoting one-half.

S.-albinism. A half-white condition of the skin, sometimes occurring in negroes.

Semian'imis. (L.) The same as *Semianimus*.

Semian'imus. (L. *semi-*; *animus*, the mind, spirit.) Half alive; also, low-spirited.

Sem'i-aquat'ic. *Biol.* Half aquatic; capable of living on land or in the water.

Sem'i-articulate. (L. *semi-*; *articulatr.*) A term for loose-jointed.

Sem'ibulb of fe'male. (Semi-; *bulbus*.) *Anat.* A name for *Bulbus vestibuli*.

Semibulbus corporis spongio'si. (Semi-; *bulbus*.) The bulb of the corpus spongiosum or bulb of the male urethra.

Semicanalic'ulus. (Semi-; *canaliculus*.) The same as *Semicanalis*.

Semicanalis. (Semi-; *canalis*.) A syn. for *Sulcus*, or groove.

S. hu'meri. A name for the *bicipital groove* of the humerus.

S. nervi vidia'ni. The groove on the temporal bone for the vidian nerve.

S. ten'sor tym'pani. The groove in the petrous portion of the temporal bone for the *tensor tympani*.

S. tu'bæ Eusta'chii. The groove in the petrous portion of the temporal bone for the *Eustachian tube*.

S. tympan'icus. The groove in the petrous portion of the temporal bone for the tympanic or Jacobson's nerve.

Sem'i-castra'tion. Half castration; the removal of only one testicle.

Sem'i-caudate. (Semi-; *caudatus*.) *Biol.* Having a rudimentary tail.

Semiceph'alus. See *Hemicephalus*.

Semicir'cular. (L. *semi*; *circularis*.) Making up half a circle.

S. canals'. See *Canals*, *semicircular*.

Semicir'culi os'sei. (Mod. L.) The osseous semicircles. A term for the *Semicircular canals*.

Semicir'culus exculp'tus. (Mod. L.) The cut-out semicircle. A term for the aortic opening in the diaphragm.

Semicon'gius. (Semi-; *congius*.) *Pharm.* Half a gallon, i. e. four pints.

Sem'i-con'scious. Half conscious.

Sem'i-cor'date. (Semi; *corda*.) Shaped like the half of a heart that has been divided longitudinally.

Sem'i-cor'neous. (Semi-; *corneous*.) Partly *corneous*.

Sem'i-costi'ferous. (L. *semi-*; *costa*; *fero*, to bear.) *Anat.* Bearing half a rib, or having a half-facet for a rib.

Semicret'in. (Semi; *cretin*.) Term for a variety of *Cretin* who can speak in a rudimentary way and can appreciate his everyday bodily necessities.

Semicu'bium. (Semi; *cubo*, to lie down.) A half bath or hip bath.

Semicup'ium. The same as *Semicubium*.

Sem'i-decussa'tion. Partial or half decussation.

Semifibula'us. (Semi; *fibula*.) *Anat.* A term for the *Peroneus brevis*.

Semiflex'ion. Half flexion. A position midway between complete flexion and complete extension.

Semiflor'et. *Bot.* A half-floret. Term for a *ligulate* floret in the *Compositæ*.

Semiflos'culose. The same as *Semiflosculous*.

Semiflos'culous. *Bot.* Epithet for a composite flower-head made up of *semiflorets*.

Semiglo'bose. (L. *semi*; *globus*, a ball.) A syn. for *Hemispherical*.

Semiho'mo. (L. *semi*; *homo*, a man.) *Bot.* Half man. A name for the *Atropa mandragora*.

Sem'i-interos'seus in'dicis. *Anat.* A term for the *Abductor indicis*, or first dorsal interosseous muscle.

S. pollic'is. *Anat.* A term for the *Opponens pollicis*.

Semilib'ra. The same as *Selibra*.

Semilun'ar. (L. *semi*; *luna*, the moon.) Half-moon shaped.

S. bone. A bone of the proximal row of the carpus. See *Carpus*.

S. car'tilages. Two somewhat semilunar-shaped fibro-cartilages attached to the upper surface of the tibia. The inner is roughly semicircular, the outer circular. Both are thicker at their outer edge, and both are inserted into the spine of the tibia, the outer being inserted both in front of and behind the inner.

S. fas'cia. A syn. for *Bicipital fascia*.

S. fibro-car'tilages. See *S. cartilages*.

S. fold of conjuncti'va. See *Plica semilunaris*.

S. fold of Doug'las. See *Douglas*, *semilunar fold of*.

S. folds of peritone'um. A name for the *Recto-uterine folds*.

S. gan'glia. See *Ganglia*, *semilunar*.

S. lobes. See *Lobes*, *semilunar*.

S. notch of il'ium. The notch or concavity between the anterior superior and anterior inferior spines.

S. notch of scap'ula. The notch in the upper border of the scapula, bridged over by ligament and thus converted into a foramen in the recent state, through which the supra-scapular nerve passes.

S. notch of ster'nium. The *inter-clavicular* notch at the upper border of the *manubrium*.

S. space of Traub'e. See *Traube*, *semilunar space of*.

S. surface. Term for the smooth cartilaginous surface partly surrounding the fossa of the *acetabulum*.

S. tract of cerebellum. See *Cerebellum*, *semilunar tract of*.

S. valves. A syn. for *Sigmoid valves*.

Semilunar'e, os. The *Semilunar bone*.

Semilun'ula un'guium. (*Semi*; *lunula*, dim. from *L. luna*, the moon.) *Anat.* The *Lunula* of the nail.

Semi'luxation. A syn. for *Subluxation*.

Sem'imas. (*L. semi*; *mas*, a male.) The same as *Semimasculus*.

Semimacula'tus. (*L. semi*; *maculus*.) The same as *Semimasculus*.

Semimas'culus. (*L. semi*; *masculus*, a male.) A eunuch; *Hemiandros*.

Semimembrano'sus. (*L. semi*; *membrana*, a membrane.) A muscle situated at the back of the thigh. In the upper third it is flat and aponeurotic, in the middle broad and fleshy, and below tendinous. It arises from the ischial tuberosity, and is inserted by three tendinous divisions into the outer condyle of the femur and the inner and back part of the tuberosity of the tibia. It flexes and rotates inward the leg, and flexes the thigh upon the leg. It helps to fix the pelvis in the standing position.

Sem'i-mem'branous. (*Semi*-; *membranous*.) *Anat.* Half, or partly, made up of membrane.

Sem'i-met'al. A syn. for *Metalloid*.

Semimetalla. (*Semi*; *metallum*, a metal.) A *Semi-metal*.

Sem'i-mol'ecule. *Chem.* Term for a compound radicle which is made up of only half the number of molecules of which it was made up when in the free state.

Semimor'tuus. (*Semi*; *mortuus*.) Half dead.

Sem'i-mute. A half-mute. An individual whose speech is imperfect owing to impairment or loss of hearing coming on after some considerable amount of speech had already been acquired.

The semi-mute expresses his thoughts naturally by words, not, like the deaf-mute, by gestures.

Sem'ina. (*L.*) Plur. of *Semen*. Seeds.

S. catapu'tiæ majoris. A term for the seeds of the castor-oil plant, *Ricinus communis*.

S. frig'ida majora. The greater cold seeds. See *Seeds*, *cold*.

S. frig'ida min'ora. The lesser cold seeds. See *Seeds*, *cold*.

S. in'dageer. A name for the *Nerium antidysentericum*. (*Dunglison*.)

S. ric'ni vulgaris. The seeds of the common castor-oil plant, the *Ricinus communis*.

Sem'inal. Belonging to the *Semen*.

S. air. See *Aura seminalis*.

S. animal'cule. A term for a *Spermatozoon*.

S. cells. The epithelial cells of the seminal tubules of the testis.

S. cysts. A class of *Retention cysts* in the interior of which are found spermatozoa. It includes hydrocele of the spermatic cord and encysted hydrocele.

S. ducts. A syn. for *Ejaculatory ducts*.

S. filaments. A term for *Spermatozoa*.

S. fluid. *Zoöl.* *Semen*.

S. gran'ules. The rounded, granular corpuscles found floating in the *Semen*.

S. los'ses. A term for the occurrence of *Spermatorrhœa*.

S. tubes. The same as *S. tubules*.

S. tub'ules. A syn. for seminiferous tubules; *Tubuli seminiferi*.

S. ves'icles. See *Vesiculæ seminales*.

Semina'lē. (*L.*) Neut. of *Seminalis*.

S., mem'brum. (*L.*) Seminal member. A term for the *Penis*.

Seminalis. (*L.*) *Biol.* Belonging to a seed or seeds; *seminal*.

Semina'tio. (*L.*) *Semination*.

Semina'tion. The same as *Insemination* (q. v.).

Seminervo'sus. (*L. semi*; *nervosus*, belonging to a nerve, or tendon.) A syn. for *Semitendinosus*.

Sem'inex. (*L. semi*; *nex*.) Half dead.

Semin'ia. (*L. seminum*, seed; plur. *seminia*.) Seeds.

S. morbo'rum. The seeds of disease.

Semini'ferous. (*L. semen*, seed; *fero*, to carry.) *Zoöl.* Semen-carrying.

Bot. Seed-carrying.

S. scale. *Bot.* The scale which bears the *ovules* in the *Coniferae*.

S. tub'ules. See *Tubuli seminiferi*.

Semini'fic. (*L. semen*; *facio*, to make.) *Zoöl.* Semen-producing.

Semin'iform. (*L. semen*; *forma*, shape.) *Bot.* Bory's epithet for the reproductive bodies of *Fungi*, *Polypi*, and animal or vegetable organisms which do not have specialised generative organs.

Sem'inist. Term for anyone who believed in the theory of the origin of the embryo from the seed of the male and the supposed seed of the female.

Semin'ium. (*L.*) Seed in general.

Seminoceph'alus. See *Semicephalus*.

Seminu'la. (Dim. from *L. semen*.) *Bot.* Term for the minute reproductive bodies of *Cryptogamous* plants.

Seminuli'ferous. Bearing *Seminula*.

Semin'ulum. (Dim. from *L. semen*.) *Bot.* A small seed, a *spore*.

Seminur'ia. (*L. semen*; *Gr. οὔρον*, urine.) Term for the presence of semen in the urine.

Semie'graphy. See *Semeiography*.

Semeiology. See *Semeiology*.

Semi'on. See *Semeion*.

Semios'seus in'dicis. (*L. semi*; *osseus*, bony.) A syn. for *Abductor indicis*.

Semiotic. See *Semeiotic*.

Semioticē. See *Semeioticē*.

S. facie'i. See *Semeioticē faciei*.

Sem'i-ovate. (*Semi*-; *ovate*.) Having the shape of half an egg, i. e. of the half of an egg divided in its long axis.

Semipal'mate. *Zoöl.* Half palmate, having half-webs between the digits.

Semipestis. (*L. semi*; *pestis*, the plague.) *Med.* An old name for *Petechial fever*.

Semiple'gia. (*L. semi*; *Gr. πλῆγη*, a stroke.) See *Hemiplegia*.

Sem'i-prona'tion. The semi-prone position, or the assuming of that position.

Sem'i-prone. Lying half on the side and half on the chest and abdomen.

S. posi'tion. See *Position, semi-prone.*

Semipto'sis. Partial or incomplete Pto'sis.

Semipu'pa. A syn. for *Propupa.*

Semisidera'tio. (L. *semi*; *sideratus*.)

An old term synonymous with *Hemiplegia.*

Semisidera'tus. (L. *semi*; *sideratus*, planet-struck.) Half-stricken or half-blasted. Suffering from *Semisideratio.*

Semisom'nis. (L. *semi*; *somnus*, sleep.) A term for *Coma.*

Semisop'itus. (L. *semi*; *sopio*, to put to sleep.) The same as *Semisomnis.*

Semisop'orus. (L. *semi*; *sopor*, sleep.) The same as *Semisomnis.*

Semispec'ulum. (L. *semi*; *speculum*.)

A surgical instrument used to dilate the incision made into the base of the bladder in *Lithotomy.*

Semispina'lis. (L. *semi*; *spinalis*, belonging to the spine.) *Anat.* Partly attached to the spine. Term for several muscles of the posterior spinal region which pass between spinous and transverse processes.

S. cap'itis. A syn. for *Complexus.*

S. colli. This muscle arises from the transverse processes of the six first dorsal vertebrae, and is inserted by separate tendons into the spines of all the cervical vertebrae except the first and seventh.

S. dor'si. This muscle arises by tendinous slips from the transverse processes of the seventh to the tenth dorsal vertebrae, and is inserted by tendons into the spines of the six upper dorsal and seventh and eighth cervical vertebrae. The two muscles acting together extend the spine; either acting alone causes extension combined with lateral flexion towards its own side.

S. exter'nus. A syn. for *S. dorsi.*

S. inter'nus. A syn. for *Transversalis dorsi.*

S. spina'tus. A syn. for *S. dorsi.*

Semispina'tus. (L. *semi*; *spina*, the backbone.) *Anat.* The same as *Semispinalis.*

S. colli. See *Semispinalis colli.*

Semis'se. (L.) Neut. sing. of *Semissis.*

Semis'sis. (L. *semissis*, -e.) A half.

Semisul'cus. (L. *semi*; *sulcus*.) A half-sulcus.

S. longitudina'lis. Term for the groove on the median border of the internal surface of the *parietal bone*, which forms, with that on its fellow of the opposite side, the sulcus for the superior longitudinal sinus of the dura mater.

S. petro'sus infe'rior. The partial groove on either side of the internal surface of the basilar portion of the occipital bone (*basioccipital*), in which runs the inferior petrosal sinus of the dura mater.

S. sagitta'lis. A syn. for *S. longitudinalis.*

Sem'i-supina'tion. Half-supination. A position halfway between supination and lying on the side; also, the assuming of that position.

Semitendino'sus. (L. *semi*; *tendinosus*, tendinous.) A posterior or hamstring muscle of the thigh. It arises from the ischial tuberosity by muscular fibres and by a flat tendon common to it and the biceps flexor cruris, and is inserted by an expanded tendon into the upper part of the inner surface of the tibia, sending a process down to the fascia of the leg.

Traversing the belly of the muscle is an oblique tendinous intersection.

Semiten'dinous. (L. *semi*; *tendinous*.) Half or partially tendinous.

Semiter'tian. (*semi*; *tertian*.) Half-tertian.

S. fe'ver. A variety of intermittent fever which is partly tertian and partly quotidian in the times of its recurrences.

Semiun'cia. (L. *semi*; *uncia*.) *Pharm.* Half an ounce.

Semivi'vus. (L. *semi*; *vivus*, living.) Half-alive.

Semol'na. (L. *semolino*.) A coarse sort of flour prepared from wheat.

Semo'tim. *Med.* Old term for *Achores* or *Tinea*, according to Valescus, *de Tarant. Phil. Ph.*, t. 2.

Semper's method. A method of making anatomical preparations, introduced by Semper. The dissection is made, and the specimen is hardened in chromic acid and then thoroughly washed in water. It is then soaked in an increasingly strong series of alcohol solutions, up to 96 per cent. It is then put into spirit of turpentine, and afterwards taken out and dried in the air.

Sempervirens. (L. *semper*, always; *virens*, keeping green.) *Bot.* Evergreen; keeping green through one or more winters.

Sempervirent. See *Sempervirens.*

Sempervivum. *Bot.* A syn. for *Sedum.*

S. ac'rë. The *Sedum ac'rë.*

S. tecto'rum. The *Sedum majus.*

Semp'stress' cramp. A neurosis occurring in sempstresses and brought on by sewing, consisting in spasms of the flexors of the fingers, followed by paresis or paralysis, and accompanied by tremors, pain, and vaso-motor disturbances (hyperæsthesia and, in some cases, local asphyxia). It is closely analogous to *Writer's cramp.*

S. pal'sy. See *Sempstress' cramp.*

Semuda. A syn. for *Betula.* (Dunglison.)

Semun'cia. A shortened form of the word *Semiuncia.*

Sen'a. See *Senna.*

Sen'ary. (L. *senarius*, made up of six each.) Arranged in groups of six each.

Senéb'era coro'nopus. (After J. Sènebier, of Geneva.) *Bot.* Another name for the *Cochlearia coronopus.*

Sen'eca oil. (Named after Lake Seneca, in the neighbourhood of which the oil is found.) A name for *Petroleum.*

S. snake-root. A name for *Senega.*

Sen'ecin. (*Senecio*.) Name for a precipitate obtained from a tincture of the plant *Senecio gracilis.* Dose, 1 to 3 grains. (Gould.)

Sen'e'cio. (L. *senex*, an old man; so named from the grey down on the plants of this genus.) A Genus of the *Compositæ.*

S. acanthifol'ius. *Hab.*, Egypt and neighbouring regions. Decoction of leaves and flower-heads used as a deobstruent.

S. ambavill'a. *Hab.*, Mauritius. Pectoral, vulnerary, and antisyphilitic.

S. anteuphor'bium. *Hab.*, South Africa. Used as an antidote to the poisonous milky juice of some of the *Euphorbiaceæ.*

S. aure'us. Golden ragweed. Indigenous in the United States. Action, diaphoretic and diuretic.

S. canic'ida. Hab., Mexico. Poisonous, inducing tetanic convulsions. Has been used, in non-poisonous doses, in epilepsy and as a sudorific. Commonly used to poison dogs.

S. do'ria. Hab., South Europe and the East. Fresh leaves, vulnerary.

S. doron'teum. Leopard's-bane groundsel. Hab., Europe. Used in asthma.

S. grac'illis. A slenderer variety of *S. aureus*.

S. hieracifo'lus. The *Erechtites hieracifolius*.

S. jacobæ'a. The ragwort, or St. James' wort. A decoction of the leaves was formerly used for camp dysentery, and also applied locally to wounds and bruises. A poultice was made of the fresh leaves.

S. madraspat'anus. A syn. for *S. pseudo-china*.

S. nigres'cens. Hab., Chili. Action, antiperiodic.

S. palus'tris. Marsh groundsel. Hab., Europe. Root used as a healing application to ulcers.

S. parvifo'rus. Hab., Mexico. Action, diaphoretic and deobstruent.

S. præ'cox. Hab., Mexico. Leaves, vulnerary. Also given in rheumatism.

S. pseu'do-chi'na. A Malabar tree. The root closely resembles *China root* in appearance and qualities.

S. rep'ens. Hab., Cape of Good Hope. Action, antirheumatic and pectoral.

S. saracen'icus. Saracens' comfrey. Hab., Europe. Herb formerly used as a vulnerary and deobstruent. (Foster.)

S. vulgar'is. Groundsel, a common herb. Hab., Europe. Refrigerant and antiscorbutic; used locally.

Senecta. (L. Gen. *senectæ*.) Old age.

S. decrep'ita. Decrepit old age. A term for *Decrepitude*.

S. extre'ma. The same as *S. decrepita*.

S. sum'ma. The same as *S. decrepita*.

S. ul'tima. The same as *S. decrepita*.

Senectus. (L. Gen. *senectutis*.) Old age. It begins according to some at the age of sixty, according to others at seventy. Characterised by slow but progressive decay of the bodily and mental faculties.

S. ul'tima. A term for *Decrepitude*.

Sen'ega. (*Senegal*, where the plant is indigenous, and where the natives use it in cases of rattlesnake bite.) Specific name of the *Polygala senega*.

S. root. See *Senegæ radix*.

S. snake-root. A fuller name for *Senega*.

Sen'egæ radix. B.P. *Senega root*. The dried root of the *Polygala senega*. A stimulating expectorant, diuretic and diaphoretic. Preparations, *Infusum senegæ*, *Tinctura senegæ*. Non-official preparation, *Syrupus senegæ*.

Sen'egal, gum. The gum which exudes from the stem of the *Acacia senegal*. It occurs in large, single drops.

S. root. Name for the root of the *Cocculus bakis*.

Sen'egin. (*Senega*.) An amorphous glucoside, soluble in water, and consisting of *sapogenin* and sugar, obtained from *Senega*. It has a *sternutatory* action.

Sen'egreen. The same as *Sengreen*.

Sen'eka. The same as *Senega*.

Senes'cence. (L. *senex*, an old name.) A term for *Senility*.

Sen'green. Bot. A common name for the houseleek, *Sempervivum tectorum*.

Senic'ic acid. A poisonous organic acid found in the *Senecio canicida*.

Sen'ile. (L. *senilis*.) Belonging to, or characteristic of, old age.

S. chore'a. A term for *Paralysis agitans*.

S. decay'. The gradual decay of faculties associated with degeneration of tissues, characteristic of old age.

S. gan'grene. See *Gangrene*, *senile*.

S. trem'bling. The general tremulousness characteristic of old age.

Sen'ilis. (L.) Belonging to old age; senile.

S., ar'cus. See *Arcus senilis*.

Senil'ity. (L. *senilis*, old.) Old age.

Senn's bone-plates. Cylindrical plates of decalcified bone, first introduced by the contemporary surgeon Nicholas Senn, for fitting into the bowel at the point of the line of sutures in the operation of intestinal anastomosis.

S.'s test. A method of detecting a perforation in the bowel, consisting in the forcing of hydrogen gas into the bowel *per rectum*.

Sen'na. (Arab. *senna*, sharp; from the sharp-pointed leaves of the plant.) B.P. The dried leaflets of various species of *Cassia*. There are two kinds in the B.P., *Senna, Alexandrian*, and *S., East Indian* (or *Tinnivelly*). *Senna* is a purgative, and a feeble hepatic stimulant. It causes griping if given alone or in large doses. Dose of powder, 10 to 30 grains.

S. acutifolia. The *Cassia acutifolia*.

S., Alexan'drian. B.P. The dried leaflets of *Cassia acutifolia*, imported from Alexandria.

S. alexandri'na. Alexandrian senna.

S., Amer'ican. The *Cassia marilandica*.

S. angustifo'lia. The *Cassia elongata*.

S., blad'der. The *Colutea arborescens*.

S., East In'dian. B.P. The dried leaflets of *Cassia angustifolia* from plants cultivated in Southern India. It is imported in a purer condition than is *S., Alexandrian*.

S. german'ica. The same as *S., bladder*.

S. in'dica. *S., East Indian*.

S. ital'ica. The *Cassia senna*.

S. leaves. See main heading.

S. obova'ta. The *Cassia obovata*.

S. officina'lis. The *Cassia elongata*.

S. paste. See under *Paste*.

S. paup'erum. (L. *pauperes*, -um, poor people.) A name for bastard senna or milk vetch, the *Colutea arborescens* of Linnæus. Leaves, purgative and emetic.

S., prair'ie. The *Cassia chamæcrista*.

S. scor'pium. Scorpion senna. A name for the *Coronilla emerus*.

S., Tinnivelly. A syn. for *S., East Indian*.

S., wild. A name for the *Cassia marilandica*; also, for the *C. chamæcrista*; also, for the *Globularia alypum*. (Dunglison.)

Sennaar' gum. A kind of gum-acacia, from Sennaar on the Red Sea.

Sen'nacrol. (*Senna*; L. *aeris*, sharp.) A bitter substance obtained from *Senna*. It is soluble in ether.

Sennapic'rin. (*Senna*; Gr. *πικρος*,

bitter.) An insoluble bitter substance obtained from *Senna*.

Sen'nin. (*Senna*.) Name given by Rau to a body composed of sulphur with a trace of some bitter organic substance. It is prepared by precipitating with subacetate of lead solution a decoction (aqueous) of senna leaves. The solution is then filtered and precipitated with sulphuretted hydrogen, the precipitate dried and digested with ether, and the product evaporated to dryness. (Foster.)

Sen'nine. (After the contemporary surgeon Nicholas Senn.) Name for a white odourless disinfectant and antiseptic powder made from phenol and boric acid. It is a proprietary preparation.

Senoc'ular. (*Senoculatus*.) *Biol.* Having six eyes.

Senocula'tus. (*L. sex, six; oculus, an eye*.) *Senocular*.

Sensa'tion. The perception of external impressions by means of the peripheral sense-organs.

S., cor'el'ative. Term for stimulation of the cerebrum by a sensation carried by a single sensory nerve.

S., cuta'neous. A sensation produced through the skin.

S., eccen'tric. Term for the appreciation of locality.

S., exter'nal. Any sensation carried from a peripheral sense-organ.

S., gen'er'al. The same as *S., subjective*.

S., gir'dle. The painful sensation as of a constricting band at the waist. A symptom in certain spinal diseases.

S., inter'nal. The same as *S., subjective*.

S., objec'tive. An *external* sensation produced by something objective.

S., ra'diated. The excitation of one sense by means of another, or from one part, in disease, to another. (Müller.)

S., sec'ondary. The same as *S., radiated*.

S., spec'ial. Any sensation produced through the special senses. See *Senses*.

S., sub'jec'tive. A sensation originating within the cerebrum.

S., tac'tile. A sensation produced through the sense of touch.

S., trans'ference of. Clairvoyance; recognition by tactile sensation of objects generally only distinguished by sight or hearing.

Sense. (*L. sensus*.) The faculty of reception by the mind of impressions carried to the brain by the peripheral nervous system from the external world.

S.-bod'y. A syn. for *S.-organ, peripheral*.

S.-cap'sule. The capsule-like or cup-like receptacle of a *S.-organ, peripheral*.

S.-club. A term for *Rhopalium*.

S.-epithel'ium. Term for any tract of epithelium specialised for some variety of function of sensation.

S.-fil'a'ment. The filamentous peripheral ending of a sensory nerve-fibre.

S.-or'gans. See *S.-organs, central*, and *S.-organs, peripheral*.

S.-or'gans, cen'tral. The collections of cells in the central nervous system in which afferent are converted into efferent impulses.

S.-or'gans, per'i'pheral. The peripheral organs of the special senses; such as the eye, ear, taste-buds, tactile corpuscles, &c.

S.-se'ta. The setose or bristly peripheral ending of a sensory nerve-fibre.

S.-shock. *Med.* Term for a phenomenon occasionally observable in neurotic individuals, especially hysterics and neurasthenics, of either sex. It consists in an aura-like feeling rising upwards from the hands or feet and ending as a bursting sensation at the top of the head.

Sens'es. The special senses; hearing, sight, &c.

Sensibil'itas. (*L.*) Sensibility.

S. anom'ala. Anomalous or excessive sensibility.

S. auc'ta. Increased sensibility. The same as *S. anomala*.

S. morbo'sa. Morbid sensibility. The same as *S. anomala*.

Sensibility. (*Sensibilitas*.) The capacity for receiving and transmitting sensory impressions and for being conscious of this reception or transmission.

S., externalisa'tion of. The same as *S., transference of*.

S., organ'ic. Term for the unconscious transmission of nervous impulses, whether afferent or efferent.

S., range of. See *Fechner's law*.

S., recur'rent. See *Recurrent sensibility*.

S., trans'ference of. A syn. for *Sensitivation*.

Sensible. (*L. sensibilis*.) Capable of feeling, capable of receiving sensory impressions. Also, capable of being perceived by the senses.

Sensiferous. (*L. sensus; fero, to carry*.) Sense-bearing, sentient.

Sensigenous. (*L. sensus; gignere, to produce*.) *Zoöl.* Setting up a sensory impulse.

Sens'itive. (*L. sensitivus*.) Having the power of feeling, or receiving, sensations.

S. den'tine. Term for a hyperæsthesia of the dentine of the teeth, due to irritation of the dentinal tubules.

S. plant. Common name for the *Mimosa sensitiva*.

Sens'itiveness. (*Sensitive*.) *Biol.* Irritability, responsiveness to external stimuli.

Sensitivisation. (*Sensitive*.) A phenomenon said to be present during the *hypnotic state*, in which the subject appears to be affected when external objects are acted upon in one way or another, exactly as though he himself were thus acted upon.

Sensitiv'ity. (*Sensitive*.) The capability of receiving and also of discriminating sensory impressions.

Sensor'ial. (*Sensorium*.) Belonging to sensory impressions or to the *Sensorium*.

Sensori-diges'tive. Belonging to sensation and digestion.

Sensori-motor. (*Sensory; motor*.) Sensory and motor. Epithet applied to nerves which contain both sensory and motor fibres.

S.-mo'tor cen'tres. Nerve-centres which are either mixed sensory and motor, or sensory only but closely connected with motor centres.

Sensor'ium. (*L.*) The common sensory centre of the nervous system; applied especially to that part of the brain which is exclusively connected with sensation.

Also, the entire mechanism of sensation. (Gould.)

S. commu'në. The common seat or centre of all the senses. This term was variously

used to mean the whole brain and spinal cord, and certain parts of the brain.

Sens'ori-vol'itional. (*Sensory; volitional.*) Belonging to *sensation* and *volition*.

Sens'ory. (*L. sentio, sensum, to feel.*) Belonging to, or carrying, *sensation*.

S. apha'sia. See *Aphasia*, *sensory*.

S. cells. The nerve-cells which go to make up sensory end-organs.

S. gan'glia. Those groups of ganglia at the base of the brain which directly communicate with the nerves of special sensation.

S. nerves. See *nerves*, *sensory*.

Sens'us. (*L.*) Sense; also, feeling, sensation.

S. ægritu'dinis. (*L.*) A feeling of illness.

S. commu'nis. A syn. for *Cenæsthesis*.

S. osmomet'ricus. (*Mod. L.*) The sense of smell.

S. pervers'us. (*L.*) Perverted sensation. See *Pseudæsthesia*.

Sent'icose. (*L. sentis, a briar.*) *Bot.* Thorny.

Sent'ient. (*L. sentiens; sentio, to feel.*) Possessed of sensation.

Sentiment'alism. *Pathol.* A name for the affection *Alusia elatio*.

Sent'iments. In *Phrenol.*, the faculties of self-esteem, love of approbation, cautiousness, benevolence, veneration, firmness, conscientiousness, hope, wonder, ideality, wit, and imitation.

Sent'ina. A term for the *Pituitary body*.

Sent'is. (*L.*) A briar or bramble.

S. cani'nus. A name for the *Rosa canina*.

Sentisection. (*L. sentio, to feel; seco, sectum, to cut.*) Term for *Vivisection* of an animal that is fully conscious and alive to pain.

Sep'al. (*Sepalum.*) *Bot.* A leaflet of the calyx of flowers. *Comp. Anat.* A thin, leaf-like organ in certain animals.

Sep'alody. (*Sepal.*) *Bot.* The process of reversion of *petals* into *sepals* in flowering plants.

Sep'alum. (*L. separ, different.*) A *sepal*.

Separate. (*L. separo, separatum.*) Situated apart or distinct. *Bot.* When *stamens* and *pistils* are found in the same individual plant but in different flowers they are termed separate.

S. sys'tem of sew'age. See *Sewage*, *separate system of*.

Separator. An instrument used in dentistry to separate teeth that are too close together, by means of continued pressure.

Separato'rium. (*L. separo, separatum.*) *Pharm.* Old name for a vessel used for separating liquors from the substances with which they have been mixed, or the essential from the non-essential parts. *Surg.* Old name for an instrument for separating the pericranium from the skull in dissection or post-mortem examinations.

Sep'aratory. See *Separatorium*.

Sepedogen'esis. See *Sepedonogenesis*.

Sep'edon. (*Σήπω, to be rotten.*) Rottenness, putridity.

Sepedono'dës. (*Sepedon.*) Putrid.

Sepedonogen'esis. (*Sepedon; γένεσις, origin.*) Putrescence, a tendency to become putrid.

Sep'es. (*L.*) A hedge or row.

S. den'tium. (*L.*) A row of teeth.

Sepetono'dës. The same as *Sepedonodes*.

Sephi'ros. (*Arabic.*) *Surg.* Old term synonymous with *scleroma*.

Sep'ia. (*Σηπία, the cuttle-fish.*) A Genus of the *Cephalopoda*. Also, the inky secretion of the cuttle-fish (*S. officinalis*). Also, term used as synonymous with *Sepiæ, os*.

S. officin'alis. The common cuttle-fish. See *Sepiæ, os*.

Sepiæ, os. The bone, or rather internal shell, of the cuttle-fish, *Sepia officinalis*, formerly used in Medicine, but now only used as a dentifrice.

Sepiar'ius. (*Sepes.*) *Anat.* A row or series. *Bot.* Belonging to a hedge.

Sepi'colous. (*L. sepes, a hedge; colo, to inhabit.*) *Bot.* Growing in hedges.

Sepiost. Shortened form of the word *Sepiostarium*.

Sepiostar'ium. (*Σηπία; ὀστέον, a bone.*) Blainville's term for *Sepiæ, os*.

Sep'ium. A syn. for *Sepiæ, os*.

Sepiasiar'ius. (*Sepiasia, a public place in Capua, where ointments, &c., were formerly sold.*) *Pharm.* Old term for a seller of sweet powders, ointments, &c., ranked among the *Medicatri*.

Sepo'meter. (*Σήπω, to rot; μέτρον, a measure.*) An instrument for the detection of organic impurities in the atmospheric air.

Sepsichym'ia. See *Chymosepsis*.

Seps'in. A poisonous, nitrogenous crystalline body obtained by Bergmann and Schmie-deberg in 1868 from the yeast of putrefying beer.

Seps'is. (*Σήψις, rottenness.*) A condition of putrefaction, or infection by means of pathogenic micro-organisms.

Sep'ta. Plur. of *Septum*.

Septæ'mia. See *Septicæmia*.

Sep'tal. (*Septum.*) Belonging to a *Septum*.

Sep'tan. (*L. septem, seven.*) Every seven days.

S. fe'ver. See *Fever, septan*.

Septa'na. (*Mod. L. septanus, -a -um.*) *Septan*.

S., fe'bris. *Septan fever*.

Septate. (*Septum.*) Provided with a *septum* or *septa*.

S. u'terus. See *Uterus septus*.

Septemangula'tus. (*L. septem; angulus.*) *Bot.* Presenting seven angles.

Septemdenta'tus. (*L. septem; dens.*) *Zoöl.* Having seven teeth.

Septemdigita'tus. (*L. septem; digitus.*) *Bot.* Having seven digitations or folioles.

Septemfoliola'tus. (*L. septem; foliolatus.*) A syn. for *Septemdigitatus*.

Septemloba'tus. *Bot.* Having seven lobes; an epithet applied to leaves.

Septemner'vis. *Bot.* Having seven nerves or nervures; epithet applied to leaves.

Septenary. (*L. septenarius.*) Made up of seven. Among the ancients the septenary years, *i. e.* every seventh year, of life were believed to be critical periods as regards life and health. This idea is still prevalent.

Septenate. (*Septenatus.*) See *Septenatus*.

Septena'tus. (*L. septem, seven apiece.*) *Biol.* Made up of seven parts.

Septen'niad. (*L. septennis, of seven years' space.*) A seventh year or septenary year. See *Septenary*.

Septen'trio. (*L. septem, seven; triones,*

oxen at the plough.) *Astron.* A name for the constellation of the Great Bear, *Ursa major*. Also, simply the north.

Septentrionalis. (*Septentrio*.) *Biol.* Growing or living in the north, northern.

Septentrionalis. (*Septentrio*.) The same as *Septentrionalis*.

Septer'ius. (*Σηπτερίος*, putrefying.) Putrefying, *septic*.

Sept'foil. (*L. septem*, seven; *folium*, a leaf.) *Bot.* Common name for the Genus *Tormentilla*.

S., up'right. *Bot.* Common name for the *Tormentilla erecta*.

Septhæm'ia. See *Septicæmia*.

Sep'tic. (*Σηπτικός*, rotting.) Belonging to *Sepsis*; also, undergoing sepsis.

S. fe'ver. A term for *Septicæmia*.

S. infec'tion. Infection by means of pathogenic germs.

S. intoxica'tion. Septic poisoning. An absorption of septic matter, i.e. of matter that is undergoing sepsis.

S. pes'tilence. A name for the *Plague*.

S. poi'son. Septic matter, matter undergoing sepsis.

S. poi'soning. See *S. intoxication*.

Septicæm'ia. (*Σηπτικός*, rotting; *αἷμα*, blood.) A general infection from absorption of toxic bacterial products, associated with fever, but without the formation of any suppurative foci.

According to its clinical features it has been divided into three varieties.

1. *Fermentation or Resorption Fever*.—A simple absorption fever following upon traumatism. It lasts from one to three days.

2. *Sapremia*.—A septic poisoning by ptomaines formed by putrefactive bacteria in wounds.

It commences with a chill and rapid rise of temperature about twenty-four hours or so after the occurrence of traumatism. The symptoms are those of acute fever. This form is serious in proportion to the dose of the poison absorbed and the possibility of removing that at the seat of infection.

3. *Progressive Septicæmia*.—Caused by ptomaines in the blood produced by microbes which have entered the circulation, and which continue to multiply.

The symptoms begin in from one to three days after infection. The fever is progressive, and the prognosis is bad. The spleen is enlarged and soft, the blood dark, and hæmorrhages are common. There are no emboli or thrombi.

S., phlebit'ic. (*Phlebitis*.) A term for *Pyæmia*.

Septicæm'ic. Belonging to, or having the characters of, *Septicæmia*.

Septi'cidal. (*L. septum*, a partition; *cado*, to fall, decay.) *Bot.* Epithet applied to that kind of dehiscence of the capsule of a fruit in which the separation occurs along the line or union of the carpels.

Sep'ticin. (*Σηπτός*, rotten.) Name for a ptomaine obtained from putrefying flesh, and resembling quinine in its action.

Septicity. The quality of being *Septic*.

Sep'tico-pyæm'ia. A combination of *septicæmia* and *pyæmia*.

S., spontan'eous. Leube's term for a kind of pyæmia arising without obvious exciting cause, or following some slight injury.

Septi'ferous. (*L. septum*; *fero*, to bear.) *Bot.* Bearing *Septa*.

Septifol'ious. (*L. septem*; *folium*, a leaf.) *Bot.* Having seven leaves.

Septiform. (*L. septum*; *forma*, shape.) *Bot.* Having the appearance of a *Septum*.

Septi'fragal. The same as *Septifragous*.

Septi'fragous. (*L. septum*; *frango*, to break.) *Bot.* That kind of dehiscence of the capsule of fruits in which a longitudinal split takes place down the middle of each carpel.

Sep'tile. Belonging to a *Septum* or *Septa*.

Septima'na. (*L.*) A week.

Septimes'tris. (*L.*) Lasting for seven months.

S., fœ'tus. A seven-months' fœtus.

Sep'tine. (*Σηπτός*.) *Sepsin*.

Septinerv'ia. (*L. septem*, seven; *nervus*, a nerve.) *Bot.* Another term for *Plantago*.

Septi'valent. (*L. septem*, seven; *valeo*, to be worth.) *Chem.* Having an atomicity such that each atom is capable of combining with seven monovalent atoms.

Septochemi'a. (*Σηπτός*, rotten; *χημεία*, chemistry.) The septic process, septic action.

Septochym'ia. (*Σηπτός*; *χυμός*, juice.) Old term signifying putrescence of the humours.

Septodiarrhœ'a. (*Σηπτός*; *diarrhœa*.) Putrid or septic diarrhœa.

Septodysente'ria. (*Σηπτός*; *dysenteria*.) Putrid or septic dysentery.

Septo'meter. (*Septum*; *Gr. μέτρον*, a measure.) Name for an instrument designed for measuring the thickness of the *septum nasi*.

Also (*σηπτός*, *μέτρον*), name for an instrument for the detection of organic impurities in the atmospheric air.

Septo'myca. (*Σηπτός*; *μυκή*, a fungus.) A name for the *Fungus mucedo*.

Sep'ton. (*Σηπτός*, putrid.) According to Mitchell, a hypothetical ferment, giving rise to contagious disease.

Septonas'al. (*Septum*; *nasal*.) Belonging to the *Septum nasi*.

Septopneum'a. (*Σηπτός*, rotten; *πνεῦμα*, air.) A pathogenic micro-organism found in the air of cemeteries, and said to give rise to symptoms like typhoid in people infected by it.

Septopyæm'ia. Shortened form of the term *Septico-pyæmia*.

Septo'pyra. (*Σηπτός*; *πῦρ*, a fever.) *Pathol.* A syn. for *Septicæmia*.

Septorrhœ'pyra. (*Σηπτός*; *ρίπω*, to fall; *πῦρ*, a fever.) *Pathol.* A term, introduced by Swediaur, synonymous with *Septopyra*.

Sep'tula. Plur. of *Septulum*.

S. fibro'sa. *Anat.* Term for the fibrous septa or trabeculæ entering the corpus cavernosum from the deep fascia of the penis.

S. intervalveolar'ia. The intervalveolar septa of the lung.

S. medul'læ spina'lis. The connective-tissue trabeculæ or septa of the spinal cord.

S. re'num. Septula of the kidneys. A name for *Bertin*, columns of.

S. tes'tis. The fibrous bands passing from the *mediastinum testis* to the inner surface of the *tunica albuginea*.

Sep'tulate. (*L. septulum*, dim. from *septum*.) *Bot.* Having small septa; also, having alse septa.

Septulifer. *Septuliferous*.

Septuliferous. *Bot.* Bearing a *Septulum*.

Septulum. (Dim. from *L. septum*.) *Bot.* A small dividing wall or band, a dividing wall between small cavities.

Septum. (*L.*) *Biol.* A partition.

S. an'null crural'is. The septum of the crural ring. The *Crural canal*.

S. aor'ticum. One of the segments of the aortic valves.

S. atrio'rum cor'dis. The septum of the atria or *auricles* of the heart.

S. a'trium. The atrial or auricular septum of the heart.

S. auricular'um. The septum of the auricles, or *auricular septum*, of the heart.

S. bronchia'lē. The *Bronchial septum* (q. v.).

S. bul'bi ureth'rae. The (median, connective-tissue) septum of the *bulb* of the urethra.

S. bursar'ium omenta'lē. The bursal omental septum. A term for the *Gastro-pancreatic ligament*.

S. cartilagin'eum. The cartilaginous septum of the nose, or *Columna nasi*.

S. cerebell'i. A syn. for *Falx cerebelli*.

S. cer'ebr'i. A syn. for *Falx cerebri*.

S. coch'leæ audito'riæ. A term for the *Lamina spiralis*.

S. cor'dis. The septum between the ventricles, or *Septum ventriculorum*, of the heart.

S. crura'lē. Crural septum. The layer of areolar tissue closing in the crural or *femoral ring*.

S. enceph'alli. A term for the *Tentorium cerebelli*.

S. fem'oris. Septum of the femur. Term for a layer of compact bone, forming a buttress on the inner side of the femur, at the union of the neck and shaft.

S. glan'dis. The septum of the glans. Term for the mesial connective-tissue septum of the glans penis.

S. inguina'lē exter'num. The external inguinal septum. Term for that portion of the superficial fascia of the abdomen which is attached to the internal pillar of the external inguinal ring.

S. lin'guæ. Lingual septum. Term for the mesial longitudinal fibrous septum of the tongue.

S. longitudina'lē. The longitudinal septum (of the spinal cord).

S. longitudina'lē poste'rior. The posterior longitudinal septum. Term for the posterior median fissure of the spinal cord.

S. luc'idum. The thin, semi-transparent, hollow vertical septum which separates the two lateral ventricles of the cerebrum, and lies between the corpus callosum and fornix.

S. mea'tus acus'tici. The septum of the auditory meatus. A term for the *Lamina cribrosa*.

S. median'um dorsa'lē. The median dorsal septum. Term for the posterior median fissure of the spinal cord.

S. me'dium cer'ebr'i. Median septum of the cerebrum. A term for the *S. lucidum*.

S. me'dium cor'dis. Median septum of the heart. A term for the *Interventricular septum* of the heart.

S. medullar'ē triangular'ē. Triangular medullary septum. A term for the *Septum lucidum*.

S. membranac'eum. Membranous septum. A term for the *Columna nasi*.

S. membranac'eum aur'is. Membranous septum of the ear. A term for the *Tympanic membrane*.

S. mo'bilē. Mobile septum. A term for the *Columna nasi*.

S. nar'ium. The *Septum nasi*.

S. na'si. The septum of the nose. It is formed by the vomer, the perpendicular plate of the ethmoid and the triangular cartilage termed *columna nasi*, all being covered by the pituitary membrane.

S. ner'veum. Nervous septum. A term for the *Crista acustica*.

S. of nose. See *S. nasi*.

S. of pons Varo'lli. The median raphe of the pons Varolii, formed by decussation of nerve-fibres.

S. os'sis ethmoid'eī. The septum of the ethmoid bone. A thin plate of bone separating the ethmoid cells from one another.

S. paramedian'um dorsa'lē. Dorsal paramedian septum. A term for the *Paramedian sulcus* of the spinal cord.

S. parietal'ē. Parietal septum. Term for the posterior or parietal segment of the *mitral valve* of the heart.

S. par'vum occipita'lē. Small occipital septum. A term for the *Falx cerebelli*.

S. pectinifor'mē. The comb-shaped septum. Name for the imperfect septum between the two *corpora cavernosa* of the penis.

S. pellu'cidum. A syn. for *S. lucidum*.

S. post'icum. Posterior septum. The same as *S. cervicalē*.

S. rec'to-vagina'lē. The recto-vaginal septum, or wall between the rectum and vagina.

S. sca'læ. Septum of the scala. A term for the *Lamina spiralis*.

S. scro'ti. The median raphe or septum of the *Scrotum*.

S. sin'uum sphenoida'l'ium. Sinuous sphenoidal septum. The *S. sphenoida'lē*.

S. sphenoida'lē. Sphenoidal septum. This separates from one another the sphenoidal cells.

S. staphyli'num. Staphyline septum. A term for the *Velum pendulum palati*.

S. subarachnoid'eum. Subarachnoid septum. Term for an incomplete connective-tissue septum along the posterior median fissure of the spinal cord, passing from the arachnoid to the pia mater.

S. ten'uē et pellu'cidum. A syn. for *S. lucidum*.

S. thora'cis. The septum of the thorax. A name for the *Mediastinum*.

S. transver'sum. The transverse septum. A name for the *Diaphragm*; also, for the *Tentorium cerebelli*; also, for the *Crista acustica*.

S. tub'æ. The septum of the Eustachian tube. Term for a thin wall of bone between the Eustachian tube and the tensor tympani.

S. ureth'rae vagina'lē. Vaginal septum of the urethra. A term for the anterior wall of the vagina.

S. vaginæ vaso'rum crural'ium. Septum of the sheath of the crural vessels. A term for the connective-tissue septum separating the femoral artery from the femoral vein within their common sheath.

S. ventriculo'rum. The septum between

the two ventricles, or *ventricular septum*, of the heart.

S. vestibuli nervo-so-membranac'eum. Nervoso-membranous septum of the vestibule. A septum across the *vestibule* of the membranous labyrinth of the middle ear, in its upper and outer part.

Septup'let. (L. *septuplus*, seven times so much.) Name for one of seven offspring at a birth.

Sept'us. (Σηπτός.) Septic.

Sequela. (L. *sequor*, to follow.) A pathological manifestation or symptom following a previous disease. More commonly used in the plural, *Sequelæ*.

Sequelæ. Plur. of *Sequela*. Pathological manifestations or symptoms occurring as a direct result of a previous disease.

Sequest'ral. Belonging to, or having the characters of, a *Sequestrum*.

Sequestra'tion. (L. *sequestratio*.) Formation of a *Sequestrum*.

Also, seclusion of infected persons or of lunatics.

Sequestrec'tomy. (*Sequestrum*; Gr. ἐκτομή, a cutting out.) Excision of a *Sequestrum* of bone.

Sequestro'tomy. (*Sequestrum*; Gr. τομή, a cutting.) Operation for removal of a *Sequestrum* of bone.

Seques'trum. (L. *sequestro*, to separate.) A detached piece of dead bone within a cavity.

S., prim'ary. An entirely free and loose sequestrum.

S., sec'ondary. A partially detached sequestrum.

S., ter'tiary. A slightly detached sequestrum which is still firm in its position.

Seralbu'min. Shortened term for *Serum albumin*.

Serango'dès. (Σήραγξ, a hollow.) Having, or full of, hollows. Old term synonymous with *Cavernous* and *Fistulous*.

Sera'peum. The same as *Serapium*.

Serap'inon. The same as *Serapinum*.

Serap'inum. A syn. for *Sagapenum*.

Serap'inus. An old name for *Gum-arabic*. (Ruland and Johnson.)

Sera'pium. Pharm. Old term synonymous with *Syrupus*.

Ser'bet. See *Sherbet*.

Seremp'ion. (West Indian.) A variety of *Measles* prevalent in the West Indies. It is especially fatal among children.

Serene'-drop. See *Gutta serena*.

Ser'ex. (L. *serus*, late [?].) Old term for *Iac acetosum*.

Serge'ticum. (L. *sergia*, a kind of olive [?].) Pharm. Old epithet applied to an ointment made from the iris, or flower-de-luce.

Ser'ial. Following in a *series* or row.

S. sec'tions. Successive transverse sections of an anatomical specimen.

S. sym'metry. Biol. Similarity of *metameres*, or, in general, of parts in series, or in different transverse planes of the body.

Ser'iate. (*Series*.) Biol. To arrange in a *series*.

Ser'iceous. (L. *sericus*, silken.) Biol. Having a fine, silky pubescence.

Ser'iceps. (L. *sericus*, silken; *caput*, the head.) Obstet. An arrangement of loops of ribbon which has been used instead of midwifery forceps for pulling on the foetal head.

Sericl'acum. (L. *sericus*, silken.) An old name for *Arsenium*.

Sericis'sion. (L. *sericus*, silken; *scindo*, *scissum*, to cut.) Division of tissues by silk thread.

Sericocarpus tortifolius. A North American plant, Nat. Order *Compositæ*. Action, diuretic. (Dunglison.)

Sericter'ium. (Σηρικός, silken.) Zool. The silk gland of Insects.

Sericulture. (L. *sericus*, silken; *culture*.) Silkworm-breeding for the sake of the silk produced.

Sericum. (L. *sericus*, silken.) Silk. The product chiefly of the silkworm, *Bombyx mori*. It was formerly used in Medicine as an alexipharmic and cordial. Bot. Term applied to a soft, silky, shiny pubescence. Chem. An old name for *Minium*.

S. an'glicum. Another name for *Isinglass plaster*.

S. tos'tum. Pharm. Burnt silk. Formerly used in Medicine. See *Silk*.

Serides. Plur. of *Seris* (q. v.).

Serid'ion. (Dim. from Gr. σέρις; see *Seris*.) A name for the *Cichorium intybus*.

Ser'ies. (L.) A row or chain.

S. den'tium. A row of teeth.

Seriflux'us. (L. *serum*; *fluxus*, a flowing.) A serous discharge. Also, any disease characterised by a serous discharge.

Ser'in. (*Serum*.) A term for *Serum-albumin*. Also, a term for amido-glycerol.

Sering'os. A variety of suppurative *Dysentery* prevalent in South Africa.

Seri'ola. The same as *Seridion*.

Ser'ious. (L. *serius*, grave.) Med. Grave, of unfavourable import.

Ser'is. (Σέρις, L. *seris*, a kind of endive.) Bot. A name for the *Cichorium intybus*. In the plur. (*Serides*), the term was formerly applied as an epithet to esculent potherbs.

Sermountain. A common name for the hartwort, *Lacerpitium album*.

Ser'o. Prefix signifying belonging to, or associated with, *Serum*.

Serocoli'tis. (*Sero-*; *colitis*.) Inflammation of the *serous* or peritoneal covering of the colon. See *Colitis*.

Serocyst. (*Sero-*; *cyst*.) A *Serocystic tumour*.

Serocyst'ic tu'mour of breast. (*Serocyst*.) See *Breast, serocystic tumour of*.

Sero-enteri'tis. (*Sero-*; *enteritis*.) Inflammation of the *serous* or peritoneal covering of the small intestine. See *Enteritis*.

Serohepati'tis. (*Sero-*; *hepatitis*.) Inflammation of the *serous* or peritoneal covering of the liver. See *Hepatitis* and *Perihepatitis*.

Sero-fibrinous. Made up of serum and fibrin.

S.-gelat'inous. Made up, or having the characters of, serum and gelatin.

S.-lact'escent. Consisting of, or having the characters of, serum and milk.

S.-pur'ulent. Composed of serum and pus.

S.-pus. A mixture of serum and pus.

S.-sanguin'eous. Composed of serum and blood.

S.-syno'vial. Composed of, or having the characters of, serum and synovial fluid.

Serodermato'sis. (*Serum*; *dermato-*

SERODERMITIS—SERRATIFOLIATUS

sis.) A disease of the skin in which serous effusions occur into the dermal connective tissue.

Serodermi'tis. (*Serum*; *derma*; Gr. fem. adj. term. -*itis*.) A *dermatitis* accompanied by effusion of serum into the dermal connective tissue.

Ser'oid. (*Sero*-; *eidōs*, form, resemblance.) Like a serous membrane.

Ser'olin. (*Sero*-; *oleum*.) An ill-understood substance occurring in the blood in the proportion of one part in 50,000. It occurs in masses of minute needles or scales, soluble in ether and hot alcohol. According to Flint, identical with *stercorin*; according to Goble, a mixture of albumin and fats.

Ser'o-mu'cous. Made up of, or having the characters of, serum and mucus.

Ser'o-phthi'sis. (*Serum*; *phthi'sis*, a wasting.) Term for an abnormally small amount of serum in the blood.

S., endem'ic, pern'icious. A term for *Beri-beri*.

Ser'o-pneumotho'rax. Pneumothorax associated with serous pleuritic effusion.

Ser'o-pur'ulent. Made up of serum mixed with pus.

Ser'o-sangui'neous. Composed of serum and blood.

Ser'o-serous. Belonging to two or more serous membranes.

Ser'o-sublimate gauze. *Surg.* A Listerian antiseptic gauze made by impregnating gauze with a solution of corrosive sublimate in blood serum.

Ser'o-synovi'tis. Synovitis accompanied by serous effusion.

Serosa. (*Serous*.) A serous membrane. Also, in *Embryol.*, the membrane in the embryo of Birds which is analogous with the chorion of Mammals.

Seros'ity. (*L. serosus*, full of whey.) The state or quality of being serous. An old term for the serum of the blood; also, for the whey of milk.

Serot'ina. (*L.*) Fem. sing. of *Serotinus*.

Serot'inous. (*Serotinus*.) *Biol.* Late in the season.

Serot'inus. (*L. serotinus*, -a, -um, late-born.) Late in developing. See *Decidua serotina*.

Ser'ous. (*Serum*.) Belonging to, or having the characters of, serum.

S. apoplexy. See *Apoplexy*, serous.

S. cyst. See *Cyst*, serous.

S. flu'id. A syn. for *Serum* in general.

S. gland. See *Gland*, serous.

S. lay'er. See *Layer*, serous.

S. mem'brane. See *Membrane*, serous.

Serpe'do. (*L. serpo*, to creep.) A term for *Psoriasis*.

Serpens. (*L. serpo*, to creep.) Creeping.

S., ul'cus. *Serpent ulcer*.

Serp'ent. (*L. serpens*.) A snake.

S. poi'son. See *Echidnin*.

S. teeth. Term for incisors which are somewhat twisted, resembling those of snakes.

S. ul'cer. Term for creeping ulcer of the Cornea.

Serpentar'ia. (*L. serpens*, a serpent; name given on account of the snake-like root.) *Bot.* The specific name of the *Aristolochia serpentaria*.

S. gallo'rum. A name for the *Arum dracunculus*.

S. hispan'ica. A name for the *Scorzonera hispanica*.

S. mi'nor. A name for the *Arum maculatum*.

S. ni'gra. A name for the *Actæa racemosa*.

S. virginia'na. A name for the *Aristolochia serpentaria*.

Serpentar'iae brazilien'sis ra'dix. A syn. for *Cainca radix*.

S. rhizo'ma. *B. P.* Serpentry rhizome. The dried rhizome and rootlets of the *Aristolochia serpentaria*, or the *Aristolochia reticulata*. Stimulant, tonic, and diaphoretic. Dose of powder, 10 to 15 grains. *B. P.* Preparations.—*Infusum serpentariae* and *Tinctura serpentariae*.

Serpentar'in. A bitter substance extracted from *Serpentry root*.

Serp'entary rhiz'ome. See *Serpentariae rhizoma*.

S. root. A name for *S. rhizome*.

Serpentine. (*L. serpens*.) Having a creeping, snake-like movement, or a sinuous shape.

Serpenti'num lig'num. See *Lignum serpentinum*.

Serpen'tum, rad'ix. See *Radix serpentum*.

Serpes. (*L. serpo*, to creep.) A syn. for *Herpes*.

Serpig'inous. (*L. serpo*, to creep.) Epithet applied to certain skin affections, &c., which creep from one part to another, developing at one edge as they heal at the other.

S. ul'cer. See *Ulcer*, serpiginous.

Serpi'go. (*L.*) A tetter. A name for Ringworm (*Tinea tonsurans* and *T. corporis*); also, for *Herpes circinatus*; also, for *Lichen psoriasis*.

S. facie'l. A syn. for *Herpes facialis*.

Serpil'lum. The same as *Serpyllum*.

Serpullum. The same as *Serpyllum*.

Serpy'llum. (*L.*) *Bot.* The specific name of the wild thyme, *Thymus serpyllum*. Also, used as a generic name for certain plants. See sub-headings.

S. citra'tum. The lemon thyme. Name for a variety of the *Thymus serpyllum*.

S. vulgar'e. A name for the common thyme, *Thymus vulgaris*.

S. vulgar'e mi'nus. A name for the wild thyme, *Thymus serpyllum*.

Ser'ra. (*L.*) *Surg.* A saw. *Biol.* Any structure resembling a saw.

S. amputato'ria. An amputation saw.

S. sal'via. A syn. for *Salvia africana*; also, for the *Artemisia frigida*.

S. versat'ilis. (*L.*) Versatile saw. An old term for *Trephine*.

Serræfo'lius. (*L. serra*, a saw; *folium*, a leaf.) *Bot.* Having notched or saw-like leaves.

Ser'rate. The same as *Serrated*.

Serrated. (*L. serra*.) *Biol.* Notched or saw-like.

S. su'ture. A suture between two bones whose contiguous edges fit into one another by means of saw-like dentations, as in the bones of the vault of the skull.

Serra'ti. (*L.* Nom. masc. plur. of *serratus*, -a, -um.) Plur. of *Serratus*.

S. inter'nl. Internal serrati. A name for the *Infracostales* muscles.

Serratifolia'tus. (*Serratus*; *foliatus*,

from *L. folium*, a leaf.) The same as *Serræ-folius*.

Serratiform. (*L. serra*; *forma*, shape.) The same as *Serrated*.

Serra'tion. (*Serra*.) The condition of being *serrated*.

Serratula. (Dim. from *L. serratus*.) *Bot.* A Genus of the *Serratulæ*, which are a tribe of the *Carduineæ*. Also, the Genus *Haplotaxis* (Don). Also, the Genus *Picria* (Rumphius). Also, the *Stachys betonica* and *S. tinctoria*.

S. amar'a. A kind of saw-wort which was said to cure ague.

S. arven'sis. The common creeping wolf-thistle. Applied locally for piles; formerly applied to scirrhus tumours.

S. be'hen. A syn. for *Centaurea behen*.

S. tincto'ria. Dyer's savory, or saw-wort. Hab., Europe. Detergent and vulnerary.

Serratu'ra. (*L. serra*, a saw.)

Ser'ature. (*Serratura*.) A dentation or dentelure.

Serra'tus. (*L. serra*, a saw.) *Bot.*, *Zoöl.*, and *Anat.* Toothed like a saw, serrated.

S. anti'cus. A syn. for *Serratus magnus*.

S. anti'cus major. A syn. for *S. magnus*.

S. anti'cus mi'nor. A syn. for *Pectoralis minor*.

S. inter'nus. Term for the *Subcostales* muscles of either side considered as one muscle.

S. mag'nus. A large, flat muscle on the upper and lateral part of the thorax, between the scapula and ribs. It arises anteriorly from the uppermost eight or nine ribs by fleshy digitations or serrations, the first being attached to the first two ribs, and the others each to its corresponding rib only. The muscle becomes narrower posteriorly, and is inserted into the line in front of the base of the scapula and the flat surfaces at the upper and lower angles. The fibres from the first digitation form a thick bundle inserted opposite the upper angle of the scapula, those from the second and third ribs spread out and are inserted along the base of the scapula, those from the remaining digitations converge to be inserted opposite the lower angle of the scapula. This muscle carries the scapula forwards, withdraws the base of scapula from the spine, and thus allows the arm to be still further extended; its lower portion, with the trapezius, rotates the scapula. In forced inspiration, the lower serrations raise and evert the ribs.

S. ma'jor. A syn. for *S. magnus*.

S. ma'jor anti'cus. A syn. for *S. magnus*.

S. pal'sy. Term for paralysis of the *S. magnus* consequent on a lesion of the *posterior thoracic nerve*.

S. posti'cus infe'rior. This dorsal muscle arises from the spines of the lowermost two dorsal and uppermost two or three lumbar vertebræ by an aponeurotic membrane constituting part of the lumbar aponeurosis, and united with the tendon of the *latissimus dorsi*, which is superficial to it. It passes upwards, forwards, and outwards, to be inserted into the lower borders of the lowest four ribs, by means of fleshy digitations. This muscle draws backwards and depresses the lower ribs.

S. posti'cus supe'rior. A thin, flat dorsal muscle, covered, except at its upper border, by the *rhomboideus major*, *rhomboideus minor*, and *levator anguli scapulæ*. It arises from the

lower portion of the *ligamentum nuchæ*, the spines of the seventh cervical and two or three uppermost dorsal vertebræ, and the supra-spinous ligament, by means of a thin aponeurotic tendon. It is inserted by four fleshy digitations, terminating in tendons, into the upper borders and outer surfaces of the second, third, and fourth ribs, external to their angles. It elevates the upper ribs.

Serre-fine. (*F. Lit.*, a "press-fine.") A form of fine spring forceps, made up of metal wire coiled in the centre into two spirals which form the spring, the arms of the forceps being curved in an S-shape.

Serre-nœud. (*F. Lit.*, a "press-knot.") *Surg.* An instrument for slowly severing, or temporarily compressing, a pedicle in an operation.

Serre-pédicule. (*F. Lit.*, a "press-pedicle.") *Surg.* A clamp used for constricting a pedicle.

Ser'es, angle of. *Craniom.* Also termed *metafacial angle*. The angle formed between the two pterygoid processes on either side and the base of the skull in the centre.

S., den'tal glands of. Term for the white epithelial masses in the buccal mucous membrane over the position of emergence of the teeth from the jaw.

Serri'ola. (Dim. from *L. serra*, a saw.) A name for the *Lactuca sylvestris*.

Serrula. The same as *Serratula*.

Serrulate. (*Serrulatus*.) *Bot.* Minutely serrated.

Serrula'tus. (*L. serrula*, dim. from *serra*, a saw.) Serrulate.

Sertoli's cells. Those cells in the seminiferous tubules of the testis which give origin to *spermatoblasts*.

S.'s columns. The supporting-cells or columns of the *Spermatozoa*.

Sertula campa'na. (Dim. from *L. serra*, a garland.) A syn. for *Trifolium melilotus*.

Sertuliferus. (*Sertulum*; *L. fero*, to bear.) Bearing *Sertula* (plur. of *Sertulum*).

Sertulum. (Dim. from *L. sertum*, a garland.) *Bot.* Term for a simple Umbel.

Serum. (*L. serus*, -a, -um, late.) The yellowish, transparent fluid separating from the blood during clotting. It contains *S.-albumin*, *paraglobulin*, and inorganic salts, mainly chlorides of sodium, magnesium, &c. See *Blood-serum*.

S.-albu'min. An albumin of the human body, especially of the blood-serum. Hydrochloric acid converts it into syntonin, dilute alkalies convert it into alkali-albumin.

S. aluminosum. *Pharm.* Alum-whey. An astringent preparation made by boiling alum in cow's milk.

S., blood-. See *Blood-serum*.

S. ca'sein. The same as *S. globulin*.

S. cer'ebro-spinalë. A term for the *Cerebro-spinal fluid*.

S. catharticum. *Pharm.* Purging whey. Prepared by putting damask rosebuds into ordinary whey at night, and straining in the morning. To be drunk shortly after being strained.

S. fibrin'ogen. A term for *Fibrinogen*.

S. glob'ulin. A syn. for *Paraglobulin*.

S. lac'teum. A syn. for *S. lactis*.

S. lac'tis. The whey of milk. See *Whey*.

S. lac'tis ac'idum. Acid whey of milk.
S. lac'tis alumina'tum. A syn. for *S. aluminosum*.

S. lac'tis dul'cē. Sweet whey of milk. Term for whey the acid of which has been neutralised by an alkaline carbonate.

S. lu'tein. The pigment of the blood-serum; it is present in the blood of most animals. It becomes bleached by exposure to light.

S. of se'rous mem'branes. The serum secreted by serous membranes. When in excess, it constitutes dropsy. See under *Membrane, serous*.

S. san'guinis. Serum, blood-.

S. scorbut'icum. Pharm. Scorbatic whey. Name for a preparation made of succory and sorrel leaves, fir-tops, scurvy grass, watercress, and coriander seeds, bruised and put in ordinary whey, with some orange juice.

S. sinapin'um. Pharm. Mustard whey. Made by boiling bruised mustard seed in milk, and straining. Used as a diuretic in cases of dropsy.

S. ther'apy. The treatment of certain bacillary diseases by injection of sterilised serum from animals rendered immune to the disease.

Serum'al. Belonging to Serum.

S. cal'culus. Term for a deposit of tartar on the teeth secreted by diseased gums.

Serumu'ria. (Serum; Gr. οὔρος, urine.) A term for *Albuminuria*.

Ser'vice-be'ing. Bot. A name for the *Amelanchia canadensis*. (Dunglison.)

S. moun'tain. The same as *Service-tree, wild*.

S. tree. Bot. A name for the *Sorbus domestica*.

S. tree, wld. Bot. Common name for the *Sorbus aucuparia*.

Ses'amē. The *Sesamum indicum*.

S. oil. *Sesami oleum*.

Sesami folia. (*Sesami*, Gen. of *Sesamum*.) Benne leaves. Name in the U. S. P. for the leaves of *Sesamum indicum* and *S. orientale*.

S. oleum. Oil of *Sesame*, Benne oil. A fixed oil resembling olive oil in its properties, obtained from the seeds of the *Sesamum indicum* and *S. orientale*. Used as a hair-oil.

Ses'amoid. (Σήσαμον, a grain; εἶδος, form.) Like a small seed or grain.

S. bod'ies. Term for small fibro-cartilages which sometimes develop in the digital tendons.

S. bones. Small bones formed by ossification in cartilaginous nodules that become developed in certain tendons where these are exposed to much pressure.

S. car'tilages. See *Cartilages, sesamoid*.

S. car'tilages of lar'ynx. Another name for cartilages of Luschka. See *Larynx*, and *Luschka, cartilages of*.

S. car'tilages of nose. See *Nose, cartilages of, sesamoid*.

Sesamoid'es. (Σήσαμοειδής.) Like sesame-seeds. Anat. Sesamoid.

Sesamoid'eus. See *Sesamoides*.

Sesamoid'itis. (*Sesamoid*; Gr. adj. term. -itis.) Vet. Med. Inflammation of the sesamoid bones of the horse's fetlock.

Ses'amum. (Σήσαμον, a grain.) The typical Genus of the tribe *Sesameæ* of the Order *Pedaliaceæ*. All of them are herbaceous plants.

S. in'dicum. Hab., E. Indies. Cultivated for its oil. See *S., oil of*. Leaves demulcent, seeds considered emmenagogue.

S., oil of. See *Sesami oleum*.

S. oleif'erum. A syn. for *S. orientale*.

S. orienta'lē. Properties identical with those of *S. indicum*. The plant is said by some to be identical with the *S. indicum*.

S. vulgar'ē. A syn. for *Camelina sativa* (q. v.).

Sesba'nia grandiflo'ra.

Sescun'cia. Shortened form of the word *Sesquincia*.

Ses'eli. (Σέσელი.) A Genus of the *Seselineæ*, which are a tribe of the *Umbelliferae*.

Also, the *Laserpitium siler*, or hartwort.

S. ægopo'dium. A syn. for *Ligusticum podagraria*.

S. an'num. A syn. for *S. tortuosum*.

S. car'um. A syn. for *Carum carui*.

S. car'ui. The same as *S. carum*.

S. cret'icum. A name for the *Tordylium officinale*.

S. foeniculifo'lium. A syn. for *Sison ammi*.

S. grav'eolens. A syn. for *Apium graveolens*.

S. marsillen'sē. A syn. for *S. tortuosum*.

S. me'um. A syn. for *Ethusa meum*.

S. pat'ens. The same as *S. tortuosum*.

S. praten'sē. A syn. for *Peucedanum silaia*.

S. tortuo'sum. The hartwort of *Marseilles*. Seeds, pungent.

Ses'elis. A name for the *Laserpitium siler*.

Ses'qui. (L. For *semisque*; *semis*, half; *que*, also; because it is a half in addition to a whole.) Prefix signifying one and a half. In Chem., the prefix denotes a salt containing one and a half times the proportion of the base or acid named contained in the corresponding normal salt.

Sesquial'ter. (L. *sesqui*; *alter*, another.) Biol. A syn. for *Sesquicellus*.

Sesquicell'us. (L. *sesqui*; *ocellus*, a little eye.) Biol. A large mark or spot, with a smaller spot in its centre.

Sesquioxide. An oxide which contains three parts of oxygen to two of the other element in combination.

S. of i'ron. See *Iron, sesquioxide of*.

Sesquioxida'tus. (Mod. L.) Sesqui-oxidised, in the condition of a *Sesquioxide*.

Sesquiox'y'dum. A *Sesquioxide*.

Ses'quisalt. Chem. A salt of any element containing one and a half times as many parts of the element as does the corresponding *proto-salt*.

Sesquiun'cia. (L. *sesqui*-; *uncia*.) Pharm. An ounce and a half.

Ses'sile. (L. *sessilis*.) Biol. Fixed by a broad base without a stalk or pedicle.

Sessilifo'rus. (L. *sessilis*; *flos, floris*, a flower.) Bot. Having sessile flowers.

Sessilifolia'tus. (L. *sessilis*; *folium*, a leaf.) Bot. Having sessile leaves.

Sessilifol'ius. (*Sessilis*; *folium*.) The same as *Sessilifoliatus*.

Ses'silis. (L.) Sitting dwarfish or low. Biol. *Sessile*.

Set. Surg. To set a fracture is to reduce the displacement, if any, and put up the part in a suitable apparatus.

Se'ta. (L.) A bristle. *Biol.* Any stiff, bristle-like appendage.

S. equi'na. (L. *equinus*, belonging to a horse.)

Seta'ceous. (L. *seta*.) Bristly.

Seta'ceum. A syn. for *Seton*.

Setæ. (L.) Plur. of *Seta*.

S. siliquæ hirsu'tæ. (L.) A name for the *Dolichos pruriens*. (Dunglison.)

Seta'ria roccella. (L. *seta*.) A syn. for *Lichen roccella*.

Set'fast. A term for *Furunculus*. (Dunglison.)

Se'thia acumi'na'ta. An East Indian tree, Order *Linacæ*. Leaves, vermifuge.

Se'ti- (L. *seta*, a bristle.) *Biol.* Prefix signifying furnished with bristles or bristle-like bodies.

Seti'ferous. (*Seti-*; L. *fero*, to bear.) A syn. for *Setigerous*.

Setiform. (*Seti-*; L. *forma*, shape.) Bristle-shaped.

Set'iger. The same as *Setigerous*.

Seti'gerous. (*Seti-*; L. *gero*, to bear.) *Biol.* Bearing *Setæ*.

Seti'parous. (*Seti-*; L. *pario*, to bring forth.) *Biol.* Producing *Setæ*.

Seton. (L. *seta*, a bristle.) *Surg.* A thread drawn through a fold of skin so as to maintain an opening for discharges (an *issue*), or drawn through a sinus or cavity to keep this from healing up.

S. need'le. A needle for passing a *seton* through a fold of skin.

Se'tose. (*Seta*.) Furnished with, or full of, *Setæ*.

Seto'sus. (L.) *Setose*.

Set'schenow's cen'tre, inhibi'tory. A hypothetical inhibitory nerve-centre for reflex movements, suggested by Setschenow as existing in the corpora quadrigemina and medulla oblongata.

Setterwort. *Bot.* A common name for the *Helleborus fætidus*.

Set'ting. See *Set*.

Setula. (Dim. from *Seta*.) A small *Seta*.

Seutin's ban'dage. Common term for a *Starch bandage*, after Seutin, who introduced it.

Sevadilla. See *Cevadilla*.

Seva'tio. (L. *sebum*, suet.) Old term synonymous with *Steatoma*.

Sev'en-bark. A name for the *Hydrangea arborescens*.

Seven-day disease'. A term for *Trismus*.

S.-day fe'ver. A term for *Fever, relapsing*.

Seven'teen-day fe'ver. A term for *Relapsing fever*.

Sevi'parous. (L. *sebum*, suet; *pario*, to bring forth.) A syn. for *Sebiparous*.

Se'vum. (L.) Suet. The fat of the abdomen of the sheep, strained and clarified. Composed mainly of stearin, with small quantities of palmitin and olein. Used in *Pharmacy* as a basis for ointments and liniments.

S. bovil'lum. The same as *S. bovinum*.

S. bovin'um. Beef tallow.

S. bu'bulum. The same as *S. bovinum*.

S. ce'ti. (*Cetum*.) The fat of the whale, *Spermaceti*.

S. ovil'lum. (L. *ovis*, a sheep.) The fat of the sheep, mutton suet.

S. præpara'tum. B. P. Prepared suet.

The internal fat of the abdomen of the sheep, *Ovis aries*, purified by being melted and strained. It is contained in *Emplastrum Cantharidis* and *Unguentum Hydrargyri*.

S. vervici'num. The same as *S. ovillum*.

Sew'age. (*Sewer*.) A complex liquid consisting of human fæces from water-closets and privies, urine, water from kitchens containing vegetable and other refuse, water from wash-houses, and animal matter from soiled linen, drainage from stables, cow-houses, and slaughter-houses. Some of the solid matters in sewage are in solution, some merely in suspension.

S. dispos'al of. The various systems of sewage-disposal may be enumerated as follows:

1. The midden system.

2. The pail or tub system.

3. The German system of moveable receptacles (practically identical with 2).

4. The Eureka system. Into the moveable receptacle or box was put a disinfectant or deodorising mixture.

5. The Goux system. The pails are lined with absorbent material.

6. Reginald Smith's process. See *Smith, Reginald's, process of disposal of sewage*.

7. The dry system, by means of earth-closets.

8. The water-carriage system, by means of water-closets.

S. far'ming. The disposal of sewage by means of irrigation or filtration upon areas of land, which thus become manured and are used for the cultivation of various crops.

S. fun'gus. See, in Appendix, *Beggiatoa alba*.

S., sep'a'rate sys'tem of. Any system of sewers which excludes the whole or part of the rainfall.

Sew'er. (Mid. Eng. *sewer*, a canal.) A channel, generally covered, for receiving and removing impure and refuse liquids, holding solids in solution or suspension, derived from several habitations.

S.-air throat. The same as *Sewer-gas throat*.

S.-gas. This is a mixture of gases, consisting of organic nitrogen, combined nitrogen, ammonia, and chlorine. It varies in composition; in some cases it is highly poisonous.

S.-gas pneumo'nia. A form of pneumonia set up by the inhaling of sewer-gas.

S.-gas throat. A form of acute tonsillitis set up by the inhaling of sewer-gas.

Sew'rage. Term for the collecting and disposal of sewage.

Sewing spasm. See *Spasm, sewing*.

Sex. (L. *sexus*.) *Biol.* The condition of being either a male or female.

Sex- (L. *sex*, six.) Prefix denoting the number six.

Sexdig'ital. (L. *sex*, six; *digitus*.) Having six digits.

Sexdig'itism. (L. *sex*, six; *digitus*.) The condition of being *Sexdigital*.

Sexfi'dus. (L. *sex*; *findo*, to cleave.) *Bot.* Divided into six parts.

Sexflo'rus. (L. *sex*; *flos*, *floris*, a flower.) *Bot.* Having six flowers.

Sexfo'rus. (L. *sex*; *foris*, a door.) *Bot.* Pierced with six holes.

Sexidig'itate. The same as *Sexdigital*.

Sexi'ferous. (L. *sexus*, sex; *fero*, to bear.) *Biol.* Bearing sexual organs.

Sexjugus. (L. *sex*; *jugum*, a yoke.) *Bot.* Epithet applied to a pinnate leaf made up of six pairs of leaflets.

Sex'tan fever. (L. *sextus*, sixth.) A form of *Malarial fever* in which a paroxysm comes on every sixth day.

Sex'tans. (L.) A weight of two ounces, the sixth part of a pound.

Sextantarius. (L.) Of the weight of two ounces.

Sextarius. (L.) A Roman measure containing two costulæ or seminæ; about one pint and a half.

Sextula. (L.) The sixth part of an ounce, or a drachm and a scruple.

Sextu'plet. (L. *sextuplus*, six times so much.) One of six offspring born from a single pregnancy.

Sexual. (L. *sexus*, sex.) Belonging to *Sex*.

S. act. A term for *Coition*.

S. bon'dage. Term for the abnormal but not absolutely perverse sexual dependence of an individual upon one of the other sex. (Gould.)

S. diseas'es. Diseases of the sexual organs.

S. in'stinct. The natural instinct of attraction of one sex for the other.

S. in'stinct, inver'sion of. The special variety of sexual perversion in which there is sexual desire for another person of the same sex.

S. in'stinct, pervers'ion of. See *S. perversion*.

S. intercourse. A term for *Coition*.

S. inver'sion. The same as *S. instinct*, *inversion of*.

S. metamor'phosis. Term for a variety of *S. perversion*, the subject of which has the instincts and tastes and wears the dress of the opposite sex.

S. organs. The *Genital organs*.

S. pervers'ion. Any abnormal alteration of the natural sexual instincts.

S. selec'tion. The selection by the females of the strongest and most attractive males of their species. This is one of the factors in *Evolution*, as pointed out by Darwin.

S. sys'tem. *Bot.* Term for the classification of plants introduced by Linnaeus, in which they were arranged according to the sex denoted by their organs of fructification.

Sexualia. (*Sexualis*. L. *sexus*, sex.) The *Sexual organs*.

Sexuality. (*Sexus*.) The characteristics of sex; those special characters which go to constitute either a male or a female.

Sexually. In a manner characteristic of sex.

Sex'us. (L.) A sex.

S. alter. Another or the other sex.

S. for'tior. The stronger or male sex.

S. mulieb'ris. The womanly or female sex.

S. po'tior. The more powerful or male sex.

S. se'quior. The worse sex. Old term for female sex.

S. vir'i'lis. The male sex.

Sexva'lent. (L. *sex*, six; *valeo*, to be powerful.) *Chem.* Capable of combining with six monovalent atoms.

Seyd'schutz. The same as *Seidlitz*.

Shab. Scab. A disease occurring in sheep. Also, to rub or scratch.

Shabbed. Mangy, scabbed.

Shab'by. Mangy, scabby.

Shac'kle. (Ang.-Sax. *scacul*, a shackle.) Something which hinders or confines. Also, a term used for the *Carpus*.

S. joint. A variety of articulation formed by the bony ring of one part passing through a perforation of another part. It is seen in the exoskeleton of some fishes.

S. vein. A vein of the horse, probably the median antebrachial, from which blood was formerly abstracted.

Shad'-bush. (Named from the fish, because it flowers at the time they ascend the rivers.) June-berry, *Amelanchier canadensis*.

Shad'dock. Fruit of *Citrus decumana*, called after the captain of a vessel who first took it to the West Indies from China. It is large, inferior to the orange in flavour, but as it keeps better it is useful on long voyages.

Shad'ow. (Ang.-Sax. *scadu*.) The dark figure or image projected by a body when it intercepts the light.

Also, a phantom-cell or skeletonised blood-cell formed by the removal of the hæmoglobin from a red blood-cell.

S. test. 1. A method of finding out by refraction whether an eye be myopic or hypermetropic. It depends on the fact that as the mirror used to throw light into the eye is moved, the shadow is seen to move in the opposite or the same way according as the lens is concave or plane.

2. A light is thrown into the outer side of an eye affected with a cataract in its second stage, *i.e.* while there is still a translucent circumferential area in the lens, and a shadow of the iris is seen on the surface of the opaque, more centrally placed portion of the lens. No shadow is seen when the lens is totally opaque.

See also *Skiascopy*.

Shady-Grove springs. Chalybeate and sulphuretted waters, Jefferson County, Tennessee.

Shaft. The trunk of any columnar mass.

Shag'gy cho'ron. Chorion covered with villi.

Shake. To quiver, tremble, cause to move with quick vibrations.

Shakes. A popular term for *ague*.

Shak'ing. A passive Swedish movement used in the treatment of nervous affections.

S. cure. The treatment of certain nervous diseases, such as paralysis agitans, by means of a vibrating arm-chair.

S. pal'sy. Paralysis agitans.

Shallot. Syn. for *Eschalot*, a species of *Allium*, employed in culinary operations.

Shallow-brained. Of no depth of intellect; empty-headed.

Sham'ming A'braham. Feigning sickness.

Shampoo'. A synonym of *Massage*. To lather, wash, or rub the head.

Shampoo'ing. (Hindoo *tchampuâ*, shampoo.) The performance of massage with the application of a liniment or other medicinal substance, and also in connection with the Turkish bath.

Shank. The leg. The *Tibia* or shin-bone.

Shank'er. Chancre.

Shan'ndale springs. Saline chalybeate waters, Jefferson County, West Virginia.

Shape. Vulva.

Shapeless. Destitute of regular form; amorphous.

Shapelessness. Shapeless character or condition.

Shapeliness. The state of being shapely; beauty of form.

Shapely. Well formed; symmetrical.

Share-bone. The os pubis.

Shark oil. Fixed oil obtained from the livers of sharks; used as a substitute and an adulteration of cod-liver oil.

Sha'ron springs. Mild saline sulphur springs in Schoharie County, New York.

Also, chalybeate waters, Sharon springs in Bland County, Virginia.

Sharp-set. Having a sharp appetite.

Sharpey's fibres, or perforating rods of Sharpey. Fibres that pass through and seem to rivet several concentric laminae of bone; they are attached to the periosteum.

Shat'ter-brain. A careless, giddy individual.

Shat'ter-pated. The same as *Shatter-brain*.

Sha'ven-beard appearance. A peculiar appearance of the enlarged intestinal glands in typhoid fever. They are dark red or reddish grey in colour, and marked with fine white striation.

Shaw's hot springs. Saline thermal waters, 120° F., two miles from Carson city, Ormsby County, Nevada.

She a butter. See *Salam butter*.

Shear'ing. (N. H. Ger. *schere*.) The overlapping of the cranial bones of the fœtus during its passage through the pelvis.

Shears. A large pair of scissors.

S., band'age. Strong shears for cutting gummed bandages, &c., usually bent at an angle.

Sheath. (Ang.-Sax. *sceath*.) A membrane, fascia, or other sheet or layer of condensed connective tissue, which closely invests a part or organ, and serves to bind it down or hold it in place.

S., arachnoid'ean. A delicate partition lying between the pial sheath and the dural sheath of the optic nerve.

S., ax'is-cylinder. Huxley's layer. A layer of nucleated, elongated, polygonal cells lying within Henle's layer of the inner root-sheath of hairs.

S., cap'illary, or circumvascular. (L.) A wide lymphatic tube surrounding some of the smaller blood-vessels.

S., carot'id. (L. *caroticus*, producing sleep.) The sheath of fascia confining the internal jugular, the common carotid and the vagus nerve.

S., cel'lular. Same as *Epineurium*.

S., chord'al. (L. *chorda*, a string.) The investment of the notochord.

S., cor'tical. (L. *cortex*, bark.) The bast bundles.

S., cru'al. (L. *crura*, legs.) The sheath of fascia investing the femoral vessels, formed from the abdominal fascia above.

S., den'tinal, of Neu'mann. (L. *dens*, a tooth.) The proper sheath of the dentinal fibres; the wall of the dentinal canaliculi.

S., du'al. A strong fibrous membrane forming the external coat of the optic nerve.

S., fem'oral. See *S., crural*.

S., fi'bril. A sheath formed of connective-tissue fibres which surrounds the individual nerve-fibres.

S., Hux'ley's. See *Axis-cylinder sheath*.

S., lamel'lar. See *Perineurium*.

S., medul'lary. (L. *medius*, in the middle.) The myelin sheath surrounding the axis-cylinder.

S., my'elin. See *Neurilemma*.

S., nerve. See *Perineurium*.

S., Neu'mann's. See *S., dentinal*.

S. of Hen'le. The delicate connective-tissue envelope of a nerve-fibre outside the sheath of Schwann, being a continuation of the perineurium.

S. of Mauth'ner. The protoplasmic sheath under the sheath of Schwann, passing in at the nodes of Ranvier to separate the myelin from the axis-cylinder. It thus encloses the myelin in a double sac. The outer leaf becomes thickened about the middle of the internode, enclosing a nucleus.

S. of opt'ic nerve. The investment derived from the dura mater.

S. of rec'tus. The sheath formed by the aponeuroses of the internal and external oblique and the transversalis. It is formed by the splitting of the aponeurosis of the internal oblique above the fold of Douglas; below that all the aponeuroses pass in front of the muscle.

S. of Schwann. Same as *Neurilemma*.

S., perivas'cular. (Gr. *περί*, round; *vasculum*, a small vessel.) The fibrous tissue enveloping a blood-vessel.

S., pi'al. (L. *pia mater*, tender mother.) Extension of the pia mater of the brain investing the optic nerve.

S., prim'itive. See *Neurilemma*.

S., root-. See *Root-sheath*.

S., syno'vial. (N. Latin *synovialis*, synovial.) A teno-synovial membrane.

Shed. To throw off.

Shed'ding. Throwing off.

S. teeth. The teeth of the first dentition.

Sheep. A ruminant mammal of the Family *Bovidae* and Genus *Ovis*.

S. berry. *Viburnum lentigo*.

S. bug. *Argus Tholozani*.

S. laur'el. *Kalmia angustifolia*.

S. pest. The sheep-tick.

S. poi'son. *Kalmia latifolia*.

S.-pox. A pustular contagious eruption similar to cow-pox.

S. sor'el. The leaves of the common sorrel, *Rumex acetosella*. Their acidity is due to potassium tartrate and oxalate. They are refrigerant and diuretic, and are useful as an antiscorbutic. Dose of the fluid extract, one to two drachms.

S.-weed. Soap-root, *Saponaria officinalis*.

S.'s wool fat. Same as *Lanoline*.

Sheet. A broad, usually flat, thin piece of anything.

S. bath. The application of cold water to the body by means of a sheet or towel placed next to the skin. As the sheet dries, more water is squeezed from a sponge on to the sheet.

Shel'don spring. Alkaline saline water, Sheldon, Franklin County, Vermont.

Shellac. A resinous incrustation produced on the bark of the twigs and branches of various tropical trees. It is prepared by spreading the resin in thin plates after it has been

melted and strained, the colouring matter being separated.

Shell-meat. Shelled food. Some edible having a shell, as shell-fish or eggs.

Shells. A term for tinted spectacles for protecting the eyes from bright light.

Shenandoah alum springs. Alum, chalybeate, and arsenic waters, Shenandoah County, Virginia.

Shepherd's-purse. The *Capsella bursa-pastoris*. A common herb possessing tonic, stimulant, and active diuretic properties. Dose of fluid extract 15 minims to 1 drachm. (Unofficial.)

Sheringham valve. A glass ventilator used on windows, capable of regulating the amount of air passing into a room.

Sherwood oil. The same as *Petroleum ether*.

Shield. A protective structure or apparatus. *Biol.* A protective plate, scute, lorica, or carapace.

S., antithermic. (Ἀντί, set against; θερμός, heat.) Device for preventing the cautery destroying the tissues round the field of operation.

S.-bone. The *Scapula*.

S., nipple. A protective covering for sore nipples.

S., Sim's. An instrument used in the application of wire sutures.

Shikimi, or Shikimia. A poisonous crystalline substance in *Illicium religiosum*, a Japanese variety of the star-anise.

Shimu-mush'i. A Japanese febrile disease, supposed to be due to the bite of an insect.

Shin. (Ang.-Sax. *scina*, *scyne*, shin.) The front part of the human leg from the knee to the ankle, along which the anterior border of the tibia can be felt.

S. bone. The *Tibia*.

Shingles. (L. *cingulum*, a girdle.) Herpes zoster.

Ship fever. A synonym of *Typhus fever*.

Shirt-stud abscess. Form of abscess having a superficial cavity connected with a deeper one by a sinus.

Shivering. A tremulous quivering from cold or fear. Often a concomitant of fevers.

Shocco springs. Saline sulphur springs in Warren County, North Carolina.

Shock. Any sudden, more or less violent physical or mental impression. A condition of profound prostration of voluntary and involuntary functions; of sudden onset, caused by trauma, surgical operations, or excessive emotions. It is due in part to over-stimulation and consequent exhaustion of the nervous centres, possibly combined with the inhibitory action of centres rendered too irritable by the over-stimulation or otherwise. The condition is associated with an abnormally high specific gravity of the blood.

1. Simple traumatic neurasthenia. Listlessness, nervous irritability. Extreme cases may go on to melancholia.

2. With marked hysterical features. The symptoms of (1) with emotional want of control, a very marked general tremor, and sensory disturbances, as hemianæsthesia, limitation of the field of vision.

3. With symptoms suggesting organic disease of the brain and spinal cord, those of pachymeningitis chronica. No external injury may

be visible. Sensory changes come on; motor are rarer. Commences with excitement some time (e.g. ten days) after the apparent cause has ceased to operate. Symptoms of organic change, bladder symptoms, optic atrophy, paresis, signs of sclerosis of the spinal cord.

S., deferred. The curious condition in which the manifestations of shock, not due to bodily injury, develop some time after the cause.

S., discharging. A shock produced by a discharge of electricity.

S., electric. The effect produced on the organism by the opening and closing of an electric circuit in which it is included.

S., epigastric. (Ἐπί, on; γαστήρ, the stomach.) The result of a blow on the epigastrium.

S., euthismic. A form of shock attended with symptoms of excitement.

S., foetal. The sensation produced by movements of the foetus in utero.

S., railway. The mental impression produced by a railway accident.

S., secondary. A second attack occurring after the first.

S., sexual. Shock produced by rape or coitus.

S., torpid. Shock in which marked depression is a prominent symptom.

S., traumatic. (Τραυμα, injury.) Shock due to traumatism.

Shoddy. Cloth made from rags and cast-off woollen clothing.

S. fever, or disease. A febrile condition caused by the inhalation of dust in making shoddy yarns or fabrics. It is characterised by feverishness, headache, nausea, dryness of the mouth, dyspnoea, cough, and expectoration.

Shoe. A covering of the foot.

S., club-foot. A shoe provided with braces for the correction of talipes.

S. salesman's disease. One of the occupation neuroses characterised by paradoxical paralysis of the anterior tibial muscles produced by the habitual assumption of the stooping position in trying on shoes. Degeneration changes take place in the muscles and nerve-endings.

S., Sayre. The high shoe used in hip disease.

S., Scarpa's. A shoe for rectifying the deformity of *Talipes varus*.

Shone's system. A system for the disposal of *Sewage*.

Short. Of brief duration.

S. breath. Same as *Dyspnoea*.

S. circuit. A circuit in which the electric current encounters an abnormally small resistance.

S. fever. Relapsing fever.

S. ribs. The ribs that do not articulate with the sternum.

S.-sight. *Myopia*.

S.-wind'ed. Difficulty of breathing; panting; the inability to undertake exertion without shortness of breath.

S.-wind'edness. The state of being short-winded. *Dyspnoea*.

S.-witted. Having little wit.

Shortsightedness. A condition of the eye in which rays of light which are parallel when they fall upon the lens are brought to a focus in front of the retina, and diverge before falling on the retina, thus causing diffusion circles on the retina of a blurred image.

Shot-gun prescrip'tion. A prescription containing many drugs of divers properties.

S. qua'rantine. (L. *quadraginta*, forty.) The prevention of traffic to or from yellow fever districts by mob force.

Shoul'der. (Ang.-Sax. *sculder*.) The parts about the scapula, the acromial end of the clavicle, and the upper part of the humerus.

S.-blade. The *Scapula*.

S.-bone. The *Scapula*.

S.-gir'dle. The pectoral or scapular girdle or arch.

S.-joint. The articulation between the humerus and the glenoid fossa of the scapula. It is the most freely moveable joint in the body, consequently it has a loose capsule; it is mainly protected by the powerful muscles surrounding it. The tendon of the long head of the biceps passes through the fibrous capsule of the joint, being held *in situ* by the bicipital groove.

S., point of the. The tip of the acromion process of the scapula.

S.-slip. A dislocation or sprain of the shoulder-joint.

S. slipped. Suffering from sprain or dislocation of the shoulder.

S.-splayed. The same as *S.-slipped*.

S. wrench. A wrench, sprain, or dislocation of the shoulder.

Show. A sanguino-serous discharge from the vagina prior to labour. The first appearance of a menstrual flow.

Shrap'nell's mem'brane. The membrana flaccida; the skin layer of the membrana tympani.

Shred. A bit, scrap, fragment, rag, or strip made by cutting or tearing up something.

Shred'dy. Consisting of shreds; ragged.

Shreds. Patches of filmy material passed with the fecal discharges in some cases of enteritis and diarrhœa. They may be composed of false membrane, of actual sloughs from the intestinal mucosa, or of flakes of hardened mucus.

Shriek. A shrill, sharp outcry.

Shrill. (G. *schrill*.) Sharp and piercing in sound; high and keen in voice or note.

S.-tongued. Speaking in a high, shrill voice.

S.-voiced. Having a shrill or piercing voice.

Shrill'ness. The quality of being shrill.

Shrivel. To shrink in bulk and become wrinkled.

Shud'der. (L. G. *schuddern*.) A tremulous motion; a quiver; a vibration. A quick, involuntary tremor or quiver of the body, as from fear, disgust, horror, or cold. A convulsive shiver.

Shud'dering. Shaking, trembling.

Shu'mac. *Rhus coriaria*.

Shunt. In Electricity, a conductor of low resistance, joining two points in an electric current, and completing a path through which the current will pass.

Shurly-Gibbes treat'ment. The treatment of tuberculosis by the injection of iodine or gold and sodium chloride in glycerine.

Shut'tle-bone. See *Scaphoid*.

S. pulse. See *Corrigan's pulse*.

Siagan'opod. *Biol.* The maxilla of a crustacean.

Siagantri'tis. (Συγρόν, a cavity;

ιτις, inflammation.) Inflammation of the lining membrane of the antrum of Highmore.

Siag'on. (Σιάγων, jaw-bone.) *Biol.* The mandible of a crustacean.

Sial'aca. Medicines which affect the salivary glands.

Sial'achus. (Σιάλον, saliva.) *Salivation*.

Sial'aden. A salivary gland.

Sialadeni'tis. (Σιάλον, saliva; ἀδην, a gland.) Inflammation of a salivary gland.

Sialadenon'cus. (Σιάλον, saliva; ἀδην, a gland; ὄγκος, a mass.) A tumour of a salivary gland.

Sialapo'ria. Deficiency in the amount of saliva.

Sialine. *Ptyalin*.

Sialis'mus. (Σιάλισμος, a flow of saliva.) *Ptyalism*; *salivation*.

Sialiste'rium. *Biol.* One of the salivary glands of an insect.

Sialocinet'ic. (Σιάλον, spittle; κίνησις, motion.) Stimulating the flow of saliva.

Sialo'des. Like saliva.

Sialodochi'tis. (Σιάλον, spittle; δοχή, receptacle; ιτις, inflammation.) Inflammation of the ducts of the salivary glands.

S. fibrino'sa. Inflammation of a salivary duct obstructed by a fibrinous exudation.

Sialodo'chium. (Σιάλον, saliva; δοχείον, receptacle.) A salivary duct.

Sialogog'ic. Promoting or provoking a flow of saliva.

Sialogogue. (Σιάλον, saliva; ἀγωγός, leading, drawing forth.) Producing a flow of saliva. *Ptyalogogue*.

Sialoid. (Σιάλον, saliva; εἶδος, like.) Pertaining to or resembling saliva.

Sialolith. (Σιάλον, saliva; λίθος, a stone.) A salivary calculus.

Sialolithi'asis. (Σιάλον, saliva; λιθίασις, disease of the stone.) The condition tending to produce salivary calculi.

Sialon'cus. (Σιάλον, spittle; ὄγκος, a tumour.) A tumour under the tongue, arising from the obstruction of a duct of a salivary gland by calculus or other cause.

Sialorrhœ'a. (Σιάλον, saliva; ῥοιά, a flow.) Excessive flow of saliva. *Ptyalism*; *salivation*.

Sialosche'sis. (Σιάλον, saliva; σχήσις, retention.) Suppression or retention of the salivary secretion.

Sialosteno'sis. (Σιάλον, spittle; στενός, narrow.) Occlusion of a salivary duct.

Sialosyr'inx. (Σιάλον, spittle; σύριγξ, a tube.) A salivary fistula. A syringe for washing out the salivary ducts. A drainage-tube for the salivary ducts.

Sialoze'mia. (Σιάλον, saliva; ζημία, loss.) Loss of saliva.

Si'am fe'ver. See *Fever*.

Siba're. *Phrenitis*.

Sib'bens. A disease formerly endemic in the Scotch Highlands; by some identified with syphilis, by others with yaws.

Sibe'rian plague. *Anthrax*.

S'ibl. A Fijian term for elephantiasis, or a tumour of the leg or arm.

Sib'ilance. The character or quality of being sibilant. Also, a hissing sound.

Sib'ilancy. The same as *Sib'ilance*.

Sib'ilant. (L. *sibilare*, to hiss.) Hissing. Making or having a hissing sound.

S. râle. See *Râles*, *sibilant*.

Sib'ilate. (L. *sibilare*, to hiss.) To pronounce with a hissing sound.

Sib'ilation. The act of sibilating or hissing; the utterance or emission of sibilant sounds.

Sibila'tory. Producing a hissing or sibilant effect.

Sibilis'mus aurium. *Tinnitus aurium.*

Sib'ilous. Hissing. *Sibilant.*

Siccant'ia. (L. *siccare*, to dry.) Drying medicines.

Sic'cate. (L. *siccare*, to dry up or dry.) To dry, especially gradual drying.

Sicca'tion. (L. *siccare*, to dry up.) The act or process of drying.

Sic'cative. Having drying qualities.

Siccha'sia. (Σικχαίνειν, to feel disgust.) A morbid loathing of food.

Sicci'fic. (L. *siccus*, dry; *facere*, to make.) Causing dryness.

Sic'city. Dryness; aridity; absence of moisture.

Sic'cus. Dry.

Sick. (Ang-Sax. *seoc*, sick; having disease or wounds.) Affected with or suffering from physical disorder; more or less disabled by disease or bad health; seriously indisposed; ill. In a restricted sense, affected with nausea; qualmish; inclined to vomit, or actually vomiting; attended with or tending to cause vomiting. To grow sick.

S. bay. The hospital on a ship or man-of-war.

S. bed. A bed to which one is confined by sickness.

S. berth. The same as *S. bay*.

S. brained. Mentally disordered.

S. head'ache. Headache accompanied by nausea; especially, migraine.

S. leave. Leave of absence from duty on account of sickness.

S. list. A list of persons, especially in the naval or military service, who are incapacitated from duty through sickness, or under medical care.

S. list'ed. Entered on the sick list.

S. report'. A sick list. A report rendered at regular or stated intervals, as daily or monthly, by a military or naval surgeon to the proper authority.

S. room. A room occupied by one who is sick.

S. time. Popularly used for menstrual period.

Sick'en. To fall sick; fall into ill-health; become ill. To experience a sickening sensation. To lose force or vitality.

Sick'en'ing. Making sick. Causing or tending to cause faintness, nausea, disgust, or loathing.

Sick'en'ingly. In a sickening manner.

Sick'ish. In a disordered condition or state of health. Out of condition; sickly; somewhat sick or nauseated; slightly qualmish.

Sick'ishly. In a sickish manner.

Sick'ishness. The state of being sickish.

Sickle-germs. A falciform stage in the development of *Coccidia*.

Sick'less. Free from sickness or ill-health.

Sick'lify. To make sickly or sickish.

Sick'lily. In a sickly manner.

Sick'liness. The state or quality of being sickly.

Sick'ly. Habitually ailing or indisposed. Not sound or strong as regards health or natural vigour. Pertaining to, or arising from, a state of impaired health; characteristic of an unhealthy condition. Pertaining to sickness or the sick.

Also, in a sick, sickly, or feeble manner.

Also, to make sickly; to give a sickly or unhealthy appearance to.

Sick'ness. The state of being sick or suffering from disease. A diseased condition of the system; illness; ill-health. A disease, a malady, a particular kind of disorder. Nausea.

S., African sleep'ing. *African lethargy.*

S., bleed'ing. *Hæmophilia.*

S., Cey'lon. Same as *Beri-beri*.

S., com'ital. See *Comital*.

S., coun'try. Same as *Nostalgia*.

S., creep'ing. A chronic form of *Ergotism*.

S., fall'ing. See *Falling sickness*.

S., gall. *Remittent fever.*

S., milk. A form of poisoning.

S., mi'ner's. *Ankylostomiasis.*

S., month'ly. *Menstruation.*

S., moun'tain. A sensation of nausea, with impeded respiration and irregular action of the heart, due to the rarefied air of high altitudes.

Sic'ua. Cupping-glass.

Sic'ula. The penis.

Sicye'don. *Caledon.*

Sic'yos. *Cucumis sativus.*

Side. Either half of the body, right or left, which lies on either hand of the vertical median longitudinal plane. The entirety of any lateral part or region. A part of the body lying laterally with reference to any given or assumed axis, and opposed to another similar or corresponding part; especially that part of the trunk of an animal between the shoulder and the hip.

S.-bone. The hip-bone. The diseased or disordered condition in horses which causes the lateral cartilages above the heels to ossify.

Sidera'tion. (L. *sideratio*, blight produced by the stars.) Apoplexy; gangrene; lightning-stroke.

Siderion. (L.) Surgical instrument made of iron.

Sideris'mus. (Σίδηρος, iron.) A name given by the believers in animal magnetism to the effects produced by bringing metals and other inorganic bodies into a magnetic connection with the human body.

Sideri'tes. Magnet.

Sideri'tis. Magnet; *Teucrium chamaepitys*.

Siderodromopho'bia. (Σίδηρος, iron; δρόμος, way; φόβος, fear.) Morbid dread of travelling by railway.

Siderokre'næ. (Σίδηρος, iron; κρίνη, spring.) Chalybeate mineral water.

Sideroph'ilous. (Σίδηρος, iron; φιλέιν, to love.) Applied to cells which show a tendency to take up iron, *e. g.* the red blood-corpuscles.

Sid'eroscope. (Σίδηρος, iron; σκοπεῖν, to look at, examine.) An instrument for detecting small quantities of iron in any substance by means of a delicate combination of magnetic needles.

Sidero'sis. (Σίδηρουν, overlay with iron.) Pneumonoconiosis in which the particles

are metallic, especially iron. The pigmentation of the lymphatic glands, liver, and kidneys, so called from the presence of iron in the pigment. Bronchiectasis, emphysema, "cilures de poumon," and acute bronchitis are frequent complications.

Siegesbeckia orientalis. Asia. Nat. Order *Compositæ*. (Not officinal.) An herb with a bitter taste, used especially in Mauritius. It contains a bitter crystalline principle, darulyne. Action, parasiticide; stimulant. Uses, locally in herpes tonsurans, tinea versicolor, in equal parts of a tincture of the plant and glycerine. The tincture also stimulates the stomach like a bitter tonic. Dose, 1 drachm; 10 drops of the fluid extract.

Siegle's speculum. An apparatus for pneumatically testing the mobility of the membrana tympani.

Sieve. A vessel with a reticulated bottom, used to separate coarse from fine particles.

S. cells. Long cells of tubular or prismatic form, constituting an essential element in fibro-vascular bundles of the inner bark of exogenous trees.

S. hypha. The hypha in which the sieve plates occur.

S. pores. The perforations in the panels of the sieve-cells.

S. tissue. A cellular tissue made up of thin-walled cells, which possess areas with sieve-like markings. The tissue is characteristic of the phloëm.

Sie'wer's test. To test the motor activity of the stomach. Two grams of salol are administered in a wafer. Salicylic acid should be present in the urine in from three quarters to one hour. Salol is decomposed in the intestines.

Sig. Abbreviation of *Sigma*. A colloquial name for urine.

Sig'ault's operation. *Symphysiotomy*.

Sige. Taciturnity.

Sigh. (Mid. Eng. *sygh*, variety of *sike*, *sik*.) A sudden, involuntary, deep-drawn inspiration of breath, followed by more or less audible expiration, usually expressive of some emotion or sensation.

Sigh'er. One who sighs.

Sigh'ful. Full of or causing sighs.

Sigh'ingly. With sighing.

Sight. (Ang.-Sax. *gesihth*, *gesieht*, *gesyht*.) The power of vision; the faculty of vision; ability to perceive objects by means of the eyes. Scope of vision.

S., day. *Hemeralopia*.

S., depraved. *Panopsis*.

S., field of. The same as *Field of vision*.

S., line of. The right line joining the object looked at and the eye of the observer.

S., mouse. *Myopia*.

S., nocturnal. The same as *Day-blindness*.

S., old. *Presbyopia*.

S., skew. *Dysopia*.

S., weak. *Asthenopia*.

Sight'ful. Having full sight; clear-sighted.

Sight'fulness. Clearness of vision.

Sight'less. Lacking sight.

Sight'lessly. In a sightless manner.

Sight'lessness. The state of being sightless; want of sight.

Sig'illate. (L. *sigillum*, a seal.) Biol. Marked as if with a seal.

Sigillation. Mark of a cicatrix.

Sig'matism. (Greek letter Sigma, σ .) Sigmatismus. Defective utterance of the sound of *s*. Too frequent use of the *s* sound in speech. Lipping.

Sig'matoid. *Sigmoid*.

Sig'moid. (*Σίγμα*, sigma; *είδος*, likeness.) Shaped like the Greek capital letter sigma. Anat. Having the curve of the uncial sigma or the Roman e.

S. artery. A branch of the inferior mesenteric artery supplying the sigmoid flexure of the colon.

S. cath'eter. One shaped like an S, for passing into the female bladder.

S. cav'ity of the ra'dius. The concave articular surface of the lower end of the radius, which articulates with the ulna.

S. cav'ity, great, of the ul'na. That part articulating with the trochlea of the humerus.

S. cav'ity of the ul'na, small or less'er. That part of the ulna articulating with the head of the radius.

S. flex'ure, her'nia of. Most common as left scrotal hernia.

S. flex'ure of the co'lon. That part of the large intestine immediately above the rectum.

S. flex'ure, vol'vulus of. A twist of the sigmoid loop on itself, causing obstruction of the intestine.

S. gy'rus. The S-shaped cerebral fold about and behind the cruciate fissure in Carnivora.

S. mesoco'lon. The peritoneal attachment of the sigmoid flexure.

S. notch. A deep semilunar gap between the coronoid and articular processes of the lower jaw.

S. valve. One of the aortic or pulmonary semilunar valves. An example of the old use of the term.

Sigmoidi'tis. Inflammation of the sigmoid flexure.

Sigmoidos'tomy. (*Σίγμα*, sigma; *στόμα*, mouth.) The creation of an artificial anus in the sigmoid flexure of the colon.

Sign. (Ang.-Sax. *segen*, *segn*. L. *signum*, a mark.) A visible mark or impress, whether natural or artificial, accidental or purposed, serving to convey information, suggest an idea, or assist inference. A distinctive guiding indication to the eye.

In short, any present or past circumstance afforded by the examination of the patient or of matters concerning him, whence a conclusion may be drawn regarding the nature or seat of his disease. The phenomena preceding the disease are called anamnestic or commemorative signs; those which accompany it are called diagnostic if they reveal the nature or seat of the disease; prognostic when they indicate its probable duration and termination.

S., Ab'adie's. Spasm of the levator palpebræ superioris muscle. Present in, and said to be pathognomonic of, exophthalmic goitre.

S., Al'lie's. Relaxation of the fascia between the crest of the ilium and the trochanter major. Present in fracture of the neck of the femur.

S., Baccell'i's. Reverberation of the

whispered voice, heard through the chest wall. Present in pleural effusion.

S., Ba'ruch's. The resistance of the rectal temperature to a bath of 75° F. for fifteen minutes with friction. Present in typhoid fever.

S., Bur'ton's. Blue line at junction of teeth with gums. Present in chronic lead-poisoning.

S., Chros'tek's. Sudden spasm of one side of the face; elicited by a slight tap on the side of the face. Present in tetany following operation.

S., Clark's. Obliteration of the hepatic dulness due to tympanitic distension of the abdomen. Present in appendicitis and other peritoneal inflammations.

S., Dalrymple's. Abnormal widening of the palpebral aperture. Present in exophthalmic goitre.

S., Da'vidson's. Reflection of light through the pupil in transillumination caused by an electric light in the mouth, said to show health.

S., expres'sive. One which is a means of attending to its signification.

S., Fil'ipovitch's. A saffron-like coloration of all the prominent parts of palms of hands and soles of feet. Present in typhoid fever; shows blood and circulatory changes.

S., Fried'reich's. Diastolic collapse of the cervical veins, showing adherent pericardium.

S., Ga'rel's. Absence of luminosity on the affected side of the walls and sinuses about the mouth, due to disease of the antrum of Highmore, with electric transillumination.

S., Graefe's. Failure of the eyelid to follow the eyeball in glancing downward. Present in exophthalmic goitre.

S., Gran'cher's. The expiratory murmur equals in pitch that of the inspiratory. Shows pulmonary condensation.

S., Guy'on's. Renal ballotement. Indicating floating kidney.

S., Hutch'inson's. Notched teeth, interstitial keratitis, otitis. Shows inherited syphilis. *Hutchinson's teeth.* The upper permanent central incisors are peg-top shape, and notched on their cutting edge. Shows inherited syphilis.

S., Jaccou'd's. Prominence of the aorta in the supra-sternal notch. Showing leukæmia (and pseudo-leukæmia).

S., Jac'quemin's. Violet colour of the mucous membrane of vagina. Appears about the fourth week of gestation. Indicating pregnancy.

S., Parrot's. Dilatation of the pupil. Elicited by pinching the skin of the neck. Shows meningitis.

S., Paul's. A feeble apex-beat, with a forcible impulse over the body of the heart. Indicates pericarditis with pericardial effusion.

S., Ro'senbach's. Abolition of abdominal reflex. Present in inflammatory intestinal diseases.

S., stairs. Difficulty in descending stairs. An early symptom of locomotor ataxy.

S., Stokes's. Violent throbbing in the abdomen to the right of the umbilicus. Indicates acute enteritis.

S., sub'stitute. One which takes the place of its meaning; a means of not thinking about the meaning which it symbolises.

S., sugges'tive. One which merely calls

up a certain idea, which may then be attended to independently of it.

S., Tar'nier's. The effacement of the angle between the upper and lower uterine segments. Indicating pregnancy.

S., West'phal's. Abolition of the knee-jerk. Seen in locomotor ataxy.

S., Wint'rich's. Change in the pitch when the mouth is opened and closed. Indicates a cavity in tuberculosis.

Sign'a. (L. *signare*, to make a sign.) In prescription writing, a conventional term meaning "mark." It designates the physician's directions to the patient concerning the medicine prescribed.

S. assiden'tia. Accompanying, concomitant, or accessory symptoms.

Signal. A sign.

S., marul' Duprez's. The interruption of an electric current produced by a tuning-fork having 100 vibrations per second.

S. sym'ptom. A symptom such as pain, tingling, or unusual motion, that gives warning of some lesion, as of disease or lesion of the great nervous centres.

Sign'als, doc'trine of. A system of discovering the medicinal uses of plants by their supposed resemblance to the disease they would cure.

Sign'ature. (L. *signatura*.) A characteristic mark. The directions showing how medicines are to be taken.

Biol. A characteristic, distinguishing, or significant mark or appearance.

Sign'um. A mark, sign, or indication.

S. characteris'ticum. Same as *Pathognomonic*.

S. conjunc'tum. See *Pathognomonic*.

S. diacrit'icum. Differential symptom of disease.

S. mor'bi essentia'le. Same as *Pathognomonic*.

Signatu'a. The name given by Spanish colonists to a complex set of symptoms that resulted from eating poisonous fishes indigenous to certain hot countries.

Siker'anine. *Hyosine*.

Sikin'ium. A poisonous principle derived from *Illicium religiosum*.

Sik'ka. *Chique*.

Sil'ent re'gion of the sp'inal cord. The *Grey matter*.

Silex. See *Silica*.

Sil'icate. A salt of *Silicic acid*.

Silic'ic. Containing *Silicon*.

Silic'ide. A combination of silicon with some other element.

Silic'ious, or Silic'eous. Having the nature of or containing silicon.

Sil'icle. (L. *silicula*, a little husk or pod.) *Biol.* A short pod, not over three times longer than broad, like that of shepherd's-purse.

Sil'icol. An alcohol from a silicon or silico-carbon radical.

Sil'icon. (L. *silex*, flint.) Next to oxygen, the most abundant element.

Silico'sis. Fibrosis of the lungs from inhalation of siliceous particles. The same as *Chalicosis*.

Silic'ula. The same as *Silicle*.

Silic'ular. *Biol.* Having the shape or appearance of a silicle.

Sil'icule. The same as *Silicle*.

Silic'ulose. *Biol.* The same as *Silicular*.

Sil'icyl. A radical containing silicon directly combined with a trivalent radical.

Silk. The simplest and most perfect of the textile fibres. It differs from all other fibres in that it is found in nature as a continuous fine thread. Silk is the product of the silkworm (*Bombyx mori*), and is simply the fibre that the worm spins around it for protection when entering the pupa or chrysalis state. The silk fibre consists, to the extent of rather more than half its weight, of fibroin, $C_{15}H_{23}N_5O_6$, a nitrogenous principle. Covering this is the silk-glue, or sericin, $C_{15}H_{25}N_5O_8$. The most important physical properties of the silk-fibre are its lustre, strength, and avidity for moisture. Besides the true silk, we have several so-called "wild silks," the most important of which is the Tussur silk, the product of the larva of the moth *Antheraea mylitta*, found in India. The cocoons are much larger than those of the true silkworm, are egg-shaped, and of a silvery drab colour. The cocoon is very firm and hard, and the silk is of a drab colour. It is used for the buff-coloured Indian silks, and latterly largely in the manufacture of silk plush. Other wild silks are the Eria silk of India, the Muga silk of Assam, the Atlas or Fagara silk of China, and the Yamamai silk of Japan. Silk has been used as a hæmostatic. See *Sericum*.

S., epispas'tic. Silk containing some vesicant.

S., floss. Dentists' untwisted filaments of fine silk, prepared expressly for the purpose of cleaning the surfaces of the teeth, and used by some dentists for finishing the surfaces or filling in the sides of teeth.

S., grass. See *Pineapple fibre*.

S., sad'dlers'. A heavy silk used by saddlers, and to some extent in surgery.

Silk'weed. See *Milkweed*.

Silk'worm. The larva of the silk moth.

S. gut. The thread drawn from a silk-worm killed when ready to spin the cocoon.

Sil'loner. (F.) A three-bladed scalpel used by oculists.

Sillus, or **Silo.** One who has a short stumpy nose.

Sil'yhow. A caul.

Silo'am springs. Alkaline saline water in Howell County, Missouri.

Sil'phium. (Gr. *Σιλφιον*, a plant so called on account of its resinous juices.) An umbelliferous plant, *Thapsia silphium*, Viviani, so highly esteemed among the ancients for its juices, which according to Pliny was a remedy for sixty diseases, internal and external, that it was sold for its weight in silver, and figured largely on the coins of Cyrene, its native home. The Greeks called it silphium, from *silphis*, its African name; the Romans, *laserpilium*.

Silpholog'ic. Term applied to diseases the symptoms of which are marked by other symptoms or circumstances. Larval.

Silphology. (Gr. *Σιλφη*, an insect; *λόγος*, science.) The morphology and development of larvæ.

Silurian spring. Alkaline diuretic water, situated fifty feet above Fox River, in Waukesha County, Wisconsin.

Sil'ver. One of the chemical elements.

S., coin. An alloy consisting of nine parts of silver and one of copper.

S. fir. The same as *Abies*.

S. fork deform'ity. A peculiar displace-

ment of the wrist and hand in fracture of the lower extremity of the radius.

Sil'vester's meth'od of restor'ing suspended anima'tion. Artificial respiration, with the tongue drawn forwards while the patient is on his back.

Sima'ba ce'dron. New Granada. Nat. Order *Simarubaceæ* (or *Rutaceæ*). (Not official.) A bitter principle, cedrine, has been isolated. Action, tonic and antispasmodic. Uses, the bruised seeds have been used in hydrophobia and snake-bites. It is useful in malaria and dyspepsia. Dose of the fluid extract, 3 to 20 minims every few hours.

Simaru'ba. Bitter simaruba, or mountain damson. South America and West Indies. (Not official.) Part used, the bark of the tree of *S. officinalis*. It contains a volatile oil and bitter principle, supposed to be identical with quassin. The bark is in-quilled 2 to 3 inches wide, $\frac{1}{4}$ inch thick, several feet long; the external surface is rough, uneven, wrinkled; the subserous layer brownish or yellowish; bark layer fibrous, thick, dull brown; the inner surface lighter; the bark tough. Action, a little tonic; large doses cause nausea and purging; it is diaphoretic and diuretic. Uses, dysentery after acute stage; it may be combined with opium in epidemic dysentery, and in the advanced stages of diarrhœa. Doses, 15 to 30 grains; 15 to 60 drops of the fluid extract; 1 to 2 ounces of the infusion.

Sim'an. Like an ape or monkey in any sense.

Similar. Having the same characteristics.

Similar'ity, law of. "Present actions, sensations, thoughts, or emotions, tend to revive their like among previous impressions or states."

Simila'tio. Assimilation.

Similia similibus curen'tur. See *Homœopathy*.

Simo. One who has a short stumpy nose.

S. trache'lus. Morbid shortness or stiffness of the neck.

Si'mon's opera'tion. An operation for repair of complete rupture of the perinæum by means of sutures, the mucous membrane of the rectum being first approximated by a line of sutures tied in the rectum, following which the external sutures are inserted and the parts brought together.

S.'s posi'tion. An exaggeration of the lithotomy position.

S.'s tri'angles. The groin, the internal aspect of the thigh, and the hypogastric region form the femoral triangle of Simon; the surface of the axilla, the pectoral region, and the inner aspect of the arm form the brachial triangle of Simon. These regions are often the seat of variolous rashes, appearing on the second or third day of smallpox.

Sim'onea folliculo'rum. *Acarus folliculorum*.

Simple. Having few parts; free from complexity or complication; uninvolved; not elaborate; not modified. Of little value or importance. Plain, entire, not varied.

Also, *Med.*, a medicinal herb or medicine obtained from an herb; so called because each vegetable was supposed to possess its particular virtue, and therefore constituting a simple remedy; commonly in the plural.

Also (verb), to gather simples or medicinal plants.

S. apoplexy. Apoplexy with no visible structural change or lesion.

S. asthenic fever. Fever characterised by little, if any, rise of temperature, weak circulation, and great exhaustion.

S. atrophy of the optic nerve. The papilla becomes pale and finally bluish white; it is excavated; the vessels disappear; the dots of the lamina cribrosa become very distinct. The retinal vessels remain unaltered.

Causes.—1. *Tabes dorsalis*, and is then in conjunction with a pupil which does not react to light, and is contracted.

2. Brain affections, especially disseminated sclerosis and progressive paralysis of the insane.

3. Tumours pressing on the nerve or its cerebral continuation.

4. Inflammation and injury.

5. None found (a fairly large class).

S. can'cer. A form of scirrhus which from excessive cell-growth resembles encephaloid cancer.

S. cell. See *Cell*.

S. chol'era. The same as *Sporadic cholera*.

S. com'missure of the cerebel'lum.

S. disloc'a'tion. Dislocation either of the more common varieties, or uncomplicated with wounds or fracture.

S. frac'ture. A fracture uncomplicated by a wound.

S. gan'gion. See *Ganglion*.

S. medic'ine. A medicine consisting of a single drug.

S. ointment. See *Ointment*.

S. toothed. Having one pair of incisors above and below, as a rodent; simplicident.

Simpler. One who collects simples; an herbalist.

Simpleton. A person of limited or feeble intelligence.

Simpli'cian. A simpleton.

Simpli'cident. (*L. simplex*, simple; *dens*, a tooth). Simple-toothed, as a rodent.

Simplist. One skilled in simples or medicinal plants; a simpler.

Simplis'tic. Of, or pertaining to, simples or a simplist.

Simp'son's meth'od. Treatment of *Placenta prævia* by complete separation of the placenta.

S.'s trac'tor. An india-rubber cupping apparatus with pump attached, to fix on the fetal head to apply traction.

Sims' depres'sor. An instrument for holding back the wall of the vagina in examinations.

S.'s feeder. An instrument for aiding in the suture of tissues.

S.'s posture or posi'tion. The *Semi-prone position*.

S.'s spec'ulum. See *Speculum*.

Simula'crum. (*L.*) A likeness, image, form, appearance, phantom. That which is formed in the likeness of any object.

Simula'tion. (*L. simulatio*, feigning.) In *Med.*, the feigning of disease.

Simulo. *Cappacis coriacea*, Peru. Nat. Order *Coriaceæ*. (Not official.) The fruit or seeds are used powdered, one part in ten of wine. Action, nerve tonic, antiepileptic, antihysteria.

Used in nervous diseases such as hysteria, epilepsy. Dose, 1 to 2 drachms of the tincture.

Sin, beset'ting. *Masturbation*.

Sin'a'pis. *Mustard*. Europe. Nat. Order *Cruciferae*. (Official.) The ripe seeds of *Brassica nigra* and *B. alba* reduced to powder. The whole virtue of mustard depends on the fact that when mixed with water the allyl sulphocyanide (mustard oil), the proteid ferment, myrosin, and the glucosides (sanallin and potassium myronate) which it contains interact and produce the acid principles of mustard. Action, laxative, rubefacient, emetic, vesicant. Uses, the whole seeds in dyspepsia, torpid condition of the bowels; as a stimulant emetic in cases of narcotic poisoning; in hiccough; locally as a counter-irritant. Caution is needed in its use locally, too long application producing ulceration.

S. applica'tio. (Not official.) Oil of mustard 4 minims, eau de Cologne 1 ounce. A vesicant.

S. cataplas'ma. Mustard in powder 2½ parts, linseed meal 2½ parts; water a sufficiency. Used as a counter-irritant.

S. char'ta. Mustard in powder one part, solution of gutta percha 2 parts. Cartridge paper is passed through the solution. Used as a vesicant.

S. infu'sum. (Not official.) Mustard 2 drachms, boiling water 4 ounces. Relieves obstinate hiccough.

S. oleum. The oil distilled with water from the seeds of *Brassica nigra*. A powerful vesicant.

S. sinamen'tum compos'itum. Oil of mustard 1 drachm, ethereal extract of mezezon 40 grains, camphor 120 grains, castor oil 5 drachms, rectified spirit 32 drachms. A stimulating liniment.

Sinapis'copy. (*Σίναπι*, mustard; *σκοπεῖν*, to view.) The use of mustard as a test of sensory disturbances, analogous to a similar use of metalloscopy.

Sinca'line. A substance found in the products of decomposition of pig's bile and ox bile. It is also found in extracts of the adrenals, and is a product of the decomposition of the complex fat lecithin. It is a colourless fluid of oily consistency, possesses a strong alkaline reaction, and forms very deliquescent salts with acids. It is a very unstable body.

Sincip'ital. (*L. sinciput*, sinciput.) Of, or pertaining to, the *Sinciput*.

Sin'ciput. (*L.*) The upper part or half of the head; the dome of the skull; the calvarium, including the vertical, frontal, and parietal regions of the cranium; distinguished from the occiput.

Sin'copē. Obsolete spelling of *Syncope*.

Sinde boil. An endemic form of ulcer occurring chiefly in hot climates. It is probably mycotic in origin. See *Scinde boil*.

Sin'don. (*Σινδών*, linen.) A pledget or dossil.

Sin'ew. (Ang.-Sax. *sinu*, seon, sionu.) A cord or tendon of the body. Figuratively, muscle, nerve, nervous energy, strength.

Sin'ewiness. The state or character of being sinewy.

Sin'ewish. Sinewy.

Sin'ewless. Having no sinews or muscles; lacking strength or vigour, as of sinews; not sinewy.

Sin'ewy. Of the nature of a sinew;

resembling a sinew; forming a sinew; tendinous.

Sing'ing voice. The voice employed in singing as opposed to the speaking voice.

Sin'gult. (L. *singultus*, sobbing speech.) A sob or sigh.

Singult'ient. (L. *singultire*, to sob, hiccough.) Sobbing, sighing.

Singult'ous. Relating to, or affected with, hiccough.

Singultus. (L.) A hiccough.

Sin'igrin. A crystalline, bitter-tasting, inodorous glucoside of black mustard; soluble in water, but not in alcohol or ether.

Sin'istral. Towards the left.

Sin'istral. (L. *sinister*, on the left.) Of, or pertaining to, the left side; situated on the left hand; not dextral.

Sinistrality. The state or character of being *Sinistral*, in any sense.

Sin'istrally. *Sinistral*. In a sinistral direction; to or towards the left; from right to left.

Sinistra'tion. A turning to the left; the state of being *Sinistral*.

Sin'istrin. A dextrin-like substance found in squills.

Sinistrocer'ebal. (L. *sinister*, left; *cerebrum*, brain.) Situated or occurring in the left cerebral hemisphere; opposed to dextro-cerebral.

Sinistroyr'ic. (L. *sinister*, left; *gyrare*, to turn.) Tending, moving, or otherwise acting from right to left.

Sinistror'sal. Same as *Sinistrorse*.

Sinistror'se. (L. *sinistrorsus*, toward the left.) Turned or turning to the left; sinistral. Same as *Sinistral*, with the additional meaning of motion or direction, instead of rest or position.

Sink'ing. Affected with debility of vital powers. Disease in process of retrogression.

S., fa'tal. See *Shock*, *nervous*.

Sin'ual. (L. *sinus*, a curve.) Resembling a *Sinus*.

Sin'uate. (L. *sinuare*, to curve, swell out in curves.) *Biol.* Wavy or winding in and out. Applied to the margins of leaves and other flattened organs.

Sinua'tion. The formation of a sinus or recess, as in a margin; a shallow, curved re-entrance; an emargination; a cerebral gyrus.

Sinuauricular. (L. *sinus*, sinus; *auricula*, auricle.) Common to, or situated between, the *Auricles*.

Sinuose. (L. *sinuosus*.) Same as *Sinuuous*.

Sinuosely. Same as *Sinuuously*.

Sinuosity. (L. *sinuare*, to bend.) Anfractuosity; the state of being *Sinuuous* or bent.

Sin'uous. (L. *sinuosus*.) Sinuate, tortuous, serpentine; full of curves, bends, or turns; undulating.

Sinuously. So as to be *Sinuuous*; in a sinuous manner.

Sinuuousness. *Sinuosity*.

Sin'us. (L.) The fold of a garment, the bosom.

Anat. and Zool. A cavity or hollow of bone or other tissue, in the widest sense; a bay, a recess, pocket, dilatation, or excavation, generally deeper and less open than a fossa. Specifically, a hollow or excavation in the bone of the skull; an air sinus. Such sinuses are larger than the spaces which constitute cancellation or

the spongy tissues of bones, and most of them are specified by qualifying terms. A venous channel in the meninges of the brain. The so-called fifth ventricle of the brain.

Pathol. A narrow passage leading to an abscess or other diseased locality; a fistula.

S.s., air. Excavations in the ethmoid, frontal, sphenoid, and superior maxillary bones communicating with the nasal fossæ, and in the mastoid process of the temporal bones communicating with the tympanum.

S. a'læ par'væ. A small venous sinus on the lesser wing of the sphenoid.

S. am'plus ure'teris. (L.; *ούρητήρ*, ureter.) The pelvis of the kidney.

S., an'tic. A sinus of Valsalva.

S. arit'il. (L.) Lachrymal fossa.

S. atlan'tis. (L.) A depression behind the lateral mass of the atlas on the posterior arch.

S. audito'rius. (L.) The cavity of the tympanum.

S. bas'ilar. (*Basís*, base.) The same as *S. transversus*.

S. bran'chial. (*Βραγχία*, gills.) A sinus of the neck found in the position of a branchial cleft.

S. bul'bi ure'thræ. (L.; *ουρήθρα*, urethra.) The dilatation of the bulb of the urethra.

S. cana'lis vertebra'lis. (L.) Any of the spinal veins.

S. cav'ernous. (L.) The cranial sinus on the upper part and side of the body of the sphenoid.

S. circulaire' dutrou occip'ital. See *S. circularis foraminis magni*.

S. circulaire' of Rid'ley. See *S. circular*.

S. cir'cular. A sinus described as encircling the hypophysis cerebri; it is artificially limited, the spongy, blood-holding tissue being continuously pre-, post-, and sub-pituitary.

S. circula'ris forami'nis mag'ni. (L.) A venous plexus surrounding the posterior margin of the foramen magnum.

S. circula'ris ir'idis. (L.) The canal of Schlemm.

S. coch'leæ. (L.) A vein in the aqueduct of the cochlea opening into the internal jugular vein.

S., com'mon, of the ves'tibule. Same as *Utricle*.

S.s., con'fluence of the. The meeting of the superior longitudinal, the straight, the two lateral, and two occipital sinuses.

S., cor'onary. (L.) The mouth of the Coronary vein opening into the right auricle.

S., cra'nial. (*Κρανίον*, the skull.) (a) Same as sinuses of the dura mater. (b) The bony air-sinuses of the skull.

S.s., diplo'ic. (*Διπλοή*, a fold.) The irregular branching channels of the *Diploë*.

S. epididym'idis. (*Ἐπί*, upon; *δίδυμοι*, testes.) The furrow between the posterior surface of the epididymis and the testicle.

S.s., ethmoi'dal. (*Ἐθμός*, sieve; *εἶδος*, likeness.) Irregular cavities in the lateral masses of the ethmoid, completed by the sphenoid, lachrymal maxillæ, and frontal bones. The anterior open into the middle, and the posterior into the superior meatus of the bone.

S. fal'ciform. (L. *falx*, a sickle; *forma*, shape.) The same as the *Superior longitudinal sinus*.

S. fræn'ull. (L. *frænulum*, dim. of *fræ-num*, a bridle.) The depression at the side of the frænum of the penis.

S.s, fron'tal. (L.) The hollow air-spaces between the inner and outer tables of the frontal bone, corresponding to the superciliary ridges.

S., galactoph'orous. (Γάλα, milk; φέρειν, to bear.) The ampullæ of the galactophorous ducts.

S. gan'glion. (Γαγγλίον, a knot.) A group of nerve-cells about the junction of the venous sinus and the auricle of the heart.

S., gen'ital. (L.) See *Genital*.

S., genito-u'rinary. (L. *genitus*, begotten; *urina*, urine.) A cavity or recess common to the genital and urinary passages.

S., great, of the aor'ta. A dilatation usually apparent along the right side of the ascending part of the arch of the aorta.

S.s, intercav'ernous. Two transverse channels connecting the cavernous sinuses.

S., lach'rymal. (L.) A small pouch in the inner angle of the eye in the deer and some other quadrupeds. It can be opened or shut at will; it has no connection with the lachrymal passages, and secretes a viscid material resembling the cerumen of the ear.

S., lat'eral. A large venous sinus, commencing at the torcular Herophilii, grooving the occipital bone at two separate parts on each side, and the parietal and temporal bones.

S., latera'lis. See *S., lateral*.

S.s, longitu'dinal. The venous sinuses on the attached and free borders of the falx cerebri.

S. longitudina'lës colum'næ verte-bra'lis. (L.) The *Longitudinal spinal veins*.

S. luna'tus ra'diil. (L.) The *Semilunar cavity of the radius*.

S. luna'tus ul'næ. (L.) The *Lesser sigmoid cavity of the radius*.

S., lymph. (L. *lymp̄ha*, water.) Small spaces scattered through the parenchyma of a lymphatic gland, between the pulp of the gland and the trabeculæ or dilatations of the lymphatic channels.

S. malë'ri. An anomalous dilatation into which both canaliculi lachrymales open.

S., marg'inal. See *S., placental*.

S., mas'toid. (Μαστός, breast, a little knoll; εἶδος, like.) See *Mastoid cells*.

S. maxilla'ris. (L.) The *Antrum of Highmore*.

S., max'illary. See *Antrum*.

S. max'imus. (L.) Olecranon fossa of ulna.

S., media'nus. (L.) The *Vestibular sac-cule*.

S. mediastinocosta'lis. (L. *medias-tinum*; *costalis*, appertaining to a rib.) The part of the pleura where the costal and medias-tinal portions unite behind the sternum.

S., mulle'bris. (L.) The *Vagina*.

S., occip'ital. (L.) One of the venous cranial sinuses.

S. of Bres'chet. The sphenoparietal sinus.

S. of conjuncti'va. (L. *conjunctivus*, connecting.) The space between the palpebral and ocular conjunctiva.

S.s of Cu'vier. Veins or venous channels of the fœtus, which are transformed into the right and left venæ cavæ.

S. of High'more. *Antrum of maxilla*.

S. of kid'ney. The prolongation inward of the hilum.

S. of Morga'gni. The space between the upper border of the superior constrictor of the pharynx and the skull.

S. of the aur'icle. The same as *S. venosus*.

S.s of the du'ra ma'ter. (L.) See *Cranial sinuses*.

S. of the exter'nal mea'tus. (L.) A space at the bottom of the external auditory meatus between the concave inferior wall and the membrana tympani.

S. of the heart. The principal or main cavity of either of the auricles.

S. of the ju'gular vein. (L. *jugulum*, the throat.) The *Bulbi venæ jugularis* (distinguished as inferior, internus, and superior).

S. of the lar'ynx. (Λαρυγξ, the larynx.) Ventricle of the larynx.

S. of Valsal'va. The pouches above the semilunar valves of the aorta and the pulmonary artery.

S.s of veins. Pouch-like dilatations of the veins above the valves.

S., ophthal'mic. (Ὠφθαλμός, eye.) The same as *Cavernous sinus*.

S., Pet'il's. See *S. of Valsalva*.

S., pet'rous or petro'sal. (Πέτρα, a rock.) The venous channels on the petrous portion of the temporal bone.

S. phlebi'tis. (Φλέψ, a vein; -ιτις, inflammation.) Inflammation of one of the cranial sinuses.

S., placenta'l. (L.) The venous channel round the placenta.

S. pleu'ræ. (L.) The recesses when one layer of the parietal pleura is folded over the other.

S. pocula'ris. (L. *poculum*, a cup.) Same as the *Prostatic vesicle*.

S., porta'l. (L.) The sinus of the portal vein.

S., prostat'ic. (Προστάτης, the prostate.) A depression on the floor of the prostatic portion of the urethra.

S. prostat'icus. Same as *Prostatic sinus*.

S.s, pul'monary. (L. *pulmo*, the lung.) The sinuses of Valsalva in the pulmonary artery.

S. rectus. (L.) The same as the *Straight sinus*.

S., rhomboid'al. (Ῥόμβος, a rhomb; εἶδος, likeness.) The fourth ventricle of the brain. A dilatation in Birds of the central canal of the cord in the sacral region.

S., rhomboida'lis. The same as *Rhomboidal sinus*.

S., Rid'ley's. See *S., circular*.

S., sag'ittal. (L.) The *Superior longi-tudinal sinus*.

S., sphenoid'al. (Σφήν, a wedge; εἶδος, likeness.) Cavities in the basisphenoid.

S., straight. One of the cranial venous sinuses at the attachment of the falx cerebri and the tentorium cerebelli.

S., tar'sal. The large irregular passage between the astragalus and the os calcis, occupied by the intertarsal ligament.

S. tentor'ii. The same as the *Straight sinus*.

S. thrombo'sis. (Θρόμβος, a thrombus.) Thrombosis of a cranial sinus; occurring as a complication of chronic otitis media, and charac-

terised by a sudden onset of irregular fever, chills, pain in the occiput and neck, pressure symptoms (ptosis, strabismus, optic neuritis), swelling along the internal jugular vein, and signs of abscess of the lung or other parts of the body.

Sinus is obstructed partially or completely by a clot formed in it. May be primary or secondary.

1. *Primary*.—Rare, associated with the graver forms of anæmia, later stages of wasting diseases, and in very young children usually in association with diarrhoea.

2. *Secondary*.—Much commoner, associated with inflammation of the sinus-wall due to disease of the internal ear, fracture, compression of the sinus by tumour, or suppurative disease outside the skull, especially erysipelas.

Symptoms.—1. Of *primary*: None, or dulness with headache. Choked discs, with or without vomiting and convulsions.

2. Of *secondary*: Those of septicæmia.

S., transverse. A venous network excavated in the dura mater over the basilar process.

S., urogenital. (L. *urina*; *genitalis*.) The cavity in which the urogenital organs terminate in the fœtus; a permanent compartment of the cloaca in many lower Vertebrates.

S., uterine. (L.) The enlarged veins in the substance of the uterus during pregnancy.

S., valvular. The same as the *Sinus of Valsalva*.

S. venosus. (L.) The atrium; that part of the auricles developed from the veins.

S. venosus cornuæ. (L.) *Schlemm's canal*.

S., venous. Any venous channel conveying blood.

Siona'gra. (Σιαγών, a jaw-bone; ἄγρα, seizure.) Gouty pain in the maxilla.

Siphilis. See *Syphilis*.

Siph'ita. *Somnambulism*.

S. pra'va. *Chorea*.

Sípho. (Σίφων, a tube.) A syringe. Also, *Siphon*.

S. auricula'ris. A species of syringe used for injecting the ear.

S. urinae. *Diabetes*.

Síphon. (Σίφων, a tube.) A tube bent at an angle, one arm of which is longer than the other, for the purpose of transferring a liquid from one vessel to another. Trocars and aspirators are constructed on this principle.

Síphonage. The action of a *Síphon*.

Síphon'al. Pertaining to, or resembling, a *Síphon*.

Síphonate. *Biol.* Provided with a *Síphon*.

Síphonel. *Biol.* One of the pair of excretory tubes on the upper surface of the abdomen of a plant-louse. It exudes honey-dew.

Síphoniferous. (Σίφων, a tube; φέρειν, to bear.) Provided with *Síphons*.

Síphon'iform. (Σίφων, a tube; forma, shape.) Shaped like a *Síphon*.

Síphon'ium. (Σίφων, a tube, pipe; pl. *Síphonia*.) *Biol.* A special bony tube in some Birds, which conducts air from the tympanum to the articular piece of the mandible.

Síphon'oma. (Σίφων, siphon; ὄμα, tumour.) A peritoneal cylindroma, sometimes called Henle's tubular tumour.

Síphon'oplax. (Σίφων, a tube; πλάξ, a plate.) *Biol.* One of the calcareous plates

which form a tube about the *Síphons* of boring Molluscs.

Síphosome. (Σίφων, a tube; σῶμα, the body.) *Biol.* That portion of a siphonophoran stock devoted to obtaining food; the feeding-polyps. See *Nectosome*.

Síphuncle. (Σίφων, a tube.) *Biol.* A small *Síphon*, as the siphonet or honey-tube of a plant-louse, or the funnel of a Cephalopod.

Síphun'cular. (Σίφων, siphon.) Pertaining to a *Síphuncle*.

Síphun'culate. (Σίφων, tube.) *Biol.* Provided with a *Síphuncle*.

Síphun'culus. Same as *Síphuncle*. See *Syringe*.

Síp'urine. An alkaloid in the bark of *Bebeeru*.

Síp'uri. *Bebeeru*.

Sí'ra. *Orpiment*.

Sí'ren. (Σειρήν, a mythic being who enticed by her singing.) 1. An instrument for studying the qualities and properties of musical sounds.

2. Same as *Sirenornelus*.

Sirenornelus. (Σειρήν, mermaid; μέλος, limb.) A form of single autostic monster of the Species *symelus*, in which the lower extremities are intimately fused, with the trace of a foot, or, at most, with but a single toe.

Sí'ret's disinfectant. A disinfecting mixture containing copperas 100 parts, zinc sulphate 50 parts, sawdust 40 parts, coal-tar 5 parts, and rape-seed oil 5 parts.

Siri'asis. (Σειριόσις, the dog-star.) Sunstroke. A sun-bath; insolation. *Heliotherapy*. Of old ascribed to the influence of the dog-star.

Sister-cells. Cells produced by the fission or gemmation of any given mother-cell; daughter-cells.

Sisteus. (L. *sisto*, to keep back.) A medicinal agent that diminishes secretions, for example.

Site. (L. *situs*, a place.) *Situation*.

S. of opac'ity. To find it a concave mirror is used. Throw a light from in front of the pupil into the pupil, look into the pupil at the same time and note the position of the opacity. While the patient keeps his eye fixed move slowly to one side, and observe whether the opacity remains in the same spot or not. In the former case the opacity is in the pupillary plane; in the latter, in front of or behind this plane—in front of it if the opacity shifts its place with a movement opposed to that of the investigating eye; behind it if the opacity move in the same direction as the investigating eye. (Fuchs.)

S., placen'tal. (L.) The area to which the placenta is attached.

Sit'fast. *Farriery*. A piece of dead tissue in the skin which would be thrown off but that it has formed firm connections with the fibrous skin beneath, or with the deeper tissues, and is there bound to its place as a persistent source of irritation.

Siticulo'sus. (L.) *Thirsty*.

Sit'iens. *Thirsty*.

Sit'iology. The same as *Sitology*.

Sitioma'nia. See *Sitomania*.

Sit'iphobia. The same as *Sitophobia*.

Sit'is morbo'sa. Morbid thirst. The same as *Polydipsia*.

Sit'ology. (Σίτος, food; λόγος, a treatise.)

Dietetics; that department of Medicine pertaining to food.

Sitoman'ia. (Σίτος, food; μανία.) A mania occurring periodically, characterised by loss of volition and an overwhelming desire to partake of food to an unlimited extent.

Sitopho'bia. (Σίτος, food; φόβος, fear.) A morbid or insane aversion to food.

Sitopho'bic. Morbidly averse to food. Affected with *Sitophobia*.

Sitos. (Gr.) Aliment.

Situs. (L.) A position.

S. alie'nus. (L.) Foreign or unnatural position.

S. anom'alus. (L.) *Perversus intestinorum*. Misplacement or ectopia of the intestines.

S. muta'tus. (L.) *Ectopia*.

S. perver'sus. (L.) *Ectopia*.

S. vis'cerum inver'sus. (L.) A condition in which the viscera are transposed to the opposite side of the body.

Sitz bath. The same as *Hip-bath*.

Siv'veus. The same as *Sibbeus*.

Six-year molar. The first molar of the second dentition.

Sixth sa'cral nerve. The *Coccygeal nerve*.

Sizy. Viscid; like glue.

Skagg's springs. Hot sulphur and chalybeate springs in Sonoma County, California. Temperature about 130° F.

Skate oil. Fixed oil obtained from the skate's liver, and supposed to contain a larger proportion of iodine than cod-liver oil, for which it may be substituted.

Ska'tol. (Σκατός, gen. of σκῶπ, dung, dirt.) C_9H_9N . The principal aromatic product of the decomposition of albumen in the intestinal canal. It resembles indol, crystallises in brilliant white plates, and possesses an intense faecal odour. It fuses at 93.5° C., and is soluble with difficulty in water. Warmed with dilute hydrochloric acid or nitric acid it gives a violet colour. Its vapour density is 65.2. Serum-albumen, digested with pancreas and water at 36° C. for from six to ten days, yields skatol on distillation; two and a half kilograms of albumen give one gram of skatol.

Skatopha'gia. (Σκατός, dung; φαγεῖν, to eat.) The same as *Coprophagia*.

Skatoxyl. (Σκατός, dung; ὀξύς, acid.) A product of the oxidation of skatol. It is obtained from the urine in cases of disease of the large intestine.

Skeer's sym'ptom. A small circle which forms in the iris, near to and surrounding the pupil, commencing in both eyes simultaneously; it is considered pathognomonic of tuberculous meningitis.

Skein. (Mid. E. *skeyne*, skein.) A fixed length of any thread or yarn of silk or other material, doubled again and again and knotted. A synonym of *Spirem*.

S., loose. The thickened chromatin filaments resulting from a loosening of the spirem or close skein in mitotic cell-division.

Skel'et. A mummy, a skeleton.

Skeletal. Of or pertaining to a skeleton; forming or formed by a skeleton; entering into the composition of a skeleton.

S. arches. See *Visceral arches*.

S. muscles. Those muscles attached to the bones.

Skeleteu'sis. *Mummification*.

Skele'tia. *Emaciation*.

Skel'etins. (Σκελετόν, skeleton.) A name given to a number of insoluble epithelial products found chiefly in Invertebrates. The group includes chitin, conchiolin, cornein, spongin, fibroin, and silk.

Skeletog'enous. (Σκελετόν, skeleton, γεννάω, to produce.) Producing a skeleton; giving rise to a skeleton.

Skeletog'eny. The origin and development of a skeleton.

Skeletog'raphy. (Σκελετόν, skeleton; γραφή, a treatise.) The description of the skeleton.

Skeletol'ogy. (Σκελετόν, skeleton; λόγος, science.) The sum of scientific knowledge of the skeleton.

Skel'eton. (Σκελετόν, dried up; σκελείω, to dry up.) *Atomy*. *Anat.* A dried body. The aggregate of the hard parts of the body or the bones. A skeleton exists in almost all animals, although not always formed in the same manner. In some, as the Crustacea and Testacea, it is wholly or partly external—exoskeleton or dermoskeleton. In others, as Birds, Mammalia, &c., it is internal—endoskeleton or neuroskeleton. It serves as a support for other organs. On it the general shape of the body and of its various parts depends. When the bones are united by their natural ligaments the skeleton is said to be natural, *Sceletum naturale*; when articulated by wires, artificial or articulated, *Sceletum artificiale*. (For weights and measurements of the skeleton, see *Man*.)

Skeletonize. To reduce to a skeleton.

Skeletonless. Having no skeleton.

Skeletopœ'ia. (Σκελετόν, skeleton; ποιεῖν, to make.) The part of practical anatomy treating of the preparation of bones and the construction of skeletons. Bones are prepared to exhibit their conformation, structure, chemical composition, mode of development, and changes, the different cavities formed by their union, and to demonstrate their connections, relations, modes of union, &c.

Skeletotroph'ic. (Σκελετόν; τρεφεῖν, to nourish.) Pertaining to the nutrition of the skeleton or framework of the body, and to its vascular system.

Skel'os. (Gr.) The whole hind limb of any Vertebrate.

Skene's glands. One of the two mucous glands just within the meatus urinarius of the female; they are frequently the seat of latent gonorrhœa.

S.'s instilla'tion tube. A tube or pipette used for making medicinal applications to the interior of the uterus.

S.'s tubes. The relics of the Wolffian ducts found in the broad ligament of the uterus.

Skew mus'cles. More or less quadrangular muscles whose plane of origin and insertion intersect.

Skiagraph. (Σκιαγραφός, painting in light and shade without colours.) A photograph taken by means of the X rays.

Skias'copy. (Σκία, shadow; σκοπία, view.) The shadow-test. A method of estimating the refraction of the eye by throwing into it light from an ophthalmoscopic mirror, and observing the movement which the retinal illumination makes on slightly rotating the mirror. See *Retinoscopy*.

Skil'ip. An inferior kind of scammony.

Skin. The external protective covering of the body. It has three layers, the epithelium, cutis vera or true skin, and the rete mucosum.

S.-bound. Having the skin drawn tightly over the flesh.

S.-browned. See *Addison's disease*.

S.-deep. Not penetrating or extending deeper than the thickness of the skin.

S. disease'. *Scleroderma*; *Sclerema neonatorum*.

S.-grafting. Skin-transplantation. A method for treating large ulcerated surfaces by transplanting small pieces of skin from another part of the body. Cicatrisation frequently results without contraction or deformity, as in extensive burns. The method of skin-grafting is as follows. The area from which grafts are taken should be well washed with soap and water, and bichloride of mercury, 1:1000, followed by sterilised salt solution (5 parts to 95 parts water boiled for one hour). Small or large pieces of cuticle, including rete mucosum but not corium, are removed by scalpel or scissors, and placed with their fresh surfaces downwards on the place to be grafted. When the operation is completed apply protective, wet in salt solution, and an antiseptic dressing, which is to be retained in place with a roller bandage firmly applied. Grafts used should be from young healthy subjects. See *Graft*.

S.-planting. Same as *S.-grafting*.

Skin'niness. Leanness.

Skin'ny. Cutaneous; emaciated.

Skirr, or Skirrus. The same as *Scirrhus*.

Skir'ret. *Sium sisarum*.

Skirt. The *Diaphragm*.

Skleria'sis. Same as *Scleroderma*.

Sklerosep'tum. (Σκληρός, hard; *L. septum*, fence, partition.) *Biol.* One of the radially arranged perpendicular calcareous ridges arising from the foot-plate of a stone coral; also called star ridges.

Skoda, con'sonating râles of. Bronchial râles heard through the consolidated pulmonary tissue of pneumonia.

S.'s res'onance sign, or Tympany. A tympanitic note heard above the line of fluid in a pericardial effusion, or above the line of consolidation in pneumonia. It is almost as tympanitic as the abdomen.

Skoda'ic res'onance. See *Skoda's resonance*.

S. tym'pany. See *Skoda's resonance*.

Skoke. *Phytolacca decandra*.

Skolio'sis. (Σκολιός, curved.) The same as *Scoliosis*.

Skoliosom'eter. (Σκολιός, curved; μέτρον, measure.) See *Scoliosometer*.

Skotopho'bia. (Σκότος, a spy; φόβος, fear.) Insane dread of spies.

Skue'-sight. Oblique sight; *Dysopia lateralis*.

Skulein. The bitter poisonous property of squill.

Skull. (Mid. E. *skulle*, skull.) The superior expansion of the vertebral column, the protective bony covering or container of the brain and organs of the special senses, consisting of the cranium and face. The cranium is made up of eight bones—the occipital, two parietal, the frontal, two temporal, the sphenoid, and the ethmoid. The face is composed of fourteen

bones—nasal, superior maxillary, lachrymal, two malar, two palatal, two inferior turbinated, vomer, and inferior maxillary.

In *Congenital syphilis*, forehead prominent, frontal eminences are marked, skull asymmetrical.

In *Hydrocephalus*, skull much enlarged, bones thin, sutures very wide, Wormian bones develop in them; orbital plates of the frontal are depressed, causing exophthalmos.

In *Rickets*, frontal and temporal eminences are large; there are areas of imperfect ossification, craniotabes. In shape elongated, or large and rectangular. Anterior fontanelle may not close till the fourth year.

S.-cap. The dome of the skull. See *Scutellaria*.

S. land'marks. The eminences, chiefly the frontal and parietal, the two temporal ridges, the sutures, and the craniometric points.

S., nat'iform. (*L. nates*, buttocks; *forma*, shape.) A skull covered with osteophytes.

S. roof. The roof of the skull; *S.-cap*.

Slab'bering. (*H. Ger. Schlabbern*.) *Slavering*.

Slaked lime. White powder made by adding water (one-half weight of the lime) upon quicklime. Used for the preparation of lime water.

Slashed. Divided into narrow parts or segments by sharp incisions; lanced.

Sla'ty. Having the nature and properties or the appearance of slate. Applied to a form of induration of the lung in which pigmentation of the tissue occurs.

Slaver. Drivel; saliva, especially that which is discharged involuntarily.

Slav'ering. Involuntary flow of saliva seen in infancy, old age, and the idiotic.

Sleek. Smooth, glossy, as the skin.

Sleep. A state of general marked quiescence of voluntary and conscious (as well as involuntary and unconscious) functions, alternating more or less regularly with periods of activity.

In human sleep, when it is deep, the body lies quiet, with the muscles relaxed, the pulse-rate lower than during waking hours, and the respiration less frequent but deep, while the person does not react to slight sensory stimuli. Intestinal peristalsis is diminished; secretion is less actively carried on; the pupils are contracted, and the brain is said to be anæmic. If the depth of sleep is measured by the noise necessary to waken the sleeper, it reaches the maximum within the first hour, and then diminishes, at first rapidly, then more slowly.

S. drunk'eness. See *Somnolentia*.

S. ep'ilepsy. Same as *Narcolepsy*. Sudden short attacks of deep sleep occasionally accompanying epilepsy, and gouty, diabetic, and other affections.

S., hypnot'ic. Mesmeric sleep produced by hypnotism.

S. paral'ysis. Paralysis produced by pressure during sleep.

S.-sick. Excessive fondness for sleep.

S.-waker. A somnambulist; one who thinks or acts in a trance.

S.-waking. The state of trance; somnambulism; the hypnotic state.

S.-walker. A somnambulist.

S.-walking. *Somnambulism*.

Sleep'ful. Strongly inclined to sleep; *asleep*.

Sleepfulness. Strong inclination to sleep.

Sleepily. In a sleepy manner.

Sleepiness. Sleepy character or state; inclination to sleep; drowsiness.

Sleeping. (Mid. Eng. *sleepen*, to sleep.) Resting in slumber.

S. draught. A drink given to induce sleep.

S. drop'sy. A singular disorder seen only on the Atlantic coast of Africa, and characterised by daily paroxysms of somnolence, tending to become more and more continuous and profound until merged in fatal coma. Its onset is gradual, commencing with a slight frontal headache. It may persist for from three months to a year or more, and always ends fatally. It is also called *African lethargy*, *Negro lethargy*, and *Sleeping sickness*, and is said by some to be only one of the manifestations of filariasis.

S. drop'sy. The same as *Negro lethargy*.

Sleep'y-seeds. The mucous secretion of the conjunctiva, or the sebaceous matter of the Meibomian follicles, dried in flakes or little masses at the edges or corners of the eyelids during sleep.

Slender column. *Funiculus gracilis*.

S. lobe. The narrow part of the posterior lobe of the cerebellum, which sometimes appears as a distinct lobe.

Slide. A small rectangular piece of clear glass for the mounting of microscopic objects.

S. culture. The slide with the drop containing the germ serves as the culture.

Sliding-flap operation. A flap of skin and subcutaneous fat with its vessels is cut. Its attached border is at one end of the surface to be covered, and its size is one-third greater than that of this surface. It is bent over and attached by sutures in its new place.

Slime. *Biol.* The viscid secretion of the cutaneous glands of the various animals' mucus.

S. fungus. The same as *S. mold*.

S.-gland. (a) One of the modified leg-glands, with ducts emerging at the end of the oral papillæ of the Probracteata.

(b) One of the glands furnishing the viscid, mucus-like substance of snails, fishes, &c.

S. mold. See *Myxomycetes*.

Slimy. Resembling slime; viscous; glutinous.

Sling. A swinging bandage and carriage for supporting an injured limb.

S.-bone. The *Astragalus*.

S. of the lenticular nu'cleus. A tract of nerve-fibres which enter the lenticular nucleus by passing beneath the optic thalamus.

Slink. The miscarriage of cows or sheep.

S. meat. The meat of prematurely born calves or lambs.

Slink'ing. (Ang.-Sax. *slincan*.) Abortion in cows or sheep.

Slip. A male fowl which has been unsuccessfully caponised.

Also, a scion or cutting of a plant made for grafting or rooting.

Slit. A narrow opening; a visceral cleft; the separation between the labia; the vulvar cleft.

S.-and-tail band'age. An invaginated bandage.

S., genito-u'ri'ary. See *Uro-genital opening*.

S. of the microspec'troscope. The spectral ocular, in place of an ordinary dia-

phragm, has two moveable knife-edges, so arranged that a slit-like opening of greater or less width and length may be obtained by the use of screws for that purpose.

S., urino-gen'ital. See *Uro-genital opening*.

S., uro-gen'ital. See *Uro-genital opening*.

Slob'bering. *Slavering*.

Slold. (Swedish.) A system of manual training taught in elementary schools.

Slops. A popular term for liquid foods.

Slough. (Mid. Eng. *slouh*, the skin of a snake.) The necrosed tissue of an open inflammatory process, either separated or in process of separation. To necrose.

Slough'ing. *Gangrenous*.

Slows. The same as *Milk-sickness*.

Sloyd. See *Slold*.

Sludge. *Sewage deposit*.

Sluggish lay'er. In the passage of blood-corpuscles through the capillaries a few adhere, and tear themselves away to again move slowly, constituting the sluggish layer.

Slumber. Light sleep; sleep not deep or profound.

Slumberer. One who slumbers.

Slum'bering. The state of sleep or repose; the condition of one who sleeps or slumbers.

Slum'beringly. In a slumbering manner; sleepily.

Slumberless. Without slumber; sleepless.

Slum'berous. Inviting or causing sleep.

Slum'berously. Drowsily; sleepily.

Slum'bery. Slumberous; inclined to sleep; sleeping. Also, occurring in sleep.

Small. Not large.

S.-pox. See *Variola*.

S.-pox, abor'tive. Variola in which few pustules are present, which rapidly disappears.

S.-pox, bas'tard. See *Varicella*.

S.-pox, con'fluent. See *Variola confluens*.

S.-pox, crys'talline. See *Varicella*.

S.-pox, false. See *Varicella*.

S.-pox, hæmorrhag'ic. See *Variola*.

S.-pox, malign'ant. See *Variola*.

S.-pox, mod'ified. See *Varioloid*.

S.-pox, o'vine. See *Sheep-pox*.

S.-pox, spu'rious. See *Varicella*.

S. red gran'ular kid'ney. See *Bright's disease*.

S. white kid'ney. See *Bright's disease*.

Smarag'dinus. (L.) The colour of emerald or grass.

Smarag'dus. (L.) The emerald. Formerly regarded as a tonic.

Smart. To feel a pungent pain. A quick, sharp, active pain.

S. weed. *Polygonum hydropiperoides*.

Smead-Dowd system. A system of ventilation in which the outlets are at the bottom of a room, the air being drawn out by a furnace draught.

Smear cultures. Cultures of micro-organisms smeared over the surface of a culture medium.

Smec'tic. The same as *Detergent*.

Smectis. *Cimolia terra*.

Smectris. *Cimolia terra*.

Smeg'ma. (Σμήγμα.) An unguent.

S. embryo'num. See *Vernix*.

S. præpu'til. (L.) The whitish, cheesy substance which accumulates between the prepuce and the glans penis. It consists mainly of desquamated cells of the epidermis of the parts, impregnated with the odoriferous secretion of Tyson's glands.

Smegmatic. Of the nature of smegma or soap; soapy; cleansing, detersive.

Smegmatorrhœa. The same as *Seborrhœa*.

Smegmatorrhœa. *Seborrhœa*; *Stearorrhœa*.

Smell. To perceive through the nose by means of the olfactory nerves; to perceive the scent of; scent; nose. To give out an odour or an offensive odour. To have an odour of a specified kind.

Also, the faculty of perceiving by the nose. Sense-perception through the olfactory nerves; the olfactory faculty or function.

S. hollows. Elliptic pits on the antennæ of bees, having olfactory functions.

S., morbid. *Parosmia*. Depraved smell.

S.-trap. A drain-trap; a stink-trap.

Smelling-bottle. A small portable bottle or flask, usually of a fanciful form or decorated, for containing smelling-salts or an agreeable perfume.

S.-salts. A preparation of ammonium carbonate with some agreeable scent, as lavender or bergamot. Used as a stimulant or restorative.

Smilacin. The precipitate from a tincture of the root of sarsaparilla, *Smilax officinalis*. Alterant, detergent, diaphoretic, and stimulant. Dose, 2 to 5 grains.

Smilax. Large irregular tubers, reddish brown, with a mealy interior. It contains smilacin and starch. Action, alterative, diuretic. Uses, in dyspepsia. Doses, Extractum fluidum 15 to 30 drops.

S., China. *China root*. North Asia. Nat. Order *Siliaceæ*. (Not official.)

S., sarsaparilla. *Bamboo briar-root*. United States. Nat. Order *Smilacæ*. (Not official.) A long, creeping, cylindrical root with perennial nodes; rootlets few; bark thick, brown externally, white inside. Action, tonic, alterative. Uses, in secondary syphilis, chronic gout. Doses, Fluid extract $\frac{1}{2}$ to 2 drachms.

Smile. A curved two-edged bistoury.

Smiling muscle. See *Risorius*.

Smil'ion. Scalpel.

Smith's, Stephen, amputation at knee'-joint. Disarticulation by lateral hooded flaps of semilunar outline, consisting of skin and the subcutaneous tissues. The semilunar fibro-cartilages are separated from the tibia and left behind, attached to the capsule and so to the femur.

S.'s anterior splint. Consists of a stout wire frame, about three and a half inches wide above, and two and three quarter inches wide below; used for suspension of the lower limb. It is applied on the anterior surface of the limb, and extends from the anterior spine of the ilium to a little beyond the toes. It is bent at the ankle, knee, and hip to conform to particular cases.

S.'s method of treating u'terine inversion. By distending the vagina with an inflated india-rubber bag, after having applied massage to the uterus for ten days.

S.'s operation for cleft palate. Usually known as Langenbeck's operation. Lateral incisions are made in the muco-periosteum of the palate. The muco-periosteum is separated from without inwards from the bone, and the pared edges of the cleft united in the middle line.

S.'s spasm. See *Spasm*.

Smoke. To emit a vapour or exhalation while burning.

S. rock'ets. An inflammable substance used in making the smoke test for sewer gas.

S. test. A method for finding defects in drains by means of smoke.

Smok'er. One who uses tobacco.

S.'s can'cer. Cancer of the lip or tongue presumably produced by irritation through smoking.

S.'s dyspeps'ia. Indigestion through excessive smoking.

S.'s patch. A smooth, red, irritable patch, usually on the mucous membrane of the tongue, arising from the irritation produced from a pipe.

S.'s sore-throat. The condition of catarrh of the pharynx and larynx, with hoarseness, common in habitual smokers.

S.'s verti'go. A form of vertigo occurring in men past fifty, especially in those accustomed to smoke before meals. It may be arterio-sclerotic in character.

Smok'y. Having the appearance or nature of smoke.

S. urine. Urine containing blood intimately mixed with it. It is generally derived from the kidneys.

Smother. To suffocate, stifle; to obstruct, more or less completely, the respiration.

Smothering. Affected as by suffocation; stifled; deprived of air by covering the mouth and nostrils.

Smut. A foul spot. A parasitic disease of plants, spread by the spores of fungi of the Order *Ustilaginæ*.

Smyrna. The same as *Myrrh*.

Snag. A tooth standing alone or projecting beyond the others.

Snaggle-teeth. Irregularity and obliquity of the teeth.

Snap'-finger. See *Spring-finger*.

Snare. A light small écraseur or wire loop, used in removing polyp' and small excrescences.

Snarling muscle. The *Levator labii superioris alæque nasi*.

Sneering muscle. The *Levator anguli oris*.

Also, the levator labii superioris alæque nasi, which exposes the canine.

Sneeze. (Ang.-Sax. *fneosan*.) To emit air audibly from the nose and mouth. Occasioned by irritation of the nasal mucous membrane or of the retina. The glottis remains open in the act, and the mouth is partially obstructed by the approximation of the tongue to the roof of the mouth.

Sneez'ing. The act of sneezing. A sternutation.

Snellen's for'ceps. Form of forceps for surrounding small growths of the eye during enucleation.

S.'s types. See *Test types*.

Snif'fles. See *Snuffles*.

Snivel. (Ang.-Sax. *snofel*, mucus.) To

run at the nose. To cry or weep. To draw up the mucus rapidly through the nose.

Snore. Breathing with a noise produced by vibration of soft palate during sleep or during unconsciousness. See *Stertor*.

Snort. To snore loudly.

Snot. (Mid. Eng. *snot*, *snotte*.) Nasal mucus.

Also, to free the nose from mucus.

Snout. (Low G. *snute*.) The nose of an animal.

Snow. (Ang.-Sax. *snaw*.) Aqueous vapour precipitated in a frozen form.

S.-ball. *Cephalanthus occidentalis*.

S.-berry. *Symphoricarpos racemosus*.

S.-blindness. Blindness produced by the reflection of the sunlight from the snow.

S.-eyes. See *S.-blindness*.

S.-shoe disease. A painful inflammatory affection of the feet produced by long journeys in snow-shoes.

Snow's inhaler. For chloroform, the inhaler is surrounded by a cold-water jacket to equalise the temperature.

Snub'-nosed. A short, flat, *retroussé* nose.

Snuff. (G. *Schnuppe*.) Powdered and dried tobacco for insufflation. A medicated powder for insufflation.

S.-box, anatomist's. *Foveola radialis*.

S., cephalic. *Pulvis asari compositus*.

Snuff'le. (Dan. *snuffelen*.) To breathe hard through the nose when obstructed with loose mucus.

Also, a troublesome nasal discharge.

Also, *Sniffles*.

Snuffles. Nasal catarrh, which may be sero-purulent or bloody. Ulceration and necrosis of nasal bones may take place in severe cases. Impedes respiration and makes suckling difficult.

Sob. (Ang.-Sax. *siobian*, to grumble.) A momentary contraction of the diaphragm with spasmodic closure of the glottis.

So'ber. (L. *sobrius*, F. *sobre*.) Habitually temperate in the use of liquor. Free from the effect of intoxicating liquor.

Sobolès. (L. *soboles*, a shoot.) Progeny; superfœtation.

Soboliferous. (L. *soboles*, a shoot; *ferre*, to bear.) Bearing vigorous shoots.

Socaloin. $C_{15}H_{16}O_7$. The aloin derived from Socotrine aloes.

Socia. One accompanying.

S. parotidis. An occasional small separate lobe of the parotid gland.

Social evil. Prostitution.

Society screw. The screw at the lower end of the body-tube of a microscope receiving the objective.

So'cin's antiseptic paste. Zinc chloride one part, zinc oxide and distilled water, of each ten parts.

Sock. A short-legged stocking.

S.s., Neapolitan. Socks containing mercurial ointment, which are to be worn continuously for the purpose of inunction.

Socket. (Mid. Eng. *soket*, *sokete*.) An opening or cavity into which anything is fitted.

Anat. The hollow of one part receiving another; eye socket, socket of hip.

S.-joint. A ball-and-socket joint. An enarthrodial articulation.

Soc'le. (L. *soccus*, a light shoe.) *Biol.*

The supporting structure of the sense-organs of certain worms. See *Pedalia*.

Socor'dia. (L. *socordia*, weak-mindedness; from *socors*.) Hallucination.

Soda bis'cuit. A biscuit raised with soda.

S. caust'ica. Hydrate of sodium, $NaHO$. In hard greyish sticks, very alkaline and corrosive. Obtained by concentration of *Liquor sodæ*. Uses, externally as a caustic.

S. crack'er. A biscuit made with flour, water, a little salt, bicarbonate of soda, and a little cream of tartar.

S. lime. A mixture of caustic soda and quicklime, used chiefly for nitrogen determinations.

S. pa'per. A paper saturated with sodium carbonate.

S., tar'tarata. Tartarated soda. Rochelle salt, $NaKC_4H_4O_6 \cdot 4H_2O$, eq. 282. Prepared officially by neutralising bitartrate of potassium with an equivalent of carbonate of sodium. In colourless transparent prisms, or halves of prisms, of the right rhombic order, generally eight-sided. Action, a mild cooling purgative. A feeble hepatic, but a powerful intestinal stimulant. Uses, in dyspepsia, biliousness. Doses, 2 to 4 drachms.

S. wa'ter. A water into which carbonic dioxide gas is forced under pressure.

So'dæ, cataplas'ma, chlor'ina-tæ. Solution of chlorinated soda, 1; linseed meal, 2; boiling water, 4.

S. chlor'inatæ, liq'uor. Solution of chlorinated soda. Chlorinated lime, 16 parts; carbonate of lime, 24; distilled water, 160. A colourless alkaline fluid containing $2\frac{1}{2}$ per cent. of available chlorine. Actions, stimulant, antiseptic, resolvent. Used as a local antiseptic, diluted as a gargle, and internally in scarlatina, dysentery, dyspepsia, glandular enlargements, and chronic mucous discharges. Dose, 10 to 20 minims.

S., liq'uor. Carbonate of sodium, 28 parts; slaked lime (washed), 12 parts; distilled water, 160 parts; or dissolving $NaHO$. Used in the preparation of *Antimonium sulphuratum*. Antidotes, the same as *Liquor potassæ*.

S., liq'uor, efferves'cens. Soda water. Aqua sodæ effervesces, 30 grains to 20 ounces. The carbonic dioxide gas is forced in under pressure.

S., pul'vis, tar'tratæ efferves'cens. Seidlitz powder. *Pulvis effervescens laxans*, *Pulvis aerophorus laxans*.

S. tar'tarata. Soda in dry powder, 120 grains; bicarbonate of sodium in dry powder, 40 grains. Mix, and wrap in blue paper. Tartaric acid in dry powder, 38 grains; wrap in white paper.

So'dilac'etas. $Na_2K_2O_3 \cdot 3H_2O$, eq. 136. (Not official.) Occurs in transparent, colourless, monoclinic prisms. Odourless, efflorescent in dry air; reaction, neutral; taste, bitter and saline. Prepared by adding carbonate of sodium to acetic acid till it is neutralised. Action, diuretic. Uses, same as potash salts.

S. arsen'ias. $Na_2HASO_4 \cdot 6H_2O$, eq. 402. In colourless, transparent prisms. Readily effloresces. Odourless; taste mild, alkaline; reaction, faintly alkaline. Prepared by mixing thoroughly arsenious acid, nitrate of sodium, and carbonate of sodium, and heating in a crucible. Action, similar to Fowler's solution. Uses, skin affections and nervous diseases.

S. bal'neum alkali'num. (Not official.)

8 to 10 ounces of carbonate of sodium to 60 gallons of water. Used in skin diseases as a solvent to remove scabs and scaly incrustations.

S. ben'zoas. Benzoate of sodium, $\text{NaC}_7\text{H}_5\text{O}_2$, eq. 144. Obtained by neutralising a solution of carbonate of sodium and evaporating to dryness. A white, obscurely crystalline or amorphous powder. Inodorous, or having a faint benzoic odour; taste sweetish, astringent; reaction, neutral. Soluble in 1 to 2 of water, 1 in 25 of rectified spirit. Action, antilithic, antiseptic. Uses, gout, rheumatism, scarlet fever, phthisis, puerperal fever. Dose, 10 to 30 grains.

S. bibo'ras. See *Borax*.

S. bicar'bonas. Bicarbonate of sodium, NaHCO_3 , eq. 84. Obtained by saturating carbonate of sodium with carbonic acid, or by reaction of chloride of sodium and bicarbonate of ammonium. A white powder in small opaque irregular scales. Odourless; taste, saline and cooling; reaction, alkaline. Decomposed by hot water. Soluble in 12 parts of cold water. Action, the same as the carbonate, but milder, being less caustic and irritating. Antacid. Has scarcely any appreciable effect as a stimulant of the liver. Uses, dyspepsia, uric acid diathesis, calculus. Dose, 10 to 30 grains.

S. bro'midum. Bromide of sodium. NaBr , eq. 103. Obtained in the same way as potassium bromide. A granular white powder, consisting of small monoclinic crystals, somewhat deliquescent. Actions and uses, similar to the potash salt, but less depressing in its action. Dose, 10 to 30 grains.

S. car'bonas. Carbonate of soda, Na_2CO_3 , $10\text{H}_2\text{O}$, eq. 286. In transparent laminar crystals of a rhombic shape, containing 63 per cent. of water of crystallisation. Efflorescent. It has a strong alkaline reaction. Actions, antacid, antilithic, resolvent. Uses, gout and dyspepsia. Doses, 3 to 30 grains.

S. car'bonas exsic'cata. Na_2CO_3 , eq. 106. Dried carbonate of soda. 53 grains are equal to 143 grains of the crystallised salt. Dose, 3 to 10 grains.

S. chlo'ras. Chlorate of sodium, NaClO_3 . (Not official.) Occurs in transparent tetrahedrons, permanent in the air. Taste, saline and cooling; odourless. Prepared by mixing a hot solution of bitartrate of sodium and chlorate of potassium. Action, similar to chlorate of potassium, but much more soluble.

S. chlor'idum. Chloride of sodium, common salt, NaCl , eq. 58.5. In small white crystalline or transparent cubic crystals. Action, antiseptic: in small doses, stimulant, tonic, and anthelmintic; in larger doses, purgative and emetic. It is antiperiodic in ague fits. A salt-bath (1 pound to 4 gallons) is a tonic and excitant of the system, especially in children. Uses, scrofula, hæmoptysis; locally in ozæna, ague; constipation, gout, in Homburg waters. Dose, 10 to 60 grains as a tonic; 120 to 240 grains as a cathartic.

S. cit'ro tar'tras efferves'cens. Effervescent citro-tartrate of sodium. Bicarbonate of sodium, 17; tartaric acid, 9; citric acid, 6; refined sugar, 5—all in powder. The powders are mixed and heated. Action, a mild saline purgative. Dose, 60 to 120 grains. A white granular salt having a bitter, nauseous taste. It is deliquescent. Dose, 5 to 10 grains as a nerve tonic.

S. et potas'sii tar'tras. See *Soda tar-*

tarata. Of sodium 100, tartaric acid in powder 54, citric acid in powder 36. The mixture is heated. Dose, $\frac{1}{2}$ to $\frac{1}{2}$ ounce.

S. ethyla'tis liq'uor. Solution of ethylate of sodium. Metallic soda free from oxide, 1; ethylic alcohol, 20; dissolve the sodium in the ethylic alcohol. A colourless syrupy liquid. Action, caustic. Uses, nævus, nasal polypus, ozæna, and lupus.

S. hypophos'phis. Hypophosphite of sodium. NaPH_2O_2 , eq. 88. Obtained by adding sodium carbonate to a solution of hyposulphite of calcium as long as a precipitate of carbonate of calcium is formed.

S. hyposul'phis. Hyposulphite of sodium. $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$, eq. 248. (Not official.) Prepared by digesting a solution of sulphite of sodium with sulphur, or by passing sulphurous acid gas through a solution of sulphide of sodium. Prismatic crystals, with a bitter saline taste; inodorous. Action, it increases the amount of uric acid and sulphates in urine; diminishes urea; antiseptic; parasiticide. Uses, pyæmia; sarcina ventriculi; also in scrofulous, rheumatic, and syphilitic affections; locally in parasitic affections. Dose, 10 to 20 grains.

S. i'odum. Iodide of sodium. NaI , eq. 150. A dry, white, crystalline, deliquescent powder. Uses, the same as iodide of potassium. Dose, 3 to 10 grains.

S., liq'uor, arseni'tis. Anhydrous arseniate of soda, 9 grains; distilled water, 2 ounces. Dose, 5 to 20 minims.

S., liq'uor, sulpha'tis benzo'icus. (Not official.) Sulphite of sodium, 30; benzoic acid, 14; water, 500. An antiseptic solution recommended by Hæckel.

S. meth'ylas. $\text{CH}_3\text{NaSO}_4 \cdot \text{H}_2\text{O}$. (Not official.) Purgative in 15-grain doses without cramping.

S. ni'tras. Nitrate of sodium. NaNO_3 , eq. 85. A native salt purified by crystallisation from water; colourless. It is only used to prepare *Sodii arsenias*.

S. ni'tris. Nitrite of sodium. NaNO_2 , eq. 69. Prepared by fusing sodium nitrate with reducing substances. A white or yellowish-white, deliquescent, crystalline salt. Uses, it has been used in angina pectoris. Dose (B.P.) 2 to 5 grains. Antidotes, emetics, fresh air, recumbent position, ergot, and atropine.

S. olea'tis solu'tio. (Not official.) See *Zinci oleus*.

S. phos'phas. Phosphate of sodium. $\text{Na}_2\text{HPO}_4 \cdot 12\text{H}_2\text{O}$, eq. 358. It may be obtained by adding a solution of carbonate of sodium to a solution of acid phosphate of calcium, prepared from a mixture of bone-ash and sulphuric acid. Transparent, colourless rhombic prisms. Action, a mild purgative. Diuretic in small doses. Renders the urine alkaline. Uses, in gout and cases of supposed deficiency of phosphorus; infantile diarrhoea with green stools. Dose, $\frac{1}{2}$ to 1 ounce. Used in the preparation of *Ferri phosphas* and *Syrupus ferri phosphatis*.

S. platino-chlor'idum. $2\text{NaCl} \cdot \text{PtCl}_4 \cdot 6\text{H}_2\text{O}$. (Not official.) Freely soluble in water and alcohol. It crystallises in light red prisms. For medicinal use a preparation is made by dissolving 3 parts of platinic chloride with 5 parts of sodium chloride; evaporating, with constant stirring. Action, alterative. Uses, in constitutional syphilis; injection in gonorrhoea. Dose, 1-8th to $\frac{1}{2}$ grain.

SODIUM

S. pul'vis sal'i'nus anticholer'iacus. (L.) (Dr. Stevens.) (Not official.) Bicarbonate of sodium 20 grains, chlorate of potassium 7 grains, for one dose. To be given frequently in a small tumbler of cold water during cholera to arrest the pain and purging.

S. pul'vis sulpha'tis et zingib'eris. (Not official.) Sulphate of sodium, powdered as finely as possible, 60 grains, ginger in powder 5 grains. Mix.

S. salic'ylas. Salicylate. $(\text{NaC}_7\text{H}_5\text{O}_3)_2$. H_2O , eq. 338. Obtained by the action of salicylic acid on carbonate of sodium or caustic soda. Action, the same as *Acidum salicylicum*. Dose, 10 to 30 grains.

S. sulphas. Sulphate of sodium; Glauber's salt. $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$, eq. 322. Obtained by purification of the crude "salt cake" resulting from the decomposition of salt by sulphuric acid in the first stage of alkali manufacture. In colourless, transparent, oblique rhombic prisms. It effloresces on exposure to air. Action, a moderately powerful stimulant of the liver, and a powerful stimulant of the intestine. Dose, $\frac{1}{4}$ to 1 ounce.

S. sulphas efferves'cens. Sulphate of sodium in crystals 100, bicarbonate of sodium in powder 100, tartaric acid in powder 54, citric acid in powder 36. Dose, $\frac{1}{4}$ to $\frac{1}{2}$ ounce. Action, antizymotic, parasiticide. Uses, in yeasty vomiting; locally in aphthæ. Dose, 5 to 20 grains.

S. sul'phis. Sulphite of sodium. $\text{Na}_2\text{SO}_3 \cdot 7\text{H}_2\text{O}$, eq. 252. Obtained by the action of sulphurous acid on carbonate of sodium or on caustic soda. White transparent prisms, which effloresce.

S. sulphocar'bolas. Sulphocarbonate of sodium. $\text{NaC}_6\text{H}_5\text{SO}_4 \cdot 2\text{H}_2\text{O}$, eq. 232. Obtained by dissolving carbolic acid in excess of sulphuric acid, supersaturating the solution with carbonate of barium, and heating the filtrate with carbonate of sodium till no further precipitation takes place. Colourless, transparent, rhombic prisms. Uses, antiseptic, in cases of flatulence, a useful injection in gonorrhœa. Dose, 10 to 15 grains to the ounce.

S. taurocholas. (Not official.) Prepared from ox bile or pig's bile. It has been given in the treatment of gout, in doses of 4 grains at each meal after food. Dose, 2 to 6 grains.

S., trochis'ci, bicarbona'tis. Each lozenge contains 5 grains of bicarbonate of sodium. Dose, 1 to 6 lozenges.

S. vale'rianas. Valerianate of sodium. $\text{NaC}_8\text{H}_9\text{O}_2$, eq. 124. Amylic alcohol is distilled with bichromate of potassium and sulphuric acid; the resulting distillate (valerianic acid) neutralised with caustic soda. In dry white masses. Action, nervous stimulant. Uses, in neuralgia, hysteria, chorea, epilepsy, and other nervous affections.

Sodium. Na. (Official.) A soft metal, rapidly oxidising in the air, but having a bright metallic lustre when cut. Test, 23 grains cautiously dissolved in water requires for neutralisation at least 975 grain measures of the volumetric solution of oxalic acid.

S. borosalic'ylate. (Not official.) A mixture of two molecular weights of sodium salicylate and four of boric acid. When finely powdered and mixed with a little water, the resulting hard mass is dried and again powdered. An efficient, non-toxic antiseptic.

S. chloroborate. (Not official.) White crystalline powder, soluble in water. Strong antiseptic.

S. choleas. (Not official.) This is practically purified ox-gall. Action, mild, laxative. Uses, flatulent dyspepsia. Dose, 1 to 5 grains.

S. citrico-ben'zoas. (Not official.) A white, spumescent powder, freely soluble in water, barely soluble in alcohol. Uses, in bronchitis and asthma like the benzoates.

S. dith'iosalicylate. A combination of two molecules of sulphur with two of sodium salicylate, dithiosalicylic acid being obtained from sulphur chloride and salicylic acid. A whitish-grey powder, very soluble in water. Action lowers temperature; stronger than salicylates. Uses, in articular rheumatism. Dose, 2 to 5 grains morning and night.

S. fluosil'icate. (Not official.) Prepared by saturating with sodium carbonate a solution in water of hydrofluosilicic acid. In powder, a caustic, powerful antiseptic; it must be used in dilute solution, 1 in 200 or 500 parts of water; injected into suppurating ulcers.

S. formate. $\text{NaCHO}_2 \cdot \text{H}_2\text{O}$. (Not official.) Small, white, deliquescent crystals. Soluble in water and glycerine. Use, by parenchymatous injection in tuberculosis. Dose, adult, 3 grains; child, 2-5ths to 1 1-5th grains. To be used once every night.

S. glycocho'late. $\text{NaC}_{26}\text{H}_{42}\text{NO}_6$. (Not official.) Prepared from the bile of bulls and oxen. It is a fine yellow-white powder, without smell, having a very bitter taste; soluble in water and in alcohol.

S. gynocar'date. (Not official.) This is put up in capsules containing 3 grains each. Dose, 2 to 5 capsules twice a day before meals.

S. hip'purate. $\text{C}_9\text{H}_8\text{NaNO}_3 \cdot \text{HO}$. (Not official.) Greyish-white, odourless powder, with a faint alkaline taste. Believed to remove excess of uric acid in gout, gravel, or calculus. Dose, 10 grains.

S. i'odate. NaIO_3 . (Not official.) White, scentless, crystalline salt, soluble in water; it is separated in small crystals from concentrated aqueous solutions by the addition of glycerine or absolute alcohol. Used as an ingredient for dusting powder for wounds.

S. paracre'sotate. Sodium paracresotinate. (Not official.) White powder, soluble in hot water. Antipyretic, antirheumatic, intestinal antiseptic. Dose, 2 to 20 grains three times daily.

S. peroxide. N_2O_3 . (Not official.) A white powder which dissolves in water, forming peroxide of hydrogen and sodium hydrate. The solution of this preparation forms a powerful bleaching agent on account of the nascent hydrogen produced by the peroxide of hydrogen. It is used by American dentists to bleach teeth and disinfect their roots. 40 to 50 per cent. watery solutions are used, in applying which a coffer-dam must always be used.

S. san'tonate. $2\text{NaC}_{15}\text{H}_{19}\text{O}_4 \cdot 7\text{H}_2\text{O}$, eq. 698. (Not official.) A new salt, which should be used with great caution. It is prepared by adding santonin to a hot solution of caustic soda as long as it is dissolved by it; then set aside to cool and crystallise. The crystals are rhombic, colourless, transparent, tabular, and slightly efflorescent. Used as a vermifuge, in 5-grain doses.

S. sulphan'ilate. (Not official.) The

sodium salt of sulphanilic acid. White laminæ, soluble in water. For acute catarrh, in doses of from 5 to 10 grains.

S. sulphuric'inate. (Not official.) This consists of sulphuricinic acid (which is a compound of castor oil and sulphuric acid) incompletely saturated by sodium oxide. It is a thick, reddish-yellow liquid, smelling of castor oil and making an emulsion with water. It is useful as a solvent of several substances, as carbolic acid, sulphur, salol.

S. sulphovl'nate. $\text{NaC}_2\text{H}_3\text{SO}_4$. Ethylsulphate of sodium. (Not official.) A white granular or crystalline powder, deliquescent and unstable. A mild but effective cathartic, in doses of 2 drachms for children and 3 drachms for adults. In the French Codex, 1884.

S. tellurate. (Not official.) Used with success for the night sweats of phthisis. Dose, $\frac{1}{2}$ grain in a pill. It seems to possess an inhibitory action on the nervous apparatus of the sudoriferous glands. It gives a garlicky odour to the breath. Potassium tellurate is also used in similar doses.

S. tetrabo'rate. (Not official.) A combination of equal parts of sodium diborate, boric acid, and water. Heat is applied to complete the reaction. Upon cooling the new salt is found to be neutral.

Sod'oma gallo'rum. Syphilis.

Sodomitical. Guilty of sodomy.

Sodomit'ically. In a sodomitical manner.

Sodom'itry. Sodomitic processes. Sodomy, gross wickedness.

Sod'omy. (Σόδομα, Sodom.) Unnatural sexual relations with the same sexes or with beasts.

Soem'isch's ul'cer. Infectious ulcer of the cornea.

Soem'mering, fora'men of. *Foramen centrale* of retina.

S., grey sub'stance of. Peduncle of brain.

S., yellow spot of. *Macula lutea*.

S.'s bone. Marginal process of malar bone.

Soft. (Ang.-Sax. *softe*, *sefte*.) Yielding to pressure. In *Anat.*, not bony, cartilaginous, or dental. Soft parts or tissues.

S. com'missure of brain. Same as *Middle commissure*.

S. pal'ate, opera'tions on. They consist in freshening and suturing the edges of the cleft. Various devices are resorted to when there is tension, such as lateral incisions (Dieffenbach) or division of the levator palati (Fergusson), or of both the levator and tensor palati (Pollock).

Softening. A diminution of the natural healthy firmness of organs or parts of organs. *Mollities ossium*.

S., acute' gas'tric. A disease of childhood in which the stomach and intestines are said to undergo softening.

S., anæ'mic. See *Cerebral softening*.

S., cer'ebral. Red, yellow, and white softenings are distinguished; popular phrase for *Dementia paralytica*. Generally due to embolism.

S., col'liquative. The name applied to that condition in which the tissues liquefy.

S., hæmorrhag'ic. Softening of parts involved in a hæmorrhage.

S., mu'coid. *Myxomatous degeneration*.

S., œsopha'geal. Softening of the lower end of the œsophagus, due to the solvent action of the gastric juice.

S. of sp'inal cord. Local, due to inflammation. The various stages of myelitis, grey, green, white, and yellow.

S. of stom'ach. *Gastromalacia*.

S. of the heart. *Myomalacia cordis*. Softening due to anæmia and fatty degeneration.

S., red or yellow. Tissue accompanied by hæmorrhage in softening of the brain.

Soil. The ground, earth.

S. diseas'es. Those diseases produced by emanations from decomposing organic soil, or from imperfect drainage.

S.-pipe. A drain-pipe.

So'la. A plant of tropical regions, *Æschynomene aspera*. Its pith-like wood is largely manufactured into pith helmets or sun-hats, especially in India.

Solan'idin. See *Solanin*.

Solan'in. (*L. solanum*, the nightshade.) A glucoside found in bittersweet. It is composed of sugar and another substance, solanidin. It is a poisonous narcotic. Dose, $\frac{1}{4}$ grain to 4 grains. (Unofficial.)

Sol'anoid. (*L. solanum*, nightshade; Gr. *εἶδος*, like.) Of a potato-like texture, as a *Solanoid carcinoma*.

Sola'num panicula'tum. Jurubeba, Brazil. Nat. Order *Solanaceæ*. (Not official.) A Brazilian plant about ten feet high, every part of which is covered with white downy hair. It yields the amorphous alkaloid jurubebin. Taste bitter, odour aromatic. Soluble in alcohol and chloroform. It is used in Brazil as an alterative tonic in syphilis, liver diseases, &c. It is purgative and diuretic, especially purifying the blood. Dose: infusion, 1 part to 10 of water, three or four times a day; fluid extract, 2 to 5 drops. The powdered extract, jurubebin, is given in the United States for syphilis, combined with the powdered extracts of *Yerba buena* and *Damiana*.

Solar. Pertaining to or resembling the sun.

S. gan'gllon. See *Semilunar ganglia*.

S. plex'us. See *Plexus*.

Sola'rium. (*L.* A part of the house exposed to the sun.) Room enclosed with glass, and arranged for the administration of sunbaths.

Solariza'tion. Exposure to the direct rays of the sun.

Sol'ayre's obliq'uity. The entrance of the foetal head into the pelvis in an oblique diameter.

Soldia'ni's reagent and test. A reagent for testing sugar in the urine. It is a solution of cupric carbonate in potassium bicarbonate. It is made by gradually dropping a saturated solution of cupric sulphate till it dissolves. Add 2 per cent. of urine and heat.

Soldiers' spots. *Macula lutea*.

Sole. The palmar side of claws and hoofs. A pad-like mass of granular protoplasm on the surface of a muscle-fibre in which the motor nerve-filament terminates an end plate.

Sole re'flex. A reflex drawing up of the leg, excited by touching the sole of the foot.

So'lea. An old name for the sole-fish.

S. ipecacuan'ha. See *Ipecacuanha*.

S. verticilla'ta. *Ionidium polygalæ-folium*.

Solea'ris. Synonym of *Soleus*.

Solen. In *Surg.*, the same as cradle. The central canal of the *Spinal cord*.

Solenochala'sis. (Σωλήν, channel; χαλαστικός, making supple.) Dilatation of a tubular organ.

Solenostegno'sis. (Σωλήν, a channel; στεγνώσις, stenosis.) Constriction of a tubular organ.

Soleus. (L. A sole.) A broad, flat, almost oval muscle, arising from the middle third of the internal border of the tibia, the soleal line, the tendinous archway over the posterior tibial vessels, the hinder surface of the upper extremity of the fibula, and the upper quarter of its external border. It blends with the gastrocnemius to form the tendo Achillis.

Solica'tio. Insulation.

Solida'go odo'ra. Golden rod. Canada, United States. Nat. Order *Compositæ*. (Not official.) The leaves are used; their odour is agreeable and aromatic; the taste aromatic, sweetish. Its virtues depend on a volatile oil. Action, carminative, stimulant, aromatic, diaphoretic. Uses, colic, to promote menstruation; locally, in neuralgia and rheumatism. Dose, fluid extract, 1 to 2 drachms.

S. rig'ida. Tonic and astringent.

S. virgaurea. Of both continents. Is astringent, tonic, and vulnerary.

Solidarity. (L. *solidus*, solid.) The unitary nature of the relations of the various parts of an organism, whereby all individual parts are subordinated to the welfare of the whole.

Solidifica'tion. (L. *solidus*, solid; *facere*, to make.) The act of becoming solid, or of possessing molecular attraction.

Solidism. The doctrine of physicians (Solidists) who referred all diseases to the solid parts, looking upon them alone as possessing vital properties.

Solidists. See *Solidism*. Opposed to the doctrine of the Humoralists.

Sol'ids. Term which refers to the bones, ligaments, muscles, nerves, and vessels of the body.

Solita'rius. (L.) Single, solitary.

S. pharyngas. (Φαρύγξ, pharynx.) *Azygos pharyngis*.

Solitary. (L. *solitarius*.) Anat. Single, separated.

S. bun'dle. A strand of nerve-fibres in the medulla.

S. follicles of the intes'tine. See *Glands*.

S. kid'ney. Rokitsansky's term for the single mass produced by the congenital fusion of the two kidneys.

S. tu'bercle. A tubercular nodule composed of miliary tubercles enclosed in fibrous tissue.

Solium. (L.) A bathing tub.

Also, *Tania solium*.

Solomon's seal. The root of *Convallaria polygonatum*. A tonic, mucilaginous and slightly astringent. It was formerly a popular domestic remedy for rheumatism and gout, and is externally employed in contusions. Dose of the fluid extract, 1 to 2 drachms. (Unofficial.)

Solubility. (L. *solvere*, to set free;

habilis, able.) That property of a body by which it can be dissolved in a menstruum.

Soluble. (L. *solubilis*; *solvere*, to solve.) Capable of being dissolved in a fluid.

S. albu'men. See *Native albumen*.

S. blue. See *Pigments*.

S. eosin. $C_{20}H_8Br_2O_5$. Dye produced by the action of bromine or fluorescein suspended in glacial acetic acid.

S. glass. Silicate of sodium, potassium, or magnesium. A viscid liquid that hardens. Used for a varnish to bandages.

S. prim'rose. Same as *Erythrosin*.

S. starch. Amylodextrin, $C_6H_{10}O_5$. A substance obtained by heating starch paste to 40° C., and digesting with a little saliva. It becomes clear and limpid. It is dextro-rotatory and does not reduce. (Fehling.)

S. stool. Fæces of semi-solid consistency.

Sol'ubleness. Soluble character or property.

Sol'utine. Tending to dissolve, loosening, laxative.

Solu'tio. A solution.

Solution. (L. *solutio*.) The act of overcoming the cohesion of the molecules of a body by a liquid, and their diffusion among those of the liquid. The infusion of the molecules of a liquid or gaseous substance among those of a liquid. "A homogeneous mixture exerting osmotic pressure."

1. A loosening or separation, as *S. of continuity*, *S. of contiguity*. See *Continuity*, *Contiguity*.

2. The act or process of dissolving.

3. The act or state of being dissolved.

4. A liquid produced by dissolving; a liquid containing particles of a solid, a gas, or another liquid diffused through it with perfect uniformity, and in such a fine state of subdivision that they are absolutely invisible, and the liquid itself is perfectly homogeneous. The liquid which thus takes up particles of other matter is called a solvent. According to the character of the solvent it is called aqueous, alcoholic, ethereal, &c. A saturated solution is one in which the solvent has taken up all of the dissolved matter that it is possible for it to hold.

S., arsen'ical. *Liquor potassi arsenitis*.

S., arsen'ical, de Velargin's. *Liquor arsenici chloridi*.

S., Bur'nett's. An aqueous solution of zinc chloride.

S., centinor'mal. A solution 1-100th of the strength of a normal solution.

S., decinor'mal. A solution 1-10th the strength of a normal solution.

S., Do'bell's. A solution containing 2 drachms of borax, 1 of sodium bicarbonate, 45 grains of carbolic acid, 1 ounce of glycerine, and water to make 1 pint.

S., Don'ovan's. A solution of iodides of mercury and arsenic.

S., Feh'ling's. An aqueous solution of copper sulphate, Rochelle salts, and sodium hydrate used in the qualitative and quantitative estimation of sugar.

S., Fow'ler's. Arsenious acid 1, potassium bicarbonate 1, Tinct. Lavand. Co. 3, water 95. Also called Liq. Potass. Arsen. Ague drop.

S., Gan'nal's. See *Ammonii acetat*.

S., Goad'by's. A preservative for tissues;

SOLUTOL

bay salt, corrosive sublimate, or arsenious acid and water.

S., Hall's, of strychnine. A solution of strychnine acetate gr. xvj, Acid. Acet. dil. 3ss, alcohol 3iv, Tinct. Card. Co. mlx, to make 3xvj.

S., Hein'ecke's. Solution of arseniate of sodium.

S., Ko'peschaar's. A decinormal bromine volumetric solution employed to test the strength of carbolic acid.

S., Lab'anaque's. A solution of chlorinated soda.

S., Löffler's. A saturated alcoholic solution of methyl blue 30 parts, 1 in 10,000. Aqueous solution of potassium hydrate used in bacteriology.

S., Lu'gol's. A solution of iodine and potassium iodide.

S., Magen'dle's, of mor'phine. Morphine sulphate 16 grains, water 1 ounce. A hypodermic solution.

S., Mon'sell's. Solution of Ferri Sulphas.

S. normal. A standard solution containing in one litre an amount of the reagent sufficient to exactly replace or combine with one grain of hydrogen.

S., nor'mal saline'. A solution of 75 parts of sodium chloride in 10,000 parts of water.

S. of ac'etate of ammo'nia. *Liquor ammonii acetatis.*

S. of ac'etate of mor'phia. *Liquor morphiae acetatis.*

S. of al'kaline i'ron. *Liquor ferri alkalinii.*

S. of al'um, com'pound. *Liquor aluminis compositus.*

S. of ammo'nia, subcar'bonate of. *Liquor ammoniae subcarbonatis.*

S. of ammo'niated cop'per. *Liquor cupri ammoniati.*

S. of arse'niate of so'da. *Liquor sodii arsenatis.*

S. of atro'pia. *Liquor atropiae.*

S. of car'bonate of so'dium. *Liquor sodii carbonatis.*

S. of char'coal, concen'trated. See *Tinctura catechu.*

S. of chlo'ride of ar'senic. *Liquor arsenici chloridi.*

S. of chlo'ride of zinc. See *Burnett's solution*, or *Disinfecting fluid*.

S. of chlo'rinated so'da. *Liquor sodii chlorinatae.*

S. of chlo'rine. *Mistura chlorini*, or chlorine gargle.

S. of cit'rate of ammo'nium. *Liquor ammonii citratis.*

S. of cit'rate of magne'sium. *Liquor magnesi citratis.*

S. of cit'rate of potas'sium. *Liquor potassii citratis.*

S. of contigu'ity. The separation of parts normally in contact.

S. of continu'ity. Division of a tissue by traumatism.

S. of corro'sive sub'limate. *Liquor hydrargyri subchloridi.*

S. of hydi'odate of potas'sium. *Liquor potassii hydriodatis.*

S. of hydrochlo'rate of mor'phia. *Liquor morphiae muriatis.*

S. of i'odide of i'ron. *Liq. ferri iodidi.*

S. of i'odine, com'pound. *Liquor iodinii compositus.*

S. of i'ron, ni'trated. *Liquor ferri nitratis.*

S. of lime. *Liquor calcis.*

S. of lime, sac'charated. *Liquor calcis saccharatus.*

S. of magne'sia, condensed'. Fluid magnesia.

S. of May'er. Decinormal mercuric potassium iodide volumetric solution.

S. of Mon'ro. *Liquor of Monro.*

S. of mu'riate of mor'phia. *Liquor arsenici muriatis.*

S. of ni'trate of i'ron. *Liquor ferri nitratis.*

S. of ni'trate of mer'cury. *Liquor hydrargyri nitratis.*

S. of op'ium. Battey's *Liquor Morphiae Sedativus.*

S. of oxymu'riate of mer'cury. *Liquor hydrargyri oxymuriatis.*

S. of perman'ganate of potas'sium. *Liquor potassii permanganatis.*

S. of persul'phate of i'ron. *Liquor ferri persulphatis.*

S. of potas'sa. *Liquor potassae.*

S. of sesqui'ni'trate of i'ron. *Liquor ferri nitratis.*

S. of so'da. *Liquor sodae.*

S. of strychn'ia. *Liquor strychniae.*

S. of subac'etate of lead. *Liquor plumbi subacetatis.*

S. of subac'etate of lead, dilu'ted. *Liquor plumbi subacetatis dilutus.*

S. of subcar'bonate of potas'sium. *Liquor potassii subcarbonatis.*

S. of sul'phate of mor'phine. *Liquor morphinae sulphatis.*

S. of tar'tarised an'timony. *Vinum antimonii tartarisate.*

S. of terni'trate of sesquiox'ide of i'ron. *Liquor ferri nitratis.*

S. of van Swie'ten. *Liquor hydrargyri oxymuriatis.*

S., Pear'son's arse'nical. Crystallised sodium arseniate 1, water 599 parts.

S., Pier'lot's. An aqueous solution of ammonium valerianate to which is added some of the alcoholic extract of valerian.

S., Plenck's. *S. of hydrargyri oxidi cinerei.*

S., sat'urated. Utmost limit of material dissolved in a menstruum.

S., semi-nor'mal. A solution having half the strength of a normal solution.

S., stand'ard. A solution containing definite quantities of chemicals whose exact reactions are known.

S., stand'ardised. A solution made of standard strength.

S., Vlemingkr's. A solution of quicklime and flowers of sulphur in water. It is useful in seborrhoea.

S., Vol'hard's. Decinormal potassium sulphocyanate volumetric solution.

S., volumetric. See *Standard solution*.

Solutol. (Not official.) Cresylic acid (cresol) rendered soluble by means of sodium cresylate. It contains in every 100 cubic centimetres (3 3-8ths fluid ounces) 60.4 grammes (two ounces) of cresylic acid—one fourth free, the other three fourths combined with sodium cresylate. According to Hammer, solutol is a safe disinfectant and antiputrefactive.

Solvability. Capable of being dissolved.

Solvent. Any fluid or substance that dissolves or renders other bodies liquid; a menstruum.

Solveol. (Not official.) A neutral concentrated solution of cresylic acid made with the aid of sodium cresotate, and miscible with water. According to Hammer, 0.5 per cent. solutions of solveol have a more energetic effect on pathogenic bacteria than 2.5 per cent. solutions of carbolic acid, and its solutions are only slightly irritating; it therefore constitutes a valuable medicinal antiseptic.

Solvine. One of a number of liquids obtained from certain oils by the action of concentrated sulphuric acid. They are blood-poisons dissolving the red blood-corpuscles.

Soma. (Σῶμα, a body.) *Anat.* The entire axial part of the body.

Somacule. (Σῶμα, a body.) The smallest portion of protoplasm which can retain its physiological properties, that is the chemical molecule of protoplasm.

Somascesis. (Σῶμα, a body; ἄσκησις, exercise.) See *Gymnastics*.

Somascetics. Same as *Gymnastics*.

Somatic. (Σῶμα, the body.) Of, or pertaining to, the body or material organism.

S. anthropol'ogy. That division dealing with anatomical points.

S. cav'ity. The cœlomic cavity or cœlom.

S. musculature. The muscles of the somatopleure.

Somato-ætiolog'ical. (Σῶμα; αἰτία, cause; λόγος, discourse.) Pertaining to or regarding the body as a cause (of disease).

Somatoblast. (Σῶμα, body; βλάστη, bud.) Any material from which cell material (in contradistinction to nuclear material) is built up.

Somatocatagonio'des. Double monster with separate trunks, the axes of which are divergent.

Somatocyst. (Σῶμα, the body; κύστις, a cyst, a germ.) Any plastidule from which cell-material (in contradistinction to nuclear material) is built up or developed.

Somatodidymus. (Σῶμα, body; δίδυμος, twin.) A double monster having the trunks united.

Somatodym'ia. (Σῶμα, body; δῦμι, two.) Double monster in which the trunks are united. There are several varieties.

Somatogen'ic. Pertaining to *Somatogeny*.

Somatog'eny. (Σῶμα, a body; γεννᾶν, to produce.) The acquirement of bodily characters, especially the acquirement of characters due to the environment.

Somatolog'ic. (Σῶμα, body; λόγος, science.) Appertaining to *Somatology*.

Somatome. (Σῶμα, body; τομή, section.) An ideal section or segment of the body, or the structural parts into which a body, especially a vertebrate body, is theoretically divisible.

Somatomeg'aly. (Σῶμα, body; μεγάλη, large.) *Gigantism*.

Somatom'ic. Having the nature of, or character of, a *Somatome*.

Somatopagus. (Σῶμα, body; πάγος, fixed.) Double monster with separate trunks.

Somato-parallel'us. Somatopagus with the axes of the two bodies parallel.

Somatoplasm. (Σῶμα, body; πλάσμα, anything formed or moulded.) Somatic plasma, the substance of the body.

Somatopleu'ra. (Σῶμα, body; πλευρά, side.) Same as *Somatopleure*.

Somatopleu'ral. Of, or pertaining to, the *Somatopleure*.

Somatopleure. (Σῶμα, the body; πλευρά, the side.) The outer of the two divisions of the mesoderm, or that part of the mesoderm adherent to the ectoderm.

Somatopleu'ric. Same as *Somatopleural*.

Somatose. (Not official.) A proprietary article. The albumose of meat freed from peptones. It is a yellow amorphous powder, finely granular and free from odour. It dissolves in water. It is indicated where an invigorating and easily absorbed food is required; when absorbed, it acts as a nutrient and does not disturb the stomach. For children, 80 to 120 grains; for adults, 150 to 300 grains.

Somatosplanchnopleu'ric. (Σῶμα, body; σπλάγχνον, the bowels; πλευρά, side.) Common to the *Somatopleure* and *Splanchnopleure*.

Somatot'omy. (Σῶμα, the body; τομία, to cut.) The anatomy of the human body, *Anthropotomy*.

Somatotridymus. (Σῶμα, a body; τριδύμος, threefold.) A monster having three bodies.

Somatotrop'ic. (Σῶμα, body; τρέπειν, to turn.) Exhibiting *Somatotropism*.

Somatotropism. The influence of the attraction of gravitation in growing organs in plants.

Sombrerite. (Sp. *sombrero*, a sounding-board.) Impure calcium phosphate found in West Indian guano.

Somit'ial. Same as *Somit'ic*.

Somite. (Σῶμα, body; ἰτε.) An actual somatome. Any one morphological segment of an articulated body. It may have a restricted sense, indicating a metamere without its appendages.

Somit'ic. Pertaining to a somite; somatonic.

Som'nal. Ethyl-chloral urethane. (Not official.)

A hypnotic introduced by Radlam, of Berlin, formed by the union of chloral, alcohol, and urethane. A colourless liquid resembling chloroform. It does not mix with water; soluble in alcoholic solutions and hot water; dissolves fats and resins; odour faint; taste pungent; reaction acid. Action, hypnotic, resembling chloral; no disagreeable after-effects; best given in tincture of ginger. Uses, insomnia of children and acute alcoholism. Dose, 5 to 30 drops.

Somnam'bulance. *Somnambulism*.

Somnam'bulant. (L. *somnus*, sleep; *ambulans*, walking.) Sleep-walking; characterised by *somnambulism*.

Somnam'bular. Of, or pertaining to, or characteristic of, sleep-walking or sleep-walkers.

Somnam'bulate. To walk in sleep.

Somnambula'tion. *Somnambulism*, the act of walking in sleep.

Somnam'bulator. Same as *Somnam-bulist*.

Somnam'bule. A *Somnambulist*.

Somnam'bulic. Of, or pertaining to, *Somnambulism*.

Somnam'bulism. The condition of half-sleep, in which apparently purposive acts are performed.

Also, hypnotic sleep, where a person is apparently awake, but his consciousness is under the control of an operator. Charcot calls this somnambulism, or the third type of the hypnotic state. The second he calls catalepsy. See *Hypnotism*.

Somnam'bulist. One who walks in his sleep.

Somnambulis'tic. Of, or pertaining to, or characteristic of somnambulism or somnambulists.

Somnam'bulous. *Somnambulist*.

Som'nial. Pertaining to or involving dreams.

Somnia'tio. The act of dreaming.

S. morbo'sa. Hallucination.

Somniative. (L. *somniatus*, *somniare*, to dream; -ive.) Pertaining to dreaming, relating to or producing dreams.

Som'niatory. Of or pertaining to dreams or dreaming; relating to or producing dreams.

Somnic'ulous. Inclined to sleep, drowsy.

Somnifa'cient. (L. *somnus*, sleep; *facius*, *facere*, to make.) Somnific, soporific; tending to produce sleep.

Somniferin. (L. *somnus*, sleep; *ferre*, to bear.) 1. A morphine-ether discovered by Bombelon, said to be stronger than morphine, and without bad effects or influence upon the heart. 2. An alkaloid derived from *Withania somnifera*, a solanaceous plant of Asia and the Mediterranean region. It is said to be narcotic.

Somniferous. (L. *somnus*, sleep; *ferre*, to bring.) Causing or inducing sleep.

Somnif'ic. Causing sleep.

Somnif'ugous. (L. *somnus*, sleep; *fugere*, flee.) Driving away sleep; agrypnotic.

Somnil'oquence. (L. *somnus*, sleep; *loquentia*, a talking.) The habit of talking in the sleep. *Somniloquism*.

Somnil'oquism. Same as *Somniloquence*.

Somnil'oquist. One who talks in his sleep.

Somnil'oquous. Apt to talk in sleep; given to talking in sleep.

Somnil'oquy. The act of talking in sleep.

Somniv'olency. (L. *somnus*, sleep; *volentia*, will, inclination.) Something that induces sleep, a *Soporific*.

Som'nolence. (L. *somnolentus*, sleepy.) Sleepiness, inclination to sleep, drowsiness.

Somnolen'tia. *Somnolency*.

Som'nolently. Drowsily.

Somnoles'cent. Drowsy, half asleep.

Som'nolism. The state of being hypnotised.

Som'no vig'il. *Somnambulism*.

Som'nus. Sleep.

Som'pus. Sleep.

Son'de a dard. Consists of a curved hollow sound, with a slightly bulbous end and a

concealed sharp-pointed stylet capable of being protruded. It is used in supra-pubic cystotomy, especially by French surgeons.

Son'itus aur'ium. (L.) Sound of the ears. See *Tinnitus*.

S. card'iacus. See *Heart sounds*.

S. cor'dis. (L.) See *Heart sounds*.

S. flu'id. Sound of fluid heard by auscultation.

S. hepat'icus. (Ἠπαρ, the liver.) Sound rendered by the liver on percussion.

S. intestina'lis. (L.) Sound made by the movement of the intestines.

S. stomach'icus. Sound heard on auscultating or percussing the region of the stomach.

Sonom'eter. (L. *sonus*, sound; μέτρον, measure.) An instrument for determining the pitch of a sound, and also for determining its relation to a chord.

Sonor'ous. (L. *sonorus*, sounding, loud-sounding.) Resonant sounding, ringing. Producing a musical sound.

S. râle. See *Râle*.

Son'stadt's solu'tion. A solution used to test the specific gravity of gems.

So'nus. See *Sound*.

So'or. See *Thrush*.

Soot. (Ang.-Sax. *sot*.) Carbon and other substances deposited by smoke.

S. can'cer. Epithelioma of scrotum, apparently due to irritation from soot in the folds of the skin. See also *Chimney-sweepers' cancer*.

S. wart. *Scrotal epithelioma*.

So'phia. (Σοφός, wise.) *Sisymbrium sophia*.

S. chirurgo'rum. *Sisymbrium sophia*.

Sophoma'nia. (Σοφός, wise; μανία, madness.) Insanity in which the patient believes himself to excel in wisdom.

Soph'ora. (Arab.) A Genus of Leguminous trees, shrubs, and herbs, mostly growing in warm regions.

S. seric'ea. (See *Loco*.) A poisonous plant of the United States. Its seeds contain *Sophorin*.

S. specio'sa. A tree of Texas; also yields *Sophorin*.

Soph'orin. (Arab.) A paralytant, poisonous alkaloid which exists in the seeds of some species of *Sophora*.

Sophronis'tæ den'tes. (Σωφρονισμός, to be discreet.) Wisdom teeth, or *Dentes sapientiae*.

Sophros'ynë. (Σωφροσύνη, temperance.) Temperance.

So'piens. Paregoric.

So'pient. (L. *sopiere*, *sopire*, to put to sleep.) A soporific agent producing sleep.

So'pio. Opium.

So'pité. To put to sleep, set at rest.

Sopi'tion. The act of putting to sleep. Also, state of being put to sleep.

So'por. (L. *sopor*, deep sleep.) A deep, unnatural sleep; lethargy, stupor.

So'porate. To stupefy, to make sleepy.

Sopo'riæ arte'riæ. *Carotids*.

Soporiferous. (L. *sopor*, sleep; *ferre*, to bring, carry.) Soporific, causing or tending to sleep.

Soporiferously. In a soporiferous manner.

Soporif'erousness. The quality of being soporiferous.

Soporif'ic. (L. *sopor*, a heavy sleep; *facere*, to make.) Nearly asleep. Tending to produce sleep.

So'porose. Same as *Soporous*.

Soporous. Causing deep sleep.

Sorbefac'ient. (L. *sorbere*, suck in, swallow; *faciens*, *facere*, to make.) Promoting absorption.

Sor'bent. An absorbent.

Sor'bic. Pertaining to, or derived from, the mountain ash.

S. ac'id. $C_6H_8O_4$.

Sor'binose. (L. *sorbus*, the sorb tree.) $C_6H_{12}O_6$. Sorbin, a ketone alcohol found in mountain ash berries, and consisting of large crystals, which possess a very sweet taste. It reduces alkaline copper solutions, but is incapable of fermentation under the influence of yeast. See *Table of carbohydrates*.

Sor'bite. (L. *sorbus*, the sorb tree.) $C_6H_{14}O_8 + H_{20}$. A hexahydric alcohol occurring in mountain ash berries, forming small crystals which dissolve readily in water. They melt at $110^\circ C$. Sorbite corresponds, in all probability, to grape-sugar.

Sorbi'tio. (L. *sorbeo*, to drink.) Soup or broth.

Sorbi'tium. Soup or broth.

Sor'des. (L. *sordes*, *sordere*, to be dirty or foul.) Filth, refuse. The crusts forming on lips and teeth during extreme exhaustion in fevers.

S. aur'ium. Cerumen.

S. cap'itis. Scurf.

S., den'tal. The collection found on teeth in certain diseases.

Sordic'ulæ au'rium. Cerumen.

Sor'dious. Filthy, foul.

Sor'dor. Filth, dregs, refuse.

Sore. (Ang.-Sax. *sar*, painful; Dan. *saar*, a wound.) Painful, aching; painfully sensitive to the touch.

S., bed-. An ulceration produced by pressure on certain parts, which leads to changes in nutrition.

S., Delhi, or Oriental boil, Aleppo boil, Penjdeh sore, Natal sore, &c. See *Delhi boil*.

S.-eyed. Affected with ophthalmia or blepharitis.

S., fungating. An ulcerating soft chancre.

S., Hunte'rian. A hard chancre.

S., in'durated. See *S., Hunterian*.

S., infect'ing. Synonym of *Chancre*.

S. mouth. Stomatitis.

S. mouth, nurs'ing. Sore mouth produced by nursing.

S., Orien'tal. A general term for any one of the number of suppurative sores in the Orient.

S., soft. A *Chancroid*.

S.-throat. A general term embracing every variety of affection of the throat.

S.-throat, clerg'yman's. Chronic follicular pharyngitis.

S.-throat, gout'y. Gouty pharyngitis.

S.-throat, hos'pital. Tonsillitis.

S.-throat, pu'trid. Sore-throat with ulceration and a foul smell.

S., vene'real. Same as *Chancroid*.

Sored'iate. Biol. Bearing *Soredia*.

Sorediferous. (*Σωρός*, a heap; L. *ferre*, to bear.) Bearing *Soredia*.

Sore'dium. (*Σωρός*, a heap; *ἴδιον*, a dim. suffix.) One or more algal cells in hyphæ discharged from the fronds of Lichens.

Sore'ness. The state of being sore in any sense of the word. Painful uneasiness or tenderness.

Sor'ghum. A variety of sugar-cane, *S. saccharatum*, of the Family *Graminaceæ*.

Also, a syrup made from the expressed inspissated juice of the same.

Sor'che. Mountain sickness.

Sorophore. (*Σωρός*, a heap; *φόρος*, bear.) The cushion lying ventral to the sporocarp of *Marsilea*, which at germination becomes detached at one end.

Sororia'tion. (L. *soror*, a sister.) The development that takes place in the female breasts at puberty.

Sorose'. Bearing a *Sorus* or *Sorosis*.

Soro'sis. (*Σωρός*, a heap.) The fleshy fruit like the mulberry, the product of a flower cluster.

Sorroc'co. Puna. Sickness common in the higher parts of South America and elsewhere. Resembles sea-sickness.

Sorts. In the drug trade, refuse; the poorest grade of any drug.

Sosib'ious. (*Σωζειν*, to save; *βίος*, life.) Able to preserve life.

Sostrum. (*Sostron*, a reward for saving life.) Reward to one saving life. A physician's fee or honorarium.

Soteriol'ogy. (*Σωτήρ*, a saviour.) A treatise on hygiene.

Souffle. A blowing sound.

S., amphot'ic, and **S., metal'lic.** See *Cavernous respiration*.

S., car'diac. See *Heart sounds*.

S., fœ'tal. An inconstant murmur audible during pregnancy, and supposed to be due to compression of the umbilical cord.

S., fu'nic or funic'ular. A hissing sound, synchronous with the fetal heart-sounds, heard all over the abdomen of a pregnant woman.

S., splen'ic. Sound said to be audible over the spleen in cases of enlargement and disease of the organ.

S., umbil'ical. See *Funic*.

S., u'terine. Same as *Placental souffle*. Sound heard in the later months of pregnancy, and caused by the entrance of blood into the dilated arteries of the uterus.

S., whis'pering. Bellows sound heard over a solidified lung and excavations when the patient whispers.

Soul-deaf. Destitute of the sensation of sound and of every reminiscence of it.

S.-deafness. Deprivation of all sensation and reminiscence of sound.

Sound. (Ang.-Sax. *sund*.) The sensation produced on the auditory nerve by aerial vibrations. Sounds may be propagated in—(1) Reciprocation or consonance resulting in the production of a musical note. (2) By resonance; as when a sounding body in proximity to another produces vibrations in it. (3) By conduction, as when they are transmitted through liquid or solid media. An instrument used by surgeons for exploration of the bladder. The operation is termed *sounding*. Also, it means healthy.

S., anasar'cous. A moist bubbling sometimes heard on auscultation when the skin is cedematous.

S., band'box. The resonant percussion note audible in emphysema.

S., Bellocq's. A curved instrument introduced along the floor of the nasal passages; it is capable of projecting a spring that curls round the soft palate. It is used for plugging the posterior nares.

S., bel'lows. A cardiac murmur resembling the sound of bellows.

S.s., blood. Anæmic murmurs.

S., blow'ing. A blowing murmur.

S., bron'chial. The normal bronchial breathing.

S., car'diac. Heart sounds.

S., clogged breath-. Jerks or wavy inspiration heard in certain diseases when a deep breath is drawn.

S., col'our. Timbre.

S.-conduct'ing appara'tus. Those parts of the auditory apparatus external to the labyrinth.

S., cracked'-pot. A form of tympanic resonance indicating a cavity; *Bruit de pot fêlé*.

S., crum'pling, pul'monary. Respiratory sound like a membrane rubbing against a hard body.

S., flap'ping. The clap made by closure of the semilunar valves.

S., foetal heart. Sounds produced by the fetal head audible during pregnancy, best heard near the umbilicus of the mother.

S.s., fric'tion. The sounds produced by rubbing rough surfaces together. Sound of pleuritic or pericardial friction.

S., funic'ular. Bellows. See *Souffle*.

S.s., heart. The two sounds best audible over the cardiac area; the first sound is said to resemble *lubb*, and to be longer and less distinct than the short second sound, resembling *dubb*. The first is isochronous with the systole of the ventricles, the second with the closure of the semilunar valves.

S., hol'low. See *Amphoric breathing*.

S., hydat'id. Sound heard, accompanied by a peculiar thrill, on percussion of a hydatid cyst.

S., ket'tle-singing. A chest-sound sometimes heard in incipient pulmonary tuberculosis.

S., lach'rymal. A fine sound for exploring or dilating the lachrymal canal.

S., metallic heart. See *Metallic murmur*.

S., metamor'phosed breath'ing. A sound due to the passage of air through a narrow opening in and out of a pulmonary cavity.

S., mur'mur. Amphoric breathing.

S., mus'cle. The sound heard when a stethoscope is placed on a muscle in a state of contraction.

S., œsopha'geal. A long flexible sound for the examination of the œsophagus.

S., os'seous. A high-pitched, intense auscultatory sound, having a slightly metallic timbre.

S., pul'monary. The *Respiratory murmur*.

S.s., respi'ratory. Sounds heard in consequence of respiration.

S., saw'ing. A form of cardiac murmur resembling sawing.

S., shad'ow. The interference with a sound-wave by the interposition of any substance.

S., subject'ive. See *Phonism*.

S., to-and-fro'. The friction sound of pericarditis and pleuritis.

S., tu'bular. The sound of tracheal respiration.

S., ure'thral. An instrument for the examination or dilatation of the urethra.

S., u'terine. A graduated probe with an elbow for examination of the uterus.

Sounding. The operation of examining the chest. *Auscultation*.

Sound'ness of mind. *Sanity*.

Sou'part's meth'od of amputa'tion. A method of amputation by elliptical flaps; well adapted for amputations through certain joints.

Sour. Having an acid taste; fermented.

S. dough. See *Leaven*.

S. wood'-sorrel tree. *Oxydendron arboreum*. The leaves are tonic, refrigerant, diuretic.

South'ernwood. *Artemisia abrotanum*. Nat. Order *Compositæ*. (Not official.) Action, tonic, anthelmintic, narcotic. Uses, amenorrhœa, chronic diarrhœa, atonic dyspepsia. Dose, extractum fluidum, 10 to 30 drops.

Southey's drain'age - tubes. India-rubber tubes of small calibre fitting on to fine cannulæ, which gradually drain away the fluid in anasarca. There is said to be less risk of inflammation.

Soy bean, or Soy'a bean. A kind of bean, the seed of *Glycine soja* (also referred to as *Soja hispida* and *Dolichos sinensis*), a plant of Japan, China, and India. Diabetic bread, biscuits, and cakes are prepared from its flour, which contains no starch. The sauce called soy is also made from this bean.

S.'s disease'. Horse-pox.

Soy'al. An astringent organic salt of aluminium, used as an antiseptic.

Soy'ka's plates. Dishes employed in the cultivation of bacteria. They are similar to Petre's capsules, but differ from them in having eight to ten depressions ground in the lower plate.

So'zal. (Not official.) This is the name given to an antiseptic. It is the aluminium salt of para-phenyl-sulphonic acid (soyonic acid), which latter is made from carbolic and sulphuric acids. It is soluble in water and keeps well. In crystals, with an astringent taste and slight carbolic odour; recommended for surgical dressings; also in 1 per cent. injections, and internally.

So'zin. (Σώζειν, to save, keep.) A natural defensive proteid. One of the classes into which Hankin provisionally divides alexins or defensive proteids.

So'zodont. (Σώζειν, to protect; ὀδόντ, tooth.) A dentifrice, supposed to be prepared mainly of Castile soap and alcohol.

Sozoi'dal. Iodoparaphenol sulphuric acid. (Not official.) A white, shining, crystalline, odourless powder, containing 52 per cent. of iodine, 20 per cent. of carbolic acid, and 7 per cent. of sulphur. Preferably used in the form of its salts. Used as a substitute for iodoform.

Spa. Formerly also Spaw. (Spa, or Spaa, a town in the east of Belgium, where there are strongly chalybeate mineral springs.) A mineral spring, or the locality where a mineral spring exists.

Space. (L. *spatium*, room, space, distance.) The interval between any two or more objects.

Also, the name given in descriptive anatomy to certain closed or partially closed parts or regions.

S., ante'rior per'forated. A triangular space on the mesial side of the Sylvian fissure.

S., arach'noid. Same as *Subarachnoid space*. The space between the pia mater and the arachnoid cerebro-spinal membranes.

S., ax'illary. The *Axilla*.

S., Bregma'til. The *Anterior fontanelle*.

S., cell. Spaces in ground substance of connective tissue, enclosing connective-tissue corpuscles.

S.s, chyle. The central lymphatic cavities of the *Intestinal villi*.

S., circumlen'tal. The interspace between the ciliary body and the lens.

S., circumvas'cular lymph. The lymphatic space round, for instance, the cerebral blood-vessels communicating with the lymphatic channels.

S., complemen'tal, of pleu'ra. That part of the pleural cavity immediately above the attachments of the diaphragm not filled with lung during inspiration.

S.s, corneal. Spaces between layers of cornea.

S., Doug'las's. See *Douglas's pouch*.

S., epidu'ral. A lymph space between the spinal dura mater and the periosteum.

S. feel'ings. Hering's term for the perception of inferences of space relations resulting from the retinal image.

S., Haver'sian, or medu'lary. Space in the cancellous tissue of bone.

S., hypoprostat'ic. Space between the rectum and the prostate.

S.s, intercel'lular. Cavities between cells.

S., intercos'tal. The space between contiguous ribs.

S., intercru'ral. Same as *S., interpeduncular*.

S.s, interfascic'ular. Spaces between the bundles of fibrous tissue.

S.s, interglob'ular. Spaces in dentine.

S.s, interlamell'ar. Spaces between the lamellæ of the cornea.

S., intermesoblas'tic. Cavity between the somatopleure and splanchnopleure.

S.s, intermetatar'sal. Spaces between the metatarsal bones.

S., interos'eous. The space between two bones placed side by side.

S., interpari'etal. See *S., Virchow-Robin*.

S., interpedun'cular. A diamond-shaped depression at the base of the brain, bounded by the crura cerebri and the optic tracts.

S., intertu'nical. See *S., Virchow-Robin*.

S., intervag'inal. See *S., subvaginal*.

S., invest'ing. See *Lymph sinus*.

S., ischio-rec'tal. Same as *Ischio-rectal fossa*, bounded by the levator ani and the oburator fascia.

S., lacu'nar. See *Lacuna*.

S., lymph. A sinus or space through which lymph passes.

S., mar'row. See *Medullary cavity* and *Spinal cord*.

S., mediast'i'nal. The *Cavum mediastinum*.

S., nerve. A name applied to those branches of the auditory nerve distributed to the semicircular canals that are concerned with the balancing of the body.

S. of Fonta'na. One of the intercommunicating cavities in the spongy tissue between the cornea and the iris, communicating with the canal of Schlemm.

S. of His. Same as *Perivascular lymphatic canals*.

S. of Ten'on. A lymph space between the sclera and the fascia of Tenon.

S., pelvi-rec'tal. Same as *Ischio-rectal fossa*.

S.s, pericel'lular. Lymph spaces in the brain.

S., perichoro'id'al. A lymph space between the sclera and the choroid.

S., perigas'tric. A cavity surrounding the stomach and other viscera.

S.s, perineu'ral. Lymph spaces between the lamellæ of the perineurium.

S., perivas'cular. See *S., circumvascular lymph*.

S., perivitel'line. See *S., yolk*.

S.s, placent'al blood. The intervillous lacunæ of the placenta.

S.s, pleuro-peritone'al. See *S., intermesoblastic*.

S., Poiseuille's. See *S., lymph*.

S., poplit'eal. A space at the back of the knee, containing the popliteal vessels and nerve.

S., poste'rior per'forated. The depression just behind the corpora albicantia at the base of the brain.

S., poste'rior trian'gular. The space lying above the clavicle and between the sternocleido-mastoid and the trapezius muscle and the occiput.

S., preves'ical. A space between the transversalis fascia and the rectus abdominis above the pubes.

S., retro-peritone'al. Space between the posterior abdominal wall and the peritoneum.

S. sense. The sense which gives information of the position and relations of objects in space.

S., subarach'noid. See *Arachnoid space*.

S., subdu'ral. Space between the dura mater and the arachnoid. It only contains a capillary layer of fluid.

S., subvag'inal. A lymph space within the sheath of the optic nerve.

S., superfi'cial car'diac. Area of chest wall corresponding to that part of the heart uncovered by lung.

S., Trau'be's. A semilunar area, tympanitic on percussion, overlying the stomach.

S., utero-rec'tal. See *Douglas's pouch*.

S., utero-ves'ical. The depression between the bladder and the uterus.

S., Vir'chow-Rob'in. An adventitious lymph space found between the coats of the cerebral capillaries.

S., vis'ual. The visual field.

S., yolk. The space formed by the retraction of the vitellus from the zona pellucida.

Spadiceous. (Σπάδιξ, a palm branch.) In *Biol.*, bearing a spadix.

Spadicoſe'. (Σπάδιξ, a palm branch.) *Spadiceous*.

Spa'dix. (Σπάδιξ, a palm branch; pl. *Spadices*.) In *Biol.*, a fleshy spike, commonly enveloped in a spathe.

Spa'do. Castratus; spasm.

Spa'don. Same as *Spa'do*.

Spag'ir'ic. (Σπάω, to stretch or rend; ἀγείρειν, to collect.) Pertaining to the obsolete chemic or Paracelsian school of medicine.

Spag'irism. The Paracelsian or spag'iric school or doctrine of medicine.

Spagy'ria. *Chemistry*.

Spagy'rists. (Σπάω, to part; ἀγείρειν, collect.) Physicians who pretend to explain the changes of the body in health and disease by chemical action.

Span. Space from the little finger to the thumb when the hand is extended to its utmost limit.

Spanæ'mia, Spanæmic. See *Spanæmia*, &c.

Spanamenorrhœ'a. (Σπάνις, scarcity; μήν, month; ροά, to flow.) Scantiness of menstruation.

Spandara'pum. *Sparadrap*.

Spane'mia. *Spanæmia*. (Σπάνις, scarce, rare; αἷμα, blood.) Poverty of the blood, hydræmia.

Spane'mic. *Spanæmic*. (Σπάνις, scarce; αἷμα, blood.) Having the property of impoverishing the blood. A medicine having the property of impoverishing the blood.

Span'emy. Same as *Spanæmia*.

Span'ing. *Weaning*.

S. brash. *Weaning brash*.

Spanopo'gon. (Σπάνις, scarce; πώγων, beard.) One who has lost his beard, or who has a thin beard.

Span'ton's opera'tion. Operation for the radical cure of hernia by means of a kind of corkscrew, which is twisted through the sides of the canal.

Spar'adrap. A waxed cloth. Also a plaster spread on cotton, linen, silk, leather, paper, or the like.

Sparagmat'odēs. (Σπάραγμα, a piece torn off; εἶδος, like.) Afflicted with convulsions or cramps.

Sparag'mos. (Σπάραγμος, a tearing.) A cramp; a choking sensation.

Sparag'mus. A severe convulsion; a laceration or tearing.

Sparcillium. An old name for a vaginal clyster.

Spare. Lacking in substance, lean, gaunt.

S.-built. Of spare habit of body, slender.

Spare'dia. A bandage covered with white of egg.

Spare'ness. The state of being spare or lean.

Spargano'sis. (Σπαργάνωσις, swelling.) Swelling of a secretory organ, *Elephantiasis arabum*.

Spargo'sis. (Σπαργώσις, swelling, distension.) Distension of the breasts with milk. Also, *Sparganosis*.

Sparrow-grass. *Asparagus*.

Spar'sus. (*Spargo, sparsum*, to throw here and there.) *Sporadic*.

Sparteine. $C_{15}H_{26}N_2$. From *Cytisus scoparius* (*Spartium scoparium*). (Not official.) It is a stronger diuretic than scoparine. It is a colourless liquid. The sulphate is a white, crys-

tallisable powder, easily soluble in water. "A safe drug, 5-grain doses have no bad effect. A fairly powerful diuretic in cardiac cases, with no effect on the brain or cord. It is useful in chronic but useless in acute kidney disease. Occasionally gives slight dyspeptic trouble."—Professor Leech, *Lancet*, August 13th, 1887. Dose, $\frac{1}{2}$ grain of sparteine sulphate.

Sparteum. *Spanish broom*. Southern Europe. (Not official.) A small shrub with large yellow flowers. The seeds are used. Action, diuretic, tonic; in large doses emetic and cathartic.

Sparth and Braun, Iodoform suppository of. A medicated suppository for use in puerperal fever. It consists of iodoform 20 grains, gum arabic, glycerine, and pure starch, each 2 grains. To make three suppositories.

Spa'sis. *Spasm*.

Spasm. (Σπασμός, a spasm.) Excessive muscular contraction. When persistent it is called tonic, when intermittent clonic. A spasm of one side of the body is termed hemispasm, a spasm of one particular spot monospasm. In general, a sudden transitory movement of a convulsive character, voluntary or involuntary.

S., Bell's. Convulsive facial tic.

S., bron'chial. Contraction of muscular coat of bronchi in asthma.

S. carpo-ped'al. Contraction causing flexion of fingers, wrist, and toes, with extension (properly flexion) of ankle.

S., clon'ic. Alternate muscular contraction and relaxation.

S., cyn'ic. A spasmodic contraction of the muscles on both sides of the mouth, giving rise to a grin.

S., driver's. One of the professional neuroses; cramp-like pains in the arms on taking hold of the reins.

S., fa'cial. A peculiar clonic contraction of the muscles supplied by the facial nerve. It may affect all the muscles supplied by the nerve, or merely, for instance, the orbicularis palpebrarum. It is reflex in origin, and due to carious teeth, &c.

S., fixed. A continuously rigid tetanic condition of a muscle or muscles.

S., func'tional. A term for the nervous disorders of artisans. *Writer's cramp*.

S., habit. Twitching of certain muscles of head and neck. Also, *Habit chorea*. It is a half-voluntary movement.

S., histrion'ic. A condition in which local involuntary twitchings of the face, acquired in childhood, persist during adult life, and are increased by emotional causes.

S., inspi'ratory. A spasmodic contraction of the inspiratory muscles.

S., lock. Same as *Writer's cramp*.

S., mas'ticatory, of the face. *Trismus*.

S., mim'ic, of the face. See *Facial neuralgia*.

S., mus'cular, idiopath'ic. *Tetaniilla*.

S., nic'titating. Trembling of eyelid due to clonic spasm of orbicularis palpebrarum.

S., nod'ding. Same as *Salaam convulsion*.

S. of accommoda'tion. A spasm of the ciliary muscle producing accommodation for near objects.

S. of the glot'tis. *Asthma thymicum*.

Also, spasmodic contraction of laryngeal muscles closing the vocal cords.

S. of the stomach. *Cardialgia*.

S., retro-collic. Clonus of the deeper muscles of the back of the neck.

S., salaam'. Clonic spasm of the muscles of the leg, causing jumping movements.

S., saltatorial. A form of clonic spasm of the legs, coming on when the patient attempts to walk, causing jumping movements.

S., sew'ing. Clonic and tonic spasms attacking tailors, sempstresses, &c., when they attempt to sew.

S., smith's. A spasm occurring in those occupied in pen-blade manufacturing, saw straightening, razor-blade striking, scissors making, &c. It consists in spasmodic movements of the arm used, followed by paralysis.

S., syncronic. Tremulousness of muscular action.

S., tetanic. Same as *Tonic spasm*.

S., wink'ing. Spasmodic movement of the orbicularis palpebrarum.

S. with rigidity. *Tetanus*.

Spasmodic. Same as *Spasmodic*.

Spasmodical. Same as *Spasmodic*.

Spasmodēs. *Spasmodic*.

Spasmi. *Spasms*.

Spasmo-. A prefix to denote connection with, or relation to, *Spasm*.

Spasmodermic. (*Σπασμός*, a spasm; *δέρμα*, skin.) A spasmodic affection of the skin.

Spasmodēs. Convulsive.

Spasmodic. (*Σπασμώδης*, convulsive.) Pertaining to, of the nature of, or characterized by, *Spasm* or *Spasms*. One in convulsions.

S. asthma. Asthma caused by spasm of the bronchial tubes.

S. cholera. Asiatic cholera with severe cramps.

S. croup. *Laryngismus stridulus*.

S. dysmenorrhœa. (*Δυσ*; *μήν*, month; *ρῆειν*, to flow.) The same as *Idiopathic dysmenorrhœa*.

S. neuro'sis. *Recurring neurosis*.

S. spinal paralysis. *Lateral sclerosis*.

S. stricture. A stricture, as of the urethra, vagina, or rectum, caused by spasmodic muscular contraction.

S. tabes. *Spastic paraplegia*, or *Lateral sclerosis*.

S. torticollis. Constant spasmodic movements of the neck.

Spasmodical. Same as *Spasmodic*.

Spasmodyspnœa. Spasmodic difficulty in breathing.

Spasmodipopy'ria. (*Σπασμός*, spasm; *λείπειν*, to leave; *πύρ*, fever.) A disease in which death takes place by convulsions, there being no fever present. It is supposed to be a form of yellow fever.

Spasmologic. (*Σπασμός*, spasm; *λόγος*, science.) Pertaining to *Spasmology*.

Spasmology. (*Σπασμός*, spasm; *λογία*, a writing.) Scientific knowledge of *Spasms*.

Spasmolyg'mus. *Hiccough*.

Spasmophil'ia. (*Σπασμός*, spasm; *φιλεῖν*, to love.) A morbid ease or tendency of being thrown into *Spasms*.

Spasmorthopnœa. (*Σπασμός*; *ὀρθός*, straight; *πνεῖν*, to breathe.) *Spasmodic orthopnœa*.

Spas'motin. *Sphacelotoxin*. (Not official.) Obtained by R. Robert from ergot by

extracting with ether, and precipitating with petroleum ether. A yellow, amorphous powder, soluble in ether, alcohol, and acetic ether. It has been given in doses of about one grain for the same purpose that ergot is given, and is said to fully represent the latter. The sodium salt is recommended for use hypodermically. The solid bitartrate is also used.

Spasmotox'in. (*Σπασμός*; *τοξικόν*, poison.) A toxin of unknown composition, obtained in 1887 from cultures of *Bacillus tetani*.

Spasmotox'ine. (*Σπασμός*, spasm; *τοξικόν*, poison.) *Sphacelotoxine*. (Not official.) Amorphous, yellow, insoluble principle derived from ergot, forming salts with the alkalies. Oxytoxic, and arterial contractor. Dose, $\frac{1}{2}$ grain.

Spasmo-tra'cheocynan'chē. (*Σπασμός*; *τράχηλος*, throat; *κυνάγχη*, sore-throat.) Same as *Asthma*.

Spas'mous. Having the nature of a *Spasm*.

Spas'nia. Lancinating pain produced at times in the chest by violent fits of coughing.

Spas'tic. (*Σπᾶω*, draw, pull.) Pertaining or relating to *Spasm*; *Spasmodic*.

S. albuminuria. Albuminuria dependent on convulsive attack.

S. anæmia. Local anæmia or ischæmia from spastic contraction of the arteries of the part.

S. hemiple'gia. A spasmodic condition following *Spastic infantile paralysis*.

S. in'fantile paral'ysis. Spastic paralysis due to lesion of the brain, often caused by the use of forceps.

S. paral'ysis. Paralysis with muscular rigidity and increase of reflexes.

S. spi'nal paral'ysis. Same as *Lateral sclerosis*.

Spas'tically. In a spastic manner.

Spastic'ity. A state of spasm. Tendency to, or capability of, spasm.

Spa'tha. (*Σπάθη*, a broad, flat blade; pl. *spathæ*.) Same as *Spathe*.

Spatha'ceous. (*Σπάθη*, a broad, flat blade.) Furnished with a *Spathe*, or resembling, a *Spathe*.

Spath'al. (*Σπάθη*, a broad, flat blade.) *Biol.* Enclosed in, or furnished with, a *Spathe*.

Spathe. (*Σπάθη*, a broad, flat blade.) *Biol.* A peculiar bract, often large and coloured, which subtends or encloses a spadix.

Also, a spatula for spreading ointments.

Spathed. Same as *Spathaceous*.

Spathella. (*Σπάθη*, a blade.) *Biol.* One of the glumes of a grass. See also *Spathilla*.

Spathester. (*Σπᾶω*, to draw.) Surgical instrument for drawing the prepuce over the glans when too short.

Spathilla. (Dim. of *spatha*, a spathe.) *Biol.* A diminutive spathe.

Also, in the Palms, *spathillæ* surround separate parts of the inflorescence.

Spathomel'ë. Same as *Spatula*.

Spath'ula. *Scapula*; *Spatula*.

S. foet'ida. *Dracontium foetidum*.

Spath'ulate. Like a *Spathula*.

Spa'thum pondero'sum. *Barium sulphate*.

Spa'tia. (L. Plural of *spatium*, space.) *Intercostalia*. Intercostal spaces.

S. interlobula'ria. Interlobular fissures.

S. intermuscula'ria. Spaces in the

popliteal region between the hamstring muscles and quadriceps extensor.

S. interos'sea metacarpi. Inter-metacarpal spaces.

Spatilē. (Σπατίλη.) Loose, liquid fæces.

Spatium. See *Space*.

Spatula. (Σπάθην, a broad spade, a paddle.) A broad, flat blade or strip of metal or wood with unsharpened edges; used by druggists to mix or spread ointments.

Also, a flat instrument with rounded edges, used to depress the tongue in examination of the fauces.

S., tongue. A tongue depressor.

Spatular. (L. *spatula*, a spatula.) Like a *Spatula*.

Spatulate. (L. *spatula*, a blade.) *Biol.* Resembling an old-fashioned spatula in outline. Applied to leaves and other flattened organs.

Spatule. (L. *spatula*, a blade.) *Biol.* A structure having a spatulate shape.

Spatuliform. (L. *spatula*, a blade; *forma*, shape.) Same as *Spatulate*.

Spatulig'erous. (L. *spatula*, spatula; *gerere*, to bear.) *Biol.* Provided with a *Spatula*.

Spaying. (Σπάω, to draw away.) Removal of the ovaries.

Spreak'er's cramp. Clonic spasm of the vocal cords. See *Dysphonia spastica*.

Spear'mint. The same as *Mentha viridis*.

Spear'wort. *Ranunculus flammula*.

Specialisa'tion. The act or process of specialising.

Spec'ialism. Devotion to a special branch of a profession or science. The characteristic pursuit or theme of a specialist.

Spec'ialist. One who devotes himself to a particular branch of a profession or science.

Specialis'tic. Of, or pertaining to, a specialist or specialism.

Special'ity. A special matter or thing; a characteristic or distinctive object, pursuit, diversion, operation, product, or the like.

Spe'cies. That which may be distinguished by its characteristics. A group of things having a number of common characteristics. The smallest group to which distinctive and invariable characters can be assigned. (Huxley.)

Also, a name in German and French pharmacy, and in the National Formulary, for certain mixtures of herbs.

S. emollen'tēs. A mixture of the leaves of mallow and *Althæa*, of leaves and branches of melilot, of *Matricaria* and flax seed, in equal parts; used as an emollient cataplasm. It is official in Germany, and is given in the National Formulary.

S. laxan'tes. See *St. Germain tea*.

S. pectora'lis. See *Breast tea*.

Specif'ic. (L. *species*, kind; *facere*, to make.) That which is specified or defined, distinctly named, formulated, or determined; of a special kind or definite tenor. A medicine having a selective curative influence in an individual disease.

S. conduc'tion-resis'tance. The special conduction-resistance dependent on the molecular properties of the conducting material.

S. disease'. A disease produced by special infection from micro-organisms, &c., especially applied to *Syphilis*.

S. grav'ity. The measured weight of a

substance when compared with that of an equal volume of another used as a standard.

S. heat. The amount of heat given off or absorbed by a definite weight (1 lb. or 1 kilo.) in undergoing a measured change of temperature (1° C. or 1° F.).

S. inten'sity. A term used in *Vital statistics* to represent the number living at any age divided by the number dying at that age. It is highest at about fourteen years of age.

S. rem'edy or med'icine. A medicine or remedy that has a distinct effect.

S. ro'tatory pow'er. The *Angle of rotation* through which a layer of unit thickness would deflect a given light ray.

S. stain. A pigment used in microscopy, having a peculiar affinity for certain histological elements. See *Stain*.

S. treat'ment. Treatment specially adapted to a disease, treatment by specific remedies; sometimes erroneously restricted to the treatment of syphilis.

S. warmth. That amount of heat which is necessary to heat one gramme of a substance 1°.

Specific'ity. The state of being *Specific*, or of having a specific character or relation; specific affinity, cause, origin, or effect. The qualities giving an organ or tissue a distinct character.

Specif'icize. To make *Specific*; give a special or specific character to.

Specific'ness. The state or character of being *Specific*.

Specillum. (L. *specere*, look, behold.) A probe, especially one of silver, armed with a button-shaped head. A lens, an eye-glass.

Spec'imen. (L. *specimen*.) A part of an individual taken to illustrate the whole mass; an illustrative example.

Speck'led leech. *Hirudo medicinalis*.

Specks of cor'nea. See *Caligo*.

Speck'y. Having specks or spots; slightly or partially spotted.

Spectacle gage. A device used in fitting spectacles to determine the proper distance between the glasses.

S. glass. Glass suited for making spectacles; optical glass. A lens of the kind or form used in spectacles.

Spectacled snake. *Naja vulgaris*, or *Cobra di capello*, so called from the resemblance of certain lines on its head to spectacles.

Spectacles. (L. *spectaculum*, a show.) Framed or mounted lenses for the correction of optical or muscular defects of the eye.

S., bifo'cal. Lenses with a double focus. Applied to a system of lenses with two foci, chiefly used for the correction of presbyopia when there is at the same time an error of distant vision. Same as *Pantoscopic lenses*; *Cement lenses*. *Franklin spectacles*.

S., orthoscop'ic. (Ὀρθός, straight; σκοπεῖν, to see.) Term applied to lenses cut from the periphery of a large lens in such a manner as to act as if decentred.

S., pantoscop'ic. (Πάντη, on every side; σκοπεῖν, to see.) Same as *S., bifocal*.

S., periscop'ic. (Περί, around; σκοπεῖν, to see.) Consist of concavo-convex and convexo-concave lenses, and therefore have but little spherical aberration.

S., prismat'ic. Spectacles with prismatic lenses, either alone or combined with spheric or

cylindric lenses. Employed in muscular asthenopia.

S. protective. Lenses usually tinted to shield the eyes from light, dust, heat, &c.

Spectra. Plural of *Spectrum*.

Spectral. Pertaining to a *Spectrum*.

S. ocular. An ocular with a direct-vision *Spectroscope* connected with it.

Spectres oculaires or per'les. The same as *Muscæ volitantes*.

Spectro-colorim'eter. (L. *spectrum*, spectrum; *color*, colour; Gr. μέτρον, measure.) An apparatus for the isolation of a single spectral colour. It is used for the detection of colour-blindness.

Spectrol'ogy. (L. *spectrum*, spectrum; Gr. λόγος, same.) The science of *Spectroscopy*.

Spectrometer. (L. *spectrum*, spectrum; Gr. μέτρον, measure.) An instrument for the determination of the refractive indices of liquids.

Spectrom'etry. (L. *spectrum*, spectrum; Gr. μέτρον, measure.) The measurement of the spectrum. The observational use of the *Spectrometer*.

Spectro-mi'roscope. (L. *spectrum*, spectrum; Gr. μικρός, small; σκοπεῖν, to view.) A direct-vision spectroscope-prism in connection with the ocular of a microscope, by the use of which it is possible to examine the absorption bands of a substance in minute quantities. The usual arrangement is a series of glass prisms in a small tube which is attached above the ocular.

Spectro-photom'eter. (L. *spectrum*, spectrum; Gr. φῶς, light; μέτρον, measure.) An instrument for determining the amount of colour in *Spectrum analysis*.

Spectro-polarim'eter. (L. *spectrum*, spectrum; *polus*, pole; Gr. μέτρον, measure.) An instrument in which a spectroscope and polarising apparatus are combined for the purpose of determining the concentration of solutions of substances that rotate the plane of polarised light.

Spectroscope. (L. *spectrum*, an image; Gr. σκοπεῖν, to view.) An instrument used to produce and examine a spectrum of the light from any source by the passage of the rays through a prism or their reflection from a grating, and for the study of the spectrum so formed.

S., Hénoque's analyseur chromatique. A modified *Spectroscope*, by means of which the spectrum of the blood in living tissues, as the nail and palm, may be analysed. Hyperæmia, it is said, can be definitely measured, and the change which the blood undergoes in the tissues observed and timed.

Spectroscopic. Of, or pertaining to, or performed by means of, the *Spectroscope* or *Spectroscopy*.

Spectroscop'ical. Same as *Spectroscopic*.

Spectroscop'ically. In a *Spectroscopic* manner.

Spectroscopist. One skilled in *Spectroscopy*.

Spectroscopy. That branch of science, more particularly of Chemical and Physical science, which is concerned with the use of the *Spectroscope*.

Spectrum. (L. *spectrum*, an image.) In *Physics*, the continuous band of light (*Visible spectrum*) showing the successive prismatic

colours or the isolated lines or bands of colour after the radiation of light through a prism.

S., absorp'tion. A *Spectrum* which contains dark lines or bands. These are produced in a continuous spectrum by the absorption of light through the incandescent vapour of the substance or its solution that the light has passed.

S. analysis. Determination of the nature of substances by their *Spectra*.

S. au'ditory. Same as *Phonism*. A sensation of sound or hearing due to the effect of sight, touch, taste, or smell, or even the thought of some object, taste, or person.

S. compar'ison. Comparing two substances spectroscopically side by side.

S., contin'uous. A *Spectrum* without sudden variations of hue, in which the spectra gradually merge into one another.

S. line. The *Spectrum* resulting from incandescent gas. It consists of sharply defined, narrow, bright lines.

Spec'ula. The plural of *Speculum*.

Speculum. (L. *speculum*, a looking-glass; a copy or imitation.) Something to look into or from; specifically a mirror or looking-glass. In *Surgery*, an instrument for rendering a part accessible to observation, especially by enlarging an orifice.

S. a'ni. A speculum used in examination of the anus and rectum.

S. citrinum. *Orpiment*.

S., duck'-billed. A name sometimes applied to *Sim's vaginal speculum*.

S., ear. A polished instrument in the shape of a hollow cone for examination of the ear.

S. gut'turis. A speculum used in examination of the throat.

S. Helmon'til. Central tendon of the *Diaphragm*.

S. in'dicum. Iron filings.

S., intra-u'terine. An instrument for the introduction of potent local remedies into the uterus.

S. laryn'gis. A speculum used in examination of the larynx.

S. lu'cidum. *Septum lucidum*.

S. mat'ricis. A speculum used in examination of the uterus.

S. na'sl. A speculum used in examination of the nose.

S. oc'uli. A speculum used in examination of the eye.

S. or'is. A tongue depressor.

S., pneumat'ic. A tube which enables the operator to distinguish movements of the *Membrana tympani*.

S. rhomboid'eum. The space left between the *Tendons of trapezii* at the level of the lower cervical and upper dorsal spines.

S., Sim's. Same as *Duck-billed speculum*.

S. Ven'eris. *Achillea millefolium*.

Spe'cus. *Vulva*.

S. cor'dis. *Ventricle of the heart*.

S. pro medul'la spina'll. See *Vertebral column*.

Spedals'khed. A Scandinavian term for *Leprosy*.

Speech. (Mid. Eng. *speche*, speech.) The articulated sounds conveying ideas.

S. cen'tre. See *Broca's convolution*.

S., disor'ders of. There are three principal classes:

I. Speech entirely absent.

- (i) **Mu'tism.** Dumbness secondary to a lesion of the auditory apparatus.
- (ii) **Anar'thria.** Dumbness due to a cerebral lesion.
- (iii) **Ala'lia.** Dumbness due to paralysis of vocal mechanism.
- (iv) **Aphthon'gia.** Temporary dumbness due to spasm of the hypoglossus.

II. Those in which speech is impaired or made difficult through an extra-cerebral lesion. *Dyslalia.*

- (i) **Apho'nia.** Loss of the power of intonation, articulation being preserved.
- (ii) **Stam'mering.** Stuttering. A hesitancy in pronunciation, due to a want of promptitude in the vocal mechanism.
- (iii) **Lal'ling.** The imperfect pronunciation of letters or words, as by children or drunkards. It includes—
 - (a) **Slur'ring.** Thickness of speech.
 - (b) **Mogila'lia.** The inability to articulate some single letter:

Rho'tacism, Sigmat'acism, Io'tacism, Gam'macism. Sub-classes in which there is partial or complete inability to pronounce R, S, L, K, and G, as the case may be.

- (c) **Parala'lia.** The production of a distinctly different sound from that desired, or the substitution of one letter for another:

Pararho'tacism, Parasigma'tacism, Paralamb'dacism, Parais'tacism, Paragam'macism, or the substitution of other distinct sounds for R, S, L, J, K, and S respectively. When Th is substituted for S it is called lipping.

- (d) **Rhinola'lia.** Defects of articulation caused by increase or decrease of the nasal resonance.

III. Those in which speech is impaired or made difficult by a central lesion.

- (i) **Bradyla'lia, or Bradypha'sia.** An abnormal slowness of speech, due to a pathological cause.
- (ii) **Logorrhe'a.** Excessive volubility of speech.
- (iii) **Echola'lia.** The parrot-like repetition of words just heard without attempt to attach meanings to them.
- (iv) **Embolola'lia, or Embolopha'sia.** The frequent interpolation of meaningless words into a speech.
 - (a) **Angophra'sia.** Hemming and hawing.
 - (b) **Logospas'mus choreiformis.** The spasmodic interpolation of a word.

Speech'lessness. Dumbness, inability to utter articulate sounds.

Spell'bone. *Fibula.*

Spence's amputa'tion at shoul'der-joint. An amputation through the surgical neck of the humerus.

S's amputa'tion of thigh. Amputation by long anterior and short posterior flaps.

Spend. (L. *spendere*, to spend.) Vulgarly, to ejaculate semen.

Sper'age. *Asparagus.*

Sper'agus. *Asparagus.*

Sperm. (Σπέρμα, seed.) Male seed of any kind, as the *Semen* or seminal fluid of the higher Vertebrates, or the seminal elements of any animal.

S. ball. A spherical cluster of *Spermatozoa*.

S. blas'toderm. The germinal blastema of the testis.

S. blas'tula. A spherical blastula whose surface is a *Sperm blastoderm*.

S. cell. A *Spermatozoön*. A cell giving rise to a *Spermatozoön*. A *Spermatoblast* or *Spermatocyte*.

S. mor'ula. A *Spermatic morula*.

S. nu'cleus. Nucleus of a *Spermatozoön*.

S. oil. The oil procured from the sperm whale.

Sper'ma. Same as *Sperm*.

Spermace'ti. (Σπέρμα, seed; κήτος, whale.) $C_{16}H_{31}O_2.C_{16}H_{33}$. Cetylpalmitic ester, a substance that occurs in the oil from peculiar cavities in the heads of sperm whales.

Spermacra'sia. (Σπέρμα, seed; ακράσια, impotence.) Imperfection of the semen.

Sper'maduct. (Σπέρμα, seed; L. *ductus*, a duct.) A spermatic duct, or sperm-duct. The *Vas deferens*.

Sper'magone. Same as *Spermogone*.

Spermagon'ium. Same as *Spermogonium*.

Sper'malist. A *Spermist*.

Sperman'gium. (Σπέρμα, seed; αγγίτιον, a receptacle. A spore case or receptacle.

Sper'maphyte. (Σπέρμα, seed; φυτόν, plant.) Same as *Spermophyte*.

Sperma'rium. A *Spermary*, used in contradistinction to ovarium.

Sper'mary. The male germ-gland or essential sexual organ, in which the spermatozoa are generated.

Spermataner'gia. (Σπέρμα, seed; α, privative; έργον, work.) *Sterility* in the male.

Spermatemphrax'is. (Σπέρμα, seed; εμπφρασειν, obstruct.) Obstruction to the passage of semen.

Spermathe'ca. (Σπέρμα, seed; θήκη, a case; pl. *Spermathecae*.) In *Biol.*, a receptacle for spermatozoa. Specifically, a globular pouch connected with the oviduct of the queen bee, and which receives and becomes the depository of the millions of spermatozoa ejaculated during the marital flight.

Spermathe'cal. (Σπέρμα, seed; θήκη, a case.) Pertaining to a *Spermatheca*.

Spermatic. (Σπερματικός.) Of, or pertaining to, the *Sperm* or male seed in general.

S. artery. The artery supplying the testis.

S. cal'culus. A concretion found in the *Vas deferens*.

S. canal. The *Inguinal canal*. Any spermatic duct, as the *Vas deferens*.

S. cord. The *Vas deferens*. With the vessels, nerves, &c., connected with the testis.

S. crys'tals. A variety of crystals formed in seminal fluid after prolonged standing.

S. cyst. A *Retention cyst* in connection with the spermatic duct.

S. fas'cia, external. Same as *Inter-columnar fascia*.

S. fas'cia, inter'nal. Same as the *Infundibuliform process of the fascia transversalis*.

S. fil'ament. A *Spermatozoön*.

S. nerve, exter'nal. The genital branch of the genito-crural.

S. plex'us of nerves. An extension of sympathetic system to the testis.

S. plex'us of veins. The *Pampiniform plexus*.

S. re'tē. Same as *Rete vasculosum testis*.

Spermat'ical. Same as *Spermatic*.

Sper'matid. A seminal cell.

Sper'matin. The odorous, mucilaginous matter found in semen. Its nature is unknown.

Sper'matis. A spermatic vein.

Spermat'ische'sis. (Σπέρμα, seed; ἵσχω, to stop.) Synonym of *Aspermatism*.

Sper'matise. To yield male seed or sperm; to discharge semen.

Sper'matism. Emission of semen. A seminal discharge.

Spermat'is'mus. The emission of semen.

Spermatist. Same as *Spermist*.

Spermat'itis. The same as *Funiculitis*.

Spermat'ium. (Σπέρμα, seed.) *Biol.* One of the rod-shaped bodies, supposed to be male gametes, found in the spermatogonia of certain Fungi.

Sper'mato-. The prefix indicating something connected with the semen.

Spermato'a. Plural of *Spermatoön*.

Spermato'al. Pertaining to a *Spermatoön*.

Sper'matoblast. (Σπέρμα, seed; βλάστος, bud, sprout, shoot.) The bud or germ of a spermatozoön. A germinal blastema whence spermatozoa are produced.

Spermatoblast'ic. Of, or pertaining to, *Spermatoblasts*, or the formation of spermatozoa.

Sper'matoc'ele. (Σπέρμα, seed; κύστις, a bladder.) *Anat.* A seminal vesicle.

Pathol. A spermatic cyst or sac.

Spermatoclem'ma. (Σπέρμα, seed; κλέμμα, stealing.) Involuntary emission of semen during waking.

Spermatocra'tia. (Σπέρμα; α, privative; κράτος, strength.) A synonym of *Spermatorrhœa*.

Sper'matocyst. (Σπέρμα, seed; κύστις, cyst.) A seminal vesicle; a pathologic cyst containing spermatozoa.

Spermatocyst'ic. Containing spermatozoa. Of the nature of a *Spermatocyst*.

Spermatocystidorrh'a'gia. (Σπέρμα, seed; κύστις, cyst; ῥήγνυμι, to burst forth.) Hæmorrhage from the seminal vesicles.

Spermatocys'tis. Same as *Spermatocyst*.

Spermatocysti'tis. (Σπέρμα, seed; κύστις, a cyst; -ιτις, inflammation.) Inflammation of the vesiculæ seminales.

Spermatogem. (Σπέρμα, seed; L. *gemma*, a bud.) See *Spermosphere*.

Spermatogem'ma. (Σπέρμα, seed; L. *gemma*, a bud.) *Biol.* A tissue formed of spermatocytes; a spermatoblast.

Spermatogen'esis. (Σπέρμα; γένεσις, origin.) The formation or development of *Spermatozoa*.

Spermatogenet'ic. Of, or pertaining to, *Spermatogenesis*.

Spermatog'enous. Producing *Spermatozoa*.

Spermatog'eny. The generation or production of sperm.

Spermatog'o'nium. (Σπέρμα, seed; γονή, generation; pl. *Spermatogonia*.) *Biol.* A formative seminal cell or mass of spermato-blasts; a pycnidium.

Spermatoid. Resembling sperm; sperm-like.

Spermatolep'sis. (Σπέρμα; λήψις, taking away.) *Spermatolipsis*. Excretion of sperm, or the production of orgasm, at other times than during coition. Masturbation.

Spermatolog'ic. (Σπέρμα; λόγια, a writing.) Pertaining to *Spermatology*.

Spermatolog'ical. Of, or pertaining to, *Spermatology*.

Spermatol'ogist. One who is versed in *Spermatology*.

Spermatol'ogy. The doctrine, body of facts, and opinions concerning semen and spermatogeny. *Spermology*.

Spermatomere. (Σπέρμα, seed; μέρος, share.) One of the parts into which the male or female pronucleus of an ovum may divide into after fertilisation.

Spermato'ön. The nucleus of a sperm-cell or spermatozoön. A spermatoblast.

Spermatop'athy. (Σπέρμα, seed; πάθος, disease.) Disease of the sperm cells or of their secreting mechanism.

Spermatoph'o'bia. (Σπέρμα, seed; φόβος, fear.) False spermatorrhœa; a morbid dread of spermatorrhœa.

Spermatophore. (Σπέρμα, seed; φερείν, to bear.) *Biol.* A receptacle of seminal products, common among Invertebrates.

Spermatoph'orous. (Σπέρμα, seed; φερείν, to bear.) Bearing or conveying seed, sperm, or spermatozoa; spermatogenous, seminiferous.

Spermatoph'thora. (Σπέρμα, seed; φθορά, decay.) Weakness or inferiority of the semen.

Spermatopla'n'ia. (Σπέρμα, seed; πλάνη, a wandering.) A supposed metastasis of the semen.

Spermatopœ'tic. See *Spermatopœus*.

Spermatopœ'us. (Σπέρμα, seed; ποιεῖν, to make.) Food supposed to have the property of augmenting the secretion of semen, and consequently of exciting the venereal act. Very succulent and nutritious substances have been so considered.

Spermatopoiet'ic. (Σπέρμα, seed; ποιεῖν, to make.) The production or secretion of semen.

Spermatorrhœ'a. (Σπέρμα, seed; ῥοία, a flow.) *Spermatorrhœa*. Involuntary seminal loss.

S. dormien'tum. A nocturnal emission of semen.

S., false. When spermatozoa are absent from the fluid; called also *Prostatorrhœa*.

S., true. When spermatozoa are present.

Spermatosche'sis. (Σπέρμα, semen; σχέσις, suppression.) Suppression of the seminal fluid.

Spermat'o'sis. See *Gonepoiesis*.

Spermatosom'ata. (Σπέρμα, seed; σῶμα, a body.) *Spermatozoa*.

Spermatosome. See *Spermatozoön*.

Spermatosphere. See *Spermatoblast*.

Spermato'vum. (Σπέρμα, seed; L. ovum, an egg.) A fecundated egg.

Spermatoze'mia. See *Spermatorrhæa*.

Spermatozo'a. (Σπέρμα, seed; ζῶν, animal.) The plural of *Spermatozoön*.

Spermatozo'al. Same as *Spermatozoan*.

Spermatozo'an. Of the nature of a *Spermatozoön*.

Spermatozo'ic. Same as *Spermatozoan*.

Spermatozo'ön. The male cell. A spermatic cell or filament. The cells that are the immediate and active means of impregnating or fertilising the ovum of the female.

Spermatu'ria. (Σπέρμα, seed; οὖρον.) The presence of semen in the urine.

Sper'mic. The same as *Spermatic*.

Sper'miduct. (Σπέρμα, seed; L. ductus, a duct.) A duct for the passage of semen.

Sper'mi hydrochlo'ras. *Spermine hydrochlorate*. Salts of spermine; used therapeutically.

Sper'min. A non-poisonous alkaloid obtained from sputum, human semen, and certain organs of leucæmic patients. Found constantly in fluid in the prostate after death, therefore called prostatic crystals.

Also, Dr. Brown Séquard's orchitic fluid. (Not official.) Usually dispensed in tabloids.

Spermio'lum rana'rum. Frog's spawn. Once used in medicine.

Sper'mism. The theory or doctrine that the male sperm contains the whole germ of the future animal, the ovum serving merely as a mould or matrix.

Sper'mist. One who holds the doctrine of *Spermism*.

Sper'mium. *Sperm*.

Sperm nu'cleus. The nucleus of a *Spermatozoön*.

Spermob'ole. (Σπέρμα, seed; βαλλεῖν, to throw.) See *Spermatisimus*.

Spermoblast. Same as *Spermatoblast*.

Spermoblas'tic. Same as *Spermatoblastic*.

Sper'mocarp. (Σπέρμα, seed; καρπός, fruit.) *Biol.* An antheridium.

Spermococ'cus. (Σπέρμα, seed; κόκκος, grain, berry.) The nucleus of a *Spermule*.

Sper'moderm. (Σπέρμα, seed; δέρμα, skin.) *Biol.* The same as *Episperm*; the outer covering of the seed.

Spermoideonecro'sis. (Σπέρμα, seed; οἰδεῖν, to swell; νέκρωσις, dead.) Sphacelus produced by ergotism.

Spermoidia cla'vius. (Σπέρμα; οἰδεῖν, to swell.) *Ergot*.

Spermog'enous. (Σπέρμα, seed; γεννάω, to produce.) Active in the formation of spermatozoa.

Sper'mogone. (Σπέρμα, seed; γονός, producing.) Same as *Spermogonium*.

Spermogonif'erous. (Σπέρμα, seed; γονός, producing; L. *ferre*, to bear.) *Biol.* Producing spermogonia.

Spermog'o'nium. (Σπέρμα, seed; γονός, producing; pl. *Spermogonia*.) *Biol.* A receptacle in which spermatia are developed. See *Peridium*.

Spermog'onous. (Σπέρμα, seed;

γονός, bearing.) *Biol.* Resembling spermogonia.

Sper'molith. (Σπέρμα, seed; λίθος, a stone.) A calculus in the spermatic duct or vesiculæ seminales.

Spermolog'ic. Same as *Spermatologic*.

Spermol'ogist. Same as *Spermatologist*.

Spermol'ogy. Same as *Spermatology*.

Spermoneural'gia. (Σπέρμα, seed; νεῦρον, nerve; ἄλγος, pain.) Neuralgia of the testicles and spermatic cord.

Spermonu'cleus. (Σπέρμα, seed; L. nucleus, a little nut.) A male pronucleus.

Spermophlebecta'sia. (Σπέρμα, seed; φλέψ, vein; ἑκτασις, distention.) Varicosity of the pampiniform plexus or spermatic vein. *Varicocele*.

Spermophlebs. The *Spermatic vein*.

Spermophore. Same as *Spermophorum*.

Spermoph'orum. (Σπέρμα, seed; φερεῖν, to bear; pl. *Spermophora*.) *Biol.* A seminal vesicle; a spermaphore.

Sper'mophyte. (Σπέρμα, seed; φυτόν, plant.) *Biol.* A Phanerogam; a plant bearing seeds, in distinction from one that produces spores.

Spermophyt'ic. (Σπέρμα, seed; φυτόν, plant.) Pertaining to a *Spermophyte*.

Sper'moplasm. *Spermoplasma*. (Σπέρμα, seed; πλάσμα, anything moulded.) *Biol.* The substance of a spermule.

Spermorrha'gia. The same as *Spermatorrhæa*.

Spermorrhœ'a. The same as *Spermatorrhæa*.

Sper'mospore. See *Spermaphore*.

Sper'mous. Same as *Spermatic*.

Spermova'rian. (Σπέρμα, seed; L. ovum, an egg.) Pertaining to a *Spermovarium*.

Spermova'rium. (Σπέρμα, a seed; L. ovum, an egg; pl. *Spermovaria*.) See *Ovotestis*.

Sper'movary. Same as *Spermovarium*.

Spermo'vum. Same as *Spermatoovum*.

Sper'mule. (Σπέρμα, seed.) *Biol.* A spermatozoön, or male generative element.

Sper'mulum. Sperm cell or spermatozoön.

Spes phthis'ica. The hopeful temperament of the consumptive.

Spew. (Πύω, to vomit.) To discharge the contents of the stomach, vomit.

Spew'er. One who, or that which, spews.

Sph. Abbreviation for a spherical lens.

Sphac'elate. (Σφάκελος, dead.) *Pathol.* Dead, necrosed.

Also, to become necrosed.

Sphac'elated. Same as *Sphacelate*.

Sphacela'tion. Necrosis; the process of becoming or making gangrenous. *Mortification*.

Sphac'elē. Same as *Spacela*.

Sphac'elia seg'etum. *Ergot*.

Sphacelin'ic. Acid contained in ergot.

Sphacelis'mus. (Σφακελεῖζιν, to be gangrened or blighted.) The condition of being affected with necrosis.

Sphaceli'um. Parasitic fungus of eye.

Sphac'eloid. (Σφάκελος, dead.) Resembling a sphacelus or gangrenous part.

Sphac'elous. (Σφάκελος, dead.) Pertaining to *Sphacelus*; gangrened; necrosed.

Sphac'elus. (Σφάκελος, gangrene.) *Necrosis.* A necrosed mass.

Sphæræsthesia. (Σφαῖρα, globe; αἴσθησις, sensation.) Perverted sensation as of the contact of a globe or ball.

Sphæraphide. (Σφαῖρα, sphere; ῥαφίς, needle.) *Biol.* One of a cluster of needle-shaped crystals arranged in spheric masses, and found in ferns and other plants. The term is extended to include other crystalline masses, having a somewhat rounded shape; a spherocrystal.

Sphærecphlogis'cum. (Σφαῖρα, sphere; ἐκφλεγεῖν, to light up.) Chicken-pox with spherical vesicles.

Sphæren'chyma. See *Spherenchyma*.

Sphærid'ion. (Σφαῖρα, a ball.) Globe; small pill or granule.

Sphærid'ium. (Σφαῖρα, a ball.) In *Biol.*, the minute spheroid bodies on the ambulacral plates of an echinoderm.

Sphæ'rion. Small pill or granule.

Sphæro-bacter'ium. See *Sperobacterium*.

Sphæro'ma. Spherical prominence, swelling, or tumour.

Sphæ'rula san'guinis. Blood globules.

Sphæ'roid. See *Spheroid*.

Sphæro'ma. See *Spheroma*.

Sphæ'romere. (Σφαῖρα, a ball; μέρος, a part.) See *Spheromere*.

Sphæ'rospore. (Σφαῖρα, a ball; σπόρος, a seed.) Same as *Spherospore*.

Sphæ'rula. (Gr. dim. of Σφαῖρα, a ball, sphere.) A form of special asexual reproductive bud, developed in fresh-water sponges. Their formation is usually associated with the death of the parent plant.

Spha'ge. (Σφαγή, the throat.) The throat, the anterior part of the neck.

Sphagias'mus. (Σφαγιασμός, from σφαγή, the throat.) Epileptic spasm of the muscles of the neck.

Sphagitis. (Σφαγή, the throat; -ιτις, inflammation.) Phlebitis of the jugular vein.

Sphagnic'olous. (Σφάγνος, moss; L. *colere*, to inhabit.) Pertaining to mosses.

Sphalerocar'pium. (Σφαλερός, slippery, uncertain; καρπός, fruit.) A naked seed surrounded by a fleshy cup or aril except at the apex. It is produced by the yew.

Sphaleroti'cia. (Σφαλερός, false; τóκος, labour.) False labour pains.

Sphen'done. A sling or sling-bandage.

Spheneth'moid. (Σφήν, wedge; ἥθμος, a strainer; εἶδος, like.) Of, or pertaining to, the sphenoid and the ethmoid bones. Representing or combining the characters of both sphenoid and ethmoid.

Sphenethmoi'dal. Same as *Sphenethmoid*.

Sphen'ic. Wedge-like.

Sphen'ion. Apex of sphenoidal angle of parietal bone.

Sphen'o-. (Σφήν, a wedge.) A prefix used to denote connection with the sphenoid bone, or to indicate a wedge-like shape.

Spheno-bas'ilar. (Σφήν, a wedge; βάσις, base.) Pertaining conjointly to the sphenoid bone and the basilar portion of the occipital bone.

S. groove. The depression for the pons on the basisphenoid.

Spheno-eth'moid. Same as *Sphenethmoid*.

Spheno-ethmoi'dal. Same as *Sphenethmoidal*.

Spheno-fron'tal. (Σφήν; L. *frons*, the forehead.) Of, or pertaining to, the sphenoid and frontal. Spheno-frontal suture between the orbital plates of frontal and lesser wings of sphenoid.

Spheno-ma'lar. (Σφήν, a wedge; L. *mala*, the cheek.) Of, or pertaining to, the sphenoid and malar bones. The sphenomalar suture.

Spheno-max'illary. (Σφήν, a wedge; L. *maxilla*, the upper jaw.) Relating to the sphenoid and maxillary bones.

S. fos'sa. See *Fossa*.

Spheno-occip'ital. Belonging or relating to the sphenoid and occipital bones.

Spheno-pal'atine. (Σφήν, a wedge; L. *palatum*, the palate.) Relating to the sphenoid and palatine bones.

S. ar'tery. Branch of third portion of internal maxillary.

S. fora'men. A foramen between the orbital and sphenoidal processes of the palate bone.

S. gan'gion. Same as *Meckel's ganglion*.

S. nerve, inter'nal. Same as *Nasopalatine*.

S. nerves. Branches of the maxillary division of the first cranial nerve to Meckel's ganglion.

S. vein. A small vein entering the pterygoid plexus of veins.

Spheno-pari'etal. Relating to the sphenoid and parietal bones.

S. si'nus. A small sinus communicating between cavernous sinus and middle meningeal vein.

S. su'ture. The suture formed by the great wing of the sphenoid and the anterior inferior angle of the parietal.

Spheno-petro'sal. (Σφήν, a wedge; πέτρα, a stone.) Relating to the sphenoid and the petrosal portion of the temporal bone.

S. fis'sure. Fissure at the base of the skull, between the apex of the petrous bone and the greater wing of the sphenoid.

S. lam'ina. The thin horizontal plate projecting backward from the foramen spinosum of the sphenoid bone.

S. su'ture. Line of union between the petrous portion of the temporal bone and the sphenoid.

Spheno-spi'nous ar'tery. The middle meningeal.

Spheno-squamo'sal. (Σφήν, a wedge; L. *squama*, a scale.) Relating to the sphenoid and squamous part of the temporal bone.

Spheno-tem'poral. (Σφήν, a wedge; L. *tempora*, the temple.) Relating to the temporal and sphenoid bones.

Spheno-tur'bate. (Σφήν, a wedge; L. *turbo*, a reel; hence a scroll.) The same as *Spheno-turbinal*.

Spheno-vo'merine. (Σφήν; L. *vomer*, vomer.) Pertaining to the sphenoid bone and the vomer.

Sphenoccip'ital. (Σφήν, a wedge; L. *occiput*, the occiput.) Of, or pertaining to, the sphenoid and occipital bones.

Sphenoceph'a'lia. (Σφήν, a wedge;

κεφαλή, the head.) The condition of *Sphenocephalus*.

Sphenoceph'alus. A variety of single autostic monsters of the species *Otocephalus*, in which the two eyes are well separated, the ears are united under the head, the jaws and mouth are distinct; the sphenoid is altered in shape, so that it is analogous in form to that normally found in Birds.

Sphe'noid. (Σφήν; εἶδος, like.) Wedge-shaped. In *Anat.*, the large, irregular, wedge-shaped bone forming the greater part of the base of the skull, articulating with eleven of the bones of the skull.

Sphenoid'al. Same as *Sphenoid*.

S. an'gle. Angle made by lines drawn from the sella turcica to the middle of the anterior wall of the foramen magnum, and to a point of junction of frontal and nasal bones.

S. crest. Median thin ridge articulating with perpendicular plate of ethmoid.

S. fis'sure. A fissure of the cerebrum.

S. fontanelle'. That found at junction of squamous and coronal suture.

S. pro'cess. The plate closing in the sphenoidal sinuses inferiorly.

S. ros'trum. The beak or beak-like part of the sphenoid.

S. sep'tum. The septum dividing the sinuses of the body of the sphenoid.

S. si'nuses. The hollow cavities in the basisphenoid.

S. spon'gy-bones. The sphenoturbinal.

Sphenoid'al'e basila're ante'rius. The fore part of the basisphenoid.

S. basio-post'icum. The lower part of the basisphenoid.

S. latera'le poste'rius. The lateral portion of the sphenoid.

Sphenoid'al'ia latera'lia. The wings of the sphenoid.

Sphenoi'des. In *Anat.*, the sphenoid; the *Os sphenoides*.

Sphenoid'eum. The sphenoid bone, or *Os sphenoidaeum*.

Sphenoido-auric'ular. (Σφήν, a wedge; *L. auriculus*, auricle.) Pertaining to the sphenoid and binauricular diameters of the skull.

S. in'dex. The ratio of the minimum sphenoid diameter of the skull with the binauricular diameter, the latter being taken as 100.

Sphenoido-front'al. (Σφήν, a wedge; *L. frons*, forehead.) Pertaining to the sphenoid and frontal diameters of the skull.

S. in'dex. The relation between the minimum sphenoid diameter of the skull and the minimum frontal, which is taken as 100.

Sphenoido-pari'etal. (Σφήν, a wedge; *L. paries*, a wall.) Relating to the sphenoid and parietal diameters of the skull.

S. in'dex. The relation between the minimum sphenoid diameter of the skull and the maximum frontal diameter taken as 100.

Sphenom'eter. (Σφήν, a wedge; μέτρον, a measure.) An instrument for measuring the wedge removed in osteotomy for curvature.

Sphenopharynge'us. (Σφήν, a wedge; φάρυγξ, pharynx.) A separated portion of the superior constrictor of the pharynx, arising from the spine of the sphenoid.

Sphenop'terous. (Σφήν, a wedge; πτέρον, a feather.) Possessing wings like a wedge.

Sphenopterygopalati'nus. (Σφήν, a wedge; πτερύγιον, a little wing; *L. palatinus*, palatine.) *Circumflexus palati*.

Sphenor'bital. (Σφήν, a wedge; *L. orbita*, orbit.) *Orbito-sphenoid*. Relating to the sphenoid and orbit. The lesser wings of the sphenoid are called the orbito-sphenoids.

Sphenosalpingostaphyli'nus. (Σφήν; σάλπιγξ, a tube; σταφυλή, a plummet.) The *Tensor palati*.

Sphenoi'sis. Wedged.

Sphenostaphyli'nus. (Σφήν, a wedge; σταφυλή, the uvula.) The circumflex muscles of the palate.

Sphenoti'c. Relating to the otic capsule and sphenoid bone.

Sphenotre'sia. (Σφήν, a wedge; τρήσις, perforation.) The breaking up of the base of the skull in craniotomy.

Sphenotribe. (Σφήν, a wedge; τριβῆν, to rub.) Cephalotribe for performing sphenotresia.

Spheræsthe'sia. See *Sphæræsthesia*.

Sphere. (Σφαῖρα, a sphere.) A ball or globe; a space.

S., embryon'ic. See *S., segmentation*.

S., gran'ule. A large granular corpuscle found in serous exudations.

S., hear'ing. The auditory centres.

S., mo'tor. The motor area.

S. of attrac'tion. A clear spot in the cell plasma, outside of and close to the nucleus of an ovum undergoing mitosis.

S., protoplas'mic primor'dial. See *S., segmentation*.

S., segmenta'tion. A nucleated cell derived from division of the vitellus in the process of segmentation.

S., sen'sory. A sensory area of the nervous system.

S., vitel'ine, or S., yolk. The mulberry-like mass resulting from the division of the ovum after fertilisation.

S., yeast. An aggregation of certain sprouting forms of the Genus *Mucor*.

Spheren'chyma. (Σφαῖρός, a ball; εγχύμα, an infusion.) The name applied to a form of parenchyma in which the cells are globular.

Spher'ic. Spherical. Having the shape of, or pertaining to, a sphere.

S. aberr'a'tion. The excess of refraction of the peripheral part of a convex lens over the central area, which prevents the light rays from being properly focussed, and causes a blurred image.

Spher'iform. Spheric.

Spheriocarcino'ma. (Σφαῖρα, a ball; καρκίνος, cancer.) A carcinoma having a spherical shape.

Spherocer'ebrin. (Σφαῖρα, a ball; *L. cerebrum*, cerebrum.) A nitrogenised substance occurring in brain tissue among a group of Cerebrinacides.

Sphero'ma. (Σφαῖρα, sphere; ὄμα, tumour.) Any more or less spherical tumour or protuberance.

Sphe'romere. (Σφαῖρα, a ball; μέρος, a part.) *Biol.* An *Actinómere* (q. v.).

Sphe'rosome. (Σφαῖρα, sphere; σῶμα, body.) *Biol.* The body-wall of a radiated animal. Suggested by L. Agassiz in place of *Perisome*.

Sphe'rospore. (Σφαῖρα, sphere; σπόρος, a seed.) *Biol.* Agassiz' name for a *Tetraspore*.

Spher'ular. (Dim. of σφαῖρα, sphere.) Resembling a *Spherule*.

S. seg'ment. See *Sphere segmentation*.

Spher'ulate. (Dim. of σφαῖρα, a sphere.) *Biol.* Studded with spherules.

Spher'ule. (Σφαῖρα, sphere.) A globule.

Sphinc'ter. (Σφιγκτήρ, anything which binds tight.) An annular muscle surrounding a natural orifice of the body.

S. ani. Internal sphincter. An involuntary muscle under the control of a centre in the lumbar region of the spinal cord. The external sphincter is voluntary, supplied by branches of the sacral plexus.

S. ani ter'tius. Rectal folds.

S. col'i. The deeper of the two primitive layers from which the facial muscles are derived.

S. gul'ae. (L. *gula*, the gullet.) *Constrictor pharyngis*.

S. il'e'i. Valve of *Bauhin*, the ileo-cæcal valve.

S. intestina'lis. The *S. ani internus*.

S. labio'rum. (L. *labium*, a lip.) The *Orbicularis oris*.

S. laryn'gis. (Λαρυγξ, the larynx.) The *Ary-epiglottic muscles* of both sides, embracing the laryngeal aperture.

S. oculi (L. *oculus*, an eye), or **S. palpebra'rum** (L. *palpebra*, an eyelid.) The same as *Orbicularis palpebrarum*.

S. œsopha'geus. *Hiatus œsophageus*.

S. o'ral. The same as the *Orbicularis palpebrarum*.

S. pharyngolaryn'geus. (Φαρυγξ, pharynx; λαρυγξ, throat.) Includes the following three sets of muscles: the *Inferior constrictor*, the *Crico-thyroideus anticus*, and the *Thyroideus*.

S. pupilla'ris. The circular muscular fibres of the pupil.

S. pylo'ri. The circular muscle-fibres of the pylorus.

S. rec'ti. The same as the *Internal sphincter*.

S. vagin'æ. (L. *vagina*, a sheath.) An elliptical muscle surrounding the orifice of the vagina.

S. ves'icæ. (L. *vesica*, a bladder.) The circular fibres in neck of bladder.

S. ves'icæ exter'nus. The muscular fibres surrounding the prostatic portion of the urethra.

Sphincter'algia. (Ἄλγος, pain.) Pain in the *Sphincter ani*, or its immediate vicinity.

Sphinc'terate. Contracted or constricted, as if by a *Sphincter*.

Sphincterectomy. (Σφιγκτήρ, sphincter; ἐκτομή, excision.) *Oblique blepharotomy*. Stellwag's operation for the dilatation of the palpebral fissure, or for blepharospasm.

Sphincter'ic. Same as *Sphincterical*.

Sphincter'ical. Relating to a *Sphincter* or its function.

Sphincteris'mus. (Σφιγκτήρ, sphincter.) A spasmodic contraction of the *Sphincter ani*, usually attendant on fissure.

Sphincterol'ysis. (Σφιγκτήρ, sphincter; λύσις, solution.) The operation of freeing the iris in *Anterior synechia*.

Sphinc'teroplasty. (Σφιγκτήρ, sphincter; πλασσεῖν, to form.) The formation of an artificial sphincter by a plastic operation.

Sphincterotomy. (Σφιγκτήρ, a sphincter; τομή, section.) Division of a *Sphincter*.

Sphinc'trate. Same as *Sphincterate*.

Sphingoin. (Σφιγγεῖν, to bind.) An alkaloid derived from cerebral tissue.

Sphing'o-myelin. (Σφιγγεῖν, to bind; μυελός, marrow.) A brain phosphatid allied to myelin. It is capable of being decomposed into neurin and a substance which is converted into *Sphingosin*.

Sphingosin. (Σφιγγεῖν, to bind.) An alkaloidal cerebroside occurring in brain tissue.

Sphinx'is. Constriction.

Sphyg'mic. (Σφυγμικός, relating to the pulse.) Of, or pertaining to, the pulse.

Sphyg'mica doctri'na. *Sphygmology*.

Sphyg'micus. Throbbing.

Sphygmoceph'alus. (Σφυγμός, pulsation; κεφαλή, the head.) A pulsatory pain in the temples.

Sphygmo'dēs. Throbbing.

Sphyg'mogram. (Σφυγμός, pulse; γράμμα, writing.) A tracing made by the lever of the *Sphygmograph*.

Sphyg'mograph. (Σφυγμός, pulse; γραφεῖν, to write.) An instrument recording the varying tension of an artery by means of a lever which exaggerates the movements.

Sphygmograph'ic. Relating to, or traced by, the *Sphygmograph*.

Sphygmog'raphy. The act of taking sphygmograms relating to the pulse.

Sphyg'moid. (Σφυγμός, pulse; εἶδος, form.) Pulse-like.

Sphygmole'dium. (Σφυγμός, the pulse; λεγεῖν, to read.) Instrument for measuring the quickness and force of the pulse.

Sphygmol'ogy. (Σφυγμός, the pulse; λόγος, treatise.) Science relating to the pulse.

Sphygmomanom'eter. (Σφυγμός, the pulse; μανός, flaccid, thin; μέτρον, measure.) An instrument measuring the tension of the blood in an artery.

Sphygmom'eter. Same as *Sphygmomanometer*.

Sphyg'mophone. (Σφυγμός, pulse; φωνή, sound, voice.) A combination of a *Microphone* and a *Sphygmograph*.

Sphyg'moscope. (Σφυγμός, pulse; σκοπεῖν, to examine.) An instrument for showing mechanically the movements of the heart and pulsations of a blood-vessel.

S., gas. A sphygmoscope which makes its registration by a gas jet.

Sphygmos'copy. The art of tracing the pulse-curve by the *Sphygmoscope*.

Sphygmo-systole. (Σφυγμός, pulse; συστολή, contraction.) The influence of the cardiac systole on the pulse.

Sphyg'motechny. (Σφυγμός, the pulse; τέχνη, art.) The art of diagnosis and prognosis by means of the pulse.

Sphygmotonom'eter. (Σφυγμός, the pulse; τόνος, tone; μέτρον, measure.) An instrument used in estimating the elasticity of the walls of an artery.

Sphyg'mous. Pertaining to, or having the nature of, a pulse.

Sphygmus. The pulse; a pulsation.

Sphyra. (Σφυρόν, the ankle.) *Malleolus*.

Sphyron. A malleolus.

Sphyrotomy. (Σφύρα, mallet; τομή, a cutting.) The operation consisting in the removal of the malleus or its handle, with a portion of the membrana tympani.

Sphyxis. See *Pulsation*.

Spica. (L. *spica*, a point.) A spiral bandage with reversed turns, supposed to resemble a spike of barley.

Spice. (Mod. Eng. *spice*, *spice*.) An aromatic vegetable substance used for flavouring; a condiment.

S. berry. A popular name for *Gaultheria procumbens*.

S. plaster. *Emplastrum aromaticum*.

S. poultice. A poultice made from a variety of spices.

Spicule. (L. *spicula*, a sharp point.) *Surg.* A projecting sharp point of bone.

Spider. An Arthropod of the Class *Arachnida*.

S. cancer. See *Acne rosacea*.

S. cells. Bacilli the flagella of which give them the appearance of small spiders.

Also, the characteristic cells of the neuroglia. They have numerous long and delicate prolongations.

S. nævus. See *Acne rosacea*.

S.'s web. Formerly used as a hæmostatic; also in some systemic diseases.

Spigel's line. Same as *Linea semilunaris*.

Spigelia, or pinkroot. Southern and Middle United States. Nat. Order *Loganiaceæ*. (Not official.) A shrub blossoming in June or July; its root consisting of a rhizome with many rootlets. The roots are used. Action, anthelmintic; narcotic in over-doses. Uses, intestinal worms; poisonous dose overcome with diffusible stimulants. Doses: fluid extract, 10 to 100 drops; compound fluid extract (pinkroot 7, senna 7, savine 1, manna 1), $\frac{1}{2}$ to 1 drachm; fluid extract with senna, $\frac{1}{2}$ to 2 drachms; tincture with senna, $\frac{1}{2}$ to 2 drachms.

Spigelian lobe. (After Adrian van der Spiegel, a Belgian physician.) One of the hepatic lobes.

Spigelin. An alkaloid said to exist in the anthelmintic species of *Spigelia*, of which it appears to be an active principle.

Spigelius, line of. Same as *Linea semilunaris*.

Spike'nard. A name given to the rhizome of various species of valerian, and especially to *Nardostachys jatamansi*, formerly much used in medicine; now used in washes and unguents, chiefly in the Orient. (Unofficial.) It is not to be confounded with American spike-nard, *Araba racemosa*.

Spill'man's soap. A soap made from pure olive oil and caustic potash, with 50 per cent. of mercury. Used in the treatment of syphilis.

Spiloma. See *Nævus vascularis*.

Spilopla'nia. (Σπίλος, a stain; πλάνη, wandering.) A condition characterised by transient or wandering maculæ of the skin.

Also, a synonym of *Elephantiasis græcorum*.

Spiloplax'ia. (Σπίλος, a spot; πλάξ, a

broad surface.) A condition marked by large red spots symptomatic of *Elephantiasis*; seen also in cases of *Pellagra*.

Spilo'sis pollo'sis. (Σπίλος, a spot; πολλός, grey.) A synonym of *Canities*.

Spilus. (Σπίλος, a spot.) A mole or coloured mark on the skin. *Nævus*.

Spina. (L. *spina*, a thorn, prickle, the backbone.) *Anat.* Any prominent process like a thorn or spine.

S. accessoria is'chii. (L. *accedo*, to be added.) A small eminence sometimes seen in the great sciatic notch at the junction of the ischium and ilium.

S. acida. *Oxycantha Galeni*.

S. alba. (L. *albus*, white.) *Carduus Marianus*.

S. angularis. (L. *angulus*, an angle.) The spine of the *Sphenoid*.

S. bicipita'lis exter'na. (L. *bis*, two-fold; *caput*, a head.) The pectoral ridge.

S. bicipita'lis inter'na. The inner lip of the bicipital groove.

S. bif'ida. (L. *bis*; *findo*, to split.) A congenital deficiency of the spinal column, usually associated with projection of the spinal membranes.

S. cerri'na. *Rhamnus*.

S. con'dyli exter'na fem'oris. (Κόνδυλος, a knuckle.) The outer lip of the linea aspera.

S. con'dyli inter'na fem'oris. The inner lip of the linea aspera.

S. condyloid'ea exter'na. (Κόνδυλος; εἶδος, shape.) The outer supra-condylar ridge.

S. condyloid'ea inter'na. The inner supra-condylar ridge.

S. Darwin'ii. The *Darwinian tubercle*.

S. dorsa'lis. The spinal column.

S. dor'si. The vertebral column.

S. dor'si intror'sum flex'a. *Lordosis*.

S. erector. *Multifidus spinæ*; *Rotatores spinæ*. Muscles of the back.

S. ethmoida'lis. The ethmoidal spine.

S. fronta'lis. Nasal spine of the frontal bone.

S. hel'icis. (Ἑλῆξ, anything twisted.) The prominence of the helix.

S. Helmon'tii. The proximate cause of inflammation, as if the part or organ was pricked with a thorn.

S. hir'ci. *Astragalus verus*.

S. il'io-pectine'a. Spine of pubis.

S. infecto'ria. *Rhamnus*.

S. infe'rior muscula'ris. *Crista arcuata*; *Cartilaginis arytenoideæ*.

S. intercondyloid'ea, or S. interme'dia. Spine of tibia.

S. ischiad'ica, ischiat'ici, or is'chii. The spine of the ischium.

S. menta'lis. The *Genial tubercle*.

S. mus'culi tere'ti majo'ris. (L. *teres*, rounded.) The process for the attachment of the *teres major* on the lower part of the axillary border of the scapula.

S. nasa'lis, or nasa'lis ante'rior. Nasal spine.

S. nasa'lis os'sis fron'tis. Nasal spine.

S. nasa'lis os'sis maxilla'ris supe'rior. The anterior nasal spine.

S. nasa'lis poste'rior os'sis pal'atini. The posterior nasal spine.

S. nasa'lis supe'rior. The nasal spine of the frontal bone.

S. na'sl. A prominent line on the side of the nose.

S. navicula'ris. (L. *navicula*, a small boat.) A pointed process found at the inner edge of the navicular bone.

S. neura'lis. Neural spine.

S. nodo'sa. *Rachitis*.

S. occipita'lis. Occipital protuberance.

S. orbita'lis infe'rior. A small spine frequently found on the orbital surface of the great wing of the sphenoid, bounding the sphenoidal fissure, for attachment of the orbital muscle of Muller.

S. orbita'lis supe'rior. *S. recti lateralis*.

S. os'sis il'li. Spine of ilium.

S. os'sis is'chil. Spine of ischium.

S. os'sis pu'bis. The spine of the pubes.

S. palati'na. The posterior nasal spine.

S. pe'dum. A corn.

S. pu'bis. Spine of the pubes.

S. rec'ti latera'lis. A small projection on the border of the great wing of the sphenoid for the external rectus.

S. scap'ulae. Spine of the scapula.

S. sphenoida'lis. Spine of the sphenoid.

S. supe'rior muscula'ris. Prominence of the arytaenoid cartilage.

S. tib'iae. Spine of the tibia.

S. transver'sa. *Crista arcuata*; *Cartilaginosis arytaenoides*.

S. trochan'tica ma'jor. The outer lip of the linea aspera.

S. trochan'tica mi'nor. The inner lip of the linea aspera.

S. trochlea'ris. (Τρόχαλια, pulleys.) The trochlear spine.

S. tuber'culi majo'ris. The pectoral ridge.

S. tuber'culi mino'ris. The inner lip of the bicipital groove.

S. tympan'ica. (Τύμπανον, a drum.) A small projection of the tympanic ring of the middle ear.

S. tympan'ica ante'rior. Small projection not seen when the ring unites with the tegmen tympani.

S. tympan'ica ma'jor. *S. tympanica anterior*.

S. tympan'ica mi'nor. Small process or projecting end of the tympanic ring.

S. tympan'ica poste'rior. Serves as a point of attachment of the anterior ligament of the malleus. It projects from the margin of the external meatus into the tympanus, and forms the anterior boundary of the notch of Rivini.

S. vento'sa. *Exostosis*. Osteoid cancer.

S. vestib'uli. *Crista vestibuli*.

S. zygoma'tica. (Ζεύγμα, a bond.) The portion of the zygomatic process of the maxilla contributing to the margin of the sphenomaxillary fissure.

Spinal. (L. *spina*, a thorn.) Relating to the backbone. Pertaining to a spine or spinous process.

S. ab'scess, opera'tion for. Treves recommends opening psoas abscesses through the loin instead of in the iliac fossa, claiming as an advantage that portions of carious bone can be removed.

S. acces'sory. The twelfth cranial nerve.

S. acces'sory nerve, opera'tions on. Stretching, neurotomy, and neurectomy have been practised for spasmodic torticollis.

S. ar'teries. Vessels, two in number, supplying the spine.

1. The *posterior spinal artery*, arising from the vertebral, and reinforced by numerous arteries in its course down the spinal cord.

2. The *anterior spinal artery*, like the former, extends the whole length of the cord, and arises from the vertebral.

S. bulb. The *Medulla oblongata*.

S. canal'. The canal of the vertebral column containing the spinal cord and membranes.

S. cen'tre. Spinal marrow or cord

S. cen'tres. The motor centres of the spinal cord.

S. col'umn. The backbone, comprising seven cervical, twelve dorsal, five lumbar, and four coccygeal vertebrae.

S. col'umn, opera'tions on. Operations have been undertaken for displaced fragments of bone, for paralysis due to hæmorrhage or inflammatory exudation, or for tumours.

S. com'missure. (L. *commissura*, a band.) The transverse portion connecting the two halves of the cord. Consists of the anterior grey and the posterior white commissure.

S. cord. *Spina medullaris*. The neural axis of Vertebrates, excluding the brain.

S. cord, opera'tions on. Tumours have been removed by simple excision.

S. debil'ity. (L. *debilitas*, weakness.) Spinal weakness.

S. ep'ilepsy. Brown-Séquard's name for *Ankle-clonus*.

S. foram'ina. The *Intervertebral foramina*.

S. fur'row. *Vertebral groove*.

S. gan'glia. The enlargement on the posterior roots of the spinal nerves.

S. ice'-bag. An elongated india-rubber ice-bag for application along the vertebral column.

S. localisa'tion. The designation of a particular part of the spinal cord as the centre of certain physiological functions, or of pathological interest, as the location of morbid processes.

S. mar'row. Same as the *S. cord*.

S. mus'cles. The back muscles.

S. nerves. Those nerves derived from the spinal cord.

S. paral'ysis. Acute, atrophic, spastic paralysis, &c. See *Paralysis*.

S. point. A tender spot over one of the spinous processes in neuralgia, supposed to indicate the nerve affected.

S. prolonga'tion. *Medulla spinalis*.

S. re'flexes. The contraction of certain muscles resulting from the stimulation of a spinal sensory nerve.

S. stim'ulant. A medicine or treatment that increases the functional activity of the spinal cord.

S. veins. Veins connected with the vertebral canal.

Spina'lis. A series of muscular strips uniting the spinous processes of the vertebrae.

S. cer'vicis. *Semispinalis colli*.

S. col'li. *Semispinalis colli*.

S. dor'si. *Transverso-spinalis*.

S. dor'si ma'jor. See *S. dorsi*.

S. dor'si mi'nor. *Interspinales*.

S. lumbo'rum. *Longissimus dorsi*.

Sp'i'nants. Medicines which, by their

action on the spinal nervous system, excite muscular contraction, as strychnia, brucia, &c.

Spina'ti. *Interspinales colli.*

Spina'tus. Spinal.

Spin'dle. A tapering rod or pin; a body having a fusiform shape.

S., achromatic. *S. cleavage; S. karyokinesis.*

S. cat'aract. A cataract characterised by the formation of a spindle-shaped opacity extending through the lens from before backwards.

S.-cell. A fusiform cell.

S.-celled. Having fusiform cells.

S., nu'clear. The double cone-like appearance of the nucleus during certain stages of karyokinesis.

S., segmenta'tion. See *Spindle, nuclear.*

S.-shaped. Fusiform.

Spine. (*L. spina, a thorn.*) The backbone, rachis, spina, or spinal column of a Vertebrate.

S.-ache. Pain in or in neighbourhood of the spine.

S., an'gular. Curvature of the spine. See *Curvature.*

S., cleft. See *Spina bifida.*

S., hæ'mal. The part that closes in the hæmal arch of a typical vertebra.

S., interne'ural.

S., lat'eral curv'ature of the. See *Curvature.*

S., men'tal. The *Genial tubercles.*

S., men'tal exter'nal. The *Mental protuberance.*

S., na'sal. A process of the frontal bone.

S. of the eth'moid. A projection of the sphenoid articulating with the ethmoid.

S.s of the il'ium. Four prominences of the ilium.

S. of the scap'ula. Prominent plates of bone separating the supra- and infra-spinous fossæ.

S. of the sphe'noid. A projection of the outer part of the great wing.

S. of tib'ia. Process between the articular surfaces of the tibia.

S., palatine. Same as *Posterior nasal spine.*

S., pharyn'geal. A process of the basi-occipital.

S., pu'bic. A prominent tubercle on the upper part of the pubes.

S., rail way. Same as *Concussion of spine from railway accidents.*

S., sciatric. Same as *Spinous process of ischium.*

S., troch'lear. A small prominence on upper and anterior part of inner wall of the orbit for the trochlea.

Spine'less. Having no backbone; limp, nerveless.

Spines'cent. (*L. spinescere, to grow thorny.*) *Biol.* Coarse, harsh, or spiny.

Spinicer'ebral. See *Cerebro-spinal.*

Spinicer'ebrate. Having a brain and spinal cord. *Myelencephalous.*

Spinidel'toid. That part of the deltoid arising from the spine of the scapula.

Spinif'erous. (*L. spina, spine; ferre, to bear.*) Bearing spines.

Spin'iform. (*L. spina, a thorn; forma, form.*) *Biol.* Spine-like.

Spinirec'tor. Erecting, extending, or straightening the spine. Same as *Erector spinæ.*

Spin'i'tis. (*L. spina, the spine; Gr. -itis, inflammation.*) *Myelitis.* Inflammation of the spinal cord or its membranes.

Spinitrape'zius. (*Τράπεζα, a table.*) The spinal as distinguished from the cranial part of the trapezius.

Spino-bul'bar. Pertaining or relating to the spinal cord and the medulla oblongata.

Spino'la. See *Spina bifida.*

Spinometer. Same as *Scoliosometer.*

Spinose'. (*L. spinosus, full of thorns.*) *Biol.* Possessing thorns, or shaped like a thorn.

Sp'inous. (*L. spinosus, full of thorns.*) Having spines; shaped like a spine.

S. fora'men. *Foramen spinosum* of the sphenoid.

S. pro'cess of a ver'tebra. The posterior process. *Hypapophysis.*

S. pro'cess of sphe'noid. See *Spine of sphenoid.*

Spin'therism. (*Spintherismus. Σπινθερίζω, to emit sparks.*) *Synchysis scintillans.* The illusory sensation of sparks dancing before the eyes.

Spin'therismus. See *Spintherism.*

Spinthero'ma. (*Σπινθήρ, a spark.*) Photopsia due to the presence of crystals of cholesterolin.

Spinthero'pia. (*Σπινθήρ, spark; ὄψις, sight.*) Same as *Spintherism.*

Spin'ula. (*L. spinula, dim. of spina, a spine; pl. spinulæ.*) *Biol.* A little hook or spine.

Spin'ulate. (*L. spinula, a little spine.*) Provided with a *Spinula.*

Spin'ule. Same as *Spinula.*

Spinulose', Spin'ulous. (*L. spina, spine.*) Spiny; having spines.

Spi'ra. (*Spira, a spine.*) A convolution of the brain.

Spir'acle. (*L. spiraculum, a breathing-hole.*) *Biol.* A respiratory aperture.

Spiraculum. (*L. A breathing hole; pl. spiracula.*) *Biol.* A spiracle.

Spiræ'a. Hard-back. North America. Nat. Order *Rosaceæ.* (Not official.) A small shrub, three or four feet high. The roots are used; they are branching, with a thin brown bark which has a bitter, astringent taste. Action, astringent and tonic. Uses, in summer complaints of children, diarrhoea, dysentery, passive hæmorrhages, gleet, leucorrhœa; locally to foul ulcers. Dose: of the extract, 5 grains; of the fluid extract, $\frac{1}{2}$ to 1 drachm.

Spi'ral. A curve with constantly increasing diameters; wound like the threads of a screw.

S. band'age. See *Bandage.*

S. canal'. See *Cochlea.*

S. cheese. The *Spirillum tyrogenum.*

S. crest. Pointed, indented border of limbus of spiral lamina turned towards the organ of Corti.

S.s, Cursh'mann's. A form of curled and tufted fibrous exudate, seen in the sputum of asthma, pneumonia, &c. Thought to be pathognomonic of exudative bronchitis. Also, *S.s, Leyden's.*

S. duct. A duct that has a spiral thickening on its inner surface.

S. fibres. Processes of bipolar ganglionic cells wound round one another.

S., Fink'ler and Pri'or's. See *Spirillum*.

S. gan'gion. See *Ganglion*.

S. groove. See *Sulcus spiralis*.

S., Herxhei'mer's. Peculiar fibres in the epidermis and epithelium of certain mucous membranes.

S. lam'ina. Bony lamina dividing the scala tympani from the scala vestibuli of the cochlea.

S.s., Ley'den's. See *S., Curshmann's*.

S. lig'ament. Thickened portion of external periosteum of cochlea, corresponding to the cochlear duct.

S. line of femur. The *Anterior intertrochanteric line*.

S. nerve. The *Musculo-spiral nerve*.

S. tract. Depression at the bottom of the internal auditory meatus by which filaments of the cochlear nerve enter the internal ear.

S. tubes of kid'ney. See *Tubuli uriniferi*.

S. tu'bule of Schachow'a. Spiral portion of uriniferous tubule between the first convoluted tubule and the looped tubule of Henle.

Spiramen'ta pulmo'nium. (*L. spiramentum*, an air-hole.) The *Pulmonary vesicles*.

Spiramen'tum an'imæ. The lung.

Spira'mina palpebra'rum. *Lachrymal puncta*.

Spira'tio. (*L. spiro*, to breathe.) *Respiration*.

Spira'tion. (*L. spirare*, to blow, breathe.) *A breathing*.

Spire. (*L. spira*, a coil, twist.) *Biol.* A conic tapering structure; a sprout, a stalk, or the exerted whorls of the shell of a spiral Gastropod mollusc.

Spired. Having a spire.

Spirem. (*L. spira*, a coil, a twist.) *Biol.* The "close skein" or "mother skein" of chromatin fibrils in a cell undergoing mitotic division. The first stage in karyokinesis.

Spire'ma. (*L. spira*, that which is wound or coiled.) Period of division of the nucleus in which chromatin becomes a long filament wound into spherical shape, and the nucleoli disappear.

Spir'icle. (*L. spira*, a coil.) *Biol.* A coiled thread found in the hairs on some seeds; they uncoil when dampened, and give rise to a motion which tends to bury the seed in the soil.

Spiriferous. (*L. spira*, a coil; *ferre*, to bear.) Bearing a spire.

Spiril'lum. A Genus of *Bacteriaceæ*, consisting of cells of Fungi having a serpentine motion.

The following table gives the more important species (Crookshank).

Associated with disease.

In Man:

S. chol'eræ asiaticæ. *Comma bacillus* (Koch). Bacillus of Asiatic cholera. Curved rods or commas half the length of tubercle bacillus. It is unquestionably pathogenic in animals, but there is still some doubt whether it is in man.

S. Fink'leri. Saprophytic in man; pathogenic in animals.

S. Oberme'eri. Pathogenic.

In Animals:

S. sputig'enum. } Saprophytic; patho-
S. tyrog'enum. } genic in animals.

Unassociated with disease.

S. attenua'tum.

S. leucomela'neum.

S. plica'tæ.

S. Rosenber'gii.

S. serpens.

S. ten'uë.

S. undula.

S. volu'tans.

S. fe'ver. Relapsing fever.

S. of Fink'ler-Pri'or. Spirillum of cholera nostras.

S. ru'brum. Chromogenic saprophyte.

Spiritism. See *Spiritualism*.

Spiritualism. (*L. spiritus*, spirit.)

The theory of an immaterial entity underlying and causing organic phenomena.

Spiritu'ous. Pertaining to alcoholic liquors.

Spiro-bacte'rium. (*L. spira*, a spiral; *βακτήριον*, bacterium.) A *Schizomycete* in the form of spiral filaments.

Spiroche'ta. (*L. spira*, a coil; *χαίτη*, a bristle.) A Genus of *Schizomycetes*, characterised by flexible spiral filaments. Only one species is known.

S. Evansi. An infusorian. Same as *Tympanosoma Evansi* (Evans). The cause of the epizootic pernicious anæmia in horses, mules, and camels.

S. Oberme'eri. The spirillum of relapsing fever found in the blood. Cultivations have as yet been unsuccessful.

Spirocolon. A form of syphilis at one time prevalent in Greece (1820—1823).

Spirograph. (*L. spiro*, to breathe; *γραφή*, a drawing.) An instrument for registering the movements of respiration.

Spirograph'in. (*Σπείρα*, coil; *γραφειν*, to write.) A substance obtained from the cartilage and skeletal tissues of the worm *Spirographis*.

Spi'roid. (*L. spira*, spire.) Resembling a screw; having spiral convolutions.

Spirom'eter. (*L. spirare*, to breathe; *μέτρον*, a measure.) An instrument for measuring the capacity of the lungs by the amount of air exhaled.

Spirometric. Pertaining to the *Spirometer*. Ascertained by means of the *spirometer*.

Spirom'etry. The use of the *Spirometer* in measuring the capacity of the lungs.

Spirophore. (*L. spirare*, to breathe; *φέρειν*, to carry.) An instrument used in artificial respiration.

Spirop'tera hom'inis. An *Entozoön* found in the urinary bladder.

Spiroscope. (*L. spirare*, to breathe; *σκοπεῖν*, to observe.) See *Spirometer*.

Spirozo'oid. (*L. spira*, a coil; *ζῶον*, an animal; *εἶδος*, form.) A defensive zoöid of certain *Hydrozoans*, consisting of a long, slender, spirally coiling filament, provided with lasso cells.

Spir'ulate. Spiral in form or arrangement.

Spiss. (*L. spissus*, thick.) Thick, close, dense.

Spissan'tia. (*L. spirare*, to make thick.)

Medicines once believed to possess the power of thickening the humours, as mucilaginous substances.

Spis'sate. See *Inspissate*.

Spis'sated. Inspissated; thickened as by evaporation.

Spis'situde. (L. *spissare*, to thicken.) The state of being thick.

Spit. (Ang.-Sax. *spætan*, spit.) To eject saliva from the mouth, to expectorate. To spit sixpences. To spit white nummular expectoration from a dry mouth. To spit white. To spit from a dry or feverish mouth.

Spital. A hospital; properly a hospital for lazars.

S.-house. A hospital.

S.-man. One who lives in a hospital.

Spitha'ma. The measurement of twelve fingers.

Spithameous. (Σπιθαμή, a span.) In *Biol.*, span high.

Spit'ter. One who spits.

Spit'ting. The act of expectoration.

S. of blood. See *Hæmoptysis*.

Spittle. Same as *Sputum* or *Saliva*.

S.-house. A lazar-house.

S.-man. An inmate of a hospital.

Spittoon. A vessel in which to spit.

Spit'za-Lissau'er, column of. A group of nerve-fibres lying immediately in front of, and immediately behind, the posterior cornua.

Spix, angles of. In *Craniometry*, the angles formed—

1. Between the alveolo-nasal line and the coronal line.

2. Between the alveolo-nasal line and the naso-basilar line.

S., horizon'tal plane of. The *Alveolo-condylean plane*.

Splanchna. (Σπλάγχνα, viscera.) The intestines; the viscera.

Splanchnapophy'seal. (Σπλάγχνα, viscera; ἀποφύσις, apophysis.) Pertaining to a *Splanchnapophysis*.

Splanchnapophy'sis. An apophysis or outgrowth of a vertebra on the ventral surface.

Splanchnecto'pia. Σπλάγχνα, viscera; ἔκτοπος, displaced.) The abnormal position or dislocation of a viscus.

Splanchnelmin'tha. Intestinal worms.

Splanchnemphrax'is. (Σπλάγχνα, viscera; ἐμφράξις, obstruction.) Obstruction of the intestine.

Splanchnneurys'ma. (Σπλάγχνα, viscera; ἀνευρύσμα, aneurism.) Distension of the intestines.

Splanchn'ic. (Σπλαγχνικός, pertaining to the viscera.) Of, or pertaining to, the viscera; visceral.

S. cavities. The visceral cavities.

S. ganglion. The ganglion on the great splanchnic nerve over the eleventh or twelfth dorsal vertebra.

S. mus'culature. Muscles of viscera.

S. nerve, great. A trunk formed by branches from the fifth, sixth, and ninth or tenth thoracic ganglia passing through the diaphragm to the semilunar ganglion.

S. nerve, less'er. Same as *S. nerve*, small.

S. nerve, small. Roots from the tenth

and eleventh thoracic ganglion. It passes through the diaphragm, and joins the celiac plexus.

S. nerve, small'est. A small branch which arises from the twelfth thoracic ganglion and goes to the renal plexus.

S. nerve, supé'rior. A rare nerve described by Ludwig and Weisberg as arising from the cardiac plexus and vagus, or the inferior laryngeal, and passing down on the right side along the aorta, on the left along the vena cava to the celiac plexus.

S. nerves. Three nerves derived from the thoracic ganglia.

Splanchn'ica. Medicines adapted to diseases of the bowels. Diseases affecting the collatitious viscera, and characterised by disquiet or diseased action in the organs auxiliary to the digestive process without primary inflammation.

Splanchn'oblast. (Σπλάγχνα, viscera; βλαστός, a germ.) The incipient rudiment destined to take part in the formation of the viscera.

Splanchn'ocoele. (Σπλάγχνα, viscera; κοίλος, a hollow.) Protrusion of any abdominal viscus. Heyik's name for the persistent part of the cœlom in the adult; the *Pleuro-peritoneal space*.

Splanchnodias'tasis. (Σπλάγχνα, viscera; διάστας, diastasis.) Displacement or separation of the viscera.

Splanchn'odyne. (Σπλάγχνα, viscera; ὁδύνη, pain.) Intestinal pain.

Splanchnog'rapher. (Σπλάγχνα, viscera; γράφειν, to write.) A writer on *Splanchnology*.

Splanchnograph'ical. Descriptive of viscera.

Splanchnog'raphy. Descriptive *Splanchnology*.

Splanchn'olith. (Σπλάγχνα, viscera; λίθος, a stone.) Calculus of a viscus.

Splanchnolithi'asis. (Σπλάγχνα, viscera; λίθος, stone.) The condition of calculus in the intestines.

Splanchnolog'ical. (Σπλάγχνα, viscera; λόγος, science.) Of, or pertaining to, *Splanchnology*.

Splanchnol'ogist. One who specialises in *Splanchnology*.

Splanchnol'ogy. (Σπλάγχνα, viscera; λόγος, a treatise.) That branch of science pertaining to the viscera.

Splanchn'on. See *Splanchna*.

Splanchnop'athy. (Σπλάγχνα, viscera; πάθος, disease.) Disease of the viscera.

Splanchnopleu'ra. Σπλάγχνα, viscera; πλευρά, the side.) Same as *Splanchnopleure*.

Splanchnopleu'ral. Constituting or pertaining to the *Splanchnopleure*.

Splanchnopleure. The inner or visceral layer of the mesoderm after its splitting to form the cœlom.

Splanchnopleu'ric. Same as *Splanchnopleural*.

Splanchnopto'sis. (Σπλάγχνα, viscera; πτώσις, a falling.) A condition of relaxation of the abdominal viscera. It includes gastropptosis, enteroptosis, nephropptosis; less commonly hepatoptosis and splenoptosis.

Splanchnosclero'sis. (Σπλάγχνα, viscera; σκληρός, hard.) Visceral induration.

Splanchnos'copy. (Σπλάγχνα, viscera; σκοπεῖν, to view.) Examination and exploration of the viscera.

Splanchnoskel'eton. (Σπλάγχνα, viscera; σκελετόν, skeleton.) That part of the skeleton specially related to the viscera.

Splanchnosym'pathy. (Σπλάγχνα, viscera; συμπαθεια, sympathy.) The reflex actions among the viscera themselves, and between the viscera and other organs.

Splanchnotom'ic. (Σπλάγχνα, viscera; τεμνείν, to cut.) Pertaining to *Splanchnotomy*.

Splanchnotom'ical. Pertaining to the anatomy of the viscera.

Splanchnot'omy. (Σπλάγχνα, viscera; τεμνείν, to cut.) Dissection of the viscera, or visceral anatomy.

Splashing frem'itus. See *Succussion*.

Splay. Spread or spreading out; wide and flat.

S.-foot. Flat-foot.

S.-foot'ed. Having splay feet.

S.-mouth. A wide mouth.

Spled'get. A pledget, or cloth, used in dressing a sore or wound.

Spleen. (Σπλήν, the spleen.) A vascular abdominal ductless organ which is situated in the left hypochondrium, and which produces certain changes in the blood.

Also, ill-humour, melancholy, feverishness.

S., ab'scess of. In this condition the pus is usually found outside the organ.

S., acces'sory. A loose portion of spleen tissue in the neighbourhood of the spleen.

S., ba'con. A uniformly lardaceous spleen.

S., excis'ion of. See *Splenectomy*.

S., float'ing. An abnormally mobile spleen.

S., In'dian. The indurated spleen following ague.

S., larda'ceous. An enlargement of the spleen due to waxy degeneration.

S., move'able. See *S., wandering*.

S. pulp. The proper substance of the spleen, held up by the trabeculae.

S., rupt'ure of. See *S., wound of*.

S., sa'go. A spleen in which the Malpighian follicles are the seat of amyloid change.

S.-sick. Splenetic.

S., wan'dering. See *S., floating*.

S., waxy. See *S., lardaceous*.

S. wort. See *Filix* and *Asplenium*.

S., wound of. Rupture of the spleen is generally associated with fractured ribs, usually when the organ is enlarged. Severe and frequently fatal hæmorrhage results.

Spleen'y. (Σπλήν, spleen.) Hypochondriacal melancholy.

Splen-. (Σπλήν, spleen.) A prefix used to denote connection with, or relation to, the spleen.

Splenadenoma. (Σπλήν, spleen; ἀδέν, a gland; ὄμα, tumour.) *Splenic lymphadenoma*. Hyperplasia of the spleen tissue.

Splenal'gia. (Σπλήν; ἄλγος, pain.) Pain in the spleen or in its region.

S. Bengalensis. *Splenic cachexia*.

S. phlegmonodea. *Splenitis*.

S. subinflammatoria chron'ica.

Splenoncus.

Splenal'gic. Having pain in the spleen.

Splenal'gy. Same as *Splenalgia*.

Splenaux'é. (Σπλήν, spleen; ἀύξή, increase.) Enlargement of the spleen.

Splen'cular. (Σπλήν, the spleen.) Having the character of a *Splenculus*.

Splen'cule. A *Splenculus* or *Splenule*.

Splen'culus. An accessory or supplementary spleen.

Splen'did line of Haller. A longitudinal fibrous band extending along the middle line of the anterior surface of the spinal pia.

Splene'chos, Splene'chus. (Σπλήν, spleen; ήχός, sound.) The percussion note obtained over the spleen.

Splenec'tama. (Σπλήν, spleen; ἔκταμα, dilation.) Enlargement of the spleen.

Splenec'tasis. (Σπλήν, spleen; ἔκτασις, enlargement.) Enlargement of the spleen.

Splenec'tomist. One who has excised the spleen.

Splenec'tomy. (Σπλήν, spleen; ἐκτομή, a cutting out.) Excision of the spleen.

Splenecto'pia. (Σπλήν, spleen; ἔκτοπος, away from a place.) Displacement of the spleen.

Splenelco'sis. (Σπλήν, spleen; ἔλκωσις, ulceration.) Ulceration of the spleen.

Splenel'cus. (Σπλήν, spleen; ἔλκωσις, ulcer.) An ulcer on the spleen.

Splene'mia, Splenæ'mia. (Σπλήν, spleen; αἷμα, blood.) Splenic leukæmia.

Splenemphrax'is. (Σπλήν, spleen; ἐμφραξις, obstruction.) Congestion of the spleen from any cause.

Splenepati'tis. (Σπλήν, spleen; ήπαρ, liver; ἱτις, inflammation.) Inflammation involving both liver and spleen.

Splenes. *Hypochondriasis*.

Splenetic. Pertaining to the spleen. Ill-humoured, peevish.

Sple'nial. (Σπλήμιον, a bandage.) Serving as a bandage or splint. Pertaining to the *Splenium* or *Splenius*.

Splen'ic. Relating to the spleen.

S. ap'oplexy. Acute anthrax. Hæmorrhage into the spleen.

S. ar'tery. The main blood-supply of the spleen.

S. cachex'ia. Splenic leucocythæmia; a scorbutic cachexia often accompanying diseases, especially enlargement of the spleen.

S. cor'puscles. See *Malpighian corpuscles*.

S. fe'ver. Same as *Anthrax*.

S. flex'ure. The bend of the colon near the spleen.

S. her'nia. Protrusion of spleen through diaphragm.

S. plex'us. A nervous network derived from the celiac plexus accompanying the splenic artery.

S. pouch. The peritoneal pouch for the reception of the spleen. It is supported below by the splenico-colic ligament.

S. tu'mour. Ague cake.

S. vein. Arises from the spleen and accompanies the splenic artery. It joins with the superior mesenteric vein to form the vena porte.

Splen'ica. *Splenalgia*. Also, medicines affecting the spleen.

Splen'ical. Same as *Splenic*.

Splenicogas'tric. (Σπλήνικός, splenic; γαστήρ, the stomach.) Belonging or pertaining to both the spleen and the stomach.

Splenicopancreatic. (Σπληνικός, splenic; πάγκρεας, pancreas.) Pertaining to the spleen and pancreas.

Splenic'terus. (Σπλήν, spleen; ἰκτερος, jaundice.) Inflammation of the spleen associated with jaundice.

Splenic'ulus. See *Splenculus*.

Splen'icus. Splenic; a drug acting on the spleen.

Splenifica'tion. (Σπλήν, spleen; L. *facere*, to make.) The conversion of the substance of the lungs or liver into tissue resembling on naked-eye examination the spleen.

Splenii. Plural of *Splenius*.

Splen'ola. Compress.

Splenis'ation. See *Splenization*.

Spleniserr'ate. (Σπληνίου, bandage; L. *serra*, saw.) Consisting of, represented by, or pertaining to, the splenii and serrati muscles of the back.

Spleniserra'tors. The third layer of the muscles of the back.

Splenis'is. A degeneration of the lung sometimes found in yellow fever. The lung contains dark brown spots having the colour and consistency of spleen tissue.

Splenic'ic. Affected with *Splenitis*.

Splen'itis. (Σπλήν, spleen; ἰtis, inflammation.) Inflammation of the spleen.

Splen'itive. Capable of acting, or acting on the spleen.

Splénium. (Σπληνίου, a bandage, compress.) The hinder rounded free border of the corpus callosum. It represents a flexion of the sheet on itself.

Splénius. (Σπληνίου, a bandage.) A broad muscle, including the splenius capitis and colli, which occupies the upper part of the back of the neck, and is attached to the occipital bone.

Spleniza'tion. A change produced in the lungs by inflammation, which causes them to resemble spleen tissue.

S., hypostat'ic. *Hypostatic pneumonia*.

Splen'ocle. (Σπλήν; κήλη, a tumour.) A splenic tumour; a hernia or protrusion of the spleen.

Splenocol'ic. (Σπλήν, spleen; κόλον, colon.) Pertaining conjointly to both the spleen and the colon.

S. lig'ament. A peritoneal fold between the spleen and the mesocolon.

Splenodyn'ia. (Σπλήν, spleen; ὁδύνη, pain.) Pain in the spleen.

Splenograph'ic. (Σπλήν, spleen; γραφείν, to unite.) Pertaining to *Splenography*.

Splenograph'ical. Descriptive of the spleen.

Splenog'raphy. (Σπλήν, spleen; γραφείν, to write.) Descriptive anatomy of the spleen.

Splenohæ'mia. (Σπλήν, spleen; αἷμα, blood.) Congestion of the spleen; hyperæmia of the blood.

Splénoid. (Σπλήν, spleen; εἶδος, resemblance.) Resembling the spleen.

Splenokerato'sis. (Σπλήν, spleen; κέρα, wax.) Splenic induration.

Splenolog'ic. (Σπλήν, spleen; λόγος, science.) Same as *Splenological*.

Splenolog'ical. Of, or pertaining to, the spleen.

Splenology. The science of the spleen, its structure, function, and diseases.

Splenolympho'ma. See *Splenadenoma*.

Spleno'ma. (Σπλήν, spleen; ὄμα, tumour.) Tumour of the spleen.

Splenomala'cia. (Σπλήν, spleen; μαλακία, softness.) Softening of the spleen.

Splenomega'lia. (Σπλήν, spleen; μέγας, large.) Idiopathic hypertrophy of the spleen; an essential hypersplenism. Simple enlargement of the spleen apart from leukæmia or cachexia.

Splenomeg'aly. See *Splenomegalia*.

Splenon'cus. See *Splenoma*.

Splenoparec'tama. (Σπλήν; παρ-έκταμα, a stretching.) Excessive enlargement of the spleen.

Splenoparec'tasis. (Σπλήν, spleen; ἔκτασις, distension.) Enlargement of the spleen.

Splenop'athy. (Σπλήν, spleen; πάθος, suffering.) Disease of the spleen.

Splenophleg'moné. (Σπλήν, spleen; φλεγμόνη, inflammation.) Phlegmonous inflammation of the spleen.

Splenophrax'ia, **Spleno-phrax'is.** See *Splenemphraxis*.

Splenophren'ic. (Σπλήν, spleen; φρήν, diaphragm.) Pertaining to the spleen and the diaphragm.

Splenopht'his. (Σπλήν, the spleen; φθίσις, wasting.) Atrophy of the spleen.

Splenopneumo'nia. (Σπλήν, spleen; πνεύμων, lung.) Pneumonia with splenization of the lung.

Splenorrha'gia. (Σπλήν, spleen; ῥήγνυμαι, to burst forth.) Hæmorrhage from the spleen.

Splenoscirr'hous. (Σπλήν, spleen; σκίρρως, hardness.) Scirrhus or cancer of the spleen.

Splenotom'ic. (Σπλήν, spleen; τεμνείν, to cut.) Pertaining to *Splenotomy*.

Splenotom'ical. Pertaining to *Splenotomy*.

Splenot'omy. (Σπλήν, spleen; τεμνείν, to cut.) Incision or dissection of the spleen.

Splenotyphoid. (Σπλήν, spleen; τύφος, stupor.) Typhoid fever with splenic complications.

Splent. (Mid. Eng. *splente*, a splint.) An exostosis occurring on the inner surface of the metacarpal bone of the horse.

Splen'ule. A splenule; a rudimentary or accessory spleen.

Splenyperthro'pia. (Σπλήν, spleen; ὑπέρ, over; τροφή, nourishment.) Hypertrophy of the spleen.

Splint. (Mid. Eng. *splente*, a splint.) A more or less rigid appliance, generally of wood or metal, for the fixation of moveable parts.

S., Ag'new's. A splint used for hip disease. A long splint with a perineal band (fitting closely against the tuber ischii) and a foot-piece. Used after the disappearance of acute symptoms, and intended to support the trunk.

S., an'chor. A splint used for fracture of the jaw. Metal loops fit over the teeth, and are held in contact by a rod and nut.

S. band'age. An immoveable bandage, as a starch, gum silicate, or plaster-of-Paris, &c., bandage.

S., Bava'rian. Two sheets of coarse flannel are cut to the part, and spread with plaster of Paris on the adjacent surfaces. Used in fracture of a limb.

S., Bond's. A splint used in Colles' fracture; a thin wooden splint, with sole leather edges an inch high, and a curved block on which to rest the palm of the hand. A pasteboard splint is used on the back of the forearm, both reaching from below the elbow to almost the distal ends of the metacarpus.

S.-bone. *Anat.* The splenium of the mandible. The *Fibula*.

S. box, or Frac'ture box. A large immoveable splint, which may have joints for the foot-piece and for the knee.

S., brack'eted. A jointed splint.

S.s, immove'able. These are made from materials which harden, such as plaster of Paris, the soluble silicates of sodium and potassium. They are usually the final application. Used in fractures when it is necessary to keep a part at rest.

S., Le'vis's. A splint of perforated metal extending from below the elbow almost to the distal ends of the metacarpal bones. It is hollowed to fit the arm and palm, and the metacarpal joints are flexed over it.

S.s, move'able. These are fixed with bandages, webbing, or strapping, and are easily removed and re-applied.

S., plas'ter-of-Par'is. See *S., Bavarian*.

S., poroplas'tic. A splint made of material which is soft when moistened with hot water, and can then be moulded on the limb. It hardens as it dries, and retains the shape given to it when moist.

S.s, shaped. These may be moulded for any case in wire, poroplastic, gutta-percha, leather, or plaster, and very simple ones may be made of sheet lead.

S.s, starch. These splints are made of millboard with thinned edges, soaked in starch, and moulded to the shape of the limb.

Splint'age. The application or the use of splints.

Splint'er. (Mod. Eng. *splinteren*, to split.) See *Sequestrum*. Applied also popularly to a bit of wood or other metal that pierces the skin.

S.-bone. The *Fibula*.

Split cloth. A bandage for the head consisting of a central portion and 6 or 8 tails.

S. pel'vis. A congenital want of union of the pubic bones at the symphysis.

Spondiomyeli'tis. (Σποδιός, grey; μυελος, narrow; ιτις, inflammation.) An acute inflammation of the anterior cornua of the spinal cord, in which the larger multipolar ganglion-cells are destroyed; it occurs usually in children during first dentition. Anterior polio-myelitis.

Spo'dium. (Σποδός, ashes.) An old term for animal charcoal.

Spodog'enous. (Σποδός, ashes; γεννάν, to produce.) Arising from *débris*, or from the waste matters of the economy.

Spoke'-bone. See *Radius*.

Spo'liative. (L. *spoliare*, to plunder.) Applied to venesection for diminution of the amount of blood.

Spollato'rium. Ante-room where the bathers stripped themselves in the ancient gymnasia. Also, *Apodyterium*.

Spón'dle, fora'men of, or Spheno-fron'tal fora'men. A small hole in the cartilaginous basis of the skull, between the ethmoid and alæ parvæ of the splenoid and the anterior splenoid.

Spond'les. (Σπόνδυλος, a vertebra.) The vertebræ.

Spond'yl, Spon'dyle. (Σπόνδυλος, a joint of the spine.) A vertebra.

Spondylal'gia. (Σπόνδυλος, a vertebra; ἄλγος, pain.) Pain in the spine, rachialgia.

Spondylarthrit'is. (Σπόνδυλος, a vertebra; ἄρθρον, a joint; ιτις, inflammation.) Inflammation of the vertebral articulations.

S. synovia'lis. Inflammation of the synovial cavities of the vertebral articulations.

Spondylarthroc'acé. (Σπόνδυλος, a vertebra; ἄρθρον, a joint; κακή, ill.) Caries of a vertebra.

Spondylexarthro'sis. (Σπόνδυλος, a vertebra; ἔξ, out of; ἄρθρον, a joint.) Dislocation of the vertebræ.

Spondylisthetic. (Σπόνδυλος, a vertebra; ὀλισθήσις, a slip.) Relating to *Spondylolisthesis*.

Spondyli'tis. Arthritis of a vertebra; Pott's disease.

S. cervica'lis. Arthritis of one or more cervical vertebræ.

S. defor'mans. Chronic inflammation of the vertebræ, of a gouty or rheumatic character, associated with deformity. Probably identical with osteo-arthritis.

S. tuberculo'sa. Tubercular inflammation of the vertebræ, usually associated with psoas abscess.

Spondylize'ma. (Σπόνδυλος, vertebra; ἵξιμα, a subsiding.) Pelvic obstruction caused by partial or total loss of a vertebra, in consequence of which the vertebræ overhang the brim of the pelvis.

Spondyloc'acé. See *Spondylarthrocace*.

Spondylodynia. (Σπόνδυλος, vertebra; ὀδύνη, pain.) Pain in a vertebra.

Spondylolisthe'sis. (Σπόνδυλος, a vertebra; ὀλισθήσις, a slipping.) A displacement forward of the lumbar vertebræ, especially the last, on the sacrum, and consequent enroachment on the brim; in consequence of fracture of the articular processes, or of non-union of the ossific centres of the laminæ of the vertebral bodies.

Spon'dylo-myeli'tis. See *Spondylitis*.

Spondylopath'ia. (Σπόνδυλος, a vertebra; πάθος, suffering.) Disease of the vertebræ.

Spondylop'athy. (Σπόνδυλος, vertebra; πάθος, suffering.) Any disease of the vertebræ.

Spondylopto'sis. See *Spondylolisthesis*.

Spondylopyo'sis. (Σπόνδυλος, vertebra; πῦον, pus.) Suppurative inflammation of one or more vertebræ.

Spondyloschi'sis. Deficient ossification of the arch of the fifth lumbar vertebra. This is said to be one of the causes of spondylolisthesis.

Spondylot'omy. (Σπόνδυλος, vertebra; τομή, section.) See *Rachiotomy*.

Spon'dylous. (Σπόνδυλος, a vertebra.) Of, or pertaining to, a vertebra.

Spon'dylus. A vertebra.

Sponge. (Σπόγγος, any spongy substance.) A Cœlenterate animal of the Class *Porifera*.

S. animal'cule. A sponge-cell.

S., antisept'ic. A sponge that has been rendered aseptic.

S., burnt. Fine sponges incinerated, and the powder sieved.

S., compressed'. A fine sponge cleansed, exposed to pressure, and dried. Used as sponge tents.

S. grafting. A method of treatment of chronic ulcers, by placing strips of sponge covered with protective on them.

S.-holder. A rod-like instrument for grasping a sponge, used for gynecological and throat operations.

S.-holder, fin'ger. A holder having a thimble at one end; for throat operations.

S. method of Voltolini. The removal of soft tumours from the vocal cords by means of a soft sponge, firmly attached to a suitable handle.

S., prepared'. A sponge soaked in cold water to separate the calcareous matter.

S. tent. A tent made of compressed dry sponge.

S., waxed. Prepared sponge soaked in melted wax, and pressed in a warm presser.

Spon'gia. *Sponge.* An organised marine substance, of the Class *Porifera*, met with in many seas, but especially in the Mediterranean and Arabian. It is supple, elastic, porous, and capable of absorbing fluids in which it may be placed, and of thus increasing in size. Employed in Surgery for cleansing or washing, for absorbing acrid discharges from ulcers, suppressing hæmorrhage when the mouth of the vessel can be compressed by it, and for forming tents for dilating wounds, in which case the sponge is immersed in melting wax and cooled before being used. It is then called *Spongia cerata*, *Waxed*, *Cerated*, or *Prepared Sponge*, or *Sponge tent*. Sponges are rendered antiseptic for surgical use.

S. Adriat'ica. Turkey cup sponge.

S. as'sa. *S. usta*.

S. cera'ta. (L.) See *Spongia*.

S. compres'sa. (L.) Compressed sponge.

S. cynosba'ti. *Bedeguar*.

S. equi'na. (L.) *Horse-sponge*.

S. gossyp'ina. (L. *gossypium*, the cotton tree.) *Sheepwool sponge*. The finest and toughest of the sponges found in the Bahamas.

S. officina'lis. Levant or common sponge.

S. pres'sa. Compressed sponge.

S. us'ta. (L.) Burnt sponge. Contains carbonate and phosphate of calcium, carbonate of sodium, charcoal, and iodine. Used in bronchocele, scrofulous affections, and herpetic eruptions. Its good effects seem to be dependent upon iodine. (Not officinal.)

Spon'giform. Resembling, or having the physical characters of, a sponge.

Spon'gin. (Σπόγγος, sponge.) In *Biol.*, the horny substance forming the skeletal fibres of the keratose sponges.

Spon'gioblast. (Σπόγγος, a sponge; βλαστός, a germ.) Cells of ectodermal origin, producing the neuroglia cells in the spinal cord. In *Biol.*, a variety of cell derived from the invaginated ectoderm forming the neural tube.

Spon'girole. (L. *spongiola*, a little sponge.) In *Biol.*, an old name for the root-tip, on account of its supposed function of absorbing like a sponge.

Spongiolin. See *Spongin*.

Spongiopiline. (Σπόγγιον, dim. of σπόγγος, sponge; πῖλος, felt.) Felted or woven cloth, into which tufts of sponge are incorporated;

one side is coated with rubber. It is a good substitute for a cataplasm.

Spon'gioplasm. (Σπόγγος, sponge; πλάσμα, anything formed or moulded.) The extremely fine, elastic, protoplasmic threads forming the intra-cellular reticulum, and containing between them clear homogeneous hyoplasm.

Spongio'sa. Cancellous tissue.

Spongiose'. Full of interstices, like a sponge.

Spongi'osus. *Spongoid*.

Spon'goblast. See *Spongioblast*.

Spon'goid. (Σπόγγος, sponge; εἶδος, like.) Resembling sponge.

Spon'gos. The *Tonsil*.

Spon'gy. Of open, loose, or compressible texture.

S. bones. Specifically the *Spheno-turbinals*.

S. car'tilage. The same as *Yellow elastic cartilage*.

Also, a portion of the urethra; that in the *Corpus spongiosum*.

Spontane'ity. (L. *spons*, of one's own accord.) Variation in structure or function attributable to some innate or hereditary condition of the organism, and not its environment.

Sponta'neous. Voluntary; without extraneous impulse; instinctive; automatic.

S. an'kle-clonus. A spontaneous rhythmic contraction of the muscles of the leg, producing a rhythmic movement of the leg and foot.

S. combust'ion. A supposed burning of the body without any extraneous means.

S. cre'tinism. See *Cretinism*.

S. evolu'tion. A term expressive of the unaided occurrence, in childbirth, of a series of changes in which a breech and shoulder presentation is substituted for a shoulder presentation, and delivery effected.

S. genera'tion. Same as *Abiogenesis*. The spontaneous generation (theoretical) of living out of non-living material.

S. vers'ion. The process by which a transverse presentation becomes a longitudinal one without any external agency.

Spool'worm. Synonym of *Oxyuris vermicularis*. This is found in the cæcum and the lower part of the ileum. No intermediate host is apparently necessary for the development of this worm.

Spoon. (Mid. Eng. *spoon*, a spoon.) A wooden or metallic instrument with an ovoid bowl on a handle. A spoon-shaped instrument; a curette.

S. nail. When the nail is thinned and concave from side to side, with everted edges. Seen in some wasting diseases.

S. saw. A curette with sharp serrated edges.

Spo'ra. Spores.

Spora'ceous. (L. *spora*, a spore.) Consisting of, or convertible into, spores.

Sporad'ic. (Σποραδικός, scattered.) Separate, single, scattered.

S. chol'era. Isolated cases of acute gastroenteritis, with symptoms resembling cholera.

S. dys'entery. Occurring in isolated cases.

Sporad'ical. Same as *Sporadic*.

Sporad'ically. In a sporadic manner; separately, singly, dispersedly.

Sporad'icalness. The quality of being *Sporadic*.

Sporadic'ity. The state of being *Sporadic*.

Sporangid'ium. (Σπόρος, spore.) The theca or capsule of mosses.

Sporangif'erous. (Σπόρος, spore; *L. ferre*, to bear.) Bearing *Sporangia*.

Sporan'giform. (Σπόρος, a spore; *L. forma*, form.) Having the form of a *Sporangium*.

Sporan'gioid. (Σπόρος, a spore; εἶδος, like.) *Sporangiform*.

Sporan'giale. (Σπόρος, a spore; ἀγγεῖον, vessel.) A capsule containing spores.

Sporan'giophore. See *Sporangiophorum*.

Sporangioph'orum. (Σπόρος, spore; ἀγγεῖον, vessel; φερεῖν, to bear.) *Biol.* The stalk or receptacle of a sporangium, including the leaf-like organ which bears the spores in *Equisetaceæ*, and the axis of the sporangia of certain ferns.

Spore. (Σπόρα, a sowing; seed-time.) A minute germ, motile or non-motile, capable of reproducing the parent organism. It arises asexually.

S.-cell. A spore or cell which gives rise to a spore.

S.-forma'tion. The vital process by which spores are reproduced; the origination of spores.

Sporif'erous. (Σπόρος, spore; *L. ferre*, to bear.) Bearing or producing spores.

Sporifica'tion. (Σπόρος, spore; *L. facere*, to make.) *S.-formation*.

Sporipar'ity. (Σπόρος, spore; *L. parere*, to produce.) Reproduction by spores.

Sporip'arous. (*L. spora*, spore; *parere*, to produce.) Reproducing by means of spores.

Spo'roblast. (Σπόρος, spore; βλαστός, germ.) The germ or rudiment of a spore.

Spo'roderm. (Σπόρος, spore; δέρμα, skin.) The enveloping material of a spore.

Spo'roduct. (Σπόρος, spore; *L. ducere*, to lead.) A passage for spores.

Spo'rogen. (Σπόρος, spore; γεννᾶν, to produce.) An organism which multiplies by producing spores.

Sporogen'esis. (Σπόρος, spore; γένεσις, producing.) Reproduction by spores.

Sporog'enous. (Σπόρος, spore; γενής, production.) Spore-producing.

Sporogon'ium. (Σπόρος, spore; γονή, generation.) The non-sexual generation of a moss from a fertilised oosphere.

Spo'roid. (Σπόρος, spore; εἶδος, like.) *Sporular*.

Spo'rophore. (Σπόρος, spore; φερεῖν, to bear.) The part of a fungus thallus devoted to and adapted for bearing propagative bodies.

Sporophor'ic. Appertaining to a *Sporophore*.

Sporoph'orous. Spore-bearing.

Sporophyl. (Σπόρος, spore; φύλλον, leaf.) The fertile leaf of a vascular *Cryptogam*. It bears spores and spore-cases.

Sporophyte. (Σπόρος, spore; φυτόν, plant.) The non-sexual generation of certain *Cryptogams*.

Sporophyt'ic. Resembling a *Sporophyte*.

Spo'ros. *Semen*.

Spo'rosac. (Σπόρος, seed; σάκκος, a bag.) A bud whose function is reproductive. Found in some *Hydrozoa*. It is medusiform.

Sporosper'mia. (Σπόρος, a spore; σπέρμα, seed.) *Psorospermia*.

Sporoste'gium. (Σπόρος, spore; στέγειν, to cover.) The oösporangium of *Characeæ*.

Sporotrich'ium. (Σπόρος, spore; θρίξ, hair.) A Genus of hyphomycetous *Fungi*.

S. dermato'des. A whitish mould that infests the *Arundo donax* in Provence, and contact with which causes the *Maladie des cannes*; a dermatitis of the face and genitals. It is common among basket-makers and others handling the reeds.

Sporozo'a. (Σπόρα, seed; ζῶον, an animal.) A Class of parasitic *Protozoa*, including five Orders:

The *Gregarinidia*, parasitic in various worms and Arthropods.

The *Coccidiidia*, or oviform psorosperms, parasitic in the hepatic and intestinal epithelium of various Mammals, including man.

Sarcosporidia, or tubuliform psorosperms, parasitic in the muscles of various animals.

Myxosporidia, the psorosperms of fishes.

Microsporidia, the psorosperms of *Articulata*.

Spor'ula. *Spore*.

Spor'ule. *Spore*.

Spor'ulus. *Spore*.

Spo'rum. *Spore*.

Spo'rus. *Spore*.

Spot. See *Macula* and *Spilus*. A more or less defined discoloration of the skin.

S.s., acous'tic. The terminations of the auditory nerve in the sacculus and utricle.

S., blind (of Mariotte). The entrance of the optic nerve into the fundus oculi.

S., cor'neal. An opacity of the cornea.

S., crib'riform. The perforation of the fovea hemispherica for the passage of the filaments of the auditory nerve.

S. dis'ease. An infectious disease of silkworms.

S., embryon'ic. The nucleolus of the ovum.

S., germ. See *S., embryonic*.

S., ger'minal. See *S., embryonic*.

S., hec'tic. The bright red flush on the cheeks of patients with hectic fever.

S.s., lentic'ular. *Ephelides*. Typhoid spots.

S., light. The projection of the membrana tympani inwards, causing the appearance of a bright spot.

S., Mar'lotte's. The optic disc.

S., milk. A mark found post mortem on the pericardium about half to one inch in diameter. Usually in persons over middle age.

S., moth'er's. Mother's mark, nævus.

S., Söm'mering's. The macula lutea, the yellow spot.

S., sun. A freckle, lentigo.

S., wine. Port-wine mark; strawberry mark.

S., yel'low. See *S., Sömmering's*.

Spot'ted. Marked with a spot or spots.

S. fe'ver. See *Cerebro-spinal fever*.

S. kid'ney. Condition in chronic interstitial nephritis.

S. sick'ness. *Pinta* disease. A contagious disease producing dermal discolorations, occurring in the tropics. The colour of the patches is greyish blue, black, red, or dull white. The spots are scaly. The disease appears to be allied in its characters to *tinea versicolor*.

Spottedness. The state or quality of being spotted.

Sprain. (L. *exprimere*, press out.) To press, push. To over-strain the muscles or ligaments of a joint.

Also, result of straining of soft parts, such as muscles and ligaments.

S. fracture. Separation of a tendon, with detachment of a thin shell of bone.

S., rider's. Sprain of the tendon adductor longus, from a severe gripping effort in riding.

Spray. (G. *spreaden*, to spread.) To sprinkle with fluid in a fine state of division.

S., carbolic. Carbolic acid solution diffused by means of steam.

S. cure. A variety of douche consisting in the application of a spray.

S. instrument. An instrument for producing and projecting a fine division of a fluid. An atomiser.

S. produce'. An atomiser.

Spread. To scatter or disperse.

S. of dividers. The space including the image between the points of the dividers. This is measured in determining the magnification of a simple microscope.

Sprengel pump. A mercurial air-pump.

Screw. Also *Sprue*. A popular term for thru-h.

Spring. The first of the four seasons of the year.

Also, a resilient apparatus.

S. conjunctivitis. Inflammation of the conjunctiva. Occurring in the young either in the spring or summer.

S. finger. When there is obstruction to movement from the adhesions of a teno-synovitis.

S. ligament. The inferior calcaneo-scaphoid ligament which forms part of the articular cavity for the head of the astragalus.

S. nail. A hang-nail.

S. worm. *Oxyuris vermicularis*.

Sprout. (D. *spruite*, a sprout.) A young root or stem from a seed; a quickly grown branch.

S. chain. A chaplet of cells formed by that mode of multiplication in which the parent cell sends out a small process, which increases in size and is gradually separated by the formation of a septum at the point of junction.

Sprouw. *Aphthæ tropica*.

Spruce. The name of certain species of *Abies*, or fir.

S. beer. A beverage made by boiling four ounces each of pimenta, ginger, and hops, and a half-pint of essence of spruce, in three gallons of water, for about ten minutes, straining, adding one pint of yeast, six gallons of molasses, and eleven gallons of water, and leaving it to ferment for twenty-four hours.

S. gum. A resinous exudate obtained from *Abies alba* and *A. nigra*.

Sprue. Same as *Thrush*.

Sprung knee. In the horse an alteration in the direction and articulation of the bones which form the various carpal joints, so that instead of forming a vertical line from the distal end of the forearm to the cannon-bone, the knee (wrist) is more or less bent forward.

Sputio. *Exspuition*.

Spumescent. (L. *spuma*, froth.) Appearing like froth.

Spumose'. Appearing like froth.

Spur. A sharp point or projection. The angle made by any branch with the main blood-vessel. *Biol.* A pointed spine-like outgrowth, either of the integument or a projecting appendage.

S-blind. *Myopic*.

S. gall. A callous and hairless place on the side of a horse, caused by the use of a spur.

Spurge. (Mid. Eng. *spurgen*, spurge.) A general name for plants of the Genus *Euphorbia*.

S., caper. *Euphorbia lathyris*.

S., cy'press. *Euphorbia cypriosias*.

S. flax. *Daphne gnidium*.

S., flower'ing, large. *Euphorbia corollata*.

S., gar'den. *Euphorbia lathyris*.

S., great'er. *Euphorbia palustris*.

S., ipecacuan'ha. *Euphorbia ipecacuanha*.

S. laur'el. *Daphne laureola*.

S., marsh. *Euphorbia palustris*.

S., olive. *Daphne mezereum*; *Cneorum tricoccum*.

S., pet'ty. *Euphorbia peplus*.

S., sea. *Euphorbia paralias*.

S., spot'ted. *Euphorbia maculata*.

S., sun. *Euphorbia helioscopia*.

S., wart'wort. *Euphorbia helioscopia*.

Spu'rious. (L. *spurius*, false.) Not legitimate; bastard.

S. hydroceph'alus. See *Diarrhæa*.

S. la'b'our. Applied to "false pains" that precede the true labour pains.

S. melano'sis. Same as *Miner's phthisis*.

S. preg'nancy. The belief in pregnancy on the part of a woman, accompanied by certain signs. Same as *Pseudocyesis*.

Spurred. *Biol.* Having spurs.

Spu'ta. The plural of *Sputum*.

Sputa'men. (L. *spuo*, to spit.) *Saliva*; *Sputum*.

Sputamen'tum. *Saliva*; *Sputum*.

Sputa'tio. *Exspuition*.

Sputato'rius. (L. *sputator*, one who spits.) Expectorant.

Spu'tum. (L. *sputum*, spittle.) Any mucous discharge ejected from the mouth.

In abscess of the liver, discharging through the lung. Contains at times *Amœbæ coli*, thereby showing the abscess to be due to dysenteric disease of the intestines.

In asthma. At first scanty, thin, and containing Curschmann's spirals. In two or three days it becomes muco-purulent, and the spirals are absent.

In bronchiectasis. When allowed to stand separates into three layers, an uppermost, brown and frothy; a middle, thin and mucoid; a lowermost, granular and thick.

Of acute bronchitis. Largely consists of pus cells with a variable number of large round alveolar cells, many of which contain carbon grains.

In chronic bronchitis. Small in amount and muco-purulent. Excessive in amount, purulent, very thin, or greenish with green-yellow masses (*Bronchorrhæa*).

In putrid bronchitis. Abundant, thin, greyish white in colour, which separates into an upper fluid frothy layer, and a lower thick, containing dirty yellow masses the size of peas or beans. Nearly always caused by bronchiectasis, gangrene, abscess, decomposition of secretion in

phthistical cavities or empyema which has perforated the lung.

In new growths of the lung. Is dark, mucoid, and was once considered to be of great diagnostic value.

In pneumonia. Viscid, rusty, or more fluid, and the colour of prune juice.

In pneumonococcosis. Thick, purulent, and frequently coloured by inhaled particles, *e.g.* in chalicosis, siderosis, &c.

In tuberculosis. There may be none in the earliest stage, or it may not be characteristic. The earliest characteristic sputum contains grey or greenish-grey small masses. Its amount increases; finally it becomes nummular, each mass being airless, flattened, and greenish grey. It contains tubercle bacilli.

Certain diseases are marked by the specific character of their sputa, especially pneumonia and phthisis. Microscopically it may contain blood, oil-globules, pus corpuscles, connective tissue, epithelium, Curschmann's spirals, and Charcot-Leyden crystals.

S., æruginous. Very green expectoration.

S., albu'minous. Described by French writers as coming on after tapping the chest in cases of pleurisy. It is associated with dyspnoea and is fatal.

S., black pigment'ed. Colour due to inhaled particles of carbon.

S., cavernous. Nummular sputum from a cavity.

S. coe'tum. Purulent, yellowish or greenish, loose sputum, forming itself into masses.

S. cru'dum. Scant, tenacious expectoration, as in the early stages of bronchitis.

S., egg-yolk. Sputum having a yellow colour.

S., glob'ular. Yellowish spheric masses of sputum in the later stages of bronchitis.

S., green. Colour probably due to oxidation of hæmoglobin.

S., ic'terus. Yellow or green sputum from the presence of bile pigments.

S. num'mular. Heavy, whitish, round, coin-like masses of sputum. See *S., cavernous*.

S., prune-juice. See *S., rusty*.

S. puriformë. Sputum having the appearance of being mixed with pus.

S. rotun'da. See *S. nummular*.

S. rus'ty. Expectoration tinged with partially decomposed blood.

S. tuberculo'sum. A purulent or mucopurulent sputum, containing tubercle bacilli.

S., yellow. Colour due to fungi or oxidation of hæmoglobin.

Spyrok'olon. (Gr.) Pustules on the nates. A form of syphilis prevalent in Greece. It commences in the nates or scrotum and genitals as an eruption of pustules.

Squal'or. Filth, disorder, and uncleanness.

Squa'ma. (L. *squama*, a scale.) A scab, as of the epidermis. It may be white and brawny, or large and thin. A thin expansive scale-like piece of bone, as the squama of the temporal bone.

S. fronta'lis. The vertical part of the Frontal bone.

S. occip'itis. The thin expanded part of the Occipital bone.

S. tempora'lis. Squamous part of the Temporal bone.

Squa'mæ. Scaly diseases.

Squa'mate. Scale-like. *Squamous* or *Squamiform*.

Squa'mated. Same as *Squamate*.

Squa'ma'tion. The state of being *Squamate*.

Squame. A cataract in the eye.

Squamella. A very small scale.

Squamellif'erous. (L. *squama*, scale; *ferre*, to bear.) Furnished with squamellæ.

Squamif'erous. (L. *squama*, scale; *ferre*, to bear.) Provided with squamæ.

Squamiflorus. (L. *squama*, scale; *flos*, flower.) Having flowers like scales.

Squa'miform. (L. *squama*, scale; *forma*, form.) Same as *Squamate*.

Squamig'erous. Same as *Squamiferous*.

Squa'mo-cellular. Flat-celled.

Squa'mo-mandib'ular. (L. *squama*, scale; *mandibula*, jaw.) Of, or pertaining to, the squamous and maxillary bones. Same as *Temporo-maxillary articulation*.

Squa'mo-mas'toid. (L. *squama*, a scale; Gr. *μαστός*, a rounded knoll; *εἶδος*, like.) Of, or pertaining to, the squamosal and mastoid elements of the Temporal bone.

Squa'mo-parietal. (L. *squama*, a scale; *paries*, a wall.) Of, or pertaining to, the Squamosal and Parietal bones.

Squa'mo-petro'sal. (L. *squama*, a scale; Gr. *πέτρα*, a rock.) Of, or pertaining to, the Squamosal and Petrosal.

S. su'ture. Suture between the squamous portion of the Temporal and Parietal bones.

Squa'moid. (L. *squama*, a scale; Gr. *εἶδος*, form.) Resembling a *Squama*; scale-like.

Squamo'sal. Scale-like or *Squamous*.

Squamosë'. Scaly.

Squamosphenoid'al. (L. *squama*, a scale; Gr. *σφήν*, a wedge; *εἶδος*, like.) Pertaining to the Squamosal and Sphenoid bones.

Squamotemporal. (L. *squama*; *tempora*.) Squamosal part of the temporal bone.

Squamotympan'ic. Of, or pertaining to, the Squamosal and Tympanic bones.

Squa'mous. Covered with scales. Scab-like. Characterised by thickened laminae of morbid cuticle.

S. bone. The Squamosal.

S. cells. Flattened, dried, thin cells, as the superficial layers of the epidermis.

S. epithe'lium. Tessellated epithelium.

S. su'ture. The suture between the Squamosal, the Parietal, and Sphenoid bones.

Squamozygomatic. (L. *squama*; *ζύγον*, a yoke.) Relating to the squamous and zygomatic portions of the temporal bone.

Squa'mula. A minute scale.

Squa'mulate. Having small scales.

Squa'mule. (L. *squamula*, a little scale.) A *Squamula*.

Squa'muliform. (L. *squamula*, a little scale; *forma*, form.) Having the form of a *Squamula*.

Squamulose'. (L. *squamula*, a small scale.) Covered with minute scales.

Square cap. A variety of provisional head-dressing.

S. lobe of cerebellum. *Lobus quadrangularis*.

S. mus'cle. *Quadratus lumborum*.

Squa'rious. Scurfy.
Squa'ra. (Ἐσχαρά, a scab.) A rough crust of tinea.

S. ton'dens. *Alopecia areata.*

Squarrose'. (L. *squariosus*, scurfy, scaly.) In *Biol.*, applied to stems or other organs that are roughened with closely arranged bracts or other spreading processes.

Squaw-root. See *Caulophyllum.*

Squeam'ishness. *Fastidium cibi.*

Squeas'iness. Nausea.

Squibb's diarrhœa mix'ture. Contains compound tincture of opium, tincture of camphor, tincture of capsicum, of each half an ounce; pure chloroform, three drachms; alcohol (95 per cent.), five ounces. Dose, ten drops to a drachm.

Squill. See *Scilla.*

Squin'ancy. See *Quinsy.*

Squinan'thia. *Cynanche tonsillaris.*

Squinan'thus. *Juncus odoratus.*

Squin'sy. Same as *Quinsy.*

Squint. (Ang.-Sax. *swican*, escape, avoid.) Looking different ways; to look askew, or with eyes with non-coincidence of the optic axes. See *Strabismus.*

S. hook. Used for picking up a tendon of one of the external muscles of the eye, to put it on the stretch preparatory to its division in operating for strabismus.

Squir'rhus. See *Scirrhus.*

Squir'ting cu'cumber. See *Ela-terium.*

Srint. A disease endemic in Hungary, characterised by inflammatory swellings of the mouth, throat, or anus.

Staar. Applied to eyes which do not follow objects, because they do not see them.

Stab culture. A culture where the inoculating point is thrust into a tube of agar or other suitable solid culture material. It is used for the culture of *Anaërobic schizomycetes.*

Sta'bile. Not moving; permanent. In *Electro-therapeutics*, opposed to *Labile*, the electrode being held continually upon one point.

Stacca'to ut'terance. The same as *Scanning utterance.*

Sta'chys. (Στάχυς, an ear of corn, spike.) A Genus of labiate plants, including motherwort, a perennial herb growing in the West Indies and South America. The leaves and root are said to be tonic and stimulant.

S. palus'tris. Hedge-nettle. It grows in marshy places in Europe and North America. A surgical bandage to the lower part of the belly, the Hypogastrium.

Stachytar'pha. (Στάχυς, an ear of corn, spike; ταρφειός, thick.) A Genus of the *Verbenaceæ*. Bastard vervain; an aromatic shrub growing in the West Indies and South America. The leaves and roots are said to be tonic, stimulant, diuretic, and anthelmintic. The leaves are used to adulterate tea, and are called Brazilian tea.

Stachytar'pheta. See *Stachytarpha.*

Stactom'eter. (Στάκτος, a dropping; μέτρον, a measure.) An instrument for measuring drops.

Sta'dium. (L. *stadium*, period.) Stage or period.

S. ac'mes. The crisis of a disease.

S. annihilation'nis. See *S. conva-lescentiæ.*

S. augmen'ti. Stage of increasing activity of a disease.

S. calo'ris. Stage in which there is fever.

S. conta'gil. The prodromal period of an infectious disease.

S. convalescen'tiæ. The period of recovery from disease.

S. decremen'ti. The defervescence of a febrile disease.

S. decrustatio'nis. The stage of an exanthem in which the lesions form crusts.

S. desquamatio'nis. The period of desquamation in a fever.

S. eruptio'nis. The stage of the appearance of the eruption in a fever.

S. exliccatio'nis. Same as *S. decrustationis.*

S. florescen'tiæ. The stage in an eruptive fever in which the exanthem develops.

S. frig'oris. The cold stage of fever.

S. incubatio'nis. See *Stage, latent.*

S. maniac'a'le. The last stage of excitement in mania.

S. nervo'sum. The paroxysmal stage of a disease.

S. prodro'mum. The stage prior to the appearance of the eruption in eruptive fevers.

S. sta'seos. See *S. acmes.*

S. suppuratio'nis. The suppurative period in variola.

S. ul'timum. The final stage of a febrile affection.

Staff. (Mid. Eng. *staff*, staff.) The instrument introduced into the bladder prior to lithotomy, to be used as a guide to the urethra.

S. tree. See *Celastrus.*

Staff'a. *Stapes.* A figure-of-eight bandage.

Staffordshire knot. A knot used to ligature the pedicle in ovariectomy. The ligature is passed through the pedicle, the needle is withdrawn, and the loop is passed over the tumour; one of the free ends is drawn through the loop; both ends are then passed through the pedicle and the knot tied.

Stage. (Mid. Eng. *stage*, stage.) A definite period of a disease characterised by a certain group of symptoms. The horizontal plate projecting from the pillar of a microscope for the support of the slide or object.

S., al'gid. A condition of great exhaustion, with a feeble, flickering pulse and a sub-normal temperature. Occurs in diseases marked by exhausting intestinal discharges.

S., amphi'bolic. The stage subsequent to the crisis.

S., asphyx'ial. The preliminary stage of Asiatic cholera due to dehydration.

S., cold. The stage of rigors or chills.

S., expul'sive. That period of labour after the dilatation of the cervix.

S., first. That period of labour antecedent to dilatation of the cervix.

S., flex'ion. That part of the expulsive stage of labour in which extrusion of the head occurs.

S., hot. The pyrexial stage of a malarial paroxysm.

S., infect'ive. The period in which an eruptive fever is infective.

S., init'ial. The prodromal stage of an eruptive fever.

S., la'tent. See *S. of latency.*

S. of inva'sion. The period in the course of a disease in which the system comes under the influence of the morbid agent.

S. of la'tency. The incubation period of an infectious disease.

S., placen'tal. That period of labour after expulsion of the fœtus, occupied by the expulsion of the placenta and the fœtal membranes.

S., pre-erup'tive. The period of a fever prior to the eruption.

S., pyrogenetic. The stage of invasion in febrile diseases.

S., sec'ond. See *S., expulsive.*

S., sweat'ing. The third or last stage of a malarial paroxysm.

S., third. See *S., placental.*

Stag'gers. (M. D. *staggeren*, to stagger.) One of the various forms of functional and organic disease of the brain and spinal cord in domestic animals, especially horses and cattle: enzoötic cerebritis of horses, sheep, &c., blind staggers, loup'ing-ill, gid, sturdy, turnside, stavers.

S., blind. Staggers due to cerebral disease.

S. bush. *Andromeda Mariana*, a plant allied to the mountain laurel, growing in the seaboard States of North America.

S., grass, lo'co, or lo'co disease' (q.v.). An epizootic disease of cattle and horses. Produced by eating various so-called loco-weeds, e.g. *Amaryllis atamasco*, *Astragalus mollissinus*, *A. Hornii*, *Oxytropis Lamberti*, &c.

S., sleep'y. Staggers due to inflammation of the cerebral envelopes.

S., stom'ach. Staggers due to cerebral disturbance dependent on gastric disorder.

Sta'gium. The sixth part of an ounce.

Sta'gma. (L. *stagma*, a drop, a liquor.) Distilled liquid or liquor.

Stagmodeopsori'asis. (Στάγμα, a dropping; εἶδος, like; ψωρίασις, psoriasis.) Psoriasis in which the lesions "look like drops of mortar on the skin." *Psoriasis guttata*.

Stagna'tion. (L. *stagnare*, to settle.) A cessation of motion. In *Pathol.*, stasis; a cessation of motion in any fluid.

Stag'num chyli. The *Receptaculum chyli*.

Stahl's ear. See *Ear, deformities of.*

S.'s the'ory. See *Animism.*

Stahl'ian. One who professes the doctrine of Stahl.

Stahlianism. The reference of the phenomena of the animal economy and its disorders to the soul, with the idea it is endeavouring to expel the deranging cause.

Stain. (Dis-, privative; L. *tingere*, to colour.) A discoloration. A liquid used to colour microscopic and other specimens to differentiate their component parts. Nuclear stains—stains acting on the nucleus more than on the rest of the cell.

Stain'able. Capable of being stained.

Stair'case. A continuous series of responses to nerve stimuli, varying from a minimal intensity to a maximum intensity. (Romanes.) See *Summation*.

Stair's sign. A sign in locomotor ataxy consisting in a difficulty in going upstairs.

Stalag'ma. Same as *Stagma*.

Stalagmom'eter. (Σταλαγμός, a dropping; μέτρον, a measure.) A contrivance for measuring the size of drops.

Stalag'mus. Distillation.

Stalax'is. Same as *Staxis*.

Stalk. (Mid. Eng. *stalken*, to stalk.) Any lengthened support to an organ.

Stallion. The male of the horse.

Stal'tica. Repellents, astringents.

Sta'men. (Στήμων, a thread as spun; the warp in the loom; pl. *Stamens*.) In *Biol.*, the pollen-bearing organ of the flower, when complete consisting of a stalk or filament and a pollen sac or anther.

Sta'mina. (Στήμων, a thread.) Natural strength of constitution. Inherent force.

Staminal. (Στήμων, a thread.) Pertaining to a stamen.

Staminate. (Στήμων, a thread.) Possessing stamens. Applied to flowers which have stamens but not pistils.

Staminid'ium. (Στήμων, a thread; pl. *Staminidia*.) An antheridium.

Staminiferous. (Στήμων, a thread; L. *ferre*, to bear.) Bearing stamens.

Staminig'erous. Same as *Staminiferous*.

Sta'minode. Same as *Staminodium*.

Stamino'dium. (Στήμων, a thread; εἶδος, like.) In *Biol.*, a stamen-like organ; a rudimentary or aborted stamen; a parastemon. See *Sepal*.

Sta'minody. (Στήμων, a thread; εἶδος, like.) In *Biol.*, the conversion of various organs of a flower into stamens.

Sta'mer. (Mid. Eng. *stameren*.) To hesitate or falter in speech. To stutter. To articulate only after repeated attempts.

Sta'mmer's cell. A variety of cell used in making electric batteries.

Sta'mmerer. One who has defective utterance.

Sta'mmering. Hesitating speech. Stuttering.

S. blad'der. A bladder whose muscles act irregularly and spasmodically, causing painful urination.

Stamp. *Cachet*.

S., med'icine. *Cachet*.

S., oculist's. *Cachet*.

Stamp out. Term used by Sir James Y. Simpson in the sense of to extirpate a disease.

Stanch. (Mid. Eng. *stanchen*, stanch.) Specifically, to check or stop the flow of blood from a wound.

Stand. (Mid. Eng. *standen*, to stand.) To have an upright posture. Also, a frame or table to place things on.

S., mi'croscope. The supporting mechanism of a microscope without the lenses.

Stan'dard. (L. *extendere*, to spread out.) An established rule or model. A criterion for comparison.

Standardiza'tion. Regulated by a standard. Conformity to use as a standard of comparison. The bringing of a preparation up to a definite standard.

Stand'still. A state of quiescence dependent upon suspended action.

S., expir'atory. Suspension of action at the end of expiration.

S., inspir'atory. A halt in respiration at the end of inspiration. The condition can be produced by the stimulation of the cut central end of the vagus.

S., respir'atory. Suspended respiration as in *Apnoea*.

Staniol. *Tinfoil.*

Stanni oleas. (Not official.) A greyish coarsely granular powder, insoluble in alcohol, very slightly soluble in almond oil, completely disintegrated and partially dissolved by ether or oleic acid.

S. unguen'tum. Oleate of tin, 60 grains; lard, 1 ounce. Of great utility in diseases of the nails; it overcomes the brittle, split, and soft conditions of the nails, and gives them a brilliant lustre.

S. pul'vis. Obtained by fusing tin and tritulating in a hot iron mortar until it cools; separate by sifting. Action, anthelmintic, astringent, antispasmodic; stimulant to paralysed muscles. Uses, to remove tapeworm. Doses: bisulphuret, 10 to 20 grains; chloride, 1-10th to 7-8ths of a grain.

Stannic. (L. *stannum*, tin.) Pertaining to *Stannum* or tin.

S. ac'id. H_2SnO_3 . A gelatinous white precipitate, which, on drying, forms a semi-transparent vitreous mass. It is dibasic.

S. anhy'dride. *Tin oxide.*

S. hydrox'ide. See *S. acid.*

Stannius's experiments. Experiments showing the action of the various cavities of the frog's heart under stimulation.

Stannum. Tin. (Not official.) A bluish-white metal; softer than gold, harder than lead.

Stapedec'tomy. (L. *stapes*, a stirrup; Gr. *ἐκτομή*, excision.) Surgical removal of the *Stapes*.

Stape'dial. Stirrup-shaped. Pertaining to the *Stapes*.

S. lig'ament. The annular ligament of the *Stapes*.

S. mus'cle. The *Stapedius*.

S. nerve. Tympanic branch of the facial nerve.

Stape'dio-vestib'ular. (L. *stapes*, a stirrup; *vestibulum*, a vestibule.) Relating to the *Stapes* and margin of the *Fenestra ovalis*.

Stape'dius. The small muscle arising from the cavity of the pyramid, and inserted into the neck of the *Stapes*.

Sta'pes. (L. *stapes*, a stirrup.) The innermost of the auditory ossicles in contact with the membrane of the internal ear.

Staph'a. *Stapes.*

Staphisa'grisë o'leum. (Not official.) Soluble in absolute alcohol.

S. semina. Stavesacre seeds. The dried ripe seeds of *Delphinium staphisagria*. They have been used many years as a parasiticide in ointment. The activity rests to a considerable extent in the oil.

S. unguen'tum. 1. (Not official.) Expressed oil, 60 minims; lard, 1 ounce. Used as a non-irritant remedy in scabies and in phtheiasis. 2. Stavesacre seeds, 1; benzoated lard, 2. Contains 10 per cent. of the oil.

Staphyla'grum. (Σταφυλή, uvula; ἀγγεῖν, to take hold of.) An old instrument formerly used to hold the uvula during amputation of that body.

Staphyl'ë. (Σταφυλή, uvula.) The uvula.

Staphylede'ma. See *Staphylædema*.

Staphylepar'tes. (Σταφυλή, uvula; ἐπαιρώ, to lift up.) An instrument for laying hold of and removing the uvula.

Staphyle'us. Pertaining to the uvula.

Staphylhæmato'ma. (Σταφυλή, the palate; αἷμα, blood.) Hæmatoma of the palate or uvula.

Staph'yline. Pertaining to the uvula or the whole palate.

Staphyli'no-pharyn'geus. (Σταφυλή, uvula; φάρυγξ, pharynx.) Relating to the pharynx and palate.

Staphyli'no-therapeu'tics. (Σταφυλή, uvula; θεραπεύω, to tend the sick.) The grape cure. A treatment for pulmonary phthisis; the patients commence with a pound of grapes a day, and go on to four.

Staphyli'nus. Synonym of *Staphyleus*.

S. exter'nus. Abductor of the Eustachian tube.

S. inter'nus. Elevator of the palate.

S. me'dius. *Azygos uvulæ.*

Staphyl'ion. (Σταφυλή, the uvula.) The median point of the posterior nasal spine.

Staphyli'tis. (Σταφυλή, the uvula; ιτις.) Inflammation of the uvula.

Staphylium. (Σταφυλή, a bunch of grapes.) The mammary nipple.

Staph'yo-. A prefix used to denote connection with the uvula.

Staphylocaust'icum. (Σταφυλή, the uvula; καυστικός, caustic.) A caustic used for application to the uvula.

Staphylococ'ci. (Σταφυλή, grape; κόκκος, a berry.) A micrococcus. "Staphylococci are characterised by the fact that, for the most part, the individual cocci in a culture are solitary" (Sternberg). Found in pus and septic cases.

Staphylodial'ysis. (Σταφυλή, uvula; διάλυσις, relaxation.) Relaxation of the uvula.

Staphyloede'ma. (Σταφυλή, uvula; οἶδημα, oedema.) Oedema of the uvula. Any morbid enlargement of the uvula.

Staphylo'ma. (Σταφυλή, a uvula; ὄμα, a tumour.) A name given to local bulgings of the eyeball.

S., an'nular. A staphyloma surrounded on all sides by atrophic choroid.

S. annula'rë. A local bulging in the ciliary region, extending round the entire corneal margin.

S. ante'rior or Keratoglo'bus. Distension and protrusion of the cornea. It is called buphthalmos when so extensive as to prevent closure of the lids; when it is cone-shaped, conical cornea. When it is opaque, and connected with synechia of the iris, it is called staphyloma of the cornea, or anterior staphyloma; when due to increase of the fluids with increased tension, hydrophthalmos. Enlargement of the cornea is called megalocorneæ.

S. anti'cum. Protrusion of the sclerotic at the anterior part of the eyeball, with atrophy of the choroid over a corresponding area. The cornea may be attacked, and the staphyloma then consists of cicatricial tissue which has yielded to the intra-ocular tension; the iris is, to a variable extent, involved in this protrusion: there may be no anterior chamber.

S., cil'iary. A staphyloma in the region of the ciliary body.

S. con'icum. Same as *S. pellucidum*.

S. cor'neæ. Same as *S., anterior*.

S. cor'neæpellu'cidum. Conical cornea. Also *Staphyloma pellucidum*.

S. cor'neæ racemo'sum. *S. corneæ* with perforation at several points, with protrusion of the iris.

S., inter'calary. One in the corneo-sclerotic junction.

S. latera'le. One on the side of the eyeball.

S. posti'cum. Protrusion of the sclerotic backwards at the margin of the optic disc, with atrophy of the choroid over a corresponding area.

S., project'ing. Same as *S. pellucidum*.

S. scle'ræ. Projection of any part of the sclerotic.

S. u'veæ. A protrusion of part of the uveal tract through a perforated sclera.

Staphylomatic. Characterised or affected by *Staphyloma*.

Staphylomatous. Pertaining to, or of the nature of, *Staphyloma*.

Staphylon'cus. (Σταφυλή, uvula; ὄγκος, tumour.) *Staphylœdema*.

Staphylon'ica. *Staphylœdema*.

Staphylo-pharyngor'haphy.

See *Passavant's operation*, in *Operations*, table of. The halves of the palate are stitched to the posterior pharyngeal wall in order to shut off the nose from the mouth.

Staphyloplas'ty. (Σταφυλή, uvula; πλασσειν, form, shape.) Operation for restoring deficiency in the soft palate.

Staphylopto'sis. (Σταφυλή, uvula; πτώσις, falling.) Abnormal elongation of the uvula.

Staphylor'haphy. (Σταφυλή, uvula; ραφή, a sewing.) The plastic operation for want of union of the soft palate.

Staphylotome. (Σταφυλή, uvula; τομή, section.) Knife for operating on the soft palate or uvula.

Staphylot'omy. Amputation of the uvula.

Staphylygro'ma. (Σταφυλή, the uvula; ὑγρός, wet.) Same as *Staphylœdema*.

Star. (Mid. Eng. *starre*, star.) 1. A celestial body appearing as a luminous point. 2. In *Biol.*, applied to various radiate structures, granules, cells, groups of cells, or organisms.

S. an'ise. See *Illicium*.

S.-blind. (Ang.-Sax. *staerblind*.) Seeing obscurely, purblind, blinking.

S. cells. Endothelial cells of vessels, first described by Kupffer, and regarded as nervous elements on account of their shape, and thin elongated processes, but afterwards shown to belong to the endothelial tissues; they have the power of enclosing various granules, Kupffer's cells.

S., daugh'ter. See *Diaster*.

S.-grass. See *Aletris*.

S. ridg'es. See *Sclerosepta*.

S.s of Verhey'en. The stellate veins.

Starch. (Original meaning, stiff and strong. *L. amyllum*.) A carbohydrate found in various vegetable tissues. Starch consists of variously shaped, often concentrically marked granules, having a wall of cellulose enclosing a carbohydrate granulose, $(C_6H_{10}O_5)_n$, where n is 2, 4, or more. Starch is converted by saliva and pancreatic juice into sugar (principally maltose), and is a readily digested and nutritious food. Hyperacidity of the gastric juice delays its digestion.

S. equiv'alent. A number expressive of the amount of oxygen which a given weight of fat will require for its complete combustion, as compared with the amount required by the same weight of starch. It indicates the heat-producing power of fat as compared with starch.

S., i'odised. (*Amylum iodatum*.) A mixture of 95 parts of starch and 5 of iodine; is used as a means of administering iodine, and as an antidote to poisons in doses of 3j (grm. iv).

S., wheat. (*Amylum*, U.S. Ph., B. Ph.; *Amylum tritici*, G. Ph.) Besides being used as a food, is employed as a dusting powder, and, in the form of *Glycerinum amyli*, U.S. Ph. (*Glycerinum amyli*, B. Ph., *Unguentum glycerini*, Ger. Ph.), and *S. paste* (*Mucilago amyli*, B. Ph.), as an emollient, especially in enemata.

Other varieties of starch employed like *S., wheat*, are—

S., ar'rowroot. *Amylum marantæ*.

S., can'na. *Amylum canna*.

S., corn. *Amylum maydes*.

S., pota'to. *Amylum solani*.

S., rice. *Amylum oryza*.

S., sa'go and sa'ep.

S., tapi'o'ca. *Amylum manihot*.

Stark mad. A popular expression for acute mania.

Start'ing pains in joints. An old criterion of cartilage destruction. They usually occur with great suddenness as the patient is dropping off to sleep. The suffering is very great, and the patient is quite unable to control them. They are alleviated by putting on "extension."

Star'tin's band'age. A combination of paraffin and stearine, impregnating a bandage, which sets after application.

S.'s lo'tion. $\frac{1}{2}$ oz. of oxide of zinc, 4 scruples of prepared powdered calamine, 1 ounce of glycerine, 7 ounces of lime water. Used as a wet application for acute vesicular eczema.

S.'s mix'ture. 2 grains of sulphate of iron or $1\frac{1}{2}$ drachms of magnesium sulphate, 15 minims of dilute sulphuric acid, 1 ounce of infusion of quassia. To be taken three times a day after meals for acne vulgaris.

Starva'tion. (*G. sterben*, to die.) Deprivation of anything essential to nutrition or the proper discharge of the functions of the body.

S. cure. Same as *Nestiatritia*, *Hunger cure*. The treatment of disease by fasting.

Starve. (*G. sterben*, to die.) To die, perish. To perish from lack of food or nourishment.

Sta'sis. (Στάσις, standing.) An arrest of circulation of any of the fluids of the body, especially the blood.

S., diffu'sion. Stasis in which there is diffusion of serum or lymph.

S., ve'nous. Stasis due to venous congestion.

Stasobasopho'bia. (Στάσις, standing; βάσις, a step; φόβος, fear.) The peculiar fear in consequence of which the act of standing or walking becomes impossible.

Stas-Ot'to meth'od. The method is applied as follows:—"Treat the mass with twice its weight of pure 90 per cent. alcohol, and from 10 to 30 grains of tartaric or oxalic acid; digest the whole for some time at about 70° C., and filter.

Evaporate the filtrate at a temperature not exceeding 35° C., either in a strong current of air or *in vacuo* over sulphuric acid. Take up the residue with absolute alcohol, filter, and evaporate again at a low temperature. Dissolve the residue in water, alkaline with sodium bicarbonate, and agitate with ether. After separation remove the ether and allow it to evaporate spontaneously. The residue may be further purified by redissolving in water and again extracting with ether. The method has been modified in some of its details, especially by Selmi and Marino-Zuco."

Stas's process. The separation of alkaloids from organic matter in analysis for poisons. It is based on the fact that the salts of the alkaloids are soluble in water and ethyl-alcohol, but not in ether, amyl-alcohol, benzene, chloroform, or acetic ether; while most of the uncombined alkaloids are nearly insoluble in water, but more or less soluble in ether and the other solvents named.

State. (L. *stare*, to stand.) A condition.

S. medicine. That department of medicine dealing with public health.

State'ment. (L. *stare*, to stand.) A declaration.

S., ante-mortem. A declaration made in the presence of witnesses, and if possible a magistrate, immediately before death.

Static. (Στατικός, causing to stand.) At rest. In equilibrium.

S. atax'ia. The failure of muscular coördination in standing still, or in any fixed position of the limbs.

S. breeze. A method of withdrawing static electricity by means of a pointed electrode from a patient. The most convenient method is by means of an insulated chair, the electricity being withdrawn from the hair.

S. electricity. Frictional electricity.

S. pel'vis. The bony pelvis.

S. shock. See *S. breeze*.

S. test Foderé's or Schmidt's test consists in ascertaining the absolute weight of the lungs. Foderé fixes the average weight of the lungs of stillborn children at 480 grains (one ounce), and 960 grains (two ounces) soon after breathing has been established. This test is obviously only of slight value.

S. the'ory, Goltz's. Teaches that every position of the head causes the endolymph of the semicircular canals to exert the greatest pressure on some one part of each canal, thus in varying degree exciting the nerve terminations of the ampullæ.

Statica medic'na. The daily weighing of the individual, his ingesta and egesta.

Staticè. See *Marsh rosemary*.

S. carolinia'na. Marsh rosemary. North America. Nat. Order *Plumbaginaceæ*. (Not official.) The thick, branched, wrinkled root of the perennial maritime plant is a powerful astringent. It contains 12 per cent. of tannic acid. Used in the United States. Action, astringent. Uses, diarrhœa, dysentery; aphthous and ulcerated sore throats; injection in leucorrhœa and gonorrhœa, &c. Dose of the fluid extract, $\frac{1}{4}$ to 1 drachm.

Statics. (Στατική, the art of weighing.) Science relating to forces in a state of equilibrium.

Station. (L. *stare*, to stand.) Standing position or attitude.

Stationary. (L. *stationarius*, pertaining to a post.) Not moving. A term applied to certain diseases remaining in the same locality for a period, or those diseases that persist without growing better or worse.

S. air. The air that remains in the lungs after the deepest possible expiration.

S. cat'aracts. Anterior and posterior central capsular cataract. Circumscribed opacities of various kinds in the lens itself. Zonular cataract. Anterior and posterior cortical. After many years these pass on to total opacity of the lens (Fuchs).

S. myo'pia. That which develops during youth, and ceases to do so when the body ceases to grow.

S. pteryg'ium. One which has undergone such changes that it is thin, pale, nearly devoid of vessels, tendinous, and has ceased to advance.

Statistics. (L. *status*, a state.) A numerical collection of facts relating to a subject.

S., med'ical. That part of medicine relating to mortality, the geographical distribution of disease, and climate.

S., vi'tal. Those statistics relating to mortality.

Statobath'mism. (Στατός, standing; βαθμός, a step, threshold.) Cope's term for inherited growth-energy which has not been interfered with by physical energy; as distinguished from *Physiobathmism* and *Kinetobathmism*.

Stat'oblast. (Στατός, standing; βλαστός, a bud-germ.) *Biol.* In fresh-water sponges and *Bryozoa*, a modified gemmule or parthenogenetic egg, provided with a protective horny envelope, and often with one or more layers of surrounding silicious spicules. These are produced on the approach of winter, or in tropical climates just before the dry season.

Statoblastic. (Στατός, standing; βλαστός, germ.) Pertaining to a statoblast.

Statogenesis. The same as *Statology*.

Statogenetic. (Στατός, standing; γένεσις, producing.) Of the nature of, or pertaining to, *Statology*.

Statogeny. (Στατός, standing; γένεσις, producing.) That department of Biology treating of the potential or static forms of energy involved in the adaptive processes or structure; modifications of living organisms. A form of ergogeny, as distinguished from *kinetogeny*.

Statometer. (Στατός, standing; μέτρον, measure.) Same as *Exophthalmometer*. An instrument for measuring the degree of exophthalmos.

Statosphere. (Στατός, standing; σφαίρα, a globe.) *Biol.* The envelope of the statoblast of fresh-water Sponges and Bryozoans.

Statospore. (Στατός, standing; σπορά, seed.) *Biol.* A resting spore, or hypno-spore.

Stat'ure. (L. *statura*, stature.) The height of any animal when standing.

Sta'tus. (L.) A condition, with the idea of permanence or continuance. A stage in which the disease having reached its height, it remains for a time before convalescence begins.

S. arthrit'icus. Nervous manifestations of suppressed gout.

S. convuls'ivus. Continuous convulsions in young children, producing marked disturbance of respiration, circulation, &c.

S. crudita'tis. Crudity.

S. eclamp'ticus. *Eclampsia*.

S. epilep'ticus. Rapidly recurring epileptic paroxysms, associated with a high temperature and a very grave condition.

S. erethrit'icus. Nervous diathesis.

S. gastr'icus. *Embarras gastrique*; *Subrina*.

S. hyster'icus. *Hysteria*.

S. nervo'sus. Same as *Neurasthenia*.

S. parturien'di. Parturition.

S. præ'sens. The condition when a case is described.

S. sthen'icus. Strength.

S. typho'sus. The marked prostration, muttering delirium, stupor, feeble dicrotic pulse, subsultus tendinum, involuntary discharge of fæces, &c., found in conditions of extreme gravity in fevers, such as typhoid.

S. vermino'sus. *Helminthiasis*.

S. vertigino'sus. A condition of prolonged vertigo, in the course of which the patient for days and weeks together cannot move or turn in any fashion without being seized with extreme vertigo.

Statu'volence. (L. *status*, state; *volens*, willing.) Auto-hypnotism; voluntary somnambulism or clairvoyance.

Staub's fluid. A chloro-albuminous solution of mercury used in syphilis. It consists of the following:—20 grains each of bichloride of mercury and chloride of ammonium, 1 drachm of chloride of sodium, 4 ounces of distilled water, and 4 ounces of liquor ovi albi; 20 minims are injected as a dose.

Stauropleg'ia. (Σταυρός, cross; πληγή, a stroke.) Crossed hemiplegia, or paralysis of the upper extremity on one side, and the lower extremity on the other.

Stav'ers. See *Staggers*.

Staxis. (Στάζω, to drop.) Slight defluxion of any humour, as nasal hæmorrhage.

Stay-knot. A term applied by Ballance and Edmunds. Two ligatures are used; in each the first hitch of a reef-knot is made and tightened, so that the loop lies in contact with the vessel. The two free ends are then tied on either side.

Steam. Water in the condition of a gas.

S. atomiser. An instrument converting a fluid into a spray by the agency of a steam jet.

S. doc'tor. An old name for a Thompsonian physician, from the extensive use of vapour-baths by physicians of this school.

S.-tug mur'mur. The double murmur of aortic obstruction and insufficiency.

Steaps'in. (Στέαρ, fat.) A ferment of the pancreatic juice which saponifies fat.

Ste'ar. (Στέαρ, fat.) See *Adeps*.

Stearyldehyd. $C_{18}H_{36}O$. A substance appearing in tablets, and having a bluish lustre.

Ste'arate. A salt of stearic acid. The neutral stearates of the alkalis are soaps.

Ste'arentine. Sebaceous matter of greenish colour, resembling cholesterin, found in the stools of infants.

Ste'arin. (Στέαρ, fat.) A fatty sub-

stance found in the oil of sheep's wool, and which is analogous to stearin.

Stear'ic acid. (Στέαρ, stiff fat.) $C_{18}H_{36}O_2$. A monobasic acid. Exists in combination with glycerine as stearin.

Ste'ariform. (Στέαρ, fat; L. *forma*, form.) Having the appearance of or resembling fat.

Ste'arin. An ether or glyceride formed by the combination of stearic acid and glycerine. Natural stearin is the chief ingredient in suet.

Ste'arine. Cocoa-nut stearine. (Not official.) This substance melts at about $84^{\circ} F$. It is much better for suppositories than oil of theobroma, as the latter has a higher melting-point.

Stearoc'note. (Στέαρ, fat; ὀκνός, inactive.) An insoluble but fusible solid substance found in brain tissue.

Stearoder'mia. (Στέαρ, fat; δέρμα, skin.) An affection of the sebaceous glands of the skin.

Ste'arol. A medicament having a fatty basis.

Ste'arone. $C_{35}H_{70}O$. Obtained by the partial decomposition of stearic acid. It is a volatile liquid, and appears to be the same as stearic acid deprived of two equivalents of carbonic acid.

Stearoplan'ic ac'id. The same as *Stearic acid*.

Ste'aropten. (Στέαρ, fat; πτηνός, winged, volatile.) Any camphor-like crystalline substance held naturally in solution in a volatile oil.

Ste'arrrhœ'a. (Στέαρ, fat; ροιά, a flow.) Same as *Seborrhœa*.

S. amian'thaca. A form of seborrhœa in which the excess of solid constituents gives a scaly appearance.

S. congesti'va. Same as *Seborrhœa congestiva*.

S. flaves'cens. A seborrhœa in which the sebaceous matter turns yellow after being deposited on the skin.

S. nigr'icans. Same as *Seborrhœa nigricans*.

S. simp'lex. Excess of facial sebaceous secretion.

Ste'aryl. (Στέαρ, fat; ὕλη, matter.) $C_{18}H_{35}O$. The radical of stearic acid.

Ste'atin. (Στεάτινον, pertaining to suet.) Any cerate containing a considerable proportion of tallow. Same as *Stearin*.

Steati'num. (Στεάτινον, pertaining to suet.) A name given to certain pharmaceutical preparations similar to cerates.

Steatit'es. *Polysarcia*.

Steatit'is. Inflammation of fatty tissue.

Ste'atocele. (Στέαρ, fat; κήλη, a tumour.) A tumour formed by a collection of fatty matter in the scrotum.

Ste'ato-crypto'sis. (Στέαρ, fat; κρύπτη, crypt.) Abnormality of function of the sebaceous glands.

Steato'des. (Στέαρ, fat; εἶδος, resemblance.) Fatty.

Steatog'enous. (Στέαρ, fat; γενής, produced.) Tending to produce *Steatosis*.

Steatol'ysis. (Στέαρ, fat; λύσις, solution.) The emulsifying process by means of which fats are prepared for absorption and assimilation.

Steatolytic. (Στέαρ, fat; λύσις, a solution.) Accomplishing a *Steatolysis*.

Steato'ma. (Στέαρ, fat; ὄμα, tumour.) Kind of fatty tumour. A lipoma.

S. mellic'eris. A sebaceous cyst.

S. testic'uli. See *Steatocele*.

Steatom'atous. Of the nature of a lipoma.

Steatomy'ces. (Στέαρ, fat; μύκος, a mushroom.) A fatty fungous growth.

Steatopath'ic. (Στέαρ, fat; πάθος, disease.) Pertaining to diseases of the sebaceous glands.

Steatopy'ga or **Steatopyg'ia.** (Στέαρ, fat; πυγή, buttock.) Hottentot deformity, enormous size of the buttocks.

Steatopy'gous. Characterised by, or pertaining to, abnormal size of the gluteal regions.

Steatopy'gy. See *Steatopyga*.

Steatorr'hæa, Steatorrhœ'a. (Στέαρ, fat; ροιά, a flow.) *Seborrhœa*. The passage of fatty stools.

S. amian'thaca. See *Stearrhœa amianthaca*.

S. nig'ricans. See *Stearrhœa nigricans*.

S. simplex. See *Stearrhœa simplex*.

Steato'ses. Skin diseases in which the sebaceous secretion is faulty.

Steato'sis. Fatty degeneration or infiltration. Any disease of the sebaceous glands.

Steatospon'gus. (Στέαρ, fat; σπόγγος, a sponge.) Same as *Steatomyces*.

Steatozo'on. (Στέαρ, fat; ζῶον, an animal.) The parasite, *Demodex folliculorum*, contained in comedones.

Stechiolog'ic, Stœchiolog'ic, Stoicheiolog'ic. (Στοιχείον, a first principle; λόγος, science.) Pertaining to *Stechiology*.

Stechiol'ogy, Stœchiol'ogy, Stoicheiol'ogy. The doctrine of elements.

Steel. (Mid. Eng. *steel*, steel.) Iron chemically combined with a certain proportion of carbon. It holds an intermediate position between white cast iron and wrought iron, partaking of the most valuable qualities of both. Steel of good quality is fine-grained, elastic, and tough. See also *Ferrum*.

S. bal'sam. Synonym of *Lin. ferri nitrici*.

S. blue. Same as *Berlin blue*.

S.-grind'er's phthi'sis. See *Pneumonoconiosis*.

S. pen pal'sy. See *Writer's cramp*.

S. wine. Synonym of *Vinum ferri*.

Steep. *Rennet*.

Ste'gè. (Στέγος, roof.) The inner layer of the rods of Corti.

Stegno'sis. (Στέγνωσις, a checking of a discharge.) Constipation; stenosis; the checking of a discharge; the closing of a passage.

Stegnot'ic. Astringent; effecting *Stegnosis*.

Steiro'sis. (Στείρωσις, sterility.) Sterility.

Stella. (L. *stella*, a star.) A star-shaped bandage.

Stellate. Star-shaped, or with parts radiating from a centre.

S. ban'dage. One wound crosswise on the back.

S. fig'ure of lens. The figure formed by the lines of junction of the lens fibres.

S. frac'ture. A fracture in which there are numerous radiating fissures.

S. hair. Hair dividing at its end in a star-shaped manner.

S. lacera'tion. One involving the tissues in several directions.

S. lig'ament. The costo-central ligament.

S. veins. Minute star-shaped veins just under the renal capsule.

Stelliform. Having the form of a star.

Stellula. A plexus of veins in the renal cortex.

S. Verhey'nii. A stellate network; cortical renal veins.

Stell'wag's symp'tom. Slight retraction of the upper lid in exophthalmic goitre with drying of the cornea, because winking is less often performed.

S.'s meth'od by cor'neal flap ex-trac'tion. The upper third of the cornea is detached by entering the knife and bringing out its point through the limbus. The cut is made upwards. The cataract is delivered through the incision.

Stelochi'tis. *Osteocolla*.

Stem. (Mid. Eng. *stem*, stem.) The pedicle of a tumour; the shaft of a hair.

S. brain. The brain, less the fissured portion of the cerebrum.

S. gland. The duct of a gland.

S., herba'ceous. A stem that dies in winter.

S. of hair. Same as *Hair shaft*.

S. pes'sary. A pessary having a stem or rod entering the os uteri.

S. sick'ness. A parasitic disease of clover due to the stem worm, *Tylenchus devastatrix*.

Ste'ma. The penis, especially the glans.

Stem'ma. (Στέμμα, a wreath, a garland; pl. *stemmata*.) In *Biol.* (a) one of the simple eyes of an Invertebrate, an ocellus; (b) one of the facets of a compound eye; (c) the tubercle giving attachment to the basal joint of an antenna.

Stem'matol. (Not official.) A Norwegian antiseptic containing, in water, turpentine, soap, glycerine, and aromatics.

Stenag'ma. (Στενάζειν, to sigh.) A sigh.

Stench. (Mid. Eng. *stench*, a smell.) A foul odour.

S.-pipe. A pipe reaching above the roof of a house to give exit to sewer gases.

S.-trap. A depression or hollow in which water lies to prevent the passage of noxious gases.

Ste'no-. (Στενός, narrow.) A prefix denoting narrowing or constriction.

Stenobreg'mate. (Στενός, narrow; βρέγμα, the bregma.) The condition in which the upper and fore part of the head is narrow.

Stenocar'dia. (Στενός, narrow; καρδία, the heart.) Contraction of the heart or its orifices.

Also, *Angina pectoris*. Agonising heart pain which extends to 'he arms and neck. Said to be due to—(1) Neuralgia of the cardiac nerves. (2) Cramp of the heart muscle. (3) Extreme tension of the ventricular walls, in consequence of an acute dilatation associated in the majority of cases with an affection of the coronary arteries (Osler).

Stenocar'pin. (Στενός, narrow; καρπός,

a fruit.) A fraudulent anæsthetic and mydriatic, asserted to have been obtained from the leaves of *Gleditschia triacanthos*, the tear-blanket tree. It is a mixture of cocaine and atropine.

Stenocephalus. (Στενός, narrow; κεφαλή, the head.) Having a head narrow in one or more of its diameters.

Stenochasmus. (Στενός, narrow; χάσμα, opening.) Term applied to skulls having a sector of from 94° to 74° for cavum nasopharyngeum.

Stenochoria. (Στενός, narrow; χώρος, space.) Narrowness, stricture, or partial obstruction. Also, contraction of the vagina.

S. saccilacrimalis. Stenosis of the lachrymo-nasal duct.

Stenocoria. (Στενός, narrow; κόρη, pupil.) Narrowing of the pupil.

Stenocrotaphia or **Stenocrotaphy.** (Στενός, narrow; κρόταφος, the temple.) A narrowing of the temporal region in the skull.

Stenodon. (Στενός, narrow; όδόν, a tooth.) Having narrow teeth.

Stenomycteria. (Στενός, narrow; μυκτήρ, the nose.) Nasal stenosis.

Stenonian duct. See *Stenson's duct*.

Stenopæic. (Στενός, narrow; όπαίος, pierced.) Applied to lenses only allowing the passage of light through a straight narrow slit.

S. glasses. Glasses with a slit so arranged as to allow only the transparent portions of the cornea to be used. Useful when there are corneal opacities.

Stenopetalous. (Στενός, narrow; πέταλον, a leaf.) In *Biol.*, furnished with narrow petals.

Stenophyllous. (Στενός, narrow; φύλλον, a leaf.) In *Biol.*, possessing narrow leaves.

Stenoraic. See *Stenopæic*.

Stenosed. Characterised by stenosis. Morbidly narrowed.

Stenosis. (Στενός, made narrow, straitened.) The pathological narrowing of a passage.

S., aortic. A constriction of the aortic orifice accompanied by valvular changes, and especially calcareous degeneration of the arteries in old men.

S., cardiac. A narrowing of the conus arteriosus in the right and left ventricles in consequence of contraction after myocarditis.

S., cicatricial. Narrowing due to contraction of a cicatrix.

S., granulation. Narrowing in consequence of the encroachment of granulations.

S., mitral. A narrowing of the mitral orifice of the heart.

S. of os internum, congenital, anatomical, and physiological. The anatomical form is due to cicatrization or fibroid induration. The physiological form is due to spasm.

S. of os tium tubæ. Occurs frequently in tubercular salpingitis.

S. of vagina. Is due to partial arrest of the developmental process or to failure of one Müllerian tube to develop.

S., post-tracheotomy. A narrowing of the trachea after tracheotomy.

Stenostegnosis. Narrowness or constriction of Steno's duct.

Stenostenosis. The same as *Stenostegnosis*.

Stenostomatous. (Στενός, narrow; στόμα, mouth.) Having a small mouth.

Stenostomia. (Στενός, narrow; στόμα, mouth.) A narrowing or closure of the mouth.

Stenostomy. The contraction of any mouth or aperture.

Stenothermal. (Στενός, narrow; θερμός, heat.) Capable of sustaining a small range of temperature.

Stenothorax. (Στενός, narrow; θώραξ, thorax.) Having a straight, short thorax.

Stenotic. Relating to *Stenosis*.

Stensen, canals of. The lateral and larger orifices of the four foramina of the anterior palatine fossa in the meso-palatine suture of the maxillæ; they lodge recesses of the mucous membrane and the remains of Jacobson's organs, and transmit the palatine arteries.

S.'s duct. The duct of the parotid gland opening into the cheek at the level of the upper third molar tooth, named after Meolau Stenonianus of Copenhagen (1636—86).

S.'s experiment. Compression of the abdominal aorta of an animal, so as to cut off the blood-supply to the lumbar region of the spinal cord. It leads to rapid paralysis of the posterior portion of the body.

S., foramen of. See *Foramen*.

Stentorin. (Στέντωρ, Greek of powerful voice in the army before Troy. A blue pigment obtained by E. Ray Lankester from infusorians of the Genus *Stentor*.

Stentorophonous. (Στέντωρ; φωνή, voice.) Having a powerful voice.

Stephané. Crown.

Stephanial, Stephanic. (Στέφανος, a wreath.) Pertaining to the *Stephanion*.

Stephanic diameter. Superior frontal diameter of Broca.

S. in'dex. Frontal index.

Stephanion, inferior. The point where the ridge for the temporal muscle intersects the coronal suture.

S., superior. The point where the coronal suture crosses the temporal ridge.

Step-mother's blessing. A popular term for hang-nail.

Steppage. (Mid. Eng. *steppe*, a step.) The peculiar gait seen in dorsal tabes, arsenical, alcoholic, and other forms of neuritic paralysis.

Steppe disease. Same as *Rinderpest*.

S. mur'rain. Same as *Rinderpest*.

Stypticus. *Styptic*.

Stercobilin. (L. *stercus*, dung; bilis, bile.) The brown colouring matter of the fæces. It is the same as *Hydrobilirubin*.

Stercometry. The art of measuring the specific gravity of solid bodies.

Stercoraceous. (L. *stercus*, dung; -aceous.) Composed of, resembling, or relating to fæces.

S. vom'iting. Fæcal vomiting.

Stercoræmia. See *Stercoremia*.

Stercoral. Same as *Stercoraceous*.

S. ul'cer. Ulcer produced by the pressure or irritation of fæcal masses.

Stercorary. (L. *stercorarius*, pertaining to dung.) Relating to fæces.

Stercoremia. (L. *stercus*; Gr. αἷμα, blood.) Contamination of the blood by absorption from retained fæces.

Stercorin. A fæcal extractive resembling biliary cholesterolin.

Sterculia. (L. *stercus*, dung.) A Genus of some eighty-five species of tropical trees. S.

urens, of India, and *S. tragacantha*, of Africa, afford some part of the gums known as tragacanth. *S. acuminata* produces the kola-nut. See *Kola*.

Sterculia'ceous. (L. *stercus*, excrement.) Of, or pertaining to, the Genus *Sterculia*.

Ster'cus. *Fæces*.

Sterelmin'thia. (Στερεός, solid; ἔλμινς, worm.) Solid worms, as the *Bothrioccephalus*, *Tenia solium*, &c., found in the human intestines and other organs.

Stereoblastula. (Στερεός, solid; βλαστός, a germ; pl. *Stereoblastulæ*.) Biol. A solid blastula. Also spelled *Sterroblastula*.

Stereo-chem'istry. (Στερεός, solid; χημεία, chemistry.) Stereo-isomerism; theoretic explanations of close isomerisms, by which it is assumed that the differences between the various isomeres are due to the different positions of the same atoms or radicals in tri-dimensional representations of the molecules. Ordinary structural formulæ involve only two dimensions, length and breadth, but these are not sufficient to explain numerous cases of isomerisms now known, and a "spatial" or "solid" conception of the molecule is necessary. The term allo-isomerism has been proposed for these cases.

Stereocyst. (Στερεός, solid; κύστις, cyst.) A hard cyst, or cystic growth.

Stereogastrula. (Στερεός, solid; γαστήρ, stomach; pl. *Stereogastrulæ*.) Biol. A solid gastrula. Also spelled *Sterrogastrula*.

Stereognost'ic. (Στερεός, solid; γνῶσις, knowledge.) Pertaining to the cognition of solidity, or tri-dimensional forms.

Stereogram. (Στερεός, solid; γράμμα, a writing.) A stereoscopic picture.

Stereograph. Same as *Stereogram*.

Stereograph'ic. (Στερεός, solid; γραφείν, to write.) Pertaining to *Stereography*.

S. dermatoneuro'sis. *Urticaria factitia*. That form which can be produced by very slight irritation in some individuals.

Stereogr'aphy. Graphic representation of the skull; a branch of *Cranionetry*.

Stereom. The strength-giving fibres of fibro-vascular tissue.

Stereom'eter. (Στερεός, solid; μέτρον, measure.) Instrument for the determination of the specific gravity of liquids, porous bodies, powders as well as solids.

Stereomon'oscope. (Στερεός, solid; μόνος, single; σκοπεῖν, to view.) An instrument with two lenses for producing a single picture giving the effect of solidity.

Stereoneu'ra. (Στερεός, solid; νεύρον, nerve.) A term proposed by Wilder for the Invertebrates whose nervous axis, when it exists, presents no cavity as in the Vertebrates or *Cæleoneura*.

Stereophan'toscope. (Στερεός, solid; φάντασμαι, to appear.) A panorama-stereoscope using rotating discs in place of pictures.

Stereoph'roscope. (Στερεός, solid; φέρειν, to carry; σκοπεῖν, to see.) A stereoscopic zoetrope. An instrument for producing a series of images apparently in motion, and in stereoscopic relief.

Stereoplan'ula. (Στερεός, solid; L. *planula*, from *planus*, flat.) Biol. A solid planula. Also spelled *Sterroplanula*.

Stereoplasm. (Στερεός, solid; πλάσμα, anything formed.) The solid insoluble portion of plasma. A secretion of the basal

membrane of certain Actinia, superseding and supplementing the dissepiments.

Stereoplas'ma. (Στερεός, solid; πλάσμα, plasma; something formed or moulded.) See *Stereoplasm*.

Stereoscope. (Στερεός, solid; σκοπεῖν, to see.) An instrument by which two similar pictures of the same object are made to overlap so that the reflected images are seen as one, thereby giving the appearance of solidity and relief. It is used in strabismus as an exercise for the affected muscles.

Stereoscop'ic. Pertaining to *Stereoscopy*.

S. vi'sion. Visual appreciation of the three dimensions of a body.

Stereos'copy. The use of the *Stereoscope*.

Stereot'ica. Fortuitous lesions or deformities affecting the hard parts of the body.

Ster'esol. (Not official.) An antiseptic benzoinated collodion. A brown limpid liquid, consisting of tolu, gums, phenol, alcohol, &c., with an aromatic odour, leaving on evaporation a resinous, isolating, antiseptic varnish on the skin.

Ster'ile. (L. *sterilis*, unfruitful.) Barren. Incapable of reproducing. Free from microorganisms or spores.

Sterilisa'tion. See *Sterilization*.

Steril'ity. Unfruitfulness.

S., fac'ultative. Sterility caused by the prevention of conception.

S., rel'ative. Sterility due to other causes than abnormality of the sexual organs.

Steriliza'tion. The act of making sterile. The process of killing micro-organisms and their spores. In most cases a temperature of 100° C. devitalises the organisms as well as the spores. In some cases—for instance, *Bacillus tenuis*—it resists 100° C., and the spores 115° C.

S., Huep'pe's meth'od of. The repeated exposure to a temperature of from 52° C. to 65° C.

S., intermit'tent. A method in which an interval of time is allowed to elapse so as to give spores the time to develop into mature organisms, which are killed by a lower temperature.

S. test, Hoch'enegg's. The surgical dressings are impregnated with a mixture of 150 parts of a solution of acetate of aluminium of the Austrian Pharmacopœia, 150 parts of water, and 5 parts of a 21 per cent. paste of alizarin. This is a yellowish-brown mixture, but on exposure to the temperature of boiling water it becomes bright red.

Steriliza'tor. An instrument for sterilising by heat.

Ster'ilize. To free from living germs and spores.

Ster'ilized. (L. *sterilis*, sterile.) Rendered sterile.

Ster'ilizer. The apparatus that sterilizes.

Ster'inum ceta'ceum. *Cetaceum*.

Ster'nad. (Στέρνον, breast-bone.) Toward the sternal aspect.

Ster'nal. (Στέρνον, the breast-bone.) Of, or pertaining to, the *Sternum*.

S. ar'teries. Small twigs from the internal mammary. The internal mammary arteries.

S. as'pect. That aspect turned toward the sternum.

S. fora'men. *Foramen sternale*. Perforation occasionally found owing to want of union of the two lateral portions.

S. glands. A chain of glands along the course of the internal mammary vessels.

S. groove. The depression shown on the surface of the body over the sternum and between the pectorals.

S. line. Median line drawn on the sternum; used for reference in physical examinations.

S. nerves. Descending cutaneous branches of the third and fourth cervical nerves.

S. re'gion. Region between sternal lines.

S. rib. A true or fixed rib.

Sternal'gia. (Στέρνον, sternum; ἄλγος, pain.) Pain above the sternum. Specifically, *Angina pectoris*.

Sternal'gic. Pertaining to, or affected with, *Sternalgia*.

Sternalis. Connected with the sternum.

Rectus sternalis. An abnormal vertically disposed muscle on the outer side of the sternum.

S. bruto'rum. The *Sternalis* muscle.

S. rectus. *Rectus sternalis*. A small muscular slip sometimes found on the front of the chest, and belonging to the same layer of muscles as does the *Rectus abdominus*.

Sterneber. A bony segment of the sternum, or sternebral element.

Sternebra. (L. *sternum*, sternum; *vertebra*, vertebra.) Any one of the serial segments of the sternum.

Sternebral. Pertaining to, or of the nature of, a *Sternebra*.

Sternen. Belonging to the sternum in itself.

Sterniform. (L. *sternum*, sternum; *forma*, shape.) Shaped like a sternum.

Ster'no-abdomina'lis. The triangularis sterni and the transversus abdominis considered as a single muscle.

Sternochon'dro-scapula'ris.

(Στέρνον, sternum; χονδρόν, cartilage; L. *scapula*, scapula.) An anomalous muscle arising from the first costal cartilage and the sternum, and inserted into the superior border of the scapula.

Sternoclavic'ular. (Στέρνον, sternum; κλείς, a key.) Pertaining to the *Sternum* and *Clavicle*.

S. a'bro-car'tilage. The interarticular fibro-cartilage of the sternoclavicular joint.

S. lig'ament. The capsular ligament of the sternoclavicular joint.

Sternoclavicula'ris. One or two anomalous muscles extending over the sternoclavicular articulation.

Sternoclaviobrachia'lis. (Στέρνον, sternum; κλείς, a key; βρακίων, arm.) The *Pectoralis major*.

Sternoclaviohu'meral. (Στέρνον, sternum; κλείς, a key; L. *humerus*, the humerus.) The *Pectoralis minor*.

Sternoclaviohyoid'eus. (Στέρνον; κλείς; υἱῆδος [υ, εἶδος, like the letter υ].) The *Sternohyoid* muscle.

Sternoclaviomastoid'es. (Στέρνον; κλείς; μαστός, a knoll; εἶδος, like.) *Sternocleidomastoid*.

Sternocleidomast'oid. Pertaining to the sternum, clavicle, and mastoid process.

Sternocleidomastoid'eus. The *Sternocleidomastoid* muscle.

Sternocli'dal. Same as *Sternocla-vicular*.

Sternocor'acoid. (Στέρνον; κόραξ,

like a raven's beak.) Of, or pertaining, to the sternum and the coracoid.

Sternocost'al. (Στέρνον, the sternum; L. *costa*, a rib.) Of, or pertaining to, the sternum and the ribs or costal cartilages.

Sternocosta'lis. Same as the *Trans-versus thoracis*.

Sternocostocarot'icus. An abnormal insertion of the sternothyroid on the carotid sheath.

Sternocostoclavihu'meral. The *Pectoralis major*.

Sternocostocoracoid'eus. *Pectoralis minor*.

Sternocostoeptirochlea'ris.

(Ἐπί, above; τροχός, a wheel or pulley.) A muscular strip occasionally attached to the lower border of the pectoralis major, and inserted into the epitrochlea.

Sternocostofascia'lis. Abnormal insertion of some of the fibres of the sternothyroid into the sternal fascia.

Sternocostoglos'sus. *Sterno-glossus*.

Sternocostohyoid'eus profun'dus. Portion of the sternothyroid which occasionally passes to the great cornu of the hyoid bone. Also, the muscle formed by the union of the sternothyroid and the thyrohyoid.

Sternocostothyroid'eus. The *Sternothyroid* muscle.

Sternodymia. (Στέρνον, sternum; δύμι, form of δύω, two.) Union by the sternum.

Sternodynia. (Στέρνον, sternum; οδυνή, pain.) Same as *Sternalgia*.

S. syncopa'lis. *Angina pectoris*.

S. syncop'tica et pal'pitans. *Angina pectoris*.

Sternoglos'sal. (Στέρνον; γλῶσσα, the tongue.) Pertaining to the sternum and the tongue.

Sternoglos'sus. Fibres of the sternohyoid which sometimes extend up into the tongue, uniting with the hyoglossus.

Sternohu'meral. The *Pectoralis major*.

Sternohy'oid. Of, or pertaining to, the sternum and the hyoid bone.

S. mus'cle. A muscle arising from the hinder part of the sternal end of the clavicle and the sternum, and inserted into the body of the hyoid bone.

Sternohyoid'eum. Same as *Sternohyoid*.

Ster'noid. (Στέρνον, the breast-bone; εἶδος, like.) Resembling the *Sternum*.

Sternomas'toid. Of, or pertaining, to the sternum and the mastoid process.

S. ar'tery. Muscular branches of the superior thyroid and the occipital arteries.

S., hæmato'ma of. The so-called congenital tumour of the sternomastoid, which is due to injury probably sustained during parturition. It generally results in wry-neck.

S. mus'cle. See *Sternocleidomastoideus*.

Sternomastoid'eus. See *Sternocleidomastoideus*.

Sternomaxilla'ris. The *Sternomaxillary*, an anomalous muscle.

Sternomax'illary. Pertaining to the sternum and the mandible.

Sternomoid'eus. The *Sternoclavicularis superior*.

Ster'non. Same as *Sternum*.

Ster'no-omphalodym'ia. (Στέρνον, sternum; ὀμφάλος, navel; δῦμι, form of δύω, two.) A double monstrosity where the union is both by the sternal and umbilical regions.

Sternopa'gia. The condition of *Sternotragus*.

Sternopa'gus. (Στέρνον, breast, chest; πάγος, that which is firmly set.) A double monster with union at the sternum.

Sternopericar'diac lig'aments. (Στέρνον; περί, around; καρδία, heart.) Bands uniting the sternum and the pericardium.

Sternoscap'ular. Of, or pertaining to, the sternum and the scapula.

Sternothy'roid. (Στέρνον, sternum; θυρεός, oblong shield; εἶδος, form.) Of, or pertaining to, the sternum and the thyroid cartilage.

Sternothyroid'eus. A muscle arising from the hinder part of the manubrium, and inserted into the oblique line on the outer side of the thyroid cartilage.

Sternotra'cheal. (Τραχεΐα, trachea.) Connected with the sternum and trachea.

Sternotrype'sis. (Στέρνον, sternum; τρίπεις, perforation.) Perforation of the sternum.

Sternoxiph'oid lig'aments. (Χίφος, a sword.) Bands connecting the sternum and the ensiform appendix.

Ster'num. (Στέρνον.) The breast-bone, consisting of the manubrium, the gladiolus, and the ensiform cartilage; the true ribs and the clavicle articulate with it.

Sternu'tament. (L. *sternutare*, to sneeze.) A substance causing sneezing.

Sternuta'tion. (L. *sternutare*, to sneeze.) The act of sneezing.

Sternu'tative. Same as *Sternutatory*.

Sternu'tativeness. The character of being *Sternutatory*.

Sternu'tatory. Anything causing sneezing, like snuff; an errhine.

Sternu'tory. Same as *Sternutatory*.

Ster'tor. (L. *stertere*, snore.) A heavy snoring sound accompanying inspiration, produced by vibration of the soft palate, in profound unconsciousness.

Ster'torious. Same as *Stertorous*.

Ster'toriousness. Same as *Stertorousness*.

Ster'torous. Characterised by the deep snoring sound of *Stertor*.

Ster'torously. In a *stertorous* manner.

Ster'torousness. The quality or state of being *Stertorous*.

Stethæ'mia. (Στήθος, chest; αἷμα, blood.) Hyperæmia of the lungs. Congestion or accumulation of blood in the pulmonary vessels.

Stetharteri'tis. (Στήθος, heart; ἀρτηρία, artery; ιτις, inflammation.) Inflammation of the thoracic arteries.

Steth'o-. (Στήθος, chest.) A prefix denoting connection with the chest.

Stethocathar'sis. Same as *Expectoration*.

Steth'ocele. (Στήθος, chest; κηλί, hernia.) Same as *Pneumonocèle*.

Stethocelodyspnœ'a. (Στήθος, chest; κηλί, hernia; δύσπνοια, dyspnœa.) Dyspnœa due to hernia of the lung.

Stethochy'sis. (Χύσις, a pouring) See *Hydrothorax*.

Stethodes'mis, Stethodes'mium, or Stethodes'mus. (Στήθος, chest; δεσμός, bandage.) Corset.

Stethogoniometer. (Στήθος, chest; γωνία, angle; μέτρον, measure.) An instrument for measuring the curvature of the chest.

Steth'ograph. (Στήθος, chest; γραφείν, to record.) An instrument for recording the respiratory movements of the chest wall.

Stethographic. Pertaining to the *Stethograph* or *Stethography*.

Stethog'raphy. The art of recording graphically the movements of the chest wall.

Stethokyr'tograph. (Στήθος, chest; κυρτός, curved; γραφείν, to write.) An apparatus for measuring and recording the dimensions of the chest.

Stethome'nia. (Στήθος, chest; μήν, month.) Vicarious menstruation by means of the bronchial tubes.

Stethom'eter. (Στήθος, chest; μέτρον, measure.) An instrument for measuring the amount of expansion of the chest, and the relative expansibility of the two sides.

Stethom'etry. The measuring of respiratory movements by means of a stethometer.

Stethomi'tis. (Στήθος, chest; μῦς, muscle; ιτις, inflammation.) Inflammation of the muscles of the chest.

Stethoparal'ysis. (Στήθος, chest; παράλυσις, paralysis.) Palsy of the muscles of the chest.

Stethophonometer. (Στήθος, chest; φωνή, sound; μέτρον, measure.) An instrument to measure the phenomena elicited by auscultation.

Stethopolysco'pium. (Στήθος, chest; πολὺς, many; σκοπεῖν, to view.) A stethoscope having many tubes for the simultaneous use by several observers.

Stethorheu'ma. (Στήθος, chest; ρεύμα, rheum.) Rheumatism of the thorax.

Steth'oscope. (Στήθος, chest; σκοπεῖν, to examine.) The instrument used for auscultation. It is a hollow tube; one end is placed over the part examined, and the broader end to the ear.

Also (verb), to examine by means of a *Stethoscope*.

S., binau'ral. The single end has a Y-shaped bifurcation, to which two tubes are fixed, so that both ears of the auscultator can be employed.

Stethoscop'ic. Of, or pertaining to, *Stethoscopy*; obtained by means of the *Stethoscope*.

Stethoscop'ical. The same as *Stethoscopic*.

Stethoscop'ically. By means of the *Stethoscope*.

Steth'oscopist. One who is skilled in *Stethoscopy*.

Stethos'copy. The examination of the chest by a *Stethoscope*.

Steth'ospasm. (Στήθος, chest; σπασμός, spasm.) Spasm of the pectoral muscles.

Steven's saline' mixture. A mixture of sodium chloride 20 grains, potassium chlorate 7 grains, sodium carbonate 30 grains, water 12 fluid drachms. Recommended to be taken every half-hour in malignant cholera.

Sthe'nia. (Σθένος, strength.) Normal or excessive force or vigour.

Sthen'ic. Strong, active.

S. fe'ver. A high temperature; full, quick, tense, and vigorous pulse, and highly coloured urine.

Sthenopy'ra. (Σθένος, strength; πῦρ, fever.) *Sthenic fever.*

Stibiace'ne. (Στίβι, antimony sulphuret; ἀκνή, acne.) Acne caused by the use of antimony.

Stib'ial. Pertaining to *Stibium* or antimonium sulphuret.

Stib'ialism. Poisoning by antimony.

Stib'ium. See *Antimonium*.

Stib'ogram. (Στίβος, a beaten path; γράμμα, a writing.) Written record of footsteps.

Stich'culture. See *Stab culture*.

Stick'ing-plaster. See *Plaster*.

Stictac'ne. (Στικτός, punctated; ἀκνή, acne.) *Acne punctata.* Acne in which the pustules have a red, raised base, with a central black point.

Stiff. Inflexible, unyielding.

S. joint. See *Ankylosis*.

S. neck. See *Torticollis*.

Stifle. (Mid. Eng. *stifle*, to choke.) To kill by arresting or impeding respiration.

Stif'ling. Close or oppressive.

Stig'ma. (Στίγμα, point.) A minute cicatrix. A *nævus*.

S. of Graaf'ian follicle. Spot where the blood-vessels of the wall are wanting, and where it finally ruptures.

Stig'mal. Pertaining to *Stigmata*.

Stig'mata. Corn silk. Widely distributed. Nat. Order *Graminaceæ*. (Not official.) Indian corn. The green pistils are collected when the tassels are well shed of their pollen. Action, diuretic, emulcent. Uses, catarrhal inflammation of the kidneys. Doses: fluid extract, 1 to 2 drachms; the vinum, $\frac{1}{2}$ to 1 drachm; the syrup, 1 to 2 drachms.

S., ba'ker's. Nodules on the backs of the fingers from kneading dough.

S. heredita'tis. Marks of heredity. Term applied by Morel to various abnormalities of physical conformation observed in the insane and in criminals.

S., hyster'ic. (Ὕστερά, the womb.) Anæsthetic, hyperæsthetic, and hysterogenic zones, reversal of the colour-field, impairment of hearing, taste, muscular sense, &c., occurring in hysterical subjects.

S. Malp'ighii. Small mouths of venules appearing in considerable numbers along the sides of the larger veins of the spleen.

S. maydis. See *Zea mays*.

S., neurasthen'ic. (Νεῦρον, nerve; ἀσθένεια, weakness.) See *S., hysteric*.

S. ni'gra. The black pigmented spots produced by the presence of gunpowder under the skin.

S. ovario'rum. (L. *ovarium*, an egg-producing organ.) The small cicatrices seen in the ovaries after the escape of the ova.

S., psych'ic. (Ψυχή, mind, soul.) Certain mental states characterised by susceptibility to particular suggestions.

S. ru'bra. Petechiæ due to various causes.

S., somat'ic. (Σωμά, body.) The objective symptoms of certain neuroses.

S. ve'nous. *Varicose veins*.

Stig'matal. *Stigmatic*.

Stigmat'ic. Belonging to, or pertaining to, a *Stigma*; characterised by *Stigmata*.

Stigmat'iform. (Στίγμα, spot; L. *forma*, shape.) Like a *Stigma*.

Stigmatisa'tion. The formation of ecchymotic spots on the body, especially on the palms of the hands, the backs of the feet, the left side, and the forehead, usually connected with ecstasy.

Stig'matism. Same as *Emmetropia*. See *Astigmatism*.

Stigmatoder'mia. (Στίγμα, a prick; δέρμα, the skin.) Disease of the prickle-cell layer of the skin.

Stig'matoid. (Στίγμα, point; είδος, like.) Resembling a *Stigma*.

Stigmato'ses. (Στίγμα, point.) Superficial forms of inflammation of the skin, due to erosion of the epidermis.

Stil'bene. (Στίλβειν, to glitter.) $C_{14}H_{12}$. Toluylene. A substance produced by the action of sodium on bitter almond oil or benzol chloride. It crystallises in large monoclinic leaflets or prisms.

Stilet', Stilette'. (L. *stilus*, a point.) The small sharp-pointed instrument contained in a cannula. Also, the wire of a flexible catheter.

Still. (Mid. Eng. *stille*, still.) Quiet; at rest.

S.-born. Born lifeless.

S. lay'er of Poiseuille'. *Space of Poiseuille*. Thin stratum of liquid in contact with the capillary vessels, in which the white corpuscles of the blood seem retarded, while the red blood-corpuscles are in the axial stream.

Stilla'tio san'guinis e nar'ibus. Bleeding at the nose.

Stilla'tion. Passage of a liquid drop by drop.

Stillicid'ium. (L. *stilla*, a drop; *cadere*, to fall down.) The flow of a liquid drop by drop. Also, the flow of the urine in strangury. Same as *Epiphora*.

S. lacrima'rum. (L. *lachryma*, tear.) Overflow of tears from obstruction of the nasal duct.

S. na'rium. (L.) *Coryza*.

S. san'guinis. (L.) See *Stasis*.

S. uri'næ. (L.) Dribbling of the urine.

S. u'teri. (L.) See *Menses*.

S., virulent. (L. *virulentus*, from *virus*.) *Gonorrhœa*.

Stilli'goute. (L. *stillare*, to let fall; *gutta*, a drop.) A dropper; a pipette that lets a liquid fall in drops.

Stil'ling, canal' of. See *Hyaloid canal* and *Central canal of spinal cord*.

S.'s sa'cral nucle'us. An island of nerve-cells in the sacral region of the spinal cord. The red nucleus.

Stillin'gia. Queen's delight. Southern United States. Nat. Order *Euphorbiaceæ*. (Not official.) A perennial shrub, two or three feet high. It has a thick, large, tapering root, with a strong odour and bitter taste. It contains an acrid resin, *Sylvacrol*, but no alkaloid. Action, alterative, emetic, and cathartic in large doses. Uses, syphilis, scrofula, chronic cutaneous diseases, hepatic disease. Doses: ethereal extract, $\frac{1}{2}$ to 2 drops; fluid extract, 20 to 40 drops; compound fluid extract, 30 to 60 drops; syrup, 1 to 4 drachms; compound syrup, $\frac{1}{2}$ ounce; tincture, 1 drachm; stillingin (resinoid) 2 to 5 grains.

Stillin'gin. (Named after Benjamin *Stillin'gite*, a botanist.) A precipitate from a tincture of the root of *Stillingia sylvatica*. Resolvent, stimulant, antisyphilitic. Dose, 1 to 3 grains. (Unofficial.)

Stilus. (L.) A small tube or piece of wire left in the lachrymal canal after dilatation for stricture. Same as *Stylus*.

Stimato'sis. (Στόμα, priapism.) Hæmorrhage from the male organ, with or without priapism.

Stim'ulant. (L. *stimulans*.) The agent causing temporary quickening of some functional process. Stimulants have been divided into general and topical.

S. bal'sam. Oil of turpentine 8 parts, flour and mustard 1 part.

S., car'diac. (Καρδία.) One increasing the heart's action.

S., cer'ebral. (L. *cerebrum*.) One exalting the action of the cerebrum.

S., cuta'neous. One causing increased sweating.

S., diffu'sive. One having a prompt and transient effect, as ether or ammonia.

S., hepatic. (Ήπαρ.) One acting on the liver.

S., intes'tinal. One acting on the intestinal tract.

S., lo'cal. One acting directly on the end-organs of the sensory nerves.

S., re'nal. One producing diuresis.

S., spi'nal. One acting on the spinal cord.

S., stomach'ic. One giving tone to the stomach.

S., va'so-mo'tor. One exciting flushing, like *Amyl nitris*.

Stimulate. (L. *stimulo*.) To quicken some functional process. To affect by the use of general stimulants, such as ether, ammonia, alcohol.

Stimula'tion. The act of stimulating or the state of being stimulated. The effect of the administration of a stimulant.

Stimulative. Having the property of *Stimulation*.

Stimulator. One who or that which stimulates.

Stimuli. (L. *stimulus*.) Adequate or homologous, those for whose actions the sense-organs are specially adapted.

S., chem'ic. (Χημεία, chemistry.) Irritation caused by a chemic agent.

S., hetero'logous. (Ήτερος, other; λόγος, relation, analogy.) One acting on the nervous elements of the sensory apparatus along their whole course.

S., homo'logous. (Ὁμός, the same; λόγος, relation, analogy.) A stimulus only acting upon the end-organ.

S., mechan'ical. Irritation caused by mechanical means.

S., summa'tion of. See *Summation*.

Stimulus. Something evoking a functional or trophic reaction on the tissues on which it acts.

S. diffe'rence. Difference in activity between two stimuli.

S. min'im'al. The lowest limit of illumination with which an object is still visible.

S. receptiv'ity. Ability of appreciating and receiving the highest degree of stimulation.

S. suscep'tibility. Ability of the perception of a stimulus.

S. value. Term applied in psycho-physics to point out sign or formula indicating the intensity of the stimulus.

Sting. (Mid. Eng. *stingen*, to sting.) A minute punctured wound produced by some insect, animal, or plant. The sharp-pointed defensive organ of reptiles and insects.

Stinge. Variety of urticaria affecting the mouths of cattle in hot weather.

Sting'ing. Producing a burning pain. Wounding by means of a sting.

S. cell. One of the urticating cells of a Cnidarian.

Stink. (Mid. Eng. *stinken*, to stink.) To emit a strong offensive smell. A disgusting odour.

S.-trap. See *Stench-trap*.

Stipa'tio. (L. *stipo*, to stop up.) Narrowness or constriction.

S. to'læ cellulo'sæ infan'tum. (L. *tela*, a web.) Induration of the cellular tissue of children.

Stir'ling and Brit'to's meth'od. A method of preparing hæmoglobin crystals. Mix a drop of blood with a few drops of water on a glass slide, and seal the preparation. After a few days crystals are developed.

Stiro'sis. Same as *Sterility*.

Stir'rup-bone. The *Stapes*.

Stitch. (Mid. Eng. *stiche*, twinge.) A sudden, sharp, lancinating pain. See *Suture*.

S. in the side. *Pleurodynia*. Also, a symptom of pleurisy or pneumonia.

Stitchwort. Common chickweed.

Stlen'gis. (Στλεγγίς, a scraper.) A flesh-brush. An instrument used in ancient baths for scraping off the sweat.

Stock'ing, elas'tic. (Ang.-Sax. *stocce*, covering.) A stocking mainly composed of elastic fibres to cause compression of a limb affected with varicose veins.

Stœchiology. (Στοιχείον, an element; λόγος, a treatise.) The study of the chemic elements of the gases, fluids, and solids of the body. Physiological chemistry.

Sto'erck's blennorrhœ'a. A form of *Laryngitis sicca* ending frequently in adhesion between the anterior portions of the vocal bands.

Stoicheio'logy. Same as *Stœchiology*.

Stoichio'metry. (Στοιχείον, a first principle; μέτρον, measure.) The determination and estimation of the elements contained in a compound body.

Stokes's disease'. See *Exophthalmic goitre*.

S.'s expec'torant. A preparation used in bronchitis. It consists of pulverised carbonate of ammonium 16 grains, fluid extract of senega and squills, of each $\frac{1}{2}$ drachm, paregoric 3 drachms, syrup of tolu sufficient to make two ounces. A teaspoonful when required.

S.'s law. "The rays that a substance absorbs are precisely those that it emits when made self-luminous." Also called *Amystrom's law of absorption spectra*.

S.'s lens. An apparatus consisting of a concave cylindrical and a convex cylindrical lens of equal strength, which can be revolved on one another so as to produce a refractive effect varying from zero to that of the combined strength of the two lenses. Used in the diagnosis of astigmatism.

S.'s lin'im'ent. A stimulating liniment containing oil of turpentine 100, acetic acid 15,

rose water 80, linseed oil 4, and the yolk of an egg.

S.'s reagent. A reducing agent used in physiological experiments. It is a solution of ferrous sulphate with a little tartaric or citric acid; ammonia is then added till the solution is alkaline.

S.'s sign. Violent throbbing of the abdomen in cases of acute enteritis. It is felt to the right of the umbilicus, and is very painful.

Stolidity. A phlegmatic or immoveable temperament. Inanity or gross stupidity.

Stolon. (L. *stolo*, a shoot.) A slender prostrate branch bearing root or having a bulb at the tip, where it forms more or less new plants.

Stolonate. *Stoloniferous*.

Stoloniferous. Producing stolons.

Stoma. (Στόμα, the mouth.) An opening between lymphatic endothelial cells.

Stoma'cea. (Στόμα, mouth; κακός, evil.) Ulcerative stomatitis.

Stomach. (Στόμαχος, the throat, gullet.) That part of the intestinal canal between the œsophagus and the small intestine, situated under the dome of the diaphragm, above the transverse colon, below the liver, and chiefly on the right side.

S.-ache. Pain in the stomach or abdomen.

S. brush. A brush designed to be introduced into the stomach by way of the œsophagus to stimulate secretion.

S. buck'et. A small silver vessel attached to a thread, used for obtaining specimens of the contents of the stomach.

S., can'cer of. Cancer is very common in the stomach, and is nearly always primary. It assumes the form of an epithelioma.

S., can'cer of, treatment by curet'ting. Treatment practised by Dr. Bernays; as much as fourteen ounces of growth have been removed.

S. cough. A form of reflex cough probably excited by irritation of the pneumogastric nerve.

S. drops. Same as *Bitter tincture* of the German Pharmacopœia. A tincture of gentian, bitter orange peel, centaury, orange berries, and zedoary.

S. fis'tula. (L. *fistula*, a tube.) Gastric fistula.

S., for'eign bod'ies in the. The list of objects is remarkable; plates of teeth, knives, forks, spoons, nails, wire, coins, &c.

S., hæmorrhagic ero'sion of. (Αἷμα, blood; ροιά, a flow; L. *erodo*, to consume.) A form of chronic ulcerative gastritis occurring in habitual drunkards.

S., hon'eycomb. See *Reticulum*.

S., perfora'tion of. Nearly always the result of a simple ulcer of the stomach.

S.-pump. A syringe having two orifices controlled by taps, one attached to an œsophageal tube capable of being introduced into the stomach, and the other with a tube used either for ejecting fluids or filling the syringe with suitable fluids for introduction into the stomach.

S.-qualmed. Same as *S.-sick*.

S., rup'ture of. This is usually produced by a sudden, well-localised, and violent blow, such as a kick from a horse, especially if the stomach contain solid matter.

S.-sick. Nauseated, qualmish.

S., stric'ture of. This is occasionally not malignant, but is due to ulceration or from swallowing caustic fluids.

S. tooth. A lower canine, especially of the first dentition.

S. tube. A long flexible tube capable of being introduced through the œsophagus into the stomach.

S. verti'go. Vertigo ascribed to a gastric origin.

S.-worm. *Ascaris lumbricoides*, the common round-worm sometimes found in the stomach.

S., wound of. This is usually readily diagnosed from the position of the wound in the abdominal parietes associated with hæmatisis.

Stomachal'gia. (Στόμαχος, stomach; ἄλγος, pain.) Pain in the stomach.

Stomach' resolutive. Weakness of the stomach. *Dyspepsia*.

Stomach'ic. (Στόμαχος, the stomach.) Of, or pertaining to, the stomach.

S. bal'sam. A mixture of balsam of Peru with oil of nutmeg and other volatile oils.

S. cal'culus. (L.) A concretion, usually hair, found in the stomach.

S. fe'ver. See *Gastric fever*; *Typhoid*.

Stomach'ical. Same as *Stomachic*.

Stomachos'copy. (Στόμαχος, the stomach; σκοπεῖν, to view.) Examination of the stomach.

Stomach'us. Word used in several different acceptations; for example, for the œsophagus, for the cardiac end of the stomach, and the stomach itself.

Stomadæ'um. See *Stomodæum*.

Stomata. Plural of *Stoma*.

Stomatal'gia. (Στόμα, mouth; ἄλγος, pain.) Pain in the mouth.

Stomatatroia'tria. (Στόμα, mouth; ἰατρεία, treatment.) The medical treatment of diseases of the mouth.

Sto'mate. Having a stoma or stomata; *Stomatous*.

Stomatel'cia, Stomatelco'sis. (Στόμα, mouth; ἔλκωσις, ulceration.) Ulceration of the mouth.

Stomat'ic. A medicine for diseases of the mouth.

Stomatif'erous. (Στόμα, mouth; φερεῖν, to bear.) Provided with *Stomata*.

Stomat'itis. Inflammation of the interior of the mouth, including the mucous membrane of the lips, gums, tongue, cheeks, and palate.

S., aph'thous. Stomatitis characterised by small superficial ulceration, with a foul condition.

S., catar'hal. A simple local or general inflammation of mouth. Same as *Oral catarrh*, *Simple stomatitis*, and *Erythema neonatorum*. The mucous membrane is swollen, there is salivation, and pain on sucking or chewing.

S., corro'sive. (L. *corrosivus*.) See *S., gangrenous*.

S. cremo'sa. (L. *cremo*.) See *Thrush*.

S. diphtherit'ica. (Διφθερία, membrane, leather.) Diphtheritic inflammation of the mouth.

S. epidem'ica. (Ἐπιδημία, prevalent among people.) An acute infectious form of stomatitis.

S., epizoot'ic. (Ἐπί, on; ζῶον, animal.) *Aphthæ epizooticæ*.

S., erythem'atous. (Ἐρύθημα, a blush.) Simple stomatitis.

S. exudati'va. (L. *ex*, out of; *sudare*, to sweat.) *Aphthæ*.

S., follic'ular. Same as *Aphthæ*.

S., gan'grenous. See *Trauma*.

S. mater'na. Stomatitis occurring during pregnancy.

S., mercu'rial. Stomatitis from mercury poisoning.

S. myco'sa. See *Thrush*.

S. parasit'ica. See *Thrush*.

S., phleg'monous. (Φλέγμα, heat.) See *S., ulcerative*.

S. pseu'do-membrano'sa. (Ψευδής, false; L. *membrana*, membrane.) See *Thrush*.

S., pul'ta'ceous. (Πόλτος, thick pap.) See *Aphthæ*.

S., sat'urnine. Stomatitis due to lead-poisoning.

S., scorbu'tic. The stomatitis of scurvy.

S., sim'ple. Simple erythema of the mucous surfaces of the mouth.

S., syphilit'ic. A form of general stomatitis accompanied by mucous plaques and ulceration.

S., ul'cerative. A grave form of catarrhal stomatitis which is characterised by the formation of small ulcers on the cheeks, lips, and tongue, with copious salivation, pain, fetid breath, slight fever, and at times great prostration.

S. ulcero'sa. Same as *S., ulcerative*.

S., vesic'ular. Same as *Aphthæ*.

Stomatoc'acē. (Στόμα, mouth; κακός, evil.) Fetid ulceration of the mouth.

Stomatocathar'sis. Same as *Salivation*.

Stomatoden'dron. (Στόμα, mouth; δένδρον, a tree; pl. *Stomatodendra*.) *Biol.* One of the branches of a complex tree-like mass suspended from the middle of the umbrella in the *Rhizostomidæ*. These branches end in and are covered with minute polypites interspersed with clavate tentacula.

Stomatodyn'ia. (Στόμα, mouth; δόνη, pain.) Pain in the mouth.

Stomatodyso'dia. (Στόμα, mouth; δυσώδης, foul odour.) A foul odour of the breath; ill-smelling breath.

Stomatogas'tric. Of, or pertaining to, the mouth and stomach.

Stomatolog'ical. Relating to *Stomatology*.

Stomatolog'ist. One skilled in *Stomatology*.

Stomatolog'y. (Στόμα, mouth; λόγος, science.) Science of structure, function, and diseases of the mouth.

Stomatomali'cia. (Στόμα, mouth; μαλάκια, softening.) Sloughing or softening of parts of the mouth.

Stomatome'nia. (Στόμα, mouth; μήν, month.) Vicarious menstruation by way of the mouth.

Stomato'mia. (Στόμα, mouth; τεμνῖν, to cut.) A general term for incision of a mouth such as that of the uterus.

Stomatomyco'sis. (Στόμα, mouth; μύκης, fungus.) A disease of the oropharynx due to the development therein of the *Oidium albicans*.

S. oid'ica. See *Thrush*.

Stomatonecrosis. (Στόμα, mouth;

νέκρωσις, deadness.) *Cancerum oris*. Gangrenous stomatitis.

Stomatono'ma. Same as *Stomacacæa*.

Stomatopan'nus. (Στόμα, mouth; πῆνος, thread.) Enlargement of the glands of the mouth.

Stomatop'athy. (Στόμα, mouth; πάθος, disease.) Any disease of the mouth.

Stomatoph'yma. (Στόμα, mouth; φῦμα, growth.) Any enlargement or growth in the mouth.

Stomatoplas'tic. (Στόμα, mouth; πλάσσειν, to form.) Relating to *Stomatoplasty*.

Stomatoplast'y. Plastic surgery of the mouth.

Stomatopoie'sis. (Στόμα; ποιῖν, to make.) See *Stomatoplasty*.

Stomatopy'ra. (Στόμα, mouth; πῦρ, fire.) See *Aphthæ*.

Stomatorrha'gia. (Στόμα, mouth; ῥήγνυμι, to break, burst.) Hæmorrhage from the mouth.

Stomatorrhœ'a. (Στόμα, mouth; ροία, a flow.) A discharge of liquid from the mouth.

Stom'atoscope. (Στόμα, mouth; σκοπεῖν, view.) Any instrument for keeping the mouth open.

Stomatosep'sis. (Στόμα, mouth; σήψις, sepsis.) Stomatosis due to septic infection.

Stomato'sis. Disease of the mouth.

Stomatospas'mus. (Στόμα; σπασμός, convulsion.) See *Trismus*.

Stomatosyr'inx. (Στόμα; σῦριγξ, a tube.) The *Eustachian tube*.

Stomatothe'ca. (Στόμα, mouth; θήκη, box, chest; pl. *Stomatothecæ*.) *Biol.* That part of a pupa-case which covers the mouth.

Stomatoty'phus. (Στόμα, mouth; τυφός, stupor.) A form of typhus in which the initial lesions are in the mouth.

Stom'atous. Provided with *Stomata*.

Stomenceph'alus. See *Stomocephalus*.

Stomenorrha'gia. (Στόμα, mouth; ῥήγνυμι, to burst forth.) Bleeding from the mouth.

Stomoceph'alus. (Στόμα, mouth; κεφαλή, head.) A variety of single autotistic monsters of the Species *Cyclocephalus*, in which the deformity is similar to rhinocephalus or in cyclocephalus, associated with a defect of the maxillary bones, causing the excess of skin to hang in folds, somewhat like that of the proboscis of rhinocephalus.

Stomodæ'al. Having the characters of a *Stomodæum*.

Stomodæ'um. (Στόμα, mouth; ὀδᾶϊος, by the way.) The primitive mouth cavity of the embryo. It is formed by a depression of the ectoderm.

Stomoman'icon. *Platysma myoides*.

Stomorrha'gia. (Στόμα, mouth; ροία, flow.) Bleeding from the mouth.

Stomoschi'sis. (Στόμα, mouth; σχίσις, fissure.) Fissure of the mouth, particularly of the soft palate.

Stomostaur'us. (Στόμα, mouth; σταυρός, cross.) *Biol.* The cross-shaped mouth of *Medusæ*.

Stomosty'la. (Στόμα, mouth; στύλος, a pillar; pl. *Stomostylæ*.) *Biol.* One of the aural styles of the *Anthomedusæ*.

Stomot'icous. Relating or pertaining to the mouth.

Stomotosyr'inx. (Στόμα, mouth; οὖς, ear; σῦνγχι, tube.) The *Eustachian tube*.

Stonck's blennorrhœ'a. Mucous discharge from the upper air-passages.

Stone. A hardened mass of mineral matter. Fourteen pounds weight.

S. bind'er. *Osteocolla*.

S., blue. Copper sulphate crystals.

S.-break. A member of the Genus *Saxi-fraga*. Supposed to be efficacious in the treatment of stone.

S.-crop. Sedum.

S.-crop, bit'ing. Sedum.

S. crush'er. See *Lithotrite*.

S.-dead. Lifeless.

S.-deaf. Absolutely deaf.

S., fruit. Same as *Drupe*.

S., gall. Same as *Biliary calculus*.

S. in the kid'ney, sol'vent treat'-ment of. Sir William Roberts advised citrate of potash in doses of half a drachm to a drachm every three hours in a tumblerful of water.

S., liv'er. A mixture of bitumen and barium sulphate.

S.-ma'son's neuro'sis. Loss of control of the hand in the use of the chisel. There is frequently spasm and neurosis, with painful points.

S.-ma'son's phthi'sis. A form of fibroid phthisis, supposed to be due to the irritation resulting from the inhalation of minute particles of dust.

S. mint. *Cumila Mariana*.

S. moss. Rock lichens in arctic regions, eaten as food.

S. pine. *Pinus cembra*.

S.-pox. *Acne vulgaris*.

S. sweat. *Hydræum*.

Stones, the. The testes.

Stool. The evacuation of the bowels. A chair or seat.

S.s, bil'ious. Fæces after large doses of calomel.

S.s, cad'dy. Yellow fever stools, resembling dark sandy mud.

S.s, fat'ty. Stools in which globules of fat are present.

S., in'sulated. A stool used in electrotherapy, having insulated legs.

S.s, mu'cous. The discharge in enteritis, mixed with mucus.

S.s, pea-soup. More particularly applied to the stools of typhoid fever.

S.s, rice-wa'ter. The clear copious evacuations of cholera.

Stop. To plug up; to hold back.

S. need'le. A needle with a shank, used in the operation of dissection.

S. spec'ulum. (L. *specere*, to look.) A speculum with a controlling device to prevent its branches spreading out too much.

Stoppage. Cessation of flow or action; closure or stegnosis.

Stopper. A plug or other closure for a bottle.

S. drop'per. A combination of stopper and medicine pipette in one.

Stopping. The operation of filling the cavity of a decayed tooth to arrest decay.

Stopple. See *Stopper*.

Storage albumen. Albumen remaining in the circulation.

Sto'rax. Same as *Styrax*.

Stout. Hardy, sturdy, corpulent. A variety of beer.

Strab'ism. Same as *Strabismus*.

Strabis'mal. Same as *Strabismic*.

Strabis'mic. Pertaining to, affected by, or involving *Strabismus*.

S. devia'tion. *Primary*.—The difference between the position assumed by a squinting eye when used with its fellow and when used alone to fix objects. *Secondary*.—The difference between the position assumed by a healthy eye when used in binocular vision, and when covered up, while the other and squinting eye is used for fixing objects.

Strabis'mical. Same as *Strabismic*.

Strabismom'eter. (Στραβισμός, squint; μέτρον, measure.) An instrument for measuring the degree of squint.

Strabismom'etry. (Στραβισμός, a squint; μέτρον, measure.) The measurement of the degree of *Strabismus*.

Strabis'mus. (Στραβισμός, a squinting.) The failure of the visual axis to pass through the fixation point. Squint caused by the inco-ordinate action of the ocular muscles.

S., ab'solute. Squint occurring for all distances.

S., appa'rent. Due to the size of angle α .

S., concom'itant. Squint remaining the same for all distances from fixation point.

S., con'stant. When the condition is permanent.

S., conver'gent. The visual axes cross in front of fixation point.

S. deor'sum ver'gens. (L.) The axis of vision of the squinting eye is directed downwards.

S., diver'gent. The visual axes do not meet or cross beyond the fixation point.

S., down'ward. The squinting eye is directed below the point of fixation of the other eye.

S., dynam'ic. A disturbance of the equilibrium of the ocular muscles; as it is overcome by binocular vision it does not produce squint.

S., exter'nal. See *S., divergent*.

S., intermit'tent. Develops quite suddenly, and after a time disappears again as suddenly. Recurs at regular intervals, and is probably referable to purely nervous disturbances.

S., inter'nal. See *S., convergent*.

S., la'tent. Squint occurring only when one eye is occluded.

S., man'ifest. Squint occurring when both eyes are open.

S., monoc'ular or unilat'eral. When the same eye always deviates.

S., monolat'eral. Squint with visual axis of same eye always failing to pass through the fixation point.

S., paralyt'ic. Due to paralysis or weakness of one or more muscles. It is marked in proportion to the need of working the affected muscle.

S., period'ic. Occurring sometimes for near, but not distant vision.

S., re'lative. Squint occurring for some and not for other distances of the fixation point.

S., spas'tic. (Σπαστικός, drawn.) Due to spastic contraction of an ocular muscle. It occurs in connection with central nervous disease.

S. sur'sum ver'gens. (L.) The axis of vision of the squinting eye is directed upward.

S., up'ward. The affected eye turns up beyond the point of fixation of the sound eye.

Strabitis'mus. (Στραβισμός, squint.) See *Strabismus*.

Strabometer. An instrument for measuring the degree of squint.

Strabo'nēs or **Strabo'ni.** (L. *strabo*, one who squints.) Those affected with squint.

Straboscopic. (Στραβός, crooked; σκοπεῖν, to see.) Pertaining to the appearance of objects seen by one who squints.

S. disc. An instrument for producing distortion of objects.

Strabos'itas. See *Strabismus*.

Strabot'omy. (Στραβός, crooked, distorted; τομή, cut.) Division of one or more ocular muscles whose action is distorting the eyeball.

Straight. Direct.

S. si'nus. This collects the blood from the inferior longitudinal sinus, the vena Galeni, the superior cerebellar veins. It runs along the base of the falx cerebri, and empties itself into the torcula herophili.

S. tu'bule. The central stem of the *Tubuli uriniferi*.

S. tu'bules of tes'tis. Short tubules receiving the semen from the seminiferous tubules, and discharging into the rete testis.

Strain. Forceful and excessive stretching of the soft parts in consequence of an effort to separate insoluble substances from liquid.

Strain'er. *Pharm.* An instrument for straining.

Strain'ing. Muscular effort.

Strait-jack'et. A strong canvas jacket capable of being tightly laced, with long sleeves that can be tied together, used for the restraint of lunatics, &c. *Camisole*.

S.-waist'coat. See *Strait-jacket*.

Straits of the pel'vis. The superior and inferior planes of the inlet and outlet.

Stramin'eous. (L. *stramen*, straw.) Straw-coloured or straw-like.

Stramon'ii extrac'tum. An evaporated ethereal extract. Dose, $\frac{1}{2}$ grain, gradually increasing.

S. fo'llia. (Official.) Thorn-apple leaves. Asia. A coarse annual weed with an erect stem. It is much used for asthma, in the form of cigarettes and smoking mixtures.

S. gut'tæ daturin'æ. (Not official.) Sulphate of daturine 2 grains, water 1 ounce.

S. pul'vis compos'itus. (Not official.) Stramonium, datura tatula, cannabis indica, and lobelia inflata, all in powder, of each 6 drachms; nitre, in powder, 1 ounce; eucalyptus oil 30 minims. Mix thoroughly. It burns well, gives off dense fumes, and affords great relief in asthma.

S. sem'ina. (Official.) The dried ripe seeds of *Datura stramonium*, Nat. Order *Solanaceæ*. The mixed alkaloids of stramonium are generally called daturine, but are the same as those contained in belladonna, viz. a mixture of hyoscyamine and atropine. Action, narcotic, anodyne, antispasmodic; dilates the pupils. Uses, pertussis, asthma, chronic constipation, dysmenorrhœa, retention of urine; locally in chronic articular and muscular rheumatism. An ointment of the fresh leaves relieves cancer.

S. tinctu'ra. Dose, 10 to 30 minims. Antidotes, the same as *Poisoning with belladonna*.

S. unguen'tum daturin'æ. (Not official.) Four grains to the ounce of vaseline.

Strangalæsthe'sia. (Στραγγαλή, a halter; αἰσθησις, sensibility.) Morbid sensation of the constriction of a part as if by a rope or band.

Strangalesthe'sia. See *Strangalæsthesia*.

Strangali'on. *Tubercle*.

Strang'alis. (Στραγγαλή, a hard kernel.) A small hard induration of the breast.

Stran'ger's cold. *St. Kilda cold.* A form of influenza in the Hebrides, supposed to be due to the presence of strangers on the arrival of a ship.

Strang'ling. (L. *strangulare*, to choke.) See *Strangulation*.

Stranguary. (Στράξ, a drop; οὔρον, urine.) Same as *Strangury*.

Stran'gulate. (L. *strangulare*, to strangle.) To compress so as to suppress the function of a part or arrest the circulation. Same as *Strangulated*.

Stran'gulated. Compressed so as to suppress the function of a part.

S. her'nia. See *Hernia*.

Strangula'tio. *Strangulation*.

S. uter'ina. Same as *Hysteria*.

Strangula'tion. The state of a part too closely constricted. Excessive or abnormal constriction. Choking. Constriction of the trachea from any cause, resulting in a more or less complete impediment to respiration.

Strangula'tor. A species of *Cynanche*.

Strangu'ria. See *Strangury*.

S. cruenta. Discharge of blood in the urine.

Strangu'rious. Affected with strangury. Of the nature of strangury.

Strang'ury. (Στράξ, a drop; οὔρον, urine.) Retention of urine. Scanty micturition with painful sense of spasm. Occurs in local inflammatory affections, and as the result of irritant poisoning by turpentine, cantharides, &c.

Strap'ping. See *Plaster*.

S., hos'pital. Strong soap plaster.

Strass'burg turpentine. A variety obtained by puncturing the vesicles forming in the bark of *Abies pectinata*.

Strass'burg's test. A test for biliary acids in the urine. Add a little cane-sugar to the urine, dip in a filter-paper, dry it, and add a drop of sulphuric acid. A violet colour is obtained after a short time if biliary acids are present.

Strass'burger's cell-plate. The equatorial plate produced in karyokinesis.

Stratifica'tion. (L. *stratum*, a layer; *facere*, to make.) The thickening of a cell wall by deposition of successive thin layers. The arrangement of such layers. The deposition of layers of clot in an aneurism.

Strat'ified. (L. *stratum*, layer; *fieri*, to be made.) Arranged in layers.

S. car'tilage. White fibro-cartilage.

S. epithe'lum. See *Epithelium*.

Strat'iform. (L. *stratum*, layer; *forma*, form.) Forming or formed into layers.

S. car'tilage or **fibro-car'tilage.** Car-

tilage covering the bone in an osteo-aponeurotic canal for a tendon. *

Strat'ify. (L. *stratum*, layer; *fieri*, to be made.) To arrange in layers.

Strat'um. A layer, lamina lamella, or a membrane.

S. arysyndes'micum. *Syndesmo-arytenoides*.

S. bacilla'tum, bacillo'sum, or bacillo'rum. Bacillary layer. Same as *Tunica Jacobi*.

S. Bow'mani. The anterior elastic layer of the cornea.

S. cellula'rum pyramida'lum. Large pyramidal layer.

S. choriocapilla're. *Tunica Ruyschiana*.

S. cine'reum. The second layer of the anterior lobes of the corpora quadrigemina, consisting of grey matter and small cells in a network of nerves.

S. cor'neum. The *Epidermis*.

S. cuta'neum. The dermoid layer of the tympanum.

S. cylindro'rum. Layer of rods and cones.

S. episclera'ta. (Ἐπί, on; σκληρός, hard.) That part of the capsule of Tenon on the sclerotic coat.

S., flesh. The *Parietal mesoblast*.

S. granulo'sum. (L.) Granular layer of retina; the upper portion of the rete mucosum. A narrow layer of pyramidal cells in the fascia dentata of the brain which corresponds to similar cells on the outer surface of the brain.

S. horizonta'le. (L.) Superficial arcuate fibres over the surface of the anterior pyramid of the medulla.

S. interme'dium. (L.) A layer of fibres in the crura cerebri.

S. lu'cidum. (L.) One of the epidermal layers.

S. Malpi'ghii. The rete mucosum. The three deepest epidermal layers.

S. of O'ehl. The layer in the *S. corneum* where there are traces of a nucleus.

S. of Re'mak. A layer of medullated nerve-fibres beneath the first layer of the cerebral cortex.

S. of vis'ual cells. A layer of cells in the retina.

S. op'ticum. (L.) A mass of grey matter forming the third layer of the anterior lobes of the corpora quadrigemina.

S. thyreomembrano'sum. (Θυρίος, an oblong shield; L. *membranosus*, membranous.) The *Thyro-epiglottideus muscle*.

S. vascula're. (L.) The middle muscular coat of the uterus.

Strause. Drop.

Strawberry mark. A vascular nævus of reddish colour and soft consistency.

S. tongue. Prominence of the fungiform papillæ, the rest of the tongue being white. Occurs in scarlet fever.

Streak. A line, band, or stripe.

S. cult'ure. One which is arranged in a streak or streaks on the surface of the medium.

S., medul'lary. Same as *Medullary groove*. A longitudinal groove at the anterior part of the blastoderm.

S., prim'itive. An opaque band extending some distance forward from the posterior margin of the area pellucida, and forming the

first noticeable sign of differentiation in the blastoderm of Amniota.

S., re'flex. A shining streak seen on the centre of the retinal vessels, due to reflection from the convexity of the contents.

Stream'less. Lacking in electrical activity.

Streblo'sis. (Στρεβλώω, to wrench.) See *Dislocation*.

Strem'ma. (Στρέμμα, a sprain.) Same as *Sprain*.

Strength. Physical power.

Strengthen. To make strong.

Strengthening. Making stronger.

S. plas'ter. *Emplastrum roborans*.

Strep'h'otome. (Στρεφείν, to twist; τεμείν, to cut.) An instrument resembling a corkscrew, used by Spanton for the radical cure of hernia.

Strepito'sus mor'bus or affec'tus. (L. *strepitus*, a noise.) A kind of flatulent disease said to have been not uncommon in the Austrian Alps, in which emphysematous tumours formed on different parts of the body, and were accompanied by the sonorous excretion of gas from the anus and mouth.

Strep'itus. A sound or noise.

S. au'rium. See *Tinnitus aurium*.

S. coria'ceus. (L. *corium*, leather.) An auscultatory sound resembling the creaking of leather.

S. u'teri. The uterine souffle.

S. uteri'nus. The uterine bruit.

Strep'sis. (Στρέψις, a turning.) See *Torsion*.

Streptobacte'ria. (Στρεπτός, twisted; βακτηρία, a stick, a staff.) Short rod-shaped bacteria associated in chains.

Streptococcha'mia, Streptococche'mia. (*Streptococci*; αίμα, blood.) The presence of Streptococci in the blood.

Streptococ'ci. (Στρεπτός, twisted; κοκκός, a berry.) A chain of micrococci linked together. Most of the species are said to be pathogenic.

Streptococ'cus. A micrococcus.

S. diphthe'riæ. (Διφθέρα, leather.) A streptococcus found by Prudden in diphtheritic membranes.

S. erysipel'atis or erysipelato'sus. (L.) *Micrococcus erysipelatosus*.

S. lanceola'tus. (L.) *Micrococcus Pasteuri*.

S. of Fehle'sen. *Micrococcus erysipelatosus*.

S. plicat'ilis. (L. *plicare*, to fold.) A streptococcus found in drinking-water, and a disease affecting the lips of children.

S. punico'sus psittaco'rum. (L.) Coccus of a disease very common in the grey parrot.

S. pyog'enes. (Πυόν, pus; γεννάω, to beget.) Micrococcus found in acute abscess.

S. sep'ticus. (L.) A streptococcus found in polluted soil.

S. septopyæm'icus. (Σηπτόν, putrid; πυόν, pus.) Pathogenic streptococcus like *S. erysipelatosus*; found in human saliva.

S. vaccin'ia. Found in vaccine lymph.

Strep'tothrix. (Στρεπτός, twisted; θρίξ, hair.) A Genus of *Schizomycetes*, the cells uniting into simple or branching threads.

Stretch. (Mid. Eng. *strecchen*, to stretch.) To draw out to its full length.

S. walk. A position in walking for physical development, with the arms stretched upward.

Stretch'er. A portable cot or litter for the transport of the sick.

Stretch'ing. Pandiculation, or the movements occurring on waking. The operation of tearing adhesions of the sciatic nerve in sciatica.

S. convul'sions. Same as *Tetanic convulsions*.

S.-nerve. An operation practised for neuralgia, peripheral neuritis, hyperæsthesia, &c. &c.

Stri'a. (L. *stria*, a furrow.) A stripe or streak, a line or linear marking, whether of elevation or depression, as a ridge or furrow. In *Pathol.*, a linear hæmorrhagic macula.

S. latera'lis. A lateral stria on the surface of the corpus callosum.

S. longitudina'lis, or **S. Lancisi.** Same as *Nerve of Lancisi*.

S. medulla'ris thal'ami. A band of white fibres running backward along the junction of the median and superior surfaces of the thalamus.

Stri'æ. Plural of *Stria*.

S. acus'ticæ. Transverse white lines on the floor of the fourth ventricle. Same as *Lineæ transversæ, Stria medullaris*.

S. atroph'icæ. (A, privative; τροφή, nourishment.) Whitish lines caused by stretching of the skin (chiefly on lower abdomen) after pregnancy, rapid deposition of fat, abdominal tumour, &c.

S., callo'sal, or **S. longitudina'les et latera'les.** (L. *callosus*, hard.) Striæ on the upper surface of the corpus callosum.

S. cor'neæ. A narrow white streak interpolated between the thalamus and the caudatum on the ventricular floor. It resembles a bluish translucent horn in colour.

S. grvida'rum. (L.) The atrophic striæ observed after stretching of the skin in pregnancy, &c.

S. muscula'rës. (L.) The transverse striæ of striped muscle.

S. of Hei'denhain. The rod-like cells of the renal tubules.

S. of Ret'zius. Brown stripes on a tooth parallel to its edge. They are indications of enamel formation.

S., pin'éal. The *Habena* or *Habenula*.

S. vascula'ris. (L.) The vascular layer of the cochlea.

Stri'ate. Marked with fine ridges.

S. body. See *Corpora striata*.

Stri'ated. Marked with furrows.

S. hair. A very rare form of canities, in which the hairs are white or coloured in rings or bands.

Stria'tion. An arrangement of lines. A striated structure.

S. of Hei'denhain. See *Striæ of Hei'denhain*.

Stria'tum. Same as *Corpus striatum*.

Stri'ature. (L. *striare*, to furrow.) Mode of striation.

Stribili'go. Efflorescence.

Stribling springs. Chalybeate and alum springs in Augusta Co., Virginia; sometimes called Augusta springs.

Strich'culture. See *Streak culture*.

Strictu'ra. (L.) A stricture.

S. a'ni. Stricture of the rectum.

S. intes'tini rec'ti. Stricture of the rectum.

S. intes'tini rec'ti spasmod'ica. (L.) Spasmodic stricture of the rectum.

S. œsoph'agi. (L.) Stricture of the œsophagus.

S. œsoph'agi spasmod'ica. (Οἰσοφαγός, œsophagus.) *Œsophagismus*.

S. præpu'tii. (L.) Phimosis.

S. pylo'ri. (L.) Stricture of the pyloric end of the stomach.

S. ventric'uli. (L.) Stricture of the stomach.

S. ves'icæ urina'riæ. (L.) A sacculated condition of the bladder.

Stric'ture. (L. *strictura*, a contraction.) A constriction of a mucous canal, such as part of the intestinal canal, the vagina, urethra, uterus, &c.

S., an'nular. A ring-like obstruction produced by a fold of mucous membrane, the result of localised cicatricial contraction in the urethra.

S., bri'dle. A crescentic fold that may be perforated.

S., cicatri'cial. Due to contraction of scar tissue.

S., conges'tive. A temporary inflammatory obstruction from subacute prostatitis, or some temporary condition.

S. cut'ter. An instrument for the division of a stricture.

S. fe'ver. The condition resulting from the passage of a catheter through a stricture.

S., func'tional. See *S., spasmodic*.

S., hour-glass. See *S., bridle*.

S., impass'able. A stricture through which the finest bougie cannot be passed.

S., imper'meable. See *S., impassable*.

S., intes'tinal. Congenital. Rare. Simple cicatricial stenosis from ulceration due to tubercle, syphilis, dysentery (rare), typhoid (rarer), new growths, compression, and traction. (Osler.)

S., irreg'ular. Any variety that is complicated or peculiar.

S., ir'ritable. Where the passage of a catheter causes great pain and spasm.

S., lin'ear. Named from its appearance.

S. of the lach'rymal duct. Closure of the lumen by œdema of the submucosa, contraction of cicatrices of ulcers, pressure by tumours, &c.

S., organ'ic. Narrowing of a canal, due to tissue change, to deposits, or pressure from without.

S., pack-thread. Named from its appearance.

S., per'meable. One permitting the passage of an instrument.

S., recur'rent or **contrac'tile.** One in which the constriction returns after dilatation.

S., sim'ple. One causing no alteration in the passage of urine.

S., spasmod'ic. A stricture due to muscular spasm, and not organic change.

S., tor'tuous. Same as *S., irregular*.

S., val'vular. Named from its appearance.

Strictureot'omy. (L. *strictura*, stricture; Gr. τέμειν, to cut.) See *Strictureotomy*.

Stricturetome. See *Stricturetome*.

Stric'turotome. (L. *strictura*, a stric-

ture; Gr. *τεμεῖν*, to cut.) A cutting instrument used to divide a stricture.

Stricturotomy. A cutting operation for the relief of stricture.

Stridor. (L. *stridere*, to make a creaking sound.) A harsh, vibrating noise produced by some bronchial, tracheal, or laryngeal obstruction.

S. den'tium, or **Odontopri'sis.** Grinding of the teeth.

S., inspiratory. A noisy inspiration in spasm of the glottis.

S., laryngeal. Stridor due to laryngeal stenosis.

S. serrat'icus. A sound like that of sharpening a saw, heard during expiration through a tracheotomy tube.

Stridulate. (L. *stridulus*, creaking.) To suffer from stridor.

Stridulation. Making a stridulous sound.

Stridulous. (L. *stridulus*, creaking, rattling, hissing.) Making a small harsh sound; having a thin squeaking sound; creaking.

S. ang'ina. (L. *angere*, to strangle.) Same as *Laryngismus stridulus*.

Striga cartilaginosa cor'dis. (L.) The isthmus of the fossa ovalis.

Strigil. (L. *strigilis*, a scraper.) A flesh-brush.

Strigilation. Friction with a brush.

Strigilis. (L. *strigilis*, a scraper: pl. *Strigiles*.) Biol. A comb-like organ on the first tarsal joint of the fore-leg of the bee, employed to clean the antennæ and to clear from the eye-hair all pollen grains or foreign bodies; the eye-brush, eye-comb.

Strigilose'. (L. *striga*, a furrow.) Biol. Minutely strigose.

Strig'is. See *Strigil*.

Strigmentum. (L. a scraping.) The rolls of dirt and epithelium rubbed off moist skin.

S. cap'itis. (L.) See *Pityriasis*.

Strigose'. (L. *striga*, a furrow.) Strigous. Armed with sharp hairs; having bristles.

String method. The plan of dilating a strictured canal by passing a strand of braided silk and drawing it back and forth.

Stringent. (L. *stringens*, *stringere*, to draw tight, compress.) Tightening or binding.

Striola. (L.) A little furrow, a delicate stria.

Striolate. Having *Striolæ*.

Striolated. Somewhat striated.

Stripe. (Mid. Eng. a stripe.) A discoloured mark, a streak.

S.s of Ret'zius. Dark lines extending more or less parallel to the free surface of the tooth, due to inequalities in growth and density of the enamel.

Striped muscle. Striated muscle.

Stripping. (Mid. Eng. *stripen*, to rob.) Uncovering, unsheathing. In the plural, the last and richest milk given at any one milking.

S. of the pleu'ra. Removal of the parietal pleura to take away traces of tuberculosis in an animal used for food.

Strob'ic. (Στρόβος, a top.) Resembling, or pertaining to, a top.

S. discs. Discs drawn with concentric circles, so as to produce an illusory impression that they are revolving.

Stro'bila, or **Stro'bile.** (Στροβίλος, a pine cone.) An adult tapeworm.

Strobilation. (Στροβίλος, a pine cone.) Biol. The formation of zooids, discs, or joints by metameric division, gemmation, or fission.

Strobilisa'tion. The same as *Strobilation*.

Stro'biloid. (Στροβίλος, a pine cone; εἶδος, like.) Like a *Strobile*.

Strobiloph'agous. (Στροβίλος, pine cone; φαγεῖν, to eat.) Living on pine cones, as a bird.

Stro'boscope. (Στρόβος, a twisting; σκοπεῖν, to view.) See *Zoetrope*.

Stroboscopic. (Στρόβος, a twisting; σκοπεῖν, to view.) Pertaining to the *Stroboscope*. A term applied to a plate used in the study of the contractions of striated muscular fibre.

Stroke. A sudden seizure. A popular term for apoplexy. To pass the hands gently over the body.

S., apoplec'tic. See *Apoplexy*.

S., back, of the heart. The supposed "reaction impulse" at the moment the blood is discharged into the aorta. The diastolic impulse.

S., heat. See *Hyperpyrexia*; *Heat apoplexy*.

S., paralyt'ic. A sudden loss of muscular power from a lesion in the brain or spinal cord.

Stroma. (Στρώμα, a covering.) The fibrous connective sustentacular tissue of an organ.

S., can'cer. The fibrous tissue element of cancer.

S. fi'brin. Landois' term for fibrin formed directly from stroma instead of plasma.

S., intertu'bular. The connective tissue supporting the tubules of the kidney, containing the blood-vessels, nerves, &c.

S. of red blood-cor'puscles. That part which remains when the hæmoglobin is removed.

S. plex'us. A plexus of axis-cylinders formed by the corneal nerves.

Stromatic. Of the nature of a *Stroma*.

Stromat'iform. (Στρώμα, a covering; L. *forma*, form.) Like a stroma.

Stromatous. Of, or pertaining to, *Stroma*.

Strombuliform. (L. *strombulus*, a little top; *forma*, form.) Twisted into a spiral form.

Strog'murh. (Ger.) See *Rheometer*.

Strongle. (Στρογγύλος, globose.) A worm of the Genus *Strongylus*.

Strongullion. *Strangury*.

Strongyl. See *Strongle*.

Strongylus. (Στρογγύλος, globose.) A Genus of Nematode *Entozoa*.

Strontia spring. Alkaline saline water, Brooklandville, Baltimore County, Maryland.

Strontium. (Not official.) The iodide and bromide are prescribed in the same manner as are similar salts of sodium, but in larger doses—from 2 to 4 drachms a day.

S., lac'tate of. Is administered in doses of 90 to 120 grains a day. In nephritis the lactate reduces the quantity of albumen without causing diuresis. The nitrate is prescribed in cases of articular rheumatism. The

STROPHANTHI—STRYCHNIA

dose of nitrate is 6 drachms or more a day. Strontium bromide, which, like strontium lactate, is so valuable in dyspepsia as a sedative gastric analgesic, has been found useful in the vomiting of pregnancy, in 16-grain doses with the two principal meals. Given in powder with bread.

Strophan'thi, tinctura. An ethereal extract is first made, evaporated, and the resulting powder dissolved in alcohol. Dose, 2 to 10 minims.

Strophan'thin. (Not official.) Recommended as a heart tonic. Dose, 1-300th to 1-200th of a grain.

Strophan'thus. (Official.) The ripe seeds of *Strophanthus hispidus*, freed from the awns. Africa. Nat. Order, *Apocyanaceæ*. A weedy climber reaching to the top of the highest trees. The active principle is a glucoside, *Strophanthin*. $C_{20}H_{34}O_{10}$. A white crystalline powder, soluble in water, with a neutral reaction. Action, cardiac, stimulant, and tonic; diuretic; similar to digitalis. Uses, same as digitalis, but probably a better diuretic in heart dropsy.

Strophium. (Στρόφος, a cord.) A bandage.

Strophoceph'alus. (Στρόφος, twisted; κεφαλή, head.) A monster having displacement of the parts forming the head and face.

Strophoceph'aly. The condition of having a distorted head.

Stroph'ulus. (Στρόφος, a twisted band or cord.) A papular eruption of the skin, exhibiting a variety of forms.

S. al'bidus. (L.) See *Milium*.

S. confer'tus. (L.) See *S. intertinctus*.

S. intertinct'us. (L.) A variety of papular eczema in children.

S. prurigin'ous. (L.) Disseminated, itching, erythematous papules occurring in the young.

S. volat'icus. (L.) A typical erythema papulatum, characterised by slight maculæ.

Strophus. Tormina.

Stroughton's elix'ir. *Tinctura absinthii composita*. A tincture of wormwood, germander, gentian, rhubarb, orange-peel, cascarilla, and aloes; used as a flavour in alcoholic drinks and as a general tonic.

Struct'ural. (L. *structura*, a fitting together.) Of, or pertaining to, structure.

S. disease'. One involving tissue and causing change visible to the naked eye or the microscope; also, organic disease in contradistinction to functional disease.

Structurally. In a structural manner, with regard to structure.

Structure. (L. *structura*, a fitting together.) Any organic form; the combination of parts in any natural production; an organisation of parts or elements.

Structureless. Devoid of distinct parts; unorganised, unformed, without structure; having no distinction into parts or organs; homogeneous.

Stru'ma. (L. *struma*, a scrofulous tumour.) Scrofula, tubercular disease, goitre (rare).

S. adipo'sa. (L.) Prominence of the neck from obesity.

S. follic'ular. *Bronchocele*.

S. fungo'sa. (L.) *Encephaloid*.

S. lipomato'des aberrat'æ re'num.

(L.) Small fatty tumours found beneath the renal capsules.

S. malig'na. (L.) Carcinoma of the thyroid gland.

S. pulsans. (L.) Pulsating goitre.

S. vasculo'sa. (L.) Same as *S. pulsans*.

Strumatic. (L. *strumaticus*, pertaining to struma.) Same as *Strumose*.

Strumectomy. (L. *struma*; ἐκτομή, excision.) Excision of a large or strumous gland, or of a goitre.

Strumiferous. (L. *struma*; ferre, to bear.) *Strumose*.

Strumiform. Having the appearance of *Struma*.

Strumipr'iva, cachex'ia. (L. *struma*, bronchocele; *prustus*, deprived of; Gr. κακος, bad; ἕξις, state.) Loss of the thyroid gland and the resulting condition of myxœdema.

Strumit'is. Inflammation of the thyroid gland.

Strumoder'ma. (L. *struma*, tuberculous tumour; δέρμα, skin.) See *Scrofuloderma*.

Strumose'. (L. *strumosus*, characterised by struma.) Scrofulous. Of, pertaining to, or affected by, *Struma*. Possessing a wen-like protuberance.

Strumosis. Same as *Strumosis*.

S. cer'ebr'i. Tubercular meningitis.

S. pulmo'num. Tubercle of the lung.

Strumos'itas. Strumous diathesis or goitrous diathesis.

Strumous. Having the nature of *Struma*.

S. bu'bo. Hyperplastic lymphadenitis of the inguinal glands.

S. inguin'al lymphadeni'tis. Same as *S. bubo*.

S. node. The tuberculous node or the scrofulous gumma. A localised tuberculous focus in the subcutaneous tissue. It is commonly fixed, is not painful, but may be tender.

Strumpell's disease'. Acute primary hæmorrhagic encephalitis.

Strumulose'. Furnished with a small *Struma*.

Strut. Swelling out, bulging, protuberant.

Struve's lo'tion. Tartar emetic 1 drachm, tincture of cantharides 1 fluid ounce, water 2 fluid ounces. Used as a counter-irritant in whooping-cough.

S.'s meth'od. Add ammonia, tannic acid, and afterwards glacial acetic acid to a dilute solution of hæmoglobin; a black precipitate is thrown down, which is washed and dried on a slide; two or three drops of glacial acetic acid and a granule of chloride of ammonium are added. Gentle heat is applied; on cooling the crystals appear.

Strych'nia, Strych'nine. $C_{21}H_{22}N_2O_3$, eq. 334. (Official.) An alkaloid, from ignatia or nux vomica, occurring in colourless, prismatic, or octohedral crystals, in a white, odourless, crystalline powder, permanent in the air. Taste intensely bitter; reaction alkaline; insoluble in ether; soluble in 6 parts of chloroform, 12 parts boiling alcohol, 2500 parts of boiling water, and in 6700 of cold water. It is prepared by macerating nux vomica in water with muriatic acid for twenty-four hours, boiling and straining through muslin; boil residue again with the same quantity of acidulated water, and again

STRYCHNIC—STUPOR

repeat the process; mix the three decoctions, evaporate to the consistency of syrup, add a mixture of lime and water; boil (stirring constantly) for ten minutes; strain through muslin, thoroughly wash the precipitate, dry, powder, and wash repeatedly with dilute alcohol (to free from brucine) until washings are only faintly reddened with nitric acid; boil with alcohol till bitterness is lost; mix these several tinctures together and distil off the alcohol; wash the residue, add water, and drop in sulphuric acid to neutralise; then add animal charcoal; boil, filter, evaporate, and crystallise; dissolve in water, and precipitate by adding liquor ammoniac; dry on blotting-paper. Dose, 1-30th to 1-12th of a grain.

Strychnia is a violent poison, destructive alike to vegetable and animal life; half a grain is the smallest quantity that has caused death. The symptoms of poisoning are dilated pupils, constriction of fauces and jaws, slight shuddering, pallor of the face, followed by flushing; tetanic convulsions. Cases of poisoning should be treated by artificial respiration, animal charcoal or tannic acid, followed by an emetic, or the stomach pump. Bromide of potassium, in half-ounce dose in water, with 30 grains of chloral. Nitrite of amyl inhalations. The patient may be kept under chloroform or ether. Curare one third grain, by hypodermic injection (Murrell). Belladonna, tincture of aconite, and morphine are also antidotes. Eight grains of morphine are said to be an antidote for one of strychnine. Actions, stimulant to the medulla and spinal cord; tonic; diuretic; increases venereal appetite; causes uterine contractions. Uses, functional paralysis, paralysis of diphtheria, chlorosis, impotency, amenorrhœa.

Strychnic. Of, pertaining to, obtained from, or including *Strychnia*.

Strychninæ acetās. (Not official.) Neutral. Soluble in 15 parts of chloroform and 100 parts of water. Dose, 1-60th to 1-8th of a grain.

S. hydri'odas. (Not official.) $C_{21}H_{22}N_2O_2HI$, eq. 462. White scales, containing 72 per cent. of strychnia. Slightly soluble in water. Dose, 1-60th to 1-8th of a grain.

S. hydrobro'mas. (Not official.) $C_{21}H_{22}N_2O_2.HBr=415$. It occurs in prismatic needles, contains 80 per cent. of strychnia. It is soluble in 32 parts of water. Dose, 1-60th to 1-10th.

S. hydrochlo'ras. (Not official.) $2(C_{21}H_{22}N_2O_2.HCl).3H_2O$, eq. 795. Crystallises in silky needles. It is soluble in 60 parts of cold water. It contains 84 per cent. of strychnia. Dose, 1-60th to 1-10th of a grain.

S. liq'uor hydrochlora'tis. *Liquor strychnie*.

S. ni'tras. (Not official.) $C_{21}H_{22}N_2O_2.HNO_3$, eq. 397. Contains 84 per cent. of strychnia. It forms colourless needles of silky lustre. Soluble in 3 parts of boiling water. Dose, liquor, 5 to 10 drops.

S. sul'phas. (Not official.) $(C_{21}H_{22}N_2O_2)_2.H_2SO_4.7H_2O$, eq. 892. Occurs in prismatic, colourless crystals, shining, odourless, efflorescent, with an intensely bitter taste. Soluble in 4 parts of boiling and 10 of cold water. Dose, 1-60th to 1-8th of a grain.

Strychninisa'tion. The condition produced by large doses of strychnia or nuxvomica.

Strych'ninism. The hyper-excitability condition of the spinal cord produced by strychnia. The state of being affected by strychnia.

Strychninoma'nia. Delirium produced by strychnia or nuxvomica.

Strychnised. Brought under the influence of strychnia.

Stryph'na. (*Στρυφνός*, sour.) Astringents.

Stryph'nos. Same as *Stryphna*.

Strypter'ia. Alumen; styptics.

Studium ina'nē. (L.) Brown study or listless musing.

Stuff'ing. *Cynanche trachealis*.

Stultil'ia. (L. *stultus*, a fool.) Foolishness, dulness of intellect.

Stump. The extremity, pedicle, or basis of a part left after surgical amputation, excision, or ablation.

S.-foot. Same as *Club-foot*.

S. of eye'ball. The remainder of the globe after the excision of whole or part of the eyeball.

S. of tooth. That part remaining after removal of the crown.

S., su'gar-loaf. Same as *Conical stump*.

Stun. (Ang.-Sax. *stunian*, to make a din.) To stupefy or bewilder with a loud noise, or distracting noises. To strike with stupor, as by a blow or violence. To benumb, stupefy, deaden.

Stun'ning. Stupefaction. The act or condition expressed by the verb to stun.

Stunt. (Mid. Eng. *stunt*, dull.) An undeveloped state.

Stunted. Undeveloped, generally from unhygienic environment and food.

Stupe. (*Στύπη*, the coarse part of flax, tow.) A pledget of tow or flannel, used as a dressing in the treatment of a wound. The material with which hot fomentations are applied. It may be sprinkled with turpentine or opium.

Stupefa'cient. (L. *stupefacere*, to make stupid or senseless.) A medicine producing stupor or insensibility; a narcotic.

Stupefaction. The act of being stupefied. A stolid or senseless state, torpor, insensibility.

Stupefiedness. Stupefaction; insensibility.

Stu'pefier. One who, or that which, stupefies.

Stu'pefy. (L. *stupefacere*, to make senseless.) To make stupid or torpid; blunt the faculties; deprive of sensibility by any means; make dull or dead to external influences.

Stupei'on. *Stupa*. The coarse parts of the stalks of flax or hemp placed next the bark.

Stupema'nia. (L. *stupor*, stupor; Gr. *μανία*, mania.) Mental stupor with insanity.

Stu'pha. Stove.

Stu'pia. Tin.

Stu'pid. (L. *stupere*, to be amazed.) In a state of stupor. Having the faculties deadened or dulled; benumbed.

Stupid'itas. Same as *Idiocy*.

Stupid'ity. (L. *stupidus*, senseless.) A state of stupor or stupefaction.

Stu'pidly. In a dazed or foolish manner.

Stu'por. (L. *stupor*, insensibility.) Suspension or great diminution of sensibility; a state in which the faculties are deadened or dazed; torpidity of feeling.

STUPOROUS—STYLOPHARYNGEUS

S., anerg'ic. Same as *Stuporous insanity*. Acute dementia.

S., delu'sional. Melancholic dulness of mind, with delusions. It is sometimes a kind of auto-hypnotism.

S., epilep'tic. The stupor following an epileptic fit.

S. for'micans. (L.) Formication.

S., letharg'ic. See *Trance*.

S. melanchol'ic. (L.) The stupor of melancholia.

S. milla'ris. (L.) Paræsthesia of the fingers and toes in connection with miliary fever.

S., post-convul'sive. Same as *S., epileptic*.

S. vig'ilans. (L.) Catalepsy.

Stu'porous. Characterised by *Stupor*.

S. insan'ity. A psychoneurosis, usually of young adults, characterised by extreme apathy and dementia, ensuing usually on conditions of exhaustion from shock, and generally resulting in recovery. Also called acute dementia, primary dementia, primary curable dementia, and anergic stupor.

Stupose'. Like tow.

Stuprate. (L. *stupare*, to defile.) To debauch; to ravish.

Stupra'tion. Rape.

Stuprum. (L. *stuprum*, defilement, dishonour.) Stupration. Any union of the sexes forbidden by morality.

Stur'dy. Vigorous, hardy.

Stut. To stutter.

Stutter. To speak with a marked stammer; to utter words with frequent breaks and repetitions of parts, either habitually or occasionally during excitement. A marked hesitating or broken utterance.

S. spasm. See *Lalophobia*.

Stutterer. One who stutters, a stammerer.

Stuttering. A hesitation in speaking, in which there is spasmodic and uncontrollable reiteration of the same syllable.

Stutteringly. In a stuttering manner.

Styan, Sty'any. See *Sty*.

Sty. (Ang.-Sax. *stigend*, a sty.) A circumscribed inflammatory swelling of the eyelid. *Hordeolum*.

Stylamblys. (Στυλος, a pillar; αμβλός, blunt.) *Biol.* A small process attached to the inner branch of the pleopod of a Crustacean. (Bate.)

Stylar. (Στυλος, a pillar.) Pertaining to, or resembling, a *Style*.

Style. (Στυλος, a pillar.) That part of the pistil, in plants, which is above the ovary and supports the stigma.

Sty'let. See *Stilet*.

Sty'letiform. (L. *stilus*, a stake; *forma*, shape.) Shaped like a *Stilet*.

Styliform. (Στυλος, a pillar; L. *forma*, shape.) Shaped like a *Style*.

Stylis'cus. (Στυλίσκος, a small pillar.) A slender cylindrical tent.

Sty'lo- The prefix used to denote connection with the styloid process of the temporal bone.

Styloceratomyoid'eus. *Stylohyoideus*.

Styloglos'sal. (Στυλος, a pillar; γλῶσσα, tongue.) Of, or pertaining to, the styloid process and the tongue.

Styloglos'sus. A muscle arising from the styloid process and inserted into the tongue.

Stylogonid'ium. (Στυλος, a pillar; γονή, generation.) *Biol.* A gonidium formed by abstriction on the ends of special branches of the thalamus in certain Fungi.

Stylohy'al. One of the bony elements of the hyoid arch; constitutes the styloid process. The stylohyoid ligament and the epihyal or lesser cornu of the hyoid bone constitute the rest of the cartilaginous element.

Stylohy'oid. (Στυλος, a pillar; υ, up-silon; εἶδος, like.) Of, or pertaining to, the stylohyal or the stylohyoid process of the temporal bone and the hyoid bone.

S. lig'ament. The ligament connecting the styloid process and lesser cornu of the hyoid bone.

S. mus'cle. See *Stylohyoideus*.

S. nerve. The branch of the facial supplying the stylohyoid muscle.

Stylohyoid'ean. Same as *Stylohyoid*.

Stylohyoid'eus. A muscle arising from the styloid process of the temporal bone and inserted into the lesser cornu and the adjacent part of the body of the hyoid bone.

Sty'loid. (Στυλος, a pillar; εἶδος, form.) Like a style.

S. cor'nua. The lesser cornua of the hyoid bone, the epihyals.

S. pro'cess of fib'ula. Pointed eminence on posterior superior part of the upper extremity. Serves for the attachment of the short external lateral ligament of the knee-joint.

S. pro'cess of ra'dius. The pointed process at the radial side of the lowest part of the bone.

S. pro'cess of tem'poral bone. A sharp prominent process supported by the vaginal process, and serving for the attachment of the stylohyoid ligament and muscle, the stylopharyngeus, and the styloglossus muscles.

S. pro'cess of third metacar'pal bone. The pointed process on the radial side and dorsal aspect.

S. pro'cess of ul'na. The pointed extremity of the inner side of the lower end of the ulna.

Stylomas'toid. (Στυλος, a pillar; μαστός, a rounded knoll.) Common to the styloid and mastoid processes of the temporal bone.

S. ar'tery. A branch of the occipital artery passing into the *S. foramen*.

S. fora'men. A foramen between the styloid and mastoid processes of the temporal bone.

S. vein. A vein coming out of the *S. foramen*.

Stylomax'illary. (L. *stylus*, a stake; *maxillaris*, relating to the maxilla.) Of, or pertaining to, the styloid process of the temporal bone and the mandible or lower jaw-bone.

S. lig'ament. A strong band of deep fascia separating the parotid and submaxillary glands, connecting the styloid process and the mandible.

Stylopharyn'geal. (Στυλος, stake, pillar; φάρυγξ, pharynx.) Of, or pertaining to, the styloid process of the temporal bone and the pharynx.

S. mus'cle. See *Stylopharyngeus*.

Stylopharyn'geus. A muscle arising from the styloid process of the temporal bone,

STYLOPODIUM—SUBACTIO

separating the superior and middle constrictions of the pharynx.

Stylopodium. (Στύλος, pillar; πούς, foot; pl. *Stylopodia*.) *Biol.* A disc-like enlargement occurring at the base of the style in some flowers, e. g. *Umbelliferae*.

Stylosanthēs. (Στύλος, pillar; ἄνθος, a flower.) Pencil flower. United States. Nat. Order *Leguminosae*. (Not official.) Shrub one foot high. Action, uterine tonic and sedative. Uses, to relieve irritability of the uterus in the later months of pregnancy; to increase the expulsive pains of parturition. Dose, of the fluid extract, 10 to 20 drops.

Stylospore. (Στύλος, a pillar; σπορά, seed.) Same as *Pycnospore*.

Stylostaphylin. (Στύλος, a pillar; σταφυλή, a bunch of grapes.) Connected with, or relating to, the styloid process of the temporal bone and the velum palati.

Stylostegium. (Στύλος, a pillar; στέγος, cover; pl. *Stylostegia*.) *Biol.* The corona covering the style peculiar to *Aselepiads*.

Stylostemon. (Στύλος, pillar; στήμων, stamen.) An epigynous stamen.

Stylos-teophyte. (Στύλος, a pillar; φυτόν, a plant.) A style-shaped exostosis.

Stylostixis. (Στύλος, a style; στιxis, puncture.) See *Acupuncture*.

Stylus. (L. *stilus*, a pen.) A pointed instrument formerly used for writing on wax tablets.

Also, in *Surg.*, a sound.

Sty'ma. See *Priapism*.

Stymatosis. (Στύμα, a stiffness.) A violent erection of the penis attended with bleeding. Chordee.

Stymmata. (Στυμμα, that which thickens.) The most solid ointments; also, the ingredients for increasing their consistence.

Stypage. (F.) The production of local anaesthesia by means of a *Stype*.

Stype. (F. *Στυπή*, tow.) A tampon or pledget, especially that used for *Stypage*.

Stypsis. (Στυπτικός, astringent.) Constipation. The use of a styptic.

Styptic. (Στυπτικός, astringent.) Astringent, constrictive, binding. Having the quality of checking hæmorrhage; a hæmostatic.

S., Binelli's. *Aqua binellis*. Creasote water.

S., Broeche'ri's. A supposed styptic once used in Paris.

S. collo'dion. A mixture of 100 parts of collodion, 10 parts of carbolic acid, 5 parts of pure tannin, 3 parts of benzoic acid.

S., col'lloid. Xylostyptic ether. Ether saturated with tannin and gun-cotton. Also made by mixing collodion, carbolic acid, tannin, and benzoic acid. Styptic and antiseptic.

S. cotton. Absorbent cotton dipped in a solution of ferric chloride or sulphate and dried.

S., Helve'tius's. *Ferrum tartarisatum*.

S. powder. A mixture of equal parts of alum, gum acacia, and calophony.

S., Ruspi'ni's. A nostrum said to consist of gallic acid, a small quantity of sulphate of zinc and opium, dissolved in a mixture of alcohol and rose water.

S. weed. *Cassia occidentalis*.

Styptical. Same as *Styptic*.

Stypticine. $C_{12}H_{13}NO_3 + H_2O.HCl$. Hydrochlorate of cotarnine. (Not official.) Cotarnine is a base, chemically related to hy-

drastinine, obtained by oxidising narcotine. In yellow crystals, soluble in water. In metrorrhagia as a hæmostatic injection. This alkaloid has been used lately with considerable success to stop uterine hæmorrhage, in doses of $\frac{3}{4}$ grain five times daily. Dr. S. Gottschalk reports that it has a sedative influence.

Styptic'ity. The property of being styptic; astringency.

Styracin. Cinnamic ester with potassium hydrate. It crystallises in shining needles, is sparingly soluble in water, and possesses a hyacinth-like odour.

Styracol. $C_6H_5CH.CH_3COOC_6H_4OCH_3$. (Not official.) It is used chiefly in the treatment of tuberculosis. It is the cinnamic ether of guaiacol, split up when taken internally. The resulting component part, guaiacol, is supposed to be the effective agent. Internally, good results are looked for in cases of chronic catarrh of the bladder, stomach, and intestines.

Styrax præparatus. Asia Minor. Nat. Order *Balsamiferae*. (Not official.) A balsam prepared from the inner bark of *Liquidambar orientalis*; purified by solution in rectified spirit. A semi-transparent, brownish-yellow, semi-fluid balsam, about the consistency of thick honey, with a strong agreeable odour and balsamic taste. It yields styrol, C_8H_8 , a thin colourless liquid of fragrant odour; cinnamic acid and styracin, $C_9H_7O_2$. Action, similar to copaiba; parasiticide. Uses, chronic catarrhs, gonorrhœa; locally in scabies, frost-bite. Dose, 10 to 20 grains a day, gradually increasing. Contained in *Tinctura benzoati composita*, *Unguentum styracis* (not official). Prepared styrax 2 fluid drachms, prepared lard 1 ounce. Used in scabies.

Styrene. (Στύραξ, storax.) $C_8H_{10}O$. Styryl-alcohol. Cinnamyl-alcohol. A substance obtained by saponifying.

Styrol. C_8H_8 . Cinnamene; phenylethylene. A colourless, strongly refractive liquid hydrocarbon, with an odour like that of benzene, and obtained by heating benzene with calcium hydrate.

Styrolene. The same as *Styrol*.

Styrone. (Not official.) A compound formed with styrax and balsam of Peru. Thin needles, with a hyacinth odour, soluble in alcohol. A deodorising non-toxic antiseptic. Use, 4 per cent. alcohol solution; a teaspoonful of this in a glass of lukewarm water for injections and washings.

Stypsis. See *Priapism*.

Sua'veolens. (L.) Sweet-scented, as a medicine.

Sub. A Latin preposition used as a prefix to denote under or beneath.

Subabdominal. Situated below or beneath the abdomen.

Subacetas. *Subacetate*.

Subac'etate. A basic acetate.

Subac'id. Moderately acid or sour.

Subac'rid. Moderately acrid, sharp, or pungent to the taste.

Subacro'mial. Situated below the acromion.

S. bur'sa. A large bursa between the acromion process and the shoulder-joint.

Subac'tio. (L. *subigo*, to prepare.) Operation of making plasters, extracts, &c., with the hand or with the pestle and mortar.

SUBACUMINATE—SUBCLAVIAN

Subacu'minate. (L.) Moderately acuminate.

Subacute'. (L.) A condition below that of acuteness, in any sense.

S. myeli'tis. An affection of the myelin of the spinal cord. It reaches its height in from two to six weeks.

S. spī'nal atrophy. Progressive muscular atrophy.

Subacutely. In a subacute manner.

Subaffec'tio. (L.) Hydropathy.

Subagita'trix. (L.) One who practises *Tribadism*.

Subala'ris ve'na. (L.) Axillary vein.

Suba'nal. (L.) Situated under the anus.

Subances'tral. Of collateral ances'try or derivation; not in the direct line of descent.

Subancone'al. Situated under the anconeus.

Subancone'us. A small muscle inserted into the posterior ligament of the elbow-joint under the anconeus.

Subapical. Beneath the apex.

Subaponeurot'ic. (L. *sub*; *aponeurosis*.) Situated under an aponeurosis.

Subarach'noid. (L. *sub*; *ἀράχνη*, a spider's web; *εἶδος*, like.) Under the arachnoid membrane of the cerebro-spinal system.

S. flu'id. The cerebro-spinal fluid.

S. hæm'orrhage. In the majority of cases the delicate arachnoid membrane is ruptured. It may, however, result from hæmorrhage from the pia mater.

S. space. The space between the arachnoid membrane and the base of the brain that acts as a protective water-pillow to the important parts of the brain found there.

Subarachnoi'dal. Same as *Subarachnoid*.

Subarachnoid'ean. Same as *Subarachnoid*.

Subar'cuatē. (L.) Slightly arcuate.

S. fos'sa. A depression on the postero-internal surface of the temporal bone, beneath the arched prominence for the superior semicircular canal.

Subare'olar. (L.) Situated under the mammary areolar.

S. ab'scess. A furuncular subcutaneous abscess of the areolar of the nipple.

Subastrag'alar. (L. *sub*; *αστραγάλος*, ankle bone.) Situated beneath the astragalus.

S. amputa'tion. Amputation of the foot through the astragalo-navicular and the calcaneo-astragaloid joints.

Subastrag'aloid. Situated beneath or below the astragalus.

S. amputa'tion. Disarticulation at the astragalo-scaphoid and astragalo-calcaneal joints. The astragalus forms the summit of the stump.

S. disloca'tion. Dislocation of the ankle in which the astragalus remains fixed to the leg bones, and is displaced forwards over the tarsus.

Subastrin'gent. (L.) Slightly as'tribent.

Subatloid'eus. (L. *sub*; *ἄτλας*, the bearer; *εἶδος*, like.) Situated beneath the atlas. The second pair of spinal nerves.

Subaudition. (L. *subauditiō*, the supplying of a word omitted.) The act of understanding something not expressed; that which

is understood or implied from that which is expressed; understood meaning.

Subau'ral. (L.) Beneath the ear.

Subax'ial. (L. *sub*; *axis*, the axis of the earth.) Lying ventral to the axis.

Subax'illary. (L.) Situated beneath the axilla.

Subaxoid'eus. (L. *sub*; *axis*, axis of earth; Gr. *εἶδος*, form.) Below the axis. The third pair of cervical nerves.

Subbra'chial. (L.) Under the pectoral muscles.

Subbrachycephal'ic. (L. *sub*; *βράχιον*, the arm; *κεφαλή*, the head.) Having a cephalic index from 80° to 84°.

Subcæ'cal. (L.) Lying under the cæcum.

S. fos'sa. A peritoneal pouch behind the cæcum.

Subcalca'reous. (L. *sub*; *calx*, lime.) Somewhat calcareous.

Subcal'carine. (L. *sub*; *calcar*, the calcaneum.) Situated ventral to the calcarine fissure.

Subcap'sular. Situated under a capsule; being in the cavity of a capsule.

S. epithe'lium. An epitheloid lining of the inside of a capsule of a spinal ganglion.

Subcar'bonate. A neutral or basic carbonate.

Subcartilag'inous. (L. *sub*; *cartilago*, cartilage.) Situated below or beneath cartilage; lying under the costal cartilages; hypochondrial.

Subcaud'al. (L.) Situated under the tail.

Subcau'date. (L.) Same as *Subcaudal*.

Subcen'tral. (L.) Situated beneath the centre, or ventral to the central fissure of the brain.

S. arch. *Hæmal arch*.

Subcerebell'ar. (L.) Situated beneath the cerebellum.

Subcer'ebral. Below the cerebrum; specifically below the supposed seat of consciousness, or not dependent on volition. Applied to involuntary or reflex action in which the spinal cord, but not the brain, is concerned.

Subchon'dral. (L. *sub*; *χόνδρον*, cartilage.) Lying under cartilage.

Subchor'dal. (L.) Situated under the notochord or chorda dorsalis.

Subchorion'ic. (L. *sub*; *χόριον*, the chorion.) Lying under the chorion.

Subcho'roid. Same as *Subchoroidal*.

S. drop'sy. Morbid accumulation of fluid between the adherent choroid sclerotic and the retina.

Subchron'ic. More chronic than subacute.

Subcla'vian. (*Sub*, under; *clavis*, a key.) Lying or extending under or beneath the clavicle. Pertaining to the subclavian vessels.

S. ar'tery. The trunk of the main vessel of the upper extremity arising on the right from the innominate artery, on the left side from the aorta, and being continued as the axillary. It supplies large branches to the neck.

S. groove. A groove made by the *S. artery* on the first rib. It is separated from the groove for the *S. vein* by the tubercle for the insertion of the scalenus anticus. The groove

SUBCLAVICULA—SUBDERMAL

for the insertion of the subclavius muscle on the under surface of the clavicle.

S. muscle. See *Subclavius*.

S. nerve. A branch of the brachial plexus supplying the subclavius muscle.

S. triangle. See *Triangle*.

S. vein. The main vein of the upper extremity, the continuation of the axillary vein emptying into the innominate veins.

Subclavic'ula. (L. *sub*; *clavis*, the collar-bone.) The first rib.

Subclavic'ular. Situated under the clavicle.

S. an'eurism. An aneurism of the third part of the subclavian or the first part of the axillary artery.

S. disloc'a'tion. A dislocation of the head of the humerus under the pectoralis major just below the clavicle.

S. fos'sa. The surface depression below the outer end of the clavicle.

S. re'gion. Same as *Infraclavicular region*.

Subcla'vius. A muscle passing from the first rib to the under surface of the clavicle.

Subcollat'eral. (L. *sub*; *con*, together; *lateralis*, lateral.) Ventral to the collateral fissure of the brain.

Subconchoi'dal. (L. *sub*, under; *κόχρη*, shell; *εἶδος*, like.) Imperfectly conchoidal.

Subconjuncti'val. (L.) Situated under the conjunctiva.

S. ecchymo'ses. Suffusion of blood under either the conjunctiva covering the eyeball or under the transitional conjunctiva. They follow injuries, operations on the conjunctiva, violent inflammations; they occur in old people whose vessels have brittle walls. Special significance attaches to them when they to all appearances spontaneously develop after injury to the skull, since they indicate fracture of the base.

Subcon'scious. (L. *sub*; *consciens*, knowing.) Partially or feebly conscious. Of, or pertaining to, subconsciousness. Being or occurring in the mind, but not in consciousness.

Subcon'sciously. In a subconscious manner; with faint consciousness; without consciousness.

Subcon'sciousness. In a condition in which there is little strength or distinctness of perception or mental action in general. Mental processes conceived as taking place without consciousness.

S., hypoth'esis of. The assumption that there is "a system of persisting modifications of consciousness of so extremely low a degree of intensity that they have no appreciable power to influence the direction of the attention." They are experienced as a complex totality, but their differences are not distinguished.

Subcontin'ual fe'ver. Malarial fever.

Subcor'acoid. (L. *sub*; *κόραξ*, a crow; *εἶδος*, like.) Situated or occurring below the coracoid process.

Subcor'date. (L. *sub*; *cor*, the heart.) Having nearly the shape of a heart.

Subcor'diform. (L. *sub*; *cor*, the heart; *forma*, shape.) The same as *Subcordate*.

Subcor'neous. (L.) Somewhat horny.

Subcor'tical. (L. *sub*; *cortex*, cortex.) Situated beneath the cerebral cortex.

Subcost'al. (L.) Situated below a rib; extending from one rib to a succeeding one; infracostal.

S. mus'cles. See *Subcostalis*.

Subcosta'lis. (L.) A subcostal muscle. Any one of the muscles which extend from the lower border or inner surface of a rib to the first, second, or third succeeding rib.

Subcran'ial. (L. *sub*; Gr. *κράνιον*, cranium.) Situated beneath the skull; in general, situated below the cranial axis or cranium proper.

S. hæm'orrhage. This is due to rupture of the middle meningeal artery. It causes cerebral compression unless the flow cease, or be stopped, very soon after its commencement.

Subcrep'itant. (L. *sub*; *crepitare*, to creak, crackle.) Approaching in character to a crepitant râle.

Subcrepita'tion. The noise of subcrepitant râles.

Subcruen'tus. (L. *sub*, under; *cruentus*, bloody.) Having the colour or nature of blood. A term applied to certain excreted substances mixed with blood.

Subcrureus. (L.) A small muscle arising from the fore part of the femur, beneath the crureus, and inserted into the synovial pouch of the knee. Also called the subcruralis, subfemorialis, and articularis genu.

Subcul'ture. (L.) *Bacteriol.* A culture derived from a previous culture.

Subcu'neus. (L.) The area of the occipital lobe ventral to the cuneus, and caudal to the collateral fissure.

Subcuta'neous. Situated beneath the skin in general; subdermal; lying in the true skin or cutis under the cuticle; subcuticular, placed or performed under the skin; hypodermic.

S. feed'ing. A mode of artificial feeding by large hypodermic injections of nutrient substances.

S. frac'ture. Simple fracture.

S. meth'od. The manner of operating subcutaneously through a small puncture, as in tenotomy, &c.

Subcuta'neously. In a subcutaneous manner.

Subcuta'neus colli. (L.) The *Platysma myoides*.

S. ma'læ. (L.) The malar branch of the orbital nerve. A part of the superior maxillary division of the fifth cranial nerve.

S. nu'chæ. (L.) A tensor muscle of the nuchal fascia occasionally found arising from the outer part of the curved line of the occipital bone, and inserted into the fascia over the serratus posticus superior.

Subcutic'ular. Situated under the cuticle.

Subcu'tis. (L. *sub*, under; *cutis*, the skin.) The deeper part of the cutis, corium or true skin.

Subdelir'ium. (L.) Mild delirium with lucid intervals.

Subdeltoid'al. (L. *sub*; Δ , delta; *εἶδος*, likeness.) Approaching in shape the Greek letter delta; also, deltoid.

Subden'tal. (L.) Situated beneath the teeth.

Subder'mal. (L. *sub*; *δέρμα*, skin.) Beneath the skin. Hypodermal; subcutaneous.

Subdicrotic. (L. *sub*; *δίκροτος*, double beating.) Partially or obscurely dicrotic.

Subdita. (L. *subdo*, to put under.) Medicines introduced into one of the natural orifices, as suppositories, pessaries, &c.

Subdititia. See *Subdita*.

Subdolichocephalic. (L. *sub*, under; *δοδισός*, long; *κεφαλή*, head.) *Cranium*. Having a cephalic index ranging between 75.01 and 77.77 in Broca's classification.

Subductio. (L.) Dejection.

Subdural. (L.) Situated beneath the dura mater, between it and the arachnoid.

S. hæmorrhage. This is usually caused by rupture of one of the cranial sinuses on its inner aspect.

S. space. The interval between the dura mater and the arachnoid of the brain and spinal cord. It is filled with a somewhat scanty greasy fluid.

Subectoder'mal. (L. *sub*; Gr. *ἐκτος*, outside; *δέρμα*, skin.) Beneath the ectoderm.

Subectopic. (L. *sub*, under; Gr. *ἐκ*, out; *τροπεῖν*, to turn.) Applied to gestation in which the ovum is implanted in the lower zone of the inner surface of the uterus.

Subencephalon. (L. *sub*, under; Gr. *ἐγκέφαλον*, brain.) The medulla oblongata, the pons and corpora quadrigemina.

Subendocardial. (L. *sub*; Gr. *ἐνδον*, within; *καρδιά*, the heart.) Lying or occurring beneath the endocardium.

S. tis'sue. The substance of the heart immediately under the endocardium.

Subendothelial. (L. *sub*; Gr. *ἐνδον*, within; *θηλή*, the nipple.) Lying or occurring beneath the endothelium.

S. plexus. Sympathetic plexus of the subepithelial tissues.

Subendothelium. Delone's name for an almost continuous layer of connective-tissue cells between the mucous membrane and the epithelium of the bronchi, bladder, and intestine.

Subepider'mal. (L. *sub*; Gr. *ἐπὶ*, upon; *δέρμα*, skin.) Lying or occurring beneath the epidermis in any sense.

Subepithelial. Lying or occurring beneath the epithelium.

Su'ber. Cork.

Suber'ic acid. $C_8H_{14}O_4$. A dibasic acid obtained by boiling corks or fatty oils with HNO_3 . Small granular crystals.

Su'berin. Pulverised cork used as a dressing for wounds.

Subesopha'geal, Subœsopha'geal. (L. *sub*; Gr. *οἰσόφαγος*, œsophagus.) Situated below or beneath the œsophagus.

Subfal'cial. (L. *sub*; *falx*.) Running along the under edge of the falx cerebri.

Subfal'ciform. Somewhat falciform.

Subfas'cial. (L. *sub*; *fascia*.) Situated under any fascia.

Subfeb'rile. (L.) Somewhat, but not decidedly, febrile.

Subfemora'lis. (L.) Same as *Sub-currens*.

Subfis'sure. A cerebral fissure that is concealed by the folds of the gyri.

Subfla'vour. A subordinate flavour, a secondary flavour.

Subfla'vous. (L. *sub*, under; *flaveo*, yellow.) Yellowish.

S. lig'ament. Short ligaments of yellow

elastic tissue connecting the lamina of the vertebræ.

Subfor'nical. (L. *sub*; *fornix*.) Beneath the cerebral fornix.

Subfron'tal. (L.) Applied to a fissure and gyrus (Broca's) in the ventral region of the frontal lobe of the brain.

Subgal'late. A basic gallate.

Subgelatinous. Partly gelatinous.

Subgener'ic. (L. *sub*; *genus*, a race, class, species.) Of, or pertaining to, a sub-genus; having the rank, grade, or value of a sub-genus.

Subgener'ical. Same as *Subgenerie*.

Subgener'ically. So as to be sub-generie.

Subgenic'ulate. (L. *sub*; *geniculatus*, with bended knee.) Imperfectly geniculate or elbowed.

Subgen'ital. (L.) Situated under the genital organs.

S. ves'tibule. See *Syndemnum*.

Subgenus. (L. *sub*, under; *genus*, kind.) A subordinate genus; a section or subdivision of a genus higher than a species.

Subger'minal. (L.) Situated under a germinal structure.

Subgle'noid. (L. *sub*; Gr. *γλήνη*, a cavity; *εἶδος*, form.) Lying or occurring immediately below the glenoid fossa of the scapula.

S. disloca'tion. A dislocation of the humerus immediately under the glenoid fossa.

Subglossitis. (L. *sub*, under; Gr. *γλῶσσα*, the tongue; *ιτις*, inflammation.) Inflammation of the tissues under the tongue.

Subgrunda'tion. (F.) The intrusion of one part of a cranial bone under another.

Subgular. Same as *Subjugular*.

Subgyrus. (L. *sub*; Gr. *γῆρος*, a gyrus.) A gyrus that is encroached on or covered.

Subhepatic. (L. *sub*; Gr. *ἥπαρ*, the liver.) Of doubtful or disputed hepatic character. Lying under the liver, on the ventral side of the hepatic lobules, sublobular as ramification of the portal vein.

Subhu'meral. (L.) Situated under the humerus.

Subhu'merate. To take or bear on one's shoulder.

Subhumera'tis. *Calomismus*. Reduction of dislocation of the shoulder in raising the body by the affected arm.

Subhy'aloid. (L. *sub*; Gr. *υἶαλος*, glass; *εἶδος*, likeness.) Situated beneath (on the attached side of) the hyaloid membrane of the eye.

Subhy'oid. (L. *sub*; Gr. *υ*, upsilon; *εἶδος*, likeness.) Situated below the hyoid bone; coming next in order to the hyoid branchial arch.

Subhyoid'ean. Same as *Subhyoid*.

Subicter'ic. (L. *sub*, under; Gr. *ικτερος*, jaundiced.) Moderately or slightly jaundiced.

Sibiculum. (L. *subex*, a layer.) 1. In *Biol.*, the thickened part of the leaf or stem of a host bearing the mycelium of a parasite fungus. 2. The uncinatè gyrus.

S. cor'nu ammo'nis. (L.) Sigmoid convolution of the cornu ammonis.

S. promonto'rii. Ridge of bone on the median wall of the tympanum, extending downward from the promontory to the floor between the foramen rotundum and the sinus tympani.

Subigita'trix. *Tribas*.

SUBILIAC—SUBMAMMARY

Subil'iac. (L.) Pertaining to the *Subilium*.
Subil'ium. The lowest portion of the ilium.

Subimag'inal. Having the character of a sub-image.

Subinflammation. An incipient or undeveloped inflammatory condition.

Subinflamm'atory. Pertaining to, or of the nature of, a slight inflammatory condition.

Subintegument'ary. (L. *sub*; *integumentum*, integument.) Situated under the integument.

Subintes'tinal. Situated beneath the intestine.

Subin'trant. (L. *subintrare*, to enter secretly.) Applied to malarial fevers, in which a new paroxysm begins before the termination of the preceding one.

Subin'voluted. (L. *sub*; *involutio*, a rolling-up.) Exhibiting incomplete involution of the uterus.

Subinvolu'tion. Incomplete involution.
S., men'strual. A subinvolution of the mucous membrane of the uterus after menstruation.

S. of the u'terus. A condition in which the uterus fails to return to its proper size after delivery. Due to debility, prolonged and severe labour, resuming work too soon after labour, abundant hæmorrhage, endometritis.

Subi'odide. An oxyiodide.

Subja'cent. (L. *sub*, under; *jacere*, to lie.) Underlying, lying beneath.

Subject. (L. *sub*, under; *jacere*, to throw.) A person or thing regarded as the recipient of a certain treatment; one who, or that which, is exposed or liable to something specified. A body that is to be dissected or operated on.

Subjective. Any thing that affects the senses and arises in the individual as opposed to objective; that which is caused by an object outside the body. By Kant (following some of his earliest contemporaries) it was restricted to the subject of a thought.

S. meth'od of es'timating. 1. Hypermetropia: the method of correcting the manifest hypermetropia by convex lenses.

2. Myopia: the method of correcting myopia by concave lenses.

3. Orientation: the mental process by which we assign to objects their correct relative positions to one another and to our body. It depends on our power of arranging things of the external world in their places just as their images are on our retina, except that they are in reverse order; and on our knowledge of the position of our body in space as well as the position of our eyes in our body.

S. neces'sity. Any association between A and B through which the idea of A calls up the idea of B.

S. selec'tion. A psychological name implying the possession of the power on the part of the mind to choose subjects for its own consideration.

S. sensa'tion. A sensation produced by internal influences.

S. symp'toms. Those symptoms that are not capable of demonstration to, or observation by, others.

Subjectively. In a subjective manner.

Subjectiveness. The state of being subjective.

Subjec'tivism, or Pas'sivism. Consists in humiliations and self-abasements before women. It may accompany sexual inversion. The complete subjugation of the will of one person to another.

Subjectivity. The absence of objective reality; illusiveness.

Sub'jee. *Cannabis indica*.

Subju'gal. (L. *sub*, under; *jugum*, yoke.) Below the malar bone.

Subla'tio. (L. *sublatio*, removal.) Sublation, ablation, depression, or couching of the lens in cataract.

S. ret'inæ. Detachment of the retina.

Subligac'ulum. (L. *sub*, under; *ligare*, to bind.) Truss.

Sublig'amen. (L. *sub*, under; *ligare*, to bind.) A form of truss used in hernia.

Subligatu'ra. Truss.

Sub'limare. (L. *sublimare*, to lift up on high, raise.) To bring a solid substance by heat into a state of vapour, which on cooling returns again to the solid state.

Sublima'tion. The vaporisation and condensation of a solid substance.

Sublime'. To undergo sublimation.

Sublimed'. Distilled, prepared or purified by sublimation.

Sublim'inal. (L. *sub*, under; *limen*, threshold.) Below the threshold of consciousness, or of sensation.

Subli'mis. (L.) Elevated; superficial.

Sublimophe' nol. (Not official.) In white crystals. A mixture of mercuric carbolate and mercuric chloride; the reddish precipitate is dissolved in, and then crystallised from, alcohol; melts at 210° C. Antiseptic.

Subling'ual. (L. *sub*, under; *lingua*, the tongue.) Situated under the tongue or on the under side of the tongue.

S. ar'tery. A branch of the lingual artery supplying the parts in the neighbourhood of the *S. gland*.

S. cal'culus. A salivary calculus in the duct of the sublingual or submaxillary glands.

S. cyst. Same as *Ramula*.

S. fos'sa. A shallow fossa on the inner side of the mandible, lodging the sublingual gland.

S. gland. The smallest salivary gland, situated behind the fore-part of the mandible under the tongue.

Sublingui'tis. (L. *sub*, under; *lingua*, the tongue; Gr. *itis*, inflammation.) Inflammation of the sublingual gland.

Subling'uium. Uvula.

Sublin'guum. Epiglottis.

Sublob'ular. (L.) Situated beneath a lobule.

S. veins. Branches of the hepatic vein, on which the hepatic lobules lie and into which the intra-lobular veins discharge.

Sublum'bar. (L. *sub*, under; *lumbus*, loin.) Situated under the loins.

Sublux'ate. To partially dislocate.

Subluxa'tion. (L.) Partial dislocation.

S. of lens. A. von Graefe's name for partial displacement of the lens.

Submalle'olar. Under the malleoli.

S. amputa'tion. Removal of the foot at the ankle-joint.

Submammary. Under, or below, the mammary gland.

S. ab'scess. An abscess between the deep

SUBMARGINAL—SUBPEDUNCULATED

fascia and the deep layer of the superficial fascia under the mammary gland.

S. re'gion. The same as *Infra-mammary region*.

Submar'ginal. Situated near the border or margin.

Submar'ginate. Bordered with a mark which is slightly separated from the edge.

Submaxilla. The mandible.

Submaxillary. Pertaining, or relating to, the mandible or submaxillary gland, or the mandible itself.

S. ar'tery. One of the branches of the facial artery in the neck supplying the *S. gland*.

S. duct. Wharton's duct.

S. fos'sa. A fossa of the mandible lodging the submaxillary gland.

S. gan'gion. A ganglion receiving fibres from the lingual and chorda tympani nerves supplying the submaxillary gland.

S. nerve. The infra-mandibular branch of the fifth nerve.

S. re'gion. The same as the *Suprahyoid region*, that region under the mandible.

S. tri'angle. See *Triangle*.

S. vein. A tributary of the facial vein, draining the submaxillary gland.

Subme'dial. Situated beneath, or near, the middle.

Submem'branous. Somewhat membranous.

Submening'eal. (L. *sub*, under; Gr. *μηνιγξ*, a membrane.) Situated under the meninges.

Submen'tal. (L.) Situated beneath the chin, or under the edge of the mandible.

S. ar'tery. The largest branch of the facial artery in the neck.

S. vein. A branch of the facial vein.

Submerge'. (L. *sub*, under; *mergere*, to dip.) To immerse; to place under the surface of a liquid.

Submer'sion. The state of being under the surface of a liquid.

Submesaticephal'ic. Having a cephalic index of 75 to 76.

Submetal'lic. (L. *sub*, under; *metallum*, metal.) To a certain extent metallic.

Submin'im'al. Less than minimal.

S. stim'ulus. A stimulus which is not strong enough to produce any obvious effect.

Submis'sio. (L.) A lowering.

S. cor'dis. The *Cardiac systole*.

Submorphous. (L. *sub*, under; Gr. *μορφή*, form.) Partaking of the characters of a crystal and an amorphous body; of calculi, &c., forming more or less regular bodies produced by the union of molecules of a crystalline salt with molecules of a colloid medium in which the former is precipitated.

Submuc'o'sa. (L. *sub*, under; *mucosus*, mucous.) The layer of areolar tissue underlying a mucous membrane; submucous tissue.

Submu'cous. Lying beneath the mucous membrane; or of a character between that of skin and mucous membrane.

S. coat. Same as *Submucosa*.

S. cysti'tis. (Gr. *κίστης*, a bladder, cyst.) Cystitis affecting the submucosa of the urinary bladder.

S. râles. Râles produced in medium-sized bronchial tubes of an indistinctly mucous character.

Submus'cular. Situated beneath a muscle.

Subnarcot'ic. Moderately narcotic.

Subna'sal. Situated at the bottom of, or under, the nose. Specifically, at the base of the nasal spine.

S. point. In *Craniometry*, the middle of the inferior point of the anterior nares, or the root of the anterior nasal spine.

Subner'vian. Same as *Subneural*.

Subneu'ral. (L. *sub*, under; *νεῦρον*, nerve.) Situated beneath a main axis or nervous cord.

Subni'trate. A basic nitrate.

Subno'dal. (L.) Behind, or under, a node.

Subnor'mal. (L.) Less than normal. Abnormal by defect or deficiency.

Subnucleus. (L.) Any one of the subdivisions into which a group of nerve-cells is divided by the passage through it of intersecting bundles. (Spitzka.)

Subnude'. (L. *sub*, under; *nudus*, naked.) In *Biol.*, almost naked or bare of leaves.

Suboccip'ital. Situated under the occipital bone.

S. nerve. The first cervical nerve.

S. tri'angle. See *Triangle*.

Suboccipita'lis. The *Transversus nuchæ*.

Suboccip'ito-bregmat'ic. (L. *sub*; *occiput*; Gr. *βρέγμα*, bregma.) In the region extending from the occiput to the bregma.

Suboc'ellate. (L. *sub*, under; *ocellus*, eye.) In *Biol.*, applied to the spots on the wings of butterflies which resemble ocelli.

Suboc'ular. (L. *subocularis*, underneath the eye. Situated under the eye.

Suboesopha'geal. (L. *sub*; Gr. *οισοφάγος*.) See *Subesophageal*.

Suboper'cular. Pertaining to the *Suboperculum*.

Suboper'culum. A part of the orbital gyrus which to some extent covers the island of Reil.

Subopt'ic. Same as *Suborbital*.

Subor'al. Placed under the mouth or oral orifice.

Suborbic'ular. Almost orbicular.

Subor'bital. Under, or on the floor of, the orbit.

S. fora'men. The infraorbital foramen.

S. canal'. The infraorbital canal.

S. fos'sa. The canine fossa.

Subor'bitary. Infraorbital.

Subordina'tion. The state of organs that are dependant on, or controlled by, other organs.

Subox'ide. (L. *sub*, under; *ὀξύς*, acid.) An oxide containing less acid than a protoxide.

Subparalytic. (L. *sub*; *παράλυσις*, paralysis.) Slightly paralytic.

Subpari'etal. Beneath the parietal bone, convolution, or fissure.

Subpatellar. Under the patella.

Subpec'tinate. (L. *sub*, under; *pecten*, a comb.) Imperfectly pectinate.

Subpec'toral. Situated beneath the chest.

Subpedun'cular. Situated beneath a peduncle.

S. lobe. The flocculus.

Subpedun'culated. Slightly pedunculated.

SUBPERICARDIAL—SUBSESSILE

Subpericar'dial. (L. *sub*; περί, around; καρδία, heart.) Situated or occurring beneath the pericardium.

Subpericra'nial. (L. *sub*; Gr. περί, around; L. *cranium*.) Situated or occurring under the pericranium.

Subperios'teal. (L. *sub*; Gr. περί, around; ὀστέον, the bone.) Situated or occurring under the periosteum.

S. amputa'tion. An operation in which the periosteum is dissected up from the bone before amputation.

S. blaste'ma. (Βλάστη, a bud.) The osteogenetic layer of the periosteum.

S. exci'sion. (*Méthode de la rugine*.) Consists in endeavouring to remove the capsular ligament and its attachment to the periosteum intact. Owing to the preservation of the capsule the new articulation is much stronger.

Subperios'teally. In a subperiosteal manner.

Subperitone'al. (L. *sub*; περιτόνιον, peritoneum.) Situated beneath the peritoneum, that is on its outer or attached surface.

S. ab'scess. An abscess between the peritoneum and the abdominal parietes.

S. fas'cia. The fascia transversalis, the diaphragmatic psoas, and iliac fascia.

Subpetiolar. (L. *sub*, under; petiolus, a petiole.) Beneath the petiole.

Subpetiolate. (L. *sub*, under; petiolus, a petiole.) Having a very short petiole.

Subpharyngeal. (L. *sub*; φάρυγξ, pharynx.) Lying under, or beneath, the pharynx.

Subphren'ic. (L. *sub*; Gr. φρήν, midriff.) Lying under, or beneath, the diaphragm.

S. ab'scess. An abscess under the diaphragm.

Subpi'al. Situated under the pia mater.

Subpilose'. (L. *sub*, under; pilus, hair.) Thinly pilose.

Subplacenta. The decidual membrane.

Subplantigrade. (L. *sub*; planta, sole; gradi, to walk.) Not quite plantigrade; walking with the heel a little raised.

Subpleu'ral. Situated beneath the outer or attached side of the pleura.

S. emphyse'ma. (ἐμφυσάειν, to inflate.) That form of interstitial emphysema in which the air is found in the subpleural connective tissue.

Subplex'al. Lying under a plexus of the brain.

Subpontile. Situated or occurring beneath the pons.

Subpontine ar'teries. Branches of the basilar artery to the pons Varolii.

Subprepu'tial. Placed beneath the prepuce and the glans penis.

S. cal'culus. A calculus consisting of calcified smegma between the prepuce and the glans penis.

Subprostat'ic. Situated under the prostate gland.

Subpubes'cent. Slightly pubescent.

Subpu'bic. Situated beneath the pubes.

S. arch. The angle formed by the junction of the pubes.

S. disloca'tion. Dislocation of the hip-joint under the pubes.

S. her'nia. Obturator hernia.

S. lig'ament. The ligament connecting

the pubes on the under surface of the symphysis.

Subpu'bio femora'lis. Adductor brevis.

S. prostat'icus. *Compressor prostatae.*

Subpul'monary. Ventral to the lungs.

Subpu'tris. Becoming putrid.

Subpyram'idal. (L. *sub*; pyramis, a pyramid.) Approximately pyramidal.

S. fos'sa. A depression on the inner wall of the middle ear, below the pyramid and behind the fenestra rotunda.

Subrad'ular. (L. *sub*, under; radula, a scraper.) Situated beneath the radula.

Subramose', Subra'mous. (L. *sub*, under; ramus, branch.) Slightly ramose.

Subren'iform. (L. *sub*; ren, a kidney; forma, shape.) Somewhat resembling a kidney.

Subret'inal. Lying beneath the retina.

Subsa'cral. Situated ventral to the sacrum. Same as *Presacral*.

Sub'salt. Same as *Basic salt*.

Subsatur'ated. Not completely saturated.

Subsatura'tion. The condition of not being completely saturated.

Subscap'ular. Under, or ventral to, the scapula.

S. aponeuro'sis. The aponeurosis covering the subscapularis.

S. ar'tery. A branch of the axillary running along the ventral side of the axillary border of the scapula. A small branch of the suprascapular artery.

S. fas'cia. See *S. aponeurosis*.

S. fos'sa. The venter of the scapula.

S. mus'cle. The subscapularis.

S. nerve. One of the three branches of the posterior trunk of the brachial plexus: (a) the upper supplies the subscapularis, (b) the lower the teres major, (c) the middle, or long, the latissimus dorsi.

S. re'gion. The region ventral to the scapula.

S. vein. A tributary of the axillary vein.

Subscapula'ris. A muscle arising from the venter of the scapula and inserted into the lesser tuberosity of the humerus.

S. mi'nor. An anomalous muscle having an origin from the axillary border of the scapula, and being inserted above the teres major.

Subscap'ulary. Same as *Subscapular*.

Subsclerotic. (L. *sub*; σκληρός, hard.) Beneath the sclerotic.

S. drop'sy. A morbid collection of fluid between the sclerotic and the choroid.

Subscrip'tio. (L. *scribere*, to write underneath.) That part of a prescription consisting in the directions to the pharmacist.

Subsensa'tion. A moderate or lesser sensation; a sensation under or beside an obvious one.

Subsep'tate. Divided partially.

Subse'rous. Somewhat serous or watery; situated or occurring beneath a serous membrane.

S. cysti'tis. (Κύστις, a cyst, bladder.) Cystitis affecting the subserous tissue of the urinary bladder.

S. tis'sue. The areolar connective tissue under a serous membrane.

Subser'rate. Slightly serrate.

Subses'sile. (L. *sub*, under; sessilis, sessile.) Not quite sessile.

SUBSIDENCE—SUBSTITUTION

Sub'sidence. (L. *sub*, under; *sedere*, to sit.) The gradual cessation and disappearance of a disease.

Subsiden'tia. (L. *subsidere*, to settle.) Sediment.

S. pupil'læ. Closure of the pupil.

Subsig'moid. (L. *sub*, under; Gr. *σίγμα*, sigma; *εἶδος*, like.) Under the sigmoid cavity or flexure.

S. fos'sa. A peritoneal pouch on the left side of the attached mesentery of the sigmoid flexure of the colon.

Subsis'tence. (L. *sub*, under; *sistere*, to stand.) That which nourishes or gives support.

Sub'soil. The under soil. The bed or stratum of earth or earthy matter which lies immediately under the surface soil, and which is less finely disintegrated and contains less organic matter than that above it.

Subsp'i'nous. Situated ventral to the spine. Situated under the spine of the scapula, or infraspinous.

S. disloca'tion of the hu'merus. A dislocation in which the head of the humerus rests in the infraspinous fossa.

S. fos'sa. The infraspinous fossa.

Subspl'enial. (L. *sub*; Gr. *σπληνίου*, a bandage.) Situated under the splenium of the corpus callosum.

Sub'stage. The arrangements under the stage of a microscope for the diaphragms, condenser, illuminator, and other accessories.

Sub'stance. Any particular kind of corporeal matter; stuff, material, part, body.

S., adaman'tine. Same as *Enamel*.

S., al'ible. That portion of the chyme used for the nourishment of the body.

S., alimen'tary. An article of food.

S., ba'sis. The intercellular or ground substance.

S., cell. Cell protoplasm.

S., cen'tral gelat'inous. *Substantia gelatinosa Rolandi*.

S., col'loid. (Κόλλα, glue.) See *Colloid*.

S., contrac'tile. Living protoplasm having the power of contraction. The contractile portion of a muscle-fibre.

S., cor'tical, of the kid'ney. The outer part of the kidney substance containing the glomeruli.

S., cor'tical, of the teeth. The cementum.

S., fibrinoplas'tic. (L. *fibra*, a fibre; Gr. *πλάσσειν*, to form.) Same as *Paraglobulin*.

S., first. The individual thing.

S., ger'minal. See *Germ-plasma*.

S., ground. The homogeneous intercellular matrix (that stains black with nitrate of silver) in which the cellular elements and fibres are embedded.

S., hy'aline. Same as *Cytoblastema*.

S., hy'aloid. Same as *Vitreous humour*.

S., intercel'lular. See *S., ground*.

S., interst'it'ial. The connective tissue of an organ.

S., intertu'bular. The matrix of dentine in which the dentinal canals are placed.

S., interver'tebral. Same as *Intervertebral discs*.

S., liv'ing. Protoplasm.

S., medull'ary. The central part of an organ. The tissue forming the medulla of bone.

S., nu'clear. *Chromatin*. Assumed by

Minot to be the essential factor in the function of heredity, and the nucleus, therefore the organ of hereditary transmission.

S., of Rolan'do. See *Substantia gelatinosa of Rolando*.

S. of Schwann, white. The medullary sheath of a nerve-fibre.

S., pari'etal. The matrix of cartilage.

S., prote'ic. (Πρώτος, first.) Same as *Proteid*.

S., retic'ular. Same as *Reticular formation*.

S., suppor'ting. A supporting tissue, as neuroglia.

Substan'tia. Substance.

S. cine'ria gelatino'sa. Same as *S. gelatinosa Rolandi*.

S. ebur'nea, os'sea, vit'rea. See *Tooth*.

S. ferrugin'ea. (L. *ferrugo*, rust.) A group of pigmented ganglion-cells on either side of the middle line just below the surface of the floor of the anterior part of the fourth ventricle. The locus cœruleus.

S. filamento'sa dentium. The enamel.

S. fus'ca. See *S. nigra*.

S. gelatino'sa centra'lis. The neuroglia which underlies the layer of columnar epithelial cells lining the central canal of the spinal cord.

S. gelatino'sa poste'rior, or Rolan'di. A part of the caput of the posterior cornu of grey matter of the spinal cord, near the tip of the cornu, having a peculiar semi-transparent appearance.

S. gris'ea. (L. *griseus*, grey.) The grey matter of the spinal cord.

S. hyal'ina. (Ἰαλος, glass.) Leydig's name for the interreticular portion of the protoplasm.

S., interme'dia. That portion of the cerebellar substance situated between the cortex and the central grey matter.

S. medulla'ris. The medullary substance of the kidney; also, of a hair.

S. ni'gra. A region marked by dark pigmented cells, separating the crusta from the tegmentum of the crus cerebri. Also called *S. nigra Soemmeringi*, *Stratum nigrum*, *Stratum intermedium*, and *Locus niger*.

S. opa'ca. Leydig's term for the reticulum of protoplasm.

S. os'sea denti'na. Dentine.

S. parenchymato'sa. (Παρά, beside; ἐγχέειν, to pour in.) Parenchyma.

S. prima'ria. The medullary portion of the central nervous system.

S. reticula'ris. Same as *Reticular formation*.

S. ru'bra. The splenic pulp.

S. Soemmerin'gi. Same as *Locus niger*.

S. spongio'sa. That part of the grey matter of the spinal cord which is not substantia gelatinosa centralis or posterior.

S. stria'ta. Same as *Enamel*.

S. vasculo'sa. The pulp of the spleen.

Subster'nal. (L. *sub*; Gr. *στέρνον*, sternum.) Situated or occurring beneath the sternum.

S. ten'derness. Pain on pressure over the lower part of the sternum, sometimes thought to be evidence of constitutional syphilis.

Substil'lum. *Stillicidium*.

Substitu'tion. (L. *sub*, under; *statuere*,

SUBSTRATUM—SUCCUSSION

to place.) The act or process of putting one thing, action, or effect in place of another. The vicarious action of organs.

S. operation. Advancement of a paretic muscle for the cure of diplopia.

Substratum. The under layer or stratum.

Substriate. Having imperfect striæ.

Subsulphate. A basic sulphate.

Subsul'torily. (L. *sub*; *saltire*, to leap.) In a subsultory or bounding manner; by leaps, starts, or twitches.

Subsul'tory. Same as *Subsultive*. Leaping, twitching.

Subsul'tus. (L. *subsultus*, leap up.) A twitching, jerky, or convulsive movement.

S. clo'nus. Same as *S. tendinum*.

S. ten'dinum. A twitching of the tendons, observed in many cases of low fevers, &c.; it is a grave symptom.

Subsyno'vial. Situated or occurring within a synovial membrane.

S. cysts. (Κύστις, a cyst.) Cysts caused by distension of the synovial follicles which open into joints, due to obstruction of their ducts.

Subteg'mem. (L. *subtextere*, to weave under.) Weft.

S. for'nicis. The layer of âbres beneath the superficial longitudinal bundles of the fornix.

Subtegumen'tal. Situated beneath the integument; subcutaneous.

Subtem'poral. Situated beneath the temporal gyrus of the brain.

S. point. That where the sphenotemporal suture is crossed by the infratemporal crest. (Topinard.)

S. width. Basilar or infratemporal diameter.

Subtep'id. Moderately warm; slightly tepid.

Subternat'ural. Below what is natural; less than natural.

Subthalam'ic. (L. *sub*; Gr. θάλαμος, an inner room.) Situated beneath the optic thalamus.

Subthorac'ic. (L. *sub*; Gr. θώραξ, thorax.) Situated below the thorax.

Subtrochanter'ic. (L. *sub*; Gr. τροχάντηρ, trochanter.) Situated below the trochanter.

S. amputa'tion. Removal of lower extremity just below the trochanters.

Subtroch'lear. (L. *sub*; Gr. τροχλία, a gully.) Beneath the trochlea.

Subtympa'nitic. Approaching the tympanitic quality.

Subu'berës. (L. *sub*, under; *ubera*, the breasts.) Suckling children.

Subulate. (L. *subula*, an awl.) In *Biol.*, awl-shaped.

Subuliform. Synonym of *Subulate*.

Subumbrel'la. (L. *sub*, under; *umbra*, shade.) In *Biol.*, the concave inner surface of the umbrella in medusæ.

Subun'gual. (L. *sub*, under; *unguis*, the nail.) Situated under the nail.

S. osteo'ma. A bony outgrowth capped with cartilage, which is attached to the ungual phalanx of the great toe. It projects through the matrix of the nail.

Subvag'in'al. (L. *vagina*, a sheath.) Placed within or on the inner side of a vaginal or sheathing membrane.

Subver'miform. (L. *vermis*, a worm; *forma*, shape.) Shaped somewhat like a worm.

Subvertebral. Placed under a vertebra; subspinal or hypaxial.

S. aor'ta. (Ἀορτή, the aorta.) The aorta, especially the primitive aortæ.

Succeda'neous. (L. *succedaneus*, *succidaneus*, that which follows after or fills the place of something.) Pertaining to, or acting as, a *Succedaneum*.

Succeda'neum. One which supplies the place of another.

S. ca'put. The œdematous scalp of the fœtus, from the pressure it was subjected to during parturition.

Succenturia'tus. (L.; F. *succenturié*, -ée, accessory placenta.) A portion of placental tissue removed from the main mass while fulfilling similar functions.

Succinam'ic acid. (L. *succinum*, amber.) $C_4H_7.HNO_3$. A crystalline monobasic acid.

Succine'tus. Diaphragm.

Suc'cini linimen'tum. Oil of amber, 1; spirit of camphor, 1; spirit of hartshorn, 1. Mix. A domestic embrocation for whooping-cough.

S. o'leum ru'brum. A volatile oil obtained by the destructive distillation of amber, and purified by subsequent rectification. Action, antispasmodic, stimulant, local irritant. Uses, pertussis, hysteria, rheumatism; externally in paralysis and rheumatism. Dose, 1 to 3 minims.

S. res'ina. Artificial musk.

S. tinctu'ra. Amber in fine powder, 1; rectified spirit, 16. Digest seven days. Dose, 25 minims in water for headache.

Succin'imid. (L. *succinum*, amber.) $C_4H_5NO_2$. A crystalline substance produced by the gentle ignition of the anhydride in a current of dry ammonia.

Succinin. $C_7H_{10}O_2$. A dark brown substance produced when equal parts of succinic acid and glycerine are heated together to about 230° C. The insoluble portion of amber.

Suc'cinome. An oily liquid obtained in the dry distillation of calcium succinate. It has a decided empyreumatic odour.

Suc'cinum. (L., gen. *succini*.) A fossil resin used in the preparation of Ol. Succini.

S. am'ber. (Not official.) A fossil resinous exudation from *Pinites succinifer*, an extinct coniferous tree, on the shores of the Baltic.

Suc'cubus. (L. *succubare*, to lie under.) Nightmare of the female only.

Succur'sal. (L. *succursalis*.) Subsidiary.

S. hos'pital. One attached to a larger, and not intended for severe cases.

Suc'cus. (L.) Juice. One of the fluid secretions of the body. In *Pharmacy*, the extracted juices of different plants.

S. enter'icus. The secretion of the glands of the small intestine. It has feeble proteolytic and amylolytic properties.

S. gas'tricus. Gastric juice.

S. pancreat'icus. Pancreatic juice.

Succuss'. (L. *succutere*, to fling up, shake up.) To elicit a splashing sound in the pneumothorax by suddenly shaking the patient.

Succusa'tion. A shaking. *Succussion*.

Succus'sion. A method of physical diagnosis which consists in grasping the thorax between both hands to elicit splashing sounds in the pneumothorax.

Suck. To draw something with the mouth. Specifically, to draw milk from a teat. Nourishment drawn from the breast.

Sucker. (Ang.-Sax., *sucan*; also *sugere*, to suck.) In *Biol.*, an organ adapted for suction; a sprout, a shoot or haustorium.

Suck'ing. Drawing or deriving nourishment from the mother's breast.

S. bot'tle. A nursing bottle.

S. cen'tre. A nervous centre believed to exist in the medulla with afferent fibres from the fifth cranial nerve and the glossopharyngeal. The efferent fibres are the facial and the hypoglossal, the third division of the fifth cranial nerve, and certain branches of the cervical plexus supplying the depressors of the jaw.

S.-pump. A breast-pump for extraction of milk from the breast.

Suckle. A teat.

Also, to give suckle to; nurse at the breast.

Suck'ling. A suckling child.

Suction. (L. *sugere*, to suck.) The removal of air, gas, or fluid from any space, producing a diminution of pressure, which induces an inrush of air, gas, or fluid to fill the vacuum.

S. curette' of Teale. An instrument employed for the removal of soft cataract.

S. of cat'aract. The removal, by means of a syringe, of the fragments of lens substance after dissection.

S. pow'er. Ability to suck.

Sudam'ina. (L. *sudare*, to sweat.) Vesicles resembling millet-seeds in form and magnitude, appearing on the skin in feverish conditions.

S. al'ba. The skin is macerated, and the vesicular contents milky.

S. crystalli'na. Clear vesicles.

S. maligna. *Miliaria*.

S. ru'bra. The vesicles have a reddish base.

Sudam'inal. Pertaining to, or of the nature of, *Sudamina*.

Suda'rium. A handkerchief. A sweating-room.

Sud'ary. (L. *sudarium*, a cloth for wiping off sweat.) A handkerchief.

Suda'tion. (L. *sudatis*, sweating.) A sweating.

Sudatoria maligna. *Miliary fever*.

S. milla'ria. Sweating sickness.

Sudatorium. (L. *sudare*, to sweat.) A hot-air bath for the production of perspiration.

Su'datory. (L. *sudatorius*, pertaining to perspiration.) That which is sudorific. A diaphoretic; a sweat-bath; a sweating-room.

S. fe'ver. The sweating sickness.

Su'dor. (L.) Sweat or perspiration.

S. anglicus. The English sweating sickness.

S. cruen'tus. *Hæmorrhidrosis*.

S. urino'sus, lac'teus, sanguin'eus. Sweat containing, or composed of, urine, milk, or blood.

Su'doral. Of, or pertaining to, sudor or sweat.

Sudorif'erous. (L. *sudor*, sweat; *ferre*, to bear.) Bearing sweat.

S. gland. Same as *Sweat-gland*.

Sudorif'ic. (L. *sudor*, sweat; *facere*, to make.) Causing, inducing, or promoting sweating. Sudatory, diaphoretic.

Sudorip'arous. (L. *sudor*, sweat;

parere, to produce.) Secreting sweat; producing perspiration.

S. gland. Same as *Sweat-gland*.

Sudo'ris nul'litas seu priva'tio. Absence or deficiency of sweat.

Su'dorous. Sweaty, sticky, or clammy, like sweat.

Suffering. (L. *sub*; *fero*.) The bearing of mental or physical pain or inconvenience. Also, pain endured.

Suffimen'tum or **Suffimen.** (L. *suffio*, to perfume.) Perfume; fumigation.

Suffla'tio. (L. *suf*; *flo*.) Puffiness.

Suf'focate. (L. *suffocare*, to suffocate.) To kill by the prevention of the access of air to the blood, or by preventing the gaseous interchange between the blood and the air. To impede respiration; to stifle.

Suffocating. Stifling, choking.

Suf'focatingly. In a suffocating manner.

Suffoca'tion. The act of suffocating; choking, stifling. The condition of being suffocated.

Suf'focative. Tending or able to choke or stifle.

S. catarrh'. (Laennec.) Capillary bronchitis.

Suffrag'inis. (L. *suffrago*, hock.) The large pastern-bone, a very compact bone in the foot of a horse, set in an oblique direction downward and forward, and extending from the cannon-bone to the coronet.

Suffrag'inous. (L. *suffrago*, hock.) Pertaining to the suffrago of the horse.

Suffra'go. (L., gen. *suffraginis*; pl. *suffragines*.) The hock of a horse's hind leg, whose convexity is backward. It corresponds to the human heel.

Suffrutes'cent. (L. *sub*, under; *frutex*, a shrub.) In *Biol.*, applied to a stem which is slightly shrubby at the base only.

Suffru'tex. (L. *sub*, under; *frutex*, a shrub.) In *Biol.*, an under-shrub.

Suffruticose'. (L. *sub*, under; *frutex*, a shrub.) Applied to an under-shrub or low shrub. Same as *Suffrutescent*.

Suffu'migate. (L. *suffumigare*, to smoke from below.) To apply fumes or smoke to the body.

Suffumiga'tion. The act of fumigating.

Suffu'mige, or Suffumig'ium. A medicinal fume.

Suffumina'tio. Fumigation; perfume.

Suffuse'. (L. *suffundere*, to pour upon.) To overspread, as with a fluid or tincture.

Suffus'io. (L. *suf*; *fundo*.) Impairment of sight, due to effusion into some parts or part of the eye.

S. dimid'ians. *Hemiopia*.

Suffu'sion. The act or operation of suffusing or spreading.

Suffu'sive. Pertaining to *Suffusion*.

Sug'ar. (*Saccharum*.) The name given to certain carbohydrates, obtained for the most part from vegetables, and divisible into three classes:

1. Fermentable or true sugars, as glucose.
2. Non-fermentable, as moist.
3. Saccharine bodies, having more hydrogen in their constitution than either 1 or 2.

S.-house molas'ses. *Treacle*.

S. of lead. *Lead acetate*.

S. teat. Sugar tied up in a rag of linen of the shape and size of a woman's nipple and moistened, given to an infant to quiet it.

Su'gent. (L. *sugere*, to suck.) Sucking, imbibing; fitted for, or habitually, sucking.

Sugges'cent. Fitted for sucking or imbibing.

Suggestibility. The mental state of a suggestible person in whom apperceptive systems are excited almost wholly by the commands, words, gestures, &c., of another person, and not by his own mutual competition and co-operation.

Sugges'tion. Specifically, in hypnotism, the insinuation of a belief or impulse into the mind of the subject by any means, as by words or gestures, usually by emphatic declarations. It appears to be entirely a phenomenon of unconscious memory.

S., post-hypnot'ic. Suggestion acted on only after awakening.

S., relative. The most general formula for it is—"If the presented content, δ , has formed part of a presented whole, δc , then the presented content, β , when it recurs, will tend to call up a whole, $\beta\gamma$, formally corresponding to δc . This ultimate principle may be complicated in endless ways; β , which corresponds to δ , may be a simple modification of δ , or may involve the relation of δ to a new context, and it may happen that the constituents of this new context have associations of their own, which contribute to determine the productive-reproductive process."

S., sim'ple. Opposed to relative suggestion.

S. ther'apy. Treatment of diseased states by suggestion.

Suggestionism. The doctrine that hypnotic persons are merely persons too trustful and submissive, and that the so-called hypnotic trance is merely a state in which these characters have been stimulated and distrust lulled.

Suggestionist. One who accepts the doctrine of suggestionism.

Sugg'il. (L. *suggilare*, to beat black and blue.) To beat black and blue; to defame.

Suggilate. Same as *Sugg'il*.

Suggila'tion. A livid black-and-blue mark, a blow, a bruise; ecchymosis. The spots occurring in disease and those in post-mortem changes.

Su'icidal. Partaking or relating to the crime of self-destruction.

Su'icidally. In a suicidal manner.

Su'icide. (L. *sui*, of himself; *cedere*, to kill.) One who commits self-murder or self-destruction. The act of designedly destroying one's life.

Suint. The natural grease of wool, consisting of insoluble soapy matter combined with a soluble salt containing from 15 to 33 per cent. of potash. Lanolin is obtained from it.

Su'jee. Fine flour from the heart of wheat, used in India to make bread for English tables.

Sul'cate. (L. *sulcus*, a furrow.) Furrowed, grooved; having long narrow depressions; fissured.

Sulca'tion. A sulcus or a set of sulci.

Sul'ci. The plural of *Sulcus*.

Sul'ciform. (L. *sulcus*, a furrow; *forma*, form.) Having the form or character of a sulcus; like a furrow or groove.

Sul'cus. A fissure between two gyri or convolutions on the surface of the brain.

Sul'fonal. See *Sulphonat*.

Sullen. Gloomy, dull, sad, sorrowful, melancholy.

Sullenly. In a sullen manner.

Sullenness. The state of being sullen.

Sul'len-sick. Sick with sullenness.

Sully. To soil, stain, varnish.

Sulphal'dehyde. (Not official.) An hypnotic obtained by the action of sulphuretted hydrogen on ethylic aldehyde.

Sul'phamid. A substance formed by action of sulphuryl chloride on free secondary amines.

Sulpham'inol. *Thio-oxydiphenylamine.* (Not official.) A substitute for iodoform, easily breaking up into phenol and sulphur. A yellow powder, without taste or smell, soluble in alcohol and alkalies, though not in water; melting at 155° C. A deodorising antiseptic, used internally and externally; said to be safe and non-irritant, especially in laryngological practice. A dry antiseptic dusting powder. It is antiseptic, antiphlogistic, and non-odorous; it suppresses ulceration in wounds, purifies them, and frees them from smell. The abscesses cicatrise under a dry crust of sulphaminol without irritation of the neighbouring tissue.

Sulphanil'ic acid. Sulphuric acid, 2 parts; aniline, 1 part; heated at 180° till SO₂ comes off. Used in Ehrlich's diazo-reaction.

Sulphar'sin. (L. *sulphur*; *arsenicum*, arsenic.) Cacodyl sulphide, a colourless inflammable liquid with an intensely disagreeable odour.

Sul'phate. Salt of sulphuric acid, formed by action of H₂SO₄ on—(1) Organic bodies, as quinine. (2) Metals, metallic hydroxides, or oxides. (3) Decomposable salts, as carbonates. (4) A solution containing a metal whose sulphate is insoluble with sulphuric acid or a soluble sulphate. May be neutral, acid, or basic. Test for sulphate: acidify with HCl, add barium chloride, and if a white precipitate falls soluble sulphates are present in the solution. Used in testing urine.

Sul'phatide. Any organic compound of the type of a phosphatide, in which all or a part of the phosphorus is replaced by sulphur.

Sulphichthyol'ic acid. An acid that appears to be the chief component of commercial ichthyol. Its sodium, ammonium, lithium, and zinc salts have been highly praised as efficacious in cystitis, nephritis, and diabetes.

Sul'phide. A direct compound of sulphur with an element or a basic radical. It may be considered as a salt of sulphuretted hydrogen. Some contain free sulphur, and are used to apply sulphur by fumigation or bath.

S. of an'timony. *Stibnite.*

S. of cal'cium. Used in itch.

S. of car'bon. CS. Will dissolve sulphur itself.

S. of hy'drogen. H₂S. (Unofficial.) A gas having the odour of rotten eggs; highly poisonous. It has been used as a rectal injection in the treatment of tuberculosis.

S. of iron. *Pyrites.* Found in nature.

S. of mer'cury. Cinnabar. Red, crystalline, found in nature. Artificially prepared, it is black, but gives red crystals when sublimed.

S. of potas'sa. Prepared by heating 2 parts of potassium carbonate with 1 part of sulphur. Narcotic and irritant. Dose, 2 to 10 grains.

SULPHIDUM—SULPHUR

S. of potas'sium. Prepared by heating together 2 parts of potassium carbonate with 1 of sulphur.

Sulphidum cal'cii. CaS . The "hepar sulphuris" of homœopathy, used mainly in the preparation of other compounds. Locally a remedy for scabies.

Sulphins. One of the several groups of crystalline compounds resulting from the combination of the thio-ethers with the iodides, bromides, and chlorides of the alcohol radicals at ordinary temperatures, but more rapidly on the application of heat.

Sulphite. Any salt of sulphurous acid. Being a dibasic acid, there are acid and basic sulphites.

Sulpho-. Prefix denoting the combination containing sulphur or a sulphur radical.

S.-azotised. Containing sulphur or nitrogen.

S.-bacte'ria. Organisms containing sulphur, growing in sulphuretted water.

S.-cal'cine. (Not official.) A proprietary article containing oxide of lime, washed sulphur, benzo-boracic acid, oil of eucalyptus, oil of winter-green, and extractum pancreaticus, used either in spray or gargle. Action, antiseptic, resolvent, astringent, powerfully solvent. Uses, as a solvent for a diphtheritic membrane; may be used pure or diluted with water.

S.-car'bamide. *Thio-urea*.

S.-car'bol. *Aseptol*.

S.-car'bolate. A salt of sulphocarbolic acid.

S. car'bolate of zinc. Antiseptic and disinfectant. It is used as an intestinal antiseptic. It makes an excellent injection in gonorrhœa.

S.-carbol'ic ac'id. Produced by the action of sulphuric acid on phenol. In a 35—40 per cent. solution it is sold as aseptol, or sozolic acid. Its isomeric form, paraphenol-sulphonic acid, is the acid of the sulphocarbulates, which is used internally and externally as an antiseptic. Calcium sulphocarbolate has been used in rachitis.

S.-car'bonated. Containing sulphur and carbonic acid.

S.-ichthyol'ic ac'id. Prepared by acting on ichthyol with strong sulphuric acid, and washing with a strong solution of sodium chloride.

S.-methyl'ic ac'id. Prepared by acting on methyl alcohol with sulphuric acid.

S.-o'lein, or Sulphoricinole'ic ac'id. Prepared by acting on castor oil with sulphuric acid.

S.-phe'nates. See *Sulphocarbulates*.

S.-phe'nol. See *Aseptol*.

S.-pi'eric ac'id. Add 4 c.c. pure sulphuric acid to 200 c.c. concentrated picric acid. Filter $\frac{1}{2}$ to 1 hour, and dilute the filtrate with 600 c.c. of distilled water.

S.-ric'inate. Salt of sulphuricinic acid, for which see *Sulpholein, Sulphoricinoleic acid*. Sodium sulphuricininate is used in ozæna narium.

S.-ric'inated. Prepared from sulphuricinic acid or sulphuricinates, as *S. creosote* and *S. phenol*.

S.-ricinole'ic ac'id. An acid prepared from castor oil by sulphuric acid. It is a thick syrupy liquid, which has the power of emulsifying and dissolving many substances. It is recommended for pharmaceutical uses.

S.-salicyl'ic ac'id. White soluble substance, crystalline. Prepared by treating salicylic acid with sulphuric anhydride. A delicate test for proteids.

S.-salt. A salt in which sulphur takes the place of oxygen in the acid radical.

S.-sinap'isin. A white, bitter, soluble, neutral substance obtained from *Sinapis alba*.

Sulphole'ic ac'id. A yellowish neutral liquid, prepared by treating vegetable oils with sulphuric acid. It has been used instead of vaseline.

Sulphonal. $\text{C}_7\text{H}_{16}\text{S}_2\text{O}_4$, eq. 228. (Official.) Diethylsulphon-dimethylmethane. In the preparation of this body, mercaptan (ethyl hydrosulphide) is combined with acetone to form mercaptol, which, by oxidation with potassium permanganate, forms sulphonal. It is in colourless, inodorous, nearly tasteless, gritty crystals.

It is now generally supplied in powder; its action is said to be more certain than when supplied in crystals. Solubility, 1 in 500 cold water, 1 in 15 boiling water, 1 in 78 rectified spirit, 1 in 3 of chloroform, 1 in 90 of ether. Action, hypnotic, with no evil secondary effects; but cases have been reported where poisonous symptoms have been produced in lunatics and in heart disease. Uses, of service when sleeplessness is persistent, producing calm normal sleep. Also of use in the insomnia of lunacy and delirium tremens.

Sulphone. One of the products of the union of two oxygen atoms with an alkyl sulphide.

Sulphovin'ic acid, or ethyl-sulphur'ic ac'id. Formed by the action of sulphuric acid on alcohol. Used as a solvent for camphor, iodoform sulphur, chrysarobin, &c.

Sulphox'ide. One of the products of the union of one oxygen atom with an alkyl sulphide.

Sulphur. (At. Wt. 32.) A non-metallic element, distinguished by its yellow colour and crystalline brittle formation. At 111° it forms a thin straw-coloured liquid, which becomes darker and thicker the more it is heated. Boils at 44° , and becomes a brownish-yellow vapour. The vapour on being suddenly condensed deposits, firstly, a fine powder, "flowers of sulphur;" secondly, a liquid which is drawn off and moulded in wooden moulds into "roll" or "stick sulphur."

S. al'cohol. *Mercaptan*.

S. antimoniatum. *Antimonii sulphuretum præcipitatum*.

S. bath. Sulphur-medicated bath.

S., car'buret of. *Carbonis sulphuretum*.

S. chlorat'um. *Chloride of sulphur*.

S., chlo'ride of. *Dichloride* and *Subchloride, Hypochloride, Protochloride*.

S. diox'ide. Formed by the combustion of sulphur in the presence of unlimited air. SO_2 .

S. ioda'tum. *Sulphuris iodidi*.

S. i'odide. Used as an ointment.

S., liver. *Potassii sulphuretum*.

S. lo'tum. Prepared by digesting sublimed sulphur in water of ammonia.

S. præcipita'tum. (Official.) Prepared by precipitating with hydrochloric acid a solution of sulphide and hyposulphite of calcium, obtained by boiling slaked lime and sublimed sulphur. Its medicinal properties are similar to those of *Sulphur sublimatum*.

SULPHURAIN—SUMBUL

S. ru'brum. *Antimony oxysulphuret.*

S. spring. A spring the water of which is impregnated with sulphureous compounds. They occur in regions of dying-out or dormant volcanism.

S. stibia'tum aurantia'tum. *Antimony pentasulphide.*

S. sublima'tum. *Flowers of sulphur.* (Official.) A slightly gritty powder of a fine greenish-yellow colour; without taste and without odour till heated. Insoluble in water, soluble in oils, slightly soluble in alcohol. Action, laxative, alterative, parasiticide. Uses, for hæmorrhoidal affections; chronic rheumatism; externally for scabies. Dose, 20 to 60 grains.

S. wa'ters. Waters impregnated with sulphuretted hydrogen.

Sulphurain. A peculiar organic gelatinous substance found on the surface of some thermal waters. It is also called glairin, baregin, plombierin, zoögene, glairidin, and zoidin.

Sulphurate. (*L. sulphuratus*, impregnated with sulphur.) Mingled with sulphur; of the yellow colour of sulphur.

Sulphurated. Impregnated with sulphur.

Sulphura'tion. (*L. sulphuratio*, a vein of sulphur.) The act of dressing or anointing with sulphur.

Sulphurator. An apparatus for impregnating with sulphur, or exposing substances to the action of its fumes.

Sulphu'reous. Consisting of, or having the qualities of, sulphur.

Sulphuret. A sulphide.

Sulphuretted. *Sulphureous.*

Sulphure'tum ammoni'acæ. *Ammonii sulphuretum.*

S. antimon'i aurat'um. *Antimony pentasulphide.*

S. arsenio'sum. *Orpiment.*

S. cal'ci. *Sulphurated lime.*

S. ferro'sum. *Ferrous sulphide.*

S. kali'cum. *Potassii sulphuretum.*

S. stibi'cum. See *Antimonium*.

Sulphu'ric. The anhydride and derived acid of sulphur trioxide, SO_3 . Sulphuric acid containing more or less SO_3 sulphur trioxide.

S. acid. H_2SO_4 . Sp. gr. 1.860 to 1.9. Dibasic, inodorous, strong acid taste, corrosive.

S. aci'd aromati'cus. Dose, 10 to 30 gtt.

S. ac'id, dilu'ted. Sulphuric acid, 1 fl. oz.; aq. dest., 15 fl. oz. Sp. gr. 1.067. Used as a tonic and astringent.

S. ac'id lemonade'. Sulphuric acid, water, and syrup.

S. e'ther. See *Ether, sulphuric*.

Sulphuric'ity. The state of being sulphureous.

Sulphuring. Bleaching with sulphurous acid.

Sulphuris confectio. (Official.) Sublimed sulphur, 4 ounces; acid tartrate of potassium, 1 ounce; syrup of orange peel, 4 ounces; tragacanth in powder, 18 grains. Dose, 20 to 120 grains.

S. chlori'dum. S_2Cl_2 , eq. 135. (Not official.) Prepared by the direct union of chlorine with sulphur.

S. iodi'dum. (Official.) It is greyish black in colour; is in a radiated crystalline

mass; odour of iodine; metallic lustre; reaction acid; taste acrid; soluble in 60 parts of glycerine and in disulphide of carbon; insoluble in water. Action, caustic, stimulant. Uses, in tubercular affections of the skin.

S. lo'tio. (Not official.) Precipitated sulphur, $\frac{1}{2}$ ounce; glycerine, 120 minims; rectified spirit, 1 ounce; rose water, 3 ounces; lime water, 3 ounces. Recommended in facial acne.

S. stim'ulant. Laxative and diaphoretic, and is used externally in itch.

S. trochis'ci. Precipitated sulphur, 3000 grains; acid tartrate of potassium, 720 grains; refined sugar in powder, 5760 grains; gum acacia in powder, 720 grains; tincture of orange peel, 720 minims; mucilage of acacia, 720 minims. Divide into 720 lozenges. Each lozenge contains 5 grains of sulphur. Dose, 1 to 6 lozenges.

S. trochis'ci compos'iti. Each lozenge contains 5 grains of precipitated sulphur, and 1 grain of cream of tartar. They differ from the official sulphur lozenges in containing no orange.

S. unguen'tum. Sublimed sulphur, 1 ounce; chloride of sulphur, 1 drachm; spermaceti ointment, 8 ounces; essential oil of almonds, 80 minims. Used in the treatment of scabies and acne. Also (official), sublimed sulphur 1, benzoated lard 4.

S. unguen'tum alkali'num. Washed sulphur 20, potassium carbonate 10, water 5, benzoated lard 65 parts.

S. unguen'tum compos'itum. (Not official.) Wilkinson's ointment. Sulphur 15, chalk 10, tar 15, lard 30, soap 30.

Chelsea pensioner. (Not official.) Sulphur 6, mustard 6, powdered guaiacum 3, rhubarb $1\frac{1}{2}$, nitre $1\frac{1}{2}$. Dose, a teaspoonful every alternate evening for rheumatism; it is also taken in the morning as an aperient to regulate the bowels.

S. unguen'tum iodi'di. (Official.) Iodide of sulphur, 30 grains; hard paraffin, $\frac{1}{2}$ ounce; soft paraffin, $\frac{1}{4}$ ounce. Used in scabies and acne.

S. unguen'tum præcipita'ta. (Not official.) Precipitated sulphur 2, carbonate of potassium 1, lard 8. Excellent for scabies.

Sulphu'rius. *Sulphureous.*

Sulphurize. To impregnate with sulphur, or subject to the action of its fumes.

Sulphuro'sus. *Sulphureous.*

Sulphurous. *Sulphureous.* A name applied to the acids and anhydrides obtained from sulphur dioxide. The acid is used as a disinfectant for clothes, letters, air, &c.; also, to fumigate in some chronic skin affections and in rheumatic pains. When respired it acts as a violent irritant, and will produce death. Its salts are sulphites.

Sulphy'drate. A compound of a metal with SH .

Su'mac. The powdered leaves, peduncles, and young branches of the various kinds of *Rhus*. Used in the manufacture of leather. Contains 16 to 20 per cent. of tannic acid.

Suma'tra camphor. *Camphor.*

Sum'bul ra'dix. Russia and India. Nat. Order *Umbelliferae*. (Official.) A perennial, six to eight feet high. The root is in transverse segments, light, spongy, with annular rings; bark thin and brown; odour of musk;

SUMBULUS—SUPERFETATION

taste, aromatic and bitter. Action, nervous stimulant. Uses, chronic bronchitis, hysteria, dysentery, chlorosis, asthma, leucorrhœa.

S. tinctu'ra. Sumbul root in No. 40 powder 1, rectified spirit 8. Dose, 10 to 30 minims.

Sum'bulus moscha'tus. *Ferula sumbul.*

Sum'en. *Hypogastrium.*

Summa'tion. (L. *summare*, to sum up.) Addition.

S. of stim'uli. The phenomenon of the production of mental effects, or the tetanic contraction of a muscle caused by repeated stimuli.

Summa'tional. Produced by summation.

S. tones. Supposed new tones produced by the summation of the vibrations of existing tones.

Sum'men. *Tinnitus aurium.*

Sum'mer catarrh'. Hay fever.

S. complaint'. Diarrhœa. *Cholera infantum.*

S. plant. *Sphæria sinensis.*

S. rash. *Lichen tropicus.*

S. sa'vory. *Satureia hortensis.* An aromatic stimulant. Used for culinary purposes.

S. spots. *Ephelides.*

Sum'mitas cu'tis. *Epidermis.*

Summita'tes sabinæ. *Savin.*

Sum'mus hu'merus. The point of the shoulder.

Sun'burn. To discolour. The discoloration of the skin occasioned by exposure to the sun's rays.

S.-burned. Same as *S.-burnt.*

S.-burnt. Tanned by the sun's rays.

S.-dew. *Drosera rotundifolia.* Antispasmodic, and useful in whooping-cough and bronchitis.

S. fe'ver. The same as *Dengue.*

S.-flower. The flower of the *Helianthus annuus.*

S.-glass. A burning-glass.

S. hemp. See *Hemp.*

S. pain. *Brow ache.*

S. ret'ina. A condition now and then seen in the macular region, somewhat resembling in outline a sunflower.

S.-strick'en. Affected by sunstroke.

S.-stroke. Acute prostration from excessive solar or artificial heat. In one variety (the hyperpyrexial form) there is coma with full and slow or rapid or jerking pulse, hot, flushed, or dusky skin, and very high temperature (105°—110° F.); in another (the asphyxial form) there is coma with feeble pulse, cold skin, and lowered temperature.

S.-struck. Affected with sunstroke.

Sune'sis. (Συνέσις, judgment.)

Sup. A prefix meaning under.

Supellectilè Diog'enis. See *Palm.*

Supel'lex anatom'ica. Anatomical collection.

Super-. A prefix meaning above.

Superabduc'tion. Excessive abduction.

Superacid'ulated. Acidulated to excess.

Superacro'mial. Situated upon or above the acromion.

Supercute'. Very acute.

Superadd'ed teeth. Permanent teeth

over and above those corresponding in position to the milk-teeth.

Superalbumino'sis. The over-production of albumen.

Superalimenta'tion. Excessive nourishment.

Superambula'cral. (L. *ambulacrum*, a walk.) Above the ambulacra.

Supera'nal. See *Supra-anal.*

Super'bus. (L.) Applied to the rectus superior oculi muscle, sometimes to the levator menti, because when in action they give the face a disdainful look.

Supercallo'sal. (L. *callosus*, hard.) Placed or occurring above the corpus callosum.

Supercalorine'sis. (L. *calor*, heat.) Any disease caused by the increase of the animal heat.

Supercil'iary. (L. *supercilium*, eyebrow.) Situated above the eyelid. Of, or pertaining to, the supercilia or eyebrows.

S. arch. The arched supra-orbital border or ridge.

S. mus'cle. The *Superciliaris*, or *Corrugator supercilii.*

S. ridge. A prominence caused by the projection of the frontal sinuses. It is absent in childhood.

Supercil'ium. (L.) The *Superciliary ridge*, *region*, or *arch*, including the hairs that constitute the eyebrow. *Acetabuli-cotyloid margin.*

S. acetab'ull. The margin of the cotyloid cavity.

Superconcep'tion. (L. *concipere*, to conceive.) *Superfætation.*

Superden'tate. Having teeth only in the upper jaw.

Superevacua'tion. Excessive evacuation.

Superexcita'tion. Excessive excitement.

Superexces'sence. A superfluous outgrowth.

Superfecunda'tion. The fertilisation of two ova at the same menstruation by different acts of coition.

Superfecun'dity. Superabundant fecundity.

Superfibrina'tion. Excessive tendency to form fibrin.

Superf'cial. (L. *superficialis*, of, or pertaining to, the surface.) Lying in or on, or pertaining to, the surface. Not deep-seated. Lying nearer the surface than some other part.

S. fas'cia. A fibrous sheet continuous all over the body; said to consist of two layers, because the mammary gland, superficial vascular and lymphatic vessels, and lymphatic glands are contained between the two layers.

S. re'flexes. See *Reflexes.*

S. stomati'tis. *Erythema* of the mouth.

Superf'cies. The surface or outside.

Superfis'sure. The lines of contact or of junction of two supergyres.

Superflex'ion. Excessive flexion.

Superfœ'tate. (L. *superfætare*, to conceive anew when already pregnant.) To conceive after a prior conception.

Superfœta'tion. A second conception some time after a previous one, so that two fœtuses of different ages exist at the same time in the same female. Also called *Superconception.*

SUPERFOLIATION—SUPINATOR

Superfolia'tion. Excessive number of leaves.

Superfron'tal. Superior or upper, as commissure of the frontal lobe of the brain. Specifying one of the anterior lateral fissures; distinguished from the subfrontal.

Superfunc'tion. Excessive activity in any organ.

Superfunc'tional. Being in excess of the normal function.

Supergemina'lis. *Epididymis.*

Supergenua'lis. *Patella.*

Superhu'meral. Something borne on the shoulders, or situated above the shoulders.

Superimpregna'tion. *Superfæta'tion.*

Superinduce'. To bring on as a complication of a condition actually existing.

Superinduced'. Superimposed.

S. segmen'tation. See *Homoplasia.*

Superinvolu'tion of the u'terus. Excessive absorption, leading to atrophy.

Super'ior. Upper in relative position or direction; uppermost with regard to another structure.

S. au'ris. *Attollens aurem (muscle).*

S. bul'bar paral'ysis. *Ophthalmoplegia externa.*

S. rotun'dus clitor'idis. *Ischiocavernosus.*

S. ver'miform pro'cess. The upper and front part of the middle lobe of the cerebellum.

Superla'bia. *Clitoris.*

Superlabia'lis. A muscle seen in some lower animals, the analogue of the *Levator labii superioris alæque nasi* of man.

Superlacta'lis. Excessive secretion of milk.

Superlig'ula. *Epiglottis.*

Superlunat'ical. Insane in an extraordinary degree.

Superme'dial. Situated over the midline.

Superna'tant. (L. *super*, above; *nature*, to swim.) Swimming above; floating on the surface.

Supernida'tion. Excessive proliferation of the decidua at the menstrual period. Sometimes the cause of membranous dysmenorrhæa.

Supernu'merary. (L. *super*, above; *numerus*, number.) Exceeding the necessary or usual number.

S. breast. An additional mammary gland.

S. fin'ger. Additional finger. Frequently hereditary.

S. kid'ney. An additional mass of kidney tissue situated in the neighbourhood of the kidneys.

S. spleen. Additional spleen.

Supernutri'tio lie'nis, or Super-nutri'tio sple'nis. Hypertrophy of the spleen.

Supernutri'tion. Excessive nutrition. Hypertrophy.

Superoccip'ital. Situated at or near the upper part of the occipital bone; of, or pertaining to, the superoccipital. The superior median element of the compound occipital bone.

Superofron'tal convolu'tion. Superior frontal convolution.

Superolat'eral. Situated high up on the side of a structure.

Superox'idised. Having an excess of

oxygen above the usual amount which satisfies the combining capacities of the other elements of a body.

Superoxygena'tion. Unusual and excessive oxygenation; for instance, of the blood.

Superpar'asite. A parasite of parasites.

Superparasit'ic. Pertaining to *Superparasitism.*

Superpar'asitism. The infestation of parasites by other parasites.

Superphos'phate. A phosphate containing a greater amount of phosphoric acid than can combine with the base.

Superposed'. Placed above.

Superpurga'tion. More purging than necessary.

Supersa'cral. Situated on or above the sacrum.

Super-salt. Any salt containing an excess of acid. An acid, as distinguished from a basic salt.

Supersat'urate. To saturate to excess.

Supersatura'tion. The operation of saturating to excess.

Superscap'ular. The same as *Suprascapular.*

S. infe'rior. *Infraspinatus.*

Superse'cretion. Over-secretion.

Superse'dent. A medicine whose action tends to remove an existing, or prevent a threatened, pathological process in an organ.

Supersen'sitive. Excessively sensitive; morbidly sensitive.

Supersen'sitiveness. The state or condition of being morbidly sensitive.

Supersphenoi'dal. Situated on or over the sphenoid; as the supersphenoidal pituitary fossa or body.

Supersquamo'sal. A bone of the skull of the ichthyosaurus.

Superstib'ias potas'sicus. *Antimonium diaphoreticum.*

Supertem'poral. Situated above or high up in the temporal region. Specifically, certain lateral cerebral gyri and sulci.

Supervenos'ity. The condition of being more than usually venous. Applied to the blood.

Superven'tion. The occurrence of another state in addition to that existing, *e.g.* necrosis after fracture, septicæmia after operation.

Sup'inate. (L. *supinare*, to lay on the back.) To bring the palm of the hand upward.

Supina'tion. The condition in which the palm of the hand is uppermost and the bones of the forearm are parallel. The opposite of pronation; if hanging, the thumb is directly forward.

Supina'to-exten'sor mass. The group of muscles placed on the radial and dorsal aspects of the forearm.

Sup'inator. A muscle which supinates the forearm.

S. bre'vis. A muscle arising from the external condyle of the humerus, the ulna, and inserted into the upper part of the radius between the oblique lines.

S. lon'gus. A muscle arising from the upper two thirds of the external supracondyloid ridge, and inserted into the lowest and outermost part of the radius.

S. ra'dii bre'vis. See *S. brevis.*

S. ra'dii lon'gus. See *S. longus.*

SUPINE—SUPRACILIARY

S. ridge of the hu'merus. The external supracondyloid ridge.

Supine'. Lying on the back.

Suppage. Food which may be supplied.

Suppeda'nea. (L. *sub*, under; *pes*, a foot.) Remedies applied to the sole of the foot.

Suppeda'neous. Appertaining to the sole of the foot.

Supplanta'lia. *Hypopodia*.

Supple. (L. *supplex*, humble, suppliant.) Pliant, flexible, easily bent.

Supplemen'ta epiplo'ica. *Appendiculæ pinguedinosæ*.

Supplemen'tary. (L.) Additional to what is normal or usual; added, as something secondary, subsidiary, useless.

S. air. The air inspired in a forced inspiration over and above that which would be inspired by the same person in an ordinary inspiration. Averages 500 c.c. (Foster.)

S. blad'der. A sacculated diverticulum of the bladder.

S. dig'it. An extra digit.

S. spleen. A small body similar to the spleen in structure, found in its neighbourhood.

Suppleness. The property of being supple; pliability.

Support'. (1) That which maintains life; subsistence; sustenance. (2) The act of holding anything in its position. (3) Any appliance acting as a supporter.

Supporter. (L. *supporto*.) An apparatus arranged to exercise even, continuous pressure on the abdominal wall, to return or keep in place an organ, or assist the abdominal wall.

Supporting cells. A series of cells in the organ of Corti which are said to support others more immediately engaged in functioning, as auditory cells.

Suppositi'tious. Spurious, not genuine.

Suppositor. An instrument for introducing suppositories.

Supposito'ria. (L. pl. of *suppositorium*.) Official name of suppositories. See *Suppository*.

S. ac'idi carbol'ici cum sapo'nē. Suppositories each of which contains carbolic acid, gr. j; curd soap, gr. xv; glycerine of starch, gr. iij½. (B.P.)

S. ac'idi tan'nici. Suppositories each containing tannic acid gr. iij, and Ol. theobromæ gr. xij. (B.P.)

S. a'cidi tan'nici cum sapo'nē. Suppositories containing each tannic acid, gr. iij; curd soap, gr. viij½; glycerine of starch, gr. ijs; starch, q.s. (B.P.)

S. hydrar'gyri. Mercurial suppositories composed each of ointment of mercury gr. v, and Ol. theobromæ gr. x. (B.P.)

S. iodoform'i. Suppositories each of which is composed of iodoform gr. iij, and Ol. theobromæ gr. xij. (B.P.)

S. morphinæ. Suppositories each of which contains hydrochlorate of morphine, gr. ss, with Ol. theobromæ gr. ij. (B.P.)

S. morphinæ cum sapo'nē. Suppositories each of which contains hydrochlorate of morphine gr. ss, glycerine of starch gr. ijs, curd soap gr. viij½, and starch q.s. (B.P.)

S. plum'bi compos'ita. Suppositories each of which contains acetate of lead gr. iij, opium gr. j, and Ol. theobromæ gr. xj. (B.P.)

Supposi'tories, mercu'rial. *Suppositoria hydrargyri*.

S. of carbol'ic ac'id. *Suppositoria acidi carbolici*.

S. of glu'ten. (Non-official.) Used to excite action of the rectum.

S. of i'odoform. *Suppositoria iodoformi*.

S. of lead, com'pound. *Suppositoria plumbi composita*.

S. of morphine. *Suppositoria morphinæ*.

S. of tan'nic ac'id. *Suppositoria acidi tannici*.

S. of tan'nic ac'id with soap. *Suppositoria acidi tannici cum sapone*.

Suppositorium. A *Suppository*.

Supposito'ry. A solid medicated compound designed to be introduced into the rectum, vagina, or urethra. Its basis is usually oil of theobroma; cacao butter and a mixture of gelatine and glycerine are also used. Usually conical, it may be cylindrical or spherical. It melts at the body temperature.

Suppressed'. Subdued.

S. breath'ing. Absence of breath-sounds.

Suppres'sio. Concealment.

S. a'lii. Constipation.

S. lochia'rum. Suppression of the lochial discharge.

S. lo'til. Suppression of urine.

S. men'sium. Amenorrhœa.

S. sudo'ris. Suppression of sweat.

Suppres'sion. (L. *supprimere*, to press down, suppress.) The stoppage or obstruction or the morbid retention of discharges; as suppression of the urine.

Sup'purans. (L.) Suppurative.

Sup'purant. Suppurating, or an agent which promotes suppuration.

Sup'purate. (L. *suppurare*, to produce pus.) To produce pus.

Suppura'tion. Formation of pus. The matter produced by suppuration.

Sup'purative. A medicine or application promoting the formation of pus.

S. kerati'tis. Destruction of corneal tissue by suppurative inflammation.

Suppure'. To suppurate.

Supra-acro'mial. Above the acromion.

S. ar'tery. A branch of the suprascapular part of the subclavian.

S. nerves. Descending cutaneous branches of the third and fourth cervical nerves.

Supra-acromio-humeral'is. The deltoid.

Supra-a'nal. Above the anus.

Supra-aryglottide'us. The superior aryteno-epiglottidean muscle of the larynx.

Supra-auricular. Situated above the auricle or external ear.

S. diam'eter. Inferior parietal diameter.

S. point. On the zygoma above the external auditory meatus.

Supra-axillary. Above the axilla.

Supra-bran'chial. (L. *supra*; *branchia*.) Above the gills.

Suprabuc'al. (L. *supra*; *bucca*.) Above the mouth.

Supracephal'ic. (L. *supra*; Gr. *κεφαλή*, head.) Above or on the head.

Supracho'roid. (L. *supra*; Gr. *χόριον*, chorion.) Above the choroid.

Suprachoro'id'al space. The space between the velum interpositum and the fornix.

Supracili'ary. Same as *Superciliary*.

SUPRACLAVICLE—SUPRA-OMPHALODYMIA

Supraclavicle. A distinct part of the scapular girdle of certain fishes, *e. g.* sturgeon.

Supraclavicular. Situated above or upon the clavicle.

S. fossa. The depression above the clavicle between the origins of the sterno-mastoid and the trapezius.

S. nerves. Descending cutaneous branches of the third and fourth cervical nerves.

S. plexus of lymphatics. Derived from the lymphatic vessels about and in the neighbourhood of the subclavian vessels.

S. point. A spot above the clavicle where electrical stimulation causes contraction of the deltoid, biceps, sterno-mastoid, brachialis anticus, and supinator longus.

S. re'gion. See *Triangles*.

Supracom'missure. The commissure of the brain just in front of the epiphysis.

Supracondylar. (L. *supra*; Gr. *κόνδυλος*, a knuckle.) Situated above the condyles, as of the humerus, femur, occipital bone, or mandible.

S. em'inence or protu'berance. The internal or external epicondyles.

S. fora'men. (L.) The posterior condyloid foramen of the occipital bone. A foramen sometimes found in the inner supracondyloid ridge of the humerus, through which the brachial artery and median nerve may pass.

S. ridg'es. The ridges extending upwards from the condyles of the femur and humerus.

Supracondyloid. The same as *Supracondylar*.

S. amputa'tion of the thigh. In this operation the femur is divided at the bases of the condyles, at about the level of the adductor tubercle or a little above that spot. The patella is removed.

S. osteot'omy of the fe'mur. (MacEwen's operation.) Consists in causing a compound fracture of the lower end of the femur for the relief of genu valgum.

Supracor'acoid disloca'tion. This is a very rare injury, usually accompanied by fracture of the coracoid or acromion processes, or both.

Supracos'tal. Lying upon or above the ribs.

Supracosta'lès. Twelve short musculo-tendinous masses extending from the transverse processes of the twelve dorsal vertebræ to the upper margins of the ribs below.

Supracosta'lis superficialis. A muscle sometimes found in man to extend from the first rib to the sternum, or to some of the ribs below.

Supradiaphragmatic. Placed above the diaphragm.

Supradors'al. Placed dorsally.

Suprafolia'ceous. Inserted upon the stem above the axil of a leaf.

Suprafo'liar. Growing upon a leaf.

Supragenual bur'sa. (L. *genu*, a knee; *bursa*, a purse.) Suberural bursa.

Supragle'noid tu'bercle. (Γληνή, a cavity; *είδος*, form.) The roughened space above the glenoid cavity to which is attached the long or intra-capsular head of the biceps.

Supraglott'ic. Situated above the true glottis. Relating to, or referring to, any part of the larynx above the true vocal cords.

S. apho'nia. (A, priv.; *φωνή*, sound.)

Aphonia due to some affection of the parts above the glottis.

Suprahepatic veins. Hepatic veins.

Suprahy'oid. (Υοειδής, like an upsilon, υ.) Situated above the hyoid bone. Specifically applied to the submental or hyo-mental group of muscles.

S. aponeuro'sis. (Ἄπό, front; *νεῦρον*, a tendon.) A fold of cervical fascia extending between the anterior bellies of the digastric muscles, forming a loop that binds the tendon down to the body of the hyoid bone.

S. glands. One or two lymphatic glands in the neck between the anterior bellies of the digastric.

S. re'gion. That part of the front of the neck situated above the hyoid bone.

Supra-il'iac. Situated on the upper or proximal end of the ilium.

Supra-il'ium. A proximal epiphysis of the sacral end of the ilium in some animals.

Supra-in'guinal. The space bounded by Poupart's ligament, rectus abdominis, and a horizontal line through the crest of the ilium.

Supra-intestinal. Situated dorsal to the intestinal canal.

Suprala'bial. Of, or pertaining to, the upper lip. Situated on or over the upper lip.

S. el'elevator. The *Supralabialis*.

Supralabia'lis. The *Levator labii superioris*.

Supramalle'olar. Above the malleoli.

S. amputa'tion. Removal of the leg above the malleoli.

Supramam'mary. Lying above the mammae.

S. ab'scess. An abscess in the subcutaneous tissue of the breast.

S. re'gion. Same as *Infra-clavicular region*.

Supramar'ginal. Bordering on the Sylvian fissure on the upper side; noting a convolution of the brain.

S. convolu'tion or gy'rus. One of the parietal gyri which lie along the upper margin of the Sylvian fissure.

Supramas'toid. Above the mastoid portion of the temporal bone.

S. crest. Ridge on the bone above the mastoid process.

Supramaxil'la. See *Maxilla*.

Supramaxill'ary. Of, or pertaining to, the *Maxilla*.

S. nerve. The maxillary division of the fifth nerve, distributed to the teeth and the skin of the face, leaving the cranial cavity by the foramen rotundum.

Suprana'sal. Situated above the nose, or over the nasal bones.

S. point. The same as *Ophryon*.

Supraneur'al. Situated above the neural axis or canal.

Supra-obliq'uus. The superior oblique or trochlear muscle of the orbit.

Supra-occip'ital. The same as *Superoccipital*.

S. an'gle. Contained between lines joining theinion and lambda to the auricular point.

S. bone. Squamous portion of the occipital bone.

Supra-oesopha'geal. Situated dorsal to the gullet.

Supra-omphalodym'ia. Double monstrosity in which the trunks are united.

SUPRA-ORBITAL—SUPRASTERNAL

Supra-or'bial. Situated over or upon the orbit; roofing over the eye socket. *Superciliary.*

S. arch. The superciliary arch.

S. ar'tery. A branch of the ophthalmic artery passing through the supra-orbital foramen.

S. bone. A bone entering into the formation of the supra-orbital or superciliary arch in the lower Vertebrates.

S. canal'. The *S. foramen* extending into a canal.

S. fora'men. A foramen in the upper rim of the margin of the orbit for the passage of the supra-orbital artery and nerve.

S. gy'rus. See *Gyrus*.

S. nerve. A branch of the superior maxillary division of the fifth cranial nerve supplying the skin of the forehead.

S. neural'gia. Neuralgia over the distribution of the supra-orbital nerve.

S. notch. When the *S. foramen* is incomplete.

S. point. A tender spot over the *S. notch* in *S. neuralgia*. The *Ophryon*.

S. ridge. Same as *S. arch*.

S. sul'cus. A fissure on the median aspect of the frontal lobes parallel with the lower surface of that lobe.

S. vein. A vein from the forehead joining the frontal vein.

Supra-or'bitar. Same as *Supra-orbital*.

Supra-or'bitary. Same as *Supra-orbital*.

Suprapatel'lar. Situated above the patella.

Supraped'al. Above the foot.

Suprapharyn'geal. Dorsal to the pharynx.

Su'praplex. (L. *supra*, above; *plexus*, plexus.) One of the plexuses of the brain of some animals.

Supraplex'al. (L. *supra*, above; *plexus*, plexus.) Pertaining to the *Supraplex*.

Suprapromontorence. Prominence formed by the wall of the petro-mastoid canal above the foramen ovale and inferior semicircular canal.

Suprapontine. Above the pons.

S. ar'teries. Vessels given off by the basilar artery.

Suprapu'bian. The same as *Suprapubic*.

Suprapu'bic. Situated above the pubes; prepubic.

S. nerve. *Genito-crural*.

Suprapu'bically. Above the pubes.

Suprapy'gal. Situated above the rump.

Suprapectus. The superior rectus muscle of the eye.

Suprarenal. Situated upon or over the kidney; specifically, the adrenal.

S. ar'teries. (1) A branch of the abdominal aorta supplying the adrenals. (2) A second, superior from inferior phrenic. (3) A third, inferior from the renal.

S. bod'ies, acces'sory. Small bodies having a similar structure to the cortical substance of the adrenals, found in their neighbourhood.

S. cap'sule or bod'y. A small body placed on the upper end and somewhat anterior to either kidney, consisting of an external cortex and an internal medulla, enclosed in a capsule of connective tissue, which sends septa into the

interior of the organ. The cortex consists of cells arranged in three zones (*zona fasciculata*, *zona glomerulosa*, and *zona reticularis*); the medulla, of cells originally derived from the sympathetic ganglia.

S. gland. The same as *S. body*.

S. melas'ma. The same as *Addison's disease*.

S. nerves. Derived from the solar plexus.

S. plex'us. Formed by the suprarenal nerves from the solar plexus.

S. veins. Veins draining the adrenals, emptying on the right side into the inferior vena cava, and on the left into the left renal or phrenic vein.

Suprascap'ula. A bone developed in the shoulder-girdle of ordinary Fishes. That part of the vertebral border of the scapula formed by separate ossification centre or centres.

Suprascap'ular. Situated above or on the upper part of the scapula. Prescapular. Pertaining to the suprascapula.

S. ar'tery. A branch of the thyroid axis passing above the transverse ligament of the suprascapular notch to supply the scapula.

S. fas'cia. Deep fascia covering the muscles of the suprascapular region.

S. mus'cles. Muscles lying over the scapula.

S. nerve. A branch of the fifth and sixth cords of the brachial plexus.

S. notch. The notch in the innermost part of the superior border of the scapula, converted into a foramen by the transverse ligament.

S. re'gion. That region of the back superior to the scapular spine.

S. vein. A tributary of the external jugular or subclavian vein.

Suprasemiocircular'ris. *Orbicularis oris*.

Suprasep'tal. Situated above a septum.

Supraserra'tus. The *Serratus posticus superior*.

Supraspi'nal. Situated dorsal to the spine; epaxial.

Suprasspina'lis. One of the series of muscular slips found between the spinous processes of the vertebrae.

Supraspin'ate. The same as *Supraspinous*.

Suprasspina'tus. A muscle arising from the supraspinous fossa of the scapula, and inserted into the great tuberosity of the humerus.

Supraspi'nous. Situated over or above the spine of a vertebra; superior with reference to the spine of the scapula.

S. aponeuro'sis. The strong fascia covering the supraspinatus.

S. ar'tery. A branch of the suprascapular artery supplying the supraspinous fossa.

S. fas'cia. See *S. aponeurosis*.

S. fos'sa. The fossa of the scapula above the spine.

S. lig'ament. Bundles of fibres connecting the tips of the spinous processes of the vertebrae from the seventh cervical to the sacrum.

S. mus'cle. Muscle filling up and arising from the inner two thirds of the *S. fossa*, and inserted into the highest facet on the great tuberosity of the humerus.

Suprastape'dial. Situated above the stapes.

Supraster'nal. Situated above or in front of the sternum.

SUPRATEMPORAL—SURGICAL

S. artery. A branch of the cutaneous supraclavicular artery.

S. bones. Two small bony nodules found at times connected by ligament or cartilage to the upper end of the manubrium sterni.

S. nerve. One of the descending branches of the third and fourth cervical nerves of the cervical plexus.

S. notch. The shallow depression at the upper part of the sternum, between the origins of the sterno-mastoids.

S. region. The region in front of the neck between the two supraclavicular regions.

Supratemporal. Placed high up in the temporal region or fossa.

Suprathoracic. Situated above the thorax; in the upper part of the thorax.

Suprathyroid laryngotomy. An operation which consists in making an incision through the thyro-hyoid membrane. It has been practised for the removal of growths situated at the upper opening of the larynx, especially in connection with the epiglottitis.

Supratrochlear. Situated over the inner angle of the orbit, where the tendon of the superior oblique muscle passes through its pulley; situated on the inner surface of the fore-part of the humerus above the trochlea.

S. nerve. A branch of the nasal nerve passing out of the orbit above the trochlea of the superior oblique muscle.

Supratympanic. Situated over or above the tympanum or tympanic cavity of the ear.

Supravaginal. Superior in respect of a teno-synovial membrane. Situated above the vagina.

Sura. The calf of the leg. The prominence formed by the gastrocnemius muscle.

Sural. (L. *sura*, the calf of the leg.) Of, or pertaining to, the calf of the leg.

S. arteries. The muscular branches of the popliteal artery distributed to the gastrocnemius and soleus.

S. nerve, superficial. That formed by the communicans tibialis and communicans fibularis.

S. vein. Just below the skin of the calf; opens into the popliteal vein.

Suralimentation. The forced feeding employed, at times, in the treatment of phthisis.

Suralis. *Sural*.

Sura'nal. The same as *Supra-anal*.

Sur'circle. (L. *super*; *cingulum*, a girdle.) The tail of the corpus striatum.

Sur'culi fellei. Ductules which convey the bile to the hepatic ducts.

Sur'culus. A sucker.

Sur'ditas. (L. *surdus*, deaf.) Deafness.

S. muto'rum. Deaf-dumbness.

S. verba'lis. Word-deafness.

Sur'dity. (L. *surditas*, deafness.) Deafness. Non-vocality.

Surdomuta'tis. Deaf-mutism.

Sur'domute. A deaf and dumb person.

Sur'dus. Deaf.

Suren, or Suro'nés. The old German name (and its Latinised form) for the pustules of scabies.

Surface. (L. *superficies*, the upper side or top.) The bounding or limiting parts of a body.

S. ten'sion. The tension of the surface-

film of a liquid due to cohesion. This seems to explain many of the phenomena of capillarity.

S. wells. Those which obtain their water from the subsoil.

Sur'feit. (F. *surfait*, excessive.) To feed to excess, so as to produce uneasiness or sickness.

S. wa'ter. A water reputed to cure surfeits.

Sur'feiter. A glutton.

Sur'felting. Excess in eating and drinking.

Sur'feit-swelled. Swelled with excessive eating.

Sur'geon. (Mid. Eng. *surgeon*, *surgien*, *surgeyn*, *surgin*, a contraction of *chirurgian*, *chirurgien*; F. *chirurgien*.) One who practises surgery; one who performs manual operations on a patient. A general practitioner. A medical officer in the army or navy.

S.-accou'cheur. One who does midwifery in his practice.

S.'s ag'aric. Spunk, touch-wood. The fungus *Polyporus fomentarius*. Used as a hæmostatic.

S.-apoth'ecary. One who has passed the examinations of the Royal College of Surgeons and the Apothecaries' Hall.

S.-au'rist. An otologist.

S.-den'tist. A dental surgeon.

S.-gen'eral. A surgeon of the higher ranks in the army or navy.

S.-gen'eralship. The office of a surgeon-general.

S.'s knot. This is made by passing one end of the thread twice over the other before passing each back again to form the second noose.

S., vet'erinary. One who treats diseases of the domestic animals.

Sur'geoncy. The office of surgeon, military or naval.

Sur'geonry. The practice of a surgeon; surgery.

Sur'geonship. The office or post of a surgeon.

Sur'gery. The work of a surgeon. Surgical care; therapy of a distinctly operative kind. The place where a practitioner dispenses medicines and sees his patients.

S., anti'septic. Surgery with antiseptic precautions.

S., clin'ical. Surgery pertaining to the bedside.

S., con'servative. The employment of surgery with the object of preserving part of the body.

S., den'tal. Dentistry.

S., ma'jor. Important operations.

S., mil'itary. Surgical attention paid on the field of battle or afterwards.

S., op'erative. Comprises important and slight operations.

S., orthopæ'dic. The treatment of deformities, chiefly of the limbs.

S., plas'tic. Operations having for their object the correction of deformities involving the skin or mucous membrane.

Sur'gian. An obsolete form of *Surgeon*.

Sur'gical. Of, or pertaining to, surgeons or surgery; done by means of surgery.

S. anat'omy. That part of anatomy dealing with the surface anatomy of the body, the palpation of organs, and that part concerned with the operations of surgery.

SURGICALLY—SUSPENSORY

S. drain'age. The use of some form of drainage-tube or tent to remove discharge from wounds.

S. fe'ver. See *Traumatic fever*.

S. kid'ney. See *Kidney*.

S. neck of the humerus. The thinner part of the shaft below the tuberosities, which is most often the site of fracture.

S. pathol'ogy. The pathology of conditions requiring surgical treatment.

S. sore-throat. Caused by the absorption of septic matter in hospitals.

S. ty'phus fe'ver. *Pyæmia*.

Surg'ically. In a surgical manner; by means of surgery.

Surg'ien. An obsolete spelling of *Surgeon*.

Surinam' bark. Bark of the *Geoffroya surinamensis*.

S. quas'sia. Bark of the *Geoffroya surinamensis*.

S. tea. See *Tea*.

Surin'amine. One of the alkaloids of the bark of *Geoffroya surinamensis*. Cathartic and anthelmintic.

Surprise'. To strike with amazement.

S. bath. See *Bath*.

S., cer'ebral. Instant and temporary stupor due to mental shock or lesion of the brain.

Sur'ra, or Sur'rah. A form of pernicious anæmia attacking horses and mules, &c., in India. Due to the *Spirochaeta Evansi*, an infusorian in the blood.

Surrec'ta al'ba. *Ranunculus flammula*.

Surre'nal. The same as *Suprarenal*.

Surrogate. (*L. surrogatus*, substituted.) Any medicine or ingredient used as a substitute for another and more expensive ingredient, or one to which there is a special objection in any particular case.

Surroga'tum. (*L. surrogatus*, substituted; *succedo*, to come in the place of another.) Succedaneum. A term used to describe drugs which are substituted for others of more expensive kind.

Sursumduc'tion. (*L. sursum*, upon; *ducere*, to lead.) The power possessed by the eyes of combining two images due to the presence of a vertically placed prism before one eye.

Sursumver'gens. (*L.*) Tending upwards, *e.g.* a vertical squint.

Surum'pe. Hyperæsthesia of the retina observed at great heights in the Andes.

Survival. (*L. super*, over; *vivere*, to live.) Persistence of life in a race or individual after the extinction of related forms.

Survivorship. The probability of a certain individual having survived others when all concerned were in the same accident and all were killed (*Legal Medicine*).

Sus. Same as *Sursum* as a prefix.

Susceptibility. (*L. suscipere*, to take up.) The state or character of being susceptible.

Suscep'tible. (*L. suscipere*, to take up.) Capable of receiving or admitting, or of being affected; capable of being, in some way, passively affected.

Suscept'ibleness. Susceptibility.

Suscept'ibly. In a susceptible manner.

Suscep'tio intestino'rum. (*L.*) Intussusception.

Suscept'iveness. Susceptibility.

Susceptiv'ity. Susceptibility.

Suscitability. The state or quality of being readily roused, lifted up, or excited.

Sus'cite. (*L. suscitare*, to lift up, excite.) To rouse, excite, or call into life or action.

Suscita'tion. The act of rousing or exciting.

Suspend'ed. (*L. suspendere*.) Hanging as an ovule from the ovarian wall, or a seed in its pod.

S. anima'tion. Temporary stoppage of some vital function; may be caused by asphyxia, catalepsy, syncope, trance, and has been known to last some days. Usually of short duration.

S. mat'ter. Particles floating in fluid, air, or gas.

Suspendic'ulum. (*L.*) *Cremaster*.

Suspen'sa. (*L.*) Clouding of the urine while cooling.

Suspen'sion. (*L.*) Hanging as a passive state. The method of treating locomotor ataxy by supporting the head at the chin and occiput, and allowing the body-weight to fall entirely on the neck. It is used also in spinal compression, and acts on the crumpled-up tissues and on the cord.

Suspen'sor. (*L.*) The chain of cells formed by the division of the germ-cell in the embryo-sac before the embryo can be seen.

Suspenso'rium. (*L.*) That which suspends.

S. hep'atis. Falciform ligament, or the suspensory ligament of the liver.

S. tes'tis. *Cremaster* muscle.

Suspenso'rius. A suspensory muscle.

S. duode'ni. A band of plain muscular fibres connecting the lower end of the duodenum with the connective tissue about the celiac axis.

S. lig'ament of the mal'leus. A band of fibres connecting the malleus and the roof of the tympanum.

Suspen'sory. (*L. suspendere*, to suspend.) Adapted to, or serving to, suspend a part or organ; suspensorial. *Surg.* Forming a special kind of sling in which an injured or diseased part is suspended.

S. band'age. A bag attached to a strap or belt. Used to support the scrotum.

S. lig'ament. The strong fascia connecting the base of the dorsum of the penis to the parts over the penis.

S. lig'ament of the axil'la. Part of the deep layer of axillary fascia.

S. lig'ament of the axis. The middle odontoid ligament connecting the tip of the odontoid process of the axis and the edge of the foramen magnum.

S. lig'ament of the clit'oris. A band of fascia passing from the symphysis pubis to the dorsum of the clitoris.

S. lig'ament of the in'cus. A delicate band of fibres attaching the incus to the roof of the tympanum.

S. lig'ament of the lens. The annular ligament, a differentiated section of the hyaline membrane of the vitreous body passing from the ciliary process to the edge of the lens.

S. lig'ament of the mam'ma. Fibrous processes, of ill-defined extent, which pass from the superficial part of the superficial fascia to the skin and nipple. The intervening spaces contain fat.

S. lig'ament of the pericar'dium. A

SUSPENSUM—SUTURA

process of the deep cervical fascia continued along the vena cava superior, aorta, and pulmonary artery to the pericardium.

S. ligament of the spleen. A fold of peritoneum extending from the under surface of the left leaflet of the diaphragm to the spleen, and continuous with the peritoneum on the spleen.

S. ligaments of the diaphragm. Folds of pre-vertebral fascia to the trefoil tendon of the diaphragm.

Suspensum urinæ. (L.) The cloudiness seen in urine which is cooling or cooled.

Suspiral. (L. *suspirare*, to breathe out.) A breathing-hole.

Suspiration. The act of sighing, a deep respiration.

Suspire. To sigh.

Suspirious. A sigh, deep breathing; asthma.

Suspirium. (L.) An audible, deep breath rapidly taken, unaccompanied by any vocal sound.

S. cardiæcum. *Angina pectoris.*

Sustain. (L. *sustinere*, to hold up, support, endure.) To hold up, support, nourish, subsist.

Sustainable. Capable of being sustained or maintained.

Sustainment. The act of sustaining, maintenance, support.

Sustenance. That which supports life; food, provisions.

Sustentacular. Supporting. Of the nature of a *Sustentaculum*.

S. fibres of the retina. The supporting fibres of the retina passing from the inner to the outer limiting membrane.

S. process of calcaëneum. The projection overhanging the excavated inner surface of the os calcis.

S. tissue. Connective tissue, such as *Neuroglia*.

Sustentaculum. (L. *sustentare*, to hold up.) A supporting part of an organ.

S. lienis ligamentum. The suspensory ligament of the spleen. A fold of peritoneum between the spleen and the diaphragm.

S. tali. See *Sustentacular process of the calcaneum*.

Sustentator clitoridis. (L.) *Erector clitoridis*.

S. penis. (L.) *Erector penis*.

S. recti. (L.) Unstriated muscle-fibres passing from the anterior surface of the coccyx to the rectum.

S. tunicæ mucosæ corrugator cutis ani. A thin stratum of muscle-fibres between the mucous membrane and the internal sphincter of the anus.

Sustoxine, or Susotoxine. $C_{10}H_{26}N_2$. A ptomaine obtained from the cultures of the bacillus of hog cholera. Causes death in convulsions.

Susurration. A whisper or murmur.

Susurrus. (L.) A faint whispering heard over contracting muscle, aneurisms, tumours lying on blood-vessels, or into which blood-vessels open.

Sutela. A suture.

Suterry. *Xanthoxylum fauxineum*.

Sutorius. (L. *sutor*.) *Sartorius*.

Sutton and Gule's disease. *Arteriosclerosis*.

Sutu'ghin's method. A method of dressing the umbilicus and the stump of the cord in which powdered gypsum is strewn over them, and over a pad of surgically clean wool, which is then used to cover and wrap round the stump.

Sutu'ra. A suture between bones.

S. corona'rius. The fronto-parietal suture.

S. cor'poris callo'si exter'na. See *Raphé*.

S. denta'tus. A suture with interlocking teeth without bevelling.

S. dorsa'lis. A dorsal suture.

S. epicrania'lis. The epicranial suture.

S. eth'mo-fronta'lis. (*ἠθμός*, a sieve; L. *frontalis*.) Suture between the ethmoid and frontal bones.

S. eth'mo-sphenoida'lis. Suture between the ethmoid and sphenoid.

S. fronta'lis. The metopic suture; suture between the two halves of the frontal bone.

S. fron'to-parieta'lis. (L. *frontalis*; *paries*, a wall.) The coronal suture.

S. fron'to-sphenoida'lis. (L. *frontalis*; Gr. *σφῆν*, a wedge; *ἴδος*, like.) Suture between the orbital plate of the frontal and sphenoid bones.

S. fron'to-tempora'lis. Between frontal and temporal bones.

S. imperfec'ta Web'eri. A fine groove or suture on the outer surface of the nasal process of the superior maxillary bone.

S. incisi'va or maxil'lo-premaxil'ary suture. A fetal suture extending from the incisive foramen to the septum between the alveoli of the lateral incisors and canines.

S. in'fra-orbita'lis transver'sa. Found at times extending between the infra-orbital suture and the lachrymal notch.

S. in'ter-endognath'ica. (*ἔνδον*, with; *γναθός*, the jaw.) Between the palatine bones and the palatine processes of the superior maxillary bones.

S. interfronta'lis. Same as *S. frontal*.

S. intermaxilla'ris. Suture between the maxillæ.

S. internasa'lis. Suture between the nasal bones.

S. interparieta'lis. The sagittal suture.

S. juga'lis. Sagittal suture.

S. lepidoi'dès. Squamous suture.

S. limbo'sus. (L. *limbus*, a border.) A suture with bevelled edges and tooth processes.

S. longitudina'lis. Sagittal suture.

S. longitudina'lis imperfec'ta. *S. imperfecta Weberi*.

S. mastoid'ea squamo'sa. A suture at times found on the mastoid process of the temporal bone.

S. masto-occipita'lis. (*μαστός*, a small knoll, L. *occiput*.) Suture between the mastoid process of the temporal bone and the occipital bones.

S. masto-parieta'lis. (*μαστός*, a rounded knoll, L. *paries*, a wall.) Suture between the mastoid process of the temporal bone and the occipital bone.

S. mendo'sa. Squamous suture.

S. menta'lis. The symphysis of the mandible.

S. metopi'ca. Same as *S. interfrontal*.

S. nasa'lis. Suture between the nasal bones.

SUTURAL—SUTURE

S. neuro-centra'lis. The line of junction of the vertebral arch and body

S. no'tha. False suture.

S. obel'æ. Sagittal suture.

S. occipi'to-mastoid'ea. Between the occipital and mastoid bones.

S. occipi'to-parieta'lis. The same as the *Lambdoid suture*

S. os'sium spu'ria. Harmonic suture.

S. pari'eto-mastoid'eus. Same as *S., masto-parietalis*.

S. pari'eto-occipita'lis. Same as *Sutura, lambdoid*.

S. pari'eto-squamosa'lis. (*L. paries*, wall; *squama*, a scale.) Suture between the squamous portion of the temporal bone and the parietal bone.

S. parie'to-tempora'lis. Suture between the parietal and temporal bones.

S. pe'tro-basila'ris. Formed by the meeting of the petrous portion of the temporal and the basilar process of the occipital.

S. pe'tro-occipita'lis. Suture between the petrous portion of the temporal bone and the occipital.

S. pe'tro-sphenoida'lis. Suture between the petrous portion of the temporal bone and the sphenoid.

S. petro-squamo'sus. Suture between the petrous and squamous portions of the temporal bone.

S. pro'rae. (*Πρῶρα*, the prow of a ship.) *Lambdoid suture*.

S. puncta'ta. The common form of suture.

S. pup'pis. Coronal suture

S. rect'a. Sagittal suture.

S. rhabdo'ides. (*Ῥάβδος*, a rod, *εἶδος*, form.) Sagittal suture.

S. sagitta'lis. (*L. sagitta*, an arrow.) See *S., interparietal*.

S. sphen'no-ethmoida'lis. Formed by the meeting of the sphenoid and ethmoid bones

S. sphen'o-fronta'lis. The suture between the frontal bone and the sphenoid.

S. sphen'o-mala'ris. (*Σφήν*, a wedge, *L. mala*, the cheek.) The suture between the malar bone and the sphenoid.

S. sphen'o-palati'na. The suture between the sphenoid and palatine bones.

S. sphen'o-parieta'lis. Formed by the junction of the sphenoid and parietal bones.

S. sphen'o-tempora'lis. Formed by the junction of the great wing of the sphenoid and the squamous portion of the temporal bones.

S. sphen'o-zygoma'tica. Formed by the junction of the sphenoid and malar bones.

S. squamo-parieta'lis. Formed by the junction of the squamous portion of the temporal and the parietal bones.

S. squamo'sa. (*L. squama*, a scale.) Formed by bones which overlap without interlocking. The *S. squamo-parietal*.

S. tempora'lis. The same as *S., petro-squamous*.

S. temporo-occipita'lis. See *S., occipito-mastoid*.

S. transver'sa. The series of articulations of the frontal with the malars, sphenoid, ethmoid, and nasal bones.

S. transver'sa os'sis occip'itis. A suture which crosses the occipital bone in the young skull, and separates the upper from the lower part.

S. u'tero-parieta'lis. Suturing of the uterus to the inner surface of the abdominal incision after Cæsarian section.

S. ve'ra. Suture by indented borders, as in the serrated, dentate, and limbose sutures.

S. vis'cero-parieta'lis. A suture attaching a viscus to the abdominal wall.

S. Wormia'na ante'rior. The upper portion of the lambdoid suture.

S. Wormia'na poste'rior. See *Sutura ossis occipitis*.

S. zygoma'ti'co-fronta'lis. Formed by the junction of the malar and frontal bones

S. zygoma'ti'co-sphenoida'lis. Formed by the junction of the malar and orbital surfaces of the great wing of the sphenoid.

Su'tural. Situated in a suture. Of, or pertaining to, a suture; effecting suture.

S. bones. The *Ossa triginta*, or Wormian bones of the skull

S. car'tilage. The fibro-cartilage which forms an edging to the flat bones of the skull.

S. lig'ament. A thin layer of fibrous tissue found in the cranial sutures.

Also, the thin layer of fibrous tissue placed between the surfaces of an immoveable joint.

Su'turally. So as to be sutured; by means of a suture.

Su'turate. To suture.

Sutura'tion. (*L.*) The formation of a suture.

Su'ture. (*L. sutura*, a seam.) The act of sewing; a sewing together; the state of being connected. A line of joining, uniting, or closure. The uniting of the edges of a wound. A linear synarthrosis, especially of the cranial bones (for classification see *Synarthrosis*) One of the stitches or fastenings used to unite the lips of a wound.

S., abdom'inal. *Gastrorrhaphy*.

S., ar'uate. Coronal suture.

S., bas'ilar. That between the basilar process of the occipital bone and the body of the sphenoid.

S., bipari'etal. Same as *S., sagittal*

S., bregmato-mas'toid. *Occipito-mastoid suture*.

S., clamped-shot. One in which the ends of the suture—silver wire in this case—pass through holes in little lead plates lying along the edges of the wound, and are then fixed by split shot placed on them close to the plate and squeezed together by pliers.

S., cla'vate. Quilled suture.

S., clypeo-front'al. Same as *S., clypeal*.

S., contin'uous. The suture is carried back and forth across the wound, and is cut off only at its ends.

S., cor'on'al. Between frontal and parietal bones.

S., cuta'neous. Raphe of the palate.

S., Czer'ny-Lem'bert. Jobert's suture, with a separate ring of interrupted sutures joining the cut edges of the mucous membrane.

S., dis'tance. A suture used in uniting nerves, &c.

S., dry. Adhesive plaster strips are applied to the edges of the wound to draw them together.

S., Em'mert's A double *Lem'bert's* suture.

S., eth'moido-lach'rymal. Between frontal and lachrymal bones.

S., false. Suture by apposition.

SUTURE

S. for gastros'tomy. A row of sutures is made around the spot at which the stomach is to be opened, with loops at convenient intervals. These loops are passed through the abdominal wall, about one third of an inch in from the wound in it. Quills are passed through the loops, and the suture is drawn tight.

S., fron'to-ma'lar. Between frontal and malar bones.

S., fron'to-max'illary. Between frontal bone and superior maxilla.

S., fron'to-na'sal. Between frontal and nasal bones.

S., Gail'ard's. For the eyelid. One end of a suture is passed in near the free margin at the junction of the outer and middle third, and made to emerge as high up the lid as possible; the second end is passed parallel with the first, and the two are tied. A similar suture is passed at the junction of the middle and inner thirds.

S., Glov'er's. A continuous suture, in which the thread passes from without inwards on one side, and from within outwards on the other; or each stitch passes through the loop of that immediately preceding it.

S., Gus'senbauer's. A figure-of-eight suture designed to act in the same way as a Czerny-Lembert.

S., harelip. A pin or pins are run through the skin and substance of the lip from one side of the wound to the other, and superficial to the mucous membrane.

S., harmon'ic. Suture by apposition of flat rough surfaces.

S., Har'ris's. The mucous membrane of the lower portion of the intestine is deprived of its mucous membrane over a ring-shaped area two or three lines wide, and the upper portion of the intestine is inserted and the edges united by suture.

S., horse'hair. The hairs of the mane or tail used as sutures.

S., in'dia-rub'ber. Made similarly to *S., harelip*, except that india-rubber rings are used in place of sutures.

S., in'fra-or'bial. A suture seen at times in the line of the infra-orbital canals.

S., interrup'ted. The stitch passes through both sides and edges of the wound, or through the edges only, and is knotted. Each such stitch is separate.

S., Jo'bert's. The suture passes through the serous coat of the intestine, and emerges at a distance of about one eighth of an inch; thence it is carried across the wound to pass through the serous coat again, and re-emerges at a distance of one eighth of an inch. The points of entrance and re-emergence are parallel with the longitudinal axis of the piece of intestine sewn. It brings serous surface to serous surface when tied. Approximation of the edges is secured by twisting a suture in a figure of eight round the projecting ends of the pins.

S., lamb'doid. The occipito-parietal suture.

S., Lit'tré's. A lower part of the intestine is obliterated by a ligature being placed around it, and the upper part attached to the inguinal ring to form an artificial anus. Used in gangrene of the intestine.

S., Man'sell's. For complete division of the intestine. A slit is made in the upper part about one inch from its cut end; a long suture

is now passed through the cut end of the upper portion and the cut end of the lower portion. On the opposite side another ligature is similarly passed. The two sutures are passed through the slit, and the ends of the gut are drawn through by them. Interrupted sutures are passed through four thicknesses of gut from side to side, and are then cut where they cross the lumen of the intestine. Each suture is tied. The newly joined edges of intestine are passed back through the slit, and the intestine is drawn out straight. The slit is then closed.

S., mat'tress. A continuous suture made back and forth through both edges of the wound.

S., nerve. Usually composed of stitches of two lengths, the one uniting the cut edges as accurately as possible, the other passed through the upper and lower portions of the divided nerve, and designed to take the tension off the shorter stitches.

S.s of relax'a'tion. Sutures passed through the skin at some distance from the cut edge, and made to pass deep and around to the wound, to emerge from the skin at some distance from the opposite cut edge. It is designed to take tension off the skin sutures.

S. of relief. See *S.s of relaxation*.

S. of support. See *S.s of relaxation*.

S., pal'atine, or Sutu'ra interendog-nath'ica. The suture between the palatine processes of the maxilla and the palate bones.

S., Pal'fyn's. A suture is passed through the edges of a wound of the intestine, and its ends are then fastened to the skin.

S., Pan'coast's. One edge of a wound is made into a prominent angle or edge, while the other is fashioned into a retreating angle or edge, and the former is fitted into and sutured to the latter.

S., Pet'tit's. Sutures are passed about one sixteenth of an inch apart and tied. The ends of each are tied and twisted into a cord. For the intestine.

S. pin. See *S., harelip*.

S., plas'tic. Suture by tongue and groove. A groove is cut along one edge of a wound, while a wedge-shaped edge is fashioned from the other edge, both groove and edge being in the same plane. A loop is passed by two punctures through the thickest part of the lip of the groove, thence through the thickest part of the wedge, to be continued on through the thickest part of the superficial lip of the groove. The ends of this suture are tightened and tied round a roll of sticking-plaster, by which means the tongue is forced into and held in the groove.

S., pri'mary. One used to close a wound immediately after it has been inflicted.

S.s, primo-se'condary. Sutures passed as soon as possible after the infliction of the wound, and not tightened until the packing put in the wound at the same time is removed.

S., proster'nal. The median suture seen in the foetal manubrium sterni.

S., quilled. A double interrupted suture drawn over a piece of quill or bougie at either end.

S., quilt. See *S., mat'tress*.

S., Ran'dohr's. Employed in transverse sections of the intestine. The upper is invaginated into the lower portion of the gut, and secured by a single point of suture, which also attaches the gut to the abdominal wound.

S., rat tail. Sutures made of material obtained from a rat's tail.

S., Rich'ter's. Interrupted wire sutures used for intestinal wounds. The ends are twisted and brought out of the external wound.

S., Rit'sch's. A suture passed through the bowel and lumen from side to side. The ends are twisted and brought out of the external wound.

S., Rob'inson's. A rubber tube is inserted into the upper part of the divided intestine, the mucous membrane of the lower part is removed for about half an inch longitudinally, the upper part is then inserted into the lower part, and a ring of sutures circumferentially placed unites the two over the tube.

S., roy'al. A ligature placed round the neck of a hernial sac to close it permanently by setting up adhesive inflammation.

S., sail'or's. A reef-knot. Used in ligaturing arteries.

S., Sang'er's. Eight or ten deep sutures through the uterine tissue, with about twenty superficial through the peritoneum.

S., sec'ondary. One passed some time after the indiction of the wound.

S., se-ro-se'rous. One that brings together two serous surfaces.

S., ser'rate. Suture with fine saw-like serrations.

S., shot-and-coil. The two ends of the suture are drawn through a small coil of silver wire, and then through a split shot. The parts are drawn together and the suture fixed by clamping the shot.

S., shot'ted. Both ends of the suture are passed through a perforated shot, which is then compressed.

S., silk'worm-gut. A suture made from the intestines of the silkworm.

S., Si'mon's. Used in cases of rupture of the perineum with sphincter ani. The rectal mucous membrane, the vaginal mucous membrane, and the skin are sutured separately.

S., Sims'. See *S., clamp*, or *S., quilled*

S., sphe-no-petro'sal. See *Petro-sphenoid*.

S., sphe'no-squa'mous. The union between the great wing of the sphenoid and the squamous portion of the temporal bone.

S., spi'ral. See *S., Glover's*.

S., squa'mo-sphe'noid. Formed by the great wing of the sphenoid and the squamous portion of the temporal bones.

S., sta'ple. A piece of wire bent like a staple passed through both edges of the wound, and then bent back on itself.

S., subcutic'ular. A continuous suture passed to and fro in the subcuticular tissue.

S., sunk. A suture employed in the depth of wounds. The superficial tissues are brought together over them.

S., superfi'cial. One which involves the skin only.

S., sur'gical. Forms of suture employed in surgery.

S., tail'or's. The stitch used to bring together the flaps after amputation through the cervix uteri.

S., ten'don. A suture consisting of a short and a long series of stitches; the short approximate accurately the edges of the broken tendon, the long act as sutures of relaxation.

S., tobac'co-bag. See *Purse-string operation*.

S., tongue-and-groove. See *S., plastic*.

S., trian'gular. See *S., Simon's*.

S., twisted. See *S., harelip*.

Suzanne's gland. A small mucous gland under the alveo-lingual sulcus, near the median line of the floor of the mouth.

Svap'nia. (Not official.) A proprietary medicine said to contain purified opium deprived of its narcotic properties. It occurs in fine light brown scales.

Swab. A piece of rag or sponge or wool tied to the end of a stick of whalebone or wood, &c., and used for cleansing the mouth, or applying drugs, &c., to the deeper parts.

Swab'bing. The act of using a swab.

Swad'dle. (Ang.-Sax. *swethel*.) A bandage or long strip of cloth used for wrapping up a child.

Also (v.) to bind with long narrow bandages

Swad'dling. The act of wrapping in a swaddle.

S.-band. A band or bandage for swaddling a young child.

S.-clothes. Swaddling-bands.

Swag-belly. *Physconia*.

Swallow. The fauces, pharynx, and gullet, especially the organs of deglutition collectively.

Also, to take into the stomach through the throat.

S.'s nest. A deep fossa of the cerebellum between the commissure of the flocculus and the uvula.

S.-tails. Notches on the teeth of a horse.

S.-wort. *Asclepias vincetoxicum*.

S.-wort, orange. *Asclepias tuberosa*.

S.-wort, tu'berous-rooted. *Asclepias tuberosa*.

S.-wort, white. *Asclepias vincetoxicum*.

Swamp ap'ple. A parasitic growth found on swamp azalea.

S. cab'bage. *Dracontium foetidum*.

S. dog'wood. *Petela trifoliata*.

S.-fe'ver. A malarial fever.

S. hel'leboe. *Veratrum viride*.

S. itch. Scabies, or pruritus hiemalis.

S. laur'el. *Kalmia glauca*.

S. milk'-weed. *Asclepias incarnata*.

S. pine. *Pinus australis*, broom pine.

S. sas'safra. *Magnolia glauca*.

S. sick'ness. Milk sickness.

S. su'mach. *Rhus venenata*.

S.-wood. *Dirca palustris*, *Cephalanthus occidentalis*.

Swan Al'ley sore. Phagedænic ulcer.

Swarm. A cluster of insects.

S.-cell. See *Zoospore*.

S.-spore. See *Zoospore*.

Swarm'ing. (Mid. Eng. *swarmen*, to swarm.) 1. Moving in a swarm. 2. To be prolific. 3. A form of endogenous cell-formation occurring in certain Algæ.

Swar'thiness. The state of being swarthy; tanniness; a dusky or dark complexion.

Swar'thy. Dark, tawny.

Swar'tria. Leguminous tree growing in South America, *Swar'tria tomentosa*. Its bark produces sweating when administered.

Swath'ing-clothes. Swaddling-clothes.

Sweam. (Ang.-Sax. *swima*.) A swimming of the head, a fainting fit, a swoon. A sudden qualm of sickness.

Sweam'ish. See *Syncope*.

SWEAT—SWEET

Sweat. (n.) (Ang.-Sax. *swat*.) Moisture exuded from the skin. It contains 2 per cent. of solids, consisting of sodium chloride, formic, acetic, butyric, and other fatty acids, neutral fats, and cholesterolin.

Also (v.), to excrete moisture from the skin, to perspire.

S., blood'y. Hæmathidrosis; blood mixed with the secretion of sweat.

S. canal'. The same as *Sweat-duct*

S. cen'tre. A centre in the medulla which controls the sweat-glands. It may be excited by eserine, nicotine, and picrotoxin.

S.-cloth. A cloth for wiping the sweat from the face.

S., cold. Perspiration accompanied by coldness of the body.

S., colliq'ative. Sweating which produces exhaustion.

S., critical. The profuse sweating which accompanies the "crisis" of a febrile disease.

S., diaphoret'ic. See *S., cold*.

S.-duct. The excretory duct of a sweat-gland.

S. ec'zema. *Eczema seborrhorcum*.

S., Eng'lish. The same as *Sweating sickness*.

S.-fi'bre. One of the nervous fibrils which causes sweating on stimulation

S. gland. A gland consisting of an epithelial tube, single or dividing into two branches, the distal end is coiled on itself.

S.-house. A place where vapour-baths or Turkish baths are given.

S.-pore. The mouth of the sweat-duct

S., red. Possibly due to *Micrococcus hæmatodes*.

S.-root. *Polemonium reptans*

S. scab. *Crusta genu equinæ*.

S. ves'icle. *Sudamina*.

Sweater. One who sweats. One who, or that which, causes to sweat.

Sweat'ily. In a sweaty manner.

Sweatiness. The state of being sweaty or moist with sweat.

Sweating. The act of perspiring; visible perspiration. The process of producing profuse visible perspiration.

S.-bath. A sudatory; Turkish bath.

S. fe'ver. The same as *Sweating sickness*.

S.-house. A Turkish or vapour bath.

S.s, Mal'wa. A disease prevalent in India, which appears to be allied to the malignant form of cholera.

S., mor'bid. *Hyperidrosis*.

S., night. Profuse sweating which occurs whenever the patient goes to sleep in certain diseases.

S., phosphores'cent. Rare. Seen in some cases of miliaria, and after eating freely of phosphorescent fish.

S. plant. *Eupatorium perfoliatum*.

S.-room. A room in a Turkish bath

S. sick'ness. *Sudor anglicanus*, *Ephemeræ sudatoria*, or *Ephemeræ maligna*. A febrile epidemic disease, characterised by profuse perspiration; in some places extremely fatal from 1485 to 1551.

S., unilat'eral. Sweating on one side of the body. Generally due to a pathological condition of the nervous system.

Swe'dish. Pertaining to Sweden.

S. green. Copper arsenite.

S. leech. *Hirudo medicinalis*.

S. move'ments. A system of active and passive movements with massage designed by Ling, a Swedish physician, for use in the treatment of disease.

S. sys'tem. Ling's system.

Swee'ny, or Swin'ney. A disease of the horse, characterised by shrinking of the shoulder muscles and lameness of the same side.

Sweet. Having a taste of the same quality as sugar and honey.

S. al'mond. *Amygdala dulcis*.

S. bal'sam. *Gnaphalium polycephalum*.

S. bas'll. *Ocinum basilicum*.

S. bay. *Magnolia glauca*.

S. birch. *Betula lenta*. It contains a chemical principle distantly allied to amygdalin, which forms an oily fluid with water.

S., bit'ter. *Solanum dulcamara*; *Solanum triostemum*.

S.-bread. Thymus or pancreas of the calf.

S. bush. *Comptonia asplenifolia*.

S. cassa'va. *Jatropha manihot*.

S. cen'taury. *Cacalia suaveolens* of North America.

S. cic'ely. The root of *Osmorrhiza longistylis*. Aromatic, stomachic.

S. clo'ver. *Trifolium melilotus*.

S. fern. *Comptonia asplenifolia*; *Adiantum pedatum*. Astringent, carminative, and alterative. Dose of fl. ext. ʒss to ʒij.

S. flag. *Acorus calamus*. The root contains a volatile oil and acorin, a bitter nitrogenous principle often used in "bitters."

S. gale. The bark of *Myrica gale*. Dose of fl. ext. mv to ʒss. Astringent and stimulant. (Unofficial.)

S. gum. The bark of *Liquidambar styraciflua*. Astringent and tonic. Used in diarrhoea (of children especially), and to overcome factor of the breath. Dose of fl. ext. ʒss to ʒj. (Unofficial.) One of the *Hamamelaceæ*.

S. lau'rel. *Illicium floridanum*. One of the *Magnoliaceæ*.

S. mar'joram. *Origanum marjorana*. One of the *Labiataæ*.

S. myr'tle. *Acorus calamus*. One of the *Araceæ*

S. ni'tre. *Spiritus ætheris nitrosi*.

S. oil. *Oleum olivæ*.

S. or'ange peel. The peel of the *Citrus aurantium*; *Aurantiaceæ*.

S. or'ange tree. *Citrus aurantium*; *Aurantiaceæ*.

S. pep'per bush. *Clethra alnifolia*.

S. pod. *Ceratonium siliqua*.

S. pota'to. Root of the *Batata edulis*.

S. prin'ciple of oils. Glycerine.

S.-root. *Aralia medicaulis*.

S. sca'bi'ous. *Erigeron canadense*.

S.-scent'ed gol'den-rod. *Solidago*.

S.-scent'ed life-everlast'ing. *Gnaphalium polycephalum*.

S.-scent'ed shrub. *Calycanthus occidentalis* and *C. floridus* of North America.

S.-scent'ed vir'gin's-bow'er. *Clematis flammula*.

S.-scent'ed wa'ter-ll'y. *Nymphæa odorata*. Contains gallic and tannic acids.

S. sedge. *Acorus calamus*.

S. sop. The fruit of the *Arrona squamosa*.

S. su'mach. *Rhus aromatica*.

S. tinc'ture of rhu'barb. *Tinctura rhei dulcis*.

SWELL—SYCOSIFORM

S. wine. One in which the grape-sugar has to some extent, which varies in the different wines, not been fermented, or to which sugar has been added.

S. wood-bark. *Cascarilla*.

Swell. (Mid. Eng. *swellen*, to swell.) To grow in bulk.

S. bod'ies. The venous plexus over the turbinate bones.

Swelled. Swollen.

S. head. *Actinomyces*.

Swelling. A tumour or any morbid enlargement.

S., albu'minous. Cloudy swelling.

S., blennorrhagic. The enlargement of the knee in gonorrhoeal synovitis.

S., cataract. The second stage in the development of cataract, in which the lens swells from absorption of water.

S., cloud'y. A pathological, acute inflammatory condition in which the cells present a cloudy appearance microscopically.

S., glas'sy. Weber's name for amyloid infiltration. A term applied to false membrane.

S., lactif'erous or lac'teal. Distension of the breast with milk, due to obstruction of the ducts.

S., white. *Phlegmasia alba dolens*, white leg. Hydrarthrus due to tubercular arthritis.

Swelt. (Ang.-Sax. *sweltan*.) To become faint; die.

Swelter. To faint with heat. To perspire freely.

Sweltering. Sultry; suffocating or faint with heat.

Swel'try. Oppressive with heat

Swert'ia. *Chiretta ophelia*. A tonic resembling gentian in its action. Order *Menispermaceæ*.

S. diffor'mis. *Calumba*. Root of *Jateorrhiza palmata*.

S. Fra'sera. Root used as is true calumba and *Jateorrhiza calumba*.

S. lu'tea. *Gentiana lutea*.

Swieten'ia. (Not official.) African mahogany Africa. The bark is used. Action, astringent, tonic, antiperiodic. Uses, malarial fever, typhoid fever. Dose of the fluid extract, 15 to 60 drops.

S. febrif'uga. One of the *Meliaceæ*. East Indies. Its bark, named rohana bark, is used as a tonic and bitter. Dose, 1 to 2 scruples of the powder.

S. mahog'ani. Mahogany tree. East Indies and tropical America. Tonic and febrifuge.

S. senegalen'sis. *Khaya senegalensis*. Gambia. The bark is used as a bitter and antiperiodic under the names of *Cailcedra* and *Karson khayi*.

Swim. Air-bladder.

S.-blad'der. *Biol.* The pneumatophore.

Swimmeret. *Biol.* One of the swimming legs of a Crustacean.

Swimmers' cramp. Painful cramp of the muscles of the calf occurring in swimmers.

Swim'ming-bell. A biological term.

Swine. A pig.

S.-bread. *Tuber cibarium*. An edible plant distantly related to *Lycoperdon*. A fungus.

S.-cress. Watercress.

S. diphthe'ria. Hog cholera.

S. fe'ver. Hog cholera.

S.-pest. Hog cholera.

S. plague. An acute, probably specific, highly infectious disease, epidemic, which primarily attacks the lungs and pleura, causing pleuro-pneumonia, and secondarily causes extensive necrosis of the intestine.

S.-pox. A disease in which tubercles come out on the legs and thighs of swine. Around and under each tubercle is highly inflamed tissue.

S.-this'tle. *Sonchus*.

Swinney. See *Sweeny*.

Swing. A cradle for supporting a broken leg. It runs on wheels which rest on a bar supported by side pieces. The supporting straps are not fastened to, but only run under the cradle, thus enabling the patient to change his position without disturbing the fracture.

Swiss tape'worm. *Bothriocephalus latus*.

Swoon. Fainting. Failure, usually sudden, of the heart's action, causing unconsciousness, great pallor, imperceptible breathing, muscular relaxation. See *Syncope*.

Treatment: Raise the lower limbs and give diffusible stimulants, as brandy, ammonia.

Swoon'ing. The state of being in a swoon.

Sword-cut. A wound or scar produced by a blow with the edge of a sword.

Sy- A prefix meaning together with.

Syaladen'i'tis. (*Σιάλον*, spittle, *ἀδὴν*, a gland; *itis*, inflammation.) Var. of *Sialadenitis*. Inflammation of a salivary gland.

Sycam'inum. (*Συκάμινον*, the fruit of the mulberry tree.) *Morus nigra*, the mulberry tree. One of the *Urticaceæ*. Also the fruit, *Morum sycaminum*.

Syceph'alus. (*Σύν*, together; *κεφαλή*, head.) A double monster with two incomplete heads joined together.

Sychnocar'pous. (*Συχνός*, many; *καρπός*, fruit.) A biological term indicating ability to produce many crops of fruit without killing the plant or tree which bears them

Sychnure'sis. (*Συχνός*, much; *οὖρον*, urine.) Undue prolongation of the act of passing water

Sycho'nium. (*Συκόν*, a fig.) The fruit of the fig.

Syc'ion. (*Σίκυος*, a gourd.) A decoction of dried figs.

Syc'ios angula'tus. (*Σίκυος*, a gourd or cucumber.) One-seeded star cucumber, wild bryony. The roots and seeds are purgative and diuretic.

Syc'ites. Made of figs.

Sycocarpus Rus'byi. (*Σύκον*, fig; *καρπός*, fruit.) *Cocillana*. Bolivia. Nat. Order *Meliaceæ* (Not official.) The bark of a small tree, thirty to forty feet high. Action, laxative, tonic, expectorant. Uses, chronic bronchitis, catarrh. Dose of the fluid extract, 10 to 30 drops.

Sycoma. (*Σύκον*, a fig.) A condition in which wart-like or fig-like growths occur on the soft parts, as the eyelids, genitals, tongue.

Syco'nium. (*Σύκον*, a fig; pl. *Syconia*.) *Biol.* The peculiar multiple fruit of the fig, which consists of a fleshy, hollow receptacle, containing numerous achenium-like fruits.

Sycosiform. (*Σύκον*, a fig; L. *forma*.) Resembling sycosis.

Syco'sis. (Συκώσις, a rough pig-like excrescence on the flesh.) An eruption on the bearded face caused by an inflammation of the sebaceous follicles and hair-follicles.

S. bacillo'gena. (L. *bacillus*, a bacillus; Gr. γεννᾶν, to produce; lit. a small staff.) Tomasoli's name for a form of sycosis of the beard in which an elliptic-shaped fungus, *Sycosiferus foetidus*, was found.

S. bar'bæ. (L.) Sycosis of the beard.

S. capilli'tii. (L.) 1. *Dermatitis papillaris capillitii* of Kaposi; *S. frambesiformis*; *Acne keloid*. 2. Kerion. 3. Pustular eczema of the scalp.

S. coccogen'ic. (Κόκκος, a berry, hence a micro-organism, γεννᾶν, to produce.) Sycosis caused by one of the schizomycetes.

S. contagio'sa. (L.) See *S. parasitica*.

S. frambesifor'mis. (L.) See *Dermatitis papillaris capillitii*.

S., hypertroph'ic. See *S., keloid*.

S., hyphogen'ic, S., hyphomyce'tous. (Ύφή, a weaving; γεννᾶν, to produce.) The inflammation caused by the *Trichophyton tonsurans*.

S., ke'loid. (Χηλή, a claw; εἶδος, likeness.) Keloid degeneration of the cicatrices following the perifollicular and follicular inflammation. Called also *Celerythema syciforme*.

S., lu'poid. (L. *lupus*, a wolf; Gr. εἶδος, likeness.) See *S., keloid*.

S. menta'gra. (L.) See *S. barbæ*.

S., non-parasit'ic. Simple inflammation due to coccogenic organisms.

S. palpe'bræ margina'lis. (L.) Sycosis on the margins of the eyelids.

S. parasita'ria. See *Sycosis parasitica*.

S., parasit'ic. *Tinea sycosis*. See *Tinea*.

S. schizomycet'ic. (Σκιζεῖν, to clean; μύκης, pl. μύκητες, fungi.) See *Sycosis, coccogenic*.

S. vulga're. (L.) Same as *S., non-parasitic*.

Sycum. See *Ficus*.

Sydenham's chorea. The ordinary mild type of chorea. Also called *Chorea minor*.

S.'s disease'. Chorea.

S.'s laud'anum. Same as *Vinum opii*.

Sydera'tio. (L.) *Sideratio*. The state of one suddenly struck without apparent cause, as if by the influence of the stars or planets. Ancient name which included apoplexy, gangrene, and other morbid conditions.

Syphilis. Alternative spelling of *Syphilis*.

Syggig'noscism. (Σύν; γίγνωσκειν, to understand.) Synonym of *Hypnotism*.

Syllabic utterance, or Scan'ning utterance. A mode of speaking seen in insular sclerosis in which each syllable is uttered after a pause, and is followed by a pause.

Syllable stum'bling. Difficulty in articulating words of several syllables, although each syllable can be easily spoken.

Syllabus. (Σύλλαβος, a collection.) The heads of the subject dealt with in a course of lectures.

Syllepsiol'ogy. (Σύλληψις, a putting together; λόγος, science.) The physiology of conception.

Syllep'sis. (Σύλληψις.) Conception.

Syl'vester's meth'od. A well-known method of carrying on artificial respiration. 1. Draw out the tongue. 2. Place the patient

on his back with a pad between the shoulders. 3. Raise the arms in extension by the side of the head for two seconds. 4. Flex the arms and adduct them across the chest, pressing them firmly against the ribs for two seconds. Repeat.

Sylvest'rine. (L. *silvestris*, appertaining to a wood.) C₁₀H₁₆. Obtained by digesting its hydrochloride with aniline. It occurs in Swedish and Russian turpentine oil.

Sylvian. Named after Sylvius, the Latinised form of Dubois, an anatomist who flourished 1478—1555.

S. aqueduct. The communication between the third and fourth ventricles.

S. art'ery. The middle cerebral in the Sylvian fissure.

S. convolu'tion. That portion of the brain of Marsupials which surrounds the end of the Sylvian fissure.

S. fis'sure. Fissure on the side of the brain which separates the parietal and frontal lobes above from the temporo-sphenoidal below.

S. fos'sa. A fetal depression on the external surface of the brain between the arms of the Sylvian fissure, where the insula is found in the adult brain.

S. line. Extends from a point three quarters of an inch below the parietal eminence to the external angular process of the frontal, following the line of the Sylvian fissure.

S. ven'tricle. A small serous cavity between the laminae of the septum lucidum.

Syl'vius, aqueduct of. See under *Sylvian*.

Sym. A form of syn (σύν). Its forms are as follows:—before b, p, ph, ps, and m it becomes sym or xym; before c, ch, gk, and x it becomes syn or xyn; before l it becomes syl or xyl; before r it becomes syr or xyr; before s it becomes sy, xy, or sys.

Symbion, Sym'biont. (Σύν, with; βίος, life.) *Biol.* The association of two organisms.

Symbio'sis. The constant association of organisms not related and not dependent for life on one another.

Symbiotic. Parasitic.

Symbleph'aron. (Σύν, together; βλέφαρον, the eyelid.) The adhesion of the eyelids to the conjunctiva as the result of an injury which has produced a break of surface. Three kinds are described: one, anterior symblepharon, affecting the central plane part of these structures; another, posterior symblepharon, the peripherally disposed parts; and a third, total, in which the whole eyelid and conjunctiva are affected.

S., Snellen's opera'tion for. Grafts are cut from the external skin and placed on the conjunctiva, or pediculated flaps are cut from the external skin and passed in between the eyelid and the eyeball through a hole in the former.

Symblepharo'sis. Adhesion between the eyelids, or the eyelid and the ball of the eye. *Ankyloblepharon*.

Sym'bol. A sign or representation of an idea. Signs used in medicine: ℞, Recipe; ℥, scruple; ʒ, drachm; fl. ʒ, fluid drachm; ʒ, ounce; fl. ʒ, fluid ounce; ℥, minim; O, octarius, a pint; C, congius, a gallon.

Sym'bolé. (Σύν; βάλλειν, to throw.) Commissure.

Symboleu'sis. (Συμβολή, a bringing together.) Consultation.

Symbolisation. Sympathy.

Sym'bolising insan'ity. Symbolism.

Sym'bolism. (Σύμβολον, a symbol.) The habit of interpreting objects and events as symbols of feelings. Occurs in some forms of insanity.

Sym'bolis'mus. *Symbolism.* Sympathy.

Sym'bolog'ica. *Symptomatology.*

Sym'bolum. (Σύμβολον, a symbol; λόγος, a treatise.) Symbol.

Sym'eles, or Sym'elus. (Σύν; μέλος, limb.) A monster whose pelvis is partially developed, as are also its lower limbs, which are fused partially or completely, and have their parts twisted one on another.

Syme's amputa'tion. Performed at the ankle-joint. The malleoli are sawn off, and the flap is made from the skin of the heel.

S.'s amputa'tion of thigh. This consists essentially of the usual circular amputation, with two lateral slits to aid retraction of the skin.

S.'s cir'cular amputa'tion. Two very short flaps are dissected up, consisting of skin and subcutaneous tissues. These flaps are then retracted, and the muscles divided by a circular incision.

S.'s meth'od of excis'ing the tongue. Excision of the tongue after division of the lower jaw. This permits of a much more extensive operation than is possible with other methods.

S.'s opera'tion on lip. This is an operation for deformity of the lip by means of double flaps, each flap corresponding to one half of the new lip. It is formed by prolonging the edges of the defect downwards by two incisions which meet and cross obliquely.

S.'s rhinoplas'tic opera'tion. A large flap is marked out on each cheek, which is dissected up and made to meet its fellow in the middle line, where the two are sutured together.

S.'s urethrot'omy. A staff is passed through the obstruction, and the stricture is divided upon it.

Symmel'ic. With the malformation of a *Symmelus*.

Sym'melus. See *Symelus*.

Symme'tria. *Symmetry.*

Sym'metrical. (Συμμέτρος, commensurate with.) Well-proportioned in its parts, having its parts in due proportion; said also of each part relatively to the corresponding part.

S. diseas'es. Those which impartially affect both halves of the body.

S. gan'grene. The same as *Raynaud's disease*.

S. hemianop'sia. See *Hemianopsia*.

Symme'try. (Σύν, with; μέτρον, measure.) The correspondence of parts; the relation of homologous parts at opposite points on the body.

S. of nutri'tion. The theory which teaches that corresponding parts of the body are nourished in the same way.

Sym'on'ds' tube. A funnel-shaped tube of rubber or metal intended to be introduced through an oesophageal stricture. It is kept in sometimes for a month.

Symparata're'sis. (Σύν, with; παρατήρησις, watching.) Close attention.

Sympas'ma. (Σύν; πάσσω, to sprinkle.) *Cataplasma*.

Sympatheoneuri'tis. (Συμπάθεια; νεύρον, nerve; ιτις.) Inflammation of the sympathetic nerve.

Sympathe'sis. Sympathy.

Sympathet'ic. (Συμπάθεια, sympathy.) Pertaining to, expressive of, proceeding from, or exhibiting sympathy in any sense. Affecting a sympathy, or consentaneous affection of the viscera and blood-vessels; uniting viscera and blood-vessels in a nervous action common to them all; inhibitory of, or controlling, the vital activities of viscera and blood-vessels, which are thereby subjected to a common nervous influence. Specifically, of, or pertaining to, the sympathetic system of nerves.

S. an'thrax. Black-leg, quarter-evil. A disease of cattle caused by a motile bacillus of rod shape, which causes blood-containing tumours.

S. bu'bo. See *Bubo*.

S. gan'gla. Those of the sympathetic nerve.

S., great. Splanchnic nerve.

S. head'ache. Pains in the head, the result of comparatively distant irritations.

S. inflamma'tion or irrita'tion. Inflammation or irritation occurring in an organ synchronous with, or as the result of, the same affection in another organ. Various described as being due to reflex action, spread of infection, or to some unknown cause.

S. insan'ity. Mental disturbance associated with disease of some organ not known to be physiologically connected with the brain.

S., mid'dle. The pneumogastric.

S. nerv'ous system. A system of nerve-ganglia lying along the base of the cranium and spine, connected by nervous cords. They receive nerves from the spinal cord, and give out nerves to the various viscera and blood-vessels. These nerves form plexuses, which usually surround the blood-vessels and take their names from them.

S. ophthal'mia. Inflammation of one eye in consequence of inflammation in the other eye.

S. paral'ysis. Paralysis of the dilator fibres of the pupil and the smooth muscular fibres in the upper lid, accompanied by (1) dilatation, followed by (2) constriction of the blood-vessels of the affected side and absence of sweating.

S. pow'der. A mediæval preparation of calcined sulphate of iron, said to cure wounds by being applied to the weapon which caused them.

S. sali'va. That produced by the irritation of the sympathetic nerve

S. vom'iting. Vomiting seen at times in the husband of a pregnant woman.

Sympathet'ical. The same as *Sympathetic*

Sympathet'ically. In a sympathetic manner; with sympathy in any sense.

Sympathet'icism. A tendency to be sympathetic; fondness for exhibiting sympathy.

Sympathet'icus. The sympathetic nerve.

S. mi'nor. The portio dura of the seventh pair of nerves.

Sympathet'iplex. (Συμπάθεια, sym-

SYMPATHIA—SYMPLECTOMERES

pathy; *L. plexus*, woven.) A plexus formed by branches of the sympathetic nerve.

Sympath'ia. Sympathy.

Sympath'ic. Synonym of *Sympathetic*.

Sympathise. To have, or to exhibit, sympathy. To express sympathy; to condole.

Sympathy. (*Συμπάθος*, affection.) A relationship existing between parts or persons, causing change in one to lead to some affection of the other. Also, between the body and the mind.

S., cure by. A treatment based on the belief that certain organs or members were affected by certain drugs.

Sympel'mous. (*Σύν*, together; *πέλαμα*, the sole of the foot.) In *Biol.*, having the deep plantar tendons united.

Sympep'sis. Digestion.

Sympet'alous. (*Σύν*, together; *πέταλον*, leaf.) In *Biol.*, the same as *Gamopetalous*.

Sympexion. *Sympexis*.

Sympex'is. (*Συμπηξίς*.) A concretion sometimes met with in the vessels or crypts of some of the glands of the body, *e.g.* thyroid, prostate.

Symphioceph'alus. (*Σύμ*, together; *φύειν*, to make, to grow; *κεφαλή*, head.) A monster composed of twins joined together by their heads.

Symphora. Congestion.

Symphore'ma. (*Σύν*; *φορεῖν*, to bear.) The state of being congested.

Symphore'sis. A congestive process.

Symphoret'icus. Congested.

Symphoricarpous. (*Σύν*, together; *φορεῖν*, to bear; *καρπός*, fruit.) In *Biol.*, bearing clustered fruits.

Sym'phorol. (Not official.) Caffeine-sulphonic acid; has been prepared by Dr. Heinz and Dr. Liebrecht; it is claimed as a reliable diuretic, which can be employed in larger doses than caffeine by itself. The sodium, lithium, and strontium salts have been prepared. Any of the salts can be taken in water. The dose is 60 grains per diem, in four portions of 15 grains each; it has been given without any disturbance of the general system.

Symphyan'therous. (*Σύν*, together; *φύεσθαι*, to grow; *ἀνθήρ*, flower.) Same as *Syn-antherous*.

Symphycarpous. (*Συμφύειν*, to make to grow together; *καρπός*, fruit.) *Biol.* Bearing fruits which are joined together.

Sym'phynote. (*Συμφύειν*, to grow together; *νότον*, the back.) *Biol.* Applied to such bivalve Molluscs as have the valves soldered together at the hinge.

Symphyogenesis. (*Συμφύειν*, to grow together; *γένεσις*, generation.) *Biol.* The union of previously separated parts.

Symphyogenet'ic. (*Συμφύειν*, to grow together; *γένεσις*, generation.) Pertaining to symphyogenesis.

Symphyostem'onous. (*Συμφύειν*, to grow together; *στήμων*, a thread spun.) A set of stamens united by their filaments. See *Monadelphous*.

Symphysal. The same as *Symphyseal*.

Symphyseal. (*Σύμφυσις*, a growing together.) Of, or pertaining to, a symphysis; entering into the formation of a symphysis.

S. angle. The angle between the line in the median plane of the skull tangent to the mental prominence, and to the alveolar border

of the lower jaw, and the plane tangent to the anterior part of the lower border of the mandible.

Symphys'eotome. (*Σύμφυσις*, a joining together; *τομός*, cut.) A knife used in section of the symphysis pubis.

Symphyseot'omy. (*Σύμφυσις*, symphysis; *τομή*, section.) The operation of division of the symphysis pubis for the purpose of facilitating labour.

Symphys'ial. The same as *Symphyseal*.

Symphys'ian. The same as *Symphyseal*.

Symphys'ic. Same as *Symphyseal*.

Symphys'ion. (*Σύμφυσις*, a growing together.) The mid-point of the external border of the lower alveolus.

Symphysiotot'mia. *Symphysiotomy*.

Symphysiot'omy. See *Symphyseotomy*.

Sym'physis. (*Σύμφυσις*, a joining together.) The union or connection of bones in the median line of the body, either by confluence, by direct apposition, or by the intervention of cartilage or ligament. It constitutes a synarthrosis or an amphiarthrosis.

S. cartilaginosa. *Synchondrosis*.

S. ligamentosa. *Syndesmosis*.

S. mandibulæ or men'ti. The union of the two halves of the mandible by apposition.

S. os'sium muscula'ris. *Syssarcosis*.

S. pu'bis. The union of the two ossa innominata in the median line. The uniting surfaces of the pubic bones are coated with cartilage and united by ligaments.

S., sa'cro-il'i'ac. The joint between the sacrum and ilium.

Symphyso-dactyl'ia. (*Σύμφυσις*; *δάκτυλος*, a finger.) Abnormal union of the fingers. Synonym for *Syndactylism*.

Symphysop'sia. (*Σύμφυσις*; *ὄψ*, the eye.) Synonym of *Cyclopia*.

Symphysoske'lia. (*Σύμφυσις*; *σκέλος*, the leg.) A monster in which the lower limbs are fused. A siren.

Sym'phytos. (*Σύμφυτος*, grown together with.) Hereditary.

Symphytot'omy. (*Σύμφυσις*; *ήτρον*, belly; *τομή*, section.) Pubic symphysiotomy.

Sym'phytum. Comfrey. Europe. Nat. Order *Boraginaceæ*. (Not official.) The root of the gum plant, a coarse-looking perennial twelve to twenty-four inches high. It is fleshy, tapering, and has several heads. Action, astringent, demulcent, tonic. Uses, catarrhal affections. Dose: of the fluid extract, 1 to 2 drachms; of the compound wine, $\frac{1}{2}$ to 2 ounces.

S. min'imum. *Bellis*.

S. mi'nus. *Frunella*.

S. petræ'um. A plant whose juice is very nauseous and bitter. Has been used in syphilis.

Sympie'sis. (*Σύν*, together; *πίεσις*, pressing.) Pressing together.

Sympiesometer. (*Σύν*; *πίεσις*, pressing together; *μέτρον*, measure.) An instrument for measuring pressure.

Sym'plast. See *Plasmodium*.

Symplec'tic. (*Σύν*, with; *πλέκειν*, to bind.) A bone which passes, in Fishes, from the hyomandibular arch above to the quadrate bone below. Also called *Mesotympanic*.

Symplectomeres. (*Σύμπλοκος*, en-

twined together; μέρος, a part.) *Biol.* The collective name applied by Dujardin to sarcode organisms.

Symplocarpus angustispatha. (Σύμπλοκος, connection; καρπός, fruit.) *Dracontium angustispatha.*

S. foetidus. *Ictodes foetida*, or *Dracontium foetidum*. Skunk cabbage. North America. Nat. Order *Aroideæ*. (Not official.) Obconical, truncate rhizome, with a disagreeable odour and acrid taste. Antispasmodic, stimulant, and emetic; in doses of 5 to 15 grains.

Symplocium. (Σύμπλοκος, entwined.) *Biol.* The band of thick-walled cells in the sporangium of most ferns; the annulus.

Sympode. (Σύν, with; πούς, a foot.) *Biol.* A stem which has arising from it a number of secondary stems, which themselves give off branches.

Sympodia. A monster having the lower limbs united.

S. a'pus. A monster in which the lower limbs taper to a point without any trace of a foot.

Sympodial. (Σύν, with; πούς, foot.) Pertaining to a sympodium.

Sympodium. (Σύν, with; πούς, foot; pl. *Sympodia*.) *Biol.* A stem which consists of a series of secondary stems or axes which have arisen as branches one from another, as in the grape-vine, the tomato, the linden, &c.

Symptom. (Σύμπτωμα, a chance, symptom of disease.) One of the departures from normal function or form indicative of disease. It may be either evident to the patient (subjective), or perceptible to the observer (objective).

S.s, acciden'tal. Symptoms supervening in the course of a disease without having any actual connection with it.

S.s, ac'tive. Obvious symptoms.

S.s, as'sident or acces'sory. Minor symptoms.

S., branch. *Romberg's s.* Confirmatory of the major symptoms.

S. complex. The total of the symptoms. The same as *S. group*.

S.s, concom'itant. (L. *concomitari*, to accompany.) Accessory phenomena which occur in association with the essential phenomena of a disease.

S.s, consec'utive. Those which follow either other symptoms or a disease.

S., direct'. One immediately due to the disease.

S., dissocia'tion. A condition found in syringomyelia in which the sense of touch and the muscular sense are retained, while there is inability to appreciate heat, cold, and pain.

S.s, equiv'ocal. (L. *aquus*, equal; *vox*, sound.) Of doubtful significance.

S. group. A group of morbid symptoms frequently occurring together.

S. group'ing. See *S. complex*.

S., indirec't. One not immediately due to the disease.

S.s, labyrin'thine. Symptoms due to disease of the labyrinth of the internal ear.

S., neg'ative. One which does not occur in certain diseases, and therefore when present shows the absence of those diseases.

S., o'bjective. One observed by the examiner of the patient.

S., pathog'nomon'ic. (Πάθος, a disease;

γνώμων, a judge.) One observed in one condition only, and therefore showing the presence of that condition when it is present.

S.s, phys'ical. Affections of the physique due to disease.

S., Rom'berg's. See *Romberg's s.*

S., Ro'senbach's. Loss of the abdominal reflex.

S., sig'nal. The first disturbance of sensation, ushering in a more or less extensive convulsion or the beginning of paralysis. It may serve to indicate the position of the initial lesion.

S., stat'ic. Referring to the condition of one organ only.

S., Stell'wag's. The slight retraction of the upper lid in exophthalmic goitre.

S., subjec'tive. One observed only by the patient.

S., sympathet'ic. One which has seemingly no sufficient cause other than "sympathy."

S., West'phal's. The loss of the knee-jerk.

Sympto'ma. (Σύμπτωμα.) *Symptom.*

S. turpitu'dinis. *Nymphomania.*

Symptomatiat'ria. (Σύμπτωμα, symptom; θεραπεία, treatment.) Treatment of symptoms. *Homœopathy.*

Symptomatic. (Συμπτωματικός, symptomatic.) Of the nature of a symptom. Adapted to the relief of symptoms, according to symptoms. Opposite to idiopathic.

S. an'thrax. An epidemic, highly contagious disease of cattle. Black-leg; quarter-evil.

S. diagno'sis. A rehearsal of the immediate findings of a case without deducing the ætiological or anatomical conditions which produced them.

S. disease'. A disease which proceeds from some prior disorder in some part of the body.

S. fe'ver. The feverish symptoms accompanying a disease.

S. neural'gia. Neuralgic pain caused by disease.

Symptomati'cal. The same as *Symptomatic*.

Symptomatically. By means of, or in the nature of, symptoms.

Symptomatis'e. (Σύμπτωμα, a symptom.) To show symptoms of.

Symptomato'graphy. (Σύμπτωμα, symptom; γραφείν, to write.) An account of symptoms which can be read.

Symptomatolog'ic. (Σύμπτωμα; λόγος, a writing.) Of, or pertaining to, *Symptomatology*.

Symptomatolog'ical. Of, or pertaining to, *Symptomatology* or *Symptoms*.

Symptomatologically. In a symptomatological manner.

Symptomatology. (Σύμπτωμα, symptom; λόγος, to speak.) The sum of scientific knowledge concerning symptoms. The array of symptoms presented by a disease.

Symptomology. The same as *Symptomatology*.

Sympto'sis. (Συμπίπτειν, to fall away, collapse.) Wasting of some, or all, of the parts of a body.

Symp'us. (Σύν, together; πούς, foot.) A monster with the lower extremities more or less united.

Syn-. A prefix signifying with.

Synac'mic. (Σύν, with; ακμή, prime.) Pertaining to *Synaemy*.

Synac'my. The characteristic feature of a plant whose stamens and pistils reach maturity at the same time. Also called *Synanthesis*.

Synac'tic. (Συνακτικός, brought together.) Accumulative.

Synære'ma. (Συναίρω, to lift.) Corrugation.

Synæsthe'sia. (Σύν, together; αἴσθησις, sensation.) The production of a sensation located in one place when another place is stimulated.

Synæ'tion. (Σύν, with; αἰτία, cause.) Either of two causes which, acting together, produce disease.

Syn'agogue, or Syn'agogē. (Σύν, with; ἄγω, to carry or bring together.) Synonym of *Contraction*.

Synal'gia. (Σύν; αλγός, pain.) Pain felt as the result of a stimulus applied to the body at another and distant point.

Synanastomosis. (Σύν, with; L. *anastomosis*.) A junction made by several blood-vessels mingling their blood.

Synan'chē. (Κύων, a dog; ἄγχειν, to strangle.) Old name for affections of the throat, such as diphtheria, croup, &c., in which the patient pants for breath like a dog.

Synan'gium. (Σύν, together; ἄγγειον, vessel.) An arterial axis.

Synan'thema. (Σύν; ανθεῖν, to blossom together.) Growths on the skin arranged in bunches.

Synan'therous. (Σύν, together with; ανθεῖν, to blossom.) *Biol.* Having stamens which are joined by their anthers.

Synan'thesis. (Σύν; ἄνθησις, the blossom of a flower.) See *Synaemy*.

Synan'thous. (Σύν, with; ἄνθος, a flower.) *Biol.* 1. Being in a state of synanthy. 2. Bearing flowers and leaves at the same time.

Synan'throse. (Σύν; ἄνθηρ, an anther.) $C_{12}H_{22}O_{11}$. A sacrose found in rye.

Synan'thy. (Σύν; ἄνθηρ.) A biological term indicating an abnormal coalescence of two or more flowers.

Synaphimeni'tis. (Συναφή, connection; ὑμῖν, a membrane; ιτις, inflammation.) Synonym for *Conjunctivitis*.

Synaph'ipod. (Συναφής, continuous; πούς, a foot.) A term applied by Bates to the palp of a Crustacean.

Syn'aptase. (Σύν, with; ἄπτειν, to join.) With amygdalin it forms hydrocyanic acid. Bitter almonds contain it.

Synarthro'dia. The same as *Synarthrosis*.

Synarthro'dial. (Σύν, with; ἄρθρον, a joint.) Immoveably articulated; immoveable, or permitting no motion, as an articulation. Pertaining to *Synarthrosis*.

S. car'tilage. The cartilage in any fixed or slightly moveable articulation.

S. diarthro'sis. *Amphiarthrosis*. A joint with a fibrous or fibro-cartilaginous capsule, and without fibrous or fibro-cartilaginous tissue between the bones.

Synarthro'dially. So as to be immoveably articulated; in a synarthrodial manner; by means of synarthrosis.

Synarthro'isis. (Σύν, with; ἄρθρίζω, to collect.) Congestion.

Synarthrois'mus. Congestion.

Synarthro'sis. (Σύν, together; ἄρθρον, a joint.) Immoveable articulation.

1. *Suture*:

(a) *Harmonic*, when the edges are even, and evenly applied.

(b) *Squamous*, when one margin overlaps the other.

(c) *Serrate*, if the teeth are serrated and they interlock.

(d) *Dentate*, dovetail edges.

(e) *Limbois*, the edges overlapping alternately.

2. *Schindylesis*, when the ridge of one bone is received into the groove of another.

3. *Gomphosis*, if a peg of one bone is received into the mortise of another like a tooth in its socket.

4. *Syndesmosis*, when the interval is wider, so that the uniting connective tissue is elongated into ligamentous bands.

5. *Synchondrosis*, when the connecting medium is cartilage.

Syncam'pē. (Συγκαμπή.) A freely moveable joint.

Syncan'thus. (Σύν, with; κανθός, canthus.) Abnormal union between the margin of the orbit and the conjunctiva over the eyeball.

Syn'carp. (Σύν, with; καρπός, fruit) A multiple fruit.

Syncar'pium. See *Syncarp*.

Syncar'pous. Of, or belonging to, a *Syncarp*.

Synceph'alus. (Σύν; κεφαλή, a head.) A double monster whose heads are fused.

Syncer'ebral. (Σύν, with; L. *cerebrum*, a brain.) Of, or belonging to, a *Syncerebrum*.

Syncer'ebrum. A compound brain.

Synchei'ral. (Σύν, with; χεῖρ, a hand.) Applied to a movement brought about by the simultaneous action of two feet, forming a pair, moving together, as in a galloping horse.

Synchilia. (Σύν, together; χεῖλος, a lip.) Atresia of the lips.

Synchisis. (Σύγχυσις, a mixing together.) Confusion.

S. scin'tillans. A condition of the vitreous humour of the eye in which it is liquefied, or in which fluid accumulates on its surface; and it contains particles of cholesterol which move with the eye, and give rise to the appearance of showers of gold and silver.

Synchi'ton. (Σύν; χίτον, coat.) Synonym of *Conjunctiva*.

Synchondrot'omy. (Σύν, with; χόνδρος, cartilage; τομή, incision.) Section of an intra-articular cartilage, e.g. that of the symphysis pubis. *Symphysiotomy*.

Synchronical. (Σύν, with; χρόνος, time.) Same as *Synchronous*.

Syn'chronism. The condition of being synchronous.

Syn'chronous. (Σύν, with; χρόνος, time.) Occurring at the same time. *Isochronous*.

Syn'chronus and Synchro'nus. See *Synchronous*.

Syn'chysis. See *Synchysis*.

Synchytophlo'gia. (Σύγχυσις, a mixing together; φλέγω, to burn.) Confluent smallpox.

Syn'ciput. See *Sinciput*.

Synclē'isis. (Σύν; κλείω, to close.) See *Oclusion*.

Syncli'nal. (Σύν; κλίνω, to slant.) Slanting towards.

Syn'clisis. *Synclitism.*
Synclitic. Exhibiting *Synclitism*.
Syn'clitism. (Συγκλίτης, incline or lean together.) Parallelism between the planes of the fetal head and those of the pelvis.
Synclon'e'sis. (Συγκλονήσις, a shaking together.) See *Synclonus*.
Synclon'us. (Σύν; κλονός, great shaking.) Continuous tremor of muscles, occurring whenever they are put in action, and sometimes when at rest. *Clonus*.
S. ballis'mus. *Paralysis agitans*.
S. beriber'ia. *Beri-beri*.
S. cho'rea. *Chorea*.
S. in'dicus. *Beri-beri*.
S. sal'tans. *Chorea*.
S. trem'or. General tremor.
Syn'copal. Pertaining to, or resembling, *Syncope*.
S. asphy'xia. A form of asphyxia in which the cavities of the heart are found empty.
Syn'copē. (Συγκοπή, a cutting short, abridged.) Loss of consciousness from fall of blood-pressure, and consequent cerebral anæmia; fainting. It may be induced by cardiac weakness or inhibition, hæmorrhage, or probably visceral vaso-motor relaxation.
S. an'gens or angino'sa. *Angina pectoris*.
S., laryn'geal. Very irregular action of the larynx.
S., lo'cal. Insensibility of a part, of sudden onset, and accompanied by extreme pallor.
Syncope'xia. (Σύν; πάσχω, to be affected by.) See *Tachycardia*.
Synco'pic. Pertaining to, or of the nature of, *Syncope*.
Synco'ptic. Same as *Syncope*.
Syncopt'us. *Syncopal*.
Synco'tyle'donous. (Σύν; κοτυληδών, a cup-shaped hollow.) Having its cotyledons joined together.
Syncran'ius. (Σύν; κρανίου, the skull.) The superior maxillary bone.
Syncran'terian. (Σύν; κραντήρες, back molars.) *Biol.* Having the anterior teeth in line with the posterior.
Syn'cretism. (Συγκρητίζειν, to join together.) The combination of different views. Blending.
Syn'crisis. (Σύν; κρίνειν, to coagulate.) The coagulation of liquids.
Syncri'tic. Astringent.
Syncri'tica. (Σύν; κρίνω, to separate.) Medicines believed to be useful for removing secretions and excretions.
Syncri'tium. Tissue with nucleated protoplasm, and with no recognisable cell-walls. A large multinucleated cell.
Syn'cy'tial. Pertaining to a *Syn'cy'tium*.
Syn'cy'tium. (Σύν; κύτος, a cell.) See *Syncri'tium*.
Syndac'tyl. (Σύν; δάκτυλος, finger.) Having the fingers joined together.
Syndactyl'ian. See *Syndactylism*.
Syndac'tylism. The condition of having the fingers or toes joined together.
Syndactylous. See *Syndactyl*.
Syndectomy. (Σύνδεσμος, a ligament; εκτομή, a cutting out.) Same as *Peritomy*. An operation in which the conjunctival and subconjunctival vessels are removed from a circumferential area outside the cornea. Used in pannus. Circumcision of the cornea.

Syndel'phus. (Σύν; ἀδελφός, brother.) A monster with one hand, one pelvis, fused thoraces, and four limbs.
Synden'ium. (Σύν; δέμνιον, a couch.) The subgenital vestibule. A space found in the middle of the sub-umbrella of the *Versuridæ* and *Crambessidæ*, two families of the *Rhizostomæ*.
Synden'drium. (Σύν; δένδριον, a small tree.) *Biol.* The thick, flat, quadrate disc, suspended from four stout pillars, and formed of the united trunks of the polypiferous tree of the *Rhizostomæ*.
Synde'sis. (Συνδεῖν, to bind together.) The state of being bound together.
Syndesmectopia. (Σύνδεσμος, a ligament; εκτοπισμός, out of place.) Displacement of a ligament.
Syndesmitis. (Σύνδεσμος, a ligament; ιτις, inflammation.) Inflammation of articular ligaments. Stellwag's name for *Catarrhal conjunctivitis*.
S. catarrha'lis. Synonym of *Catarrhal conjunctivitis*.
Syndes'mo-arytænoid'eus. (Σύνδεσμος, a ligament; ἀρύταινοειδής.) A variety of the lateral crico-arytænoid muscle, which arises from a tendon common to it and the inferior crico-arytænoid.
Syndesmodon'toid. (Σύνδεσμος, a ligament; ὀδόν, a tooth; εἶδος, like.) Formed by the transverse ligament of the atlas and the odontoid process of the axis; noting the synovial articulation between these parts.
Syndesmography. (Σύνδεσμος, a ligament; γραφείν, to write.) Descriptive syndesmology; a description of, or treatise on, the ligaments and joints.
Syndesmology. (Σύνδεσμος, ligament; λεγείν, to speak.) The science of the ligamentous system; the knowledge of the ligaments of the body, and of the joints or articulations which they contribute to.
Syndes'moma. (Σύνδεσμος, a ligament; ὄμα, tumour.) A new growth containing much connective tissue.
Syndesmopath'ia. (Σύνδεσμος, a ligament; παθεῖν, to suffer.) Synonym of *Desmopathia*.
Syndesmopharynge'us. An occasional anomalous muscle of the pharynx connected with the superior constrictor.
Syndes'mosis. (Συνδεῖν, to bind together.) The connection of bones by ligaments, fasciæ, or membranes in a synarthrodial articulation.
Syndes'motic. Pertaining, or relating to, *Syndesmosis*.
Syndes'motomy. Parker's operation. In this operation the tendons are divided at or near their insertions, where they spread out as fibrous expansions, closely blended with the capsular ligaments connecting the head of the astragalus with the scaphoid, the scaphoid with the internal cuneiform, and this latter with the first metatarsal bone. The ligaments are also divided.
Syndes'mus. (Σύνδεσμος.) A ligament.
Syndigasmus. (Σύν, together; δύο, two.) Coition.
Syn'drome. (Σύν, together; δρόμος, a running.) A name denoting the aggregate of symptoms of a disease.
S. of Brown-Séguar. Hemipara-

plegia with hemianæsthesia of the opposite side.

S. of Weber. Paralysis of the oculomotor nerve of one side (side of the cerebral lesion), and of the face, limbs, and hypoglossal nerve of the opposite side.

Syneches. (Συνήκης, unintermitting.) See *Continued fever*.

Synechia. (Σύν; ἔχειν, to hold.) Morbid union of parts, especially that of the iris to the cornea (anterior synechia), or to the anterior surface of the capsule of the lens (posterior synechia).

S., circular or annular. Same as *Exclusion of the pupil*.

S. pericardii. Adhesions of the pericardium.

S., to'tal. When the whole surface of the iris is adherent to the lens.

Synech'otome. (Σύν; ἔχειν, to hold; τομή, section.) An instrument for dividing adhesions, particularly those of the membrana tympani.

Synechotomy. (Συνέχειν, to hold together; τομή, section.) The operation of dividing a synechia.

Syne'dral. (Σύν, with; ἔδρα, a seat.) *Biol.* Growing on the angle of a stem.

Synedrous. See *Synedral*.

Syne'ma. (Σύν, with; νῆμα, a thread.) *Biol.* A column formed by the united filaments of monadelphous stamens.

Synencepha'lia. (Σύν, with; ἐγκέφαλος, the brain.) The condition of a *Synencephalus*.

Synenceph'alocoele. (Σύν, with; ἐγκέφαλος, the brain; κήλη, tumour.) An encephalocoele occurring as the result of some intrauterine pathological process.

Synencephalus. (Σύν, with; ἐγκέφαλος, the brain.) A double monster with fused heads.

Syner'gia. *Synergy*.

Synergic. (Σύν, with; ἔργον, work.) Helpful. Applied broadly to something which assists another, *e.g.* muscles, drugs.

Syner'gida. (Σύν; ἔργον, work.) *Biol.* Applied to the two cells of the egg apparatus that are associated with the germ-cell in the embryo-sac.

Synergist. (Σύν, with; ἔργον, work.) Something which assists another.

Synergy. (Σύν, with; ἔργον, work.) A correlation of action between different organs in health. Sometimes used of organs which are diseased.

Synesthe'sia. (Σύν, with; αἴσθησις, sensation.) The state in which a sensation is felt at one part of the body when a stimulus is applied at another part.

Syneuro'sis. See *Syndesmosis*.

Synezi'sis. (Σύν, together; ἵζω, to sit, or to make to sit.) A falling together; contraction.

S. pupillæ. Closure or occlusion of the pupil due to persistence of the membrana pupillaris or absence of the pupil. It may follow accident or severe ophthalmia.

Syngamus trachea'lis. A nematode worm found in the trachea of birds.

Syngenes. (Σύν, with; γεννάω, to beget.) Hereditary.

Syngenesious. (Σύν, with; γένεσις, generation.) *Biol.* Applied to stamens which are united by their anthers.

Syngenesis. (Σύν, together; γένεσις, generation.) Reproduction in which a male and a female take part, one furnishing spermatozoa and the other an ovum, so that the substance of the embryo is actually derived from both parents.

Syngenetic. Reproduced by means of both parents.

Syngen'ic. See *Congenital*.

Syngig'noscism. (Σύν, with; γυγνώσκειν, to know.) A proposed synonym for *Hypnotism*.

Syngonid'ium. (Σύν, together; γόνος, generation.) *Biol.* A collection of *Gonidia*.

Syndro'sis. (Σύν, with; ἰδρώς, sweat.) A concurrent sweating.

Synimen'sis. See *Synymensis*.

Synize'sis. See *Synezisis*.

Synkine'sis, or Synkine'ses. (Σύν, together; κίνησις, movement.) An associated reflex movement; a reflex movement occurring in a paralysed part when a non-paralysed part, and especially an homologous member, is set in motion; or occurring in a non-paralysed part as a consequence of motion, passive or active, of the paralysed limb.

Synneuro'sis. (Σύν; νεῦρον, a tendon.) The same as *Syndesmosis*. The connection of parts by ligaments.

Syn'ocha. (Σύνοχος, continued.) A continued fever.

S. rheumat'ica. Acute rheumatism.

S. vacci'na. Cow-pox.

Syn'ochal. Of, or pertaining to, *Synocha*.

S. fe'ver. The same as *Synocha*.

Syn'ochoid. (Σύνοχος, continued; εἶδος, likeness.) Of the nature of, or resembling, *Synochus*.

Syn'ochus. (Σύνοχος, joined together.) A continued fever.

S. anniversa'ria. A fever which recurs annually at a definite time.

S. ar'dens. Typhoid fever.

S. bilio'sa. Gastric or bilious fever.

S. catarrha'lis. Influenza.

S. ictero'des. Yellow fever.

S. impu'tris. *Synocha*.

S. milla'ria. Miliary fever.

S. scorbu'tica. Fever due to scurvy.

S. varicel'la. *Varicella*.

Syn'ocil. (Σύν, with; L. *cilium*, lash.) A bundle of sensory filaments found in certain sponges, and believed by some to have visual function.

Synœ'cious, or Syne'cious. (Σύν, with; οἰκεῖν, to live.) Having male and female organs or flowers in one cluster.

Synol'cè. (Σύν, together; ἔλκω, to draw.) Spasm.

Syn'onym. (Σύν, together; ὄνομα, a name.) A word or name which can be used instead of another without alteration of meaning.

Synonymat'ic. (Σύν, together; ὄνομα, a name.) Synonymous.

Synophthal'mia. (Σύν, together; ὀφθαλμός, eye.) A monstrosity having but one orbital cavity. *Cyclopia*.

Synophthal'mos. Synonym of *Cyclops*.

Synophy'ty. (Σύν, together; φυτόν, a plant.) The coalescence of embryos in a seed.

Synopsia. (Σύν, together; ὄψ, the eye.) Congenital union of the eyes.

SYNOPSIS—SYNOVITIS

Synop'sis. (Σύν; ὄψις, a view.) A general view.

Synor'cheos. (Σύν, together; ὄρχεος, the scrotum.) Adhesion of the penis to the scrotum.

Synor'chism. (Σύν, together; ὄρχις, a testicle.) Fusion of the testicles.

Synosteography. (Σύν, together; ὀστέον, bone; γραφείν, to write.) Descriptive synosteology; a description of, or treatise upon, joints.

Synosteology. (Σύν, together; ὀστέον, bone; λόγος, science.) The science of the joints of the body, or the knowledge of the articulations of the bones.

Synos'teophyte. (Σύν; ὀστέον, a bone; φύτον, growth.) Congenital growth of bone.

Synosteo'sis. Union by means of bone; ankylosis.

Synosteotome. A dismembering knife.

Synosteotomy. (Σύν, together; ὀστέον, bone; τομή, section.) The dissection of joints, the anatomy of the articulations.

Synostology. (Σύν; ὀστέον, a bone; λόγος, a treatise.) The treatment of joints.

Synostosed. Joined in osseous continuity.

Synosto'sis. The same as *Synosteosis*.

Synostotic. Pertaining to, or characterised by, *Synostosis*.

Synot'ia. (Σύν; οὖς, an ear.) Having the ears fused as in certain monsters.

Synot'is, or Synot'us. (Σύν; οὖς, an ear.) A double monster whose second head is represented by two ears close together or a double median ear. One of the variations of *Otocephalus*.

Synovia. (Σύν, together; L. ovum, egg.) The lubricating liquid secreted by the synovial membrane. It is a nearly colourless liquid containing mucin.

Synov'ial. Of, or pertaining to, *Synovia*; secreting synovia, as a membrane; containing synovia, as a bursa.

S. bur'sa. A *Bursa mucosa*.

S. cap'sule. See *S. membrane*.

S. cysts. Cysts resulting from the distension or expansion of bursæ and the synovial sheaths of tendons.

S. fim'brise. *S. fringes, S. ligaments, S. folds.*

S. flu'id. The same as *Synovia*.

S. folds. Folds of *S. membrane* projecting into the cavity of a joint.

S. fre'na. The folds of a teno-synovial membrane, stretching from the tendon to the surface of the membrane.

S. frin'ges. Projections of synovial membrane into joints.

S. glands. Masses of fat around a joint, thought by Havers to be glands.

S. her'nia. A protrusion of the synovial membrane.

S. lig'aments. Ligament-like synovial folds.

S. mem'branes. Resemble serous membranes; their surfaces here and there show villous projections, and they secrete synovia, a mucous-albuminous fluid. The deep layer of the membranes is more vascular than that of serous membranes. They either line joints, bursæ, or theææ.

S. mem'brane, artic'ular. The mem-

brane lining all but the cartilage-clad bone in a diarthrodial joint.

S. mem'brane, bur'sal. The synovial lining of a bursa; it may be regarded as the entire thickness of the bursa. It is also called the *Vesicular synovial membrane*.

S. membrane, vag'in'al. A *Teno-synovial membrane*.

S. mem'brane, vesic'ular. The same as *Bursal synovial membrane*.

S. rheu'matism. *Rheumatic synovitis*.

S. sheath. A *Vaginal synovial membrane*.

S. vil'li. The small non-vascular processes forming the secondary synovial fringes.

Synovial'is. A *Synovial membrane*.

Synov'ially. By means of, or with the concurrence of, a *Synovial membrane*.

Syn'ovin. (Σύν; ὠόν, an egg.) The form of mucin found in synovial fluid.

Synovip'arous. (L. *synovia*; *parere*, to produce.) Producing or secreting synovia; synovial, as a membrane.

S. crypts. Small follicle-like extensions of the synovial membranes which occasionally perforate the capsule of the joints, and sometimes become cut off from the main sac.

Synovitis. Inflammation of a synovial membrane.

S., acute. A result of injury, cold, or over-use, which causes inflammatory changes in the synovial membrane accompanied by effusion.

S., chron'ic pur'ulent. See *Fungous arthritis*.

S., chron'ic se'rous. See *Hydrarthrosis*.

S., dry. Accompanied by little or no exudation.

S., exanthem'atous. Synovitis accompanying one of the exanthemata.

S., fi'brinous. See *Dry synovitis*.

S., fun'gous. See *Fungous arthritis*.

S., gonorrhoe'al, or Ure'thral rheu'matism. A joint affection associated with a specific urethral inflammation. Believed to be a metastatic infection. It attacks the knee, wrist, ankle, and foot more often than any other parts. The heart is sometimes affected.

S., gout'y. Inflammation, of an acute or chronic character, produced by the deposition of sodium urate.

S. hyperplas'tica. Synovitis with thickening.

S. hyperplas'tica granulo'sa. *Tubercular synovitis*.

S. hyperplas'tica læ'vis. The same as *S. hyperplastica pannosa*.

S. hyperplas'tica panno'sa. Synovitis in which the membrane grows over the articular cartilage so as to resemble pannus.

S., lipom'atous. Synovitis in which the newly formed tissue undergoes fatty degeneration.

S., metrit'ic. Synovitis following on septic infection of the uterus.

S., pri'mary. See *S., acute*.

S., puer'peral. Synovitis following childbirth, and due to septic infection of some part of the genital tract.

S., pu'rulent. Synovitis accompanied by suppuration.

S., pyæ'mic. Usually a septic synovitis, the result of pyæmia.

S., scarlati'nal. Synovitis coming on in an attack of scarlatina.

S., sep'tic. An infected inflammatory con-

dition of a joint, due to micro-organisms of putrefaction.

S. sero-fibrino'sa. A synovitis with sero-fibrinous exudation.

S., simple. See *S., acute.*

S., subacute'. A slight degree of inflammation from any cause.

S., syphilitic. Synovitis due to syphilitic inflammation.

S., ten'dinous. Inflammation of the synovial sheath surrounding a tendon.

S., tuber'culous. Inflammation of a synovial membrane due to a tuberculous process.

S., ure'thral. See *Gonorrhœal synovitis.*

Syn'plast. (Σύν, together; πλασσειν, to form, mould.) In *Biol.*, a unit or group of protoplasts.

Synsarco'sis. The same as *Syssarcosis.*

Synsep'alous. (Σύν, together; L. *sepalum*, a sepal.) Same as *Gamosepalous.*

Synspermy. (Σύν, together; σπέρμα, a seed.) *Biol.* The union of two or more seeds.

Syntag'ma. (Σύνταγμα, that which is put together.) Biological term applied to a collection of tagmata.

Syn'tasis. (Συντείνειν, to stretch or strain.) Tension of structures.

Syntatic'. (Συντείνειν, to stretch or strain.) Tonic.

Syn'taxis. (Συντάσσειν, to arrange.) Reduction, articulation, taxis.

S. serra'ta. See *Suture.*

Syntecopy'ra. (Συντῆκειν, to waste away; πύρ, fire.) Hectic fever.

Syntectic'. (Συντητικός, wasting.) Characterised by *Syntexis.*

Synteno'sis. (Σύν, together; τένων, a sinew.) The articulation or connection of bones by means of tendons.

Synteresis. (Συντήρησις, a watching closely.) Preservative or preventive treatment; *Prophylaxis.*

Synteret'ic. Pertaining to *Synteresis*; preserving health.

Synteret'ics. Hygiene.

Syntexis. (Συντήξιν, a melting or wasting away.) Wasting of the body.

Synthema. A form of epilepsy accompanied by cardialgia and tormina.

Synther'mal. See *Isothermal.*

Synthesis. (Συντιθέναι, to put together in one.) In *Surg.*, synthesis of continuity is the union of edges artificially disunited, *e.g.* the edges of a wound. Synthesis of contiguity is the replacement of parts artificially displaced, *e.g.* the reduction of a hernia.

In *Chem.*, synthesis means the act by which a chemical compound is built up from its constituents.

Synthetic. Appertaining to *Synthesis.*

Syn'thetism. The whole process by which a fracture is reduced, when there is displacement, set, and kept in position. It includes extension, counter-extension, coaptation, and bandaging.

Syntho'rax. (Σύν, together; θώραξ, chest.) See *Thoracopagus.*

Syn'tonin. (Σύντονος, contracted.) Acid-albumin. A proteid produced by the action of dilute acids on myosin and fibrin.

Syntrim'ma. (Σύν, together; τρίβω, to rub.) See *Comminution.*

Syntrip'sis. (Συντρίψις, rubbing together.) See *Comminution.*

Syn'tropë. (Σύν, with; τρέπειν, to turn.) One of a set of syntropic parts.

Syn'trophus. (Σύν, with; τρέφω, to grow up.) A term applied to a disease which has grown up with the individual.

Syntrop'ic. (Σύν, together; τρέπειν, to turn.) Applied to the position of those parts, and those parts themselves, which form by repetition a series of similar segments; thus several vertebrae and several ribs are syntropic in respect to one another.

Synulo'sis. (Σύν; οὔλω, to be whole.) Cicatrisation.

Synulot'ic. (Συνουλωτικός, healing.) Promoting cicatrisation. Applied to certain drugs.

Synus'ia. (Συνουσία, a being together.) Coition.

Synymen'sis. (Σύν, with; ὑμῆν, a skin, membrane.) Synonym for *Syndesmosis.*

Synzyg'ia. (Συζυγία, a junction.) See *Syzygy.*

Syphilel'cos, or Syphilel'cus. (L. *syphilis*; Gr. ἡλκός, an ulcer.) Syphilitic ulceration. Presence of a syphilitic chancre.

Syphilelco'sis. (L. *syphilis*; Gr. ἡλκός, ulcer.) The condition or progress of syphilitic ulceration. The condition of having a chancre.

Syph'ilid. Same as *Syphilide.*

Syphilide. A syphiloderm; a syphilitic eruption of the skin; any disease of the skin due to syphilis.

S., acne'iform. Dark red, flat pustules on a raised base, each with a narrow areola, which occur most often on the skin of the face and shoulders.

S., an'nular. A form of squamous syphilide which occurs mostly on the skin of the neck, forehead, and around the chin and mouth. Forms circular, oval, or gyrate figures, with clear centres and raised scaly edges.

S., bul'lous. A vesicular or pustular form characterised by the absence of a raised red base, and by the areola being pink in place of copper-coloured. Occurs in two forms, rupial and pemphigoid.

S., cir'clinate. See *S., annular.*

S.s., classifica'tion of (Treves' system) :

1. *Erythema* or *roseola.* Scattered pinkish spots on the trunk and limbs, chiefly on the flexor aspects, which diminish or disappear on stretching the skin.

2. *Papular* or *lichenoid.* Small or large papules, caused by masses of exudation cells, accompanied by congestion and thickening of, and cell deposit round, the walls of the small vessels in and close to the papules.

Papulo-squamous syphilide. A scale lies on the papule, caused by proliferation of the epithelium on its surface.

Condylomata. Large papules occurring in a moist place, *e.g.* between the buttocks, and having a thin whitish membrane on the surface and secreting thin fluid. (Extremely contagious.)

Mucous patches. Condylomata occurring in the mouth, tongue, tonsils, &c.

Rhagades. Fissured condylomata.

3. *Nodular* or *tubercular syphilide.* An extensive infiltration of the skin, which

SYPHILIDIATER—SYPHILIDOCOLPITIS

tends to ulcerate and then heal at the centre, while it spreads at the edge.

4. *Pustular syphilide*. May resemble acne, varicella, or variola. Large scabs form on them if, and when, they break (*Ecthyma*).

5. *Pemphigus*. Large vesicles, which may suppurate and burst. The scab formed is continually increased in thickness and circumference by the formation of scab on the ulcerating surface, which continues to extend. The whole result resembles a limpet shell, and is called *Rupia*.

6. *Gummatous*. A collection of cells grouped in especial profusion around the vessels of the structure in which it is placed. By the pressure of the cells upon the blood-vessels and against each other (often by a concurrent inflammation of the true vessel wall) their nutrition is damaged, and they undergo fatty or granular degeneration. This will be most marked in the centre of the cellular exudation, whereas towards the periphery organisation into fibrous tissue is the rule.

This condition is capable of existing indefinitely, unless on a cutaneous or mucous surface, where it is exposed to injury and the access of micro-organisms, which cause it to soften or suppurate.

Gummata occur also in the periosteum and medulla of bones, in the one case pitting and in the other causing expansion of the bone.

Gummatous ulcer. A broken-down gumma.

7. *Serpiginous syphilides* and *syphilitic lupus*. A raised infiltration of the skin, generally of a brownish-red colour, occurring as isolated nodules, which tend to form pustules or to scab over their centre. These nodules often coalesce later, and a spreading line of infiltration is produced, which has a crescentic, annular, or horseshoe shape.

8. *Multiple subcutaneous gummata* resemble in their early stage fibromata or "rheumatic nodules," which later on soften and suggest chronic pyæmic abscesses.

S., ecthym'atous. A form of eruption characterised by the presence of large pustules, each of which originates round a hair-follicle. The pustules may be superficial or deep, according as they appear in the early or latent stage of the disease; they are about a quarter of an inch in diameter, and placed on a red raised base. They dry to a blackish or to a greenish scab. Most often occur on the lower limbs.

S., erythem'atous. See *Roseola syphilitica*.

S., follic'ular. *Miliary syphilis*, *Syphilitic lichen*. Occurs in two forms, large and small papules. The large occurs usually in the first eight months, and consists of a more or less general outbreak of papules about the size of a pea, rounded, raised, firmly seated, and dull red. At first smooth, they are afterwards branny from exfoliation of the epidermis. The small occurs

usually in the first four months, and is a more or less generalised profuse rash, consisting of grouped or discrete papules about the size of a millet-seed, each of which is firm, rounded, or pointed, with a smooth or scaly top. At first they are bright or dull red, later on they become brownish.

S., herpet'iform. See *S., vesicular*.

S., impeti'go. Pustules about the size of a pea, flat or raised, discrete, sometimes confluent, generally distributed, and drying to yellow or brownish-yellow, thick, uneven, more or less adherent crusts, beneath which there is ulceration, superficial or deep. The hairy parts of the body are those affected.

S., lentic'ular. Large papular rash which appears on the nape of the neck, back, genitals, anus, and flexor aspects of the limbs.

S., mac'ular. See *Roseola syphilitica*.

S., mili'ary. See *S., follicular*.

S., nod'ular. Projections of the skin larger than papules, which may occur early, and generally are late manifestations of the disease. They are well defined, raised, coppery colour, with smooth surfaces. Eventually they come to an end either by absorption or ulceration, which may be deep or superficial.

S., num'mular. See *Syphiloderma papulo-squamosum*.

S., orbic'ular. See *Syphiloderma circinatum*.

S., pap'ular. Papular rash on the skin or mucous membrane.

S., pem'phigoid. Syphilitic pemphigus. Occurs generally in the congenital form of syphilis, and is usually limited to the palms and soles, but it may be general.

S., pig'mentary. Syphilitic leucoderma. Round or oval spots of well- or ill-defined margin, of yellowish-white colour or dead white, smooth and not elevated, which may run together and form a patch. The skin bordering them is darker than usual.

S., pus'tular. A vesicular syphilide of which the contents have become purulent. A crust forms, ulceration may go on under it, and a pigmented scar is left.

S., ru'pia. The lesion is an ulcer punched out and shelving from the centre to the edge, covered with a firm stratified conical mass. It usually occurs on the limbs.

S., squa'mous. See *Syphiloderma papulo-squamosum*.

S., tuber'cular. See *S., nodular*.

S., varicel'liform. Umbilicated or convex vesicles on a coppery red raised base. Their contents are cloudy.

S., variol'iform. Small or large pea-sized, separate or grouped, pointed or rounded pustules, resembling the lesions of acne and variola.

S., vesic'ular. The lesions are small or large, and grouped in patches. They have a deep red base.

Syphilidi'ater. (L. *syphilis*; Gr. *ιατρός*, a physician.) One who treats syphilis.

Syphilidiat'ria. (L. *syphilis*; Gr. *ιατρεία*, treatment.) The skilled treatment of syphilis.

Syphilidoch'thus. (L. *syphilis*; Gr. *ὄχθη*, a hill.) A tubercular syphilitic eruption.

S. discrimina'tus. Tubercular syphilitic eruption.

S. ro'dens. Ulcerated syphilitic tubercle.

Syphilidocolp'itis. (L. *syphilis*; Gr.

κόλπος, vagina; *ιτις*, inflammation.) Syphilitic inflammation of the vagina.

Syphilidog'raphy. See *Syphilography*.

Syphilidol'ogist. The same as *Syphilologist*.

Syphilidol'ogy. The same as *Syphilology*.

Syphilidoma'nia. See *Syphilomania*.

Syphilidopho'bia. See *Syphilophobia*.

Syphilidophthal'mia. (L. *syphilis*; Gr. *ὀφθαλμός*, an eye.) Syphilitic inflammation of the eye.

Syphil'ifer. One who has syphilis.

Syphilon'thus. See *Syphionthus*.

Syphilipho'bia. Morbid dread of having contracted syphilis.

Syph'ilis. (Of uncertain origin, probably derived from a character in a play by Hieronimo Fracastorio, an Italian physician and poet [1483—1553], entitled "*Syphilis, sive morbi Gallici, libri tres*.") A contagious venereal disease of chronic course; also communicated by heredity. The initial lesion is either a Hunterian chancre, a soft sore, or a papule; this is called primary syphilis, and is followed by secondary syphilis, characterised by general eruption of the skin and mucous membranes, alopecia, iritis, and a general enlargement of the glands; which in turn is followed by tertiary syphilis, in which gummata are formed.

S., benign'. Syphilis which runs a mild course.

S. brephotroph'ica. Syphilis spread amongst infants and those who take care of them.

S., congen'ital. Syphilis inherited from the parents.

S., constitu'tional. Syphilis which is generally manifested throughout the body.

S. cor'puscles. Microscopic bodies said to have been observed in the blood of syphilitic patients.

S., cuta'neous. See *Syphiloderma*.

S. e col'itu illic'ito. See *S. pravorum*.

S. e col'itu legit'imo. See *S., marital*.

S., encephal'ic. Syphilis of the brain.

S. endem'ica. See *S. pandemica*.

S. epidem'ica. See *S. pandemica*.

S., e'quine. A disease affecting the horse. It is characterised by inflammatory lesions of the genital organs, enlargement of the lymphatic glands, and muscular weakness. It may be fatal, and is infectious.

S., extra-gen'ital. Syphilis in which the primary lesion is not on the genital organs.

S., gonorrhoe'al. A chancre of the urethra which gives rise to a discharge simulating that of gonorrhœa.

S., hered'itary. Constitutional syphilis, derived from the parent during foetal life by the child.

S. ingen'ita. See *Hereditary syphilis*.

S. innocen'tium. See *S. insontium*.

S. inson'tium. Syphilis acquired in an innocent manner.

S. inson'tium si'ne co'itu. Syphilis acquired otherwise than by sexual intercourse.

S., in'tra-u'terine. Syphilis acquired during intra-uterine existence.

S. invet'erata. Synonym of *S., tertiary*.

S., la'tent. Syphilis in which the symptoms and signs are for a time in abeyance.

S., malign'ant. Syphilis characterised by destructive gummata.

S., mar'ital. Syphilis acquired in wedlock.

S. modifica'ta. Synonym of *Syphiloid*.

S., non-vene'real. Synonym of *S. insontium*.

S. occul'ta. Syphilis appearing in persons in whom no primary or secondary symptoms have been seen.

S. œconom'ica. A form of *S. insontium* which is derived from using infected household utensils, or by accidental contact with syphilitic persons.

S. pandem'ica. Syphilis which has extended widely like other contagious diseases. It may be epidemic or endemic. In the former it extends rapidly, and affects many persons; in the latter it spreads more slowly, and limits itself to a tribe or nation. (Bulkley.)

S. pravo'rum. Syphilis acquired in illegitimate sexual intercourse.

S., pri'mary. Syphilis during the period intervening between the appearance of the chancre and the secondary manifestations.

S., sec'ondary. Syphilis during the period in which there are secondary manifestations.

S. si'ne co'itu. Syphilis not acquired by sexual intercourse.

S. sporad'ica. Syphilis *insontium* occurring in isolated cases, or in a sporadic manner.

S. tech'nica. Syphilis acquired in following one's occupation.

S., ter'tiary. See *Syphilis*.

S. universa'lis. Syphilis affecting the entire body.

S., vaccina'tion. Syphilis acquired from infected lymph, or by inoculation of the vaccination wound.

S., vene'real. Syphilis acquired in illegitimate sexual intercourse.

S., vis'ceral. Syphilis of the viscera, either inflammatory lesions or gummata.

Syphilis'mus. Synonym of *Syphilis*.

Syphilit'ic. Pertaining to, or of the nature of, *Syphilis*.

S. diath'esis. The condition of body induced by hereditary or acquired syphilis.

S. fe'ver. Pyrexia as a symptom of syphilis.

S. inflamma'tion. Any inflammation due to syphilis, but especially gummata.

Syphiliza'tion. A saturation of the body by repeated inoculations of syphilis, suggested as a cure for syphilis and a preventive of future attacks.

Syph'ilize. To saturate the system with syphilis by inoculation.

Syphilized. Affected with hereditary syphilis.

Syph'iloceles. (L. *syphilis*, Gr. *κηλίς*, a stain.) Syphilitic patches on the skin.

Syph'iloderm. A dermal lesion of syphilis, a syphilide.

Syphiloder'ma. Same as *Syphiloderm*.

S. circina'tum. Orbicular or annular syphilide, *Lepra syphilitica*. A squamous syphilitic eruption of the secondary period.

S. papulo-squamo'sum. Nummular syphilide, *Squamous syphilide*, *Syphilitic psoriasis*. A papular skin eruption seen in the first and occasionally in the second year of syphilis. Followed by desquamation, which may be scanty

SYPHILODERMIA—SYRINGOMYELIA

with large dirty scales, or profuse with small and silvery scales.

Syphiloder'mia. See *Syphiloderma*.

Syphilogeny. (L. *syphilis*; Gr. γεννάω, to generate.) The origin of syphilis.

Syphil'ogist. One who is versed in *Syphilology*.

Syphilog'rapher. (L. *syphilis*; Gr. γραφείν, to write.) One who writes on syphilis.

Syphilog'raphy. The description of syphilis.

Syphil'ogy. The sum of scientific knowledge concerning syphilis.

Syphiloid. (L. *syphilis*; Gr. εἶδος, likeness.) Resembling, or having the character of, *Syphilis*.

S., Cana'dian. A disease, resembling in some respects syphilis, which prevailed in Canada during part of the eighteenth century.

S., Hes'sian. A form of disease resembling syphilis at one time prevalent in Hesse.

S., Jut'land. A disease resembling syphilis seen in Jutland, Denmark.

S. of Cour'land. A disease seen at Courland, Russia, having many of the symptoms of syphilis.

Syph'iloids. Name of a group of endemic diseases due to syphilis in a severe form with complications. In this group are included radesyge, skerlievo, &c.

Syphilole'pis. (L. *syphilis*; Gr. λεπίς, scale.) A scabby eruption due to syphilis.

S. gutta'ta. A papulo-squamous eruption, due to syphilis, which looks like drops.

S. palma'ris. A papulo-squamous syphilitic rash occurring on the palms.

Syphiloma. (L. *syphilis*; Gr. ὄμα, tumour.) A syphilitic tumour.

Syphiloma'nia. (L. *syphilis*; Gr. μανία, mania.) Morbid dread of syphilis, giving rise to fancied symptoms of the disease.

Syphilomatous. Pertaining to, or of the nature of, a *Syphiloma*.

Syphilonych'ia. (L. *syphilis*; Gr. ὄνυξ, a nail.) Onychia of syphilitic origin.

S. exul'cerans. Syphilitic onychia with ulceration.

S. sic'ca. Syphilitic onychia without ulceration.

Syphilop'athy. (L. *syphilis*; Gr. πάθος, disease.) Any syphilitic disease.

Syphilopem'phis. (L. *syphilis*; Gr. πύμφις, a blister.) Pemphigus of syphilitic origin.

Syph'ilophobe. (L. *syphilis*; Gr. φόβος, dread.) One affected with syphilophobia.

Syphilopho'bia. (L. *syphilis*; Gr. φόβος, fear, dread.) The same as *Syphilophobia*.

Syphilophyl'isis. (L. *syphilis*; Gr. φλύσις, eruption.) Syphilitic eruption.

Syphilophy'ma. (L. *syphilis*; Gr. φύμα, growth.) Syphilitic growth.

Syphilopsilo'ma. (L. *syphilis*; Gr. ψίλος, bare.) Syphilitic alopecia.

Syphilosclero'ma. (L. *syphilis*; Gr. σκληρός, hard.) Synonym of *Chancre*.

Syphlo'sis. Syphilitic disease.

Syph'lous. Syphilitic.

Syphion'thus. (L. *syphilis*; Gr. ἰονθος, down on the face.) A scaly copper-coloured eruption on the face due to syphilis.

Syph'ita. *Somnambulism*.

Syphon. See *Siphon*.

Syphonage. See *Siphonage*.

Syphono'ma. *Cylindroma*.

S. clys'ter. A syringe for administering clysters.

S. cup'ping. Artificial cupping apparatus.

Syriac'ula. Diphtheria.

Syrigmopho'nia. (Συριγμός, whistling; φωνή, voice.) A piping state of the voice.

Syrig'mus. (Συρίσσειν, to whistle, hiss.) *Tinnitus aurium*.

Syrin'ga. (Συριγξ, anything shaped like a pipe.) Eustachian tube; fistula; syringe; trachea.

S. clysmat'ica. *Syringe*.

S. vulga'ris. Common lilac. Order *Oleaceæ*. The leaves and fruit have been used as tonics and antiperiodics.

Syrin'ge. (Συριγξ, a tube, a pipe.) A portable hydraulic instrument of the pump kind, commonly employed to draw in a quantity of fluid. Also, to inject by means of a pipe or syringe.

S., A'nel's. A fine-pointed syringe for injecting fluids through the puncta lachrymalia.

S., hypoder'mic. A syringe employed for the hypodermic administration of medicated solutions under the skin.

Syrin'geal. (Συριγξ, a pipe.) Appertaining to a *Syringe*.

Syringes aërif'erl. Bronchia. Two tubes carrying air to the lungs, having their origin at the bifurcation of the trachea.

Syrin'gin. (Συριγξ, a pipe.) A crystalline glucoside obtained from *Syringa vulgaris*.

Syrin'gious. Fistulous.

Syringi'tis. Inflammation of the Eustachian tube.

Syrin'gium. (Συριγξ, a pipe.) *Biol.* A tubular repugnatorial organ on certain caterpillars.

Syring'mus. (Συριγμός, a hissing.) *Tinnitus aurium*.

Syrin'gocele, or Syringocœ'lia. (Συριγξ, a tube; κοιλία, hollow.) The central canal of the spinal cord.

Syrin'go-cystadeno'ma. (Συριγξ, a tube; κύστις, a cyst; ἀδήν, a gland; ὄμα, a tumour.) A peculiar disease of the skin that probably begins in the embryonic sweat-glands. The eruption consists of a number of small, round, hard papules, of the colour of the skin, which tend to become larger and of a bluish-red colour.

Syringo'dēs. (Συριγξ, a pipe; εἶδος, likeness.) *Fistulous*.

Syringoid. Syn. of *Fistulous*.

Syringome'lia. Same as *Syringomyelia*.

Syringomenin'gocele. (Συριγξ, a pipe; μεμβράνη, membrane; κήλη, a rupture.) A congenital tumour, composed of the membranes and posterior wall of the dilated central canal of the spinal cord, which protrudes through the spina bifida.

Syringomye'lia. (Συριγξ, a pipe; μυελός, marrow.) A condition in which cavities filled with liquid exist in the spinal cord surrounded by abnormal tissue. The term is usually restricted to this condition when exist-

SYRINGOMYELITIS—SYSTEMIC

ing in adults, while the somewhat similar condition in young children is called hydromyelia. The latter is further distinguished by being connected with the central canal of the spinal cord, while syringomyelia is produced by the breaking down of substance in the cord itself, and is due usually to hæmorrhage followed by softening and necrosis.

S. atroph'ica. *Cavitary myelitis.*

Syringomyeli'tis. The inflammation coincident with, or preceding, *Syringomyelia*.

Syringomy'elocle. (Σύριγξ, a pipe; μυελός, marrow; κήλη, a tumour.) The swelling formed by the posterior wall of a dilated central canal of the spinal cord projecting through a spina bifida.

Syringomy'elus. (Σύριγξ, a pipe; μυελός, marrow.) A monster having a *Syringomyelocle*.

Syringomy'on. (Σύριγξ, a pipe; μύων, a muscle.) *Biol.* One of the intrinsic muscles of the syrinx in birds.

Syringotome. (Σύριγξ, a pipe; τομή, section, to cut.) A probe-pointed bistoury used for cutting a fistula.

Syringotomy. The operation of cutting for fistula.

Syr'inx. (Σύριγξ, a pipe.) A tube, a fistula. Eustachian tube. *Biol.* The lower larynx or voice organ of a bird.

S. hi'era. The vertebral column.

Syrmais'mus. (Συρμαίζω, to take an emetic, to purge.) An evacuation by vomiting or stool.

Syr'up. A concentrated solution of sugar in water. May be simple, and consist of sugar and water only, flavoured or medicated.

Sys-. As a prefix, like sym-, with.

Syso'ma. (Σύν, together; σῶμα, body.) Double monster with bodies fused.

Sysom'ic. (Σύν, together; σῶμα, body.) Appertaining to a *Sysoma*.

Syspa'sia. (Σύν, together; σπάω, to draw.) Clonic spasm with diminished sensibility and inability to utter sounds.

S. convul'sio. *Convulsion.*

S. epilep'sia. *Epilepsy.*

S. hyster'ica. *Hysteria.*

Syssarco'sic. (Σύν, together; σάρξ, flesh.) Appertaining to a *Syssarcosis*.

Syssarco'sis. (Σύν, together; σάρξ, flesh.) Fleishy connection; the connection of one bone with another by muscular tissue. Also, *Synsarcosis*.

Systal'sis. See *Systole*.

Systal'tic. (Σύν, with; στέλλειν, to set.) Pulsatory; contracting; having a systole.

Systasis. (Σύστασις, association.) Consistency, density.

Systatica. (Σύν, together; ἵστημι, to make to stand.) Diseases affecting several or all of the sensorial powers simultaneously; irritation or inertness of mind extending to the muscles or external senses, or of the muscles or external senses extending to the mind.

System. (Σύστημα, a system.) A whole compounded of several parts. Any combination or assemblage of things adjusted as a regular and connected whole; a number of things or parts so connected as to make one complex whole. Things connected so as to make a scheme.

S., ante'rior. In the microscope, the system of lenses nearest the object.

S., Bant'ing. The abstention from carbohydrates and fats for the reduction of fat. Described and practised by Dr. Banting.

S., Bruno'nian. An old medical doctrine founded by Dr. John Brown, a Scottish physician. It was based on the assumption that the body possesses a peculiar property of excitability, and that every agent capable of acting on the body during life does so as a stimulant. When these stimuli were normal in amount the condition was one of health; if excessive, one of debility; if insufficient, one of indirect debility.

S., cer'ebro-sp'inal. The brain, spinal cord, and their various branches.

S., cir'culatory. The organs concerned in the circulation of the blood and lymph collectively.

S., den'tinal. All the tubules radiating from a single pulp-cavity.

S., der'moid. Bichat's term for the skin and its derivatives.

S. disease'. A disease of the cerebro-spinal axis affecting a tract of nerve-fibres or nerve-cells having common anatomical relations and physiological properties.

S., epider'mal. See *S., dermoid*.

S., glan'dular. The glandular organs of the body considered as a whole.

S., hu'man. The human body and its organs.

S., iridochoroi'dal. Cadiat's name for the choroid and iris taken together, as being of similar structure and development.

S., Ling's. A rather complicated system of kinesitherapy, or movement cure, in which active and passive movements are combined with massage and mechanical stimulation of the muscles, nerves, and other tissues.

S., mid'dle. The lenses of a microscope between the anterior and posterior systems.

S., mus'cular. All that part of the body comprising the muscles.

S., ner'vous. All that part of the body comprising the nerves.

S., os'seous. The skeleton.

S., por'tal. That part of the venous vascular apparatus that contributes to the portal vein.

S., poste'rior. In a microscope, the system of lenses farthest from the object.

S., stomatogas'tric ner'vous. See *Sympathetic*.

S., sympathet'ic ner'vous. See *Sympathetic*.

S., vas'cular. See *S., circulatory*.

Syste'ma. See *System*.

S. nervo'rum vegetatu'rum. Sympathetic nervous system.

S. vasor'num. Vascular system.

S. ve'næ porta'rum. Portal venous system.

Systemat'ic. (Συστηματικός, systematic.) Methodical.

Systematism. A method according to which every fact of a science is collected round an opinion, whether true or false. One who uses this method is called a *Systematist*.

Systematist. See *Systematism*.

Systematology. (Σύστημα, system; λόγος, science.) The science of arrangement and classification.

System'ic. Pertaining to the body as a whole; somatic; common to a general system.

S. circula'tion. A circulation of the

SYSTEMOID—TABANUS

blood through the body at large, exclusive of the pulmonary circulation.

S. death. The death of the body as a whole.

S. le'sion. One confined to homologous parts, as the lateral or posterior columns of the spinal cord.

Systemoid. (Σύστημα, system; είδος, form.) A term applied to tumours composed of a number of tissues resembling a system of organs. *Teratoid.*

Sys'tolē. (Σύστολη, a drawing together.) The contraction of the ventricles of the heart and the blood-vessels in propelling the blood. Clinically it refers simply to the ventricular contraction ending at the second sound.

S., abortēd. A cardiac systole which from insufficient energy or mitral regurgitation does not increase the arterial pressure.

S., antic'ipated. An aborted systole due to an imperfectly filled ventricle.

S., arter'ial. The arterial retraction following a cardiac systole.

S., auric'ular. Auricular contraction.

S., ventric'ular. Ventricular contraction.

Systolic. Pertaining to, or marked by, *Systole*; contracting.

S. cer'ebral mur'mur. A blowing sound heard over the fontanelle in infants. It was once thought to be a sign of rachitis.

Systolometer. (Σύστολη, systole; μέτρον, a measure.) An instrument for measuring the intensity and quality of cardiac sounds and murmurs, and the length of the pauses.

Systrem'ma. (Σύστρεμμα, a swelling.) Cramp in the muscles of the legs.

Systrophē. (Σύν, together; στρέφειν, to turn.) A wrench and the subsequent inflammation. *Biol.* The massing of the chlorophyll bodies of a cell under intense light.

Sys'tylous. (Σύστυλος, with columns standing close.) *Biol.* Term applied (a) to flowers in which the styles cohere to form a single column; (b) to mosses in which the lid is fixed to the columella.

Sytectycopy'ra. See *Syntecopyra*.

Syzyg'ial. (Σύζυγος, yoked together.) Pertaining to *Syzygy*.

Syzyg'ium. (Σύζυγος, yoked together.) A Genus of East Indian myrtaceous trees.

S. jambola'num. West Indies. Nat. Order *Myrtaceæ*. (Not official.) The edible fruit, bluish black, pulpy, and astringent. Also the bark is employed. The hard seeds are used after being dried and powdered. Dose and uses: 2½- to 5-grain doses of the powdered fruit stones have been found to greatly relieve diabetes. The fluid extract of bark (as well as the fruit) has, in the large doses of 2 fluid ounces a day, caused the disappearance of the sugar in diabetes.

S. nervor'um. A pair of nerves.

Syzygy. (Σύζυγος, yoked together.) *Biol.* 1. A fusion of two bodies without loss of identity. 2. A zygote or conjugate body formed by the union or conjugation of two similar gametes, and usually followed by encapsulation and later by sporulation. A *Syzygium*.

Szydlowski's meth'od. A method of estimating CO₂ in the air.

Szymanowski's operation on the up'per lip. Lateral flaps of the full breadth of the lip are cut on either side from the cheek. Their outer extremities are curved downwards, so as to relieve them from tension. After they have been detached their inner extremities are brought together and united in the median line.

T.

T. Short form of *Tension*; referring to the intra-ocular tension.

T band'age. See *Bandage*.

T fibre. Branch given off from fibre of multipolar ganglion-cell.

Tab'ac. (F.) Tobacco, *Nicotiana tabacum*. *Tabac de Montagne*, *Arnica montana*.

Taba'ci folia. The dried leaves of *Nicotiana tabacum*, Nat. Order *Solanaceæ*. (Official.) It contains salts,—nicotianin, forming white foliaceous crystals, having the odour of tobacco smoke, taste bitter; and nicotina, the poisonous principle, which is an oily colourless liquid. Sp. gr. 1.027. C₁₀H₁₄N₂ = 162. Odour unpleasant; taste burning; reaction alkaline; soluble in water, ether, alcohol; it forms salts with acids. Dried tobacco yields 2 to 10 per cent. Action, poisonous to plants and animals; emetic, diuretic, sedative, narcotic, paralyses the heart, antispasmodic. Death has resulted from its external application to the head of a boy eight years old. Uses, in obstruction of the bowels, hernia, spasmodic asthma, tetanus, strychnia poisoning, locally in scabies, urticaria, rheumatism, injection in ascariides. Incompatibles, lodides, tannin, caustic alkalies, ergot, digitalis,

alcohol. Antidotes, an emetic and usual remedies; tannic acid, nux vomica, or strychnine. Dose of the extract, 1-6 to ½ grain (not official); of the fluid extract, 1 to 5 drops (not official); of the infusion, ½ to 4 ounces (not official); of the oil, 1-6 drop (not official); of the wine, 10 to 30 drops (not official).

Tabaci'nus. Colour of tobacco, pale brown.

Taba'co cimar'ron. Various species of *Nicotiana*.

Tabaco'sis. (L. *tabacum*, tobacco.) Pneumonokoniosis produced by the inhalation of dry vegetable fibre (especially cotton). (Zenker.) Properly the form due to inhalation of tobacco dust.

Taba'cum. See *Tobacco*.

Tab'agisme. (F.) Morbid condition produced by the excessive use of tobacco.

Tab'anid. (L. *tabanus*, a horse-fly.) One of the Family of *Tabanidæ*, of which there are 1300 species known. The proboscis of the female is adapted for biting, the male does not bite. Gad-dies, breezes, clegs.

Tab'anus. The horse-fly. Family *Tabanidæ*.

Tabardillo. A form of fever, of markedly asthenic kind, seen in South America.

Tabasheer', or **tabax'in.** A substance found in the knots of unhealthy bamboos. It is used in the West Indies as tonic and aphrodisiac.

Tabatière anatomique. (F.) Anatomical snuff-box. Space on dorsal side of root of the thumb, between the extensores primi internodi pollicis and the secundi internodii pollicis. The floor is formed by the scaphoid and trapezium; it contains the radial vessels and is crossed by branches of the radial nerve.

Tabby-cat striation. Appearance presented in extreme fatty degeneration of muscle; for instance, in heart in pernicious anæmia.

Tabé. See *Tabes*.

Tabebu'ia. (A native Brazilian name.) A Genus of Bignonaceous trees and shrubs of tropical America, of some sixty species. *T. impetiginosa* is mucilaginous and highly astringent, and is locally valued as a medicine. (Unofficial.)

Tabefaction. (L. *tabefacere*, to melt.) Wasting; emaciation.

Tabefy. (L. *tabere*, to melt.) To emaciate.

Tabellia. (L.) *Table*, *Tablet*.

Tabel'læ. (L.) *Troches*, *Lozenges*.

T. bal'sami toluta'ni. *Troches of Tolu.*
T. cum bicarbonate so'dico. *Troches of Sod. Bicarb.*

T. cum bora'te so'dico. *Troches of borax.*

T. cum carbona'te magnes'ico. *Troches of Mag. Carb.*

T. cum carbo'ne. *Troches of charcoal.*

T. cum catechu. *Troches of catechu.*

T. cum chlora'te potas'sico. *Troches of chlorate of potassium.*

T. cum gum'mi. *Troches of acacia.*

T. cum ipecacuan'hâ. *Troches of ipecacuanha.*

T. cum Ker'mes minera'le. *Troches of Kermes mineral.*

T. cum man'nâ. *Manna lozenges.*

T. cum ment'hâ. *Peppermint lozenges.*

T. cum santoni'nâ. *Santonin lozenges.*

T. cum sul'phure. *Sulphur lozenges.* (Codex Medicamentarius.)

T. nitroglyceri'ni. *Nitroglycerine lozenges.*

Tabellary. Same as *Tabular*.

Taberna med'ica. (L. *taberna*, a shop.) A druggist's shop.

Tabernæmonta'na u'tilis. A tree of British Guiana, *Hya-hya*. A drink is made by the natives from the bark and pith.

Ta'bès. (L. *tabes*, decay.) Slow progressive emaciation.

T. atroph'ica. *Phthisis.*

T. coxa'ria. Hip disease with suppuration.

T. diuret'ica. *Diabetes mellitus.*

T. dorsa'lis. See *Ataxia*.

T. ergot'ica. *Toxæmia* from use of ergot.

T. glandula'ris. *Scrofula.*

T., hereditary. *Friedreich's ataxia.*

T. ischiad'ici. *Ischio-phthisis.*

T. lac'tea. Wasting in nursing women.

T. mesenter'ica. Tubercular disease of the mesenteric lymphatic glands.

T. neurasthen'ica. *Neurasthenia* with symptoms of ataxia.

T. os'sis sa'cri. *Tabes dorsalis.*

T. pectore'a. *Rhachitis.*

T. pulmona'lis. *Pulmonary phthisis.*

T. saturni'na. The general disability due to lead poisoning.

T. se'num. *Marasmus senilis.*

T., spasmod'ic. *Spastic paraplegia*, or *Lateral sclerosis.*

T. urina'lis. *Diabetes mellitus.*

Tabes'cent. Suffering from *Tabes*. Becoming emaciated.

Tabetic. Of, or pertaining to, or affected with, *Tabes* or emaciation. Of, or pertaining to, or affected with, *Locomotor ataxia*; the result of locomotor ataxia.

T. arthropath'ia. Same as *Charcot's disease.*

T. arthrop'athy. A form of arthritis allied to osteo-arthritis, developing in connection with *tabes dorsalis*. *Charcot's disease.*

T. crises. Gastric crises of *Ataxia*.

T. demen'tia. *Dementia* with locomotor ataxia.

T. foot. Flattening or distortion of foot in ataxia.

T. gait. In general paralysis.

T. neurit'is. *Peripheral neuritis* found in ataxia.

Tab'ic. Same as *Tabetic*.

Tab'id. Same as *Tabetic*.

Tab'idly. In a tabid manner; wastingly; consumptively.

Tab'idness. The state of being wasted or emaciated.

Tabific. Causing wasting, through mal-assimilation.

Tabin's tube. A tube bent at a right angle, of which the horizontal arm communicates with the outer air, and the vertical with air of the room at a height of about six feet above the floor.

Tabitu'do. (L.) *Marasmus.*

Table. (L. *tabula*.) *Anat.* The compact inner and outer tables of the calvarium that are separated by the diploë. The inner or vitreous table is compared to porcelain, and is close-grained and brittle. The petrous portion of the temporal bone is of the same material. It transmits vibrations more readily.

T., oper'ating. Table on which surgeons operate. The table, in the expression "on the table," refers to it.

T.-spoon, T.-spoon'ful. *Cochleare magnum.* Half a fluid ounce, ℥ss.

Tablet. A small lozenge or trochiscus. Its basis is usually sugar; it is made with some volatile liquid and a drug or drugs. The liquid evaporates.

Tablier. (F.) Apron. Enlarged labia of Hottentot women (*tablier vulvaire*).

Tab'loid. A tablet-like pharmaceutical preparation. A flat troche or lozenge.

Tab'ula cathamna'les. The septal plates of *Medusæ*.

T. voti'va. Tablet hung by a sick person in a temple.

Tab'ular. (L. *tabula*.) Flat and expansive.

T. bones. Flat bones. Scapula, ilium, fronto-parietals, and occipital bones.

Tab'um. (L. *tabum*.) Corrupt moisture; putrid gore. A fœtid mixture of blood and pus discharged from a raw surface. *Ichor*; *Plague*.

Tac. (F.) Scabies in the sheep. Rot. Synonym of *Influenza*.

Ta'ca, or **Tac'ca**. (Malay.) Nat. Order *Taccaceæ*. *T. oceanica* yields Tahiti arrowroot.

Tac'amahac. (Mex.) Resinous product of various trees of Genera *Bursera*, *Protium*, *Calophyllum*. Rarely used in medicine at the present day.

Tache. (F. *tache*.) Congenital discolorations, or freckles, or spots. Blemish.

Also, to spot, stain, or blemish.

T. aveu'gle. Blind spot.

T. blanche. White spots occurring especially on convex surface of liver in infectious diseases. (Hanot.)

T. bleuâtre. Delicate blue spots said to precede the typical typhoid spots.

T.s cé'rébrales. Rapid onset of marked and more than usually persistent hyperæmia consequent on a scratch. Supposed formerly to be symptomatic of meningitis.

T. colorée. *Nævus*.

T. congénitale. *Nævus maternus*.

T. criblée. *Macula cribrosa*.

T. de feu. Claret-stain *nævus*.

T. de Mar'lotte. Blind spot.

T. de nais'sance. *Nævus*.

T. embryonnaire. Embryonic area.

T. ger'minative. Germinal spot.

T. jaune. *Macula lutea*.

T. ménin'géal. See *T.s cé'rébrales*.

T. ménin'gitique. Cerebral macula.

T. olfac'tive. Yellowish part of olfactory area.

Tachis'toscope. (*Taxús*, swift; *σκοπέω*, to view.) A form of falling screen for the rapid exhibition of stereoscopic views.

Tachometer. (*Taxús*, quick; *μέτρον*, a measure.) An instrument for measuring the speed of flow of the circulating blood.

Tachycardia. (*Taxús*, swift; *καρδία*, heart.) Abnormal paroxysmal rapidity of heart's action.

T., essential paroxys'mal. Due to functional disturbance of cardiac nerves.

T., paroxys'mal. Occurring periodically in paroxysms.

Tachygraph. (*Taxús*, swift; *γράφω*, to write.) Same as *Hæmatochometer* or *Tachometer*.

Tachyia'ter. (*Taxús*, swift; *ιατρός*, physician.) One who cures speedily.

Tachyiat'ria. (*Taxús*, swift; *ιατρεία*, healing.) The art of curing quickly.

Tachyot'omy. (*Taxús*, fast; *τομή*, cutting.) The art of dissecting, cutting, or operating rapidly.

Tachyph'rasis. (*Taxús*, swift; *φράσις*, speech.) Great volubility in speech.

Tachypnœ'a. (*Taxús*, swift; *πνοή*, breath.) Unusually rapid respiration.

Tachythanatous. (*Taxús*, swift; *θάνατος*, death.) Rapidly fatal.

Tachyt'omy. See *Tachyotomy*.

Tac'iturn. (L. *taciturnus*, disposed to be silent.) Sullen silence; short of speech.

Taciturn'ity. State of being *Taciturn*.

Tac'iturnly. In a *taciturn* manner.

Tact. Rapidity of discernment and sympathetic action.

Tac'tile. (L. *tactilis*, tangible.) Of, or pertaining to, the sense of touch. Palpable; tangible. Adapted or used for feeling or touching.

T. anæsthe'sia. Loss or impairment of sense of touch or being touched.

T. appara'tus. Nerve endings.

T. cells or **bod'ies**. Differentiated cells in which the nerves of tactile sensibility terminate.

T. corpuscles, or **touch bod'ies**. Found in papillæ of rete mucosum of hand and foot, bed of nails, and other parts. The medullated nerve-fibres are lost in them. Corpuscles of Grandry, corpuscles of Herbet, occur in birds. Corpuscles of Vater, or Pacinian bodies. End bulbs found in conjunction, &c.

T. end-or'gans. Nerve terminals.

T. hairs. Such as whiskers of cat, &c.

T. menis'ci or **discs**. (Ranvier.) Concavo-convex flattened expansions of nerve-endings.

T. papil'læ. Cells representing special sensory nerve-endings found in the deeper layer of the epidermis and the adjacent layer of the corium.

T. re'flexes. Reflex following on stimulation of tactile corpuscles.

Tactil'ity. Tangibility. State of being tactile.

Tac'tion. (L. *tangere*.) Sense of touch or its exercise. Contact, palpation.

Tactometer. (L. *tango*, to touch; Gr. *μέτρον*, measure.) Æsthesiometer. Instrument for determining degree of sense of touch.

Tactor. An organ of touch.

Tac'tual. Communicating or imparting sense of touch. Relating to, or originating in, touch.

Tactually. As regards sensation of touch.

Tac'tus. Sense of touch.

T. erud'itus. Skill acquired in tactile sensation by long practice in surgery and medicine; especially applied to surgery.

T. exper'tus. Fine sense of touch.

Tæ'da. (A torch.) Medicine employed under form of fumigation.

Tæ'dium vi'tæ. A serious symptom arising in some forms of insanity. As a rule, patients showing this are suicidally inclined.

Tæ'nia. (L. *tænia*; Gr. *ταινία*, band, fillet, ribbon, worm.) A tapeworm.

T. acus'ticæ. Striæ medullares of fourth ventricle.

T. chain. Whole or part of tapeworm.

T. co'll. *Anat.* The longitudinal muscular bands of the large intestine.

T. cor'nea. *Stria terminalis*.

T. for'nicis. *Stria medullaris*.

T. fo'veæ rhomboida'lis, or **T. medulla'res**. Striæ medullares of fourth ventricle.

T. head. The scolex in any period of its development.

T. hippocam'pi, or **Cor'pus fimbria'tum**.

T. longitudina'les. *Stria longitudinales*.

T. medul'læ oblonga'tæ. *Ligula*.

T. nervo'sa Hal'leri. Gasserian ganglion.

T. sagitta'lis. Ridge on roof of right auricle in front of superior vena cava, remains of lower or right lip of the Eustachian valve.

T. semicircula'ris. White band in groove between nucleus caudatus and optic thalamus.

T. tec'tæ. *Stria tectæ.*

T. termina'lis. Ridge delimiting that part of right auricle derived from the sinus venosus.

T. thal'ami op'tici. *Stria medullaris thalami optici.*

T. Valsal'væ. See *T. coli.*

T. ventric'uli quar'ti. *Ligula.*

T. ventric'uli ter'tii. *Stria medullaris thalami optici.*

T. viola'cea. Thin streak of pigmented cells on upper part of floor of fourth ventricle.

Tæniacide. Same as *Tænicide.*

Tæniafuge. Same as *Tenifuge.*

Tæniate. Ribbon-like in shape. Long, narrow, and very thin.

Tænicide. (L. *tænia*, a tapeworm; *cædo*, to kill.) A drug destroying tapeworms. Also, *Tæniacide.*

Tænifuge. (L. *tænia*, a tapeworm; *fugare*, to drive away.) Vermifuge. A drug serving to expel tapeworms.

Tænioid. Ribbon-like.

Tæniolæ cine'reæ. (L.) *Fasciolæ cinereæ.*

T. cor'poris callo'si. (L.) Continuation of peduncle of septum lucidum upon anterior and superior surface of corpus callosum, continuous with striæ longitudinales.

Tafia. (Malay *tafia*, spirit distilled from molasses.) A kind of rum distilled from fermented skimmings of cane-juice or refuse sugar.

Tag al'der. See *Alnus.*

Tagetes. Nat. Order *Compositæ.*

T. erec'ta. (Mex.) *T. lucida.* Antiperiodic.

T. pat'ula. Flowers are febrifuge, aperient, vermifuge.

Tagliacotian. Pertaining to *Tagliacozzi*, an Italian surgeon.

T. opera'tion. A rhinoplastic operation, the flap being derived from a distant part. It is left attached temporarily by one edge to its original site.

Tag'ma. *Biol.* An aggregation of molecules.

Tah'ti ar'rowroot. See *Tacca.*

Tail. (Ang.-Sax. *taegel*, *taegl*.) The hinder or caudal extremity of an animal. The opposite end to the head or cephalic extremity.

T.-bone. The coccygeal vertebræ; coccyx, or os coccygis.

T. fold. The caudal fold of the embryo enclosing the hind gut.

T. mus'cle. *Coccygeus.* Depressor of the tail.

T. of epidid'y'mis. Its extremity.

T. of the pan'creas. Its left extremity.

Tailor's cramp. A spasmodic affection of the muscles of the thumb, forefinger, and forearm occurring in tailors.

T.'s mus'cle. The *Sartorius.*

T.'s spasm. A neurosis affecting the muscles of the hands of tailors.

Tail'ward. Caudalwards. In the direction of the tail.

Taint. (L. *tinctus*, a dyeing, dye.) Colour, hue, dye, tinge, stain, spot, blemish. A trace of a disease, or a modification of a disease by such specific diseases as syphilis or tubercle.

Also, to tincture, touch; to render putrid or unfit for food; to give a corrupted appearance or character; to treat with a tincture; to embrocate.

Taintless. Free from infection; pure.

Tait's knot. A method of ligature of the pedicle after ovariectomy.

T.'s opera'tion. Removal of broad ligament, Fallopian tube, and ovary for disease other than cystic tumour.

Talal'gia. (L. *talus*, heel; Gr. *ἀλγος*, pain.) Pain in the heel.

Talc. Hydrated magnesium silicate, combined with iron and alumina in small amounts.

Tal'ca. Gum; also *Talka.* Suakim gum.

Taliaco'tian. See *Tagliacotian.*

Tal'iped. (L. *talus*, ankle; and *pes*, foot.) Club-footed, as a result of disease; or as a natural condition, as in the sloth.

Tal'ip'ës. Club-foot, or distortion of the feet.

T. calca'neo-val'gus. *T. calcaneus* and *T. val'gus.*

T. calca'neus. Heel depressed and toes raised.

T. ca'vus or arcua'tus. Exaggerated plantar arch.

T. equino-val'gus. *T. val'gus* with *T. equinus.*

T. equino-va'rus. *T. varus* with *T. equinus.*

T. equi'nus. Elevation of heel with contraction of soleus and gastrocnemius.

T., osteot'omy for. The operation is reserved for extreme cases when tenotomy and other measures have failed. It consists in the removal of a more or less wedge-shaped portion of the tarsus; in rare cases the wedge may contain portions of all the tarsal bones.

T. val'gus. Eversion of foot.

T. va'rus. Inversion of foot.

Tallade'ga sul'phur spring. Sulphuretted water near Fayetteville. Talladega Company, Alabama.

Tallicoo'nah oil. See *Kundah oil.*

Tallow. The solid fat extracted from suet, used for the manufacture of soaps and candles. It consists mainly of stearic, palmitic, and oleic acids.

T. shrub. (F.) Wax myrtle, *Myrica cerifera.*

Tal'o-. (L. *talus*, ankle.) Prefix indicating, or pertaining to, the *Astragalus.*

T.-calca'nean lig'aments. *Calcaneo-astragaloid ligaments.*

T.-cru'al joint. *Ankle-joint.*

T.-fib'ular lig'aments. *External lateral ligaments of ankle-joint.*

T.-navic'ular lig'aments. The *Calcaneo-scaphoid ligaments.*

T.-tib'ial. Antero-posterior and internal lateral, or deltoid, ligaments of ankle-joint.

Tal'on. (L. *talus*, ankle.) A heel or low cusp of a tooth.

Tal'pa. Mole, nævus, or wen.

Tal'piform. Shaped like a wen.

Talus. Ankle-joint. *Os tali astragalus.*

Tam'anu oil. Bitter oil of India.

Tam'arac. Bark of *Larix americana.* Astringent and tonic.

Tamaræ'a zec'la. *Tamarindus.*

Tam'arind. (Ar. *Tamral Hind*, the Indian date.) The fruit of the *Tamarindus indica.*

Tamarin'di pul'pa. Pulp of the fruit of the *Tamarindus indica.* Astringent, cooling. Dose indefinite.

Tamarin'dus. India, Africa, West Indies. Nat. Order *Leguminosæ.* (Official.) The fruit of the tamarind tree. Action, laxa-

TAMARISK—TAPE-GRASS

tive, to correct nausea and quench thirst. Uses, as a cooling drink in fevers. Dose, $\frac{1}{2}$ ounce and upwards.

Tamarisk. The tamarisk tree. Nat. Order *Tamariscineæ*. The bark, wood, and leaves were employed medicinally; the first for its aperient and corroborant virtues in obstructions of the liver.

Tambor oil. Purgative oil from *Omphalea oleifera*.

Tambour. A drum employed for receiving and transmitting movements in physiological registering apparatus.

Tampan. A member of the Group *Acaridæ*. A biting insect of S. Africa.

Tampicin. Resin from *Tampico jalap*.

Tampico jalap. The tuberous root of *Ipomoea simulans*.

Tampon. A plug inserted tightly to arrest hæmorrhage.

Also (v.), to plug a wound or natural orifice tightly.

Tamponing. The operation of plugging a wound or natural orifice with a tampon or tampons.

Tamus or **Tamnus communis.** Black bryony. The root is diuretic, purgative, discutient, and is given as an antilithic.

Tanacetin. (Not official.) Is yellowish white and granular, odourless, soluble in alcohol, sparingly soluble in water. Action, that of aromatic, bitter, and irritant narcotic; emmenagogue; tonic; diaphoretic. Antidote, emetics, then stimulants, coffee, &c. Uses, amenorrhœa, flatulency, hysterical troubles, ague, gout. Doses of the extract, 1-6 to $\frac{1}{2}$ a grain; of the fluid extract, $\frac{1}{4}$ to 1 drachm; of the oil, 2 to 6 drops ($\frac{1}{2}$ ounce has proved fatal).

Tanacetum. Tansy; hindheel. Order *Compositæ*.

T. balsam'ita. Costmary; an aromatic herb employed like tansy.

T. vulgarë. Tansy. Europe. Nat. Order *Compositæ*. A perennial herb with serrated leaves and yellow florets, containing $\frac{1}{2}$ per cent. of volatile oil and bitter tanacetin. The leaves, tops, and flowers are official.

Tanalum. Aluminium tanno-tartrate. Employed in the treatment of diseases of the nose and throat.

Tanasia. *Tanacetum*.

Tange. (*Tange*, putridity.) A putrescent tumour.

Tangent. Touching.

Tanghin poison. Seed of *Tanghinia venenifera*, an Apocynaceous tree, native of Madagascar. Used by natives in trial by ordeal. Contains a poisonous principle, *Tanghinin*.

Tanghinia. (*Madagascar tanghin*.) *Cerbera tanghin*.

Tanghinin. (Not official.) Obtained from *Tanghinia venenifera*. It has been recommended in Russia as a substitute for strophanthus. It is soluble in alcohol and ether.

Tangle. *Laminaria digitata*.

T. big. *Pila marina*.

T. blue. *Gaylussacia dumosa*.

T. sea. *Laminaria digitata*. Employed for making tents.

Tan'in. See *Tannin*.

Taninum. See *Tannin*.

Tanisic acid. Tanacetic acid.

Tanjore pill. Asiatic pill.

Tankworm. A Nematode worm, believed

to be the young of the *Filaria* or *Dracunculus medinensis*, or guinea-worm. A troublesome parasite.

Tannal. Aluminium tannate.

Tannalbin. (Not official.) Tannin albuminate, prepared by Dr. Gottlieb, of Heidelberg, is a yellowish powder, containing about 60 per cent. of tannic acid. It is a combination of tannin, which remains unaltered in the stomach, but is gradually split up in the intestines so that the tannin is liberated little by little, and exerts its action in the alkaline intestinal contents as alkali tannate. Tannalbin is odourless, tasteless, and agreeable to take, and does not alter the gastric functions. In chronic intestinal uncomplicated catarrh it is a reliable remedy; 15 grains could with safety be administered to young and older adults and children over ten; under ten, $7\frac{1}{2}$ grains twice or four times a day for several days.

Tannas. (L.) *Tannate*. A salt of tannic acid. The synonym of *Tannate*.

T. chin'ni. Quinine.

T. plum'bicus. Lead tannate. (F. Mex.)

T. quin'icus. Quinine tannate.

Tannate. Any salt of tannic acid. The tannates of iron, lead, quinine, &c., are used to some extent as medicinal remedies.

Tannic. Obtained from, or containing, tannic acid.

T. ac'id. See *Tannin*.

Tannigen. *Acetyl-tannin*. (Not official.) An intestinal astringent. It is a compound of tannin and acetyl. Obtained by Professor H. Mayer, of Marburg, and intended particularly for the treatment of chronic diarrhœa. It is said to pass through the stomach without exerting its astringent action. It is a yellowish-grey, odourless, tasteless, slightly hygroscopic powder. Insoluble in cold water. Dose, 3 to $7\frac{1}{2}$ grains. Doses of from 45 to 60 grains can be given in a day without inconvenience.

Tannin. Tannic acid. An astringent principle obtained from oak bark and, for medicinal purposes, from galls by the action of ether. Dose, up to 2 grains, frequently repeated.

Tannoform. $C_{29}H_{20}O_{18}$. (Not official.) A product of gallotannic acid and formaldehyde. It is a reddish-white, light powder, insoluble in water, but soluble in alkaline solutions. It differs from tannin in that it does not unite with the albuminoids in the stomach. It exercises no irritant action on the mucous membrane. As it is insoluble in dilute acids, it does not dissolve in the stomach. The dose is up to 15 grains.

Tanosal. (Not official.) A name given by Feigl, of Mulhausen, to a combination of tannic acid and creasote at high temperatures. It is a brown, amorphous, volatile powder, insoluble in water, alcohol, and glycerine. It does not possess the burning taste or irritating properties of creasote; and, according to Feigl, it is decomposed in the intestinal canal into creasote and tannin.

Tanret's test. Mercuric chloride 1.35 grms., Pot. iod. 3.32 grms., acetic acid 20 c.c., distilled water up to 1000 c.c. When added to a fluid containing proteid it causes opacity.

Tansy. See *Tanacetum*.

Tap. (Ang.-Sax. *tappa*.) To withdraw fluid from the abdominal, pericardial, or pleural cavities, or the serous spaces of the cerebro-spinal system.

Tape-grass. Eel-grass, *Vallisneria spiralis*. Said to be refrigerant and demulcent.

Tapeinocephalic. Pertaining to, or of the nature of, a low, flattened skull.

Tapeinocephaly. (Ταπεινός, lying low; κεφαλή, head.) Having a low, flattened cranial vault.

Tapēs. *Veneridæ*. A large Genus of bivalve Molluscs. Some are edible.

Tape'sium. (Τάπης, a carpet.) *Biol.* The mycelium of a fungus spreading out in a layer.

Tape'tum. (L. *tapete*, a carpet.) The intermediate stratum of the choroid, which is markedly fibrous in some animals, and, since it shines through the layers of the retina and choroid superficial to it, has been called the *Tapetum lucidum*. Radiating fibres of corpus callosum.

T. nigrum. The pigmented layer of retina.

Also, in *Bot.*, the layer of cells, absorbed as the spores develop, outside the archesporium.

Tape'worm. *Tænia*.

T. plant. The cusso, *Brayera* (*Hagenia*) *anthelmintica*.

Taphepho'bia, or **Taphipho'bia.** (Τάφος, burial; φόβος, fear.) Morbid fear of burial alive.

Taphren'chyma. (Τάφος, a pit; ἔγχυμα, a solution.) *Biol.* The "pitted tissue" of a plant.

Tapia'ca. Same as *Tapioca*.

Tapinocranius. (Ταπεινός, lying low; L. *cranium*, skull.) A skull in which the length to the height, by Lissauer's method, is from 74.5° to 82.5°.

Tapinopis'thius. (Ταπεινός, lying low; ὀπίσθιον, hinder.) Skulls in which with the radius fixus the line from *hormion* to *lambda* makes an angle from 24.5° to 33°. (Lissauer.)

Tapio'ca. (Braz. *tipioca*.) A farinaceous food prepared from the root of the manioc (*Cassava*) by heating, which causes the starch grains to burst and become agglomerated into the well-known irregular masses.

Tapir mouth. A separation and thickening of lips with disease of orbicularis oris, resembling mouth of tapir. Sometimes seen in facial muscular atrophy.

Tap'lash. Poor or stale malt liquor; the refuse of the tap.

Tapote'ment. (F. *tapoter*, tap.) That part of treatment by massage which consists in tapping with the hand, flat or hollow, with the half-closed fist, or the side of the hand.

Tapsa'ria. *Decoctum hordei*.

Tap'sia. *Thapsia*.

Tap'sus barba'tus. *Verbascum nigrum*.

Tar. A product of the distillation of *Pinus sylvestris*. Also from coal. See *Pinus sylvestris*.

T. ac'ne. A form of acne resulting from the application of fluid tar, or from the action of the atmosphere impregnated with the vapour of tar.

T.-and-soot can'cer. Epithelioma of scrotum.

T., Barba'does. Petroleum.

T. beer. See *Pinus sylvestris*.

T. infu'sion. See *Pinus sylvestris*.

T. min'eral. *Pissasphaltum*.

T. oint'ment. *Unguentum picis liquidæ*.

T. wa'ter. See *Pinus sylvestris*.

T. wine. See *Pinus sylvestris*.

Tara. An epidemic contagious disease in Tara, in Siberia. Resembled the button scurvy of Ireland.

Taracan'num. *Antihydropin*. Crystallisable principle from the cockroach; a supposed diuretic.

Tar'achë. (Ταραχή, disorder.) Disorder; disturbance of function.

Tarag'ma, or **Tarag'mus.** *Tarache*.

Tar'agon. *Artemisia dracunculus*. Oil used as a condiment.

Tarantella, or **Tarentelle'.** (Derived from Tarento, a town in Southern Italy.) A rapid whirling dance. See *Tarantism*.

Tar'antism. A dancing mania; occurred in Italy in the sixteenth century in those supposed to be bitten by the tarantula.

Taran'tula. *Lycosa tarantula*, or *Tarantula apulicæ*. A large spider whose bite was supposed to produce tarantism.

Taran'tulated. (L. *tarantoluto*.) Bitten by a tarantula.

Taras'sis. Hysteria in the male.

Tarax'aci decoct'um. (Official.) Bruised and sliced dried root 1, distilled water 20. Dose, 2 to 4 ounces.

T. extrac'tum. (Official.) The expressed juice concentrated. Dose, 5 to 30 grains.

T. extrac'tum liq'uidum. (Official.) Dry dandelion root in No. 20 powder 40, proof spirit 80, distilled water a sufficiency. Concentrated. Dose, 15 to 120 minims.

T., liq'uer. (Not official.) A preparation resembling the succus, but the spirit is added to the root before bruising.

T. ra'dix. Dandelion root. Northern Hemisphere. Nat. Order *Compositæ*. (Official.) The roots of a short-stalked perennial; 100 parts of the fresh juice yield 30 parts of juice, or 8 of the extract. The roots should be collected in November. The active principle, taraxacin, is obtained as an amorphous mass. Action, laxative, tonic, diuretic, cholagogue. Used in atonic dyspepsia with hepatic congestion, constipation, and skin diseases due to liver derangement.

T. suc'cus. (Official.) Bruise fresh dandelion root and express the juice. To 3 parts of it add 1 of rectified spirit. Dose, 1 to 2 drachms.

Tarax'acin. The bitter principle of *Taraxacum*.

Tarax'acum. (Ταραξσω, to disturb.) *Leontodon taraxacum*.

Tarax'is. (Τάραξις, confusion.) Disturbance of vision. A slight conjunctivitis.

Tar'dieu's spots. Punctiform subpleural ecchymosis, indicating death from suffocation.

Tar'gar. *Juniperus communis*.

Tari'nus, fas'cia of. *Dentate convolution*.

T., valve of. *Posterior medullary velum*.

Tari palm. *Cocoa wine*, from which sugar called jagry was obtained; once used as a tonic.

Tar'nier, sign of. Effacement of angle between upper and lower uterine segments from displacement of the ovum, said to be a sign of inevitable abortion.

Ta'ro. (Polynesian *taro*.) A food-plant, *Colocasia antiquorum*, especially *esculenta*, a native of India, widely cultivated in the Pacific.

TARRAGON—TARTARUS

Tar'ragon. See *Taragon*.

Tarropetrolin. (Ἰέτρος, sick; *L. oleum*, oil.) A compound of wood-tar and petroleum, recommended as a salve in skin diseases.

Tar'ry stools. See *Melena*.

Tar'sal. Of, or pertaining to, the *Tarsus*.

T. amputa'tion. Amputation through the tarsus.

T. arch'es. Made by palpebral arteries across eyelid and the tarsal cartilages.

T. ar'teries. Branches of the *Arterium dorsalis pedis*. The internal tarsal arteries are small; the external tarsal artery is larger, and distributed to the tarsus.

T. canal'. The passage between and beneath the heads of abductor hallucis, serving for passage of vessels and nerves to the sole of the foot.

T. car'tilage. A somewhat uncommon name for the *Tarsal membrane*.

T. conjuncti'va. The conjunctiva lining the lids. *Palpebral conjunctiva*.

T. cyst. *Chalaza*.

T. joint. The ankle-joint, or more commonly the joint between the two rows of tarsal bones.

T. lig'a'ment. Same as *Tendo oculi* or *Tendo palpebrarum*.

T. lig'a'ments. Ligaments of the tarsus.

T. mem'brane. The condensed fibrous tissue forming the basis of the eyelids.

Tars'alë. (Pl. *tarsalia*.) One of the bones of the distal row of the tarsus.

Tarsal'gia. (Ταρσός, tarsus; ἄλγος, pain.) Pain connected with flat-foot in the tarsus. Often rheumatism or gout.

Tarsalis. (L.) *Tensor tarsi*.

Tarsec'tomy. (Ταρσός; ἐκτομή, excision.) Excision of part or all of the tarsus.

Tarsecto'pia. (Ταρσός; ἔκτοπος, displaced.) Displacement of tarsus.

Tarsi'tis. Inflammation of eyelids. See *Blepharitis*.

T. syphilit'ica. Swelling of the tarsus from gummatous infiltration. It is greatly enlarged, tense, and reddened.

Tarsocheiloplas'tic. (Ταρσός, flat surface, woven reed mat; χεῖλος, edge; πλάσσω, to form.) Term proposed for the operation of reconstructing the edge of the lid in cases of trichiasis.

Tarsoc'lasis. (Ταρσός, flat surface; κλάσις, rupture.) Rupture of tarsal cartilages.

Tarsomala'cia. (Ταρσός, tarsus; μαλάκια, softness.) Softening of tarsal or palpebral cartilages.

Tarsometatar'sal. (Ταρσός; μετά, next after; ταρσός.) Of, or pertaining to, the *Tarsus* and *Metatarsus*.

T. lig'a'ments. The ligaments between the tarsus and metatarsus.

Tarsophy'ma. (Ταρσός, tarsus; πλάσσειν, to form.) Same as *Tarsoplasty*.

Tarsoplasty. Plastic surgery of eyelid.

Tarsorraphy. (Ταρσός, flat surface; ράπτειν, sew or stitch together.) Operation for diminishing the ocular aperture, or correcting eversion of the lids, by cicatrices. (Dunglison.)

Tarsot'omy. (Ταρσός, flat or mat-like surface; τομή, a cutting.) Section or removal of tarsal cartilages.

Tar'sus. (Ταρσός, flat, mat-like surface.) The small bones of the foot, typically consisting

of two rows, the proximal and distal, and the os centrale. The tibiale corresponds to the astragalus. The fibula corresponds to the os calcis or calcaneum. The intermedium is absent (occasionally represented by the os trigonum). The centrale corresponds to the navicular or scaphoid; the Tarsale I to the interior cuneiform; the Tarsale II to the middle cuneiform; the Tarsale III to the exterior cuneiform; the Tarsale IV and Tarsale V to the cuboid.

(Uncommon.) The tarsal membrane or cartilage of the eyelids.

T., amputa'tion through. This consists of a disarticulation of the foot through the mid-tarsal joint, the calcaneo-cuboid on the outer side, and the astragalo-scaphoid on the inner. In its main points it is identical with Lisfranc's operation, with a long plantar and shorter dorsal flap.

T., cune'i'form, osteot'omy of. The same as *Tarsectomy*.

T., exci'sion of. This operation usually consists in gouging out the affected bones.

Tar'tar. *Antimonium tartarisatum*. (Improperly) *Potassii supertarttras impurus*.

Also, to impregnate with tartar; to administer tartar.

T., calca'reous. *Potassii subcarbonas*.

T., cream of. *Potassii bitartras*.

T., crys'tals of. *Potassii supertartras*.

T. emetic. *Antimonium tartarisatum*.

T., salt of. See *Potash* and *Potassii subcarbonas*.

Tar'tarated ant'imony. *Antimonium tartarisatum*.

T. i'ron. *Ferrum tartarisatum*.

T. s'oda. *Sodium tartrate*.

Tarta'reous. *Tartarous*. Resembling, consisting of, or partaking of, qualities of tartar.

Tar'tari crystal'li. *Potassii supertartras*.

Tart'aric acid. *Tartareous acid*. $H_2C_4H_4O_6$. An organic acid of crystalline form, found in the vegetable kingdom, chiefly in grapes and acid fruits. It is refrigerant and antiseptic, but is chiefly used for making effervescent draughts with soda. Obtained from acid tartrate of potassium. Tartaric lemonade, or tartaric acid lemonade, is made by adding syrup of tartaric acid to water.

Tar'tarised ant'imony. *Antimonium tartarisatum*.

T. i'ron. *Ferrum tartarisatum*.

Tar'tarum. *Potassii supertartras impurus*.

T. solu'bile. *Potassii tartras*.

T. vitriola'tum. *Potassii sulphas*.

Tar'tarus ammo'niæ. *Ammonii tartras*.

T. chalybea'tus. *Ferrum tartarisatum*.

T. cru'dus. *Potassii supertartras impurus*.

T. den'tium. See *Odontolithus*.

T. emet'icus. *Antimonium tartarisatum*.

T. kalicofer'ricus. *Ferrum tartarisatum*.

T. kal'l'us. *Potassii tartras*.

T. lixiv'ia. *Potassii tartras*.

T. martia'lis. *Ferrum tartarisatum*.

T. potas'sii ferrugino'sus. *Ferrum tartarisatum*.

T. stibia'tus. *Antimonium tartarisatum*.

TASAGOS—TEA

T. subpotas'sicus. *Potassii super-tartras.*

T. superpotas'sicus. *Potassii super-tartras.*

T. tartarisa'tus. *Potassii tartras.*

Tasa'gos. Same as *Tassago*.

Tasch'kent ul'cer. Sartian disease. Endemic malady of Taschkent. A red spot with induration followed by ulceration on the face.

Tassa'go. A South American preparation of dried meat that has been dipped in brine.

Taste. (L. *taxo*, to judge of.) Sense by means of which the savours of bodies are ascertained.

T. buds. These are the gustatory organs, lodged in the thickness of the stratified epithelium of certain parts of the tongue and pharynx, especially round the circumvallate papillæ in man. They consist of the sustentacular cells, gustatory cells, and nerve terminals. Also called taste bulbs, taste goblets, and gustatory buds.

T. centre. Not determined. Ferrier places it close to that of smell.

Tattoo'. (Tahitian *tatu*.) To mark the surface of the body with indelible patterns produced by puncturing the skin with a tattooing needle. Different pigments are rubbed into the punctures.

Also, the marks produced by tattooing.

Tattoo'age. The practice of tattooing.

Tattoo'er. One who tattoos.

Tattoo'ing. The art of marking the body.

Also, an operation in ophthalmic surgery for leucoma. It consists in pricking the white area and rubbing in Indian ink. A representation of the iris and pupil is thus formed.

T. needle. The instrument for tattooing the body or the cornea.

Tatze. The fruit of *Myrsina africana*. Native of Abyssinia, the Cape of Good Hope, the Azores, and Algeria. Used as a tæniacuge.

Tau'benzecke. The German name for an insect, *Argas reflexa*, whose sting produces local and sometimes general oedema.

Tau-bone. *T-bone*. The episternum.

Tau'rin. Amido-ethyl-sulphonic acid. A constituent of taurocholic acid; one of the characteristic acids of bile.

Taurocholic ac'id. A bile acid very plentiful in man, exclusively present in the bile of dogs. Possesses the remarkable property of completely precipitating proteids from their solution.

Taurylic ac'id. A substance resembling carbolic acid found in the urine.

Tautomer'ic. (*Ταυτό*, same; *μέρος*, share.) The attribution of two different formulæ to one substance.

Tautom'erism. It is assumed that in the bodies referred to the different formulæ are reciprocally replaceable.

Tau'ya. A syn. for *Tayuya*.

Taxider'mic. (*Τάξις*, arrangement; *δέρμα*, skin.) Appertaining to *Taxidermy*.

Tax'id'erm'y. The art of preserving and stuffing animals.

Taxin'omy. (*Τάξις*, arrangement; *νόμος*, law.) Science of systematic arrangement.

Tax'in, Tax'ine. (*Τάξος*, yew tree.)

Resin of *Taxus baccata*, the yew tree. Also, a poisonous alkaloid found in the leaves. This has been recommended in epilepsy.

Taxis. (L. *tasso*, to arrange.) Extension. Tension. The replacement of a displaced structure by manipulation without instruments. The act of reducing a hernia by manipulation.

T., cough'ing. When the manipulative process is aided by coughing.

Taxo'dium. (*Τάξος*, yew tree; *εἶδος*, form.) The common bald or black cypress of the southern United States and Mexico, said to destroy malarial germs. The leaves and seeds are used internally in hepatic diseases.

T. dis'tichum. American or bald cypress. *Coniferæ*. Balsam obtained from it is applied to wounds. Resin of cones is diuretic and carminative.

Taxol'ogy, Taxiol'ogy. (*Τάξις*, order, arrangement; *λογία*, a word.) The science of arrangement or classification.

Taxonom'ic. Relating, or pertaining, to *Taxonomy* or *Biotaxy*.

Tax'us bacca'ta. (*Τάξος*, the yew.) Yew tree, *Smilax*. *Coniferæ*. The stones of the fruit are poisonous; the fruit itself is not.

T. canadensis. American yew. The leaves are said to be sedative.

Tax-wax. See *Tauya*.

Tay'a. A South American species of plants supposed to be an ingredient of curare.

Tay's choroiditis. A form of central choroiditis seen in persons of advanced years.

Tayu'ga. A syn. for *Tayuya*.

Tayu'ya. *Trianosperma ficifolia*. South America. Nat. Order *Cucurbitaceæ*. (Not official.) The root is used for syphilis. A saturated tincture is used, 1 in 4 proof spirit, 15 minims for a dose, diluted, internally. Official in Rio. It has been exported to Italy and France. The alkaloid is *tayuyina*, a violent purgative.

Tea. (Jap. *chin*, *ch'a*, *ts'a*, *tea*.) The dried leaves of *Thea* (*Camellia*) *chinensis* (*Camellia theifera*), a Chinese shrub.

T., Abyssin'ian. Leaves of *Catha edulis*. Stimulant and antisoporific, antinarcotic.

T., Alger'ian. Flowers of *Paronychia argentea* and *P. capitata*. (F. *thé arabe*.) Medicinal.

T.-ber'ry. American winter-green, *Gaultheria procumbens*.

T., black. Prepared by a slow process of fermentation and drying. Varieties: Bohea, congou, souchong, caper tea, oolong, and pekoe.

T., Bot'any Bay. See *Sarsaparilla*, or *Smilax*.

T., Bour'bon. Same as *Fawn tea*.

T., Brazil'ian. See *Mate*.

T., breast. Infusion of althæa 8 parts, coltsfoot leaves 4 parts, Russian glycyrrhiza 2 parts, anise 2 parts, mullein 2 parts, orris 1 part.

T., brick. See *Brick tea*.

T., bush. Cape of Good Hope. Dried leaves and tops of leguminous shrub, *Cyclopia genistoides*. Expectorant.

T., cam'bric. Hot milk and water.

T., green. Prepared by a more rapid process without fermentation. Var.: Twankay, hyson skin, hyson, imperial, and gunpowder. It contains certain volatile oils, thein and tannin. It is said to restrain tissue waste. It is a stimu-

TEAK—TECTRIX

lant. The term is also employed for an infusion of various other plants used medicinally or as a beverage.

T.-leaf eye. Muco-purulent conjunctivitis from the prolonged application of tea leaves to the eye.

T., New Jersey. *Canothus americanus*. Used during Revolution. Manufacture has been revived.

T. oil. Oil resembling that expressed from leaves of *Camellia sasanqua*. A narcotic essential oil is also distilled from it.

T., Oswego. *Monarda didyma*. Bee balm. Said to be tonic, stomachic.

T., pec'toral. See *T., breast*.

T., sage. Infusion of common sage. Said to be tonic, astringent, aromatic.

T., St. Barthol'omew's. See *Mate*.

T., St. Ger'main. Alcoholic extract of senna 16, sambucus flowers 10, anise 5, fennel 5, potassium bitartrate 3 parts.

T., sas'safra's. Saloop. See *Sassafras*.

T. shrub. The common tea plant.

Teak. See *Paronychia*.

Teale's amputation of the arm.

The long flap is placed on the antero-external aspect of the limb, so that the brachial artery with the median and ulnar nerves are found divided in the posterior flap.

T.'s amputation of the fore arm. Amputation by means of a long posterior flap. This operation is not advisable when the incision is carried below the wrist-joint.

T.'s amputation of the leg. Amputation with a long anterior flap. It is peculiarly applicable to the lower third of the leg.

T.'s amputation of the thigh. The anterior flap is equal in width and in length to one half of the circumference of the limb at the level of the saw line. The posterior flap is one quarter the length of the anterior.

Tear. (Ang.-Sax. *tear*, *taer*.) In the plural, secretion from lachrymal glands. Except during excessive secretion they pass by the puncta lachrymalia through the canaliculi and the lachrymal sac into the inferior meatus of the nose.

Also, hardened lumps of any resinous or gummy drug.

T. gland. The lachrymal gland.

Tease. (Ang.-Sax. *tesan*, *tasan*, pull, pluck.) To pull apart, or separate the fibres of, a structure for microscopical examination by means of needles.

Tea'sick. *Phthisis pulmonalis*.

Teasing. See *Tease*.

T.-needle. A fine needle mounted on a holder, used for teasing. See *Tease*.

Teat. (Ang.-Sax. *tit*.) The mammary nipple, dug, or udder. The raised prominence whence the milk passes from the lactiferous ducts.

Teat'ed. Having teats. Mammiferous, mammillary, mammilliform, mastoid.

Teat'ish. Peevish.

Teat-like. Mammilliform, as a teat-like form of bone.

Tebi'aco. Relating to, or composed of, opium.

Tebi'ana. *Thebaine*.

Tech'nic. (Τέχνη, art, handicraft.) The method of performance or manipulation of any art, or that peculiar to any artist, operator, or

school; technical skill or manipulation. A formula of operation.

Also, of, or pertaining to, the mechanical arts, or any particular art, science, profession, or trade; specially appropriate to, or characteristic of, any art, science, profession, or trade.

Technicality. *Technique*. Technical character or quality. That which is peculiar to any science.

Techn'ics. Doctrine of arts in general. Technical terms, methods, or objects.

Technique. (F.) See *Technic*.

Technism. *Technicality*.

Technocausis. (Τέχνη, art; καῦσις, a burning.) Mechanical cauterisation, such as electrical or actual cautery.

Technogonia, or **Technopœ'ia.** *Tecnogonia.* *Techomyza fusca*, a dipterous insect, the larvæ of which have been found in human stools and vomit.

Technolog'ic. Same as *Technological*.

Technolog'ical. Of, or pertaining to, technology. Relating to the arts.

Tecnogonia. (Τέκνον, a child; γονή, generation.) Generation; child-bearing.

Tecnology. (Τέκνον, child; λόγος, study.) The study or scientific knowledge of childhood; its hygiene, diseases, &c.

Tecnotonia. (Τέκνον, child; κτείνειν, to kill.) Child murder.

Tecology. See *Technology*.

Tecoma. (Aztec *tecomaxochitl*, the name of *Solanandra guttata*.) A Genus of bignonaceous plants, mostly climbers, with showy trumpet-like flowers.

T. impetigino'sa. The bark is used in lotions for inflamed joints.

T. ip'ë. A Brazilian species. The leaves are used in ophthalmia and yield tannin.

T. rad'icans. *Bignonia radicans*. Trumpet-flower, trumpet creeper, Virginia creeper. Leaves are acrid, root sudorific. Used as a vulnerary in snake-bite. Leaves and branches used as dyes. Common in the United States.

T. subvernico'sa. Of South America. Is diuretic; others are actively astringent.

Tectiform. (L. *tectum*, a roof; *forma*, form.) Like a roof in form or use; covering or forming a cover; lid-like.

Tectocephalic. Of, or pertaining to, tectocephaly.

Tectoceph'aly. (L. *tectum*, cover; Gr. κεφαλή, head.) Form of skull produced by premature synostosis of the sagittal suture.

Tectochry'sin. (Τέκτων, a carpenter; χρυσός, gold.) A colouring matter obtained from poplar buds.

Tectology. (Τέκτων, a builder; λόγος, speech.) Structural morphology which regards an organism as composed of organic individuals of different orders.

Tecto'na. (Τεκτωνία, carpentry.) Teak, a tree of the Nat. Order *Verbenaceæ*, the East Indian oak. Its wood is valuable for ship-building. Its leaves are astringent, and the flowers and seeds diuretic.

Tecto'rial. (L. *tectorium*, a covering.) Covering, as if roofing over. *Tegminal*. Tectorial membrane of the ear.

Tec'trices. (L. *tegere*, cover, conceal.) Pl. of *Tectrix*. In *Biol.*, the feathers of the wing-coverts or tail-coverts of a bird, as distinguished from remiges and rectrices.

Tec'trix. See *Tectrices*.

TECTORIUM—TELEPATHY

Tecto'rium. The *Tectorial* membrane. A covering.

Te'dium vi'tæ, or **Tæ'dium vi'tæ.** Weariness of life. A symptom of insanity precursory to suicide.

Teel or **Til oil.** *Sesame oil.*

Teeth. To grow or cut the teeth. See *Tooth.*

Teeth'ing. Dentition. Growth or formation of teeth. Act or process of acquiring teeth, as when they cut the gums.

T., climacter'ic. See *Climacteric.*

Teeto'tal. (An emphatic reduplication of total.) Of, pertaining to, or for the promotion of, total abstinence from intoxicating liquors.

Teeto'taler. A total abstainer.

Teeto'talism. The practice of entire abstinence from alcoholic beverages.

Tefro'sia. See *Tephrosia.*

Tegen'era medicinalis. *Cantharis.*

Teg'men. (N. pl. *tegmina.*) (L. *tegere*, cover.) A covering; a covering or protecting part. A *Tectorium.*

T. tympani. Thin plate of bone covering tympanum and the Eustachian tube.

Tegmen'tal. Pertaining to a *Tegmentum.*

T. nu'cleus. Same as *Red nucleus.*

T. region. *Tegmentum* of crus and corresponding parts of the pons and medulla oblongata to decussation of the pyramids.

Tegmen'tum. (Pl. *tegmenta.*) A covering or cover. In *Anat.*, the larger and deeper or upper of two parts into which each crus cerebri is divisible, separated from the crusta by the substantia nigra.

T., nu'cleus of the. Same as *Red nucleus.*

Teg'mina. Plural of *Tegmen.*

Teg'minal. (L. *tegmen*, a covering.) *Tectorial*; *Tegumentary.*

Teg'ula. (L. *tegula*, a tile; pl. *tegulae.*) In *Biol.*, a sclerite covering the base of the forewing, or the metathoracic spiracle of certain insects.

Teg'umen. Same as *Tegmen.*

Tegument. A cover; an envelope; a natural covering or protection of the body. Properly the *Crust*, or *Chitinous integument* of the body.

Tegument'al. Covering, investing, or integumental; *Tectorial*; *Tegumentary.*

Tegument'ary. Of, or pertaining to, the *Integument.* Composed or consisting of skin or other covering or investing part of structure.

Tegumentum. Same as *Tegmentum.*

Teichmann-Newmann's test. See *Test.*

Teichmann's crys'tals. See *Hæmin.*

Telchop'sia. (Τείχος, wall; ὄψις, vision.) A temporary amblyopia, with subjective characteristic visual images, in migraine.

Teigne. See *Tinea.*

T. pelade'. *Alopecia areata.*

Te'ina. See *Theine.*

Teinesmus. See *Tenesmus.*

Teinodyn'ia. See *Tenodynia.*

Teinophlogo'sis. Inflammation of tendons.

Teissler's meth'od. See *Phosphates.*

Teke'don. *Tabes.*

Teknonymous. (Τέκνον, child; ὄνομα,

name.) The practice of naming the parent from the child.

Tela. (Pl. *tela.*) A web, a *Rete.* *Anat.* A tissue in general. It is extended to include fluids.

T. adipo'sa. Fatty tissue.

T. cellulo'sa. Areolar tissue.

T. choroid'ea cerebel'li. The membranous roof of the lower section of the fourth ventricle, continuous above with the *Velum medullare posterius.*

T. choroid'ea supe'rior. *Velum interpositum*, or membranous roof of third ventricle.

T. connecti'va. Connective tissue.

T. lymphat'ica. Liquid contents of body-cavity and lymphatic vessels.

Telæsthe'sia. See *Telepathy.*

Telangect'asy. See *Telangiectasia.*

Telangiecta'sia. (Τέλος, the end; ἀγγείον, vessel; ἔκτασις, extension.) A dilatation of capillaries and small vessels.

Telangiectasis. Congenital vascular tumours met with on the lids and in the orbit.

Telangiectatic. Relating to, or characterised by, *Telangiectasia.*

Telangio'ma. A tumour composed of dilated capillaries.

Telangio'sis. Disease of capillaries or minute blood-vessels.

Telar. Having the character of a *Tela*, web, or tissue; telary, as the telar membranes of the brain.

Teledac'tyl. (Τῆλε, far; δάκτυλος, a finger.) A device to avoid stooping to pick up objects from the floor in cases of diseased spine. It consists of springy forceps at the end of a cane.

Teleg'ony. (Τῆλε, afar; γονή, offspring.) The influence of a previous husband on the children of a subsequent one through the same woman.

Telegrapher's cramp. See *Cramp.*

Telekine'sis. (Τῆλε, far; κίνησις, movement.) The causation of the movement of objects without contact.

Telekinetic. Pertaining to, or characterised by, *Telekinesis.*

Teleocephalous. (Τέλεος, complete; κεφαλή, head.) Having the full number of bones in the skull.

Teleol'ogy. The doctrine of final causes.

Teleopho'bia. (Τέλος, end; φόβος, fear.) A disposition of mind resulting in a great unwillingness to admit anything that tends toward definite ends.

Tel'eophyte. (L. *tela*, a web or tissue; Gr. φυτόν, plant.) *Biol.* A plant exhibiting well-differentiated tissues.

Teleorganic. (Τέλεος, complete; ὄργανον, an organ.) Accomplishing the purpose of organism; vital necessary to organic life.

Teleo'sis. (Τέλεος, τέλειος, complete.) *Biol.* Progressive development.

Teleozo'ön. (L. *tela*, a web or tissue; Gr. ζῶον, an animal; pl. *Teleozoa.*) *Biol.* An animal exhibiting well-differentiated tissues; a *Metazoön.*

Telepath'ic. Of, or pertaining to, *Telepathy.*

Telepath'ically. In a telepathic manner.

Telepathist. One who practises *Telepathy.*

Tel'epathy. (Τῆλε, afar; πάθος, suf-

TELEPHIC—TEMPORARY

fering.) Direct communication of one mind with another otherwise than in ordinary and recognised ways. The supposed action of one mind on another at a distance; thought transference.

Telephic. Term applied to an ulcer difficult to cure.

Telephone tinnitus. A professional neurosis of the auditory mechanism, said to be caused by the constant use of the telephone.

Telescop'ic cath'eterism. (Τήλε, far; σκοπεῖν, to examine.) The passage of several catheters, each smaller than the one before it, one within another, until one is passed through a urethral stricture.

Telephore'sis. (Τέλος, end; φορέω, I bear.) Complete normal delivery.

Telethermom'eter. (Τήλε, afar; E. thermometer.) A thermometer that records its temperature at a distance.

Teleutogonid'ium. (Τελευτή, completion; γένος, generation; pl. *teleutogonidia*.) See *Teleutospore*.

Teleutospore. (Τελευτή, completion; σπορά, seed.) *Biol.* A peculiar thick-walled, often compound spore, produced by the *Uredineæ*, or Rusts, late in the season. A brand-spore; pseudospore.

Teli'ni fly. A species of beetle found in India, used for blistering.

Telluric. Derived from the earth. Such as a telluric miasm.

Tellurism. Influence of the soil in producing disease.

Tellurist. One who believes in the telluric origin of any disease (*e.g.* of tetanus).

Tellurium. (*Tellus*, the earth.) *Te* = 128. Sp. gr. 6.24; quantitative ii, iv, and vi. A non-metallic element of bluish-white colour, brittle, brilliant, easily fusible, and resembling sulphur in chemic properties. None of the preparations are used in medicine. The element itself, like selenium, imparts an extremely foetid odour to the exhalations and excreta of the body.

Teloblast. (Τέλος, end; βλαστός, germ.) A segmentation sphere at the extremity of the germ-band which becomes elongated by cells arising from the mesoblast.

Teloblas'tic. Pertaining to the *Teloblast*.

Telolec'ithal. (Τέλος, end; λέκιθος, the yolk of an egg.) Having much food-yolk, eccentric from the formative yolk, as large mesoblastic eggs of birds.

Telolemma. (Τέλος, end; λέμμα, husk.) The membrane covering the eminences of Doyère, or the point of entrance of a motor nerve into a muscle.

Telomala'cia. (Τέλος, end; μαλακία, softness.) Phlegmonous erysipelas.

Telopore. (Τέλος, end; πόρος, pore.) A terminal pore left by closing from before backward of median furrow, produced by the invagination of mesoderm in the embryo of some insects.

Telora'sis. *Presbytia*.

Telotro'cha. (Τέλος, end; τροχός, a wheel.) A Chaetopod larva with a pre- and post-aural ring of cilia.

Temperament. (*L. temperamentum*, due proportion, proper measure.) That individual peculiarity of physical organisation by

which the manner of acting, feeling, and thinking of every person is permanently affected. The following were based on the doctrine of the four humours of the body:

Choleric or bilious temperament. Sallow, dark hair.

Lymphatic temperament. Fair complexion, light hair, flabby muscles and character.

Nervous temperament. Great sensitiveness and activity of nervous system.

Sanguine temperament. Ruddy complexion, hopeful disposition, and strong passions.

Temperamen'tal. Of, or pertaining to, *Temperament*.

Temperamen'tally. As regards *Temperament*.

Tem'perance. (*L. temperantia*, moderation.) The observance of moderation; temperateness.

Tem'perature. (*L. temperatura*, due measure, proportion.) Constitution, state, temperament. Degree of heat of a living body, especially the human body. Temperature taken by the mouth or rectum, or in the axilla. *Critical temperature*.

T. chart. A chart divided into spaces, enabling a record and curve to be taken of the temperature.

Tem'ple. (*L. tempora*, the temples; pl. of *tempus*, temple, head, face.) The region of the head or skull behind the eye and forehead, above and mostly in front of the ear.

Tem'plin oil. Oil of pine cones, from *Pinus pumilio*. It resembles ordinary oil of turpentine.

Tem'poral. Of, or pertaining to, the temples; the temple or temples of the head.

T. aponeuro'sis. Temporal fascia.

T. ar'teries, deep. From internal maxillary.

T. ar'tery, mid'dle. Branch of superficial temporal.

T. ar'tery, super'ficial. Terminal branch of external carotid.

T. bone. A complex bone consisting of the squamous, petrous, and mastoid portions enclosing the ear.

T. canal'. Canal or canals in the temporal bone serving for passage of temporal branch of temporo-malar vessels.

T. fos'sa. A fossa on the side of the head, the floor of which is partly formed by the squamous portion of the temporal bone.

T. hemio'pia. Blindness due to loss of function of the inner half of each retina.

T. lobe, or Tem'poro-sphenoi'dal lobe of brain. Lobe of the brain below the Sylvian fissure.

T. mus'cle. A muscle from the temporal fossa inserted into the coronoid process of the mandible.

T. nerves, deep. From inferior maxillary division of fifth.

T. point. A tender point in neuralgia over the auriculo-temporal nerve.

T. su'ture. Same as *Petro-squamous suture*.

T. vein, mid'dle. A large vein receiving blood from substance of temporal muscle.

Tempora'rii den'tes. The temporary or milk teeth.

Tempor'ary. Not permanent.

T. car'tilage. Cartilage that is replaced by bone.

T. stop'ping. 'A stopping used for a short period by dentists, consisting of gutta-percha, carbonate of lime, and quartz, for filling teeth.

Tem'poren. Belonging to the temporal bone in itself.

Temporisa'tion. The expectant treatment of disease.

Tem'poro-. (L. *tempus*, time.) A prefix denoting connection with the temporal.

T.-auric'ular. Pertaining to the temporal and auricular regions.

T.-fa'cial. The larger branches of the facial nerve.

T.-hy'oid. Pertaining to the temporal and hyoid bones.

T.-ma'lar. Pertaining to the temporal and malar bones.

T.-mandib'ular. Pertaining to the temporal and lower jaw bones.

T.-mandib'ular joint, anchylo'sis of the. Due generally to adhesions the result of acute or chronic arthritis.

T.-mandib'ular joint, arthri'tis of the. Occurs as the result of traumatism or disease.

T.-mandib'ular joint, disloca'tion of the. The jaw is forced forwards in front of the eminentia.

T.-mas'toid. Pertaining to the temporal and mastoid bones.

T.-maxillary. Pertaining to the temporal and upper jaw bones.

T.-maxillary joint, exci'sion of. The condyle of the mandible is sawn through and removed.

T.-occip'ital. Pertaining to the temporal and back of the head.

T.-parietal. Pertaining to the temporal and parietal bones.

T.-sphe'noid. Pertaining to the temporal and sphenoid bones.

Temse bread. Bread made from flour better sifted than ordinary flour. (Provincial English.)

Tem'ulence. (L. *temulentia*, drunkenness.) Intoxication, inebriation.

Tem'ulent. (L. *temulentus*, drink.) Given to drink; intoxicated.

Temulentia. Synonym of *Alcoholism*.

Tem'ulentic. In a state of inebriation.

Tem'ulently. In a drunken manner.

Tem'ulენტness. Same as *Temulence*.

Tena'cious. (L. *tenax*, tough.) Having the quality of toughness, or ability to resist mechanical strain or dissolution.

Tenacity. (L. *tenax*, tough.) Toughness; resistance to fracture or dissolution.

Tenac'ulum. (L. *tenere*, hold.) A variety of artery forceps for arresting hæmorrhage. A small, strong, sharp, curved steel instrument set on a handle for tying arteries.

Tenal'gia. (Tένων, tendon; άλγος, pain.) Same as *Tenodynia*.

Te'nax. (L. *tenax*, tough.) Surgical oakum.

Tench's mouth. *Os tincæ*; the os uteri.

Ten'dency. (L. *tendere*, to stretch.) Readiness to succumb to a given disease.

Ten'der. (L. *tener*, soft, tender.) Undue sensitiveness of a part to palpation or pressure.

Ten'derness. (L. *tener*, soft.) A condition of abnormal sensitiveness to touch or pressure.

Ten'dinal. Same as *Tendinous*.

Tendine'al. Same as *Tendinous*.

Ten'dinēs. Plural of *Tendo*.

Tendino'sus. (L. *tendo*, a tendon.) Having a tendon; sinewy. Of, or pertaining to, tendons. Aponeurotic, as a tendinous structure; tendinous insertion of a muscle.

Ten'dino-trochante'rian lig'a-ment. A fibrous band running from the upper margin of the capsule of the hip-joint, and binding down the tendon of the gluteus minimus.

Tend'ment. Attendance, care.

Ten'do. (L.) A tendon.

T. Achil'lis. The tendon of insertion of the superficial flexors of leg.

T. oc'ull. *Tendo palpebrarum*. Internal tarsal ligament. A short band of fibres passing over the lachrymal sac to be attached to the nasal bone.

Ten'don. A white fibrous glistening cord by means of which muscle is attached to bone.

T., disloca'tion of. Displacement of a tendon from its groove, such as the peroneus longus or brevis. It is a very uncommon affection.

T., ossifica'tion of. This may occur from habitual strain, such as rider's bone, or else the projection of a mass of bone from a part of the skeleton.

T. sheaths, inflamma'tion of. See *Tenosynovitis*.

T. sheaths, syphilitic disease' of. A painless and often symmetrical distension of the tendon sheaths.

Tendoph'ony. (L. *tendo*, tendon; Gr. φωνή, voice.) Auscultatory sounds supposed to be caused by the chordæ tendinæ of the heart.

Ten'doplasty. (L. *tendo*, tendon; Gr. πλάσσειν, to form.) A plastic operation on tendons.

Ten'do-synovi'tis. (L. *tendo*, tendon; *synovia*, synovia.) Inflammation of the tenosynovial membrane of a tendon.

Ten'dotome. (Tένων, a tendon; τομός, cutting.) Same as *Tenotome*.

Tendo-vaginitis granulo'sa. Hueter's term for tuberculosis of the tendon sheaths, which are filled with granulation or fungous tissue.

Tenes'mic. (Τενεσμός, a straining.) Pertaining to, or characterised by, *Tenesmus*.

Tenes'mus. (Τενεσμός, a straining at stool.) A continual inclination to painful defæcation, accompanied by straining the passage of scanty motions; caused by local irritation, as in dysentery.

Tē'nia. See *Tænia*.

Ten'i'asis. (L. *tænia*, tenia.) Symptoms produced by the presence of tænia in the body.

Ten'iate. (L. *tænia*, tapeworm.) Ribbon-like in shape.

Ten'ioid. See *Teniod*.

Ten'iola. A small ribbon.

T. cine'rea. A thin greyish ridge separating the striæ of the floor of the fourth ventricle from the cochlear division of the eighth nerve.

Teniopho'bia. (L. *tænia*, tapeworm; Gr. φόβος, dread.) A morbid fear of becoming the host of a tapeworm.

Ten'nant's powder. See *Powder*.
Ten'nis arm. Pain in the elbow-joint in lawn tennis players produced by the rupture of muscle-fibres.

Ten'nysin. An alkaloid found in brain tissue.

Tenodyn'ia. (Τένων, tendon; ὀδύνη, pain.) Pain in a tendon.

Tenog'raphy. (Τένων, a tendon; γράφια, write.) Description of tendons.

Tenology. (Τένων; λόγος [λεγεῖν, to speak].) The part of anatomy pertaining to tendons.

Ten'on. To fit for insertion into a mortise.

Tenon'itis. Inflammation implicating the capsule of Tenon.

Also, inflammation of Tenon's capsule.

Ten'on's cap'sule. A delicate band of fascia with involuntary muscle-fibres disposed round the eyeball.

Tenonta'gra. (Τένων, tendon; ἄγρα, seizure.) Gout in tendons.

Tenontodyn'ia. (Τένων, tendon; ὀδύνη, pain.) See *Tenodynia*.

Tenontog'raphy. (Τένων, tendon; φράγειν, to write.) See *Tenography*.

Tenontology. See *Tenology*.

Tenonto'mia. Synonym of *Tenotomy*.

Tenontophy'ma. (Τένων, tendon; φῦμα, growth.) A tumour growing on a tendon.

Tenon'tophyte. (Τένων, tendon; φυτόν, growth.) An osseous or cartilaginous growth on a tendon.

Tenontostoma. (Τένων, tendon; ὀστέον, bone.) Bony change in a tendon.

Tenontotro'ti. (Τένων, tendon; τιτρούσκω, to wound.) Those wounded in the tendons.

Ten'ophyte. See *Tenontophyte*.

Tenorrhaphy. (Τένων; ραφή, a seam.) Same as *Teno-suture*.

Tenositis. (Τένων, tendon; ιτις, inflammation.) Inflammation of tendons.

Tenostosis. (Τένων, tendon; ὀστέον.) Ossification of a tendon.

Teno-suture. The sewing together of the divided ends of a tendon.

Tenosyn'itis. Same as *Tenosynovitis*.

Tenosynov'itis. (Τένων, tendon; L. *synovia*; ιτις, inflammation.) Inflammation of a tendon.

T., acute'. An acute inflammation of a teno-synovial membrane.

T., chron'ic. This condition is frequently tuberculous. It is associated with thickening and occasional dilatations of the teno-synovial membrane.

T., fun'gating. Caused by tubercle. It may be preceded by hygroma. It is frequently of considerable size, causing a well-marked bulging of the affected part.

T., sup'purative. Inflammation accompanied by the formation of pus.

T., tuber'culous. Hygroma or hydrops. The wall consists of an outer firm layer, a middle layer of granulation tissue, and an inner of fibrous-looking material. Melon-seed and rice-shaped bodies exist; they are smooth and polished in appearance, and of a whitish colour.

Ten'otome. (Τένων, a tendon; τομός [τέμνειν, cut].) A slender knife employed for the subcutaneous section of tendons or fasciæ.

Tenot'omise. (Τένων, tendon; τομή, a cutting.) To divide a tendon or tendons.

Tenot'omy. (Τένων, a tendon; τέμνειν, to cut.) The operation for the division of tendons, which is almost invariably carried out subcutaneously.

Tense. (L. *tensus, tendere*, to stretch.) Being in a state of tension; stretched till tight; rigid.

Also, to make tense or taut.

Tensely. In a tense manner.

Tense'ness. State of being tense or stretched to stiffness.

Tensibility. Property of being tensile.

Ten'sible. Capable of being extended or drawn out. Ductile.

Ten'sile. Of, or pertaining to, *Tension*. Capable of tension.

Ten'sion. (L. *tensus, tendere*, to stretch.) The act of stretching, straining, or making tense. The constrained condition of the constituents of a part, arising from the action of antagonistic forces.

Ten'sity. The state of being tense; tense-ness.

Ten'sive. Giving the sensation of tension, stiffness, or contraction.

Ten'sor. (L. *tendere, tensus*, stretch.) One of several muscles which tighten a part, or make it tense, or put it on the stretch.

T. fas'ciæ la'tæ. Same as *T. vaginæ femoris*. A muscle inserted into the ilio-tibial band.

T. lam'inæ postero'ris vaginæ rec'ti abdom'inis. Small anomalous slips arising near the internal inguinal opening, and inserted into the transversalis fascia.

T. pal'ati, or Circumflex'us pal'ati. Tensor of palate.

T. tar'si. A small muscle inserted into inner angle of the tarsal cartilages of eyelids.

T. tym'pani. The tensor of the tympanum.

Ten'sure. A stretching or straining; tension.

Ten'sus. (L. *tendere*, to stretch.) The penis.

Tent. (L. *tentorium*, a tent.) A piece of fabric. A small cylinder of sponge or laminaria introduced into the cervix uteri or into a wound.

Also, to probe, to sound. To apply a tent or pledget.

T. stitch. *Petit point*. A single stitch not crossed, the stitches lying side by side.

Tentacle. (L. *tentare*, to handle, touch, feel.) *Biol.* Loosely applied to any slender tactile or prehensile organ, as a feeler, horn, proboscis, antenna, vibrissa, ray, or arm.

Tentacula. Same as *Tentacle*.

Tentacula'ria. *Filaria hominis-bronchialis*.

Tentac'ulate. (L. *tentaculum*, a tentacle.) Having tentacles.

Tentaculicyst. (L. *tentaculum*, a tentacle; Gr. κύστις, a cyst.) The auditory tentacles of certain Cnidara.

Tentaculiferous. (L. *tentaculum*, tentacle; *ferre*, to bear.) Bearing tentacles.

Tentaculiform. (L. *tentaculum*, tentacle; *forma*, form.) Tentacular.

Tentaculigerous. Same as *Tentaculiferous*.

Tentaculocyst. See *Tentaculicyst*.

TENTACULUM—TEREBENUM

Tentaculum. (L. *tentare*, feel, touch, handle; pl. *tentacula*.) *Biol.* A tentacle.
Tenta'men medicum. The Prussian medical examination.

Tentative. (L. *tentativus*, trying, testing.) Based on, or consisting in, trial or experiment; experimental, empirical

Tentigo. *Lust. Satyriasis.*

T. pra'va. See *Lupus*.

T. vene'rea. Same as *Nymphomania*

Tentorial. Of, or pertaining to, the *Tentorium*.

T. angle. Angle formed by the intersection of the basio-cranial axis with plane of tentorium.

Tentorium. (L. *tendere*, to stretch.) A partition of dura mater between the cerebrum and cerebellum ossipis sometimes occurring in the cat.

Tentum. (L. *tendere*, to stretch.) The penis.

Tenuate. (L. *tenuis*, thin.) To make thin.

Tenuifolious. (L. *tenuis*, thin; *folium*, leaf.) *Biol.* Having slender leaves.

Tenuis ma'ter. The pia mater.

Tenuitas aquo'sa. Predomination of watery fluid

Tenuity. The state of being tenuous or thin

Ten'uous. Thin, small, minute.

Tephromyeli'tis. (Τέφρος, ashy; *myelitis*.) *Poliomyelitis*.

Tephro'sia apollin'ea. (Τέφρος, ash-coloured, grey.) *Galega apollinea* of Egypt and Nubia. The leaves are often mixed with senna.

T. leptosta'chya. Plant of Senegal, with purgative root.

T. purpu'rea of Coroman'del. The root is bitter, and a decoction of it is often prescribed in dysentery, lientery, and tympanites.

T. sen'na. The leaves are used for senna by the people of Popayan.

T. toxica'ria. *Galega toxicaria* of Cayenne. Leaves are used for poisoning fish. Suggested as a substitute for digitalis.

T. virginia'na. *Galega virginiana*.

Tephro'sis. See *Incineration*.

Tephrylom'eter. (Τέφρος, ashes; μέτρον, measure.) A graduated glass for measuring the thickness of the grey matter of the brain by means of the segment or core removed

Tep'id. (L. *tepidus*, lukewarm.) Moderately warm.

Tepida'rium. A hot-air chamber used by Romans to prepare for hot water or hot vapour baths.

Tepidity. Lukewarmness.

Tep'or. (L. *tepor*, warmth.) Gentle heat; moderate warmth.

Terabdelle'. (Τερεειν, to bore; βδάλειν, suck.) An artificial leech.

Teramor'phous. (Τέρας, a monster; μορφή, form.) Of the form or nature of a monstrosity.

Ter'as. (Τέρας, a monster.) A monster.

Ter'ata anadid'yma. An Order of double autositic monsters in which there is an upward cleavage of the cerebro-spinal axis; fusion having occurred at the cephalic extremity.

T. anakatadid'yma. Double monsters with upward and downward cleavage.

T. katadid'yma. Double monsters with caudal cleavage.

Teratic. Of the nature or pertaining to monsters; monstrous.

Terat'ical. (Τεράτικός, strange, monstrous.) Marvellous, prodigious.

Ter'atism. (Τέρας, a wonder.) Any anomaly of conformation, whether congenital or acquired. Classified by Gouley as follows:

A. Congenital monstrosities.

1. *Ectrogenic.* Absence of parts of the body, such as absence of a kidney or testicle.
2. *Symphysic.* Fusion or coalescence of organs, as the horseshoe kidney.
3. *Ceasmic.* Failure of union of parts of the body; epispadias, &c.
4. *Atresic.* Occlusion of orifices; imperforate anus.
5. *Hypergenetic.* Disproportionate size of certain parts.
6. *Ectopic.* Displacement of a part from its normal position.
7. *Hermaphroditic.* Persistence of organs of both sexes in one individual.

B. Acquired monstrosities.

1. *Ectogenic.* The loss of some part by disease, injury, or operation
2. *Symphysic.* Fusion of parts by disease, accident, or operation.
3. *Ceasmic.* Occurrence of a cleft by disease, accident, or operation.
4. *Atresic.* Occlusion of normal orifices by disease, accident, or operation.
5. *Hypergenetic.* Inordinate enlargement of a part by disease.
6. *Ectopic.* Displacement of a part by disease.

Teratogen'ic. Producing monsters.

Teratog'eny. (Τέρας, a monster; γενῆαν, produce.) The production of monsters.

Ter'atoid. (Τέρας, a monster; εἶδος, form.) Resembling a monster. Teratoid tumour.

Teratolog'ic. Same as *Teratological*.

Teratolog'ical. Of, or pertaining to, *Teratology*.

Teratol'ogy. (Τέρας, monster; λόγος, science.) Science of animal or vegetable monstrosities.

Terato'ma. (Τέρας, a monster.) A complex congenital tumour, containing many different tissues, hair, teeth, bone, &c.; generally found at lower end of spine or in pelvis.

Teratom'atous. Resembling a *Teratoma*.

Teratopho'bia. (Τέρας, monster; φόβος, dread.) Morbid fear of monsters or deformities.

Terato'sis. (Τέρας, a wonder.) A congenital deformity.

Terba'sic. Same as *Tribasic*.

Terebellum. (Τερεειν, to bore; βδάλειν, to suck.) A pneumatic glass used in cupping.

Terebella. (L. dim. of *terebra*, a borer.) A trepan or trephine.

Terebellum. (L.) An instrument used in craniotomy to perforate the skull.

Terebenum, Terebene. (Τερίβινθος, terebinth.) $C_{10}H_{16}$. (Not official.) The liquid obtained from oil of turpentine after successive treatments with a small proportion of sulphuric acid till the optical rotation is reduced to zero, followed by distillation in a current of steam. Soluble in $6\frac{1}{2}$ parts of rectified spirit; in all proportions of absolute

TEREBIC—TERMINAL

alcohol or chloroform. Action, antiseptic; prevents fermentation. Uses, in chronic bronchitis and phthisis, dyspepsia with flatulency, cystitis, gleet; as a spray in post-nasal catarrhs. Dose, 5 or 6 drops on sugar.

Terebic acid. $C_7H_{10}O_4$. A monobasic acid formed by the action of HNO_3 on oil of turpentine.

Tereb'llin. Obtained by the action of hydrochloric acid on oil of turpentine.

Terebin'thina. (Τερεβινθος, the turpentine tree.) Turpentine, botin, albotin, altilib, brutino. Substance, of the consistence of honey, which flows from many trees of the *Terebinthinaceæ* and *Coniferae* families, composed of resin and essential oil without benzoic acid. See *Pinus sylvestris*. All the turpentines are stimulant, diuretic, and cathartic. *Terebinthina* (Ph. U.S.) is the concrete oleo-resin of *Pinus australis* and other species of *Pinus*; also the juice of *Pinus australis* and other species of *Pinus*.

T. argentoraten'sis. See *Pinus picea*.

T. balsamea. See *Pinus balsamea*.

T. canadensis. Canada turpentine; Canada balsam. (Official.) Obtained by puncturing the bark of *Pinus balsamea*. A pale yellow and faintly greenish transparent oleo-resin, of the consistence of thin honey; solidifying when mixed with about one sixth of its weight of magnesia; soluble in all proportions of benzol, chloroform, and ether. Action, locally irritant, vesicant, nervous stimulant, antiseptic, stimulant to the vaso-motor system, cardiac stimulant, antispasmodic, anthelmintic, expectorant. Uses, chronic catarrh of the bowels, flatulency, dyspepsia after acute stage, passive hæmorrhages of debility, puerperal and yellow fever, hospital gangrene, erysipelas, enema in impaction of rectum, constipation, tapeworm, chronic bronchitis. Dose, 20 to 30 grains.

T. chi'a. Chian turpentine. (Not official.) An oleo-resin obtained from the incised trunk of *Pistacia terebinthus*, collected in Scio. A soft solid with a characteristic odour. When heated with its own weight of absolute alcohol or pure ether the bulk dissolves, leaving a residue useful for cancer. Dose, 5 to 10 grains.

T. coc'ta. Strasburg turpentine boiled in water until solidification occurs on cooling.

T. communis. See *Pinus sylvestris*.

T. copaifera. Copaiba.

T. cyp'ria. See *Pistacia terebinthus*.

T. vene'ta. See *Pinus larix*.

T. ve'ra. See *Pistacia terebinthus*.

T. vulga'ris. See *Pinus sylvestris*.

Terebinthinæ acetum lini-mentum. (Official.) Oil of turpentine 4, glacial acetic acid 1 (by weight), liniment of camphor 4. An imitation of the St. John Long's celebrated liniment.

T. chi'æ pil'ula. (Not official.) Chian turpentine 6 grains, sublimed sulphur 4 grains. To be made into two pills, and taken every four hours.

T. confec'tio. (Official.) Oil of turpentine 1, liquorice powder 1, clarified honey 2. Dose, 60 to 120 grains.

T. ene'ma. (Official.) Oil of turpentine 1 ounce, mucilage of starch 15 ounces. Mix for enema.

T. linimen'tum. (Official.) Oil of turpentine 16, camphor 1, soft soap 2, distilled water 2. One part in 14.

T. o'leum. Oil of turpentine. (Official.) The oil distilled, usually by the aid of steam, from the oleo-resin (turpentine) obtained from *Pinus australis*, *P. tæda*, sometimes from *P. pinaster* and *P. sylvestris*. Limpid, colourless, with a strong peculiar odour, which varies in the different kinds, and a pungent bitterish taste. Action, antiseptic, stimulant, diuretic, anthelmintic, purgative in large doses, antispasmodic. It especially affects the kidneys and the genito-urinary mucous membrane. Uses, in passive hæmorrhage, in hysteria, inhalation in chronic bronchitis, an enema in obstinate constipation, and for flatulency. It is a rubefacient and counter-irritant externally. Dose, 10 to 30 minims; 2 to 4 drachms as an anthelmintic. Antidotes, Epsom salts, emetic, demulcent drinks, morphine or laudanum to relieve pain.

T. unguen'tum. (Official.) Oil of turpentine 2, resin in powder $\frac{1}{4}$, yellow wax 1, prepared lard 1.

Terebin'thinate. A member or derivative of the turpentine group.

Terebin'thine. Having the nature of, or pertaining to, *Terebinth*.

Terebration. (L. *terebrare*, to bore.) The operation of boring or trephining. Also, a boring pain.

Teres. (L., round, smooth.) Organ in which the fibres are collected into round fasciculi.

T. ligamen'tum. The round intra-capsular ligament of the hip-joint. The round ligament of the uterus.

T. ma'jor. A muscle connecting the lower and dorsal part of the vertebral border of the scapula and the humerus.

T. mi'nor. A muscle coming from above the former to the humerus.

Tere'sis. Observation.

Terete'. (L. *teres*, round, smooth.) *Biol.* Nearly cylindric. A term descriptive of certain stems, leaves, pistils, &c

Teretiprona'tor. *Pronator radii teres*.

Teretiscapula'ris. *Teres major*

Tere'trium. (L. *tereo*, to bore.) *Trep-an*.

Tere'tron. Same as *Teretrium*.

Ter'gal. (L. *tergum*, the back.) Dorsal.

Tergem'ini. *Trigemini*.

Ter'go-lat'eral. Appertaining to the back and side.

Ter'gum. The back.

Term. (Τέρμα, a limit.) The period of time anything lasts. The time of expected delivery. Menses.

Terma. (Τέρμα, a limit.) The lamina terminalis or lamina cinerea of the brain. The cephalic boundary of the mesal encephalic cavities.

Termatic. (Τέρμα, a limit.) Pertaining to the terma, or lamina terminalis of the brain.

T. artery. Distributed to the lamina terminalis.

Terminal. Pertaining to the end; placed at the end. Poles of a battery or other electric source.

T. gen'ital corpuscles. Krause's name for the round dilated nerve-terminals in the skin of the penis of the horse.

T. neuritis. See *Erythromelalgia*.

TERMINALIA—TEST

Terminalia chebu'la, T. bel-lerica. India. Nat. Order *Combretaceæ*. (Not official.) Oval, yellowish, dried fruit, about an inch long; contains gallic and tannic acid. Astringent, and used for tanning.

Termination. An ending; an issue.

T., nerve. A nerve-ending.

Terminology. (L. *terminus*, a name; Gr. *lógos*, a word.) Nomenclature; a system of names or terms.

Termin'thus. (Τερμίνθος, terebinth tree.) An old name for a carbuncle or sore, from its supposed resemblance to the fruit of the terebinth.

Terminus super'ior as'peræ arteriæ. Larynx.

Terms. Menses.

Ter'nary. Pertaining to the number three.

Terni'trate. A *Trinitrate*.

Terox'ide. (L. *ter*, three; Gr. *όξύς*, acid.) A *Trioxide*.

Ter'pene hy'drate. Obtained by hydration from terebinthine. Used in whooping-cough and hay asthma, and locally as an application in diphtheria.

Terpenes. Term applied to various isomeric hydrocarbons of the composition $C_{10}H_{16}$; principal constituents of a number of essential oils, as of turpentine, juniper, lemon, lavender, &c.

Ter'pine. Crystalline substance derived from terpene hydrate by action of heat.

T. hy'drate. $C_{10}H_{16}(H_2O)_2 \cdot H_2O$. (Not official.) It is produced by mixing nitric acid, alcohol, and turpentine in large or small transparent rhombic crystals, which lose one atom of water at $212^\circ F.$, becoming terpin ($C_{10}H_{16}(H_2O)_2$). Inodorous and nearly tasteless, only slightly soluble in water, alcohol, and ether, but soluble in glycerine. Recommended by Lepine as "the best expectorant in existence." In bronchitis and asthma, best given in pills of $1\frac{1}{2}$ grains with gum or balsam of tolu; three such pills three times a day. Antiseptic.

T. i'odide. Antiseptic. Used in chronic affections of the lung, in acute affections of the throat, in spray, or internally in doses of ten drops on sugar.

Terpin'eol. (Not official.) $C_{10}H_{17}OH$. An alcohol used for deodorising iodoform. A thick, colourless liquid, with a hyacinth-like odour, present in terpinol. When pure it gives the odour of lily of the valley.

Ter'pinol. (Not official.) An oleaginous liquid with a hyacinth-like odour. Insoluble in water, soluble in alcohol. Bronchial stimulant. Dose, 3 to 10 minims.

Also, colourless oily liquid, produced by acting on terpene hydrate with sulphuric, phosphoric, or glacial acetic acid. Used as a stimulant expectorant.

Terpin'olene. $C_{10}H_{16}$. A substance produced when terpin hydrate, terpineol, and cineol are boiled with dilute H_2SO_4 .

Ter'ra. (L.) Earth.

T. absor'bens minera'lis. Carbonate of magnesia.

T. al'ba. White clay.

T. lem'nia. Name given by the ancients to a solid reddish astringent substance prepared with the pulp and fruit of the baobab, an African tree. It is an argillaceous earth, and has been employed as an astringent.

T. oleum. Petroleum.

T. orlea'na annot'to. Pigmented matter obtained from the seeds of *Bixa orleana* or *orellana*. It is recommended in dysentery.

T. uri'næ. The earthy deposit in urine.

Ter'rain cure. (F.) A therapeutic method, comprising walking, climbing, and diet.

Ter'raline. A proprietary tasteless preparation of petroleum. Used as a substitute for cod-liver oil.

Terrene'. (L. *terrenus*.) Pertaining to the earth.

Ter'ritory. An extent of land.

T. of a cell. The extent of tissue supposed to be under the influence or control of a cell.

Ter'ror. Intense fear. Night terrors. Day terrors.

Ter'sion. (L. *tergere*, *tersus*, to wipe.) The act of cleaning by friction or dry rubbing.

Tersul'phate. A salt containing three molecules of sulphuric acid.

Tersul'phide. Same as *Trisulphide*.

Tert'ian. (L. *tertiana*, a tertian fever.) Occurring every second day. Double tertian fever. See *Fever*.

T. a'gue. Intermittent fever occurring every other day. A fever or other disease whose paroxysms return after a period of two days, or on the third day, reckoning both days' consecutive occurrence. An intermittent the paroxysms of which occur after intervals of about forty-eight hours.

Tertiarism. Tertiary syphilis.

Tert'ary. Tertiary syphilis, or tertianis. See *Syphilis*.

Terva'lence. Same as *Trivalence*.

Tescal'ma. Resinous drug from a variety of fig used in Mexico.

Tess'elated. (L. *tesselatus*, a square.) Chequered; formed into little squares.

T. endothe'lum. The flattened cells of pavement epithelium.

T. fun'dus. One in which the intervascular areas of the choroid are much pigmented, and stand out in strong contrast to the choroidal vessels anastomosing freely in their midst.

Tessel'la. (Dim. of L. *tessera*, a quadrangular paving stone.) A tablet.

Tes'sera. The cuboid bone.

Test. (L. *testum*; also *testu*, the lid of an earthen vessel.) Means of trial; that by which the presence, quality, or genuineness of something is shown.

T., Bött'ger's su'gar. A test for sugar in urine, boiling with solution of sodium carbonate and basic bismuth nitrate. Black precipitate with sugar.

T., Bres'lau's. It was formerly supposed that if the stomach and intestines of an infant were placed in water they floated if the child had been alive.

T., Bryce's. Test of the genuineness of vaccination by re-vaccinating at another point.

T., catop'tric. A former method of diagnosis of cataracts by means of changes observed in reflected images of a light held in front of an eye affected by cataract, as differing from a normal eye.

T., Day's blood. Stain treated with guaiacum and hydrogen peroxide; if blood be present there is a sapphire-blue stain.

TESTA—TESTUDINATIO

T., Ehrlich's. Equal parts of urine made strongly alkaline with ammonia and of the test solution are used. The mixture should become red, and after twenty-four to forty-eight hours give a precipitate which is dark violet in its upper stratum. The solution is, concentrated aqueous solution of sulphanilic acid 200 c.c., pure nitric acid 10 c.c., half per cent. solution of pure nitrite of sodium 6 c.c. This reaction was supposed to be diagnostic of typhoid fever, but has been obtained with other diseases.

T. meal. A known quantity of food introduced into the stomach, with the view of withdrawal and subsequent analysis after a stated time.

T. mixer. A tall cylindrical bottle of clear glass with a wide foot and stopper.

T. object. A microscopic specimen, such as the muscular fibres of *Dytiscus marginalis*, used for testing the definition of a microscope.

T. paper. A paper impregnated with litmus or some other reagent.

T., Reinsch's. Heating suspected solution with a strip of bright metallic copper and dilute hydrochloric acid. The arsenic is deposited in a grey film.

T.-tube. A cylindrical tube of glass, open at one end, used for chemical and bacteriological purposes.

T. type, Snellen's. Letters of given size to be read at a given distance, *e.g.* 12 metres. At the proper distance from the eye each letter subtends an angle of 5'.

Testa. A shell or outer covering. Oyster shells. (Not official.) It consists of carbonate of calcium.

T. ovi. Crushed egg-shells.

T. præparata. (Not official.) An impalpable powder, white, coarser than prepared chalk; soluble in hydrochloric acid. It is prepared by removing the rough external layer from oyster shells, washing with boiling water, powdering, and drying. Dose, 5 to 30 grains.

Testamentary capacity. A legal term indicating a condition of mind capable of making a will.

Testectomy. (L. *testis*; Gr. ἐκτομή, excision.) Removal of the testicle.

Tester, lung. See *Lung tester*.

Testes. Plural of *Testis*.

T., descent of. Passage of the testes through the inguinal canal into the scrotum.

T. of brain. *Corpora quadrigemina*.

Testicle. (L. *testiculus*, a testicle.) Male glands secreting spermatozoa and some of the fluid elements of the semen.

T., Cooper's irritable. Neuralgia of testis.

Testicoid. (L. *testis*, a testicle; *condere*, to hide.) Undescended testicle; especially applied to animals when condition is normal.

Testicular. (L. *testiculus*.) Of, or pertaining to, the testicle.

T. artery. *Spermatic artery*.

T. cord. Same as *Spermatic cord*.

T. cyst. Retention cyst of a seminal tubule.

T. duct. *Vas deferens*.

T. veins. *Pampiniform plexus*.

Testiculate. Of rounded or ovate shape; of a testicle.

Testiculus. (L.) A testicle.

Testis. (Pl. *testes*.) A testicle.

Also, some rounded formation likened to a testicle, as the testis of the brain.

T., aberrant duct of. See *Aberrant*.

T., atrophied. A diminutive testicle without function. The condition may be congenital or the result of fibrous contraction.

T., carcinoma of. The medullary form. The growth starts in the glandular epithelium of the tubules in the centre of the organ near the rete testis. The epididymis is usually lost in the mass.

T. cer'ebri. *Testis of corpora quadrigemina*.

T., contusion of. Bruising of the testicle. Causes acute insupportable pain, often severe enough to produce syncope, or even death from shock. Atrophy very commonly follows injury.

T., cysts of. These are either cystic fibromata or cystic sarcomata.

T., ectopia of the. Displacement of the organ. It occurs in three situations: (1) into the perinæum—perinæal ectopia; (2) through the crural canal—crural ectopia; (3) peno-pubic ectopia, where the testis is situated in front of the pubes at the root of the penis.

T., encysted hydrocele of the. The cyst is situated between the tunica albuginea and the tunica vaginalis, or in the substance of the tunica albuginea itself.

T., fungus. See *T., hernia of*

T., hæmato'ma of the. The hæmorrhage is either into the tunica vaginalis, the testicle, or the epididymis.

T., her'nia of the. The extrusion of the testicular substance through the tunica albuginea and the skin of the scrotum.

T., hypertrophy of the. This may occur when the other testicle has become atrophied.

T., mediasti'num. See *Mediastinum*.

T., misplaced'. See *T., ectopia of the*.

T. mulieb'ris. The *Ovary*.

T., neural'gia of the. Sudden severe paroxysmal pain in the testicle.

T., pi'a ma'ter. Same as *Tunica vasculosa*.

T., retained'. See *T., ectopia of the*.

T., sarco'ma of the. It is either a soft round-celled medullary tumour, or a firm fleshy tumour of spindle and mixed cells; a fibrosarcoma.

T., syph'ilis of the. This is seen in the form of chronic orchitis or sarcocele.

T., terato'ma of the. These are—(1) congenital cystic growths, containing fragments of bone, teeth, &c.; (2) the more ordinary dermoid cysts, with epithelium, hair, and sebaceous material.

T., tor'sion of the. This is a rare condition in which the spermatic cord is twisted or rotated on itself, thereby causing acute strangulation of the testicle. It is generally associated with undescended testicle.

T., tuberculo'sis of the. This is either primary or secondary to tuberculosis of some other part of the genito-urinary apparatus. The testicle may be affected with acute tuberculosis as a part of a general disease.

T., undescend'ed. See *T., ectopia of the*.

Testitis. (L. *testis*; Gr. *itis*, inflammation.) Inflammation of the testicle; *Orchitis*.

Testudinatio cranii. Fracture of the skull, in which the fragments are placed so as to form a vault.

TESTUDO—TETRAGONUS

Testu'do. A figure-of-8 bandage about an articulation.

Tet'anē. (Τέτανος, tetanus.) *Tetanus.*

Tetan'ic. (Τέτανος, tetanus.) Pertaining to, or of the nature of, *Tetanus.*

T. spasm. A tonic muscular spasm.

Tetan'iform. (L. *tetanus*, tetanus; *forma*, form.) Resembling tetanus; tetanoid.

Tetanig'enous. (L. *tetanus*, tetanus; *gignere*, produce.) Producing tetanus.

Tetanill'a. *Tetany.* An affection (*Paramyoclonus multiplex*) characterised by a clonic spasm of groups of voluntary muscles, often symmetrical, ceasing during sleep.

Tetanin. A toxin obtained from cultures of tetanus bacilli, and present in the blood in tetanus.

Also, strychnia. *Tetanine.*

Tetanine. A ptomaine ($C_{13}H_{30}N_2O_4$) obtained from cultures of the bacillus of tetanus and from the tissues of tetanus patients. It produces lethargy and paralysis, followed by convulsions, principally tonic, and death.

Tetanium. Strychnia.

Tetaniza'tion. Production of tetanus by a rapid succession of stimuli to a muscle in a muscle-nerve preparation.

Tet'anize. To produce tetanus.

Tet'ano-can'nabin. A basic substance, having the same therapeutic value as strychnia, found in *Cannabis indica*.

Tet'anode. Same as *Tetanoid*.

Tet'anoid. (Τέτανος, tetanus; εἶδος, form.) Resembling tetanus.

T. pseudo-paraple'gia. Same as *Spastic spinal paralysis*.

Tetanom'otor. (L. *tetanus*, tetanus; *motor*, a mover.) Heidenhain's instrument for producing rapid direct mechanical stimulation by an ivory hammer attached to the vibrating spring of an induction machine. An instrument used to excite tetanus in muscles.

Tetanoth'ra. Medicines which remove wrinkles.

Tetanotoxin'in. (Τέτανος, tetanus; τοξικόν, poison.) $C_5H_{11}N$. A poisonous ptomaine obtained by Brieger as one of the products of the culture of the tetanus microbe. It is tetanising in its action, producing first tremor, then paralysis and violent convulsions.

Tet'anus. (Τέτανος, spasm; a stretching tension.) Disease characterised by tonic contraction of many or all voluntary muscles. In *Physiol.*, a condition of prolonged contraction, produced by rapidly repeated stimuli.

T., artifi'cial. That produced by drugs, such as brucia, strychnia.

Tet'any. Tonic spasm affecting chiefly the fingers, hands, and wrists, and seen oftenest in rickety infants.

T., epidem'ic. An acute form occurring in winter, which lasts two to three weeks, and is not usually fatal.

Tetartæ'us. Occurring on the fourth day. *Quartan.*

Tetartophu'la. (Τέταρτος, four; φύω, to arise.) A quartan in which the intermission is inordinately short or imperfect.

Tetatox'in. See *Tetanotoxin*.

Tete. Nipple.

Tetraba'sic. (Τέτρα, four; βάσις, basis.) Having a basicity of four; having four atoms of replaceable hydrogen.

Tetrablas'tic. (Τέτρα, four; βλαστός,

a germ.) In *Biol.*, applied to an embryo having four germ layers.

Tetrab'olon. (Τέτρα, four; ὀβολόν, obole.) Having the weight of four oboli, or two scruples.

Tetrabra'chius. (Τέτρα, four; βραχίον, arm.) A monster having four arms.

Tetrac'elus. (Τέτρα, four; σκέλος, leg.) A monster with four legs.

Tetr'ach. (Τέτρα, four; ἀρχεῖν, to rule.) A term descriptive of radial fibro-vascular bundles having four rays.

Tetrachei'rous. (Τέτρα, four; χεῖρ, the hand.) A monster with four hands.

Tetrachys'tic. (Τέτρα, four; σχίσμα, a cleft, division.) *Biol.* Dividing into four similar parts.

Tetracoc'cus. (Τέτρα, four; κόκκος, berry.) A micrococcus occurring in clusters, and forming groups of four.

Tetrac'tinal. (Τέτρα, four; ακτίς, a ray.) Having four rays.

Tetracy'clic. (Τέτρα, four; κύκλος, a ring.) In *Biol.*, applied to a flower possessing four whorls of floral organs.

Tetradactyl, Tetradac'tyle. (Τέτρα, four; δάκτυλος, a finger, toe.) *Biol.* An animal having four digits on each limb.

Tetradrach'mon. (Τέτρα, four; δραχμή, a drachma.) A weight of four drachms, or half an ounce.

Tetrads. (Τέτρα, four.) Groups of micrococci developing in fours.

Tetrad'y'mous. (Τετράδνμος, four.) *Biol.* In sets of four each.

Tetradyn'amous. (Τέτρα, four; δύναμις, power.) In *Biol.*, applied to stamens when there are six in the flower, four of them longer than the other two.

Tetra-e'thyl-ammo'nium. A proposed solvent for uric acid and urea. It is best used in a 10 per cent. solution, the dose being 10 to 20 minims. It is obtained by decomposing its iodide by moist $AgNO_3$, or its sulphate by baryta. It occurs in deliquescent hair-like needles, as bitter as quinine. It is strongly alkaline and caustic.

T. hydrox'ide. $N(C_2H_5)_4HO$. (Not official.) A solvent for uric acid, that has been tried in 10 per cent. solution (10 minims three times a day) in acute articular rheumatism.

Tetrag'enous. (Τέτρα, four; γενής [γίνεσθαι], to be born.) *Bacteriol.* Giving rise to square groups of four. *Micrococcus tetragenus*, described by Koch, found in tuberculosis.

Tetrago'num feb'ris fla'væ. (Finlay.) Same as *Micrococcus versatilis* (Steinberg), found in mosquito cultures, and once in the liver of a yellow fever case in Havana. Cocci vary much in size and grouping, often in tetrads; liquefy gelatine very slowly; form a viscid, straw-coloured mass on agar.

T. lumba'lë. An irregularly rhomboidal space in the lumbar region, under the aponeurosis of the latissimus dorsi, bounded below by the upper edge of the internal oblique muscle, above by the serratus posticus inferior and the tip of the twelfth rib, medially by the sacrospinalis, externally by the posterior edge of the origin of the external oblique.

Tetrago'nus. (Τέτρα, four; γωνία, an angle.) The *Platysma myoides*.

TETRAGYNOUS—TEUCRIUM

Tetrag'ynous. (Τέτρα, four; γυνή, a female.) Having a gynœcium of four carpels.

Tetrahydrobetanaphthyl'amin. See *Hydronaphthylamin*.

Tetramas'thous. (Τέτρα, four; μαστός, breast.) Having four breasts.

Tetramas'tigate. (Τέτρα, four; μάστιξ, a whip.) *Biol.* Applied to micro-organisms having four flagella.

Tetrama'zia. (Τέτρα, four; μαζός, breast.) The presence, normally or abnormally, of four teats or mammary glands.

Tetram'erism. (Τέτρα, four; μέρος, part.) *Biol.* Having parts or organs arranged in fours or multiples of four.

Tetramethyldiam'ido-triphenylcarbinoxalate. Malachite green.

Tetramethylenedi'amin. $C_4H_{10}(NH_2)_2$. A substance identical with putrescin, which has been isolated from decaying vegetable matter. It is crystalline, with a peculiar odour.

Tetramethylthi'online. Methylene blue.

Tetram'yron. (Τέτρα, four; μύρον, an ointment.) An ointment consisting of four ingredients.

Tetrangu'ria. *Cucurbita citrullus*.

Tetranop'sia. (Τέτρα, four; όψις, vision.) A contraction of the field of vision limited to one quadrant.

Tetra-ophthal'mous. (Τέτρα, four; όφθαλμος, eye.) A form of monster having four eyes.

Tetraphar'macum. (Τέτρα, four; φάρμακον, a medicine.) Medicine consisting of four ingredients.

Tetrapous. (Τέτρα, four; ποός, foot.) Having four feet.

Tetrap'terous. (Τέτρα, four; πτερόν, wing.) *Biol.* Having four wings; said of a fruit or stem.

Tetrapyre'nous. (Τέτρα, four; πυρίν, the stone of the fruit.) *Biol.* Characterised by four stones or pyrenes.

Tetraschis'tic. Same as *Tetrachystic*.

Tetrasele'nodont. (Τέτρα, four; σελήνη, moon; όδόν, tooth.) *Biol.* Applied to an animal with molar teeth exhibiting four crescentic ridges.

Tetrasepal'ous. (Τέτρα, four; L. sepalum, sepal.) *Biol.* Having four sepals.

Tetrasper'mous. (Τέτρα, four; σπέρμα, seed.) *Biol.* Having four seeds.

Tetrasporan'gium. (Τέτρα, four; σπορά, a spore; αγγείον, vessel; pl. *Tetrasporangia*.) *Biol.* A cell in which tetraspores are produced.

Tetraspore. (Τέτρα, four; σπορά, a spore.) *Biol.* One of four spores produced in a single mother-cell or sporangium, as in the red marine Algæ (*Floridæe*).

Tetraspor'ic. (Τέτρα, four; σπορά, spore.) Composed of tetraspores.

Tetraspo'rous. (Τέτρα, four; σπορά, spore.) Of the nature of tetraspores.

Tetraster. (Τέτρα, four; αστήρ, a star.) The karyokinetic figure when there is a fourfold division of the nucleus and four centres of radiation.

Tetrastichi'asis. (Τέτρα, four; στίχος, row, line.) An anomalous arrangement of the eyelashes in four rows.

Tetrasto'ma. (Τέτρα, four; στόμα, a mouth.) A Genus of *Entozoa*.

Tetrathe'cal. (Τέτρα, four; θήκη, case.) *Biol.* Applied to a four-chambered ovary.

Tetratom'ic. (Τέτρα, four; άτομος, atom.) Containing four atoms; having four atoms of replaceable hydrogen.

Tetratox'in. Ptomaine from the culture of the bacillus of tetanus, producing paralysis and convulsions.

Tetrava'lent. Synonym of *Quadri-valent*.

Tetrax'ial. (Τέτρα, four; L. axis, axis.) Having four axes.

Tet'razone. $(C_2H_5)_2NNNN(C_2H_5)_2$. A basic liquid of alliaceous odour.

Tetrethyldiam'ido-triphenylcarbinoxalate. A bright green crystalline body giving a blue colour on solution in water; hydrochloric acid converts the green-blue solution into green, hence it is used in testing the acidity of the gastric juice.

Tetronal. *Diethylsulphonediethylmethane*. (Not official.) Tetronal is in white crystals, scarcely soluble in water, fairly so in alcohol. Nearly related to sulphonal. A disulphone of the ethyl and methyl groups, harmless in ordinary doses, and having marked hypnotic properties. Dose, 10 to 20 grains.

Tetroner'ythin. (Τέτρα, four; ερύθρος, red.) *Biol.* The name given to a group of lipochrome pigments found in animals.

Tetro'rus. Synonym for the *Astragalus*.

Tetter. (Ang.-Sax. *teter*.) A vague name of several cutaneous diseases, such as impetigo, eczema, herpes. A cutaneous disease of animals, spreading in different directions on the body.

T., blis'ter. *Impetigo*.

T., brawn'y. *Seborrhœa capitis*.

T., crust'ed. *Impetigo*.

T., dry. *Dry eczema*.

T., eat'ing. *Lupus*.

T., hon'eycomb. *Porrigo favosa*.

T., hu'mid. *Eczema*.

T., milk'y. *Crusta lactea*. *Achor*. A small pustule on the heads of infants, followed by a scab.

T., moist. *Eczema*.

T., pus'tular. *Impetigo*.

T., run'ning. *Eczema*.

T., sca'ly. Includes *Psoriasis* and *Squamous eczema*.

Tet'terous. Like *Tetter*.

Tet'terwort. The larger celandine, *Chelidonium majus*, so named from its use in cutaneous diseases.

Tet'y. A skin disease peculiar to Madagascar, and characterised by a pustular or squamous eruption in the neighbourhood of the mouth and nostrils.

Teu'crium. Europe. Nat. Order *Labiatae*. (Not official.) A plant about twelve inches high. Its virtues depend on a volatile oil. Action, diaphoretic, tonic, stimulant. Uses, scrofula, dropsy, chronic gout, flatulency. Dose of the fluid extract, $\frac{1}{2}$ to 1 drachm.

T. ægypti'acum. *T. capitatum*.

T. be'l'ium. *T. capitatum*.

T. canad'en'se. American germander or wood-sage. Aromatic and stimulant indigenous herb.

T. capita'tum. Poley mountain of

TEXAS—THAMNIUM

Montpellier. Order *Labiatae*. Is generally substituted for *T. chamædrys*. The common poley mountain is the *Teucrium montanum*, and the golden poley mountain the *Teucrium polium*, polion.

T. chamædrys. Common creeping or small germander. English treacle. Plant possessed of aromatic and bitter properties.

T. chamæpitys. Common ground-pine. Properties like the last. The tops and leaves have been recommended as aperients and tonics, especially in female obstructions and in paralytic disorders.

T. creticum. Poley mountain of Candy. The tops and whole herb enter into the old compounds mithridate and theriaca. It is placed among the aperients and corroborants.

T. fla'vum. Has similar properties to *T. chamædrys*.

T. hyssopifolium. *T. creticum*.

T. i'va. French ground-pine. It has similar properties to *T. chamæpitys*, but is weaker.

T. maritimum, T. mar'ium, T. mar'um. Syrian herb mastich; cat thyme. A very aromatic plant of a camphorated smell. Formerly much used in medicine as a tonic, antispasmodic, emmenagogue, &c.

T. officina'le. *T. chamædrys*.

T. palus'tre. *T. scordium*.

T. pol'ium. Used in the East for cholera.

T. pyramida'le. *Ajuga*.

T. rosmarinifolium. *T. creticum*.

T. scordium. Water-germander; wood-sage. The leaves have a garlicky smell, and bitterish, slightly pungent taste. It has the tonic properties of other teucria. The principle teucriin, derived from it, has been employed subcutaneously in cold tuberculous abscesses, tuberculous infiltrations, &c.

Texas cat'tle fever. Specific infectious disease affecting horned cattle.

T. mange. Eczema, Scabies, or Pruritus.

T. rhat'any. Root of *Krameria secundiflora*.

T. sarsaparilla. *Menispermum canadense*.

T. snake-root. *Aristolochia reticulata*.

Textum interlobula're. Interlobular tissue.

Textu'ra. Texture.

T. organ'ica. Organised tissue.

Textural. Of, or relating to, *Texture* (Quain, *Med. Dict.*, p. 52). It may be the result of congestion or inflammation of nerve, or of other textural changes.

Texture. (*Texo*, to weave.) The particular arrangement of tissues constituting an organ.

Textus. Texture. Tissue.

T. cellulo'sus. Cellular tissue.

T. desmo'sus. Desmoid tissue.

T. erec'tilis. Erectile tissue.

T. nervo'rum. *Plexus nervorum*.

T. organ'icus. Cellular tissue.

T. papilla'ris. *Corpus papillare*.

T. parenchyma'lis. Cellular tissue.

Thæ'ria. (Θήρ, a wild animal.) Razygge.

Thalamencephal. Same as *Thalamencephalon*.

Thalamencephalic. Of, or pertaining to, the *Thalamencephalon*.

Thalamencephalon. (Θάλαμος, an inner chamber; ἐνκεφαλόν, the brain.) The

parts round the third ventricle developed from the first primary vesicle.

Also called diencephalon, interbrain, 'tween-brain.

Thal'ami. Pleural of *Thalamus*.

Thalam'ic. Of, or pertaining to, the *Optic thalamus*. The thalamic commissure of the brain, or the grey commissure.

Thala'mium. (Θάλαμος, an inner chamber, a bedroom; pl. *thalamia*.) *Biol.* Applied to various fruit-bearing organs in cryptogams.

Thalamocœle. (Θάλαμος, an inner chamber; κοιλία, a hollow.) Cavity of thalamencephalon. The thalamic cœlia, or third ventricle.

Thalamocru'al. Pertaining to *Thalamus* and *Crus cerebri*.

Thalamus. Apparent origin of a cranial nerve, placed where a nerve emerges or leaves the brain. Specifically the optic thalamus; the ganglion in walls of the third ventricle; the thalamus of the optic nerve; anterior, inferior, internal, and posterior peduncles of thalamus. *Nucleus externus thalami*.

T. cor'porum caverno'sum. See *Crus penis*.

T. rega'lis. See *Pericardium*.

Thalassother'apy. (Θάλασσα, the sea; θεραπεία, treatment.) Treatment of disease by sea bathing, sea voyages, &c.

Thalline peri'odide, T. peri'odosulphate. (Not official.) A combination of iodine and thalline sulphate. Black and crystalline. Soluble in alcohol. Recommended by Dr. Mortimer Granville for cancer. In pills (with musk and pilocarpine) that contain 3 grains each of the periodide. One every two or three hours during the day.

T. sulphate. (C₁₀H₁₃NO)₂H₂SO₄. (Not official.) The sulphate of a synthetically prepared base derived from chinoline, the full name of which is *Tetrahydroparaquinosol*. A yellowish-white crystalline powder, with an odour resembling that of coumarin, and an aromatic bitter taste. Soluble in 1 in 7 of water. Action, antipyretic and antiseptic. Uses, recommended in typhoid. Death has followed the use of the tartrate in debilitated conditions. A 2½ per cent. solution has been used with success in gonorrhœa; also used in the form of a bougie (2 grains to 40 of cacao butter). Dose, 3 to 8 grains.

Thall'ium. (L. *thallus*, a green bud or shoot.) Metal found in certain seleniferous and telluriferous deposits in the native sulphur of Lipari, &c., and resembling lead physically in its aspect, colour, density, &c., as well as in its toxic action on the economy. The salts of thallium, especially the nitrate, are very soluble.

Thallome. (Θαλλός, a young shoot.) A thallus.

Thallophy'ta. (Θαλλός, a green shoot; φυτόν, a plant.) Plural of *thallophytum*. A comprehensive term for the lower cryptogams, in which there is no well-defined differentiation of root, stem, or leaf.

Thal'lophyte. (Θαλλός, a green shoot; φυτόν, a plant.) One of the lower cryptogams.

Thallus. (Θαλλός, a young shoot.) *Biol.* Applied to a plant body in which there is no differentiation into root, stem, and leaves.

Tham'nium. (Θαμνίον, dim. of φάμνος, a bush.) *Biol.* A bushy thallus.

Thanasis'mus. Mortal.
Thanatic, Thanaticus. Relating, or appertaining, to death.
Thanatici mor'bi. Fatal affections, usually from violence.
Than'ato-biolog'ic. (Θάνατος, death; βίος, life.) Pertaining to life and death.
Thanato'dēs. Mortal.
Thanatognomon'ic. (Θάνατος, death; γιγνώσκω, to know.) Characteristic of death.
Thanatog'raphy. (Θάνατος, death; γραφία [γραφειν, write].) A narrative of one's death, distinguished from biography.
Than'atoid. (Θανατοειδής, resembling death.) Resembling death; apparently dead; deadly.
Than'atol, Gua'ethol, Ajakol. (Not official.) Pyrocatechin-monoethyl ether is a substance which has its first name from Dr. Than, a professor of Buda-Pesth. Produced by the action of an ethyl radical on guaiacol, and used as the latter is for tuberculosis. It is called guaethol by Merck.
Thanotology. (Θάνατος, death; λόγος [λεγειν, to speak].) Doctrine of death. A discourse on death.
Thanatoma'nia. (Θάνατος, death; μανία, mania.) Suicidal mania.
Thanatom'eter. (Θάνατος, death; μέτρον, measure.) A thermometer capable of being introduced into the stomach to determine whether the depression of temperature is sufficient to be looked on as a sign of death.
Thanotophid'ia. (Θάνατος, death; N.L. ophidia.) Venomous or poisonous snakes in general.
Thanatopho'bia. (Θάνατος, death; φόβος, dread.) A morbid fear of death.
Thanatop'sis. (Θάνατος, death; ὄψις, sight.) A view or contemplation of death.
Thanato'sis. See *Mortification*.
Thanatoty'phus. *Malignant typhus*.
Thane's meth'od. A plan for finding the fissure of Rolando. The upper end is half an inch behind the mid-point of a line drawn from the glabella to theinion. Its lower end is close to the posterior limb, and about an inch behind the bifurcation of the fissure of Sylvius. The bifurcation of the fissure of Sylvius corresponds to a point one and a quarter inches behind and a quarter of an inch above the level of the external angular process of the frontal bone.
Thap'sia garga'n'ica. Algiers. Nat. Order *Umbelliferæ*. (Not official.) The root-bark yields a brown rubefacient resin, with the effects on the skin of croton oil. The plaster, used in France, contains 1 in 7 of the resin, and is irritating to the skin. Action, emetic, purgative, tonic. Uses, rheumatism and bronchitis. Dose of the fluid extract, 10 to 20 drops.
Tharandt normal culture solution. A solution employed for the study of the life-history of plants by water-culture in Tharandt, in Saxony.
Tharm. (Τράμης, gut.) An intestine, entrail, gut.
Thau'matrope. (Θαῦμα, wonder; τροπή, change.) A revolving instrument containing figures which bleed when the instrument is in motion. It shows the duration of visual impressions.
Thau'matropy. (Θαῦμα, wonder;

τροπή, change.) The extraordinary transformation of one organ or part into another.
Thaumatur'gical. Miraculous, magical.
The'bain. See *Paramorphine*.
The'baism. The condition produced by thebain or paramorphine.
Thebe'sius, veins of. One third of the foramina Thebesii found in the right auricle of the heart are the mouths of these small veins. The largest is called the vena Galeni cordis, and is constant.
The'ca. (Θήκη, a case.) A sheath, a vaginal structure. A hollow case containing a part or parts enclosing or covering it or them as a scabbard does a sword. Fibrous sheath, in which tendons of fingers and toes are contained.
T. cer'ebrl. The *Cranium*.
T. cor'dis. The *Pericardium*.
T. folliculi. See *Graafian follicles*.
T. vertebra'lis. The investing membranes of the spinal cord.
The'cal. Of the nature of, or pertaining to, a *Theca*.
T. ab'scess. *Tenosynovitis*. Paronychia or whitlow.
Thecaspo'ral. (Θήκη, case; σπορά, spore.) *Thecasporous*.
Thecaspore. (Θήκη, case; σπορά, spore.) In *Biol.*, a spore formed in the interior of a sac-like cell; the theca or ascus; an ascospore.
Thecaspo'rous. (Θήκη, case; σπορά, spore.) Having thecaspores.
The'cate. (Θήκη, a case.) In *Biol.*, sheathed; held within a theca, or furnished with a theca.
Thecif'erous. (Θήκη, case; L. *ferre*, to bear.) Bearing thecae.
The'ciform. Resembling a theca.
Theci'tis. (Θήκη, case; ιτις, inflammation.) Inflammation of tendons or their sheaths, or any fibrous sheath.
The'codont. (Θήκη, case; ὀδούς, tooth.) Having the teeth covered or sheathed in alveoli.
Thecostegno'sis. (Θήκη, case; στεγνύνειν, to contract.) The contraction of a tendon sheath.
The'dan's band'age. A form of roller bandage, applied from below upwards over a graduated compress, to control hæmorrhage from a limb.
The'ic. One addicted to immoderate tea-drinking.
The'ina. Same as *Theine*.
The'ine. $C_8H_{10}N_4O_2$. From *Camellia thea*. (Not official.) White silky crystals. A bitter feeble base and tonic stimulant. An identical principle is found in coffee, guarana, Paraguay tea, and kola nuts. Dose, 1 to 3 grains. Chemically the same as caffeine, but produces spasms, and its lethal dose is larger. China tea has $1\frac{1}{2}$ to 4 per cent. of theine; India and Ceylon teas have 3.2 and 4.6 per cent. The leaves also contain theophyllin, crystallisable, isomeric with theobromine, soluble in hot water and 10 to 20 per cent. of tannic acid.
The'ion. Sulphur.
Theiope'gæ. (Θείον, sulphur; πέγε, a spring.) Sulphureous mineral waters.
Theiother'mæ. (Θείον, sulphur; θερμη, heat.) Waters, mineral or sulphureous.
Theism. (L. *thea*, tea.) The condition produced by excessive tea-drinking. It is

characterised by headache, palpitation of the heart, tremor, insomnia, cachexia, &c.

Thelalgia. (Θηλή, nipple; ἄλγος, pain.) Pain in the nipples.

Thelasis, Thelasmus. (Θηλάσμος. a sucking.) The act of sucking.

Thelastria. A nurse.

Thelē. *Mamma.* Nipple.

Thelismus. Synonym of *Lispings*.

Thelitis. (Θηλή, a nipple; ιτις, inflammation.) Inflammation of the nipple.

Thelium. (Θηλή, a nipple.) A papilla. Also, a layer of cells.

Theloncus. (Θηλή, a nipple; ὄγκος, tumour.) Tumour of the nipple.

Thelophlebostemma. (Θηλή, a nipple; φλέψ, a vein; στέμμα, a wreath.) A venous circle formed by the union of veins around the nipple.

Thelorrhagia. (Θηλή, nipple; ῥοιά, flow.) Hæmorrhage from the nipple.

Thelothism. (Θηλή, a nipple; ωθεῖν, to push.) Projection of the nipple caused by contraction of the transverse muscular fibres.

Thelyblast. (Θήλυς, female; βλαστός, germ.) In *Biol.*, the female element of the bisexual nucleus (or genoblast) of a cell. A mother-cell. Cf. *Arsenoblast*.

Thelycum. (Θήλυς, female; pl. *thelyca*.) In *Biol.*, a structure on the ventral surface of the perion of certain Crustaceans; peculiar to the females.

Thelygonia. (Θήλυς, female; γονή, generation.) The part taken by the female in the act of generation. The procreation of female children. Also, *Nymphomania*.

Thelygonum. Sperm of the female.

Thelymania. (Θήλυς, woman; μανία, madness.) *Satyriasis*.

Thelypteris. *Pteris aquilina*.

Thelytocus. (Θήλυς, female; τεκεῖν, to bear.) Producing females only.

Thelytoky. (Θήλυς, female; τεκεῖν, to bear.) Caused by an over-supply of females.

Thenad. (Θέναρ, palm.) Toward the thenar side or extremity.

Thenal. (Θέναρ, the palm.) Pertaining to the palm or sole; also, toward the palm.

Thenar. (Θέναρ, the flat of the hand.) The ball of the thumb, the palm of the hand; also, the sole of the foot. Of, or pertaining to, the thenar.

T. and hypothenar eminences. The prominences of the hand caused by muscles of the thumb and little finger.

T. muscles. The small thumb muscles.

Thenard's blue. The same as *Cobalt blue*.

Thenen. Belonging to the thenar aspect in itself.

Theobroma'tis oleum. Oil of theobroma (official), a concrete oil obtained by expression and heat from the ground seeds of *Theobroma cacao*. It is of the consistency of tallow; colour, yellowish; odour, resembling that of chocolate; taste, bland and agreeable; fracture, clean; presenting no appearance of foreign matter. It does not become rancid on exposure to air. Principally used for suppositories.

Theobromine. $C_7H_8N_4O_2$. (Not official.) The alkaloid contained in the cacao seeds, which, deprived of part of their fixed oil, constitute the bulk of the commercial cocoa so

largely used as a beverage. It is closely allied to caffeine. The seeds contain 1 to 2 per cent. of the alkaloid.

T. diure'tin. (Not official.) A compound of sodium-theobromine with salicylate of sodium. Its action appears to be purely diuretic. Dose, 10 to 20 grains thrice daily.

Theomania. (Θεομανία, madness caused by the gods; inspiration.) Religious insanity.

Theoma'niac. One afflicted with *Theomania*.

Theophyllin. (L. *thea*, tea; Gr. φύλλον, leaf.) $C_7H_8N_4O_2$. An alkaloid discovered in tea. It is isomeric with the base obtained from cacao (theobromine) and with paraxanthin, but differs from them in its reactions.

Theople'gia. (Θεός, a god; πληγή, a stroke.) *Apoplexy*.

Theoplexia. *Apoplexy*.

Theoretical. That which is confined to theory or connected with it. Also applied to a sect of physicians who founded their doctrine chiefly on reasoning.

The'ory. (Θεωρία, a view.) The abstract or speculative principles of a science. A reasonable supposition or assumption.

T., Cohn'heim's. Same as *T., Samuel's*. That the main factor of inflammatory conditions consists in vascular lesions, the vessels being attacked by the irritating cause, and that the consequent exudation is passive. The collection of the exuded products constitutes the inflammatory tumour.

T., Dar'win's. See *Darwinism*.

T., Hammarsten's. That the coagulation of the blood is due to the decomposition of fibrinogen by the agency of fibrin-ferment, the product of the decomposition of the white blood-cells. The most important product is fibrin.

T., Lamarck'ian. Doctrines based on teachings of J. B. P. A. de Monet de Lamarck (1744—1829), who attempted to explain the progressive evolution of nature by virtue of an inherent tendency to development, and the efforts excited by changes of condition.

T. of inflammation, Fluss's. Same as *T., Landerer's*. That dilatation of the capillaries in an irritated area is due to a local lowering of tension. The first effect is acceleration of the blood-current. But after a certain time, owing to loss of elasticity of the walls of the vessels, the blood-stream slows.

T. of inflammation, Metschni-koff's biologic or comparative. "Inflammation must generally be regarded as a phagocytic reaction on the part of the organism against irritants. This reaction is carried out by the motile phagocytes, sometimes alone, sometimes by the aid of vascular phagocytes, or of the nervous system. The essential phenomena of inflammation represent an actual struggle between the phagocytes and the irritant agent."

T. of inflammation, paralytic. The doctrine looking on hyperæmia caused by trophic influences as the essential act of inflammation.

T. of inflammation, Podwyssoz'ki's. "Inflammation is a local reaction of the living tissues against the irritant substance. This reaction is chiefly produced by a phagocytic activity of the mesodermic cells. This reaction, however, may precipitate not only changes in

the vascular system, but also the chemic action of the blood-plasma and tissue fluids in liquefying and dissolving the irritant agent."

T. of inflamma'tion, Rokitan'sky's. That inflammation is an abnormal process of nutrition. That stasis is the most important factor, causing exudation. The cause is found in the mixing and adhesion of the red cells, the condensation of plasma by the serous exudation, and the accumulation of the white cells. The exudation is explained by the continued pressure under which the plasma in the area of stasis exists, besides molecular attraction.

T. of inflamma'tion, Sach's. That inflammation represents a salutary action against an injurious influence: regeneration, cicatrization, and the primary processes of inflammation, such as emigration and the alteration in the vessel walls, are reparatory acts, serving to counteract the damage brought about by the irritant; i. e. true inflammation never occurs without a primary lesion.

T. of inflammation, spasmod'ic. That a spasmodic contraction of the affected vessels causes the most essential phenomenon of inflammation, hyperæmia accompanying determination of blood to the part.

T. of inflammation, Strick'er's. That cells under the influence of inflammation return to their embryonic undifferentiated condition, and then rapidly proliferate.

T. of parenchym'atous inflamma'tion, Virchow's nutrit'ional. According to Virchow, hyperæmia is secondary to an increased nutritive and reproductive activity of the cells at the seat of inflammation, resulting in the formation of a large quantity of exudation cells at the expense of the cells of the damaged tissue.

T. of peptog'en'y and peptog'enous substances of Schiff and Corvisart. This theory adduces the noteworthy peculiarity whereby the secretory tissues of the stomach yield gastric juice only when in contact with certain alimentary substances, because these substances furnish an indispensable element in the production of pepsin.

T., Schann's. Same as *T., Rokitsansky's*.

Therape'ia. See *Therapeutics*.

Therapeu'sis. (Θεραπευτική, cure.) Therapeutics.

T., sugges'tive. Hypnotic suggestion in the treatment of disease.

Therapeu'tic. (Θεραπευτική, cure.) Curative. Pertaining to the healing art. Therapeutical.

T. te'st. A method of diagnosis by the administration of certain remedies which are known to influence a given disease, such as iodide of potassium in syphilis, quinine in malaria, &c.

Therapeutically. In a therapeutic manner. In respect of curative properties.

Therapeutics. The branch of medicine dealing with the nature of, uses, and methods of exhibition of remedies. Occasionally used to include all treatment, dietetic and hygienic.

Therapeu'ticus. Therapeutical.

Therapeu'tist. A specialist in theory or practice of therapeutics.

Therap'ic. Pertaining to *Therapy* or *Therapeutics*.

Ther'apist. Same as *Therapeutist*.

Therapol. (Θεραπεία, cure; *L. oleum*,

oil.) A vegetable oil containing ozone. It has been used in diphtheria.

Ther'apy, Therape'ia. (Θεραπειν, serve, attend.) The treatment of disease; therapeutics. Now chiefly used as a suffix, as *Serotherapy*.

Therenceph'alus. (Θήρ, a beast; κεφαλή, the head.) Skull in which the angle made by lines from the inion and nasion to horizon measures from 116° to 129°.

Thereobro'ma. (Θέρως, summer; βρώμα, food.) Summer dietary.

There'tia. (After André Theret, a French monk and traveller.) A Genus of tropical Apocynaceous shrubs and trees. *T. iccolli* and *T. neriifolia*, of tropical America and Asia, are poisonous, febrifugal, and emeto-cathartic. (Unofficial.)

Ther'etin. (After André Theret, a French monk and traveller.) A poisonous glucoside from certain species of *Theretia*.

Ther'iac. See *Theriaca*.

Ther'ica. Treacle. (Official.) The uncrystallised residue of the refining of sugar. Action, demulcent, nutrient, and slightly laxative. A favourite condiment in pharmacy for pills.

Ther'aki. Turkish name for opium eaters.

Theriat'rica. (Θήρ, a beast; ιατρία, medicine.) Veterinary art.

Theriocatar'rhus. (Θέρως, summer; κατάρρειν, overflow.) Hay fever.

Theriod'ic. (Θηρίον, a wild beast.) Malignant.

Therio'ma. (Θηριοεΐν, to make wild.) A rare name for malignant ulcer; a tumour.

Ther'ion. Therioma.

Theriot'omy. (Θηρίον, a wild beast; τομή, a cut.) *Zool.* The anatomy or dissection of wild animals.

Therm. (Θέρμη, heat.) The amount of heat required to raise the temperature of 1 gramme of water from 0° C. to 1° C. It is equal to 1000 calories.

Thermæ. (Θέρμη, heat.) Hot baths; hot springs.

Thermæsthe'sia. (Θέρμη, heat; αίσθησις, sensation.) The sensation of heat or the temperature of bodies. Same as *Thermesthesia*.

Thermæsthesiom'eter. (Θέρμη, heat; αίσθησις, sensation; μέτρον, measure.) An instrument for measuring the degree of sensibility to heat in different parts of the body.

Thermal. (Θέρμη, heat.) Of, or pertaining to, heat.

T. atax'ia. Loss of the heat-regulating power of the body.

T. fe'ver. A form of fever occurring during the treatment by hot baths.

T. sense. Special division of sensation by which heat is appreciated.

T. springs. Springs producing warm water which contains some medicinal agent.

Therman'tica. *Calefacients*.

Therman'tidote. An apparatus for cooling the air, much used in India, &c.

Thermas'ma. A warm fomentation.

Thermatology. (Θέρμη, heat; λόγος, speech.) Science of treatment of disease by heat, or specifically by thermal baths.

Thermic. Pertaining to heat.

T. fe'ver. Sunstroke, heat apoplexy, &c.

Thermifugin. (Θέρμη, heat; *L. fugare*, to expel.) $C_6H_5(CH_3)N.COONa$. Sodium

THERMINE—THERMOTERION

carbonate, recommended as an antipyretic. (Unofficial.)

Ther'mine. *Tetrahydro-beta-naphthylamine.* $C_{10}H_7.H_4.NH_2$. (Not official.) A limpid, thickish liquid, without colour, but with a powerful odour and strong basic power. It causes mydriasis and elevation of temperature, and hence its name. Its hydrochlorate is in white crystals, soluble in water.

Ther'mo-. (Θέρμη, heat.) A prefix used to denote connection with or relation to heat.

Thermo-anæsthêsia. Loss of the perception of heat.

Thermo-caut'ery. (Θέρμη, heat; Ε. cautery.) A form of actual cautery, whether the heated surface be produced by fire, electricity, or benzine vapour.

Thermo-chem'ic. Pertaining to *Thermo-chemistry*.

Thermo-chem'ist. (Θέρμη, heat; χημεία, chemist.) One versed in *Thermo-chemistry*.

Thermo-chem'istry. That branch of chemical science embracing the relation of heat and chemical changes.

Thermo-cho'ic. (Θέρμη, heat; χρώς, surface.) Pertaining to a quality of certain substances that transmit some thermal radiations, but absorb or change others.

Thermo-cur'rent. (Θέρμη, heat; L. *currere*, to run.) An electric current produced by heat.

Thermo-diffu'sion. (Θέρμη, heat; diffusion.) Diffusion of a gas by inequalities of temperature.

Thermodin. *Acetyl-para-ethoxyphenylmethane.* (Not official.) It forms colourless crystals, almost insoluble in cold, and very slightly soluble in warm water. It is recommended by Professor Mering as a mild antipyretic of certain action. Dose, 20 grains, or 7 grains three times a day.

Thermo-electric'ity. (Θέρμη, heat; ηλεκτρον, amber.) Electricity generated by heat.

Thermo-exci'tory. Having the function of exciting the production of heat.

Thermogen'esis. (Θέρμη, heat; γεννᾶν, to produce.) The production of heat.

Thermogenet'ic. Same as *Thermogenic*.

Thermogen'ic. (Θέρμη, heat; γεννᾶν, to produce.) Pertaining to *Thermogenesis*. Producing heat.

Thermog'enous. Producing heat.

Thermogram. (Θέρμη, heat; γράμμα, a mark.) The record of a thermograph.

Thermography. (Θέρμη, heat; γράφειν, to write.) Writing by means of heat. The use of the thermograph.

Thermohyperæsthêsia. (Θέρμη, heat; ὑπέρ, above; αἴσθησις, sensation.) An abnormal sensitiveness to heat.

Thermohyperalge'sia. (Θέρμη, heat; ὑπέρ, above; ἄλγος, pain.) Where a painful sensation results from contact with either a hot or cold substance.

Thermo-inhib'itory. Having the function of inhibiting or controlling the production of heat, as the thermo-inhibitory nerves or centres.

Thermol'ogy. (Θέρμη, heat; λόγος, science.) A treatise on heat.

Thermolu'sia. (Θέρμη, heat; λῦω, to wash.) Warm bath.

Thermol'ysis. (Θέρμη, heat; λύσις, a loosening.) The dissipation of heat. This is mainly accomplished by the skin and lungs. It is regulated by nervous apparatus.

Thermolyt'ic. Pertaining to, or promoting, *Thermolysis*. An agent promoting the discharge of heat from the body.

Thermo-mag'netism. (Θέρμη, heat; μαγνήτης, magnet.) Magnetism produced by heat.

Thermom'eter. (Θέρμη, heat; μέτρον, measure.) An instrument for measuring the heat of a body.

T., cen'tigrade. One in which the freezing-point is 0° C., and the boiling-point at 100° C.

T., clin'ical. Small thermometer used in clinical medicine.

T., Fah'renheit. One in which the freezing-point is 32°, and the boiling-point 212°.

T., Réau'mur. One in which the freezing-point is 0°, and the boiling-point 80°.

T., sur'face. An instrument for ascertaining the temperature of the skin of a part.

Thermomet'ric. Pertaining to the *Thermometer* or *Thermometry*.

Thermom'etry. The scientific use of the thermometer, and the facts and theories relating thereto.

Ther'mon. The sense of heat and cold.

Thermonanæsthêsia. Same as *Thermo-anæsthesia*.

Thermo-neuro'sis. (Θέρμη, heat; νεύρον, a nerve.) Pyrexia of vaso-motor origin.

Thermono'sus. (Θέρμη, heat; νόσος, disease.) Disease produced by heat.

Thermo-palpa'tion. (Θέρμη, heat; L. *palpare*, to palpate.) Palpation of the surface of the body, with a view of determining local or general variations of temperature.

Thermoph'agy. (Θέρμη, heat; φαγεῖν, to eat.) The habit of swallowing very hot food.

Thermopo'dium. (Θέρμη, heat; ποῦς, a foot.) Hot pediluvium.

Thermopolypne'a. (Θέρμη, heat; πολὺς, many; πνέειν, to breathe.) Rapid respiration due to a high temperature.

Thermop'sia. (Θέρμη, heat; πόδις, a drinking.) The practice of swallowing excessively hot drinks.

Thermo-regulator. See *Thermostat*.

Ther'moscope. (Θέρμη, heat; σκοπεῖν, to view.) An instrument for measuring minute changes of temperature, without registering the degree or the amount of heat.

Ther'mostat. (Θέρμη, heat; στατός, standing.) Any automatic device for regulating and maintaining a constant temperature.

Thermostere'sis. (Θέρμη, heat; στέρσις, deprivation.) Deprivation of heat.

Thermosystal'tic. (Θέρμη, heat; τασσεῖν, to regulate.) Muscular contraction due to heat.

Thermotax'ic. Same as *Thermotactic*. Of, or pertaining to, the regulation of the body heat.

Thermotax'is. (Θέρμη, heat; τάξις, arrangement.) The regulation and correlation of heat-production and heat-dissipation.

Thermote'riion. (Θερμότρος, heat.) An apparatus for keeping food warm, consisting of a glass case surrounded by a hot-water chamber, and an air-space to prevent the radiation of heat.

Thermother'apy. (Θέρμη, heat; θεραπεία, cure.) The treatment of disease by heat.

Thermotoxin. (Θέρμη, heat; τοξικόν, poison.) A poison produced by heat in the body.

Theromor'phia. (Θήρ, a beast; μορφή, form.) A monstrosity resembling a lower animal.

Theromor'phism. An apparent reversion to an animal of lower type in the human subject.

The'sis. (Θέσις, a proposition.) A dissertation. Usually the essay presented by a candidate for a degree.

The'socyte. (Θέσις, from τίθημι, to lay up; κύτος, cell.) One of certain reserve cells found in several Sponges.

Thew. A muscle, a sinew; generally used in the plural.

Thewed. Having thews, muscle, or strength.

Thewless. Weak, nerveless.

Thew'y. Sinewy, brawny, muscular.

Thialanin. (Not official.) The name given by Seibel to sulphuretted lanolin. Produced by allowing sulphur to act on lanolin; it contains 3 per cent. of sulphur. A yellowish-brown substance of the appearance of vaseline. It is devoid of irritating properties, and has been beneficially used by dermatologists in eczema.

Thialdine. (Not official.) Trithialdehyde in which an atom of sulphur replaces one of ammonia; in large aromatic crystals, with a paralysing effect. Carbothialdine, produced by the action of carbon bisulphide and ammonia on aldehyde, has an energetic tetanic effect on the system.

Thiazole. C_3H_3NS . A substance produced by exchanging hydrogen for the amidogroup in amidothiazole. It is a colourless liquid, boiling at $117^\circ C.$; it closely resembles pyridin.

Thick-wind. A colloquial term for impeded respiration in the horse.

Thielmann's drops. A mixture of Vinum opii, Vinum ipecacuanhæ, Tinctura valerianæ, flavoured with peppermint; 75 parts represent 1 part of opium.

Thiersch's method of skin grafting. The part to be treated is first made antiseptic, then washed with a salt solution (6 to 1000). The granulations are removed with a suitable curette; the bleeding surface is covered with protective and compressed. From a portion of the arm or leg, free from fat and previously sterilised, strips of epidermis are carefully removed with a sharp razor and applied to the prepared granulating surface. The surface is then covered carefully with lattice strips of protective to permit the necessary exudation, and dressed antiseptically.

T.'s operation for ecto'pia vesicæ. Two lateral flaps are used; one to cover the upper half, the other for the lower half.

T.'s operation for epispadias. An operation consisting of four stages. First, the formation of a meatus; secondly, the formation of the penile urethra; thirdly, the covering in of the small gap left in the roof of the urethra, between the glans and the body of the penis; and lastly, the closure of the funnel-shaped opening which leads to the bladder.

Thigh. (Icel. *thjo*, thigh.) The proximal part of the lower extremity determined by the parts round the femur.

T.-bone. See *Femur*.

T.-joint. The hip-joint.

Thighed. Having thighs.

Thin. Slender, meagre, lean.

T.-gut. A starveling.

Thi'o. Prefix denoting the presence of sulphur.

Thi'o-arsenic. (Θείον, sulphur; αρσενικόν, arsenic.) Containing sulphur and arsenic.

Thi'ocamph. (Not official.) A fluid disinfectant, used for fumigation, formed by the action of sulphurous acid on camphor, which on exposure evolves sulphur dioxide in steady fumes. It is stable and permanent when contained in closed vessels, but rapidly evolves SO_2 on exposure.

Thi'oforn. Dithiosalicylate of bismuth. (Not official.) A light yellowish powder, without odour or taste, insoluble in water or alcohol. It possesses the medicinal effects of iodoform, being at the same time antiseptic and esiccative. It has been given with good results in chronic intestinal catarrh in 3-grain doses. It has also been introduced into surgery with promising success.

Thi'ol. Ammonium sulphothiolate. (Not official.) This synthetical product of the hydrocarbons, sulphuretted to 10 per cent., replaces ichthyol in skin affections. It is a dark brown syrupy fluid, of a specific gravity of 1.081. Soluble in water, and non-irritating. An ointment is made with 10 to 50 per cent. with fossiline, vaseline, or lanolin. The dry powder is used as a dusting powder. It is also taken internally in pills from 2 to 24 grains a day.

Thi'olin, thiolin'ic acid. (Not official.) It is prepared from sulphuretted linseed oil and sulphuric acid. Dark green mass. Its uses are the same as those of thiol and ichthyol.

Thi'onin. Same as *Louth's violet*.

Thi'ophen. $C_4H_2I_2S$. (Not official.) A white oily fluid allied to pynol. Its di-iodide is in crystals, soluble in alcohol, but insoluble in water. It is a succedaneum of iodoform, drying up wounds and helping granulations.

Thiophe'nol. $C_6H_5S.H$. Phenyl mercaptan. Obtained by the action of pentasulphide of phosphorus on phenol.

Thi'ophtene. $C_8H_4S_2$. Obtained by heating pentasulphide of phosphorus with citric acid.

Thioresor'cin. $C_6H_4(OS)_2$. (Not official.) It is a popular substitution of resorcin, and has been used instead of iodoform. A yellowish inodorous powder, insoluble in water. Used as a dusting powder.

Thiosa'piol. (Not official.) A sulphuretted soap, containing 10 per cent. of sulphur, obtained by heating sulphur and oleic acid together, saponifying the resulting sulphur compound with an alkaline hydrate. A successful application to many skin diseases.

Thiosav'onol. (Not official.) A sulphur soap, soft and soluble in water, but dissolving balsam of sulphur in alcohol, and saponifying with potash. In liquid and paste forms. Used in skin diseases.

Thiosin'amine. Allylsulphocarbamide. (Not official.) This has been recommended by von Hebra in lupus and some allied diseases. It is formed by warming mustard oil, $C_3H_7N.CS$, with a strong solution of ammonia. On evaporating the solution thiosinamine crystallises

THIRD—THORACOCYMECHOS

in colourless prisms. It is readily soluble in water, alcohol, or ether, has a faint alliaceous odour, bitter taste, and melts at 74° C. It is used in the form of an alcoholic injection, containing 15 to 20 per cent., usually in the back between the shoulder-blades.

Third. Next after the second.

T. cor'puscles. Blood plates or plaques.

T. eye. The pineal body.

T. eye'lid. *Membrana nictitans*.

T. inten'tion. See *Inflammation*.

T. ton'sil. See *Luschka's tonsils*.

T. trochan'ter. The gluteal tuberosity.

T. ven'tricle. See *Brain*.

Thirst. The state manifested by a desire for drink. It is marked by dryness of the mouth and fauces, together with constriction of the mouth, pharynx, and œsophagus.

T. cure. Abstinence from drinking as a cure for pleural effusion.

T., exces'sive. *Polydipsia*.

T., mor'bid. Excessive desire for fluid.

Thirsty. Affected with thirst.

Thiuret. (Not official.) A light, odourless, crystalline powder, strongly antiseptic, almost insoluble in water, and moderately soluble in alcohol and ether. Sulphur separates out from thiuret in presence of alkalies, even at low temperatures. It owes its antiseptic properties to the separation of sulphur in a nascent state.

Thla'dias. (Θλάω, to crush.) A eunuch.

Thlap'sis depress'io. (Θλάω, to crush.) Depression; melancholy.

Thla'sias. Same as *Thladias*.

Thla'sis. (Θλάω, to crush.) Contusion.

T. strem'ma. Sprain.

Thlil'ias. Same as *Thladias*.

Thlipsenceph'alon. See *Thlipsencephalus*.

Thlipsenceph'alus. (Θλίψις, pressure; ἐγκέφαλος, brain.) A variety of single autositic monsters of the species *Pseudencephalus*, in which there is extensive exposure of the base of the skull from non-development of the occipital bone, and even of the upper vertebræ.

Thlip'sis. (Θλίψις, pressure.) Compression, especially of blood-vessels.

Thnescolog'ia. (Θνέσκο, to die; λόγος, discourse.) *Thanatology*.

Thoka-lo'si. An Australian and Fijian form of mutilation, consisting in the incision of the urethra at the membranous portion. The object is supposed to be a superstitious method of healing rheumatism and various fevers.

Tholus. (Θόλος, a vaulted chamber.) *Archicolum*.

T. dio'cleus. Bandage for the head.

Thomas's decalcifying solu'tion. Ninety-five per cent. of alcohol and pure nitric acid, in the proportion of 1 per cent. of the latter to 25 per cent. of the former. Fix in 95 per cent. alcohol, then place in the decalcifying fluid containing sulphur and arsenic, for several days.

T.'s splint. A splint made of strong metal, which is bent to fit the case. It extends from the thorax, where it is supported, as far as halfway down the leg.

Thomp'son's meth'od of treat'ing vesical tu'mours. The removal of vesical tumours by operation, either by the perineal or the supra-pubic method.

T.'s solu'tion of phos'phorus. See *Solution*.

Thom'sen's disease'. *Myotonia congenita.* (Dr. *Thomsen*, of Schleswig-Holstein, suffered from the disease.) An affection characterised by inability to relax certain muscles that have contracted after a period of rest.

Thomsonianism. (After Dr. Samuel Thomson.) A form of empiric medicine introduced by Samuel Thomson (1769—1843), of Massachusetts. Sweating, lobelia, and capsicum were the principal agencies relied on.

Tho'oid. (Θώς, a beast of prey of the wolf kind; εἶδος, form.) Lupine; resembling a wolf.

Thoracabdominal. Pertaining to, or common to, the thorax and abdomen.

Thoracaor'ta. *Thoracic aorta*.

Thoracente'sis. (L. *thorax*; Gr. κεντήσις [κεντεῖν, puncture].) The operation of puncturing the chest to withdraw fluid. *Paracentesis thoracis*.

Thoraces. Plural of *Thorax*.

Thoracic. Of, or pertaining to, the *Thorax*.

T. aor'ta. That part of the main arterial trunk in the thorax.

T. ar'tery, long. One of the branches of the axillary artery. Also, thoracic branch of acromio-thoracic.

T. ax'is. The common trunk of the superior thoracic and the acromio-thoracic branches of the axillary artery.

T. cage. The bony and ligamentous thorax.

T. cav'ity. Space bounded by the ribs, vertebral column, and the diaphragm.

T. duct. The main lymphatic trunk on the left side.

T. duct, in'jury of. This occurs as the result of stabs or gun-shot wounds.

T. gan'glia. See *Ganglion*.

T. groov'ing. Pigeon-chest, as in rickets.

T. in'dex. The ratio between the antero-posterior and transverse diameters of the thorax.

T., in'tra-. Appertaining to the contents of the thorax.

T. limbs. The upper extremities.

T. nerves. Internal and external anterior thoracic branches of the brachial plexus.

T. pari'etes. The chest walls.

T. ra'tio. That existing between the antero-posterior and lateral diameters of the thorax.

T. ver'tebræ. The twelve dorsal vertebræ.

Thorac'ica. *Pectoralis*.

Thorac'ico-acromia'lis. The acromio-thoracic artery, a branch of the axillary.

Thorac'ico-hu'meral. Pertaining to the chest and upper arm.

Thorac'ico-lum'bar. (Θώραξ, thorax; L. *lumbus*, the side.) Pertaining to the thoracic and lumbar regions.

Thoracispinal. (Θώραξ, thorax; L. *spinus*, spine.) Relating to the thoracic portion of the spinal column.

Thoraco-acro'mial. Of, or pertaining to, the chest and shoulder. Specifically noting a group of muscles.

Thoracochi'sis. Fissure or cleft of the chest.

Thoracocyllo'sis. (Θώραξ, thorax; κύλλωσις, curvation.) Deformity of the thorax.

Thoracocym'echos. (Θώραξ, thorax; κύμα, a wave; ἦχος, a sound.) A splashing sound in the chest audible on succussion.

THORACOCYRTOSIS—THROAT

Thoracocyrtosis. (Θώραξ, thorax; κύρτος, curved.) Abnormal curvature of the thorax.

Thoracodidymus. (Θώραξ, thorax; διδύμος, double.) A double monster, the two bodies joined at the thorax.

Thoracodyn'ia. (Θώραξ, thorax; δόδυνη, pain.) Pain in the chest.

Thoracogastrodidymus. (Θώραξ, thorax; γαστήρ, stomach; διδύμος, double.) *Teratol.* A double monster with united trunks.

Thoracom'eter. (Θώραξ, thorax; μέτρον, measure.) An instrument for measuring the range of respiratory movement.

Thoracom'yodyn'ia. (Θώραξ, thorax; μύς, muscle; δόδυνη, pain.) Pain in the muscles of the chest.

Thoracop'agus. (Θώραξ, thorax; πήγνυννι, to join.) A double monster with portions of the thorax or abdomen coalescent.

T., prosopo-. With the heads, breasts, and bellies coalescent; also called *Cephalo-thoracopagus*, or *Syncephalus*.

T. tribra'chius. With two of the upper limbs coalescent.

T. tripus. With two of the lower limbs coalescent.

Thoracopath'ia. (Θώραξ, thorax; πάθος, disease.) A disease of the thorax.

Thoracoplasty. (Θώραξ, thorax; πλάσσειν, to form.) Plastic operation upon the thorax. Estlander's operation. This is an operation for the speedy obliteration of an old empyemic cavity by resection of the ribs.

Thoracopneumoplasty. (Θώραξ, thorax; πνεύμων, lung; πλάσσειν, to form.) Plastic operation on the lung and chest.

Thoracos'copy. (Θώραξ, thorax; σκοπεῖν, to examine.) Examination of the chest for diagnostic purposes, especially by the stethoscope.

Thoracostenosis. (Θώραξ, thorax; stenosis.) Contraction or coarctation of the chest.

Thoracotheca. (Θώραξ, thorax; θήκη, a case; pl. *Thoracothecæ.*) *Biol.* That portion of the pupa-case which covers the thoracic region of the pupa.

Thoracot'omy. (Θώραξ, thorax; τεμνείν, to cut.) Incision of the thorax.

Thoradel'phus. (Θώραξ, thorax; ἀδελφός.) A monocephalic dual monstrosity with bodies united above the umbilicus, and with four lower and two upper extremities.

Tho'rax. (Θώραξ, a breastplate or thorax.) The part of the trunk enclosed by the ribs, vertebræ, and diaphragm, having a small aperture above at the base of the neck, containing the heart, lungs, and great vessels.

Thore. *Sperm.*

Thorn'cliffe disinfectant. A bye-product obtained in the course of coke formation; it possesses strong disinfectant properties without any irritating quality. It mixes well with water, and has an agreeable odour. Same as *Izal*.

Thorn-headed worms. See *Acanthocephala*.

Thorn'waldt's bursitis or disease, Thornwalditis. A form of naso-laryngeal stenosis associated with the abnormal formation of a cyst-like cavity in the midst of the pharyngeal gland, containing pus and muco-pus.

Thorough. Complete.

T. illumination, or Voltolli's method. The examination of the anterior nasal region by transmitted light.

T.-joint. Same as *Arthrodia* or *Diarthrosis*.

Thoroughwort. See *Eupatorium*.

Thor'ter-ill. Same as *Louping-ill*.

Thor'ulus stramineus. (A straw pad.) A splint of straw, corded and having a central stick for a splint. Used for fractures of the thigh and leg.

Tho'rus. Semen.

Thought-read'ing. *Muscle-reading.* Appreciation of involuntary muscular movements of the subject.

Thought-trans'ference. See *Telepathy*.

Thrae'nine. (Θράνη, a tear.) See *Tear*.

Thread. The spun and twisted fibres of cotton, silk, or linen.

T.s, mycelial. The hyphæ of the mycelium.

T.s, nu'clear. Chromatin fibrils of the cell-nucleus.

T. opera'tion. An operation for advancing the tendon of an ocular muscle whose effect it is desirable to increase, or for advancing Tenon's capsule under like circumstances.

T.-worm. Common term for any Nematode worm.

Thready. Like a pulse.

T. pulse. A small, scarcely perceptible pulse found in the terminal stage of fatal diseases.

Thremmatology. (Θρέμμα, a nursing; λόγος, science.) Experimental evolution.

Threpsology. (Θρέψις, nutrition; λόγος, science.) The science of trophic phenomena and conditions. The knowledge of the nature and processes of nutrition.

Threshold. The limit of perceptibility of a stimulus.

Thrida'cium. (Θρίδαξ, lettuce.) The expressed and inspissated juice of the lettuce. A variety of *Lactucarium*.

Thrill. *Frenitus.* A quiver of the vessels or heart in certain conditions of disease.

T., hydatid. The sensation felt on sharply pressing or percussing a hydatid cyst.

T., purr'ing. A more distinct sensation, the individual vibrations being more perceptible.

Thrix. Hair.

Throat. A popular term, very vague and general, including the front of the neck below the chin and above the collar-bone, the upper part of the pharynx, and the fauces.

T., al'mond of the. Adam's apple. The projection of the thyroid cartilage.

T. boll. (Ang.-Sax. *throtbolla* [*throt*, throat; *bolla*, a round object].) The protuberance of thyroid cartilage or whole fore-part of neck.

T., cler'gyman's sore. A chronic laryngeal affection.

T. cough. A cough due to irritation of the pharynx apart from diseases of the respiratory tract, as from an elongated uvula.

T. mir'ror. See *Laryngoscope*.

T.-pipe. The weasand. The trachea.

T., sore. A popular term for tonsillitis, pharyngitis, laryngitis.

THROATINESS—THYMOL

Throatiness. An unusual prominence of the thyroid cartilage.

Throatwort. *Trachelium* and *Siatris*. Also, species of *Campanula*, the *Digitalis purpurea*, and *Scrophularia nodosa*.

Throat'y. Having a peculiar guttural sound, as a throaty voice.

Throb. To beat or pulsate, as the heart with increased or quickened force or rapidity; palpitate. To quiver or vibrate.

Throb'bant. Throbbing.

Throb'bingly. In a throbbing manner.

Throb'less. Not beating or throbbing.

Throe. (Icel. *thra*, a hard struggle, a pang.) A violent pang, anguish, suffering, agony; hence especially applied to anguish of childbirth or parturition.

Thromballo'sis. (Θρόμβος, a clot; αλλύωμαι, to change.) The change resulting from coagulation of the blood in the veins.

Throm'bi. Plural of *Thrombus*.

T. lac'tei. The accumulation of milk in the mammary gland.

Thrombin. (Θρόμβος, thrombus.) Fibrin-ferment.

Thrombo-arteri'tis. (Θρόμβος, a clot of blood; *M. L. arteritis*.) Inflammation of an artery accompanied by thrombosis.

Thrombo-cysti'tis. (Θρόμβος, a clot; κύστις, a cyst.) The cyst occasionally surrounding a clot of blood, as in encephalic hæmorrhage.

Throm'bogen. (Θρόμβος, a clot; γεννᾶν, to produce.) Producing or giving rise to clots.

Thrombogen'ic. Producing thrombi.

T. en'zyme. An unorganised ferment having the power to cause clotting.

Throm'boid. (Θρόμβος, a clot; εἶδος, like.) Resembling, or having the nature of, a clot.

Thrombo-lymphangi'tis. Inflammation and obstruction of a lymphatic vessel.

Thrombo-phlebi'tis. Inflammation of a vein with thrombosis.

Thrombosed'. Affected with thrombosis.

Thrombo'sis. (Θρόμβος, a clot.) The formation of a thrombus.

T., car'diac. Thrombosis of the heart.

T., maran'tic. A blood-clot produced by slowing of the circulation.

T., puer'peral ve'nous. Puerperal thrombosis of the uterine veins.

Thrombot'ic. Pertaining to, or of the nature of, a clot.

Thrombus. A clot formed in the heart or a vessel, not necessarily causing obstruction, due to an impediment to the circulation, or to disease of the blood or the walls of the blood-vessels.

T. an'te-mor'tem. The white thrombi found in the heart and great vessels.

T., ball. A small or large, rounded, ante-mortem clot found in the heart, especially in the auricles.

T., cur'rant-jel'ly. A soft, reddish, post-mortem clot.

T., lat'eral. A clot attached to the vessel wall, and not completely obstructing the lumen.

T. neonato'rum. *Cephaloma*.

T., obstruct'ing. A clot causing complete obstruction of the lumen of a vessel.

T., pel'vic. *Pelvic hæmatocele*.

T., progres'sive. One growing into the lumen of a vessel.

T., strat'ified. One in which there are successive layers of clot, like an onion, found in aneurism.

T. vul'væ and vagi'næ. *Pudendal hæmatocele*.

T., white. See *Ante-mortem clot*.

Throt'tle. The throat. To choke.

Throw. Agony; labour pains.

Thrush. *Parasitic stomatitis*. Also called aphthæ, sprew, sprue. Caused by *Oidium albicans* or *Saccharomyces albicans*, and characterised by the presence of diffuse white patches. It occurs especially in weakly children, but it may affect adults having a wasting disease.

Thrust-culture. A culture of bacteria in a solid culture medium, inoculated by thrusting an infected needle into the sterilised gelatine. Also, *Stab-culture*, or *Stick-culture*.

Thryps'is. (Θρύπτω, to break in pieces.) Comminution.

Thryp'ticus. *Lithonhryptic*.

Thuja. *Arbor vitæ*. Canada and United States. Nat. Order *Conifera*. (Not official.) The leaves and small branches are used. It yields a colourless, volatile oil; also thujin, $C_{20}H_{22}O_{12}$, crystallising in yellow tables, soluble in water and alcohol; of a bitter taste. Action, astringent, antiperiodic, irritant. Uses, locally to fungous growths, warts, and cancer; internally for pulmonary catarrh, dropsy, malarial affections, and gonorrhœa. Dose: fluid extract, $\frac{1}{2}$ to 1 drachm; of the tincture, $\frac{1}{2}$ to 1 drachm.

Thumb. (*L. tumere*, swell; or Gr. τῦλος, swelling.) The pollex. The radial digit. Palpitation in domestic animals.

T.-mark. Impression left by the thumb.

Thunbergia. (After K. P. Thunberg, 1743—1828, a Swedish botanist.) *Thunbergia fragrans*, a native plant of East India, is cultivated in the West Indies, and used as an aromatic tonic.

Thunder-struck disease'. Same as *Apoplexy*.

Thy'ma. *Ecthyma*. *Thymion*.

Thymac'etin. (Not official.) An analgesic introduced by Hoffmann, of Leipzig. It bears the same relation to thymol that phenacetin does to phenol, and is a white crystalline powder, sparingly soluble in water. Dose, 2 to 12 grains.

Thymelco'sis. (Θύμος, thymus; ἐλκῶσις, ulceration.) Ulceration of the thymus gland.

Thymiastotech'nia. *Thymiatechny*.

Thymi'asis. Fumigation.

Thym'latechny. (Θυμίαμα, a perfume; τέχνη, art.) The art of employing perfumes in medicine.

Thym'ic. (Θύμος, thymus.) Pertaining to the *Thymus gland*.

T. asth'ma. *Laryngismus stridulus*, or "crowing breath." It has been attributed to enlargement of the thymus or to reflex spasm.

Thymi'on. A small wart on the nose resembling a bud of thyme.

Thymi'tés. Wine impregnated with thyme.

Thymi'tis. (Θύμος, thymus; ιτις, inflammation.) Inflammation of the thymus gland, a rare condition.

Thymol. $C_{10}H_{13}.HO$. (Official.) A stearoptene obtained from the volatile oils of *Thymus vulgaris*, *Monarda punctata*, and *Carum ajowan*, by saponifying with caustic soda and

THYMOLIS—THYRO-ÆSOPHAGUS

heating the separated soap with hydrochloric acid. Large oblique prismatic crystals, having the odour of thyme and a pungent aromatic flavour. Action, antiseptic. Uses, intestinal affections, catarrhs, typhoid fever, to correct the fœtor of foul ulcers. Dose of the fluid extract, $\frac{1}{4}$ to 1 drachm; of the oil, 1 to 10 drops.

T. antiseptic dressings. Five per cent. both gauze and wool.

Thymolis liquor. (Not official.) One in 100 rectified spirit.

T. vapor. (Not official.) Thymol 6 grains, rectified spirit 60 minims, light carbonate of magnesia 3 grains, water to an ounce. A teaspoonful in a pint of water for each inhalation.

Thymopath'ia. (Θυμός, mind; πάθος, illness.) Mental disorder.

Thymoxalme. (Θύμος, thyme; ὄξυς, acid; ἅλς, salt.) Compound of thyme, vinegar, and salt.

Thymus. (Θύμος, a glandular substance, a warty excrescence.) A gland found in front of trachea. It reaches its greatest size by the second year. It is vestigial in the adult.

Thyremphrax'is. *Bronchocele.*

Thyreo-adenitis. (Θυρεός, shield; ἄδην, gland; ιτις, inflammation.) Inflammation of the thyroid gland.

Thyreo-antitox'in. (Not official.) Crystalline, nitrogenous constituent of the thyroid gland, freed from iodine. In goitre and diseases of the thyroid. Pertussin is a saccharated extract of the thyroid gland; in whooping-cough.

Thyreo-arytæ'noid. Of, or pertaining to, the *Arytænoid* or *Thyroid cartilages*.

T. ligaments. The upper are the false cords, the lower the true vocal cords.

Thyreo-arytænoid'eus. A muscle passing from the arytænoid to the thyroid cartilages.

T. az'ygus. Accessory muscle arising from the great cornu of the hyoid bone to the upper edge of the thyroid cartilage.

Thyreoce'le. (Θυρεός, shield; κηλή, a tumour.) A tumour affecting the thyroid gland.

Thyreo-corniculatus. The upper portion of the inferior thyreo-arytænoid muscle, running from the upper anterior portion of the thyroid to the arytænoid cartilage.

Thyreop'eus. Same as *Thyreoce'le*.

Thyreot'omy. Division of the thyroid cartilage for exploratory purposes.

Thyro-cricot'omy. Tracheotomy performed through the crico-thyroid membrane alone.

Thyro-cuneifor'mis. Portion of the inferior thyreo-arytænoid cartilage inserted on the cuneiform cartilages.

Thyro-epiglott'ic. Pertaining to the epiglottis and thyroid cartilages.

T. ligament. Ligament uniting the cartilages.

Thyro-epiglottide'an. Same as *Thyro-epiglottic*.

Thyro-epiglottide'us. A few scattered muscular fibres connecting *inter alia* the epiglottis and thyroid cartilages.

Thyroglos'sus lateralis. Muscles arising occasionally between the thyro-hyoid and the hyoglossus.

Thyroglottide'us. Same as *Thyro-epiglottideus*.

Thyro-hy'al. The cartilage developed in the third visceral arch, represented in man by the great cornu of the hyoid bone.

Thyro-hy'oid. Of, or pertaining to, the thyroid cartilage and hyoid bone.

T. ligament. A rounded elastic ligament connecting the tip of the superior cornu of the thyroid cartilage and the tip of the great cornu of the hyoid bone.

T. mem'brane. Membrane connecting the cartilage and the bone.

T. mus'cle. Muscle connecting the oblique ridge of thyroid cartilage and the great cornu of the hyoid bone.

Thyro-hyoid'eus. The *Thyro hyoid muscle*.

Thy'roid. (Θυρεοειδης, shield-shaped.) The largest of the cartilages of the larynx.

T. arteries. Superior and inferior, distributed to the thyroid body.

T. ax'is. A trunk coming from the subclavian artery, giving off the inferior thyroid, the supra-scapular, and the transverse cervical.

T. bod'y. See *T. gland*.

T. car'tilage. The largest of the laryngeal cartilages, so called from its resemblance to a shield.

T. disloca'tion. Dislocation of the head of the femur into the thyroid foramen.

T. extract. A glycerine extract of the thyroid gland of the sheep, very successfully used in the treatment of myxœdema. Also used for cretinism.

T. fora'men. See *Obturator foramen*.

T. gland. A ductless gland, consisting of two lobes and an isthmus, found on the front and sides of the trachea and thyroid cartilage. It is the seat of goitre.

T. mus'cle. The *Palato-pharyngeus*.

T. tab'loids. Tabloids containing extract of thyroid gland.

T. ther'apy. The treatment of disease by the administration of thyroid extract.

Thyroid'al. That which concerns the thyroid.

Thyroid'eal. Same as *Thyroidal*.

Thyroid'ean. Same as *Thyroidal*.

Thyroidectomy. (*Thyroid*; Gr. ἐκτομή, a cutting out.) Excision of whole or part of the thyroid gland or cartilage.

Thyroid'eus access'o'rius. A muscular slip sometimes found running from the superior cornu of the thyroid cartilage to the greater cornu of the hyoid bone.

Thyroid'in. The extract of thyroid gland.

Thyroiditis. (Θυρεός, a shield; ιτις, inflammation.) Inflammation of the thyroid gland.

Thyroidot'omy. (Θυρεός, a shield; τομή, incision.) Incision of the thyroid gland.

Thyroiditis. Same as *Thyroiditis*.

Thyro-mediastinalis. Pericardico-thyroideus. Muscular fibres running from the external surface of the pericardium to the thyroid gland.

Thyro-membrano'sus. A portion of the thyreo-arytænoides inserted within the plica thyreo-arytænoides inferior.

T. mi'nor. Same as *T. az'ygus*.

T. supe'rior. Same as *T. az'ygus*.

Thyro-æsoph'agus. (Θυρεός, shield; ὠσοφάγος, œsophagus.) Muscular fibres between the œsophagus and the thyroid cartilage.

Thyro-pal'atine. Pertaining to the thyroid gland and the palate.

Thyrophrax'ia. Synonym of *Goitre*.

Thyrophyma. (Θυρεός, a shield; φώμα, a tumour.) Enlargement of the thyroid.

Thyro-protein. (Θυρεός, a shield; πρῶτος, first.) An albumen isolated by Bubnoff from the thyroid gland.

Thyr'sus. (Θύσσος, a stalk, stem.) The penis.

Tib'ia. (L. *tibia*, shin-bone.) The ventral and larger of the bones of the leg.

Tib'iad. Toward the tibial aspect.

Tib'ial. Of, or pertaining to, the tibia, or a structure connected with the tibia,—tibial crest, muscles, arteries.

Tibia'le. The morphological name for the astragalus.

Tibia'lis. *Tibialis anticus* and *posticus*, muscles of the leg attached to the tibia.

Tib'ian. Belonging to the tibia itself.

Tib'io-calca'nean. Pertaining to the tibia and the calcaneus.

Tib'io-fem'oral. Common to the tibia and femur.

T. amputa'tion. Removal of the leg at the knee-joint.

T. index. Ratios of lengths of the two bones.

Tib'io-fib'ular. Of, or pertaining to, the tibia and fibula.

Tib'io-perone'al. The same as *Tibio-fibular*.

Tib'io-tar'sal. Of, or pertaining to, the tibia and the tarsus, as *Tibio-tarsal articulation* and *ligaments*.

T. amputa'tion. Removal of the foot at the ankle-joint.

Tic. A local and habitual convulsive movement of certain muscles.

T. douloureux. Neuralgia of one or more branches of the fifth nerve; also applied to twitching of the muscles supplied by the seventh nerve. This affection has also been called *Antalgia dolorosa*, *Dolor crucians faciei*, *Neuralgia faciei*, *Prosopalgia*, *Trismus dolorificus*, and *Trismus maxillaris*.

T. non-douloureux. Synonym of *Myoclonus*.

T. ro'tatoire or gi'ratoire. *Spasmodic torticollis*. A spasm of certain muscles, by which the neck is violently jerked from one side to the other.

Tick. One of the many external parasites.

Tickling. Same as *Titillation*. Causing spasmodic muscular contraction, with a sense of peculiar distress, by a slight irritation of the peripheral nerve-fibres of the skin.

Tick'lishness. Peculiarly sensitive to tickling.

Tictolo'gia. (Τίκτω, to bring forth; λόγος, doctrine.) Doctrine of parturition.

Ticu'na poi'son. A powerfully convulsant arrow poison found in South America, of unknown derivation. It probably contains picrotoxin.

Tidal air. See *Respiration*.

Tide. A definite period of time.

T., ac'id. A transient condition of increased acidity of the urine, sometimes after fasting.

T., al'kaline. The transient condition of

alkalinity of the urine occurring during digestion, when by reason of the determination of acid to the stomach there is a diminution of the acid salts secreted by the kidney.

Tidy's meth'od. The method of estimating the quantity of organic matter present in water by means of the following solutions:— 1. Dilute H_2SO_4 (1 part of pure H_2SO_4 and 4 of distilled water). 2. Solution of potassium permanganate 0.286 gramme per litre; 10 c.c. = .714 milligramme of available oxygen. 3. Solution of iodide of potassium, free from iodate, 1 part in 10 of water. 4. Sodium thiosulphate (hyposulphite), 0.77 gramme in 1 litre of distilled water. 5. Carefully prepared starch solution, about $1\frac{1}{2}$ gramme in 100 c.c. of water.

Tie'go. *Vertigo*; dizziness.

Tig'lii o'leum. See *Croton oil*.

Tigretier. Local name for a form of hysterical mania in Abyssinia.

Til'ia ulmifolia. Lime. Europe. Nat. Order *Tiliaceæ*. (Not official.) The yellowish flowers, in cymes, partially united to a long bract, contain volatile oil and mucilage, with a pleasant odour; they are diaphoretic, and used extensively on the Continent in tisane.

Tilland'sia. (After *Tillands*, a Swedish botanist.) A Genus of bromeliaceous plants, of some 220 species, mostly epiphytic.

T. usneo'ides. Growing in the Southern United States and Central America, called Spanish moss; is astringent, and is used as a cure for piles. (Unofficial.)

Til'mus. (Τίλμος, a pulling.) Carphologia, or floccillation; the picking of the bed-clothes by a delirious patient.

Tim'bre. The peculiar quality of a tone, other than pitch and intensity, that makes it distinctive. It depends on the overtones of the vibrating body.

Time. The duration of an event or phenomenon.

T., iner'tia. In the stimulation of a muscle or sense-organ, the latent time required to overcome the inertia of the muscle or organ after the reception of the stimulus through the nerve.

T., reac'tion. That required for the conduction of a sensory impulse to the centre combined with that of the duration of the perception of the direction of attention (apperception) of the voluntary impulse, and of the return of a motor impulse to the muscles, with their consequent activity. The reaction time varies according to the part and sense, &c., stimulated.

T., recogni'tion. The time required for the recognition of the kind of stimulus after its application.

T. sense. The perception of the lapse of time.

Tim'idus. *Rectus inferior oculi*.

Tin. A solid metal, of a characteristic odour when rubbed, insipid, whitish; sp. gr. 7.291; giving a peculiar tinkling sound when struck. It has been used in medicine as a mechanical anthelmintic in the form of Pulvis stanni, or granular tin.

T., but'ter of. *Muriate of tin*.

T., chlo'ride or chlo'ruret of. *Muriate of tin*.

T., deutohydrochlo'rate of. *Muriate of tin*.

T.-fo'li. Used for plugging carious teeth, &c.

T., glass. Bismuth.

T., gran'ular. See *Tin*.
T., mu'riate of. Fuming liquor of Libavii salt of tin, butter, deutohydrochlorate, or superoxygenated muriate of tin, formed by action of muriatic acid on tin. Violent cathartic in dose of gr. ij or iij. Also used for injection in gonorrhœal and purulent discharges from the vagina.
T., mu'riate of superoxy'genated. *Muriate of tin*.
T. o'leate. See *Oleate*.
T., salt of. *Muriate of tin*.
T., sul'phuret of. See *Aurum musivum*.
Tinag'mus. (*Τινάγμος*; from *τινάσσειν*, to shake.) A concussion.
Tinas'mus. *Tenesmus*.
Tin'ca. A tench; a small fish.
Tin'cæ, os. The tench's mouth. An old name for the *Os uteri*.
Tinctura Amar'ca. *Bitter tincture*.
T. antac'rida. See *Guaiacum mixture*.
Tinctura'tion. The preparation of a tincture.
Tinct'ure. (L. *tinctura*, a dyeing.) A fluid containing the essential parts of a substance or substances in solution in alcohol, ether, water, &c., prepared by maceration or digestion.
T., ammo'niated. A solution of a medicinal substance in spirits of ammonia.
T., Bes'tucheff's ner'vous. Ethereal solution of ferric chloride.
T., bit'ter. Gentian, centaury, orange peel, orange berries, zedoary root, extracted in alcohol.
T., eth'e'ral. A solution of a drug in ethereal spirit.
T., Flem'ing's. Strong *Tinctura aconiti*.
T., Green'ough's. Tooth wash containing alum, bitter almond, logwood, orris root, horseradish, oxalate of potash, cassia berries, and cochineal extracted in alcohol.
T. press. A press for extracting by expression the active principles of plants.
T., War'burg's. An alcoholic preparation formed of quinine, aloes, rhubarb, gentian, myrrh, camphor, and other substances.
Tin'ea. (L. *tinea*, a crawling worm, book-worm.) *Ringworm*.
T. abest'ina. Synonym of *Seborrhœa*.
T. amianta'cea. Synonym of *Seborrhœa*.
T. axilla'ris. Ringworm of the axilla.
T. bar'bæ. Same as *Sycosis*.
T. cap'itis. *Porrigo*.
T. cilia'ris. See *T. tarsi*.
T. circina'ta. Ringworm of parts of the body free from hair, caused by *Trichophyton tonsurans*.
T. circina'ta trop'ica. Burmese, Chinese, Indian, or Oriental ringworm. A severe variety of ringworm.
T. cor'poris. See *T. circinata*.
T. cru'ris. Ringworm of the inner surfaces of the thighs.
T. decal'vans. *Alopecia areata*.
T. fa'ciei. *Porrigo larvalis*.
T. favo'sa. Same as *Favus*.
T. fico'sa. *Porrigo scutulata*.
T. furfura'cea. *Porrigo furfurans*; *Pityriasis*; *Seborrhœa*.
T. granula'ta. *Porrigo scutulata*; *P. lupinosa*.
T. imbrica'ta. Tokelau ringworm, Bow-

ditch Island ringworm, *Le pita*, *Guna*, *Lascadoë*, *Herpes desquamans*. A tropical vegetable parasitic contagious disease, characterised by the formation of patches of concentric scaly rings. It attacks any part of the body except the head. Intense itching is the only other symptom.
T. ke'ron. A form of *T. tonsurans* with excessive inflammation and suppuration.
T. lac'tea. *Porrigo larvalis*.
T. muc'o'sa. *Porrigo lupinosa*.
T. nodo'sa. *Paxton's disease*. A nodose condition of the hair of the moustache, accompanied by thickening, roughness, and some fragility.
T. supino'sa. Same as *Favus*.
T. syco'sis. *Mentagra parasitica*; *Sycosis parasitica*; barber's itch; ringworm of the beard. A common affection the result of the irritating effect of trichophyton upon the follicles of the hairy portions of the face. It consists of circular scaly patches or rings in the beard forming gyrate areas. If allowed to go on, pustular folliculitis is produced.
T. tar'si. *Eczema palpebrarum*. An eczematous condition of the edges of the eyelids.
T. ton'dens. Same as *T. tonsurans*.
T. tonsu'rans. Ringworm of the scalp, which is chronic and contagious, usually affecting children. It consists in the formation of patches surrounded by a raised red margin, in which the hairs are scanty, swollen at the root, and lustreless.
T. trichophyti'na. Same as *Ringworm*.
T. un'guis. A condition of the nail in which it appears to be eroded.
T. ve'ra. Synonym of *Favus*.
T. versic'olor. *Pityriasis versicolor*. A common skin disease due to a vegetable parasite, *Microsporon furfur*. It consists of circular discrete spots, which coalesce and cover extensive irregular areas, which are sharply defined and finely scaly. It usually affects the chest, abdomen, and interscapular regions.
Ting'ible. (L. *tingere*, to tinge.) That which may be tinged; stainable.
Tingle. A pricking or stinging sensation; the feeling of a slight and sudden thrill, as of pain.
Ting'ling. "Pins and needles." The popular name for those abnormal sensations of tingling experienced by patients affected with various diseased conditions of the nervous system, or after an injury to a nerve.
Tink'ler's-weed. See *Triosteum*.
Tink'ling. A sharp sound like that caused by striking one piece of metal against another.
T., metal'lic. An auscultatory chinking sound, heard mainly in pneumothorax.
Tin'na. See *Chloasma*.
Tinni'tus. (L. *tinnire*, to tinkle.) Any subjective tinkling or ringing sound.
T. au'rium. A ringing, buzzing, roaring, or hissing sound heard after the administration of certain drugs, as a result of disease or without any apparent cause.
T., tele'phone. A professional auditory neurosis, supposed to be caused by the continual use of the telephone.
Tintinnab'ulum. (L. *tintinno*, to ring.) A bell. The uvula.
Tip. The point or summit of anything.
T.-foot. *Talipes equinus*. A variety of club-foot.

TIRE—TITUBATION

Tire. A sensation of weariness and exhaustion.

T.-balle. An instrument for the extraction of bullets.

T.-fond. An instrument for penetrating a cavity or tissue, transfixing and withdrawing foreign bodies, usually made in the form of a gimlet.

Tires. Milk-sickness.

Tiry. In a tired condition.

Tisane'. A decoction with medicinal properties.

T. de champagne'. A light wine.

T. de Feltz. Decoction of sarsaparilla, isinglass, and sulphuret of antimony. Official in French Codex.

Tissue. Any web-like structure. "In the widest sense of the term, every aggregate of cells which obeys a common law of growth (usually, however, not uniform in its action) may be termed a tissue."

T., accidental or adventitious. Consists of every tissue—foreign to the primitive organisation of the economy, but yet organised and living—which may be developed in the interior or at the surface of organs. They have been divided into—(1) Those resembling others in the animal economy or analogous accidental tissues. (2) Those having nothing analogous in the body, and which are always the result of a morbid process.

T., adenoid or lymphoid. A modified form of retiform connective tissues in which the reticular meshes contain lymphoid cells. This tissue is found all over the body, but mainly in the spleen and the lymphatic glands.

T., adipose'. A very widely distributed tissue, consisting of nucleated vesicles of fat bound together by blood- and lymph-vessels and connective tissue.

T.s, animal. A general name for the tissues comprising the elements of the body. There are four classes—epithelial, connective, muscular, and nervous tissues.

T., areolar. A form of fibrous connective tissue consisting of delicate, soft, elastic fibres interlacing in every direction.

T., base'ment. The tissue of the base-membrane.

T., bony. See *Bone*.

T., can'cellous. The spongy tissue of the bones.

T., cartilag'inous. See *Cartilage*.

T., conjunc'tive. Cellular tissue.

T., connective. A general term for those tissues supporting and connecting the tissues of the body. They are divided into three groups—fibrous connective tissue, cartilage, and bone.

T., cor'neous. Tissue found in the nails, hairs, and epidermis.

T., den'tal. See *Dentine*.

T., embryon'ic connective. Connective tissue of which the constituent structures are in an early stage of development. The supporting tissue of the umbilical cord is a good example.

T., endothe'llial. The endothelia of the body.

T., epithe'llial. The epithelia of the body.

T., erec'tile. Tissue of a spongy nature, which is expanded when turgid with blood or other fluid.

T., fi'bro-cellular. Tissue in the form of long fibres.

T., fi'brous connective. There are three varieties—white fibrous, yellow elastic, and areolar; the variety depending on the nature of the fibres. The fibres are embedded in a matrix.

T. forma'tion. *Histogeny*.

T., ger'minal. The tissue that gives rise to the ova and spermatozoa.

T., granula'tion. See *Granulation*.

T., inflam'matory. Tissue formed as a consequence of inflammation.

T., inodular. Accidental fibrous tissue developed in wounds, which is the principal agent in cicatrisation.

T., intersti'tial connective. See *T., areolar*.

T.-making. *Histogenetic*.

T., mu'coid. Mucous or gelatinous tissue present in the umbilical cord.

T., mus'cular. See *Muscle*.

T., ner'vous. See *Nerve*.

T., paren'chymal. The areolar tissue that accompanies vessels into the substance of an organ.

T., scl'e'rous. A term used collectively for the cartilaginous, osseous, and fibrous tissues.

T., sim'ple. A tissue which possesses but a few structural elements, as blood, lymph, epithelium, connective tissue of cartilage and bone, nervous and muscular tissues.

T., tu'bular or vas'cular. Tissue in the form of long cylindrical tubes.

T., white fi'brous. A form of fibrous connective tissue consisting of fine, inelastic, transparent, homogeneous filaments. They form the greater part of tendons, fasciæ, &c.

T., yellow elas'tic. A form of fibrous connective tissue, the fibres being coarse, of a yellowish colour, with their ends showing a tendency to curl up. Found in certain ligaments, such as the *Ligamenta subflava*, &c.

Tis'sue-paper test. On a background of one of the colours confounded by colour-blind people a border of neutral tint is placed, and tissue-paper is laid over both. A man who has normal colour vision sees the neutral border coloured with the complementary colour of the background, while a person blind to the colour of the background does not see the neutral border thus tinted.

Tit. The nipple.

Tita'nium. (Τίταν, Titan.) A metal having a certain relationship to iron, chromium, and tin. It is extremely infusible, and will scratch glass. Symbol Ti; at. wt. 48.1. Its medicinal properties are not well understood.

Tith'ine. (Τίθη, nurse.) A nurse.

Titillamen'tum. *Gargarism*.

Titilla'tion. (L. *titillatio*; from *titillare*, to tickle.) The act of tickling. A momentary or transient excitation.

Titra'tion. (F. *titre*, standard of fineness.) Volumetric analyses by the aid of standard solutions.

T. lin'guæ. Stuttering, stammering.

Tit'the, Titthi'on, Tit'this, Tit'thos, Titty. *Mamma*; nipple.

Tituban'tia. Staggering.

Titubating. (L. *titubare*, to stagger.) A term applied to the gentle swaying ataxia of cerebellar disease and posterior spinal sclerosis.

Tituba'tion. (L. *titubare*, to stagger.)

The staggering gait and inco-ordination of motion accompanying certain diseases of the spine and cerebellum. Also, the staggering gait of the drunkard. Restlessness or inquietude.

Tizarin. An intoxicating drink made by the Apaches and other Indians from some of the species of *Yucca*.

Tmetica. Medicines supposed to have the property of "cutting" thickened humours.

To-and-fro sound. See *Auscultation*.

Toast. Bread browned by heat.

T. water. Water in which toasted bread has been steeped, &c.

Tobacco. The dried leaves of *Nicotiana tabacum*, a plant of the Order *Solanaceæ*. It contains an acrid, pungent liquid alkaloid, nicotine, $C_{10}H_{14}N_2$. The smoke is said to contain collidine, pyridine, picoline, and other bases with various acids besides nicotine. Tobacco is a nauseant, emetic, cardiac depressant, and antispasmodic. Used as an anodyne and relaxing agent in intestinal obstruction, mainly by enemata; in orchitis as a poultice; to destroy intestinal worms and external parasites; by inhalation in spasmodic laryngitis and asthma; and internally in tetanus and strychnine poisoning. Smoked in excess it produces a form of poisoning (*Tabacosis*) marked by amblyopia, due to retro-bulbar neuritis (*T. amblyopia*) by irritable, irregular action of the heart (*T. heart*), and by pharyngeal inflammation.

T. amblyopia. Impairment of vision, especially for red and green, which may be slight or amount to absolute blindness over the parts of the field corresponding to the maculopapillary region of the retina. The peripheral regions do not become affected. The patient thinks he sees better in the dark than in full daylight, and at times this is so.

T-bag suture. Stoltz's operation for cystocele; it is also called purse-string operation. It consists in denuding a circular patch on the anterior vaginal wall, running a suture round the margin, and tying it.

T. dyspepsia. Dyspepsia induced by excessive smoking or chewing.

T. habit. A term used to indicate the employment of tobacco in any form; it is also applied to excessive use.

T. heart. A functional disorder of the heart, characterised by a rapid and often irregular pulse.

T. poisoning. Same as *Nicotism*.

To bin's tubes. A method of the ventilation of rooms by the introduction of air through tubes placed in the walls.

Tobold's apparatus. An illuminating apparatus, with a moveable reflector, for use with the laryngoscope.

Tocarexis. (*Tókos*, labour; *ἀρηξίς*, help.) Assistance rendered to a woman in childbirth.

Tocodynamometer. (*Tókos*, labour; *dύναμις*, power; *μέτρον*, measure.) An instrument for measuring the force of the expulsive efforts in childbirth.

Tocograph. (*Tókos*, birth; *γράφειν*, to write.) A recording *Tocodynamometer*.

Tocology. (*Tókos*, birth; *λόγος* [*ἀεγείν*, to speak].) That part of medicine dealing with parturition. *Obstetrics*.

Tocometer. The same as *Tocodynamometer*.

Toddalia. A genus of Rutaceous plants.

T. aculeata. Southern Asia. A useful aromatic and tonic.

Toe. (Ang.-Sax. *ta*.) A digit of the foot. First digit is called the great toe.

T.-drop. Inability to lift the toes, or the anterior part of the foot, due to a local paralysis, usually from peripheral neuritis.

T., great. The innermost and largest toe.

T. reflex. Strong flexion of the great toe, producing involuntary flexion of the foot, then flexion of the leg, and lastly flexion of the thigh or pelvis.

Tofus. *Tophus*.

Toilet. The cleansing, washing, and dressing that follows an operation, especially of the abdominal cavity.

To'kas. *Puerpera*.

To'kelau. A cutaneous disease peculiar to Oceania, the Fiji Islands, and the Society Islands. There is scabbiness of the skin, due to a parasitic fungus.

T. ring worm. See *Tinea imbricata*.

To'ken, plague. Plague mark, plague spot. Mark by which one struck with the plague was known. Perhaps the early stage of carbuncle in unfavourable cases.

Tokodynamometer. See *Tocodynamometer*.

To'kograph. See *Tocograph*.

Tokology. See *Tocology*.

Tolerance. (*L. tolerare*, to bear.) The capacity of a patient to withstand certain drugs or certain doses of drugs without injurious consequences, particularly when acquired by a continued use of the drug.

Tolerant. Withstanding the use of a drug without injury.

Toles, Tolium, Tollés. The *Tonsil*.

Tolu'. A balsam obtained through the bark of *Myroxylon toluifera*.

Toluene', Toluol. $C_6H_5CH_3$. (Not official.) Colourless, oily, highly refractive liquid, employed as a parasiticide.

Tolu'idin. $C_7H_7.NH_2$. A methylated homologue of aniline prepared by heating dimethylaniline to 300° C.

Toluta'num. See *Balsamum*.

Tolpyrin. (Not official.) *Tolydimethylpyrazolon*. $C_{12}H_{14}N_2O$. The homologue of antipyrin. It is given in the same doses as antipyrin.

Tol'ysal. (Not official.) $C_{12}H_{14}N_2O$. $C_7H_6O_3$, which has been patented, is the analogue of salipyrin. It is given in cachets of 7 to 15 grains, and for articular rheumatism in doses of 30 grains.

Tom toe. The *Pollex*.

Tomaci'num, Toma'clum, or Tomaculum. (*Tómh*, cut.) A kind of sausage made of mixed meat and spices.

Tomato. The ripe fruit of the common tomato, *Lycopersicum esculentum*. It is claimed to be useful in cancer of the mouth. There is a wide-spread popular idea that it is concerned in the causation of cancer.

Time. A common suffix, as in *Lithotome*.

Tomel'on. Knife.

Tomen'tum. The flocculent inner surface of the pia mater, or the *Tomentum cerebri*.

Tomes, fibres of. Elongated branched processes of the odontoblasts of the pulp filling the dentinal tubules of the teeth.

Tome'us. Knife.

To'mis. Surgeon's forceps. Scissors.

Tomoman'ia. (Τομός, cutting; μανία, madness.) An excessive desire or habit on the part of a surgeon to use the knife or perform unnecessary surgical operations.

Tomoto'cia. (Τομή, cut; τόκος, parturition.) Cæsarean section.

Tom'y. Suffix denoting incision, cut, or operation.

Tone. A distinct sound. The normal activity, strength, and excitability of the various organs and functions as observed in a state of health.

Tong'a. Fiji. (Not official.) The root of *Raphidophora vittensis* and the bark of *Premna taitensis*. Tonga is a fluid extract of the root. Action, antineuralgic. Uses, neuralgia. Dose of the fluid extract, 30 to 60 drops.

Tong'aline. (Not official.) An American proprietary drug made by the Mellier Drug Company, St. Louis, U.S.A., consisting of the Hawaiian drug tonga, salicylic acid, pilocarpine salicylate, and colchicine. It is a liquid, and used as an antirheumatic in doses of 1 to 2 drachms in water.

Tongue. (Ang.-Sax. *tunge*.) The principal organ for the sense of taste. It is a fleshy mass capable of moving the food in the mouth, aiding in mastication, sucking, and articulation.

T., adhe'rent. See *Tongue-tie*. One which is abnormally attached to the floor of the mouth by the frænum.

T., base of. That portion lying between the circumvallate papillæ and the frænum.

T., bi'fid. A tongue in which the anterior portion is cleft in the median line.

T., black. Ciaglinski and Hewelke found a fungus allied to the *Mucor rhizopodinus* in these cases. Mason inclines to the view that it is not parasitic.

T.-bone. See *Hyoid bone*.

T., cleft. Same as *T., bifid*.

T., coat'ed. A tongue with a white or yellowish and dirty coating. The condition seems to be related to gastro-intestinal disorders. The coating consists of desquamating epithelium, fungi, bacteria, and débris.

T. compres'sor. Clamp for holding down the tongue in operations.

T. depres'sor. A spatula for depressing the tongue in operations on the mouth.

T., dot'ted. See *T., stippled*.

T., dry. With a dry surface. Condition seen in the low fevers.

T., earth'y. A tongue on which dry, rough layers of calcareous matter are deposited.

T., fern-leaf pat'tern. A name given by Hutchinson to a tongue presenting a well-marked central furrow, with lateral branches due to hypertrophy of the papillæ.

T., film'y. A tongue on which there are whitish symmetrical patches on both sides, but usually larger on one side than the other. These are slightly firmer than the surrounding tissue, and consist of rounded filiform papillæ, which are glued together by a filmy white material.

T., furred. A coated tongue in which the papillæ are prominent.

T., geograph'ic. A tongue with localized thickening of the epithelium of the lingual mucous membrane. This is seen in leucoplakia, and gives the surface of the tongue the appearance of a geographic chart.

T., hair'y. A tongue with hyperplasia of its papillæ, giving rise to hair-like projections from their tips.

T.-hold'er. A dental instrument for restraining the movements of the tongue.

T., par'rot. A shrivelled dry tongue that cannot be protruded. Seen especially in typhus fever.

T., plas'tered. A tongue covered by an abundant thick coat.

T., post-tip of. That portion of the dorsum of the tongue which extends from the tip about an inch, and is usually distinguished by a median linear depression when the tongue is at rest.

T., pre-base of. That region of the dorsum of the tongue included between the circumvallate papillæ and the end of the linear groove of the post-tip.

T., shag'gy. See *T., hairy*.

T. spat'ula. A tongue compressor or depressor.

T., stip'pled. One in which the papillæ are distinct and separate, and covered with a whitish patch of epithelium.

T., straw'berry. A hyperæmic tongue of which the fungiform papillæ are very prominent. Especially seen in scarlet fever.

T. swal'lowing. A condition in which there is abnormal mobility of the tongue, giving rise to a danger that it might be swallowed.

T.-tie. Impeded motion of the tongue in consequence of shortness or increased size of the frænum linguæ.

T. tri'angle. The triangular or wedge-shaped red arch at the tip of a coated tongue seen in typhoid.

T., wood'en. One that is the seat of *Actinomyces*.

Tonic. (Τονικός, tone.) A medicine or treatment used to strengthen the tone of the body generally, or part of it; for instance, a nervous tonic, a stomach tonic, &c. Characterised by continuous tension; not clonic.

T. spasm. A steady involuntary contraction of a muscle or muscles, lasting a comparatively long time.

T. treat'ment. The treatment of disease by tonics. The continuous treatment of syphilis by the use of protoiodide of mercury for two or three years in small doses.

Tonic'ity. The state or property of possessing tone. It means in *Physiol.*, the elasticity of parts. A property of muscles distinct from true irritability.

Ton'icize. To give tone or tonicity to.

Ton'ka bean. *Dipterix odorata*. (Not official.) Guiana. Nat. Order *Papilionaceæ*. The bean is from a large tree. The active principle of the bean is coumarin, $C_9H_6O_2$. Action, antispasmodic, heart-stimulant, narcotic. Uses, whooping-cough. Dose of the fluid extract, 5 to 8 drops.

Tono'dés. Tensive.

Ton'ogram. (Τόνος, tone; γράφειν, to write.) The record of a tonograph.

Ton'ograph. A machine for recording the tension of the arterial blood-current.

Tonom'eter. (Τόνος, tone; μέτρον, measure.) An instrument to measure the tension of the eyeball.

Tonom'etry. Measurement of tension, as of the eyeball.

Tonomit'ter. (Τόνος, tone; L. *mittere*,

to send.) An instrument to improve the hearing near the opening of the Eustachian tube.

Tonopsychag'gia. (Τόνος, tone; ψυχή, mind; ἀγώγος, leading.) Restoration of mental vigour.

Tonot'icus. *Tonic.*

Ton'sil. (L. *tonsilla*.) A mass of adenoid tissue situated between the anterior and posterior pillars of the fauces. One of the lobes of the cerebellum.

T. gull'lotine. An instrument used for removal of the tonsils.

T., ling'ual. A small collection of lymphoid tissue at base of tongue.

T., Lusch'ka's. Adenoid tissue existing between the orifices of the Eustachian tubes, analogous in structure to the tonsils. Also called the "third tonsil."

T., pharyn'geal. Same as *T., Luschka's*.

Tonsill'a. One of the cerebellar lobes on the mesial side near the vallicula.

T. tu'bullis Gerla'chii. Same as *T., Luschka's*.

Tonsillæ gangræ'na. *Cynanche maligna*.

T. pestilen'tes. *Cynanche maligna*.

Ton'sillar. (L. *tonsilla*.) Of, or pertaining to, the tonsils.

T. ar'tery. A branch of the facial.

T. nerves. Slender branches of the glosso-pharyngeal.

T. plex'us. An anastomising network of blood-vessels found in the tonsil and its immediate neighbourhood.

Tonsillary. Same as *Tonsillar*.

Tonsil'lia. *Cynanche tonsillar*is.

Tonsillit'ic. Of, or pertaining to, the tonsils.

Tonsilli'tis. Inflammation of tonsils.

T., follic'ular. When there is increased secretion from the lining of the crypts owing to inflammation of the follicles.

T., herpet'ic. A form of inflammation of the mucosa of the palate, tonsils, uvula, and pharynx, characterised by the formation of herpetic vesicles, which burst, forming ulcers that coalesce and are covered with a fibrinous exudation. Its course is not unlike pneumonia.

T., lacu'nar. Same as *T., follicular*.

T., mycot'ic. A form due to the presence of fungous growths.

T., pus'tular. One characterised by the formation of pustules.

T., sup'purative. Same as *Quinsy*.

Ton'sillotome. An instrument for removal of the tonsils.

Tonsillot'omy. (L. *tonsilla*, tonsil; Gr. τμήν, a cutting.) Removal of the tonsils.

Ton'sure. (L. *tondere*, to clip.) The removal of the hair from any part.

To'nus. *Tonic spasm*; *Tonicity*.

T. trism'us. *Trismus*.

Tochu'tia. Same as *Dengue*.

Toot poi'son. See *Coriara*.

Tooth. The teeth are small hard bodies fixed in the alveoli of the jaw-bones; serving to seize, cut, tear, and triturate alimentary substances. The teeth have in general the shape of an irregular cone, the base of which is toward the interior of the mouth, and the apex, single or divided, toward the bottom of the alveoli. Each tooth is composed of dentine, and has an extra-alveolar portion covered with a vitriform substance called enamel, the crown

or corona, separated from the root by the cervix. There are thirty-two teeth in the adult, sixteen to each jaw; these consist of four incisors, two canines, four bicuspidæ, and six molars. The dentine (ebur, substantia eburnea, substantia ossea of Malpighii, proper tooth substance, bone of the tooth, osseous substance of tooth, tooth bone) is composed of tubular fibres—dental fibres—which contain organic deposits of calcareous salts and of intertubular substance, in which are observed corpuscles or osseous cells of the tooth called caligerous cells, which also contain earthy salts. At the part where the enamel terminates the crusta petrosa or fibrosa (cortex osseus, cementum, cæmentum, or cortical substance) commences in a slightly modified thin layer of true bone, which gradually increases in thickness as the root is reached. This encloses a vascular and nervous pulp in a central cavity (cavitas pulpæ, cavum dentis, antrum dentale).

T.-ache. Any pain in or about the teeth. *Odontalgia*.

T.-ache tree. See *Prickly ash* and *Xanthoxylum fraxineum*.

T. cough. Reflex cough due to dental irritation.

T., denud'ing pro'cess of. Gradual removal of the enamel without evidence of disease; most common in the old.

T.-edge. Great sensibility of the teeth, especially to acrid substances.

T. germ. Ingrowth of epithelium and connective tissue that later forms the complete tooth.

T. paste. See *Dentifrice*.

T. plug'ger. A dental instrument used for filling teeth.

T. pulp. Connective and other soft tissue filling the cavity of a tooth.

T. rake. Instrument for scaling the teeth.

T. rash. A cutaneous eruption occurring during the teething of children.

T. sac. The connective tissue surrounding the germ of a tooth in the foetus.

T. saw. A fine saw used by dentists in preparing a tooth for crowning.

T.-wort. *Anthemis pyrethrum*.

T. wounds. Wounds inflicted by the teeth of animals which do not owe their gravity to poison, but to the laceration of the tissues.

Toothed. Provided with teeth or indentations.

Toothless. Having no teeth. *Edentulous*.

Tooth-like. Resembling a tooth. *Odontoid*.

Topæsthe'sia. (Τόπος, place; αἴσθησις, sense.) Local sensibility to touch.

Topal'gia. (Τόπος, place; ἄλγος, pain.) Pain in a circumscribed area not referable to the distribution of any particular nerve.

Toph'a'ceous. Of the nature of *Tophi*. Sandy or gritty.

To'phi. Plural of *Tophus*.

To'phus. (L. *tophus*, *tofus*, sandstone.) A calcareous concretion that forms on the pinna of the ear, round the joints, &c., in gout.

Tophyperidro'sis. (Τόπος, place; ὑπέρ, in excess; ἰδώς, sweat.) Local sweating in excess.

Top'ic, Top'ical. (Τόπος, place.) Local.

T. rem'edy. One applied locally.

TOPICUM—TORRIFICATION

Top'icum. Any remedy for local and external application.

Top'inard, angle of. The ophryospinal facial angle; the angle included between two lines from the nasal spine to the ophryon and auricular point.

T. line or pro'file. A line joining the intersuperciliary point and the most prominent point of the chin.

Topina'ria. *Talpa.*

Topoal'gia. (Τόπος, place; ἄλγος, pain.) Localised pain, common in neurasthenia, often appearing suddenly after strong emotional disturbances, recurring with paroxysmal intensity and not in the distribution of a particular nerve, and without appreciable central or local lesion.

Topograph'ic. (Τόπος, place; γράφειν, to write.) Pertaining to the features of a locality.

T. anat'omy. Descriptive anatomy; or, used in the restricted sense, surface anatomy.

Topog'raphy. A description of an area with reference to the features of its surface. *Anat.* Applied to the study of regional or topographic anatomy.

Topology. (Τόπος, place; λόγος, science.) *Topographic anatomy.* The relation of the presenting part of the foetus to the pelvic canal.

Toponarco'sis. (Τόπος, place; νάρκωσις, a benumbing.) Local insensibility or anaesthesia.

Toponeuro'sis. (Τόπος, place; νεύρον, a nerve.) A local neurosis.

Topon'omy. See *Toponymy.*

Topon'ymy. (Τόπος, place; ὄνομα, a name.) Topical terminology; the system of anatomical terminology indicating the direction and position of parts. It is either intrinsic, having reference only to the organism; or extrinsic, based on the relation of the organism to the earth's surface while in the anatomical position.

Topopho'bia. (Τόπος, place; φοβός, fear.) Morbid dread of places.

Topothermaesthesia'eter. (Τόπος, place; θερμη, heat; αἴσθησις, sensation; μέτρον, measure.) An instrument for measuring local sensitiveness or impressions of heat.

Tor'cular, or T. Heroph'ili. The point of meeting of the superior longitudinal, the straight, the two lateral, and the occipital sinuses.

Tor'i. Plural of *Torus.*

T. pyramida'les. The two eminences on the surface of the pons caused by bundles of ascending fibres of the pyramids.

Toric. Having the properties of a *Torus.*

T. lens. See *Torus.*

Tormac'ulo. (L. *torqueo*, to twist.) *Tourniquet.*

Torment'il'ia. Europe and North Asia. Nat. Order *Rosaceæ.* (Not official.) The rhizome of *Potentilla tormentilla* is used; it is two to three inches long and half an inch thick; the surface is covered with roundish protuberances; the odour is rose-like, taste astringent; contains tannin. Action, astringent. Uses, passive hæmorrhages. Dose, 5 to 10 grains.

Torment'um. An old name for various obstructive disorders of the intestine.

T. intestino'rum. Same as *Dysentery.*

Tor'mina. (L. *torquere*, twist, wrench.) Severe griping pains in the bowels; gripes; colic.

T. al'vi. *Colic.*

T. Cel'si. *Dysentery.*

T. intestino'rum. Same as *Dysentery.*

T. post-par'tum. The after-pains of parturition.

Tor'minal. *Torminous.* Affected with *Tormina.*

Tor'minous. Affected with *Tormina* characterised by griping pains.

Tor'modont. (Τόμος, a hole or socket ὀδὸν, tooth.) Having teeth in sockets.

Tornac'ulum. *Tourniquet.*

Torn'waldt's disease. See *Thornwaldt's disease.*

Torose'. (L. *torus*, a bulging, protuberance.) *Biol.* Cylindric, with constrictions and enlargements at intervals.

Toros'ity. (L. *torosus*, muscular sheath.) Muscular strength.

Torped'inous. (L. *torpere*, to numb.) Benumbing, like a torpedo.

Torpe'do. (L. *torpedo*, *torpedinis*, cramp-fish; *torpere*, to be numb.) Numbness stupor; narcosis. (Rare.)

Torpefactio universa'lis. (L. *torpeo*, to be stupid; *facio*, to make.) Torpidity of the whole body.

Tor'pent. Incapable of the active performance of a function. A medicine or agent that reduces or subdues any irritative action.

Torpes'cence. State of torpidity; numbness.

Torpes'cent. (L. *torpescere*, to grow numb or stiff.) Becoming torpid or benumbed.

Torpid. (L. *torpeo*, to be sluggish.) Numb, dull, stupid, inactive.

T. ul'cer of the cor'nea. One in which the irritative symptoms are very slight, or wanting altogether.

Torpid'itus. *Torpor.*

Torpid'ity. *Torpor.* Insensibility, apathy, numbness.

Torpidly. In a torpid manner.

Torpidness. *Torpidity*; *Torpor.*

Torpidus. Narcotised. *Torpid.*

Torpify. (L. *torpifacere*, to make numb.) To stupefy; to make torpid, numb.

Torpit'ude. *Torpor*; *Torpidity.*

Tor'por. State in which a part becomes numb and almost incapable of motion. *Narcosis*; *Torpidity*; *Torpit'ude.* Also applied to the whole body.

T. intestino'rum. Constipation.

T. ret'inæ. Loss of energy on the part of the retinal elements.

T. soporif'icus. Lethargic torpor.

Torporif'ic. Torpifying; stupefying.

Tor'quate. (L. *torques*, a neck chain.) *Biol.* Ringed about the neck.

Tor'ques. (L. *torques*, a neck chain.) *Biol.* A collar-like marking of the skin; hair or feathers of the neck.

Tor'refied bread. Ordinary bread toasted in thin slices till it is almost blackened.

Tor'rid. (L. *torrere*, to parch.) Hot, burning.

T. zone. The climatic zone lying between the isotherms of 70° north and south.

Torrifica'tion. Application of a high degree of heat, but not sufficient to produce carbonisation.

Tor'sion. (L. *torquere*, to twist.) The act or effect of twisting. The twisting of a cut end of an artery for the arrest of hæmorrhage.

T. for'ceps. Forceps used for twisting the end of a divided artery.

T. of a long bone. The normal twist of a bone.

T. of teeth. The forcible correction of irregularities in the disposition of the teeth.

T. of the umbilical cord. The spontaneous twisting of the umbilical cord.

Torsocclusion. (L. *torquere*, to twist; *cludere*, to close.) A form of acupressure in which the point of the pin is pushed through a portion of tissue parallel to the course of the vessel to be secured, then carried over its anterior surface, and at the same time swept round until it is brought to a right angle to the course of the artery, when its point is thrust into the soft parts beyond.

Torticollar. (L. *tortus*, twisted; *collum*, neck.) Wry-necked. Affected with *Torticollis*.

Torticollis. A twisting of the neck caused by the contraction of one of the sterno-mastoids and one or more of the deep cervical muscles.

T., intermit'tent. See *Spasmodic torticollis*.

T., spasmod'ic. A spasmodic contraction of the sterno-mastoid on one side, causing the head to be drawn upwards and toward the opposite side.

Tor'tulous. (L. *torta*, a twist.) *Biol.* Twisted, or like a string of beads; moniliform.

Tortuose'. (L. *tortuosus*, winding.) *Biol.* Bent and twisted, as some stems.

Tortuosity. (L. *tortus*, twisted.) A twisted or devious course, as of a blood-vessel.

Tor'tuous. Twisted. Sinuous.

Tortura o'ris. (L. *torqueo*, to twist.) Canine laugh. *Neuralgia faciei*.

T. o'ris paralyt'ica Linnæ'i. Bell's paralysis.

Torula. (L. *torus*, a swelling.) A Genus of budding Fungi (*Blastomycetes*).

Toruliform. (L. *torula*, torula; *forma*, form.) Resembling an organism of the Genus *Torula*.

Tor'uloid. Same as *Toruliform*.

Torulose'. Knobbed.

Tor'ulous. Same as *Torulose*.

To'rus. A smooth rounded ridge or elongated protuberance, as of a muscle. Specifically, the *Tuber cinereum* of the brain.

T. fronta'lis. A protuberance in the region of the frontal sinuses, at the root of the nose, in the median line, and on the external surface of the skull.

T. ma'nus. The metacarpus.

T. occipita'lis. Prominence at times present on the upper portion of the occipital bone.

T. palati'nus. A protuberance on the surface of the hard palate marking the point of junction of the intermaxillary and the palato-maxillary sutures.

T. spira'lis. *Stria acustica*.

T. u'teri. Thick fold at the point of reflection of the uterine and vaginal peritoneum.

Tot'ty. *Vertiginous*.

To'tum carno'sum. *Pancreas*.

Touch. Tactile sense. Palpation. In *Obstetrics*, vaginal digital examination.

T., abdom'inal. Abdominal palpation.

T., after. The persistent sensation after palpation.

T. cor'puscle. A tactile corpuscle.

T., doub'le. Combined vaginal and abdominal examination.

T., rec'tal. Rectal digital examination.

T., roy'al. It was formerly supposed that king's evil or scrofula was cured by the royal touch.

T., ves'ical. Digital examination of the female bladder through the dilated urethra.

Touch'ing. The application of the hand or fingers.

Toule'ma. Canna starch.

Tour de maî'tre. The turn in the introduction of a catheter after being passed into the urethra. It is first placed over the groin, then in the median line, and then depressed, having been simultaneously pushed into the bladder.

Tourette's' disease'. Motor inco-ordination with echolalia and coprolalia. A convulsive form of tic.

Tour'niquet. An instrument for arresting circulation through the whole or part of a limb or through a single large artery by compression. In its simplest form it consists of a strap, a screw, and a pad.

T., Dupuy'tren's. A tourniquet for compression of the abdominal aorta, consisting of a semicircle of metal with a pad at one extremity.

T., Es'march. Consists of a strong india-rubber band. Applied after the limb has been rendered bloodless by means of an elastic bandage.

T., field. Consists of a strap, buckle, and a pad to pass over the artery.

T., horse'shoe. This instrument compresses at two points by means of a screw at one end. Used for prolonged control of arterial circulation.

T., lip. Consists of a V-shaped piece of steel, the arms being provided with plates that are approximated by a central screw.

T., Petit's. A metal screw was employed in which the principal pressure was brought to bear on the main artery.

T., provi'sional. An instrument applied so that it can immediately control hæmorrhage, if necessary, in a wound.

T., Signori'ni's. See *T., horseshoe*.

T., Signoro'ni's horseshoe tour'niquet. This is an instrument of a horseshoe form, consisting of two rigid arms, one for compression of the main vessel, and the other for counter-pressure. It is especially useful in controlling the circulation in the treatment of popliteal aneurism.

T., Skey's. A modification of the horseshoe tourniquet.

T., Span'ish wind'lass. A knotted bandage or handkerchief twisted by a stick and used as a tourniquet.

T., tor'cular. Same as *T., Span'ish windlass*.

Tous-les-mois. A farinaceous food obtained from the tubers of *Canna edulis*.

Toussaint's the'ory. That the lymphatic glands become so hardened after specific inflammation that they refuse passage to micro-organisms of a similar nature afterwards, thus conferring local immunity.

Tow. The refuse of flax or hemp. Used as an absorbent in surgery.

Town cachexia. The general cachectic condition of pallor and anæmia met with in densely populated towns.

Toxa. (Plural of *toxum*; from *τοξικόν*, poison.) Diseases due to poison.

Toxæmia, Toxæmic. See *Toxemia*, *Toxemic*.

Toxalbumin. (*Τοξικόν*, poison; *L. albumin*, white of egg.) A poisonous albumose produced by metabolic processes of micro-organisms, and shown in certain specific instances, such as diphtheria, &c., to produce the symptoms and effects characteristic of the disease caused by the micro-organism. It is possible that they are also produced by animal parasitic organisms.

Toxanæmia, Toxanæmia. Anæmia caused by the actions of ptomaines.

Toxemia, Toxæmia. The presence of a toxic substance or substances in the blood. Blood-poisoning.

Toxemic, Toxæmic. Pertaining to, or of the nature of, toxæmia. Affected with toxæmia.

Toxic. (*Τοξικόν*, poison.) Of, or pertaining to, toxicants. *Toxological*.

T. convul'sion. A convulsion caused by a poison.

T. demen'tia. Feebleness of mind consequent on poison.

T. ep'ilepsy. Epileptiform spasms produced by poison.

Toxicæmia, Toxicemia. See *Toxemia*.

Toxical. See *Toxic*.

Toxically. By toxicants, or narcotic or stimulating poisons.

Toxicant. Having a toxic effect; capable of poisoning.

Toxicate. To poison, intoxicate.

Toxica'tion. Synonym of poisoning.

Toxichæmia. Same as *Toxemia*.

Toxichemito'sis. (*Τοξικόν*, poison; *αἷμα*, blood.) Blood-poisoning.

Toxicide. (*Τοξικόν*, poison; *L. cædere*, to kill.) A remedy that destroys toxic agents.

Toxicity. (*Τοξικόν*, poison.) Toxic quality; poisonousness.

Toxicoder'ma. See *Toxicodermatitis*.

Toxicodermatitis. See *Toxicodermatitis*.

Toxicodermi'tis. Inflammation of the skin due to an irritant poison.

Toxicogenic. (*Τοξικόν*, poison; *γεννᾶν*, to produce.) Giving rise to poisons; producing a toxic substance, as a toxicogenic micro-organism.

Toxicoid. Resembling poison.

Toxicological. (*Τοξικόν*, poison; *λόγος*, science.) Of, or pertaining to, *Toxicology*.

Toxicologically. In a toxicological manner.

Toxicol'ogist. One who is a specialist in toxicology.

Toxicology. (*Τοξικόν*, poison; *λόγος*, science.) The branch of medicine dealing with poisons; their nature, properties, symptoms, sources, and antidotes.

Toxicomania. (*Τοξικόν*, poison; *μανία*, morbid desire.) A morbid craving for poisonous substances.

Toxico'ses. (*Τοξικόν*, poison.) A family of diseases caused by the introduction of poisons into the system.

Toxico'sis. (*Τοξικόν*, poison.) A toxic or poisoned state; the state of disease produced by a poisonous principle.

T., au'to-. One with clinical symptoms caused by the formation of toxic basic products from morbid matter, such as pathologic fluids lodged in certain parts of the system.

T., exogen'ic. One with clinical symptoms induced by the action of toxic bases taken into the system with the food, such as the poison of tinned meats, &c.

T., no'so-. One with clinical symptoms referable to the presence of basic products formed in the body and eliminated by the urine.

T., reten'tion. Symptoms referable to the retention of toxic physiological products, such as anæmia.

Toxicum. Poison, venom.

Toxiden'dron. See *Rhus tox*.

Toxiferous. (*Τοξικόν*, poison; *L. ferre*, to bear.) Carrying or conveying poison.

Toxihe'mia. Same as *Toxemia*.

Toxin, Tox'ine. Any toxic ptomaine; any diffusible alkaloidal substance analogous to the vegetable alkaloids.

Toxipho'bia. A morbid fear of being poisoned.

Toxipho'biac. (*Τοξικόν*, poison; *φόβος*, fear.) A person affected with *Toxiphobia*.

Toxires'in. (*Τοξικόν*, poison; *L. resina*, resin.) A poisonous decomposition product of digitalis when it is treated with dilute acids and heated to 240° C.

Toxophylax'in. (*Τοξικόν*, poison; *φύλαξ*, a guardian, protector.) A defensive proteid produced in the body of an animal which has acquired immunity for a given infectious disease, and which has the power of rendering inert the toxic products of the pathogenic micro-organisms to which the condition was due.

Toxoso'zin. (*Τοξικόν*, poison; *σώζειν*, to save.) A defensive proteid found in the body of a normal animal which has the power of protecting itself to a greater or less degree against micro-organisms and their products.

Toyn'bee's experiment. The rarefaction of the air of the middle ear by swallowing, with coincident closure of the mouth and nares.

T. law. A law concerning intra-cranial disease secondary to otitis. It is that the cerebellum and lateral sinus suffer from disease of the mastoid, while the cerebrum is endangered by caries of the tympanic roof.

Tra'bal. Pertaining to the *Trabs*; *Callosal*.

Trabec'ula. The fibrous cords, layers, or processes of connective tissue ramifying in the substance of organs for purposes of support. The fleshy part of the cardiac columnæ carneæ. In *Embryol.*, the prechordal cartilages (lateral trabecules of Rathke).

T. cer'ebr'i. *Corpus callosum*, or *Trabs cerebri*.

T. cine'rea. *Middle soft grey commissure*.

Trabec'ular. Of, or pertaining to, a trabecula. *Trabeculate*.

Trabec'ularism. A coarse reticulation or cross-barred condition of any tissue.

Trabec'ulate. Having a trabecula or trabeculæ.

Trabec'ulated. Same as *Trabeculate*.

Trabec'ule. Same as *Trabecula*.

Tra'bes car'neæ. *Musculi pectinati*.

T. cor'dis. *Columnæ carneæ.*

Trabs. The *Callosum*, or *Corpus callosum*. Called also the *Trabs cerebri*.

T. cer'ebrî. The *Corpus callosum*.

Trace. A track or mark; a bare visible quantity.

Tra'cer. An instrument used in dissection for isolating nerves or vessels by teasing.

Trache'a. (*Τραχεΐα*, the windpipe.) The windpipe; a cylindrical tube extending from the larynx to the bronchi.

Tracheaect'asy. (*Τραχεΐα*, trachea; *ἐκτασις*, dilatation.) Dilatation of the trachea.

Trache'al. Of, or pertaining to, the windpipe.

T. ar'teries. Branches of the inferior thyroid.

T. catarrh'. See *Tracheitis*.

T. râles. Bubbling sounds from mucus in the trachea.

T. tube. See *Trachea*.

T. tug'ging. The feeling of a downward tugging sensation of the larynx when the thyroid cartilage is pushed upward. Sometimes observed in thoracic aneurism.

Tracheal'gia. (*Τραχεΐα*, trachea; *ἄλγος*, pain.) Pain in the trachea. Croup.

Tra'cheary. (*Τραχεΐα*, trachea.) Pertaining to the trachea.

Trachel'itis. Same as *Trachitis*.

Trachela'gra. (*Τραχεΐα*, trachea; *ἀγρα*, seizure.) Rheumatic pain in the neck.

Trachela'lis. (*Τράχηλος*, neck.) The *Trachelo-mastoid muscle*.

Trachelectomopex'ia. (*Τράχηλος*, neck; *ἐκτομή*, excision; *πῆξις*, a fixing.) Partial excision, with fixation of the neck of the uterus.

Trachelectomy. (*Τράχηλος*, neck; *ἐκτομή*, excision.) Excision of the uterine cervix.

Trache'lian. Pertaining to the neck, particularly to its dorsal part.

Trachelias'mus. Same as *Trachelismus*.

Trachelis'mus. Spasmodic contraction of the muscles of the neck.

Tra'chelo-acrom'ial. (*Τράχηλος*, neck; *ακρόμιον*, the point of the shoulder-blade.) Connecting the shoulder-blade and vertebrae, as a muscle common to the neck and acromion.

Tra'chelo-acromia'lis. The *Trachelo-acromial muscle*.

Tra'chelo-clavic'ular. Pertaining to, or common to, the neck and the collar-bone.

Tra'chelo-clavicula'ris. A small anomalous muscle, extending generally from the sixth cervical to the clavicle.

Tra'chelo-costoscapula'ris. The *Serratus magnus* and the *Levator anguli scapulae*.

Tra'chelo-cyllo'sis. Same as *Torticollis*.

Tra'chelo-cyrto'sis. Same as *Trachelo-kyphosis*.

Tra'chelo-cysti'tis. (*Τράχηλος*, neck; *κύστις*, bladder; *-ίτις*, inflammation.) Inflammation of the neck of the bladder.

Tra'chelo-diaphragmat'ic. (*Τράχηλος*, neck; *διάφραγμα*, diaphragm.) Pertaining to the neck and the diaphragm.

Trachelodyn'ia. (*Τράχηλος*, neck; *όδύνη*, pain.) Pain in the neck.

Tra'chelo-kypho'sis. (*Τράχηλος*, neck; *κυφώσις*, kyphosis.) An anterior curvature of the cervical spine.

Tra'chelo-mas'toid mus'cle. Connecting the cervical vertebræ and mastoid process.

Tra'chelo-myi'tis. (*Τράχηλος*, neck; *μύς*, muscle; *-ίτις*, inflammation.) Inflammation of the muscles of the neck.

Tra'chelo-occip'ital. Pertaining to, or common to, the nape of the neck and the hind head. Specifying a muscle in this region, the *Complexus*.

Trachelopa'nus. (*Τράχηλος*, neck; *L. panus*, swelling.) Swelling of the cervical lymphatic glands.

Trachelopex'ia. (*Τράχηλος*, neck; *πῆξις*, a fixing.) Fixation of the neck of the uterus.

Trachelophy'ma. (*Τράχηλος*, neck; *φύμα*, growth.) Swelling of the neck.

Tra'cheloplasty. (*Τράχηλος*, neck; *πλάσσειν*, to mould.) Plastic surgery of the neck of the uterus.

Trachelor'haphy. (*Τράχηλος*, neck.) *ῥαφή*, suture.) Suture of the edges of a laceration of the cervix uteri.

Tra'chelo-scap'ular. Common to the neck and scapular regions.

Trachelostropho'sis. (*Τράχηλος*, neck; *στρόφος*, a twisting.) Torsion of the neck.

Trachelot'omy. (*Τράχηλος*, neck; *τομή*, a cutting.) Incision into the cervix uteri.

Tracheoa'ërocele. (*Τραχεΐα*, trachea; *ἀήρ*, air; *κήλη*, tumour.) A diverticulum of the trachea.

Tracheoblennorrhœ'a. (*Τραχεΐα*, trachea; *βλέννα*, mucus; *ροία*, flow.) A profuse discharge of mucus from the trachea.

Tracheobron'chial. (*Τραχεΐα*, trachea; *βρόγχος*, bronchus.) Pertaining to the trachea and bronchi.

Tracheobronchi'tis. Inflammation of the trachea and bronchi.

Tra'cheocele. (*Τραχεΐα*, windpipe; *κήλη*, tumour.) An enlargement of the thyroid gland; bronchocele; goitre. Hernia of the lining membrane of the trachea.

Tracheoclavicula'ris i'mus. Muscular slips at times found in man running from the clavicle to the occipital bone.

Tracheocynan'che. *Τραχεΐα*, windpipe; *κύων*, a dog; *ἀγχειν*, to strangle.) Synonym of *Tracheitis*.

Tracheolaryn'geal. (*Τραχεΐα*, windpipe; *λάρυγξ*, larynx.) Pertaining to the larynx and trachea.

Tracheolaryngot'omy. (*Τραχεΐα*, trachea; *λάρυγξ*, larynx; *τομή*, a cutting.) Combined laryngotomy and tracheotomy.

Tra'cheo-œsoph'agus. A band of muscle-fibres uniting the trachea and œsophagus.

Tracheop'athy. (*Τραχεΐα*, trachea; *πάθος*, disease.) Any disease of the trachea.

Tra'cheo-pharyn'geus. (*Τραχεΐα*, windpipe; *φάρυγξ*, pharynx.) An anomalous band uniting the inferior constrictor and the trachea.

Tracheoph'ony. (*Τραχεΐα*, trachea; *φωνή*, voice.) The sound heard over the trachea on auscultation.

Tra'cheo-phthi'sis. See *Phtisis laryngea*.

TRACHEOPHYMA—TRANSCENDENTAL

Tracheophy'ma. Same as *Goitre*.

Tracheopy'o'sis. (Τραχεΐα, trachea; πύον, pus.) *Purulent tracheitis*.

Tracheopy'ra. *Cynanche trachealis*.

Tracheorrh'a'gia. (Τραχεΐα, trachea; ῥηγνύναι, to burst forth.) *Hæmorrhage from the trachea*.

Tracheoschi'sis. (Τραχεΐα, trachea; σχίζω, to split.) *Fissure of the trachea*.

Tracheoscop'ic. (Τραχεΐα, trachea, σκοπεῖν, to view.) *Pertaining to Tracheoscopy*.

Tracheos'copist. One versed in *Tracheoscopy*.

Tracheos'copy. (Τραχεΐα, windpipe; σκοπεῖν, view.) *Inspection of the trachea with a laryngoscope*.

Tracheosten'o'sis. (Τραχεΐα, windpipe; στενῶσις, narrowing.) *Stenosis of the trachea*.

Tr'a'cheotome. (Τραχεΐα, windpipe; τομή [τομεῖν], cut.) *A scalpel used for tracheotomy*.

Tracheot'omist. One who practises *Tracheotomy*.

Tracheot'omize. To perform the operation of *Tracheotomy*. Also spelt *Tracheotomise*.

Tracheot'omy. The operation of opening the trachea.

T., inf'e'rior. Operation below the isthmus of the thyroid.

T., plun'ge. Operation in one incision for great emergencies.

T., supe'rior. Operation above the isthmus.

T. tube. A curved tube used for an air-passage after tracheotomy.

Trachielco'sis. (Τραχεΐα, trachea; ἐλχῶσις, ulcer.) *Ulceration of the trachea*.

Trachiel'cus. Ulcer of the trachea.

Trachoma. (Τραχώμα, roughness.) Granular lids, occurring sometimes after purulent ophthalmia. Granulations on the palpebral conjunctiva. The disease is due to a specific diplococcus.

T. Ari'ti. The granular form.

T., brawn'y. A late stage of mixed trachoma, in which the surface of the conjunctiva is rather smooth, although lymphoid infiltration persists.

T. difu'sum. A high degree of mixed trachoma, in which large growths cover the tarsal conjunctiva.

T., follic'ular; T., mixed. The usual form of trachoma.

T. gland. Aggregated glands of Bruch. A number of follicles in the conjunctiva at the palpebro-sclerotic junction.

T., Knapp's roller-for'ceps meth'od of treat'ing. The expression of the gelatinous matter by roller forceps.

T. ve'rum. See *T. Ari'ti*. Horny epithelium, or summer granulations. In this form the granulations are horny. The name of *Hypertrophic trachomatous conjunctivitis* has been proposed for it.

Trachom'atous. Pertaining to, of the nature of, or affected with. trachoma.

Trachypho'nia. (Τραχύς, rough; φωνή, voice.) *Hoarseness of the voice*.

Trachys'ma. Same as *Trachoma*.

Traction. (L. *trahere*, to draw.) The act of drawing or pulling.

T. an'e'urism. An aneurism most com-

monly seen in children, due to traction of the aorta from an incompletely atrophied ductus Botalli.

T. ax'is. Traction in the axis of a channel.

T. ax'is for'ceps. Obstetric forceps permitting axis-traction.

T. divertic'ulum. A circumscribed sacculation of the œsophagus from the traction of the circum-œsophageal adhesions.

T., elas'tic. Traction by an elastic force.

Trac'tor. An instrument for employing traction.

Tractora'tion. Treatment by metallic tractors.

Tragacan'tha, Trag'a'canth. (Official.) Europe, Africa. Nat. Order *Leguminosæ*. A gummy exudation obtained from incisions made in the stem of *Astragalus gummifer*, and some other species of *Astragalus*. Action, demulcent. Use, a vehicle for the suspension of heavy insoluble powders; for forming troches. Dose of the powder, 20 grains or more.

T. compos'itus, pulvis. (Official.) Tragacanth in powder, 1; gum acacia in powder, 1; starch in powder, 1; refined sugar, 3. Dose, 20 to 60 grains.

Tragacan'thæ glyceri'num. (Official.) Tragacanth in powder, 110 grains; glycerine, 1 ounce; distilled water, 74 grains. Used as a pill excipient.

T. mucila'go. (Official.) Tragacanth in powder, 60 grains; distilled water, 10 ounces; rectified spirit, 2 fluid drachms.

Trag'al. Pertaining to the *Tragus*.

Trag'alism. (Τράγος, goat.) *Salaciousness, Sensuality*.

Trag'icus. A few scattered muscular fibres found on the tragus.

Tragomas'chala, or Tragomas'chalë. (Τράγος, goat; μασχάλη, armpit.) An unpleasant odour from the armpits.

Tragopho'nia. (Τράγος, goat; φωνή, voice.) *Egophony*.

Tragopo'dia. (Τράγος, goat; πούς, a foot.) *Knock-knee*.

Tra'gus. (Τράγος, goat.) A small gristly, fleshy prominence anterior to the orifice of the external meatus.

Traik. To be in a declining state of health.

Also, the flesh of sheep that have died of disease or accident.

Traik'el. Very much exhausted; worn out.

Train'ing. Systematic exercise and diet for some physical or mental attainment.

Trait. Any natural characteristic that is peculiar to an individual.

Trame, or Tram'is. The *Perinæum*.

Tramoseric'eous. (L. *trama*, web; *sericeus*, silken.) *Biol.* Having a satin-like lustre.

Trance. (L. *transitus*, a passage.) *Catalepsy; Ecstasy*. The hypnotic state: a prolonged abnormal sleep, in which the vital functions are reduced to a very low ebb, and from which the patients cannot ordinarily be aroused.

T. doc'tor. A *Hypnotist*.

T., hyster'ic. A trance-like condition sometimes met with in hysteria.

Transau'dient. (L. *trans*, across; *audire*, to hear.) Permitting the passage of sound.

Transcenden'tal. (L. *trans*, across;

scandere, to climb.) Beyond the bounds of experience.

T. anatomy. *Philosophic anatomy.*

Transcondyloid amputation of thigh. *Carden's operation.* Anterior and posterior flaps are cut, and the bone sawn across at the level of the base of the flaps. The anterior flap extends to the middle of the ligamentum patellæ. The posterior can hardly be said to have length.

Transductor. Synonym of *Transversus pedis*.

T. hal'lucis. *Transversus pedis.*

Transect'. (*L. trans*, across; *sectus*, cut.) To cut across, to dissect transversely.

Transection. The dissection of a body transversely.

Transfem'inate. To change from female to male.

Transference. (*L. trans*, across; *ferre*, to bear.) Supposed transmission of thought from one individual to another.

Transfix'. (*L. trans*, across; *figere*, to fix.) To pierce.

Transfixion. In amputation, piercing the limb with the knife before making the flap.

Transforate. (*L. trans*, through; *forare*, to bore.) To bore through, to perforate.

Transforation. The act of transforating, as in craniotomy.

Transformation. In *Pathol.*, a morbid change of tissue in a part.

Transfuse'. *L. trans*; *fundere*, to pour from one vessel to another.) To transfer from one vessel to another; especially applied to the transference of blood or fluid into the veins of a patient.

Transfus'er. One who, or that which, transfuses.

Transfus'ible. Capable of being transfused.

Transfu'sion. (*L. trans*, across; *fundere*, to pour.) The transfer of liquid from one vessel to another; applied especially to the passage of fluid from a vessel in one body to another.

T., arte'rial. The transfusion of blood into an artery.

T., auto-. The driving of blood from the periphery to the centre—the heart and brain—in order to maintain the circulation, as in bandaging the limbs in post-partum hæmorrhage.

T., direct' or imme'diate. The transfusion of blood from one person to another without the exposure of the blood to the air.

T., indirect' or me'diate. The introduction of blood that has first been drawn into a vessel.

T., ner'vous. Paul, in 1892, advocated the hypodermic administration of solutions of sheep's brain in conditions of neurasthenia.

T., peritone'al. Transfusion of saline solution into the peritoneal cavity.

T., recip'ocal. The exchange of equal volumes of blood between a patient suffering from a febrile disease and one who is convalescent from the same disease, the blood of the latter being supposed to contain an antitoxin.

T., ve'nous. Transfusion into a vein.

Transfu'sionist. One who is skilled in transfusion.

Transfu'sive. Tending or having power to transfuse.

Transfu'sively. So as to transfuse; in a transfusive manner.

Trans'ient blind'ness. Temporary amblyopia, said to be caused by vaso-motor disturbances of the visual centre.

Transili'ac. Extending transversely from one iliac bone to another.

Transil'ient. (*L. transilire*, leap or spring across.) Leaping or extending across.

T. fi'bres. Nerve-fibres passing from one convolution of the brain to another not immediately adjacent.

Transillumina'tion. A shining through. The passage of light through an organ for diagnostic purposes.

Transin'sular. Traversing the insula of the brain, as, *e. g.*, a fissure.

Transis'chiac. Extending transversely from one ischiac bone to the other.

Transi'tion. (*L. transire*, to go over.) Change. Passage from one state to another.

T. resist'ance. The resistance introduced into an electric current by the accumulation of decomposition products upon the electrodes.

Transi'tory. Temporary, not permanent, as transitory mania.

Transke'ian scab. *Natal boil.*

Transla'tion. *Metastasis.*

Translocate. The same as *Dislocate*.

Translu'cent. (*L. trans*, across; *lucere*, to shine.) Semi-transparent.

Translu'cid. Having the property of permitting the partial transmission of light.

Translumina'tion. The same as *Transillumination*.

Transmigra'tion. (*L. trans*, across; *migrare*, to wander.) The passage of cells or particles through a membranous septum.

T., exter'nal. The passage of an ovum from one ovary to the opposite oviduct through the peritoneal cavity.

T., inter'nal. The passage of an ovum through the uterus to the opposite oviduct.

Transmissibility. (*L. trans*, across; *mittere*, to send.) The capability of being transmitted or communicated from one person to another.

Transmis'sion. The communication of anything, especially disease, from one person or place to another.

T., du'plex. The property of nerves to be able to transmit impulses in two directions.

Transmuta'tion. (*L. transmutare*, to change.) The process of changing; the conversion of one substance or form into another substance or form.

Transoc'ular. Extending across the eye.

Transpal'atine. Transverse, as a palatine bone which extends on either side of the median line.

Transpal'mar. Situated across the palm of the hand; lying crosswise in the palm.

Transpalma'ris. The transpalmar muscle of the hand.

Transpa'rent. (*L. trans*, across; *parere*, to appear.) Having the property of permitting the passage of light-rays without material obstruction.

Transperina'us. The transverse perineal muscle.

Transper'itone. Traversing the peritoneal cavity.

Transpina'llis. A muscle of the spine between successive transverse processes of the vertebræ. An intertransverse muscle.

Transpirable. Capable of transpiring.
Transpiration. (L. *trans*, across; *spirare*, to breathe.) The act of passing fluid, vapour, or gas through a membrane, especially through the skin. The material passed off.

T., pulmonary. The exhalation of watery vapour from the lungs.

Transpiratory. Of, or pertaining to, *Transpiration*.

Transpire. (L. *transpirare*.) To emit through skin or lungs; send off in vapour; exhale.

Transpiry. The act of transpiration.

Transplan'tar. Lying across the sole.

Transplanta'tion. The operation of grafting.

T. of cor'nea. Same as *Keratoplasty*. An operation in which an opaque piece of the cornea is removed, and a transparent piece from another eye grafted in its place. Unsuccessful except in those cases in which the injury that led to the original opacity did not affect Descemet's membrane.

Transpleu'ral. Traversing the pleural cavity.

Trans'port. *Delirium*.

Transposition. (L. *trans*, across; *ponere*, to place.) An interchange of position, as of the viscera.

Transpro'cess. (L. *trans*, across; *processus*, process.) A transverse process.

Transsection. Same as *Cross-section*.

Transsubstantia'tion. (L. *trans*, across; *substantia*, substance.) The replacement of one tissue by another.

Transtem'poral. Traversing the temporal lobe of the brain.

Trans'udate. (L. *trans*, through; *sudare*, to perspire.) A liquid or other substance the result of transudation.

Transuda'tion. The act or process of transuding.

Transu'datory. Passing by transudation.

Transude. (L. *trans*, through; *sudare*, sweat.) To pass or ooze through the pores or interstices of a membrane or other permeable substance.

Transver'sal. (L. *trans*, across; *vertere*, to turn.) Transverse, running across.

Transversalis. Certain muscles lying across certain parts.

T. abdom'inis. The deepest of the abdominal muscles.

T. anti'cus pri'mus. *Rectus capitis lateralis*.

T. cervi'cis. Flat fleshy muscle in neck.

T. cervi'cis anti'cus. Probably an aberrant *Intertransversalis longus*.

T. cervi'cis me'dius. Same as *T. cervicis anticus*.

T. cervi'cis post'i'cus mi'nor. An accessory muscle arising from the transverse process of the upper dorsal or lower cervical vertebræ, and inserted into the transverse process of the atlas or the mastoid process.

T. collatera'lis col'li. See *Sacro-lumbalis*.

T. col'li. An artery running across the lower part of the neck.

T. fas'cia. Fascia lining transversalis muscle.

T. men'ti. An anomalous thin muscle.

T. na'si. A small nasal muscle.

T. pe'dis. A muscle running across the foot.

Transverse. In *Anat.*, broader and wider than long.

T. axis. The longest diameter measured from side to side.

T. cer'ebral fis'sure, poste'rior. Bounded by the cerebellum and the medulla.

T. cerv'ical ar'tery. Same as *Superficialis colli*.

T. co'lon. The horizontal central part of colon.

T. door-flap. A semicircular or horse-shoe-shaped flap made in the scalp for the operation of trephining.

T. fa'cial ar'tery. A branch of the temporal artery.

T. fis'sure of the brain. Bounded by the corpus callosum and fornix above, and the corpora quadrigemina below.

T. fis'sure of the liver. A sulcus seen in the under surface of the liver, and which contains the points of entry and leaving of the vessels and ducts.

T. fron'tal convolu'tion. Ascending frontal.

T. hal'lucal mus'cle. Same as *Transversus pedis*.

T. hu'meral ar'tery. Same as *Suprascapular*.

T. lig'ament. Part of the cotyloid ligament.

T. lig'ament of at'las. Ligament keeping odontoid process of axis *in situ*.

T. metacar'pal lig'ament. A superficial transverse portion of the palmar fascia.

T. metatar'sal lig'ament. A superficial transverse portion of the plantar fascia.

T. myel'i'tis. Myelitis affecting the whole thickness of cord.

T. perine'al ar'tery. A small vessel in the perineum.

T. presenta'tion. Presentation of the foetus at right angles to the longitudinal axis of the uterus.

T. pro'cesses of ver'tebræ. *Diapophyses of Owen*.

T. su'ture. Runs across the face, sinking into the orbits joining the facial and cranial bones.

Transver'so-ana'lis. Same as *Transversus perinei*.

Transver'so-spina'lis. One of a series of muscles connecting the spinous and transverse processes of the vertebræ.

Transver'sus. *Transverse*.

T. au'ris. A muscular band dividing the concha.

T. col'li. A muscle arising from the first costal cartilage, and running towards the middle line of the neck.

T. lin'guæ. One of the intrinsic muscles of the tongue.

T. ma'nus. *Adductor transversus*.

T. pec'toris. *Triangularis sterni*.

T. pe'dis. *Adductor transversus pedis*.

T. perine'i. The *Transverse perineal muscle*.

T. prosta'tæ. *Compressor prostatae*.

Trap. A device to prevent the escape of foul vapours from sewers and water-pipes into a house. It generally consists of one or more S-shaped pipes filled with fluid.

Trape'za. (Τράπεζα, a table.) Corona of the jaw teeth.

Trap'ezate. Same as *Trapeziform*.

Trape'zial. (Τράπεζα, a table.) Pertaining to the *Trapezium* or *Trapezius*.

Trape'ziform. (Τράπεζα, a table; *L. forma, form.*) Having the shape of a *Trapezium*.

Trape'zii. Plural of *Trapezius*.

Trape'zium. (Τράπεζα, a counter or table.) A cross-band of fibres near the lower border of the pons Varolii. Carpale I, a bone of the carpus articulating with the metacarpal bone of the thumb.

T. cer'e'brī. A set of nerve-fibres in the pons.

Trape'zius. The large superficial muscle of the back of the neck and upper part of the trunk, attached to the scapular spine, clavicle, vertebral spine, and the occipital bone.

Trape'zoid. (Τράπεζα, a table; *εἶδος, form.*) Carpale II, a carpal bone articulating with the metacarpal bone of the index finger.

T. lig'ament. See *Ligament*.

Trapp's for'mula or co-eff'icient. Employed in the estimation of the amount of solid matter in urine. In Trapp's formula the figure is 2, while in Hoeser's co-efficient it is 2·33. The approximation to the quantity of solid matters present may be obtained by multiplying the last two figures of the specific gravity by 2 or 2·33.

Traube-Her'ing's curves. Rhythmical variations of arterial blood-pressure occurring in animals that have been subjected to the influence of curare after a total cessation of respiratory movements and section of both vagi. It is supposed to indicate rhythmic activity of the vaso-motor centres.

Traube-Ro'senstein the'ory. A theory of the cause of puerperal eclampsia, due to cerebral anæmia from œdema in consequence of the toxæmia.

Traube's plugs. Same as *Dittrich's plugs*. Masses of granular matter, degenerated epithelium, and crystals of the fatty acids (chiefly butyric acid) plugging up the ends of the bronchial tubes in cases of gangrene of the lung. They are yellowish brown in colour, of very fetid odour, and vary in size from a millet-seed to a bean.

T.'s semilu'nar space. A space on the left side of the chest where normally there is found a vesiculo-tympanitic sound, due to air in the stomach.

Traul'ism. (Τραυλισμός, a lisp.) A lisp; a stammer. Drawling or imperfect utterance.

Trau'ma. (Τραῦμα, wound.) A local or general condition resulting from injury. External violence producing injury.

T. ty'phus. Same as *Hospital gangrene*.

Traumatic. Pertaining to, or caused by, a wound or injury.

T. ab'scess of co'ma. Caused by infection from without, *e.g.* injury; or infection from within, *e.g.* typhus, smallpox.

T. cat'aract. Caused by the lens capsule being opened, or by contusion without the capsule being opened. It is, as a rule, total.

T. degenera'tion. Degeneration of the ends of divided nerve-fibres to the next node of Ranvier.

T. delir'ium. The delirium occurring after operation, as distinguished from true delirium.

T. disloca'tion of lens. May be partial

or complete. When complete it may take place into the anterior chamber, vitreous humour, or under the conjunctiva when the sclerotic is ruptured.

T. fe'ver. Fever consequent on an operation or injury, due to absorption of poisonous material from the seat of injury.

T. hyste'ria, or fright neuro'ses. Page's term for certain neuromimetic disturbances following injury. They frequently occur in males as the result of railway injuries.

T. infec'tive diseas'es. A group of diseases caused by definite micro-organisms consequent on wounds or abrasions.

T. iri'tis. Inflammation of the iris. Caused by wounds of the eyeball, particularly when a foreign body is left in the eye.

T. neuro'ma. This is identical in structure with the bulb at the end of a divided nerve. When a nerve is only partially cut across a bulb will form at the seat of injury, and will thus form a swelling on the nerve-trunk itself.

T. neuro'ses. The same as *Railway spine*.

T. striped kerati'tis. Consists in grey lines starting from a wound, extending at times across to the edge of the cornea, and arranged perpendicularly to the wound.

T. sugges'tion or au'to-sugges'tion (Page). A mental hypnotic condition found after railway accidents. The subjects are peculiarly susceptible to suggestion.

Traumaticin. (Not official.) A saturated solution of gutta-percha 1 part in 15 of chloroform. Three parts of ichthyol, salol, phenol, or lysol may be added to 10 of traumaticin. Used in erysipelas.

Trau'matism. The condition of a subject suffering from injury.

T. of mo'tion. Diseased joint from improper fixation.

Traumatoc'acé. (Τραῦμα, wound; *κακός, bad.*) Synonym of *Hospital gangrene*.

Traumatoc'o'mium. (Τραῦμα, wound; *κομέω, to take care of.*) Hospital for the reception of the wounded.

Trau'matol. *Iodo-cresol.* (Not official.) Prepared by the action of iodine on oxytoluene. It is described as a fine reddish-violet precipitate without odour. Intended to be dusted on abrasions of the skin.

Traumatology. (Τραῦμα, wound; *λόγος, science.*) The science of injuries.

Traumatone'sis. (Τραῦμα, a wound; *νήσις, a suture.*) Suture of a wound.

Traumatopne'a. (Τραῦμα, a wound; *πνοή, breath.*) The passage of air into a wound of the chest during respiration.

Traumatopy'ra. (Τραῦμα, wound; *πῦρ, fever.*) Same as *Traumatic fever*.

Traumatosep'sis. (Τραῦμα, a wound; *σήψις, putrefaction.*) Same as *Hospital gangrene*.

Traumatosis. Same as *Traumatism*.

Trav'ail. (Earlier form of *travel*.) Parturition. Also, to suffer the pangs of childbirth.

Tray. A flat, shallow vessel for holding instruments.

Tread. *Cicatricula.* The germinating point of a fecundated egg.

Treadler's cramp. A professional neurosis.

Treat. To manage disease by the exhibition of remedies.

Trecho'ma. Same as *Trachoma*.

Trelat's meth'od. The administration of 2 to 4½ grammes of chloral hydrate and 10 to 20 grammes of syrup of morphia in 60 grammes of water, repeating the dose in fifteen minutes, and following by the administration of chloroform anæsthesia.

Tremato'da. (Τρεματώδης, porous.) An Order of *Entozoa*. Flukeworms, parasitic in the liver and intestinal tract.

Trem'ble. To be affected with trembling.

Trem'bling. Quick and continued vibratory movements.

T. chair. A vibrating chair used in the treatment of paralysis.

T. pal'sy. The same as *Paralysis agitans*.

T., se'nile. Involuntary but uniform contraction of muscles over a limited space, and succeeding each other with excessive rapidity, in old persons generally.

Tremellose'. (L. *tremere*, to tremble.) Jelly-like.

Tremens. See *Delirium*.

Trem'ogram. (L. *tremere*, to tremble; Gr. γράμμα, a writing.) The tracing of tremor made by means of the *Tremograph*.

Trem'ograph. (L. *tremere*, to tremble; γραφείν, to write.) An instrument for making graphic records of tremor.

Trem'or. (L. *tremere*, to shake.) An involuntary trembling or agitation of the body, or some part of it.

T., arsen'ical. A tremor the result of arsenical poisoning.

T. ar'tuum. *Paralysis agitans*.

T. cap'itis. Affecting the muscles of the neck and head.

T. coac'tus. See *T., forced*.

T., contin'uous. A form of tremor like paralysis agitans; but it can be voluntarily controlled, and is liable to intermission.

T., convul'sive. *Paramyoclonus*. The convulsive tremor of Friedreich. A functional neurosis marked by the sudden shock-like character of the muscular contractions, their bilateral symmetry, and the freedom of the extremities. There is no ataxia, paralysis, or anæsthesia; electric irritability is normal; consciousness is unimpaired; the convulsive movements are usually in abeyance during sleep. It generally occurs in males.

T. cor'dis. Palpitation.

T., epilep'toid. Intermittent clonus with tremor.

T., s'brillary. Tremor caused by the consecutive contraction of the components of a muscle.

T., forced. Convulsive movements persistent during repose after voluntary motion.

T., hyster'ic. Uncertain nervous impulses causing tremor in hysteria.

T., inten'tion. Tremor appearing on voluntary movement.

T., intermit'tent. Hemiplegic tremor occurring during voluntary movement.

T., mercu'rial. A peculiar form of tremor consequent on chronic mercurial poisoning. It is sudden or gradual in onset, and may affect the whole body ultimately.

T., mus'cular. Slight, oscillating, rhythmic muscular contractions.

T. potato'rum. *Delirium tremens*.

T., purr'ing. Same as *Purring thrill*.

T. saturni'nus. Lead-poisoning tremor.

T. ten'dinum. Same as *Subsultus tendinum*.

T., vi'bratile. Same as *Fremitus*.

T., voli'tional. A trembling of the entire body during voluntary effort, as observed in multiple sclerosis.

Trem'orless. Free from tremor.

Tremula'tion. (L. *tremulare*, to tremble.) A tremulous condition.

Trem'ulous. Affected with tremor.

T. cata'ract. A hypermature cataract which has shrunk in size, and by so doing stretched the attachment of the lens to the zonule of Zinn, thus causing atrophy of its fibres and imperfections in the attachments of the lens, which therefore shakes as the eye moves.

T. i'ris. Arising from non-support of the iris in aphakia or dislocation of the lens.

Tre'na. Foramen. Vulva.

Tren'delenberg pos'ture. Patient in dorsal posture with the trunk elevated at an angle of about 45°, feet and legs hanging over the end of the table.

Trepan'. (Τρυπάν, to bore.) A trephine. Sometimes a saw.

Also (*v.*), to trephine.

Trepana'tio. See *Trephining*.

T. cor'næ. The operation for conical cornea. A small circular piece of the membrane of Descemet is removed. A hernia protrudes, which is pricked daily till cicatrization is complete.

Trepana'tion. Operation of trephining.

Trepane'. Obsolete form of *Trepan*.

Trepan'ize. To trephine.

Trephine'. (Fr. *tréphine*.) A tube having its edge made into a saw. It is kept *in situ* during the operation by a sharp pin capable of adjustment. It removes a circle of bone from the skull.

Also, to operate with a trephine.

T., brace. A trephine with an ordinary carpenter's brace.

T., con'ical. A trephine with a truncated cone-shaped crown, and provided with oblique ridges on its outer surface to stop the trephine as soon as the bone is perforated.

T., cor'neal. A small circular trephine for the removal of a portion of the cornea.

T., na'sal. An instrument made of a steel shaft ending in a small fenestrated tube, and having a knife or saw edge.

T. of Galt. A form of conical trephine.

T. saw. A small crown saw used by surgeons in trephining.

T., tympan'ic. An instrument made of a small steel shaft ending in a small polished tube, 2 mm. in diameter, with a cutting edge.

Trepidant chair. See *Trembling chair*.

Trepida'tio. (L. *trepidare*, to be agitated.) The state of agitation.

T. cor'dis. Palpitation of the heart.

Trepida'tion. A rhythmic movement of the foot in certain forms of paraplegia and in epilepsy.

Tre'sis. (Τετραίνειν, to pierce.) Wound.

T. cau'sis. See *Burn*.

T. punctu'ra. A punctured wound.

T. vul'nûs. A wound.

T. vul'nûs lacerat'um. A lacerated wound.

T. vul'nûs simp'lex. A cut.

Tresso'ria. Hair covering the mons Veneris.

TRIACETAMIDE—TRICHLORPHENOL

Triacet'amide. $(C_2H_3O)_3N$. Produced by treating acetonitril with acetic anhydride.

Triac'etin. $C_3H_5(C_2H_3O_2)_3$. An oily liquid found in cod-liver oil and in some of the fats.

Triaceton'amine. $C_9H_{17}NO$. Produced by the action of ammonia on acetone.

Triacetyl'ene. The same as *Benzene*.

Triac'id. An acid containing three atoms of replaceable hydrogen.

Triadel'phous. (*Τρεῖς*, three; *ἀδελφός*, a brother.) *Biol.* Applied to stamens that are united by their filaments into three sets.

Triakaidekapho'bia. (*Τριακαίδεκα*, thirteen; *φόβος*, fear.) An insane dread of the number thirteen.

Tri'al. The act of trying or testing.

T. case. A collection of graduated convex and concave lenses, with cylindrical and prismatic glasses, used in testing the refraction of the eye.

T. frame. A frame in which the test-glasses may be fixed.

Tri'al'ate. (*L. tres*, three; *alatus*, winged.) *Biol.* Having three wings.

Triammon'ic. Containing three molecules of ammonia.

Triamyl'amin. $N(C_5H_{11})_3$. Tertiary amine of amyl.

Triam'ylin. $C_3H_5(C_5H_{11})O_3$. A substance produced by heating amyl-alcohol and acrolein with acetic acid.

Trian'drous. (*Τρεῖς*, three; *ἀνήρ*, a male.) *Biol.* Having three stamens.

Tri'angle. (*L. triangulus*.) A three-sided arrangement.

T., Scar'pa's. The upper third of the front of the thigh.

T.s of the neck. Anterior, posterior, digastric or submaxillary, inferior and superior carotid, suboccipital, and supra-clavicular of subclavian are more or less triangular areas bounded by certain muscles, so called for convenience of description.

Tri'arch. (*Τρεῖς*, three; *ἀρχός*, ruler.) *Biol.* A term descriptive of radial fibro-vascular bundles having three rays.

Triatom'ic. (*L. tres*, three; *atomus*, atom.) Consisting of three atoms. Applied to molecules when the atoms are identical. Also, having three hydroxyl groups by which other atoms or radicals may be attached without altering the structure of the rest of the molecule.

Triba'sic. (*L. tres*, three; *basis*, a base.) Having three hydrogen atoms replaceable by basic atoms.

Tribromace'tic ac'id. (*Τρεῖς*, three; *βρώμος*, stench; *L. acetum*, vinegar.) $C_2Br_3HO_2$. A monobasic acid derived from acetic acid.

Tribro'mide. (*Τρεῖς*, three; *βρώμος*, stench.) A compound of bromine analogous to a trichloride.

Tribromophe' nol. $C_6H_5.BrOH$. (Not official.) White crystals, soluble in alcohol. An antiseptic, especially for the intestines. Dose, 1 to 4 grains.

Tribu'tyrin. (*L. tres*, three; *butyrum*, butter.) A compound found in butter. It is liquid, and has a sharp bitter taste. $C_3H_5(O.C_4H_7O)_3$.

Tricap'rin. (*L. tres*, three; *caper*, a

goat.) $C_3H_5(O.C_6H_{11}O)_3$. A substance found in milk and butter.

Tricap'roin. (*L. tres*, three; *caper*, a goat.) $C_3H_5(O.C_6H_{11}O)_3$. A substance found in milk and butter.

Tricap'rylin. (*L. tres*, three; *caper*, a goat.) $C_3H_5(O.C_8H_{15}O)_3$. A substance found in milk and butter.

Tricap'sular. (*L. tres*, three; *capsula*, capsule.) *Biol.* Having three capsules.

Tricar'bon. (*L. tres*, three; *carbo*, carbon.) A radical containing three atoms of carbon.

Tricar'pellary. (*L. tres*, three; *carpellus*, carpel.) *Biol.* Having three carpels.

Tricar'pous. (*Τρεῖς*, three; *καρπός*, fruit.) *Biol.* Bearing three fruits or three carpels.

Trichi'asis. A diseased condition of the edge of the eyelid, in which the cilia look backwards, more or less, so as to come in contact with the cornea. Its most common cause is trachoma in its cicatricial stage.

T., Ho'tt's opera'tion. An incision is carried along the edge of the tarsus furthest from the edge of the lid, and its lips are drawn apart. The fibres of the orbicularis exposed are cut away to lessen the tendency of that muscle to push the lid backward, and sutures are passed through the lower edge of the skin wound, the edge of the tarsus, the upper edge of the skin wound, in that order. The sutures are tied, and the skin is thus attached to a fixed point.

T., Jae'sche Arit's meth'od. The intermarginal space of the lid is divided longitudinally, a crescentic piece of skin of the upper lid is excised, and the two cutaneous edges of the wound drawn together by sutures.

T., Snellen's opera'tion. The skin is incised along the tarsus about 2 mm. from the edge of the lid, the exposed fibres of the orbicularis are removed; a prismatic piece is sawn out, with a knife, from the tarsus. Sutures are passed thus:—Each thread has two needles, of which one is passed through the upper edge of the tarsus, down along its front, in between the skin and the lower part of the tarsus, and then out at the edge of the lid; the second end is similarly passed, the two are tied over a bead, and then fastened to the forehead with a plaster.

Trichid'ium. (*Θρίξ*, hair; pl. *trichidia*.) *Biol.* A delicate hair-like structure supporting the spores of certain Fungi.

Trichil'ia. (*Τρίχηλος*, three-lipped.) A genus of polypetalous plants occurring in tropical Africa and America. The bark and fruits of certain varieties have been used medicinally.

Trichina. (*Θρίξ*, hair; pl. *trichinae*.) A genus of Nematode worms. See *Parasites (Animal)*, *Table of*.

Trichina spiralis. A Nematode worm which, when introduced into the alimentary canal, develops numerous embryos, which migrate into the voluntary muscles of their host.

Trichini'asis. (*Θρίξ*, a hair.) The same as *Trichinosis*.

Trichinif'erous. (*Θρίξ*, hair; *L. ferre*, to bear.) Containing trichinae.

Trichino'sis. The condition of being affected with *Trichina spiralis*.

Trichlorphe' nol. (Not official.) Carbolic acid in which three atoms of chlorine displace three of hydrogen; produced by the action

of carbolic acid on chlorinated lime. White, strong-smelling crystals, soluble in alcohol, insoluble in water. Reported to be a more powerful disinfectant than carbolic acid.

Trichoblast. (Θρίξ, a hair; βλαστός, shoot.) An internal hair like those projecting into the intra-cellular spaces of the stems of some water-lilies.

Trichocar'pous. (Θρίξ, a hair; καρπός, fruit.) *Biol.* Having the fruit covered with hairs.

Trichocla'dose. (Τρεῖς, three; κλάδος, branch.) *Biol.* Trifid or trichotomous.

Trichocyst. (Θρίξ, hair; κύστις, bladder.) A small vesicle containing a thread capable of being rapidly shot out, found in the ectoplasm of the Infusoria and some of the Flagellata.

Trichocyst'ic. (Θρίξ, hair; κύστις, bladder.) Pertaining to, or of the nature of, a hair-cell or *Trichocyst*.

Trichogyne. (Θρίξ, hair; γυνή, a female.) *Biol.* The simplest form of female organ in certain Algæ (*Porphyraceæ* and *Nemalica*) before fertilisation. It consists of a single cell with a lateral hair-like prolongation.

Trichogyn'ic. (Θρίξ, hair; γυνή, a female.) Pertaining to a *Trichogyne*.

Trich'oma. (Τρίχωμα, a growth of hair.) *Biol.* A general term for a plant-hair or hair-like structure; specifically applied to the string of cells or pseudocysts contained in the filament of Algæ of the Sub-class *Nostochineæ*. Also, see *Trichomatosis*.

Trichomaphyte. (Τρίχωμα, a growth of hair; φυτόν, a plant.) A cryptogamic growth which was formerly thought to be the cause of trichomatosis.

Trichomato'sis. A disease of the hair in which it becomes matted together. Also called plica.

Trich'ome. (Θρίξ, hair.) See *Trichoma*.

Trichom'onas. (Θρίξ, hair; μονάς, a monad.) A Genus of Infusorians. See *Parasites (Animal)*, Table of.

Trichomy'ces. (Θρίξ, hair; μύκης, a mushroom.) Synonym of *Trichophyton*.

Trichophore. (Θρίξ, hair; φέρειν, to bear.) *Biol.* (a) The cell or cells immediately supporting a trichogyne. (b) A process of the integument enclosing the base of the bundle of setæ in certain Annelids (*Polychæta*).

Trichophor'ic. (Θρίξ, hair; φέρειν, to bear.) Pertaining to the *Trichophore*.

Trichoph'orous. (Θρίξ, hair; φέρειν, to bear.) *Biol.* Bearing hairs or hair-like structures.

Trichophyt'inous. (Θρίξ, hair; φυτόν, a plant.) Pertaining to the presence of *Trichophyton tonsurans*.

Trichophyton. (Θρίξ, hair; φυτόν, a plant.) A Genus of fungoid vegetable organisms parasitic upon or affecting the hair.

T. tonsu'rans. The cause of *Tinea tonsurans*, or ringworm.

Trichopsia. A form of temporary blindness of central origin, in which scintillating spots appear, attended with vertigo, headache, and migraine.

Trichosporan'gium. (Θρίξ, hair; σπόρος, seed; αγγείον, vessel; pl. *trichosporangia*.) *Biol.* A sporangium having the function of a hair.

Trichospore. (Θρίξ, hair; σπόρος, seed.) See *Conidium*.

Trichoste'ma. (Θρίξ, hair; στήμα, stamen.) A Genus of gamopetalous plants.

Trichothal'lic. (Θρίξ, hair; θαλλός, a green shoot.) *Biol.* Having a filamentous thallus.

Trichot'omous. (Τρίχα, in three; τομός, a piece cut off.) *Biol.* Three-forked.

Trichot'omy. (Τρίχα, in three; τομός, a piece cut off.) Division into three parts.

Trichrom'ate. (Τρεῖς, three; χρώμα, colour.) A compound of a basic oxide with three molecules of chromium trioxide.

Trico'dein. Formed when codeia is acted on by sulphuric acid. It causes vomiting and ptialism when given in full doses to animals.

Tricor'nis. (L. *tres*, three; cornu, horn.) Having three processes or prominences. A descriptive name applied to the lateral ventricles of the brain.

Tricor'nute. (L. *tres*, three; cornutus, horned.) *Biol.* Having three horn-like appendages.

Tricos'tate. (L. *tres*, three; costatus, ribbed.) *Biol.* Having three ribs or costæ.

Tricotyle'donous. (Τρεῖς, three; κοτυληδών, a cup-like hollow.) *Biol.* Having three seed-leaves.

Tricre'sol. (Not official.) It consists of the three cresols, orthocresol, metacresol, and paracresol, isolated and freed from crystallised carbolic acid, neutral oils, pyridine, and naphthalene. Owing to its sameness in composition, which is evidenced in its constant specific gravity, boiling-point, and other physical properties, it has a definite antiseptic strength. It is soluble in water, and has a comparative freedom from toxic action.

Tricresol'amine. (Not official.) A 4 per cent. solution of an equal mixture of ethylene diamine and tricresol. Antiseptic like tricresol, but less irritating. In 1-5th to 1 per cent. solution.

Tricru'al. (L. *tres*, three; crus, leg.) *Biol.* Having three branches from a common centre.

Tricus'pidate. (L. *tres*, three; cuspis, a point.) *Biol.* Tipped with three cusps, or small hard teeth.

Tricyan'ic acid. $C_3N_3O_3H_3$. Cyanuric acid. Obtained from tricyanogen chloride by boiling the latter with water and alkalis. It crystallises from aqueous solutions with two molecules of water in large rhombic prisms.

Triflag'ellate. (L. *tres*, three; flagellum, a whip.) Having three flagella.

Triflor'al, Triflor'ous. (L. *tres*, three; flos, a flower.) *Biol.* Three-flowered.

Trifo'liate. (L. *tres*, three; folium, a leaf.) *Biol.* Three-leaved.

Trifolium. Clover. (Not official.) A fluid extract is made from the dried plant, and from this a syrup, a teaspoonful of which three or four times a day is serviceable in whooping-cough.

Trifo'veolate. (L. *tres*, three; foveola, a little pit.) Having three foveæ.

Trigl'ans. (L. *tres*, three; glans, acorn, nut.) *Biol.* Having three nuts within an involucre.

Trig'on'al. (Τρεῖς, three; γωνία, angle.) *Biol.* Same as *Trigonus*.

Trigon'cerous. (Τρίγωνος, three-cornered; κέρας, horn.) *Biol.* Having three-edged horns.

Trig'onous. (Τρίγωνος, three-cornered.) *Biol.* Three-angled.

TRIGYN—TRIQUINATE

Trigyn. (Τρεῖς, three; γυνή, female.) A plant having three styles

Trigynous. (Τρεῖς, three; γυνή, a female.) *Biol.* Having three pistils.

Trihilate. (L. *tres*, three; *hilum*, a hilum.) Having three hila or scars, as a seed.

Trihydric. (Τρεῖς, three; ὕδωρ, water.) Containing three atoms of hydrogen in the molecule.

Triiodide. (Τρεῖς, three; ἰωδῆς, like a violet.) A compound of iodide like a trichloride.

Trilaminar. (L. *tres*, three; *lamina*, plate.) *Biol.* Three-layered.

Trilineate. (L. *tres*, three; *linea*, line.) *Biol.* Marked with three longitudinal lines.

Trillium erectum. *Bethroot.* United States; Canada. Nat. Order *Liliaceæ*. (Not official.) The rhizome is subglobular, oblong; the lower end is truncate in diameter, flattened, and annulate, light brown externally. It has a spongy parenchyma, and is odourless. Its taste is astringent, bitter, and acrid, containing an acid and a tannin principle. Action, astringent, tonic. Uses, bronchorrhœa, passive hæmorrhages, menorrhagia. Doses of the fluid extract, 1 to 2 drachms; of the tincture, 1 to 4 drachms.

Trilobate. (L. *tres*, three; *lobatus*, lobed.) *Biol.* Three-lobed.

Trilobed. Same as *Trilobate*.

Trilocular. (L. *tres*, three; *loculus*, cell.) *Biol.* Having three chambers.

Triloculate. (L. *tres*, three; *loculus*, a cell.) *Biol.* Same as *Trilocular*.

Trimargarin. A mixture of tripalmitin and tristearin.

Trimas'tigate. See *Triflagellate*.

Trimercuric. Containing three atoms of bivalent mercury.

Trim'erous. (Τρεῖς, three; μέρος, a part.) *Biol.* Having three parts or segments. In threes.

Trimes'ic acid. (C₉H₆O₆.) Formed when mesitylenic and uritic acids are oxidised with a chromic acid mixture.

Trimetallic. Containing three atoms of a metal in each molecule.

Trimethyl. The group (CH₃)₃.

Trimethylamine. N(CH₃)₃. From herring brine. (Not official.) Usually a solution of about 20 per cent. of this compound ammonia in water. Dose, $\frac{1}{2}$ to 1 drachm every few hours. The hydrochlorate is also used. Dose, 2 to 3 grains in pill. It is employed in acute rheumatism, as it lowers the pulse as well as the temperature. It is isomeric with propylamine.

Trimeth'ylene. C₃H₆. A gas obtained by heating metallic sodium and trimethylene bromide.

T-di'amine. A ptomaine obtained from cultures of the comma bacillus on beef broth. It causes violent convulsions and muscle tremor.

Trimethyl'ic. Containing three molecules of methyl.

Trimy'arian. (Τρεῖς, three; μῦς, a muscle.) *Biol.* Applied to such bivalve molluscan shells as present three muscular impressions.

Trimysis'tin. C₃H₅(C₁₄H₂₇O₂). A crystalline substance obtained from butter.

Trinervate. (L. *tres*, three, *nervus*, nerve.) *Biol.* Three-nerved, or having three slender ribs.

Trinerved. Same as *Trinervate*.

Trini'trin. The same as *Nitro-glycerine*.

Trinodal. (L. *tres*, three; *nodus*, knot.) *Biol.* Having three nodes or joints.

Trional. (Not official.) See *Telronal*

Triosteum. Fever-root. United States. Nat. Order *Cuprifoliaceæ*. (Not official.) It has a horizontal rhizome, thick-branched, cylindrical, and knotty; cup-shaped scars on its upper surface; rootlets on its lower side are numerous; it is longitudinally wrinkled. It has a bitter taste and a sickening odour. It yields a bitter principle, soluble in water and alcohol. Action, purgative and emmenagogue. Uses, fevers and amenorrhœa. Dose of the extract, 10 to 15 grains.

Triovulate. (L. *tres*, three; *ovulum*, an ovule.) Having three ovules.

Tripaleolate. (L. *tres*, three; *paleola*, a little straw.) *Biol.* Provided with three paleæ, as the flower of the bamboo.

Tripal'mitin. C₃H₅(O.C₁₆H₃₁O)₃. One of the solid fats of the body

Tripetaloid. (Τρεῖς, three; πέταλον, leaf.) *Biol.* Appearing as if furnished with three petals.

Tripetalous. (Τρεῖς, three; πέταλον, leaf.) *Biol.* Three-petalled.

Triphen'in. C₆H₄.C₂H₅.O.NH(CH₃.CH₂.CO). (Not official.) J. von Mering describes triphenin as a homologue of phenacetin, obtained by heating parphenetidin with tropionic acid. It melts at 120° C. (248° F.), and is soluble in about 2000 parts of cold water. It is therefore considerably less soluble in water than phenacetin or the other commonly used antipyretics and antineuralgics. In cases of headache, migraine, sciatica, &c., it acts promptly but mildly in 7 to 15 grain doses, which may be repeated three or four times in the twenty-four hours.

Tripier's amputation of the foot. This is a modification of Chopart's amputation. A wide horizontal section is made of the os calcis, so that the stump may present a broad and level basis of support.

Tripin'nate. (L. *tres*, three; *pinnatus*, winged.) *Biol.* Three times pinnately compounded.

Tripinnat'ifid. (L. *tres*, three; *pinnatus*, winged; *findere*, to cleave.) Pinnatifid with the segments twice divided in a pinnatifid manner.

Tripinnat'isect. (L. *tres*, three; *pinnatus*, winged; *sectus*, cut.) Parted to the base in a tripinnate manner.

Triplicostate. (L. *tripplus*, threefold; *costa*, rib.) *Biol.* Triplinerved.

Triplinerved. (L. *tripplus*, threefold; *nervus*, nerve.) *Biol.* Denoting a leaf in which two prominent nerves emerge from the middle nerve a little above its base.

Triploblastic. (Τριπλόος, threefold; βλαστός, germ.) Possessing three blastodermic membranes, consisting of epiblast, mesoblast, and hypoblast. Most animals are triploblastic.

Trip'terous. (Τρεῖς, three; πτερόν, a wing.) Having three wings or alæ.

Tripu'pillate. (L. *tres*, three; *pupilla*, pupil.) *Biol.* Having three central spots or pupils close together.

Triquetrous. (L. *triquetrus*, three-cornered.) *Biol.* Three-angled or triangular-prismatic. Applied to certain stems and leaves.

Triquin'ate. (L. *tres*, three; *quini*,

TRIRADIAL--TROPHOLECITHAL

five each.) *Biol.* Divided into three parts or lobes, each of which is subdivided into five.

Trira'dial, Trira'diate. (*L. tres*, three; *radiatus*, rayed.) Radiating in three directions; trifurcate.

Trira'diate pel'vis. Due to mollities ossium or to rickets which has continued after the child could walk. The pelvis is pressed in in the region of the sacrum and of the acetabula.

Trisep'alous. (*L. tres*, three; *sepalum* sepal.) Denoting calyxes which have three sepals.

Trisep'tate. (*L. tres*, three, *septum*, a septum.) Having three septa.

Trise'rial, Trise'riate. (*L. tres* three; *series*, series.) Disposed in three horizontal rows, one above the other.

Trisetose'. (*L. tres*, three; *seta*, a bristle.) Having three bristles.

Trise'tum. (*L. tres*, three; *seta*, bristle.) A Genus of plants belonging to the Order *Graminaceæ*. They are closely related to *Avena*.

T. flaves'cens. A grass having yellow flowers, found in North America, Europe, and Asia.

Trista'chyous. (*Τρεῖς*, three; *στάχυς*, an ear of corn.) *Biol.* Bearing three spikes.

Triste'arin. A compound of glycerin and stearic acid, containing one glycerine molecule to three of stearic acid.

Tristichi'asis. (*Τριστιχία*, a triple row.) A form of congenital distichiasis in which there are three rows of cilia.

Trist'ichous. (*Τρεῖς*, three; *στήχος*, a line, row.) *Biol.* Arranged in three perpendicular rows. Applied to *Phyllotaxy*.

Tristigmatic. (*Τρεῖς*, three; *στήγμα*, a mark.) *Biol.* Having three stigmata.

Tristig'matose. Same as *Tristigmatic*.

Trisul'cate. (*L. tres*, three; *sulca*, a furrow.) *Biol.* Three-grooved.

Trisul'phide. A compound of sulphur analogous to a trichloride.

Trisulphure'tum. A *Trisulphide*.

Tritellu'ride. A compound of tellurium analogous to a trichloride.

Triter'nate. (*L. tres*, three; *ternatus*, arranged in threes.) Applied to a leaf that is thrice compounded on the ternate plan.

Tritici decoctum. Triticum cut small 1 ounce, water 20 ounces; boil ten minutes and strain. Dose, 4 to 8 ounces, three times a day.

T. liq'uidum extrac'tum. Triticum, in No. 20 powder, 10; percolate with water till exhausted, evaporate to 15, and add 5 of rectified spirit. Set aside for forty-eight hours, filter, and make up to 20 with 3 parts of water and 1 of rectified spirit. Dose, 1 to 6 drachms.

Triticin. $C_{12}H_{22}O_{11}$. A gummy material found in *Triticum repens*.

Triticum. Creeping couch-grass. Northern Hemisphere. Nat. Order *Graminaceæ*. (Not official.) The rhizome of *Triticum repens* is used, gathered in the spring and deprived of its rootlets. Action, diuretic, antiphlogistic. Uses, to relieve strangury and thirst in fever, jaundice, chronic bronchitis, gout.

Trit'opin. $C_{42}H_{54}N_2O_7$. An alkaloid obtained from opium.

Tritovum. (*Τρίτος*, third; *L. ovum*, egg.) The third stage of an ovum.

Trito'zo'oid. (*Τρίτος*, third; *ζῶον*, an animal; *ἴδος*, form.) *Biol.* A zooid of the

third generation; the immediate offspring of a deuterio-zooid.

Tri'tyl. (*Τρεῖς*, three; *ὑλη*, matter.) C_3H_7 . The third of the methyl series of hydrocarbon radicals.

T. al'cohol. $C_3H_7.HO$. *Propyl alcohol*.

Tri'tylene. The same as *Propylene*.

Triun'gulin. (*L. tres*, three; *ungula*, a hoof, claw.) *Biol.* The first larval stage of certain beetles (*Meloidæ*).

Triva'lence. (*L. tres*, three; *valere*, to be worth.) The quality of being trivalent.

Triva'lent. (*L. tres*, three; *valere*, to be worth.) Equivalent in combining or displacing power with three monad atoms.

Trival'erin. $C_3H_5(C_5H_9O_2)_3$. A substance found in the oil of marine animals like the seal.

Triva'lve. (*L. tres*, three; *valva*, door.) *Biol.* Applied to a structure having three valves, as a shell.

Triva'lular. (*L. tres*, three; *valvula*, a small valve.) Having three valves.

Triv'ia. (*L. trivius*, of three roads.) The point of intersection of the three semicircular canals of the cochlea.

Triv'ium. (*L. tres*, three; *via*, way; *pl. trivium*.) *Biol.* The three anterior ambulacra of an Echinoderm.

Tri'xis. A Mexican plant resembling rhubarb. The root is employed as a laxative.

Tro'chal organ. The characteristic oral organ of the Rotiferæ.

Trochiferous. (*Τροχός*, wheel; *L. ferre*, to bear.) *Biol.* Provided with a trochal organ.

Troch'iform. (*Τροχός*, wheel; *L. forma*, form.) *Biol.* Having the form of a top-shell.

Troch'lea. A firm fibrous loop through which the tendon of the superior oblique passes in such a way that it can glide upon it. It is placed a little behind the upper and inner margin of the orbit.

Troch'lear nerve. Fourth cranial nerve.

T. paral'ysis. Paralysis of the fourth nerve and the muscle it supplies, the superior oblique.

Trochoph'ora. (*Τροχός*, a wheel, *φέρειν*, to bear.) *Biol.* A peculiar larval stage of certain Vermes, having a characteristic preoral ciliated ring.

Trochosphere. (*Τροχός*, a wheel; *σφαῖρα*, a sphere.) *Biol.* Applied to various invertebrate larvæ bearing a circle of cilia.

Trochospher'ic. (*Τροχός*, wheel; *σφαῖρα*, sphere.) Pertaining to a *Trochosphere*.

Troph'oblast. (*Τροφή*, nourishment; *βλαστός*, a germ.) *Biol.* The outer epiblastic layer of the extra-embryonic somatopleure. A special layer of tissue from which many of the sinuses (uterine) are in all probability formed.

Trophoblas'tic. (*Τροφή*, nourishment; *βλαστός*, germ.) Pertaining to a *Trophoblast*.

Trophocal'yx. (*Τροφή*, nourishment *κάλυξ*, a calyx.) See *Trophosphere*.

Troph'odisc. (*Τροφή*, nourishment *δίσκος*, a disc.) See *Trophosphere*.

Tropholecith'al. (*Τροφή*, nourishment; *λίκιθος*, pulse porridge.) Pertaining to a *Tropholecithus*.

TROPHOLECITHUS—TUBAL

Tropholec'ithus. (Τροφή, nourishment; λείκιθος, pulse porridge.) *Biol.* The food-yolk of a meroblastic egg. See *Morpholecithus*.

Troph'ophore. (Τροφή, nourishment; φέρειν, to bear.) *Biol.* One of the amœboid cells of sponges giving rise to gemmules.

Trophoph'orous. (Τροφή, nourishment; φέρειν, to bear.) Pertaining to trophophores.

Troph'oplasm. (Τροφή, nourishment; πλάσσειν, to mould in clay.) *Biol.* Naegeli's term for the vital substance of the cell, the formative plasm, or morphoplasm, in contrast to the idioplasm.

Troph'oplast. (Τροφή, nourishment; πλάσσειν, to mould or form in clay.) *Biol.* A plastid; a mass of formative plasm.

Trophoso'mal. (Τροφή, nourishment; σῶμα, body.) Nutritive. Pertaining to a *Trophosome*.

Troph'osome. (Τροφή, nourishment; σῶμα, body.) *Biol.* The mass of nutritive zooids of a Hydrozoan. See *Gonosome*.

Trophosperm. (Τροφή, nourishment; σπέρμα, seed.) The portion of an ovary that bears the ovules.

Trophosperm'ium. (Τροφή, nourishment; σπέρμα, seed.) *Biol.* The placenta.

Trophosphere. (Τροφή, nourishment; σφαῖρα, a sphere.) *Biol.* The tissue between the decidua stroma and the blastocyst in *Erinaceus*. See *Trophodisc*, *Trophocalyx*, *Trophoblast*, *Trophospongia*.

Trophospong'ia. (Τροφή, nourishment; σπογγία, a sponge.) *Biol.* The outer or maternal layer of the trophoblast, trophodisc, or trophocalyx.

Trophotropic. (Τροφή, nourishment; τρέπειν, to turn.) *Biol.* Exhibiting trophotropism.

Trophotropism. (Τροφή, nourishment; τρέπειν, to turn.) *Biol.* The term applied by Stahl (1884) to the attraction (positive trophotropism) and repulsion (negative trophotropism) exhibited by certain organic cells to various nutritive solutions; a phenomenon now included under *Chemotaxis* (q. v.).

Trophozo'oid. (Τροφή, nourishment; ζῶον, an animal; εἶδος, form.) *Biol.* Nutritive zooid.

Tropical ab'scess of liver. It results most commonly in a case of dysentery. The trouble is more common in Europeans than natives.

Trop'idin. $C_8H_{13}N$. Produced by the decomposition with hydrochloric and glacial acetic acids of atropine.

Tropoco'caine. *Benzoyl pseudo-tropine*; *Tropsin*. (Not official.) It occurs with cocaine and other bases in the small Java coca leaves, and in some other species: the hydrochlorate is used. It is considered more reliable than cocaine, and produces a longer anæsthesia. A 2 to 3 per cent. solution is used for general purposes. It practically has no mydriatic action.

Trop'sin. The same as *Tropococaine*.

True im'age. The image perceived by the eye which fixes the object in cases where there is binocular double vision.

Truss, Cole's. This truss resembles Salmon and Ody's. It has a cross-strap connecting the pads.

T., fem'oral. A femoral truss is much

lighter than an inguinal, and the spring is lighter.

T., frame. See *T., silver-spring*.

T., hinged cup. A truss for irreducible hernia.

T., in'guinal. This has a pyriform and somewhat elongated pad. The lower part of the pad is inclined downwards to allow for the obliquity of the inguinal canal.

T., rat-tailed. This is a strong inguinal truss, the pad of which terminates in a perineal band.

T., Salm'on and O'dy's. Consists of a semicircular spring with a dorsal and ventral pad.

T., See'ley's. This is a modification of Salmon and Ody's truss. The spring is long, and embraces two thirds of the body.

T., sil'ver-spring. The so-called spring consists of a light band of German silver almost entirely surrounding the pelvis, to the outline of which it is accurately moulded. The band is continuous in front but is open behind, where it terminates in a circular disc which is placed on either side of the spine.

T., steel. A truss made of a bent steel spring.

T., umbil'ical. On the principle of Salmon and Ody's truss, with a dorsal and ventral pad and a spring.

T., Wood's horse'shoe. An ordinary steel spring to which is affixed a pad of box-wood of horseshoe shape. It is claimed that it supports the pillars of the external ring.

Truxillic acid. $C_6H_5O_2$. An acid in three isomeric forms obtained from cocaine.

Try'ma. (Τρύμη, a hole.) *Biol.* A drupe-like fruit, which is commonly two-celled, and has a bony nucleus and a thickish but fibrous epicarp. Example, a hickory-nut.

Tryp'sin. (Τρίψις, a rubbing. Probably because it was first obtained by triturating the pancreas with glycerine.) The proteolytic ferment of the pancreatic juice. It is active in neutral and alkaline media.

Trypsin'ogen. A granular substance in the cells of the pancreas, the antecedent of *Trypsin*.

Tryp'tic. Of, or appertaining to, *Trypsin*.

Tryptonæ'mia. See *Peptonæmia*.

Tryp'tone. The substance formed by the action of pancreatic juice on peptones. Any pancreatic peptone.

Tryptophan. See *Protein chromogen*.

Tsam'ba. The principal cereal product of Tartary, Thibet, and parts of China.

Tse'tse, *Glossina morsitans*. A dipterous insect of South Africa, whose bite is generally fatal to cattle.

Tsin. The same as *Arrack*.

Tu'ba. (L.) A Eustachian or Fallopian tube.

Tu'bage. The introduction of a tube or catheter.

T. of the glot'tis. See *Intubation*.

Tu'bal. Relating to one of the tubular passages in the body; more commonly the Fallopian tube.

T. abor'tion of Bland Sut'ton. Internal rupture of the ovum in extra-uterine gestation, with a pouring out of blood through the fimbriated extremity of the tube into the abdominal cavity.

T. drop'sy. Dropsy of one or both Fallopian tubes.

TUBE

T. mole. A tubal ovum that has been destroyed by hæmorrhage.

T. nephrit'is. Bright's disease.

T. pregn'ancy. The development of the embryo wholly or partially in the Fallopiian tube.

Tube. (L. *tubus*, a tube.) A pipe or hollow cylinder of rubber, glass, bone, silver, &c. A hollow tubular organ. A pipe, canal, or duct conveying fluid or gas.

T., absorp'tion. A glass tube used in Bunsen's method of volumetric analysis of gases. It is graduated and closed at one extremity, and collects gases, which are then conducted to the eudiometer.

T., air-. A bronchial tube.

T., alimen'tary. The alimentary canal.

T., au'ditory. The external auditory canal.

T., auric'ular. The external auditory meatus.

T., auscult'a'tion. A tube for testing the acuteness of hearing. It has three branches, two of which are placed in the patient's ears, the third in the ear of the auscultator. The sound of a vibrating tuning-fork placed in contact with the top of the patient's head will then be transmitted to the observer through the patient's ears.

T., Belli'ni's. The excretory tubes of the kidney opening on the papilla.

T., Bel'locq's. See *Bellocq's sound*.

T., binoc'ular. The tube of a binocular microscope.

T.-breath'er. An animal breathing through tubes.

T.s, bron'chial. The bronchi.

T., calci'g'erous. See *Dental canals*.

T., cap'illary. A tube with a very minute bore.

T., car'diac. The embryonic heart.

T.-casts. Microscopic casts or moulds of uriniferous tubules of the kidneys, observed in the urine in kidney disease. They vary in size, shape, and appearance. Their length ranges up to 200 μ or more; their diameter from 4 μ to 40 μ . They are usually straight, but may be curved, twisted, convoluted, or branched.

T.-casts, blood. Those having blood-corpuscles in the coagulated fibrin, showing tubal hæmorrhage.

T., cer'ebro-medull'ary. See *Canal, central, of cord*.

T., collect'ing. See *Tubule*.

T., commu'n'icating. See *Tubule, communicating*.

T. cult'ures. Bacteriological cultivations in tubes of nutrient media.

T., den'tinal. See *Dental canals*.

T., Depaul's. An instrument similar to Chaussier's, for insufflation.

T., drain'age-. A tube of glass, rubber, or other material, to be inserted into a wound or cavity to allow of the escape of fluids.

T., draw-. The tube which slides within the tube of a microscope.

T.s, egg. See *T.s, ovarian* or *Fallo-pian*.

T., Em'mett's fis'tula. A trumpet-shaped tube for draining a fistula.

T., enterot'omy. A tube used in establishing an artificial anus.

T.s, epithe'lial. Those containing desquamated epithelial cells.

T., Es'bach's. Esbach's albuminimeter. A graduated glass cylinder for estimating the percentage of albumen in urine.

T., Es'march's elas'tic. An elastic tube furnished with a hook and chain, and used to render a limb bloodless.

T., Eusta'chian. See *Eustachian*.

T.s, Fallo'pian. The oviducts.

T.s, fatty. Those containing free fat, found in the degeneration of chronic nephritis.

T., feed'ing. An elastic tube is introduced by the œsophagus into the stomach, and food is passed down through it.

T., Geiss'ler's. An instrument for showing the striæ which are produced by an electric discharge in a highly rarefied medium.

T., germ. A tube formed in the germination of a spore by distension of the endospore.

T.s, gran'ular. Those composed of granular debris of degenerated epithelium or blood-cells.

T., hear'ing. A tube composed of close-textured silk or wool stretched over spiral wire, with an oval ear-piece and a cup-shaped mouth-piece. It is for the use of persons whose hearing is impaired.

T., Hen'le's looped. See *Tubulus*.

T., hepat'ic. The embryonic bile tubules.

T.s, hy'aline. Structureless, transparent, gelatinous moulds, probably formed of coagulated fibrin. Also called *Mucous casts*.

T., intuba'tion. A short hollow cylinder of peculiar shape, having a flange at its upper extremity, which is inserted between the vocal cords in cases of laryngeal obstruction.

T., Ko'belt's. The paroöphoron, the remains of the Wolffian body in the female.

T., laryn'geal. A short hollow cylinder used in intubation.

T., laticif'erous. The ducts of the mammary gland.

T., Lei'ter's. A long flexible tube that can be made to surround the head or a limb, through which hot or cold water is allowed to pass.

T. length. The length of the tube of the microscope at which corrections must be made for the formation of distinct images.

T., Lie'berkuhn's. See *Crypt*.

T., lithot'omy. An instrument introduced into the bladder through the perineum for drainage after cystotomy.

T., lob'ular bron'chial. The smaller lobular bronchial tube.

T.s, Malpi'ghian. See *Tubuli uriniferi*.

T., medull'ary. The neural canal of the embryo.

T., microscop'ic. The metallic cylinder that contains the draw-tube of a microscope.

T., Mie'scher's. Same as *Sarcocystis Miescheri*.

T.s, milk-test'ing. A form of lactometer containing a number of tubes graduated alike, in which different samples of milk can be put for comparison under identical conditions.

T.s, mu'cous. See *T.s, hyaline*.

T., mus'cular. See *Muscle-fibre*.

T., na'sal. A tube used for nasal feeding.

T., nerve. A primitive nerve-fibril.

T., neu'ral. See *T., medullary*.

T., O'Beirne's. A rubber tube for irrigation of the colon.

T., œsopha'geal. A soft flexible tube used for lavage of stomach.

TUBER -TUBERCLE

T.s of Fer'rein. Same as *Tubuli of Ferrein*. A prolongation of the striæ of the Malpighian pyramids into the cortex of the kidney. They are also known as the medullary rays.

T.s, oil'y. See *T.s, fatty*.

T., olfac'tory. The same as *Caruncula mammillaris*.

T., otopharyn'geal. See *Eustachian tube*.

T.s, ova'rian. Ova chains. Germinal epithelium in a developing ovary.

T.s, pep'tic. The gastric glands.

T.s, perforating. *Sharpey's fibres*.

T., perine'al. See *T., lithotomy*.

T.s, Pfäü'ger's. See *T., ovarian*.

T.s, Pfäü'ger's salivary. Ducts of the acini of the salivary glands.

T., pitu'itary. The *Hypophysis cerebri*.

T.s, pulp. Tubular masses of the proper tissue of an organ.

T.s, pus. Those having pus-corpuseles entangled in the coagulated fibrin.

T., pylor'ic. The pyloric glands.

T.s, receiv'ing, of kid'ney. See *Tubuli uriniferi*.

T., rec'tal. An elastic rubber tube introduced into the rectum to give exit to the intestinal gases, or for the administration of enemata.

T.s, respi'ratory bron'chial. See *Bronchioles*.

T., Ribe'mont's laryn'geal. A tube used for insufflation in asphyxia neonatorum.

T., safe'ty. A small part of the Eustachian tube which is slightly open, and permits equalisation of pressure in the tympanum from the pharynx, and also allows a recoil of air from the tympanum when the tympanic membrane is suddenly driven in, as in explosions.

T.s, sem'inal. The tubules of the testicle. Moulds of the seminal tubules, recognised by the presence of spermatozooids.

T., speak'ing. See *T., hearing*.

T., spray. An apparatus consisting of two tubes so adjusted that a current of air or steam through one will cause a spray to issue through the other.

T., stom'ach. See *T., cesophageal*.

T., straight. See *Tubuli uriniferi*.

T., Toyn'bee's ton'ic met'al. A tube used for washing out the mastoid cells and the tympanum.

T., trache'al. A tracheal cannula.

T., tracheot'omy. A tube used after tracheotomy, made of silver, rubber, or vulcanite. It usually consists of an inner and outer tube to facilitate cleaning.

T., urinif'erous. See *Tubuli uriniferi*.

T., urinip'arous. See *Tubuli uriniferi*.

T., u'terine. A tube used for washing out the uterus.

T., vis'ceral. The alimentary canal.

T., vo'cal. That part of the air-passages above the inferior ligaments of the larynx, including the passages through the mouth and nose.

T., Voltol'i'ni's. A small tube used to keep open an incision in the tympanic membrane.

T.s, wax'y. Those casts giving the amyloid reaction.

Tu'ber. (L.) A lump or swelling *Biol.* A thickened portion of an underground stem.

T. anatom'ica. A protuberance, tumour, or swelling.

T. ante'rius. See *T. cinereum*.

T. atlo'i'do-occipita'lë. The *Rectus capitis posticus minor*.

T. bruma'le. See *T. cinereum*.

T. calca'neum. See *T. calcis*.

T. cal'cis. The tuberosity of the os calcis.

T. cervi'num. *Blaphomyces granulatus*.

T. ciba'rium. *Lycoperdon tuber*.

T. cine'reum. A conical projection from the lower part of the cerebrum, just behind the optic chiasma, and in front of the corpora albicantia.

T. coch'leæ. The promontory of the tympanum.

T. cor'poris callo'si. See *Corpus callosum*.

T. Eusta'chii. A slight protuberance below the fenestra ovalis on the inner wall of the tympanum.

T. fronta'lë. Frontal protuberance.

Tu'bera genicula'ta. The internal and external geniculate bodies.

T. gutturo'sum. See *Goitre*.

T. is'chii. The tuberosity of the ischium.

T. is'chio-trochante'rium. *Quadratus femoris*.

T. maxil'læ. Tuberosity of the maxilla.

T. ni'grum. *Lycoperdon tuber*.

T. omenta'lë hep'atis. Tubercle on the superior border of the lobe of the liver, opposite to the upper curvature of the stomach.

T. parieta'lë. The parietal eminence.

T. ra'dii. The tuberosity of the radius.

T. supracondyloid'eum. An eminence opposite the distal end of the internal border of the linea aspera.

T. supraorbita'lë. The superciliary ridge.

T. syphilit'icum. See *Syphiloma*.

T. tym'pani. See *T. Eustachii*.

T. val'vulæ (cerebelli). A small prominence on the anterior extremity of the inferior vermiform process.

Tu'bercle. (L. *tuberculum*, a small swelling.) A small projection of bone; a small tuberosity. A hard, circumscribed, rounded elevation or nodule on the surface of a body or an organ. A small, hard, granular body of varying size, composed of granulation cells, which often undergo caseation; the characteristic lesion of tuberculosis. *Biol.* Applied specifically to the enlargements found on the roots of leguminous plants.

T., adduc'tor. A slight protuberance at the lower end of the internal supracondyloid line of the femur, giving attachment to part of the adductor magnus.

T., amygdaloid. A prominence of the roof of the descending cornu of the lateral ventricle.

T., anatom'ical. A wart-like growth seen on the hands of those habitually engaged in dissection. Also called *Necrogenic verruca*.

T., ante'rior, of atlas. The protuberance on the ventral arch of the atlas.

T., ante'rior, of calca'neum. A prominence on the anterior inferior surface of the calcaneum.

T., ante'rior, of the op'tic thalamus. A rounded prominence of the thalamus at its anterior extremity.

T., ante'rior, of the ver'tebrae. The

TUBERCLE

anterior part of the transverse process of a vertebra.

T., ante'rior, of vagi'na. A rough eminence of the upper part of the vaginal orifice behind the meatus urinarius.

T.s, ante'rior pair of. The anterior pair of the corpora quadrigemina.

T. bacillus. The bacillus characteristic of tuberculosis.

T., black. *Melanotic sarcoma.*

T., can'cerous, of the face. *Lupus.*

T., carot'id. The anterior tubercle of the sixth cervical vertebra.

T., Chas'saignac's. See *T., carot'id.*

T., co'noid. A roughness of the clavicle for the attachment of the conoid ligament.

T., cu'neate. The slight eminence of the cuneate funiculus on a level with the adjoining clava.

T., cune'i'form. See *T., painful sub-cutaneous.*

T., Dar'win's. A nodule at the edge of the helix of the human ear, believed to be the vestige of the point of the quadrupedal pointed ear.

T., del'toid. An eminence on the clavicle at the inner side of the surface for the attachment of the deltoid. A roughness on the humerus for the insertion of the deltoid.

T., exter'nal. The outermost of the three tubercles on the transverse processes of some of the dorsal vertebrae.

T., exter'nal supra-con'dyloid. The tubercle on the hinder part of the external condyle, giving origin to the plantaris.

T., fi'brous. A tubercle modified by the growth of fibrous tissue in it.

T.s, geni'al. The tubercles on the inside of the symphysis of the mandible for the attachment of the genio-hyoid and genio-hyoglossi muscles.

T., gen'ital. One of the first appearances of the external genital organs in the foetus.

T., great'er. The greater tuberosity of the humerus.

T., grey, of Rolan'do. A prominence between the prolongation of Burdach's column and the postero-lateral groove.

T., hy'aline. A tubercle the reticulum of which has undergone hyaline degeneration.

T., infe'rior. The lowest of the three tubercles on the transverse process of lowest dorsal vertebrae.

T., infragle'noid. Rough ridge beneath the glenoid fossa of the scapula.

T., lach'rymal. A small projection of the maxilla at the facial end of the nasal duct.

T., lam'inated. The same as the nodule at anterior pointed termination of the inferior vermiform process.

T., lep'rous. The tubercles found in tubercular leprosy.

T., less'er, of the hu'merus. The lesser tuberosity.

T., Lis'franc's. See *T., scalene.*

T., lym'phoid. A tubercle hidden by leucocytes.

T., mam'millary. See *Corpora mam-millaria.*

T.s, men'tal. The same as *T.s, geni'al.*

T., mili'ary. A small globular tubercle in the stroma of an organ, caused by tuberculosis.

T., mu'cous. See *Condyloma.*

T., nu'chal. The spinous process of the seventh cervical vertebrae.

T.s, ob'turator. Two tubercles, inferior and superior, limiting the obturator groove of the pubic bone.

T., oc'ular. The projection formed by the globe of the eye.

T. of a rib. The articular tubercle for the vertebral transverse process.

T. of clav'icle. See *T., conoid.*

T. of cu'boid. A tubercle on the plantar surface of the cuboid.

T. of Gray. See *T., mili'ary.*

T. of Low'er. A small eminence on the wall of the right auricle, between the orifices of the pre-cava and inferior post-cava.

T.s of Montgom'ery. The prominences on the surface of the areola of the nipple. They are formed by the sebaceous glands.

T. of Rolan'do. Tubercle formed by the blending of the lateral crescentic portions of the grey matter of the medulla oblongata with the fibres of the corpus restiformis.

T. of Santorini. A small eminence on the mucous surface of the larynx, due to the prominence of the cartilage of Santorini.

T. of the calca'neum. A tubercle on the external surface of the os calcis.

T. of the epiglottis. Same as *Cushion of the epiglottis.*

T. of the fe'mur. A tubercle on the neck of the femur, on the anterior surface near its junction with the great trochanter.

T. of the ra'dius. The bicipital tuberosity of the radius.

T. of the scaph'oid. A projection on its outer surface, giving attachment to the annular ligament.

T. of the thy'roid car'tilage. A tubercle on the posterior and upper part of the external surface of the thyroid cartilage.

T. of the tib'ia. The tubercle serving for the insertion of the quadriceps extensor femoris.

T. of the ul'na. The rough area at the base of the coronoid process, for the insertion of the brachialis anticus.

T. of the zygo'ma. A tubercle at the junction of the anterior root with the zygoma, giving attachment to the external lateral ligament of the temporo-mandibular joint.

T., olfac'tory. The same as *Caruncula mam-millaris.*

T.s, op'tic. *Tubercula quadrigemina.*

T., pain'ful subcuta'neous. A painful tubercle of the subcutaneous tissues near the joints. The nature of the affection is uncertain.

T., papill'ary, of the liv'er. A projection of the lobus Spigelii into the transverse fissure.

T.s, pearly. *Milium.* Small whitish, non-inflammatory elevations situated on the upper part of the corium.

T., pharyn'geal. The origin of the superior and middle constrictors from the basilar portion of the occipital bone.

T.s, pi'siform. The *Corpora mam-millaria.*

T., plan'tar. A tubercle on the first metatarsal bone, giving insertion to the peroneus longus.

T., poste'rior, of a ver'tebra. A tubercle on the posterior end of the lumbar and several of the thoracic vertebrae.

T., poste'rior, of the at'las. A tubercle

TUBERCULA—TUBERCULOSIS

in the median line on the posterior arch of the atlas.

T., poste'rior, of the op'tic thal'a-mus. A tubercle on the ventricular surface of the thalamus, toward the posterior end.

T., poste'rior, of the thal'amus. The same as *Pulvinar*.

T.s., poste'rior pair. The *Posterior corpora quadrigemina*.

T., pter'ygoid. A tubercle at the insertion of the internal pterygoid on the mandible.

T., retrograde. A tubercle that has undergone calcification.

T.s., scalene'. The eminences on the first and second ribs for the attachments of the three scalene muscles.

T., sec'ondary. A tubercle that sometimes follows the breaking down of a caseous mass, as in catarrhal pneumonia.

T., subcuta'neous pain'ful. Fibromata found in the deeper layers of the skin. Tender.

T., supragle'noid. Tubercle giving origin to the long head of the biceps above the glenoid fossa.

Tu'bercle'd. *Tuberculate*. Affected with tubercles.

Tuber'cula. The plural of *Tuberculum*.

T. Aran'tii. The small fibrous nodules on the middle of the convex edge of the semilunar valves of the pulmonary artery and the aorta.

T. are'olæ. See *Mamma*.

T. cer'e'br'i. Tubercles of the brain.

T. dolor'o'sa. See *Tubercle, subcutaneous painful*.

T. gonorrhoe'ica. *Gonorrhœa impura*.

T. hep'atis. Tubercles of the liver.

T. hypoglos'si. The same as *Trigonum hypoglossi*.

T. intestino'rum. Tubercles of the intestines.

T. malle'i. The same as the *Processus brevis of the malleus*.

T. nervo'rum nodo'sa. *Nervous ganglia*.

T. par'væ du'ræ ma'tris. *Pacchionian bodies*.

T. pella'græ. *Pellagra*.

T. peritonæ'i. Tubercles of the peritoneum.

T. pu'bis. The *Pubic spine*.

T. quadrigem'ina. The *Corpora quadrigemina*.

Tuber'cular. Formed like a tubercle; shaped into a little tuber or tuberosity; characterised by the presence of tubercles. *Tuberculous*.

T. consump'tion. *Pulmonary phthisis*.

T. diath'esis. A constitutional predisposition to tuberculosis.

T. gum'mata. See *Gumma*.

T. laryngi'tis. *Laryngeal phthisis*.

T. lep'rosy. Leprosy with maculæ or nodules of varying size on the body, especially on the face.

T. meningi'tis. Tubercular inflammation of the meninges of the brain, usually found in children.

T. periton'i'tis. A chronic form of peritonitis caused by tuberculosis.

T. phthi'sis. Tuberculosis, especially pulmonary.

T. pro'cess. An elevation of the tip of a transverse process of a vertebra supporting the

facet that articulates with the tubercle of the corresponding rib.

T. spu'tum. The sputum of one suffering from pulmonary phthisis, usually containing a large number of tubercle bacilli.

Tuber'cularize. To affect with *Tuberculosis*.

Tuber'cularly. With regard to a tubercle or tubercles.

Tuber'culate. The same as *Tubercular*.

T. sarco'ma of Aberne'thy. Tubercles firm, round, and clustering; pea size, yellowish or brown-red. When large they are disposed to ulcerate and produce a painful, malignant, and often fatal sore.

Tuber'culated. The same as *Tuberculate*.

T. liv'er. *Cirrhosis*.

Tubercula'tion. The formation of tubercles. A tubercular part or organ.

Tubercule. A tubercle or tuberculum.

T. ciner'i'tious. The *Tuber cinereum*.

Tuber'culi. The plural of *Tuberculus*.

Tuber'culiform. Shaped like a tubercle.

Tuber'culin. Koch's lymph. It is a brownish neutral liquid, slightly frothing, soluble in water, consisting of ptomaines of the tubercle bacilli. It owes its almost lethal activity probably either to a ptomaine, a toxalbumin, or a globulin.

Klebs and Hunter have endeavoured to eliminate from tuberculin its dangerous elements. Hunter has prepared certain modifications, of which he has named the two principal respectively B and CB. Trudeau has concluded that modification CB contains much less of the remedial agent than tuberculin, and is quite as dangerous; whereas modification B is as efficacious as tuberculin, and free from some of its dangers.

The first maximum dose to be injected is 0.001 c.c. (or $1\frac{1}{2}$ minims) of a 1 per cent. solution at intervals of one day; then to be increased gradually to 0.1 c.c. (about $1\frac{1}{2}$ minims) of 1 c.c. (16 minims) of a 10 per cent. solution.

Antiphthisin is Professor Edwin Klebs' tuberculin in a purified form, and is now on its trial for tuberculosis.

Tuber'culinized. Submitted to the action of tuberculin.

Tuberculinose'. A term applied to some of the modifications of tuberculin.

Tuberculi'tis. Inflammation of the tissues surrounding a tuberculous nodule.

Tuberculiza'tion. The formation of tubercles, or the condition of becoming tubercled.

Tuber'culize. The same as *Tubercularize*.

Tuberculo'cidin alex'in. A precipitate obtained by Klebs from Koch's tuberculin by precipitating the noxious substances with platinum chloride, the albumoses remaining in solution.

Tuber'culoid. *Tuberculiiform*.

Tuberculose'. *Tuberculate*.

Tuberculosed'. Affected with tuberculosis.

Tuberculo'sis. A specific disease affecting almost any part of the body, associated with the formation of tubercles and the presence of the tubercle bacillus.

T., acute mil'lary. An acute affection

TUBERCULOTIC—TUBERCULUM

characterised by the formation of tubercles in large numbers in the various organs of the body, accompanied with grave symptoms and an almost invariably fatal result.

T., a'vian. Tuberculosis affecting birds.

T., bo'vine. Tuberculosis in cattle.

Pearl disease.

T., cer'ebral. Tubercular meningitis, or tuberculosis of the brain itself.

T. cu'tis. *Lupus vulgaris*.

T., hæmatog'enous. Miliary tuberculosis affecting both lungs, or a greater portion of one only; or it may be localised tuberculosis, characterised by the appearance of tubercles in a limited area of the lung.

T., inoc'ulated. Tuberculosis caused by direct inoculation of tuberculous material.

T., intes'tinal. Tuberculosis affecting the intestinal tract.

T., laryn'geal. The same as *Tubercular laryngitis*.

T. of cho'roid. May be disseminated or solitary.

T. of conjuncti'va. A tuberculous ulcer surrounded by small nodules. May be primary or secondary.

T. of iris. May be disseminated or solitary. Rare. Secondary to a tuberculous focus in some other organ.

T. of the lach'rymal sac. Occurs secondarily to tuberculosis of the conjunctiva or the nasal mucous membrane.

T., parasitic. Tubercular growths produced by parasitic nematodes.

T., pseu'do-. A disease producing lesions similar to those of tuberculosis, but due to a pleomorphic organism, the *Cladothrix asteroides* (Eppinger).

T., pul'monary. Tuberculosis of the lungs, popularly called *Consumption*.

T., re'nal. Tuberculosis affecting the kidneys.

T., sur'gical. Tuberculosis of parts amenable to surgical treatment.

T., urogen'ital. Tuberculosis, apparently primary to the urogenital tract.

T. zooglo'eica. See *T. pseudo-*.

Tuberculo'tic. Tubercular.

T. depos'it. Tubercle.

T. disease'. See *Tubercle*.

T. disease' of the lungs. *Phthisis pulmonalis*.

T. dust. Fine white or yellow minute points of tuberculous matter, occurring in profusion like dust.

Tuberc'ulous. Affected with tubercles. Tuberculate. Pertaining to, or of the nature of, *Tuberculosis*.

T. arthri'tis. Tuberculosis of a joint.

T. inflamma'tion. Inflammation resulting from the presence of the tubercle bacillus.

Tuber'culum. A small tuberosity. A hard, circumscribed, rounded elevation of small size on the surface of an organ or of the body.

T. adeno'sum. (Ἀδέν, a gland.) *Mol-luscum contagiosum*.

T. annula'rë. The *Pons Varolii*.

T. atlan'tis anti'cum. (L. *atlas*, atlas; *anticum*, anterior.) Prominence on anterior arch of atlas, giving attachment to longus colli muscle.

T. atlan'tis post'i'cum. (L. *atlas*, atlas; *posticum*, posterior.) Prominence on posterior

arch of atlas, taking place of spinous process of other vertebræ.

T. calca'neum. (L., the heel.) Tubercle of calcaneum.

T. capit'uli fib'ulæ latera'lë. (L. *caput*, head; *fibularis*, fibular.) Prominence on head of fibula giving rise to peroneus longus.

T. carot'icum. (Καρωτίς, producing sleep.) Carotid tubercle.

T. cartilag'inis thyroid'eæ. (L. *cartilago*, cartilage; Gr. *θυρίος*, an oblong shield.) Triangular prominence at upper border of thyroid cartilage.

T. cauda'tum. (L. *cauda*, a tail.) Caudate lobe of liver.

T. cine'reum. (L. *cinereus*, ashen grey.) A mass of cineritious substance at the top of the calamus scriptorius, continuous with the same substance in the cord, and on the sides with the corpus restiforme.

T. cine'reum Rolan'di. An eminence of grey matter situated between the optic tracts and the corpora albicantia. It forms part of the floor of the third ventricle, and is connected with the surrounding parts of the cerebrum.

T. colli fem'oris infe'rius. (L. *col*, neck; *femur*, thigh-bone; *inferius*, lower.) Tubercle of femur.

T. colli fem'oris super'ius. Prominence at upper end of intertrochanteric line.

T. cos'tæ. (L. *costa*, a rib.) Costal tubercle.

T. cunea'tum. (L. *cuneus*, a wedge.) Protuberance in median cuneate funiculus of medulla oblongata.

T. delto'id'eum. (Like the letter Δ [δέλτα and εἶδος].) Deltoid tubercle of clavicle.

T. dolor'o'sum. A small painful nodule.

T. ephip'pii. (Επίππιον, a saddle-cloth.) Olivary body.

T. epiglottid'eæ. (Ἐπί, on; γλωττίς, glottis.) Prominence on epiglottis.

T. exter'num hu'meri. (L.) Greater tuberosity of humerus.

T. exter'num mandib'uli. (L.) Prominence on inferior border of lower jaw.

T. fas'ciæ denta'tæ. (L. *fascia*, a band; *dentatus*, toothed.) Prominence in fascia dentata.

T. fib'ulæ. Styloid process of fibula.

T. ileopectin'eum. (L. *pecten*, a comb.) Pubic spine.

T. il'i ante'rius i'mum. (L., undermost.) Eminence occasionally found on upper surface of ilium, which forms a groove with the ileopectineal prominence for passage of femoral vessels.

T. im'par. (L., dissimilar.) Small elevation from which the tongue develops, appearing about fifth week of embryonic life, behind the inferior maxillary arch.

T. inter'num. Lesser tuberosity of humerus.

T. jugula'rë. (L.) Jugular tubercle.

T. lab'ii superio'ris. Teat-like projection in middle of upper lip in nursing babies.

T. lachryma'lë. (L.) See *Lachrymal puncta*.

T. latera'lë ta'li or media'lë ta'li. (L.) Small eminence on posterior border of astragalus bounding sides of groove for flexor longus pollicis.

T. linea'rum. (L.) Ridge below the occiput, from which proceed inferior curved lines.

TUBERCULUS—TUBIPAROUS

T. Lisfranc'i. Tubercle on first rib, giving attachment to scalenus anticus.

T. Low'eri. *Tubercle of Lower.*

T. majus. (L.) Greater tuberosity of humerus.

T. mandibula'rë. (L.) Articular eminences of inferior maxillary bone.

T. menta'lë internum. (L.) Genial tubercle.

T. minus. (L.) Lesser tuberosity of humerus.

T. of a rib. The elevation where the rib articulates with the tip of the transverse process of a dorsal vertebra.

T. olfacto'rium. (L.) Olfactory tubercle.

T. os'sis cuboid'eï. (L.) Tubercle of cuboid.

T. os'sis il'i ante'rius i'mum. (L.) Ileo-pectineal spine.

T. os'sis multan'guli majo'ris. (L. *multus*, many; *angulus*, an angle, corner.) Ridge on trapezium bounding externally groove for tendon of flexor carpi radialis (or navicular bone.)

T. os'sis navicula'ris. (L. *navicula*, a skiff.) Tubercle on palmar surface of scaphoid (or navicular bone).

T. os'sis pu'bis. Spine of pubes.

T. papilla'rë. (L.) Papillary tubercle of liver.

T. pharynge'um. (L.) The tubercle from which springs the medial band connecting the pharynx with the occipital bone.

T. poste'rius or **postic'um.** Greater tuberosity of humerus.

T. prosta'tæ. (L.) Middle lobe of prostate.

T. pu'bicum or **pu'bis.** Pubic spine.

T. Rolan'di. *Tubercle of Rolandi.*

T. Santorinia'num. Small eminences made by cartilages of Santorini in the larynx.

T. scale'ni. (Σκαληνός, uneven.) Scalene tubercle.

T. seba'ceum. (L.) *Milium.*

T. sell'æ. (L.) Olivary body.

T. spino'sum. (L.) Spinous process of sphenomaxillary bone.

T. supe'rius. (L.) Mammillary processes.

T. supracondyloid'eum exter'num and **media'lë.** (L. *supra*, above; Gr. *κόνδυλος*, a knuckle.) External and internal supracondyloid tubercle.

T. supracotyloid'eum. (L. *supra*, above; Gr. *κότυλος*, a cup; *είδος*, like.) Prominence at junction of acetabular margin and anterior border of ilium.

T. supratrag'icum. (L.) Small cartilages occasionally entering into formation of the tragus.

T. vagin'æ. Prominence on anterior wall of vagina.

T. verruco'sum. A callosity often found on the great toe at the metatarso-phalangeal joint.

T. Wrisbergia'num. Whitish elevations on inner surface of aryteno-epiglottidean fold produced by cartilages of Wrisberg.

T. zygomatic'um. A prominence of the zygoma on its lower border near the union of the maxilla and zygoma.

Tuber'culus. *Entomol.* A supplementary eye.

Tuberiferous. Producing tubers.

Tuberiform. Tuber-shaped.

Tuberoid. (*Tuber*, a swelling; Gr. *είδος*, like.) Resembling a tuber.

Tubero'se. See *Tuberosus*.

Tuberos'ity. (L. *tuberosus*, tuberos.)

A large rough projection or protuberance of bone, generally serving for the attachment of a muscle.

T., bicip'ital. A rough surface for the insertion of the biceps below the head of the radius.

T., cos'tal. A rough impression on the inferior surface of the clavicle for the attachment of the rhomboid ligament.

T., glute'al. The same as the *Gluteal ridge*.

T., greater, of the hu'merus. A rough projection on the outer side of the head of the humerus.

T. il'i'ac. Tuberosity on the ilium for the attachment of the sacro-iliac ligament.

T., less'er, of the hu'merus. The small prominence on the front of the head of the humerus to the inner side of the bicipital groove.

T., max'illary. A rounded eminence at the lower part of the zygomatic surface of the maxilla, especially prominent after the growth of the third molars.

T. of maxil'la. The maxillary tuberosity on the posterior surface of the maxilla.

T. of the is'chium. A thick, downward projection of the ischium, on which the body rests in a sitting posture.

T. of the os calc'is. The internal and external prominences on the plantar surfaces of the os calcis.

T. of the pal'ate. *T., pyramidal.*

T. of the scaph'oid. Eminence for the insertion of the tibialis anticus.

T. of trape'zium. Tuberosity on the outer border of the groove for the extensor carpi radialis.

T., pu'bo-ischiatic. Rough surface at the junction of the pubes and ischium.

T., pyram'idal. Tuberosity between the pterygoid plates of the palate bone.

T., scap'ular. *Coronoid tubercle.*

T., ul'nar. Ridge at the angle of junction of the coronoid process with the shaft of the ulna.

Tub'eros. Covered with wart-like or knobby prominences.

T. angio'ma. A subcutaneous form of angioma resembling at times a lipoma.

Tubic'ulous. (L. *tuba*, tube; *colere*, to inhabit.) *Biol.* Inhabiting a tube.

Tubifa'cient. (L. *tuba*, a tube; *facere*, to make.) *Biol.* Tube-forming, as certain polyps and worms.

Tubif'eros. (L. *tuba*, a tube; *ferre*, to bear.) Bearing or having tubes.

Tubiflo'rous. (L. *tuba*, a tube; *flos*, a flower.) *Biol.* Having tubular flowers.

Tubiform. (L. *tubus*, a tube; *forma*, form.) Tubular; canalicular.

Tubil'icous. (L. *tubulus*, a tube; *colere*, to dwell.) Inhabiting a tubule.

Tubilin'gual. (L. *tuba*, tube; *lingua*, tongue.) *Biol.* Having a tubular tongue.

Tubina'rial. (*Tuba*, tube; *nares*, nose.) Having tubular nares.

Tubip'arous. (L. *tuba*, tube; *parere*, to produce.) Producing tubes or tubules.

TUBO-ABDOMINAL—TUMOUR.

Tubo-abdom'inal. Pertaining to a Fallopian tube and the cavity of the abdomen.

Tubo-ova'rian. Pertaining to the ovary and Fallopian tube.

Tubo-u'terine. Pertaining to the Fallopian tube and the uterus.

Tubova'rian. The same as *Tubo-ovarian*.

T. pregn'ancy. A form of extra-uterine gestation which occurs first in the Fallopian tube, which after rupture becomes abdominal. A portion of the sac projects into the uterus, and has on the outer side the round ligament and the greater portion of the tube.

Tu'bular. (L. *tubulus*, a small pipe.) Tubuliform; fistulous. Having the shape of a tube.

T. adeno'ma. An adenoma after the type of the tubular glands.

T. epithelio'ma. A carcinoma found in the salivary glands, the cell-masses extending in tubular prolongations.

T. glands. Glands in which the secreting gland structure is tube-like or cylindric.

T. loose'ness. The same as *Enteritis membranosa*.

T. mem'brane. See *Neurilemma*.

T. pneumo'nia. The same as *Lobular pneumonia*.

T. râle. One produced in a bronchial tube.

T. respira'tion. The sound heard when there is solidified lung between the bronchi and the stethoscope of the observer.

Tubular'ity. The quality of a tubular sound.

Tubulate. Formed like a tube.

Tubule. A small tube. *Anat.* Any minute tube-shaped structure.

T., communicat'ing. That part of a uriniferous tubule between the distal convoluted and the straight uriniferous tubules.

Tu'buli. The plural of *Tubulus*.

T. lactif'eri. (L. *lac*, milk; *ferre*, to carry.) The excretory ducts of the mammæ, 15 to 20 in number.

T. of Fer'rein. The tubules composing the pyramids of Ferrein in the kidney.

T. rec'ti. The short straight sections of the seminiferous tubules, situated between the convoluted secreting tubules and the rete testis.

T. semini'eri. (L. *semen*, seed; *ferre*, to carry.) The tubular threads, arranged in fasciculi, which compose the substance of the testicle. They are lined with epithelium, from which the spermatozoa develop, and are about 1-200th inch in diameter.

T. urini'eri. (L. *urina*, urine; *ferre*, to carry.) The urinary tubes of the kidneys. Beginning at the Malpighian corpuscles, each forms—1. A constricted neck. 2. A wide canal, called the proximal or first convoluted tubule. 3. A spiral tube, called the spiral tubule of Schachowa. 4. The narrow, straight tube called the descending limb of Henle's loop. 5. The ascending limb of Henle's loop. 6. The irregular tubule. 7. The distal or second convoluted tubule. 8. The curved tubule. 9. The straight collecting tubule opening at the apex of a pyramid.

Tubulic'olous. (L. *tubulus*, a tubule; *colere*, to inhabit.) Inhabiting a tubule.

Tubuliferous. (L. *tubulus*, tubule;

ferre, to bear.) Having tubules or tube-like ovipositors.

Tubulifo'rous. (L. *tubulus*, a little tube; *flos*, flower.) *Biol.* Having the heads composed of tubular flowers.

Tu'buliform. (L. *tubulus*, tubule; *forma*, form.) Shaped like a tubule.

Tu'bulose. Same as *Tubular*.

Tu'bulus. (L. *tubulus*, a small tube; pl. *Tubuli*.) *Biol.* (a) A small tube-like organ; a tubule. (b) The ovipositor of certain insects.

See also *Cornu, neck*.

Tu'bus. (L. Pl. *Tubi*.) A tube. *Biol.* The basal portion of the labium of the bee.

T. annula're. The pons Varolii.

T. medulla'ris. The same as *T. vertebralis*.

T. proximus convolu'tus. See under *Tubulus*.

T. vertebra'lis. The spinal canal; the hollow of the vertebral canal containing the spinal cord.

Tuf'nell's band'age. An immovable bandage, stiffened with a paste of white of egg and flour. It is also called egg-and-flour bandage.

T.'s diet, or treat'ment. See *Diet*.

T.'s meth'od. The treatment of aneurism by absolute rest and low or dry diet.

Tuft. A bunch of soft flexible things fixed at the base. A rete; a glomerulus.

T., Malpi'ghian. A renal glomerulus.

Tu'lip. (L. *tulipa*.) A common European flowering plant, *Tulipa vulgaris*. It is a sialogogue and cardiac poison.

Tu'lipin. The alkaloidal principle of the common tulip. It acts on the heart like veratrin, and on the spinal cord like scillitin.

Tul'pius, valve of. The ileo-cæcal valve.

Tumefa'cient. (L. *tumefacere*, to swell.) Swelling, swollen. A swelling or enlargement of a part from any cause.

Tumefaction. (L. *tumefacere*, to cause to swell.) The act or process of swelling or rising into a tumour; also, the condition of being tumefied or swollen. A tumour.

Tu'mefy. To swell, or to cause to swell, or to be tumid.

Tu'menol. (Not official.) Produced from mineral oil treated with concentrated sulphuric acid. Of an oily consistence. Used in 10 to 25 per cent. ointments. It is used in all forms of pruritus, and good results are generally obtained when used in excoriations and superficial ulcerations. It is not of service in erysipelas, like ichthyol or thiol.

Tumes'cence. The state of growing tumid; tumefaction. A swelling, tumid part, or tumour.

Tumes'cent. Swelling; tumefying; forming into a tumour.

Tu'mid. (L. *tumidus*, swollen.) Tumefied, swollen, protuberant.

Tumid'ity. The state or character of being tumid or swollen.

Tu'midly. In a tumid manner or form.

Tu'midness. The state of being tumid in any sense.

Tu'mour. (L. *tumor*, a swelling, or the state of being swollen.) A swelling. An abnormal prominence existing in any part of the body. It is used popularly in the narrow sense of a new growth.

TUMOUR

T., ad'enoid. Same as *Adenoma*.
T., adipose'. A *Lipoma*.
T. al'bus. White swelling. *Tuberculous arthritidis*.
T., aneuris'mal. An aneurism.
T., anom'alous. *Hæmatodes fungus*.
T., benign'. A tumour that does not recur after removal.
T., blood. Same as *Hæmatoma*.
T., bu'tyroid. A form of milk tumour of the breast, the contents of which resemble butter.
T. cap'itis sanguin'eus. *Cephalæmatoma*.
T. car'neus. A *Sarcoma*.
T. cartilagin'o'sus. *Chondroma*.
T., cav'ernous. A tumour consisting of loosely reticular tissue. Telangiectatic tumour.
T., cel'lular. A tumour occurring in cellular tissue which does not contain fat.
T., cel'lulo-fi'brous. A fibro-cellular tumour.
T. chelo'ides. See *Cancroid*.
T., colloid. A tumour containing colloid material.
T., connec'tive-tis'sue. Any tumour made up of connective tissue. The *Parablastomata*.
T., cys'tic. A tumour containing cysts or cavities filled with fluid. Also, a cyst forming a tumour.
T. cys'ticus hygro'sus. *Hygroma*.
T., dendritic. A warty growth having a number of branches.
T., denti'nal. The tubular structure of the teeth.
T., der'matoid or der'moid. A cystic tumour, the inner walls of which consist of dermal elements. It contains hair, nails, and even teeth.
T., der'moid. A hard fibroma.
T., dilata'tion. *Retention cyst*.
T., encyst'ed. A tumour that is surrounded by a definite capsule.
T., erec'tile. A tumour composed of vascular tissue.
T., fat'ty. See *Lipoma*.
T. fib'ro-adipo'sus. A *Fibro-lipoma*.
T., fib'ro-calca'reous. A fibrous tumour containing earthy matter.
T., fib'ro-cel'lular. Cellulo-fibrous tumour. Soft and elastic form of fibrous tumour.
T., fib'ro-cys'tic. A fibrous tumour containing cysts.
T., fi'broid. Consisting of fibrous tissue. Usually applied to the fibroid tumour of the uterus.
T., fi'b'ro-mus'cular. See *Myoma*.
T., fi'b'ro-nu'cleated. A tumour composed of fibrous tissue mixed with elongated nuclei.
T., fi'b'ro-plas'tic. A spindle-celled sarcoma.
T. fib'rous. A fibrous tumour.
T., fi'b'ro-vas'cular. A telangiectatic tumour.
T., float'ing. A moveable body in the abdomen, usually the kidney or spleen.
T., follic'ular. An atheroma.
T., fun'gating. A tumour proliferating actively on its surface. Usually applied to cysts the wall of which is proliferating.
T. gallicus. The same as *Bubo*.
T., gas'eous. A tumour containing gas.

T., glan'dular. An adenoma.
T., Gub'ler's. A prominence on the back of the wrist, seen in the wrist-drop of plumbism.
T., gum'matous. A syphilitic gumma.
T., gum'mous. A syphilitic gumma.
T., gum'my. A syphilitic gumma.
T., hair. See *T., dermoid*.
T., hair'y. See *T., dermoid*.
T., hard. Term applied to tumours of hard consistency.
T., heteraden'ic. A hyaline cylindroma.
T., heterochron'ic. A tumour made up of tissue which is not normally found in the individual at the period of life at which the tumour occurs.
T., heteroplas'tic. A tumour differing from the tissue in which it grows.
T., heterotrop'ic. A tumour differing in structure from the tissue in which it grows.
T., his'toid. Same as *T., histoid*.
T., his'toid. A tumour composed of connective tissue.
T., homœo'plastic. A swelling whose composition is that of the structure which it affects.
T., homol'ogous. The same as *T., homœoplastic*.
T., horn'y. *Cornu cutaneum*.
T., infec'tious granula'tion. A nodule or node due to infection with a specific micro-organism.
T., infil'trating. A tumour growing into the surrounding tissues.
T., in'nocent. The same as *T., benign*.
T., ir'ritable, of the breast. This may be a painful adenoma or a painful subcutaneous nodule.
T., junc'tional. The same as *T., communicating*.
T., lac'teal. A galactocoele.
T., lam'inated na'creous fat'ty. *Cholesteatoma*.
T. lar'deus. *Steatoma*.
T., leuchæ'mic. *Lymphoma*.
T., lymph. A lymphangioma.
T., lymphad'enoid. A lymphadenoma.
T. mala'rum. *Meloneus*.
T., malig'nant. One which gives metastasis or recurs, or does both, and eventually destroys life.
T., marg'aroid. A cholesteatoma.
T., medull'ary. A tumour of soft consistency, due to excess of cellular over connective-tissue elements.
T., melan'ic. The same as *T., melanotic*.
T., melanot'ic. A sarcoma with black pigmented cells.
T., mesoblas'tic. A tumour developed from mesodermic tissue.
T., mesoder'mic. The same as *T., mesoblastic*.
T., mil'lary. A minute circumscribed growth, usually of secondary rather than primary growth.
T., milk-like. *Encephaloid*.
T., mixed. A tumour composed of more than one kind of tissue.
T., mollus'cous. The same as *Molluscum contagiosum*.
T., move'able. A tumour that is not fixed.
T., mu'coid. The same as *Myxoma*.
T., mu'cous-tis'sue. The same as *Myxoma*.

TUMOURED—TUNICA

T., mus'cular. *Myoma.* Phantom tumour.

T., myelogen'ic. The same as *T., myeloid.*

T., my'eloid. One containing giant-cells.

T., my'oid. The same as *Leiomyoma.*

T., nerve. The same as *Neuroma.*

T., neural'gic. A tumour which, without perceptible reason, is the seat of pain.

T. of the scalp, Cock's pecu'liar. A fungating growth of the sebaceous glands of the scalp.

T., or'ganoid. Tumour following the type of growth of an organ in that it is composed of one distinctive type of tissue, *i.e.* cancer.

T., os'seous. The same as *Exostosis.*

T., ova'rian. One of the many varieties of growths occurring in the ovary.

T., pap'illary. The same as *Papilloma.*

T., pearl. The same as *Cholesteatoma.*

T., pearl'y, of the iris. A small cystic tumour of the iris containing a whitish tallowy material.

T., perine'al. The bulging of the perineum produced by the foetal head in childbirth.

T., phan'tom. A circumscribed abdominal swelling, occurring usually in hysterical women, due to muscular contraction or to an accumulation of intestinal gases.

T., pilocys'tic. A dermoid cyst containing hair.

T., pol'y'poid. A tumour having a narrow long pedicle.

T., pul'sating. A tumour having pulsation due to the state of intra-mural blood-vessels, independently of its proximity to large vessels.

T., recur'rent. A tumour which recurs after removal.

T., recur'rent fi'broid. A spindle-celled sarcoma.

T., reten'tion. *Retention cyst.*

T., sand. *Psammod.* So called because of the sand-like calcareous matter it contains.

T., sanguin'eous. *Pelvic hæmatocoele.*

T., scalp. The same as *Caput succedaneum.*

T., scir'rhus. A tumour having a hard consistency, due to an excess of fibrous tissue elements over cellular.

T., seba'ceous. An atheroma. A sebaceous retention-cyst.

T., se'ro-cys'tic. A proliferation cyst.

T., ster'coral. A tumour formed by impacted faeces.

T., sys'temoid. See *T., teratoid.*

T., tar'sal. *Chalaza.*

T., telangiectatic. See *T., cavernous.*

T., ter'atoid. A tumour made up of a number of tissues resembling an organ or system of organs. A dermoid cyst.

T., transi'tion. A recurrent tumour having the disposition to assume a more malignant form.

T., var'icose. Circumscribed bluish tumour, formed by the dilatation and turgescence of the capillary vessels of a part.

T., vas'cular. *Angioma.*

T., wart'y. A papilloma.

Tumoured. Affected with a tumour or tumours. Swollen, tumid, distended.

Tumourous. (*L. tumorosus*, swollen.) Swelling; protuberant.

Tumul'tus. (*L.*) Commotion; irregular action.

T. cor'dis. Irregular action of the heart.

T. sermo'nis. A form of aphasia where the patient stutters when reading aloud.

Tun-bellied. Having a large protuberant belly.

T.-bel'ly. A large protuberant belly.

Tun'da oc'uli. Conjunctival membrane.

Tun'dis cor'di. The apex of the heart. *Lunga chique.*

Tung'sten. (*Swed.*, "heavy stone.") A metal, symbol W, at. wt. 183.5, having properties like those of uranium and molybdenum. Some of its compounds have been employed in medicine. They are now chiefly used as reagents. See *Table of elements.*

Tunic. The name given to different membranes which envelop organs, as the tunics or coats of the eye, stomach, bladder, &c. See *Tunica.*

T., albugin'eous. Same as *Albuginea.*

T., arach'noid. Same as *Arachnoid*

Tunica. (*L.*) *Tunic.*

T. abdomina'lis. The deep layer of superficial fascia in quadrupeds. The representative of Scarpa's fascia in animals, &c.

T. acina'lis. *Uvea.*

T. acinifor'mis. *Uvea.*

T. acino'sa. *Uvea.*

T. adipo'sa re'nun. The fatty investment of the kidney.

T. adna'ta. The conjunctiva. Also applied to the visceral portion of the tunica vaginalis testis.

T. adventi'tia. The outermost vascular tunic.

T. agna'ta. Conjunctiva.

T. alba oc'uli. The sclerotic.

T. albugin'ea. The same as *Albuginea.*

T. albugin'ea oc'uli. A tendinous membrane of the sclerotic coat.

T. albugin'ea o'vi. The thin, compact, distinctly marked zone of connective tissue immediately under the ovarian cortical epithelium.

T. albugin'ea tes'tis. The fibrous tissue of the testis.

T. arachnoid'ea. A thin membrane, forming one of the cerebral meninges, interposed between the dura mater and the pia mater.

T. arachnoid'ea oc'uli. The lamina fusca.

T. cadu'ca. *Decidua.*

T. can'dida oc'uli. The sclerotic.

T. car'nia. The *Dartos.*

T. carno'sa. The *Panniculus carnosus.*

T. cellulo'sa. See *T. submucosa.*

T. cer'ebri. The dura mater.

T. cer'ebri pro'pria. The pia mater.

T. choriocapilla'ris. The same *Choriocapillaris.*

T. choroid'ea. The choroid coat of the eye.

T. cilia'ris. The ciliary process and muscles.

T. commu'nis. The cremaster muscle.

T. conjuncti'va. The same as *Conjunctiva.*

T. cor'nea opa'ca. The sclerotic.

T. cor'nea pellu'cida. The same as *Cornea.*

T. costa'lis. The pleura.

TUNICATE—TURGID

T. cras'sa. The decidua.
T. crystall'na. The arachnoid membrane.
T. demorsia'na. The membrane of Descemet.
T. elytro'idēs. The vaginal coat.
T. erythro'idēs. The cremaster.
T. exterior o'vi. The decidua.
T. faccimina'lis. The allantois.
T. fibro'sa. The external layer of the connective-tissue envelope of the Graafian follicle.
T. fibro'sa intestina'lis. See *T. submucosa*.
T. granulo'sa. The granular lining of a Graafian follicle.
T. hyali'na pro'pria. The transparent layer of membranous semicircular canals situate between the layers of connective tissue and of papilliform processes.
T. in'tima. The innermost lining of a blood-vessel.
T. me'dia. One of the vascular tunics.
T. muco'sa. The mucous membrane of a part.
T. muscula'ris. The *Dartos*.
T. muscula'ris muco'sae. A thin and occasionally incomplete layer of smooth muscle-fibres in the mucous membrane of the alimentary canal.
T. nervo'rum. The neurilemma.
T. perfora'ta. The uvea.
T. pharyn'gis. The fibrous investment of the pharynx.
T. præten'sa abdom'inis. The peritoneum.
T. pro'pria. The proper coat of some structure, as an artery; the layer which specially constitutes the wall of a vessel, in contradistinction to the lining and investing layers. Specifically, the membrane lining the bony labyrinth of the ear.
T. reflex'a. The outer wall of the tunica vaginalis testis.
T. Ruyschia'na. The same as *Choriocapillaris*.
T. sero'sa. The serous coat of the small intestines.
T. submuco'sa. The submucous areolar tissue of the small intestines and some other organs.
T. u'vea. The uveal tract of the eye.
T. vagina'lis oculi. The sheathing fascia of the eyeball and the optic nerve.
T. vagina'lis tes'tis. The serous investment of the testicle, consisting of the tunica propria, adherent to the testicle itself, and the tunica reflexa.
T. vasculo'sa Hal'leri. The same as *Choriocapillaris*.
T. vasculo'sa tes'tis. The vascular layer underlying the tunica albuginea.
T. vitrea. The hyaloid membrane.
Tunicate. (*L. tunica*, tunic.) *Biol.* Having coverings or coats. A bulb like that of the onion is tunicated.
Tunicin. Animal cellulose. A carbohydrate constituting the chief part of the mantle of *Tunicata* (Ascidians). It is soluble in Schweitzer's reagent, and is coloured blue by the addition of iodine after preliminary treatment with sulphuric acid.
Tu'nicle. (*L. tunicula*, a tunicle.) A little tunic.

Tunic'ula. The clitoris. A fine membrane, coat, or skin.
Tuning-fork. A pronged metallic instrument capable of vibrating, so as to form a certain definite note.
Tunnel disease'. A form of anæmia caused by the parasite *Dochmius*.
T. sound. A metallic sound having a central cavity, by means of which it can be passed over a guide previously introduced into the bladder.
Tun'nelled. Provided with a tunnel.
Tupelo. A tree indigenous to the United States, the bark of which is sometimes used in making uterine tents.
Turacin. (African *turakoo*.) A crimson colouring matter obtained from the feathers of the turakoo. It is slowly soluble in water, but easily soluble in alkaline fluids, and contains about 6 per cent. of copper. See *Conspectus of pigments*.
Turacover'din. (African *turakoo*; *L. viridis*, green.) A green colouring matter obtained from the feathers of certain birds.
Turbid. (*L. turbidus*, disturbed.) Confused, disordered, disquieted; muddy, foul.
T. pneumo'nia. A term applied to the indistinct pneumonic symptoms following injections of tuberculin. It is also called *Injection pneumonia*.
Turbid'ity. The state of being turbid; turbidness.
Turbidly. In a turbid manner.
Turbidness. The state or quality of being turbid.
Turbinal. (*L. turbo*, a top.) The same as *Turbinate*. One of the spongy or scroll-like bones of the nasal passages: the ethmo-turbinal, the maxillo-turbinal, the sphenoturbinal.
Turbinate. (*L. turbinatus*, shaped like a top or cone.) Whorled or scroll-like in form. Spongy in texture, or full of cavities.
T. bone, infe'rior. A distinct bone attached to the maxilla, separating the inferior from the middle nasal fossæ.
T. bone, mid'dle. An indefinite lower section of the lateral mass of the ethmoid.
T. bone, supe'rior. An indefinite upper part of the lateral mass of the ethmoid.
T. crests. Ridges on maxilla and palate for articulation with the turbinated bones.
T. pro'cesses. The turbinated bones.
Turbo cerebri. The pineal gland.
Turbulent. (*L. turbulentus*, restless.) Disturbed, agitated, restless, being in violent commotion.
Türk, column of. The anterior or direct pyramidal tract.
T., fascic'ulus of. The crossed pyramidal tract of the spinal cord.
Turgent. (*L. turgens*, swelling.) Swelling, tumid; rising into a tumour; puffy.
Turgentia. *Turgescence*.
Turgesce'. To become turgid; to swell.
Turges'cence. The swelling or enlargement of any part, usually from congestion or the extravasation of serum or blood.
Turges'cency. The same as *Turgescence*.
Turges'cent. Growing turgid; swelling.
Turgescentia. *Turgescence*.
Turges'cible. Capable of swelling or becoming turgid.
Turgid. (*L. turgidus*, swollen.) Swollen,

TURGIDITY—TYLOSIS

bloated, tumid. Distended beyond its natural or usual state.

Turgidity. The state of being turgid or swollen.

Turgidly. In a turgid manner.

Turgidness. A swelling or swelled state of a thing. Distension beyond the natural state by some internal force or agent.

Tur'gidous. *Turgid*.

Turgom'eter. That which measures or indicates the amount or degree of turgidity.

Tur'gor. (L.) A swelling. *Physiol.* The normal fulness of the capillaries and the smaller vessels, upon which is supposed to depend the normal resiliency of the tissues.

Tu'rio. (L.) A strong young shoot, or sucker, springing out of the ground.

Turk'ish bath. A hot-air bath of varying temperatures followed by massage and a cold plunge.

Tur'meric. (L. *turmerica*, turmeric.) The rhizome of *Curcuma longa*, an aromatic and stimulant. The colouring matter is used as a test for soluble salts of boron. Dose of the fluid extract, mxxv to 3j.

T. pa'per. Paper soaked in tincture of turmeric and dried; it gives a reddish-brown coloration with alkaline solutions.

T. tinc'ture. (B.P.) Used to make turmeric paper.

Turn. To cause to revolve about an axis.

T. of life. See *Menopause*.

Turne'ra aphrodisi'aca. See *Damiana*. (Not official.)

Turner's ce'rate. Calamine ointment.

Turn'ing. See *Version*.

Turns. Menses.

Turn'sick. Vertiginous.

Turn-ta'ble. An instrument having a revolving plate. Used in mounting microscopic specimens.

Tur'pentine, Chi'an. From *Pistacia terebinthus*. Nat. Order *Anacardiaceæ*. (Not official.) Pale yellowish brown; soft, yet brittle, but not bitter. Supposed to be of value in cancer. Dose, 6 grains in two pills every six hours.

Turpe'thum. India. Nat. Order *Convolvulaceæ*. (Not official.) A large white resinous root with a starchy interior. It yields the resin turpethin, $C_{34}H_{56}O_{16}$, which resembles jalap resin in behaviour with acids. Action, purgative, similar to jalap. Dose of turpethin, 5 to 8 grains.

Turtle. A tortoise. A member of the *Testudinata*.

T. back nail. The name given by S. Weir Mitchell to a nail curved in all directions. It is a condition seen in certain trophic disturbances.

T. lung. See *Bronchiectasis*.

Tur'tur. Penis.

Turun'da. Tent.

Turun'dula. Tent.

Tuss'al. (L. *tussis*, a cough.) Of, or pertaining to, the nature of a cough.

Tusse'do. *Tussis*.

Tussic'ular. (L. *tussicularis*; *tussicula*, diminutive of *tussis*, a cough.) Of, or pertaining to, a cough.

Tussicula'tion. Slight, frequent, dry cough.

Tussila'go. Coltsfoot. Europe, North Asia. Nat. Order *Compositæ*. (Not official.)

The leaves and roots are used. It yields mucilage and a bitter principle.

Tus'sis. A cough.

Tus'sive. Pertaining to, or caused by, a cough.

T. frem'itus. The thrill felt when the hand is placed on the chest as the patient coughs.

Tus'sol. Antipyrin amygdalate. (Not official.) Recommended by Dr. Rehn, of Frankfort-on-the-Maine, as mitigating the frequency of the paroxysms and their severity. In doses of $\frac{1}{4}$ to $1\frac{1}{2}$ grains in children of one year two to three times a day, and from this to $7\frac{1}{2}$ grains a day to older children. Action, tonic, demulcent. Uses, chronic pulmonary affections, scrofula. Doses: of the fluid extract, 1 to 2 drachms; of the succus, 1 ounce.

Tuta'men. (L.) A defence or protection.

Tutam'ina cer'ebrl. The scalp, skull, and meninges of the brain.

T. oc'uli. The eyelids and their appendages.

Tut'tering. Stuttering.

Tweez'ers. See *Volsella*.

Twid'dle. A pimple.

Twin. One of two persons born at the same birth.

T. leaf. The rhizome and rootlets of *Jeffersonia diphylla*. It is diuretic, alterative, and antispasmodic, and in large doses emetic. The dose of the fluid extract is mxx to 3j. Unofficial.

Twinge. A sharp darting pain of momentary duration. A pang, physical or mental.

Twist, Aberdeen'. A variety of acupressure in which the pin is given half or a quarter rotation before fixing it in the tissues on the side of the artery opposite to the point of insertion of the pin.

Twisted. A cord made of strands of thread or wire turned spirally on one another.

T. su'ture. A suture in which the edges of a wound are pierced transversely by a needle over which a thread is wound.

Twisting for'ceps. The same as *Torsion forceps*.

Twitch. A short spastic contraction of the fibres of a muscle. A stitch; a twinge.

Twitching. The act of one or anything that twitches, especially an involuntary convulsive jerking movement of muscles.

T., a'brillary. Irregular spasmodic contraction of the fibrils of a muscle independent of each other.

T. tic. *Tic douloureux*.

'Twixt-brain. The same as *Mid-brain*.

Two-nee'dle. Performed with two needles.

T. opera'tion. A procedure for tearing through the opaque posterior capsule which sometimes interferes with vision after an operation for cataract, or tearing up opacities remaining from portions of the lens.

Tych'ica. Fortuitous lesions or deformities.

Tylé. *Callosity*.

Tylo'ma. (Τυλώμα, callus.) A hard thickened patch on the skin produced by excessive accumulation of the horny layers.

Tylo'sis. (Τύλος, a callosity.) A form of blepharitis in which the edges of the lids are

thickened and hardened. *Biol.* A protuberance of the wall of a plant-cell through the pit in the wall of an adjacent duct.

T. palmæ vel palma'ris. A synonym of callosity of the palm.

T. plan'tæ vel planta'ris. A callosity occurring in the foot.

Tylostere'sis. (Τύλος, a knot; στερεῖν, to deprive.) Extirpation or removal of a callosity.

Tylo'tic. Pertaining to, or affected with, a callosity.

Tylus. *Biol.* A median projection of the upper surface of the head of certain insects.

Tym'ma. Wound.

Tym'pan. A tympanum.

Tym'pana. Plural of *Tympanum*.

Tympanal. The same as *Tympanic*.

T. organs. The peculiar sense-organs found in certain insects. They have long been universally regarded as auditory organs, though the animals continue to hear after their removal.

Tym'pania. Tympanitis.

Tympan'ic. (Τύμπανον, a drum.) Of, pertaining to, or resembling a tympanum or drum.

T. artery. A small branch of the first part of the internal maxillary artery that passes through the Glasserian fissure, and helps to supply the structures in the tympanum.

T. bone. The tegmen tympani, the roof of the tympanum.

T. car'tilage. That part of the external auditory meatus formed of cartilage and attached to the tympanic bone.

T. cav'ity. The tympanum.

T. cord. The *Chorda tympani*.

T. mem'brane. The drum of the ear. A membrane stretched across the outer wall of the tympanum. It is connected with the long process of the malleus.

T. nerve. The tympanic branch of the glosso-pharyngeal which enters the tympanum through Jacobson's foramen. It supplies the mucous membrane of the tympanum and Eustachian tube.

T. notch. The deficiency in the membrana tympani.

T. plate. The tympanic bone which forms the greater part of the bony external auditory meatus.

T. plex'us. The plexus on the promontory of the tympanum formed by the branching of Jacobson's nerve.

T. res'onance. See *Tympanitic resonance*.

T. ring. The tympanic bone. The ring of bone that forms the greater part of the bony external auditory meatus.

Tympanichor'dal. Of, or pertaining to, the chorda tympani.

Tympanic'ity. The quality of being tympanic.

Tympanicomas'toid fis'sure. Furrow indicating the junction of the mastoid with the tympanic portion of the temporal bone.

Tympan'iform. Resembling, or having the form of, a tympanum.

Tym'panism. State of parts affected with tympanites. Distended with gas.

Tympani'ta. *Tympanites*.

Tympani'tēs. (Τύμπανον, a drum;

-ιτις, inflammation.) Distension of the abdomen caused by the presence of air either in the intestine or in the peritoneal cavity.

T., acute'. That due to intestinal irritation.

T. hyster'ica. Enormous distension of the abdomen in hysteria.

T. universa'lis. General emphysema.

T., u'terine. Tympanism of the womb. *Physometra*.

Tympanit'ic. (*L. tympaniticus*, one who is afflicted with tympanites.) Pertaining to, or of the nature of, tympanites.

T. disc. The membrana tympani.

T. dul'ness. A quality of percussion note in which the resonance is subnormal, and in which the vesicular quality is absent.

T. res'onance. See *Resonance*.

Tympanitis. Inflammation of the lining membrane of the tympanum.

Tym'pano-Eusta'chian. Of, or pertaining to, the tympanum and Eustachian tube.

T.-hy'al. Part of the hyoid arch, distinct in an early period of development. It forms part of the root of the styloid process.

T.-mal'leal. (Τύμπανον, a drum; *L. malleus*, a hammer.) Pertaining to the tympanic bone and the malleus.

T.-mandib'ular. (Τύμπανον, a drum; Eng. *mandible*, jaw.) Pertaining to the tympanum and tympanic bone and the malleus.

T.-occip'ital. (Τύμπανον, a drum; Eng. *occiput*.) A small bone in relation with the exoccipital bone and the outer ear of a bird.

T.-periot'ic. (Τύμπανον, a drum; περί, around; οὖς, ear.) Consisting of a tympanic bone united with the periotic bone proper.

Tympanoph'ony. (Τύμπανον, a drum; φῶν, sound.) Abnormal sounds in the ear, as echoes, &c.

Tympano'sis. *Tympanites*.

Tym'pano-squamo'sal. (Τύμπανον, a drum; *L. squama*, a scale.) Common to the tympanic and squamosal bones.

Tym'panous. Distended, swelled out.

Tym'panum. (Τύμπανον, a drum.) The middle ear, or the membrana tympani. The irregular cavity within the petrous portion of the temporal bone between the external auditory meatus and the Eustachian tube.

Tym'pany. A swelling out or inflation; an inflated or puffed-out mass or condition.

Type. (Τύπος, a stamp.) Imprint; emblem, symbol; character. A normal average example. *Pathol.* The group of distinguishing features of a morbid condition enabling it to be classified.

Typem'bryo. (Τύπος, type; ἔμβρυον, embryo.) The stage or period in the development of an embryo when the characteristics of the main type to which it belongs are first discoverable.

Type-writer's back'ache. An occupation neurosis said to be best guarded against by the use of a high seat and a foot-stool.

Typhe'mia. (Τύφος, smoke; αἷμα, blood.) A depraved state of the blood following typhus.

Typh-fe'ver. A term proposed to include both typhoid and typhus fevers.

Typh'icus. *Typhoid*.

Typhilit'ic. (Τυφλός, the cæcum; -ιτις,

inflammation.) Pertaining to, or of the nature of, typhlitis. Affected with typhlitis.

Typhnia. Relapsing fever.

Typhlitis. (Τυφλός, the cæcum; -ιτις, inflammation.) Inflammation of the cæcum and the vermiform appendix.

T. stercoralis. Typhlitis due to constipation.

Typhlodycliditis. (Τυφλός, blind; δικλῆς, a doubling.) Inflammation of the ileo-cæcal valve.

Typhlo-enteritis. (Τυφλός, blind; ἔντερον, intestine; -ιτις, inflammation.) Same as *Typhlitis*.

Typhlo-enterum. The cæcum.

Typhloid. (Τυφλός, blind; εἶδος, form.) Having defective vision.

Typhlolithiasis. The formation of concretions in the cæcum.

Typhlogy. (Τυφλός, blind; λόγος, science.) The sum of knowledge of blindness.

Typhlops. Cæcum.

Typhlosis. Blindness.

Typhlosolar. (Τυφλός, blind; σωλήν, a tube.) Pertaining to a *Typhlosole*.

Typhlosole. (Τυφλός, cæcum; σωλήν, a tube.) *Biol.* A tube lying in the dorsal middle line of the intestine of certain worms (*Lumbricidæ*). It is open longitudinally towards the body-cavity, and is formed to increase the absorbing surface of the stomach intestine by a longitudinal fold of its dorsal wall into the lumen of the gut.

Typhlosteno'sis. Stricture of the cæcum.

Typhloteritis. *Typhlo-enteritis*.

Typhloterum. The cæcum.

Typhlotēs. Blinding.

Typhlotomy. (Τυφλός, cæcum; τομή, a cutting.) Division or section of the cæcum.

Typhlotrophium. Blind asylum.

Typhodēs. *Typhous*.

Typhogenic. (Τύφος, stupor; γεννᾶν, to produce.) Producing typhus.

Typhoid. (Τύφος, stupor; εἶδος, like.) Resembling typhus.

T. spine. A neurosis occurring after typhoid fever, characterised by acute pain on movement without any febrile disturbance. (Gibney.)

T. state. The condition of stupor, sordes on the tongue, foul mouth, sordes on the teeth, rapid feeble pulse, incontinence of fæces and urine, rapid wasting, &c., seen in any serious affection of nutrition, such as febrile conditions and nervous diseases.

Typhoidal. Of, pertaining to, or characteristic of typhoid fever, or the typhoid condition or state.

Typhoidet. (F.) A mild or benign type of typhoid fever.

Typhomalarial. (Τύφος, stupor; *L. malaria*.) Typhoid fever modified by malaria.

Typhoma'nia. (Τύφος, stupor; μανία, madness.) A low muttering delirium with stupor.

Typho'nia. The same as *Typhomania*.

Typhotox'in. (Τύφος, stupor; τοξικόν, poison.) A toxin ($C_7H_{17}NO_2$) obtained from cultures of the bacillus of typhoid fever. It was obtained by Brieger. It produces lethargy, paralysis, and death without convulsions. The unnamed base produces marked convulsive symptoms. After death from typhotoxin the heart is found to be contracted in systole.

Typhous. Of, or pertaining to, *Typhus*.

Typh-poi'son. Poison which, when admitted into the system, produces typhus or typhoid fevers.

Typ'ical. Having the character of a type, or markedly characteristic of a disease.

Tyr'annism. (Τύραννος, a tyrant.) Cruelty of morbid inception, of which Sadism is an erotic variety.

Tyrba'sia. Agitation.

Tyrbé. Agitation.

Tyremesis. (Τυρός, cheese; ἔμεσις, vomiting.) The vomiting of cheesy or curdy matters.

Tyria. *Porrigo decalvans*.

Tyriasis. (Τυρός, cheese.) *Elephantiasis arabum. Alopecia.*

T. lepra. *Satyriasis.*

Ty'rine. See *Cadein*.

Tyro'ma. (Τυρόμα; τυρός, cheese.) Baldness; loss of hair. A tumour caused by the caseation of lymphatic glands. *Porrigo decalvans.*

Tyro'sin. (Τυρός, cheese.) A white crystalline body, odourless, and insoluble in cold water, having the formula $C_9H_{11}NO_3$. It is an amido-acid, and forms salts with both acids and bases. It is a product of the decomposition of proteids by the ferment trypsin.

Tyrosis. (Τυρός, cheese.) The curdling of milk.

Tyrothrix. (Τυρός, cheese; θρίξ, hair.) A bacterium found in cheese.

Tyrotox'icon. (Τυρός, cheese; τοξικόν, poison.) A ptomaine obtained by Vaughan from poisonous cheese, poisonous milk, ice cream, &c. It induces vertigo, nausea, vomiting, chills, rigors, and severe epigastric pain, dilatation of the pupils, griping and purging, a sensation of numbness or "pins and needles," especially in the limbs, and marked prostration or death. The symptoms may vary somewhat in different individuals. The poison is thought to be the cause of summer diarrhoea.

Tyr'el's fascia. The recto-vesical fascia.

T.'s hook. A fine hook used in operations on the eye for drawing out the iris.

Tysonian. Of, or pertaining to, or named after, the anatomist *Tyson*. Specifying the preputial glands or follicles which secrete the smegma.

U.

Uaka'ri. Same as *Saki*.
Uaterium. (*Oūs*, the ear.) A medicinal application for use in disease of the ear.
U'ber. (L. *udder*.) The mamma.
Uberis a'pex. Apex of the mamma. The nipple.
Uberous. (L. *uber*, fruitful.) Prolific.
U'berthy. (Mid. Eng. *uberter*; L. *uberta*, abundant c.) Fertility. Abundant yield.
Uchatius pro'cess. A method of making steel in which the iron is fused with material which will give up oxygen.
U'da. (Hind.) A purple-brown colour used in the manufacture of Hindoo pottery.
U'dder. (Mid. Eng. *udder*; Ang.-Sax. *uder*; L. *uber*; Gr. *οὐθαρ*, *udder*.) The mammary glands of various animals, especially those having a baggy form and more than one teat.
U'ddered. Having an udder or udders.
U'dderful. Having a full udder.
U'dderless. Having no udder to suck. Foodless.
Udom'eter. (L. *udus*, moist; Gr. *μέτρον*, measure.) A rain gauge.
Udomet'ric. Pertaining to, or made by, a *Udometer*.
Uffelmänn's gelatin'. Uffelmann's solution to distinguish hydrochloric from lactic acid in suspected gastric contents. Add a few drops of neutral ferric chloride to a 4 per cent. solution of carbolic acid. This is turned yellow by lactic acid, and is unaltered by hydrochloric when diluted to the strength of gastric juice 2 per cent.
Ug'ger oil. (Hind. *agar*, wood of aloes.) A perfume distilled from *Agallochum*.
Ug'ging. (Mid. Eng. *ugging*.) Horror.
Ukam'bin. An African arrow poison, believed to be compounded of juices from various plants. Its effects are those of strophanthin, but are more marked.
U'la. (*Οὐλον*, pl. *οὐλα*.) The gums.
Ulamorrhag'ia. (*Οὐλα*, gums; *αἷμα*, blood; *ρέω*, flow.) Hæmorrhage from the gums.
Ulaganac'tesis. (*Οὐλον*, gum; *ἀγαν-ἀκτησις*, irritation.) Irritation of the gums.
Ulatroph'ia. (*Οὐλον*, gum; *ἀτροφία*, atrophy.) Atrophy of the gums.
Ul'cer. (L. *ulcus*, an ulcer; Gr. *ἔλκος*, a sore.) A solution of continuity of the skin, or of the investing membrane of a cavity, the result of morbid action, and not of injury. Ulcers may be simple or specific, *i.e.* local manifestations of a poison which infects the whole system.
U., A'den. A tropical skin affection which chiefly attacks those living under depressing influence. It begins as a vesicle, which ruptures, becomes gangrenous, and enlarges by destroying the neighbouring tissue, even the bones. The feet and ankles are usually the earliest to be attacked. Finally it becomes atonic, indurated, and cicatrises, though before this can take place death often occurs from exhaustion.
U., adhe'rent. An ulcer whose base is fixed to the underlying tissues.
U., Alep'po or A'den. A cutaneous affection which starts as a small red boil, suppurates, and finally ulcerates.

U., am'putating. An ulcerative process which encircles a limb and destroys the tissues to the bone.
U., an'amite. A progressive ulcer which is very obdurate. Seen in hot countries.
U., arter'ial. A superficial ulcer due to arterial disease.
U., atherom'atous. An ulcer due to atheroma of the blood-vessels.
U., aton'ic. An ulcer having an unhealthy floor covered with granulations, which show no tendency to form cicatricial tissue.
U., autoch'thonous. Same as *Chancre*.
U., cal'lous. An ulcer which shows very little or no tendency to heal. Its edges are raised and indurated; its base is hard, covered with a thin layer of secretion, and formed of flat, unhealthy granulations. It discharges thin pus in small amount. Very common on the lower third of the leg.
U., can'croid. Rodent ulcer.
U., carcinom'atous. Ulcerated carcinoma.
U., ca'rrious. A gangrenous ulcer.
U., chancro'id'al. Same as *Chancre*.
U., chiro'nian. An obstinate form of callous ulcer.
U., Co'chin Chi'na. A chronic spreading ulceration of the skin seen in foreigners in Cochin China.
U., cold. A small ulcer occurring on the ends of the digits. Name given by Sir James Paget.
U., constitu'tional. Syphilitic ulceration.
U., corrod'ing. Rodent ulcer.
U., corros'i'va. An old synonym of *Stomatitis gangranosa*.
U., crater'iform. A variety of epitheliomatous ulcer which attacks the same region and kind of people that a rodent ulcer does. It progresses more rapidly.
U., creep'ing. A serpiginous corneal ulcer.
U., Cur'ling's. An ulceration of the duodenum seen after severe burns of the body and limbs.
U., Del'hi. A cutaneous affection which begins as a boil and proceeds to ulceration, which is said to be incurable.
U., diphtherit'ic. An ulcer covered with diphtheritic membrane.
U., dyssep'tic. The ulcers resulting from *Herpes facialis*.
U., eczem'atous. A chronic ulceration which has many of the characteristics of eczema.
U., endem'ic. An ulcer more or less local as regards the countries in which it is found.
U., erethis'tic. An extremely sensitive ulcer occurring in parts freely supplied with nerves.
U., ero'sive. Lupus of the skin.
U., fis'surated. Laceration of the cervix uteri.
U., fis'tulous. An ulceration commencing with a fistula.
U., follic'ular. Ulceration of a mucous membrane having its origin in the lymph follicles.

ULCERA—ULCERATIVE

U., fun'giform. Same as *Epithelioma*.
U., fun'gous. An ulcer whose base takes on growth, giving rise to granulations which project above the level of the surrounding skin.
U., gas'tric. Ulcer of the wall of the stomach which begins on the mucous surface.
U., gout'y. An ulcer seen over gouty deposits.
U., Gua'lior. An ulcer endemic in Gualior.
U., gum'matous. Ulceration due to the breaking down of a gumma.
U., hæmorrhag'ic. An ulcer whose base bleeds readily.
U., in'dolent. One with an elevated indurated edge and a non-granulating floor.
U., inflamed'. An ulcer surrounded by marked inflammation.
U., ini'tial. See *Chancre*.
U., intrac'table. See *U., indolent*.
U., inveterate. See *U., indolent*.
U., ir'ritable. An ulcer characterised by great tenderness and sometimes by pain.
U., Ja'cob's. A rodent ulcer of the eyelid.
U., lu'poid. An ulceration having all or some of the characters of lupus.
U., lu'pous. Same as *Lupus*.
U., lymphatic. An ulcer having a discharge which resembles lymph.
U., Mal'abar. See *Aden ulcer*.
U., malign'ant. See *Carcinoma, Hospital gangrene*.
U., Mar'jolin's. An ulcer occurring in a cicatrix.
U., mercu'rial. An ulcer due to chronic mercurial poisoning.
U., Mozambique'. A single highly intractable and contagious ulcer seen in Mozambique and Réunion.
U., œdem'atous. An ulcer having large flabby granulations seemingly infiltrated with serum.
U. of stom'ach. An ulcer of the wall of the stomach said to be due to obstruction of the blood-vessels of the wall of that organ. It usually occurs on the posterior wall of the pyloric portion. It may perforate the wall. The aperture made in the serous coat has a punched-out appearance.
U., per'forating. An ulcer which perforates the surrounding tissue.
U., per'forating, of the foot. A painless ulcer which occurs in affections of the nervous system, *e. g.* locomotor ataxia, and extends deeply into the tissues.
U., Per'sian. An ulcer seen in Persia, and said to be due to the same cause as Aden ulcer.
U., phagedæ'n'ic. An ulcer which extends steadily and obstinately.
U., phleg'monous. Syn. of *Inflamed ulcer*.
U., pu'trid. Syn. of *Hospital gangrene*.
U., ro'dent. A form of ulcer which involves all tissues, bones and soft tissues equally. It has no granulations.
U., round. Perforating gastric ulcer or perforating ulcer of the uterus.
U., Sae'misch's. An infectious ulcer of the cornea.
U., scorbu'tic. An indolent ulcer found in scurvy.
U., se'nile. Ulcers which are dry and

have a dark surface, generally seen in those whose arteries are degenerated.

U., serpig'inous. An irregularly shaped ulcer with alternate convexities and concavities in its edge.

U., sim'ple. A benign form of ulceration not due to a poison or to systemic disease.

U., slough'ing. A destructive ulcer rapidly spreading by necrosis of visible portions of tissue which are cast off as sloughs.

U., ster'coral. A small ulcer of the intestine, sometimes manifold, caused by the irritation of masses of impacted feces in long-standing constipation.

U., stru'mous. An ulcer seen in people of tuberculous tendency, or who are attacked by tubercle. It is chronic, painless, spreads steadily, and discharges thick greasy-looking pus.

U., symptomatic. An ulcer indicative of general disease.

U., syphilitic. Ulceration due to syphilis.

U., Syr'iac. *Malignant angina*.

U., toe-nail. Ulcer caused by ingrowing toe-nail.

U., tuber'culous. Ulceration due to tuberculosis.

U., Tur'kestan. A form of ulceration seen in Russian soldiers in Turkestan, accompanied by profuse suppuration and adenitis.

U., varicose'. An ulcer which occurs with varicose veins, chiefly in the skin over the lower third of the leg. It is very chronic as a rule.

U., vene'real. See *Chancre* and *Chancroid*.

U., wart'y. An ulcer resulting from the breaking down of a warty cicatricial tumour.

U., weak. An ulcer with flabby granulations.

U., Yemen. See *Cochin China ulcer*.

Ul'cera intestina'lia. Ulcers of the bowels.

U. laryn'gis. Ulceration of the larynx, generally tuberculous in origin.

U. serpenta'ria o'ris. *Aphthæ*.

U. u'teri. Ulceration of the uterus.

U. ventric'uli. Ulcer of the stomach.

U. vesic'æ. Ulceration of the bladder, usually tuberculous in origin.

Ulcerable. Capable of becoming ulcerated.

Ulcerate. (*L. ulceratus*, p. p. of *ulcerare*, to make sore.) To form an ulcer or ulcers; to take on the process of ulceration. To affect with an ulcer or ulcers.

Ulcerated. (*L. ulcus*.) Affected with ulcers.

U. tooth. Popular name for purulent periostitis occurring in a tooth socket.

Ulcerat'ion. (*O. F. ulceration*; *L. ulceratio*, a breaking out into ulcers.) The process by which an ulcer is formed. An ulcer.

U., fissured. See *Ulcer, fissured*.

U., Her'ying's pharyngeal. A diffuse ulcer of the hard palate and fauces.

U., malign'ant. Ulceration due to carcinoma or sarcoma.

U. of cer'vix. Same as *Erosion of cervix*.

U., puer'peral. Ulceration of the genitals due to injury during labour.

U., tuber'culous. An ulcer caused by the breaking down of a nodule due to tuberculosis.

Ulcerative. (*O. F. ulceratif*.) Ap-

ULCERATORY—ULNAR

pertaining to, or having the characters of, an ulcer. Causing or producing ulcers.

U. scrofuloder'ma. See *Mycosis*.

Ulceratory. Ulcerative.

Ulcered. Ulcerated.

Ulcerous. (L. *ulcerosus*, covered with sores.) Having the appearance and characteristics of an ulcer. Affected with ulcers.

U. stomat'itis. Inflammation with ulceration of the mucous membrane of the mouth and gums.

Ulcerously. In an ulcerous manner.

Ulcerousness. The state of being ulcerous.

Ulcus. (L.) Ulcer.

U. aton'icum. *Rupia*.

U. cancro'sum. Chancre.

U. cor'neæ ser'pens. See *Saemisch's ulcer*.

U. cru'ris. Indolent ulcer of the leg.

U. depas'cens. Phagedænic ulcer.

U. ero'dens. *Lupus*.

U. ex'edens. See *Rodent ulcer*.

U. feri'num. Phagedænic ulcer.

U. gra'vë. *Madura foot*. An endemic disease of India affecting the foot, which greatly increases in size, owing to the development of pustules which contain a sinus, leading to the characteristic "fish-roë bodies" of the disease. These bodies are composed of caseous and fatty matters mixed with blood and salts. All tissues are affected. Gangrene or exhaustion may kill the patient. A fungus, *Chionypha Carteri*, appears to be the cause of the disease.

U. hyp'ulum. An ulcer healed over superficially.

U. na'rium foe'tens. *Ozæna*.

U. omam'bulans. Phagedænic ulcer.

U. phagedænicum col'is. Phagedænic chancre.

U. pulmo'num. *Phthisis pulmonalis*.

U. ro'dens. A creeping ulcer which begins in the upper portion of the cornea. It has a grey indurated undermined edge. The whole cornea may be affected and the sight destroyed.

U. sinuo'sum. *Hypophora*.

U. syphilit'icum. Chancre.

U. Syri'acum. *Cynanche maligna*.

U. tuberculo'sum. *Lupus*.

U. vene'reum du'rum. Chancre.

U. ventric'uli per'forans. Perforating ulcer of the stomach.

U. ventric'uli rotun'dum. Perforating ulcer of the stomach.

Ulcuscle. (L. *ulcusculum*, dim. of *ulcus*.) Same as *Ulcuscle*.

Ulcus'cula præpu'tii. *Herpes præputii*.

Ulcus'cule. (L. *ulcusculum*.) A little ulcer.

Ulcus'culum. (L.) See *Ulcuscle*.

U. cancro'sum. Chancre.

Ule. A diminutive termination of many words derived from Latin.

Ule. A cicatrix.

Ulerythe'ma. (Οδλή, a scar; ἐρύθημα, erythema.) An erythematous disease marked by the formation of cicatrices.

U. centrif'ugum. *Lupus erythematosus*.

U. ophryog'enës. A form of ulerythema which commences at the eyebrows, and later on gives rise to alopecia.

Ulet'ic. (Οδλον, gum.) Appertaining to the gums.

Ulet'icus. (Οδλον, a gum.) Appertaining to the gums.

Ulex. (L. *ulex*, a shrub resembling rosemary; furze.) A leguminous plant of the Tribe *Genistæ*, Sub-tribe *Cytiseæ*. Ten or twelve species are included under the name.

Ulex'ine. (C₁₁H₁₄N₂O.) An alkaloid derived from *Ulex europæus*. Used as a diuretic in heart disease. A local anæsthetic. Dose, 1-10th grain in a pill.

Ulex'ite. A hydrous borate of calcium and sodium occurring in loose, rounded, white masses of fibrous structure.

Uliginose'. (L. *uligo*, moisture.) Appertaining to, or growing on, a marshy soil.

Ulit'is. (Οδλον, gum.) Inflammation of the gums.

U. sep'tica. *Cancer aquaticus*.

U'lem. A form of indigestion found in Lapland, and said to be caused by eating smoked meat.

Ullma'nia. A fossil plant classed with the conifers.

Ullman'nite. Sulphide of nickel and antimony. Part of the latter is at times replaced by arsenic.

Ullu'co. *Tropæolum canerosum*.

Ulma'ria. (L. *ulmus*, an elm.) *Spiræa ulmaria*.

U. palus'tris. *Spiræa ulmaria*.

Ul'meæ. The tribe of elms, of the Order *Urticacæ*.

Ulmic. (L. *ulmus*, an elm.) Adjective referring to an acid found in earth mould, a product of the decay of vegetable matter.

Ulm'in. (L. *ulmus*, an elm.) A name applied to various substances found in vegetable mould, peat, &c.

Also, the brown exudation of various trees such as elm.

Also, a substance produced by acting on certain organic bodies with strong acids or alkalies, and washing the residue, triturating it with gum, and drying it.

Ul'mo. A rosaceous tree of Chili.

Ulm'ous. Refers to a group of brown or black substances in which ulmin or ulmic acid is present, occurring in vegetable mould, peat, &c.

Ulmus. (L. *ulmus*, an elm.) The elms, type of the Tribe *Ulmæ*, in the Order *Urticacæ*. Demulcent and slightly astringent. Useful in diarrhœa and as a diuretic. The bark alone is used. There are sixteen species scattered through the north temperate regions, and extending in Asia to mountains within the tropics.

U. mucla'go. Elm 6, boiling water 100. Macerate for two hours and strain.

Ulna. (L. *ulna*, a cubit; Gr. ὀλίον, the elbow.) The inner of the two bones of the forearm which extend from the elbow to the wrist. It enters into the elbow-joint. The radius revolves about it in pronation and supination of the hand in those animals in which these movements are practicable.

In *Entomology*, the marginal vein of the forewing.

In *Ichthyology*, the hyper-coracoid.

Ulnad. Toward the ulna; toward the ulnar aspect of the forearm.

Ulnar. (L. *ulna*.) Of or pertaining to the ulna, or to that side of the forearm on which the ulna is situated.

ULNARĒ—ULTRAMARINE

U. artery. The inner and larger of the divisions of the brachial artery. It commences at the elbow, and extends along the inner side of the forearm to the wrist, where it forms the superficial palmar arch.

U. carpal arteries. Two small vessels given off by the ulnar artery at the wrist, which run on the anterior and posterior surfaces of the carpus.

U. glands. Lymphatic glands situated in front of the elbow, and above the internal condyle of the humerus.

U. groove. The space between the inner condyle of the humerus and the olecranon process in the articulated elbow-joint, in which lies the ulnar nerve.

U. nerve. A branch of the brachial plexus which arises in common with the inner head of the median nerve. It is distributed to the skin and muscles on the inner side of the forearm and hand, to the interossei muscles, and the deep muscles of the thenar eminence.

U. recurrent artery. A branch of the ulnar artery to the elbow-joint.

U. vein, anterior. See *Vein*.

U. vein, common. See *Vein*.

U. veins. Two veins, anterior and posterior, which collect blood from the forearm.

Ulna'rē. A bone of the carpus placed on the ulnar aspect of the proximal row of carpal bones. In man the cuneiform.

In *Ornithol.*, that one of the two free carpal bones which is upon the ulnar side.

Ulna'ris. Ulnar, cubital.

U. exter'nus. The extensor carpi ulnaris muscle.

U. grac'ilis. The palmaris longus muscle.

U. inter'nus. Flexor carpi ulnaris muscle.

U. quin'ti. A slip from the extensor carpi ulnaris which passes to the little finger.

Ulnocar'pal. (L. *ulna*, ulna; Gr. *καρπός*, carpus.) Common to the ulna and the carpus.

Ulnometacar'pal. (L. *ulna*, ulna; Gr. *μετά*, beyond; *καρπός*, carpus.) Appertaining to the ulna and metacarpus.

Ulnometacarpa'lis. In *Ornithol.*, a muscle of the wing which arises from the ulna, and is inserted into a metacarpal bone.

Ulnora'dial. (L. *ulna*, ulna; *radius*, radius.) Appertaining to the ulna and the radius.

Uloc'acē. (Οὔλον, gum; *κακός*, evil.) Ulcerative ulitis.

Ulocarcino'ma. (Οὔλον, gum; *carcinoma*.) Carcinoma of the gums.

Ulogen'dron. (Οὔλή, a scar; *δένδρον*, a tree.) A genus of fossil plants considered by some authors to belong to, or be a peculiar condition of, the *Lepidodendra*.

Ulon. (Οὔλον, gum.) A gum.

Ulon'a'ta. The name given by Fabricius to a group of mandibulate insects including *Acheta*, *Achrydium*, *Blatta*, *Forficula*, *Gryllus*, *Locusta*, and *Truxalis*. An obsolete synonym of *Orthoptera*.

Ulon'eus. (Οὔλον, gum; *ὄγκος*, a tumour.) Swelling of the gums.

Ulophoc'inæ. (Οὔλος, woolly; *φύκη*, a seal.) A section of the Otarridæ, the true fur seals, as distinguished from the Trichophocinæ, or hair seals of the same family. The Oulophocinæ.

Ulophoc'ine. Of, or pertaining to, the *Ulophocinæ*.

Ulorrha'gia. (Οὔλον, gum; *ρῆγνύναι*, to flow.) Bleeding from the gums.

Ulorrhœ'a. (Οὔλον, gum; *ροία*, a flow.) See *Ulorrhagia*.

Ulo'sis. Same as *Cicatrization*.

Ulo'thriz. (Οὔλος, woolly; *θρίξ*, a hair.) A Genus of confervoid Algæ, typical of the Order *Ulotrichaceæ*.

Ulot'ic. (Οὔλή, a scar.) Appertaining to cicatrization.

Ulotricha'ceæ. An Order of confervoid Algæ. Aquatic or terrestrial, and consisting of an unbranched filament of cells, usually broader than they are long.

Ulotrichan. A member of the *Ulotrichi*. *Ulotrichous*.

Ulotrichi. In the classification of men, according to Boryde St. Vincent, the two primary groups are *Ulotrichi* and *Liotrichi*.

Ulotrichous. (Οὔλος, woolly; *θρίξ*, hair.) Having crisp woolly hair. Belonging to the *Ulotrichi*.

Ulte'rior. (L.) Toward the periphery. Applied to lesions of the spinal cord.

Ultimate. (L. *ultimatus*, last.) Furthest. Most remote in place. Last. The last of a series of three or more members.

In *Entom.*, specifically noting a stage of the second larva, after the third moult, of those insects which undergo hypermetamorphosis, as the blister beetles. It succeeds the scarabæidoid stage, and is followed by the coarctate larva. (Century Diet.)

U. analysis. Chemical term. The splitting up of a substance into its simplest elements.

U. cause. A primary cause.

U. element. An element which cannot be split up.

U. fact. One which is arrived at as a last result.

U. prin'ciple. A first principle. An ultimate element.

U. spe'cies. The lowest species of series.

Ultimister'nal. (L. *ultimus*, last; Gr. *στέρον*, sternum.) Appertaining to the lowest segment of the sternum.

Ultimum. (L.) Last.

U. mo'riens. A term given to that part of the economy which dies last.

Ul'tra-. (L.) A preposition used as a prefix, signifying beyond.

Ul'tra-brachyceph'aly. (L. *ultra*, beyond; Gr. *βραχύς*, short; *κεφαλή*, a head.) Brachycephaly in which the cephalic index exceeds 90°.

Ul'tra-capillary. Bot. Composed of exceedingly fine capillary filaments.

Ul'tra-centenarianism. The condition of living to more than one hundred years.

Ul'tra-dolicoceph'aly. (L. *ultra*, beyond; Gr. *δολυχός*, long; *κεφαλή*, head.) Dolicocephaly, in which the cephalic index is less than 64°.

Ul'tra-ellipt'ic. Hyperelliptic.

Ultramarine'. (L. *ultra*, beyond; *marinus*, marine.) A natural blue pigment obtained from lapis lazuli. Specially picked pieces of the stone are heated and then cooled in water. A powder results, which is repeatedly washed, the wash waters depositing pigments of different degrees of purity. Lapis lazuli contains silicate

ULTRA-MICROSCOPICAL—UMBILICAL

of soda, lime, and alumina, with a sulphuret probably of soda and iron.

U., artificial. Consists of clay, carbonate of soda, sulphur, and resin, ground together and heated in closed crucibles.

U. ash'es. A pigment which is the residuum of lapis lazuli after the ultramarine has been extracted. Used by the old masters for flesh, skies, &c.

U. green. An intermediate product obtained in the manufacture of ultramarine.

U. yellow. Barium chromate.

Ultra-microscopical. (L. *ultra*, beyond; Gr. *μικρός*, small; *σκοπεῖν*, to view.) Too small to be examined by a microscope.

Ultra-motivity. Capable of spontaneous movement.

Ultra-quinine. *Homoquinine*. An alkaloid obtained from cuprea bark.

Ultra-red. Applied to the invisible heat rays beyond the red end of the spectrum.

Ultra-sensual. Beyond the sensual.

Ultra-violet. Used of the invisible rays beyond the violet end of the spectrum.

Ultz'mann's test. For bile pigments in urine. Add 3 or 4 c.c. of potassium hydrate (1 in 3) and an excess of hydrochloric acid to 10 c.c. of urine. The liquid becomes emerald green when bile pigments are present.

Ulula. A screech-owl.

Ululant. (L. *ululans*, howling.) Howling.

Ululate. (L. *ululare*, to howl.) To howl like a dog. To screech or hoot like an owl.

Ululation. An hysterical howling.

Ululinae. One of the Sub-families of the Strigidae, containing owls of the Genus *Ulula* and some others.

Ul'va. (L. *ulva*, sedge.) One of the Order *Ulvaceae*, a Genus of the Algæ. It has a flat bright green frond. *Ul'va latissima* and *U. lactuca* are sometimes eaten.

U. cris'pa. *Fucus crispus*.

U. umbilica'lis. Purple laver. When pickled it is sold as an antiscorbutic.

Ulva'ceæ. An Order of Algæ found in salt or brackish water, classed with the Floridiæ.

Ulva'ceous. Of, or pertaining to, the Ulva or *Ulvaceæ*.

Ulyptol. A preparation of salicylic and carbolic acids with eucalyptus. It is antiseptic.

Um'bel. (L. *umbella*, a sunshade; dim. of *umbra*, shadow.) *Bot.* An inflorescence consisting of a number of flower-stalks, about equal in length and attached to a common centre, forming by their surfaces a flat, convex or rounded, rarely a concave surface to the inflorescence. *Zool.* An umbelliform tuft.

U., univer'sal. In *Bot.*, a primary or general umbel.

Umbella. An Umbel.

Umbellal. In *Bot.* and *Zool.*, same as *Umbellate*. Specifically in *Bot.*, of, or pertaining to, the Cohort *Umbellales*.

Umbellalès. A cohort of polypetalous plants of the Series *Calycifloræ*. It includes the *Umbelliferae*, *Araliaceæ*, and *Cornaceæ*.

Umbellar. Same as *Umbellate*.

Umbellate. (L. *umbellatus*.) *Bot.* Bearing umbels; umbel-like.

Zool. Umbelliferous; umbelliform.

Umbellated. See *Umbellate*.

Umbellately. In an umbellate manner.

Umbellet. A small umbel; one formed

at the end of a primary ray of a compound umbel.

Umbellifer. One of the *Umbelliferae*.

Umbelliferæ. (L. *umbella*, umbel; *ferre*, to bear.) An Order of plants. The parsley family.

Umbelliferon. (L. *umbella*, an umbel; *ferre*, to bear.) $C_9H_6O_3$. Oxycoumarin, found in the bark of *Daphne mezereum*. Obtained by distillation. It consists of fine needles, sparingly soluble in hot water and ether, and melting at 224° C.

Umbelliferous. (L. *umbilicus*, a navel; *ferre*, to bear.) Having a formation like an umbilicus.

Bot. Bearing umbels. Of, or pertaining to, the *Umbelliferae*.

Umbelliform. (L. *umbella*, an umbel; *forma*, form.) Forming an umbel.

Umbellularia. (L. *umbellula*, a little umbel.) A Genus of trees of the Order *Laurineæ*, and Tribe *Litseeceæ*. Apetalous.

Umbellulate. (New L. *umbellulatus*.) *Bot.* Pertaining to umbellules or that which has umbellules.

Umbellule. (New L. *umbellula*, a little umbel.) An umbellet.

Um'ber. (L. *umbra*, shade.) A natural pigment darker than ochre, of a brown colour. Of a dark or brown tint.

Also, in *Zool.*, the grayling. The umber bird. Also, to colour with umber; to darken.

U. bird. *Scopus umbretta*, the shadow bird. Allied to the storks and the herons.

U., burnt. The natural pigment heated to redness. It is redder than raw umber.

Um'bery. Of, or pertaining to, umber. Dark brown.

Umbilic. (L. *umbilicus*, the navel.) Same as *Umbilical*.

Umbilical. Of, or belonging to, the umbilicus. Shaped like the umbilicus. Deriving descent through females.

U. arteries. Vessels passing from the foetal umbilicus to the placenta of the mother.

U. circulation. The second fetal circulation. It is carried on by the umbilical arteries and veins between the placenta and the foetal circulatory system.

U. cord. The intra-uterine connection between the foetus and the mother.

U. fis'sure. The anterior portion of the umbilical fissure of the liver, separating the left and quadrate lobes.

U. fis'tula. A fistulous opening communicating with the umbilicus.

U. her'nia. Protrusion of the intestines through or in the neighbourhood of the umbilicus.

U. perfora'tion. The open umbilicus seen in some Cephalopods.

U. re'gion. The central region of the abdomen. Its limits are arbitrary.

U. ring. The opening in the abdominal wall through which the umbilical vessels pass in foetal life.

U. sac. See *Umbilical vesicle*.

U. souf'fle. A peculiar sound heard over the region against which the umbilical cord of the foetus is lying.

U. stalk. A foetal structure formed by early constriction of the embryonic layers on the ventral side of the embryo. It contains the beginning of the yolk-sac or allantois.

UMBILICARIA—UNALLAYED

U. veins. (Usually only one persists.) Vessels conveying arterialised blood from the placenta to the general venous system of the fœtus. After birth the fœtal portion becomes converted into the round ligament of the liver.

U. ves'icle. The yolk cavity of a Vertebrate. It hangs as a sac from the umbilicus, and communicates with the cavity of the fœtal intestine. The blood circulation first appears in it, and in animals having only an allantois it is the organ of nutrition during fœtal life. In animals which develop a placenta this latter supersedes it.

U. vessels. The umbilical arteries and vein or veins.

Umbilicaria. (Low L. *umbilicaris*, of or belonging to the umbilicus.) A Genus of Lichens found in the temperate and arctic regions. Family *Umbilicariæ*.

Umbilicate. (L. *umbilicatus*, of or pertaining to the navel.) Shaped like a navel. Having an umbilicus. Pitted.

Umbilicated. See *Umbilicate*.

Umbilica'tion. The condition of having a central depression, or the depression itself.

Umbilicular. (Low L. *umbilicaris*.) Of, or belonging to, the navel.

Umbil'cus. The navel. The spot in the abdomen at which the umbilical cord of the fœtus becomes continuous with the walls of the abdomen and various structures inside the abdomen, *e. g.* vessels in intestine.

Also, a navel-like formation. The central hollow in a spirally wound shell.

Also, the pit at the point of junction of the rachis and calamus of a feather, or the opening at the end of a feather.

Also, an old name for the *Cotyledon umbilicus*. The hilum of a seed.

U., poste'rior. A depression in the spinal region due to imperfect closure of the vertebral groove.

Umbiliform. (L. *umbilicus*; *forma*, form.) Like a navel.

Um'bo. (L. *umbo*.) A protuberance seen on the cap of certain Fungi.

Conch. That part of a bivalve shell immediately above the hinge. A pore plate (*Echino-dermata*).

Anat. The depression of the tympanic membrane which corresponds to the attachment of the handle of the malleus.

Umbo'nal. Like an umbo.

U. re'gion. The part of a bivalve shell marked off by the margin of the mantle.

Um'bonate. (New L. *umbonatus*.) Formed like or into an umbo. Bearing an umbo in the centre.

Um'bonated. Same as *Umbonate*.

Umbona'tion. The formation of an umbo.

Umbo'nes. Plural of *Umbo*.

Umbon'ic. Appertaining to an umbo.

Umbon'ulate. (New L. *umbonulus*, a little knob.) *Bot.* Ending in a very small boss or umbo.

Um'bra. (L. *umbra*.) 1. The *Umbridae*, mud minnows. Two species are known, *Umbræ Kramerii* and *Umbræ limi*. 2. The umbrine, a sciænoïd fish.

U. tree. Same as *Bellasombra tree*.

Umbrac'ulate. (L. *umbraculum*, umbrella.) *Entomol.* Referring to the condition

in which the frontal process projects forwards, shading the face and eyes.

Umbraculiferous. (L. *umbraculum*, umbrella; *ferre*, to bear.) *Bot.* Having a part shaped like an opened umbrella.

Umbrac'uliform. (L. *umbraculum*, umbrella; *forma*, form.) Shaped like an umbrella.

Umbrac'ulum. (L.) *Bot.* An appendage of umbrella shape.

Um'brage. Shade.

Umbrageous. Shaded.

Umbrageously. In an umbrageous manner.

Umbrageousness. Shadiness.

Um'bral. (L. *umbra*, shade.) In the classification of the Palæozoic series of Pennsylvania, according to H. D. Rogers, a group of rocks of great thickness belonging to the carboniferous, and lying between the Seral or millstone grit and the Vespertine. (Century Dict.)

Umbras'copy. (L. *umbra*, shadow; *σκοπεῖν*, to view.) Same as *Retinoscopy*.

Um'brate. (L. *umbra*.) To shade.

Um'brél. See *Umbrella*.

Umbrel'la. (L. *umbra*, a shade.) The swimming-bell of an *Aculephas*, or jelly-fish. A Genus of tectibranchiate or pleurobranchiate Gastropods. A tectibranchiate Gastropod of the Genus *Umbrella*.

U. ant. An ant which carries bits of leaves over its back when foraging.

U. bird. A bird of the Genus *Cephalopterus*, so called from having a crest which overshadows the head.

U. clasp. In *Biol.*, one of the processes of the urticating ring of the umbrella margin in *Narcomedusa*, called the umbrella clasp, which divides it into a number of collar-lobes.

U. fir. See *U. pine*.

U. grass. *Panicum decompositum*, the Australian millet.

U. leaf. A plant of the species *Berberidaceæ*, found in Virginia.

U. shell. The shell of one of the *Umbrilidæ*.

U. tree. *Magnolia tripetala*.

U. tree, ear-leaved. The mountain magnolia, *Magnolia Fraseri*.

U. tree, Guin'ea. *Hibiscus Guiniensis*.

U. tree of Queens'land. *Brassai actinophylla*.

Umbrella'cea. See *Umbrellidæ*.

Umbrellæd. Having an umbrella.

Umbrellawort. A Genus of apetalous plants of the Order Nystagineæ.

Umbrette'. (F. *ombrette*, dim. of *ombre*, shade.) The umber or umber bird.

Um'bridæ. A family of acanthopterygian Fishes, typified by the Genus *Umbræ*. Mud minnows.

Umbril'idæ. A family of Pleurobranchiate Gastropods.

Umbr'ina. (L. *umbra*, shade.) A Genus of sciænoïd Fishes.

Um'brine. (New L. *umbrina*.) A fish of the Genus *Umbrina*, more especially *Umbrina cirrhosa*.

Umbrose'. (L. *umbrosus*, full of shade.) Casting a large shadow.

In *Ornithol.*, dusky, dark-coloured.

U. war'bler. See *Warbler*.

Unach'ing. Not aching

UNALLOYED—UNCTUOUS

Unallayed' *Unalloyed*.
Unalloyed' Unmixed with foreign substances.

Unanimalised. Not formed into animal matter.

Unassimilated. Not assimilated.

Unau'. Two-toed sloth of South America.

Unawned' *Bot.* Without an awn.

Unazotised. Deprived of nitrogen.

Unbegot' *Unbegotten*.

Unbegotten. Not yet begotten. Self-existent.

Unbleached' Not bleached; of the natural colour.

Unbleaching. Not bleaching.

Unbleeding. Not bleeding.

Unbloody. Not stained with blood. Not accompanied by bloodshed.

Unbone'. To take away the bones. To move as though boneless.

Unborn'. (*Mod. Eng. unboren.*) Not yet existing.

Unbow'el. To disembowel.

Unbraced'. Not braced.

Unbraided'. To unweave.

Unbrained'. Without brains.

Unbranched'. Without branches.

Unbreathed'. Not having passed through the lungs. Unpractised.

Unbreathing. Not breathing.

Unburned'. (*Mid. Eng. unbrent.*) That which has not been acted upon by fire.

Uncaria. (*L. uncus*, a hook.) A Genus of gamopetalous plants of the Order *Rubiaceæ*, and Tribe *Naucheæ*. There are about thirty-two species. Chiefly found in India.

Uncas, Indian. *Veratrum viride*.

Uncate. (*Low L. uncatus*, curved.) Same as *Uncinate*.

Unci. Pl. of *Uncus*.

Uncia. (*L.*) An ounce.

Uncial. An inch in length.

Unciform bone. (*L. uncus*, a hook; *forma*, shape.) A bone of the lower row of the carpus carrying a hook-shaped process.

U. em'inance. The *Hippocampus minor*.

U. pro'cess. The hook-like process on the palmar surface of the unciform bone. A hook-like lamina of bone projecting downwards and backwards, and assisting to close the upper part of the orifice of the antrum.

Uncinal. (*Low L. uncinus*, a hook.) Same as *Uncinate*.

Conchol. One of the lateral teeth of the radula.

Uncina'ta. (*New L. uncinatus*, hooked.) Applied to sponges whose spicules are armed with recurved hooks.

Also, a division of marine Chætopod Worms, containing those whose tori are provided with minute chitinous hooks. They inhabit tubes of various forms made of carbonate of lime, bits of shell, or sand.

Also, plural of *Uncinatum*.

Uncinate. (*L. uncinatus*, hooked.) Hooked at the end.

U. abdo'men. One in which the segments situated at and towards the end are turned under the others.

U. anten'næ. Those in which the terminal part is curved backwards on the part immediately preceding it.

U. convolu'tion. The hippocampal gyrus or its anterior end.

U. pro'cess. A process of bone more or less hook-shaped.

U. wing nerv'u'es. Wing nervures passing from the base of the wing towards its apex, and turned at their ends into a hook-like form.

Uncinated. See *Uncinate*.

Uncina'tum. (*New L.*, neuter of *uncinatus*, hooked.) The unciform bone of the carpus.

Uncin'ia. (*Low L. uncinus*, a hook.) A genus of sedges distinguished by possessing a hooked apex to the spikelet pedicle.

Uncin'iform. Uncinate.

Uncinita'ria. (*L. uncinatus*, hooked.) A Sub-order of sponges characterised by having uncinate spicules.

Uncinita'rian. Having uncinate spicules.

Uncin'ula. A Genus of Fungi, parasitic, and belonging to the Family *Erysipheæ*. The appendages are free from mycelium and curved at the tip.

Uncinus. A hook.

Conchol. One of the uncinal teeth of the radula.

Also, a curved cilium of an infusorian.

Uncipres'sion. A method of arresting hæmorrhage by means of two hooks pressed deeply into the sides of the wound.

Unciros'trate. (*L. uncus*, a hook; *rostratus*, beaked.) Possessing a hooked beak.

Uncompatibly. Incompatibly.

Uncompounded. Not compounded; simple.

Unconcoct'ed. Not concocted; crude.

Unconform'. Not analogous; unlike.

Unconformability. The condition of not being conformable.

Unconform'able. Not consistent.

Geol. Strata not having the expected position with regard to, or the same dip as, another bed or series of beds.

Unconform'ableness. The state of being unconformable.

Unconformably. In an unconformable manner.

Uncongea'l'. To thaw.

Uncon'scious. (*L. un*, not; *consciens*, knowing.) Not conscious.

U. cerebra'tion. Mental activity of which the subject is not conscious.

Uncon'sciousness. (*L. un*, not; *consciens*, knowing.) The condition of insensibility with absent reflexes seen in some pathological states, as apoplexy, uræmic coma, asphyxiation, and cerebral injuries.

Uncous. (*L. uncus*, hooked.)

Unc'tion. (*Mid. Eng. unction*, *unxioun*; *L. unctio*.) The act of smearing or rubbing with an ointment or oil.

Unc'tious. Unctuous.

Unc'tiousness. Unctuousness.

Unc'tor. (*L.*) An anointer in an ancient bath.

Unc'torium. (*L.*) A chamber of an ancient bath set apart for the process of anointing.

Unctuos'itas elephanti'na. The condition produced by increased secretion of sebaceous matter in the inflammatory stage of elephantiasis græcorum.

Unctuos'ity. Unctuousness.

Unctuous. (*L. unctus*, a smearing;

Mod. L., an ointment.) Greasy, soapy. Having a soapy or greasy feel to the touch.

Unctuously. In an unctuous manner.

Unctuousness. The state of being unctuous.

Uncture. (L. *unctura*, an anointing; Mid. Eng. *uncture*.) An unguent.

Uncus. (L. *uncus*, a hook.) The anterior end of the circinate convolution of the brain, so called from its shape. A beak-like prolongation of the eighth abdominal segment of Lepidoptera.

Undefecated. Not defecated. Unrefined.

Under. (Mid. Eng.) Beneath, below.

U.-toe. A variety of hallux varus in which the great toe underlies its neighbours.

Underback. The vessel into which the wort is run from the mash tun, and from which it is pumped into the copper to be boiled with hops.

Underbrush. Brush. Undergrowth.

Underbush. Same as *Underbrush*.

Also (v.), to work in the underbush.

Underclay. Strata of clay not infrequently found underlying coal strata.

Undercliff. A subordinate cliff on the shore formed by material which has fallen from the cliff above.

Undercolour. Colour beneath the external colour.

Undercurved. Applied to the continuations of the upper surface of the body of animals when they curve downwards and inwards at the sides to pass below the body.

Under-exposed. Said of a photographic plate not exposed to the light long enough to make the picture distinct.

Underhung. Said of a lower jaw which projects beyond the corresponding upper jaw.

Underjawed. Having a lower jaw of prominence or size disproportionate to the corresponding upper jaw.

Underlay. A term used in speaking of the inclination of a mineral lode.

Underleaf. A variety of apple used for making cider.

Underlie. (Mod. Eng. *underliggen*; G. *unterliegen*.) Used in geology of stratified rocks where one stratum is spread over another which underlies it.

Undermine. Used in surgery and medicine with the meaning to injure or weaken.

Underproof. Applied to alcoholic liquors whose specific gravity is greater than 0.91984. In reducing underproof liquors to proof, a spirit of the specific gravity 0.825 is taken as the standard for estimation, and is the lightest spirit obtainable by ordinary distillation. The number of volumes of this standard spirit which must be added to a sample of alcohol to reduce it to proof is said to be the number of degrees the sample was underproof.

Under-ripe. Not fully ripe.

Undershrub. A very small shrub.

Undersoil. Subsoil.

Undim'ia. A swelling of which the contents resemble white of egg.

Undissolving. Not melting.

Undistemp'ered. Free from distemper or any disturbing influence.

Undose. (L. *undosus*, wavy.) Entom. Wavy.

Undross'y. Free from dross.

Undulant. (New L. *undulare*, to undulate.) Undulatory.

Undulary. (L. *undula*, a wavelet.) Undulating.

Undulate. (L. *undulatus*, wavy.) Having a wavy surface or edge. To rise and fall in waves.

Bot. Having an edge alternately convex and concave.

Entom. Having a series of opposite curves which meet at their ends.

Undulately. In an undulate way.

Undulating. Moving in waves.

Undulatingly. In an undulating manner.

Undula'tion. The act of undulating. Wave motion. Fluctuation.

U., ju'gular. The venous pulse.

U., respi'ratory. The variations in the blood-pressure due to respiration.

Undula'tionist. A supporter of an undulatory theory, particularly applied to one who advocates the undulatory theory of light.

Undulative. Undulatory.

Undulatory. Having the character of an undulation, moving in waves. Having the appearance of a series of waves.

Undulose. Undulous.

Undulous. Undulating.

Undur'able. Not durable.

Undur'ably. Not lastingly.

Undy'ing. Immortal, imperishable, unceasing.

Undy'ingly. Unceasingly.

Undy'ingness. The state of being immortal.

Uned'ible. Inedible.

Une'do. *Arbutus unedo*.

Unelas'tic. Inelastic.

Unemo'tional. Impassive.

Unemo'tionally. Impassively.

Unemo'tioned. Impassive, free from emotion.

Unencap'suled. Not capsulated.

Une'qual. (L. *un*, not; *æquus*, equal.) Having different proportions or qualities.

Unessen'tial. Not of importance.

Unferment'ed. Not fermented; not leavened.

Unfer'tile. Infertile.

Unfer'tileness. Infertility.

Unfert'ility. Infertility.

Unfo'liated. Not foliated.

Unfore'skinned. Circumcised.

Unfossilif'erous. Without fossils.

Unfos'silised. Not fossilised.

Unfruct'ed. Without fruit.

Unfruct'uous. Unfruitful.

Unfruit'fulness. Sterility.

Unfrure. To thaw.

Ungen'erated. Not generated.

Ungen'itured. Without genitals.

Unget. To treat as though unbegotten.

Ungna'dia. A Genus of plants of the Order *Sapindaceæ*, and Tribe *Sapindeæ*. It is distinguished from the related Genus *Esculus*, the horse-chestnut, by its alternate pinnate leaves, and by its flowers with a tongue-shaped disc. (Century Dict.)

Ungot'ten. Not begotten.

Ungreen. (Mid. Eng. *ungrene*.) Decaying.

Ungrown. Immature.

Un'gual. (L. *unguis*, a nail.) Appertaining to, shaped like, or having a nail.

U. bone. Lachrymal bone.

U. furrow. A transverse groove in the nail from loss of substance.

U. ma'trix. The root of the nail.

U. phalanx. The terminal phalanx.

Un'gueal. Same as *Ungual*.

Un'guen. Same as *Unguentum*.

Un'guent. (Mid. Eng. *unguent*; L. *unguentum*, ointment.) A soft preparation used as an ointment.

Unguenta'ria. *Myristica moschata*. The tree which produces the nutmeg and mace, Order *Myristicæ*. It has aromatic properties which can be obtained by the agency of alcohol.

Unguenta'rius. (L.) One who makes and sells ointments.

Un'guentary. (L. *unguentarius*.) Appertaining to an ointment.

Un'guen'tine. (L. *unguentum*, an ointment.) A local application for cutaneous affections, burns, and scalds.

Un'guen'to. An ointment.

Un'guen'tous. Like an ointment.

Unguentum. (L.) An ointment. In pharmacy, a soft mixture of vaseline or some fat with a medicament, and intended to be applied to the skin. Its melting-point should be below the body temperature.

U. simplex. Consists of lard 80 parts, wax 20 parts.

Un'gues. (L.) Talons. Nails.

U. adun'cl. A thickened, ridged, and curved condition of the nail. It sometimes takes the form of ingrowing nail.

U. fibro'si. A condition of the nails in which they appear to have a fibrous structure.

Un'guical. (L. *unguis*, a nail.) Like a nail or claw.

Un'gulic'orn. (L. *unguis*, a claw; *cornu*, a horn.) The hard horny skin at the end of the upper mandible of the bill of certain birds, ducks, geese, &c.

Un'guic'ular. (L. *unguiculus*, dim. of *unguis*, a nail.) Relating to a nail.

Un'guic'ulate. (New L. *unguiculatus*.) Having nails or claws.

Bot. Having a claw-like base; referring to petals.

Entomol. Hooked.

U. anten'næ. Antennæ in which the last joint is slender and curved.

U. maxil'læ. Subchelate maxillæ whose external lobe has at its apex a slender tooth which can be folded down on the lobe itself. (Century Dict.)

U. tib'la. A tibia which has the external apical angle prolonged in a more or less incurved and pointed process. (Century Dict.)

Un'guic'ulated. Same as *Unguiculate*.

Un'guic'ulus. (L. *unguiculus*, dim. of *unguis*, nail.) A small hook-like appendage.

Un'guiferous. (L. *unguis*, nail; *ferre*, to bear.) Bearing a nail. Having digits which carry nails.

U. pro'legs. *Entomol.* The deciduous legs of a caterpillar which have minute hooks on their under surface.

Un'guiform. (L. *unguis*, nail; *forma*, shape.) Shaped like a nail.

U. man'dibles. Long mandibles with

straight and parallel sides curved downwards at their ends.

Un'guinal. (L. *unguis*, a nail.) Relating to a human nail.

Un'guinous. (L. *unguinosus*, oily.) Consisting of, or resembling, fat.

Unguiros'tral. (L. *unguis*, nail; *rostrum*, a beak.) Having a nail at the end of the bill.

Unguiros'tres. The duck family, so called by Nitzsch on account of the nail at the end of the bill.

Un'guis. (L. *unguis*, nail; Gr. *ὄνυξ*, nail.) A nail. The human lachrymal bone, so called from its shape. The hippocampus minor.

Also, one of the curved claws at the extremity of an insect's tarsus.

Also, the lower contracted part of some petals by which they are attached to the receptacle.

U. involu'tus. Ingrowing nail.

U. odora'tus. *Blatta bysantia*.

Un'gula. (L., claw.) A hoof or talon.

Also, an instrument for extracting a dead fœtus from the womb.

Also, a Genus of Brachiopods.

U. caballi'na. Coltsfoot. Order *Compositæ*. Demulcent and expectorant.

Un'gulæ palpebra'rum. (L.) Tarsal cartilages of the eyelids.

Un'gular. Having the characteristics of an ungula.

Un'gula'ta. (L.) A name used for hoofed quadrupeds without strict reference to class.

In the classification of Mammalia, according to Linnæus, it is one of the primary divisions. Include Peccora and Belluæ of Linnæus, Ruminantia and Pachydermata of Cuvier.

Un'gulate. (L. *ungula*, claw, hoof.) Hoof-like. Belonging to the Ungulata. A hoofed quadruped.

Un'guligra'da. (New L. neuter pl. of *unguligradus*.) Walking upon hoofs. Ruminants with exception of the *Camelidæ*.

Un'guligrade. (L. *ungula*, hoof; *gradus*, walk.) Having true hoofs. An unguligrade quadruped.

Un'guli'na. (L. dim. of *ungula*, a hoof.) The typical Genus of the bivalves *Ungulinidæ*.

Un'gulite. A Brachiopod of the Genus *Ungulites*.

Un'gulites. A Genus of Brachiopods.

Un'gulous. Appertaining to a hoof.

Un'health'. Unhealthiness.

Un'health'ful. Unwholesome.

Un'health'fully. Unwholesomely.

Un'health'iness. The condition of being unhealthy.

Un'health'y. Unsound; unwholesome; morbid; morally injurious.

Un'homoge'neous. Not homogeneous.

Un'homoge'neousness. The condition of being unhomogeneous.

Un'artic'ulate. (L. *unus*, one; *articulus*, a joint.) Having but one joint.

Un'iauric'ulate. (L. *unus*, one; *auricula*, ear.) Possessing one organ of hearing.

Un'iax'al. See *Uniaxial*.

Un'iax'ally. See *Uniaxially*.

Un'iax'ial. (L. *unus*, one; *axis*, axis.) Having but one optical axis or axis of double refraction. Having one axis to which the others are subordinate. Having a single axis.

Un'iax'ially. In a uniaxial manner.

Uniba'sal. Having a single base.

UNIBRANCHIATE—UNILOCULATE

Unibranchiate. (L. *unus*, one; *branchiæ*, gills.) Having but one gill.

Unicamerate. (L. *unus*; *camera*, a chamber.) *Unilocular*.

Unicap'sular. (L. *unus*; *capsula*, capsule.) Having a single capsule.

Unicella of Naegeli. In *Biol.*, the particles theoretically supposed to contain the gemmule.

Unicellar. (L. *unus*, one; *cella*, a cell.) Having but one cell.

Unicellate. (L. *unus*; *cella*, a cell.) One-pronged.

Unicelled. *Unicellular*.

Unicellular. (L. *unus*, one; *cellula*, a cell.) Composed of one cell.

U. animals. *Protozoa*.

Unicentral. (L. *unus*; *centrum*, centre.) A term used by Herbert Spencer to denote growth proceeding in all directions from one centre.

Unichord. Same as *Monochord*.

Uniciliate. (L. *unus*, one; New L. *cilium*.) Having one cilium.

Uniciliated. See *Uniciliate*.

Unicism. The belief that there is only one venereal virus.

Unicist. One who believes in *Unicism*.

Unicolorate. Same as *Unicolour*.

Unicolorous. Same as *Unicolour*.

Unicolour. (L. *unus*; *color*, colour.) Of one colour.

Unicoloured. Same as *Unicolour*.

Unicon'chæ. (L. *unus*; *concha*, a shell.) The univalve shells.

Unicorn beetle. A beetle having a single large horn.

U. bird. *Palamedea cornuta*.

U. fish. The narwhal.

U.'s horn. See *Unicorn root*.

U. moth. One of the Family *Notodontidæ*. Found in North America.

U. plant. See *Martynia*.

U. root. *Aletris farinosa*.

U. shell. One of the *Muricidæ* family; a Gastropod whose shell has a lip prolonged into a horn-like process.

U. uterus. (L.) A uterus having but one cornu.

U. whale. The narwhal.

Unicorn'neal. (L. *unus*, one; *cornea*, cornea.) Possessing but one cornea.

Unicornous. Having one horn.

U. uterus. A uterus having but one oviduct; usually from atrophy of one of the Müllerian ducts.

Unicornu'ted. (L. *unus*; *cornutus*, horned.) Having one horn.

Unicostate. (L. *unus*; *costa*, a rib.) With one rib.

Applied also to leaves having one large vein running down the centre.

Unicotyledonous. *Monocotyledonous*.

Unicus'pid. Having but one cusp.

Unicus'pitate. *Unicuspid*.

Unidactyl. (L. *unus*, one; Gr. *δάκτυλος*, finger, digit.) Having a single digit. An animal having a single digit.

Unidactylous. See *Unidactyl*.

Unidentate. (L. *unus*; *dentatus*, toothed.) Having a single tooth-like projection.

Unidenticulate. (L. *unus*, one; *denticulus*, a denticle.) Having but one denticle.

Unidigitate. (L. *unus*, one; *digitatus*, bearing digits.) Possessing one digit. *Monodactylous*.

Uniembryon'ic. Bearing a single embryo.

Unifa'cial. (L. *unus*; *facies*, a face.) Having but one face, or looking in one direction.

Unifi'lar. (L. *unus*; *filum*, a thread.) Possessing one thread. Applied specially to the magnetic bar of the magnetometer which hangs by a thread.

Uniflag'ellate. (L. *unus*; *flagellum*, a whip lash.) Having but one flagellum.

Uniflorous. (L. *unus*, one; *flos*, a flower.) Having but one flower.

Unifo'liar. *Unifoliate*.

Unifo'liate. (L. *unus*, one; *folium*, a leaf.) One-leaved.

Uniforate. (L. *unus*, one; *foratus*, pierced.) With one opening.

Uniform. (L. *unus*, one; *forma*, form.) Not changing in shape.

U. current. A continuous current of constant strength.

Uniformise. To make uniform.

Uniformita'rian. Of, or pertaining to, the doctrine of uniformity, or to uniformity.

Also, a believer in the doctrine of uniformity, especially when applied to geological change.

Uniformita'rianism. The doctrine of the Uniformitarians.

Uniformity. (L. *uniformis*.) The condition of being uniform.

Uniformly. In a uniform manner.

Uniformness. Uniformity.

Unifo'veate. (L. *unus*, one; *fovea*, a small pit.) With a single small depression.

Uniglob'ular. Of globular formation and single.

Uniju'gate. (L. *unus*, one; *jugum*, a yoke.) A pinnate leaf with one pair of leaflets.

Unijugous. See *Unijugate*.

Unila'biate. (L. *unus*, one; *labium*, a lip.) Having one lip or lip-like part.

Unilamellate. (L. *unus*; *lamella*.) Having a single lamella.

Unilaminar. (L. *unus*, one; *lamina*, a layer.) Single-layered.

Unilam'inate. See *Unilaminar*.

Unilat'eral. (L. *unus*, one; *latus*, a side.) Appertaining to one side only.

Bot. Growing from, or directed towards, one side.

U. band. One which binds one part only.

U. cho'rea. A form of chorea in which the convulsive movements are confined to one side of the body only.

U. leaves. Those which incline towards one side of the stem.

U. raceme'. One whose flowers grow on one side of the common peduncle only.

Unilateral'ity. The condition of being unilateral.

Unilat'erally. In a unilateral manner.

Unilo'bar. (L. *unus*, one; New L. *lobus*, a lobe.) See *Unilobed*.

Unilobed. (L. *unus*, one; New L. *lobus*, a lobe.) Having a single lobe.

Uniloc'ular. (L. *unus*, one; *loculus*, a compartment.) With one loculus; single-chambered.

Uniloc'ulate. See *Unilocular*.

UNIMUCRONATE—UNIT

Unimu'cronate. (L. *unus*, one; *mucro*, a point.) With one tip or point.

Unimus'cular. (L. *unus*, one; *musculus*, muscle.) Having one adductor muscle, as a bivalve.

Unimusclo'sa. (L. *unus*, one; *musculosus*, muscular.) Unimuscular bivalves.

Uniner'vate. (L. *unus*, one; *nervus*, a nerve.) With one rib or midrib. One-nerved.

Uninerved. See *Uninervate*.

Uninflam'mability. The condition of being uninflamable.

Uninflam'mable. Incapable of being set on fire.

Unintegrated. Not integrated.

Unintermit'ted. Continuous.

Unintermit'ting. Continuing.

Unintermit'tingly. Continuously.

Unintermixed. Not mixed.

Uninterrupted. Not interrupted; incessant.

Bot. Consisting of parts which increase or decrease by regular gradation.

Uninterrupt'edly. Without interruption.

Uninu'clear. (L. *unus*, one; *nucleus*, nucleus.) With a single nucleus.

Uninu'cleate. (L. *unus*, one; *nucleus*, nucleus.) *Uninuclear*.

Unio. A Genus of the Family of bivalves *Unionidæ*. A fresh-water mussel.

Unioc'ular. (L. *unus*, one; *oculus*, an eye.) *Monocular*.

Unio'la. A Genus of grasses of the Tribe *Festuceæ*. Found in North America.

Union. (L. *unio*, oneness.) The process of joining parts, or the condition of being so joined.

U. by granula'tion. Healing by "third intention."

U. dissolved'. The condition in a fracture in which the callus is dissolved and absorbed.

U., pri'mary. Healing by "first intention."

U., sec'ondary. Healing by "second intention."

U., vi'cious. Union with deformity.

Uniona'cea. (L.) Include *Unio pectorum*, *Anodon cygneus*, *Unio margaritifera*. Order Isomya of Lamellibranch Molluscs, in which the anterior and posterior adductor muscles are equally well developed. The members of this Order have no respiratory siphons.

Uniona'cean. Appertaining to the *Unionacea*.

U'nion-grass. A name for grasses of the Genus *Uniola*.

U'nionid. A member of the *Unionidæ*.

Union'idæ. A Family of bivalve Molluscs, typified by the Genus *Unio*.

Union'iform. (New L. *unio*, oneness; *forma*, shape.) Resembling, or related to, the *Unionidæ*.

Union'inæ. A Sub-family of the *Unionidæ*.

Unionine. Of, or pertaining to, the *Unioninæ*.

U'nionite. A fossil *Unio*.

Unio'val. (L. *unus*, one; *ovum*, an egg.) Having but one egg.

Unio'vular. (L. *unus*, one; *ovulum*, an ovule.) Having a single ovule.

Unio'vulate. (L. *unus*, one; *ovulum*, ovule.) Having one ovule.

Unip'ara. (L. *unus*, one; *parere*, bring forth.) A woman who has borne one child.

Unip'arous. (L. *unus*, one; *parere*, to bring forth.) Bearing one at a time. In *Bot.*, having but one axis or branch.

Unipar'tite. (L. *unus*, one; *partitus*, divided into pieces.) Not separated into parts.

Uniped. (L. *unus*, one; *pes*, a foot.) Having but one foot.

Unipelta'ta. A division of Stomatopoda, Order Stomatopoda. Included in this Order of Crustacea is the locust-shrimp, *Squilla mantis*, alone.

Unipetal'ous. (L. *unus*, one; Gr. *πίταλον*, a leaf.) Having a single petal.

Uniph'onous (L. *unus*, one; Gr. *φωνή*, a sound.) Giving rise to a single sound.

Unipla'nar. (L. *unus*, one; *planum*, a plane.) Lying in one plane.

Uniplicate. (L. *unus*, one; *plicare*, to fold.) Forming a single fold.

Unipo'lar. (L. *unus*, one; *polus*, a pole.) Possessing one kind of polarity. *Biol.* Having one pole.

Unipolar'ity. The condition of being unipolar.

Unipo'rous. (L. *unus*, one; *porus*, a pore.) With but one pore.

Unira'diate. (L. *unus*, one; *radius*, a ray.) With but one arm or process.

Unira'diated. See *Uniradiated*.

Uniramose'. See *Uniramous*.

Unira'mous. Having a single branch.

Unise'ma deltifolia. (L. *unus*, one; *semen*, seed; Gr. *δέλτα*, the letter Δ; *folia*, leaves.) The water plantain, shovel-leaf. An aquatic plant found in North America. The root is emollient and astringent.

Unise'palous. (L. *unus*, one; *sepalum*, a sepal.) With a single sepal.

Unisept'ate. (L. *unus*, one; *septum*, a partition.) Possessing but one septum.

Unise'rial. (L. *unus*, one; *series*, series.) In one series.

Uniser'ially. In one series.

Unise'riate. See *Uniserial*.

Unise'riately. See *Uniserially*.

Uniser'ate. (L. *unus*, one; *serra*, a saw.) With one row of teeth.

Uniser'ulate. (L. *unus*, one; *serrula*, a small saw.) With one row of small teeth.

Unisexual. (L. *unus*, one; *sexus*, sex.) Of one sex. In *Entom.*, having females only. In *Bot.*, appertaining to an inflorescence which has only the organs of one sex.

Unisexuality. The condition of being unisexual.

Unisex'ually. Relating to the individual which is one sex only.

Unisil'icate. A salt of silicic acid in which the ratio of the atoms of oxygen combined with the base to those combined with silicon is 1 : 1.

Unispi'ral. *Bot.* Having a single spiral.

Unisul'cate. *Bot.* and *Zool.* Having a single groove.

Unit. A single thing or value.

U., ampère-hour. A unit of electric quantity equal to one ampère flowing for one hour; it is the equivalent of 3600 coulombs.

U., C.G.S. sys'tem. Centimetre-gramme-second units, a system of fundamental units in which a centimetre is taken as the unit of

length, the gramme as the unit of mass, and the second as the unit of time.

U., coulomb'. The unit of measurement of electric quantity. The quantity of electricity which passes during one second through a conductor having a resistance of one ohm, with one volt of electro-motive force. The microcoulomb is the millionth part of this amount.

U., dyne. The unit of force, *i. e.* the force which if it acted for one second on a mass of one gramme would, if the mass were previously at rest, give it a velocity of 1 cm. per second, or if it were previously moving in the direction of the force would in the same time alter its velocity by that amount.

U., elec'trical. Ampère. The electro-motive force of one volt produced in a circuit having one ohm of resistance, equal to 1-10th C.G.S. electro-magnetic unit. It is sufficient to deposit .3 gr. of copper a minute on the plate of a copper voltameter, or to decompose sufficient acidulated water to generate 10.32 c.c. of mixed hydrogen and oxygen a minute. In medicine the 1-1000th part is used, a milliampère, which is equal to one volt divided by 1000.

U., erg. Denotes the force required to move a body through one centimetre against a force of one dyne.

U., far'ad. The unit of electric capacity. Practically a capacity sufficient to hold one coulomb of current having a potential of one volt. The microfarad, 1-1,000,000 part of the theoretical farad, is generally used.

U., joule. The unit of electric energy or work. The volt-coulomb. It equals 10,000,000 ergs.

U., meg'alerg. A million ergs.

U., meg'avolt. A million volts.

U., microcoulomb'. See *U., coulomb.*

U., microfar'ad. See *U., farad.*

U., microvolt. One millionth part of a volt.

U., milliampère'. See *U., ampère.*

U. of cur'rent. A conductor 1 cm. long, which, if bent into an arc of 1 cm. radius, will act with a force of one degree on a unit magnet pole at the centre.

U. of heat. The amount of heat necessary to raise the temperature of one kilogramme of water from 0° to 1° C.

U. of work. An erg; it is equal to the work required to move a body through one centimetre against a force of one dyne.

U., ohm'. The unit of resistance. For practical purposes it is the resistance of a pure silver wire one metre in length and one millimetre in diameter.

U., photomet'ric. The light emitted by one sq. cm. of melted platinum at its solidification temperature.

U. quan'tity of light. The quantity of light which falls on a surface of one square foot placed at a distance of one foot from a standard candle, and so that a normal drawn to the surface at any point passes through the source of light. This unit quantity of light is called a candle-foot.

U., volt. The unit of electro-motive force, the force sufficient to cause a current of one ampère to flow against a resistance of one ohm.

U., volt-ampère'. The unit of electric work. It is the amount of pressure developed by a current of one ampère having an electro-

motive force of one volt. Its mechanical equivalent is 44.2 foot-pounds a minute. Sometimes called a watt.

U., weber. An ampère.

Unitary. Of, or relating to, a unit.

Chem. Specifically noting that system in which the molecules of all bodies are compared, as to their magnitude, with one molecule, and all chemical actions are, as far as is possible, reduced to one typical form of reaction, namely, double decomposition. (Watts' Dict. of Chem.) Also, appertaining to uniformity.

Uniting band'age. A bandage for bringing the edges of a wound together.

Unitise. To form into a unit.

Unity. Oneness. The whole in contradistinction to its constituent parts.

Univalence. *Chem.* The property of being univalent.

Univalency. Same as *Univalence.*

Univa'lent. (L. *unus*, one; *valere*, to be worth.) Able to replace a single hydrogen atom in combination.

Univa'lid. Same as *Univalent.*

Unival'vate. See *Univalve.*

Univalve. (L. *unus*, one; *valva*, a valve.) Possessing but one valve. A univalve mollusc.

Univalved. See *Univalve.*

Univalvular. Same as *Univalve.*

Univer'sal. General.

U. joint. A ball-and-socket joint moveable in any direction.

Univ'ocal. (L. *unus*, one; *vox*, a voice.) Having but one possible meaning.

Univ'ocally. Unmistakably.

Unliq'uesied. Not dissolved.

Unmaimed'. Entire.

Unmalleability. Having the characteristic of being unmalleable.

Unmalleable. Not malleable. Unyielding.

Unmas'culate. To emasculate.

Unmea'surable. (Mid. Eng. *unmeasurable*.) Immeasurable.

Unmea'surableness. The condition of being unmeasurable.

Unmea'surably. (Mid. Eng. *unmeasurably*.) Immeasurably.

Unmea'sured. Immense; boundless.

Unmedic'inable. That which cannot cure or be cured.

Unmixed'. Unadulterated; pure.

Un'na's paste. A paste for large patches of eczema. It consists of zinc oxide 1 part, mucilage of acacia and glycerine, of each 2 parts.

Unnatural. (L. *un*, not; *natura*, nature.) Not according to nature.

U. offen'ces. The gratifying of sexual appetites by methods other than the usual.

Unoculus. See *Unioctular*.

Unoga'ta. The name given by Fabricius to insects having only maxillary palpi. In the male these maxillary palps are at times modified for the purpose of conveying the spermatozoa to the female, *e. g.* spiders. Includes centipedes, dragon-flies, spiders.

Uno'na. A Genus of plants of the Order *Anonaceæ*. Natives of tropical Asia and Africa.

Uno'neæ. A Tribe of polypetalous plants of the Order *Anonaceæ*. Its flowers have a very large number of stamens, and six valvate, flattened or connivent petals, arranged in two rows, and all nearly alike.

UNORGANISED—URANIA

Unor'ganised. (L. *un*, not; Gr. *ὄργανον*, organ.) Not possessing definite organs, but not necessarily lifeless.

Unos'ified. Not bony.

Unpalped'. With no palpi.

Unpetrified. Not petrified.

Unplast'ic. Not plastic.

Unprolif'ic. Barren; not prolific.

Unripe'. (Mid. Eng. *unripe*; Ang.-Sax. *unripe*.) Not ripe. Not in a state of maturity or perfection.

Unri'pened. Not mature.

Unripe'ness. The condition of being unripe. Immaturity.

Unsan'itary. Unhealthy.

Unsa'ponif'able. Not capable of saponification.

Unsat'urated. (L. *un*, not; *saturare*, to saturate.) Not saturated. A qualification applied to carbon compounds that are capable of saturating two valence units.

Unsat'uration. The state of being unsaturated.

Unsem'inared. Made a eunuch.

Unsolid. Not solid.

Unsolid'ity. The condition of being unsolid.

Unsound'. (Mid. Eng. *unsounded*.) Unhealthy.

Unsound'ness. The state of being unsound.

U. of mind. Inability to conduct properly one's affairs.

Unstratified. (L. *un*, not; *stratum*, stratum.) Not arranged in strata or layers.

Unstriated. Not striated.

Unsusceptibility. The condition of being unsusceptible.

Unsusceptible. Insusceptible.

Unsymmet'ric. See *Unsymmetrical*.

Unsymmet'rical. Without symmetry; especially used of flowers which lack numerical symmetry.

Unsymmet'rically. In an unsymmetrical manner.

Unsym'metry. Want of symmetry.

Untinctured. Not tintured, not infected; unimbued.

Untinged'. Not tinged; not infected.

Unto'mool. *Tylophæa asthmatica*.

Untransmu'table. Not capable of being transmuted.

Untranspa'rent. Opaque.

Unva'riegated. Not coloured differently in its various parts.

Unwell'. (L. *un*, not; *well*.) Ill. Menstruating.

Unwhole'. (Mid. Eng. *unhol*, not whole.) Inferior; not sound.

Unwhole'some. (Mid. Eng. *unholsum*.) Insalubrious; unhealthful.

Unwield'. (Mid. Eng. *unweelde*.)

Unwield'ily. In an unwieldy manner.

Unwield'iness. The condition of being unwieldy.

Unwield'some. Unwieldy.

Unwield'y. Moving or moved with difficulty because of size. Wanting in pliability.

Upas. A name applied to several trees found in the East Indies which contain a poisonous principle, probably identical with strychnine. The tree producing it is the *Ipo toxicaria* and the *Upas antiar*, from which the Javanese

obtain an arrow poison which acts directly on the heart, paralysing it.

Uphantænia. A generic name given by Vanuxem to a fossil from the Chemung group in New York, of very problematic character, classed by Schimper with Dictyophyton in a group of Algæ; more recently has been generally looked upon as belonging to the silicious sponges. (Century Dict.)

Up'land bone'set. *Eupatorium sessilifolium*.

U. su'mach. *Rhus glabra*.

Up'per po'lar circle. The upper third of the uterine cavity.

Up'raising. Rearing.

Up'siloid. See *Hypsiloid*.

Upucer'thia. A Genus of neotropical Birds of the Family Dendrocolaptidæ, Order Passeres, Sub-class Carinatae. Found in North and South America. Six or eight species.

Upucer'thidæ. A Family of Birds. Same as Dendrocolaptidæ or Anabatidæ.

Upu'pa. (L. *upupa*; Gr. *ἑποψ*, the hoopoe.) The only existing Genus of Upupidæ.

Upu'pidæ. A Family of tenuirostral picarian or non-passerine Birds, of which the Genus Upupa is the type. A Family of upupoid picarian Birds, of which Upupa is the only living genus.

Upu'poid. Resembling a hoopoe.

Upupoid'æ. A group of tenuirostral picarian birds containing two families, Upupidæ and Irrisidæ.

U'rachal. (*ὀυράχος*, urachus.) Pertaining to the urachus.

U. fold. The peritoneum surrounding the urachus.

U'rachus. (*ὀυράχος*, urachus.) A fibrous cord extending from the bladder to the umbilicus. It represents a part of the foetal allantois with its vessels, whose cavities have become obliterated; the parts which remain pervious being those which form the bladder and the superior vesical arteries. It may remain pervious, and being then a malformation, allow urine to pass by the umbilicus.

Uracra'tia. See *Enuresis*.

Uræm'atin. See *Urohæmatin*.

Uræ'mia, Uræ'mic. See *Uremia, Uremic*.

Uræ'um. (*ὀυραῖον*, the hinder part.) The posterior half of a bird.

Urali. Synonym of *Curare*.

U'ralite. A mineral resembling augite in its crystalline form, and hornblende in its physical properties.

Uralit'ic. Having the characters of uralite.

Uralitira'tion. The paramorphic change of augite to hornblende.

Uralitise. To convert into uralite.

Ura'lium. (*ὀύρον*, urine.) Ural. Chloral-urethane. $\text{CCl}_3\text{CH.OH.NHCO}_2\text{C}_2\text{H}_5$. A combination of chloral hydrate and urethane, discovered in 1889. Has a bitter metallic taste.

U'rana. *Ureter*.

Uranalysis. (*ὀύρον*, urine; *ἀνάλυσις*, analysis.) Urine analysis.

Uranate. A salt formed by the union of uranic oxide with a metallic oxide.

U'rane. *Urinal*.

U'ran-glim'mer. See *Uranite*.

Ura'nia. A Genus of moths, diurnal in habit. Also, a Genus of humming-birds.

Uran'ic. Appertaining to uranium.
Uranif'erous. Containing uranium.
Uran'idæ. A Family of moths resembling butterflies, of the Family Papilionidæ.
Uran'inite. Pitch-blende. A heavy black mineral, of specific gravity 9.5. It consists of oxides of uranium, thorium, and lead. It contains nitrogen, and is the only mineral found in the earth known to do so.
Uraniscochas'ma. (Οὐρανίσκος, the roof of the mouth; χάσμα, a chasm.) Cleft palate.
Uraniscon'itis. (Οὐρανίσκος, the roof of the mouth.) Inflammation of the palate.
Uranis'coplasty. (Οὐρανίσκος, the roof of the mouth; πλάσσειν, to shape.) Plastic surgery of the palate.
Uraniscorraphy. (Οὐρανίσκος, the roof of the palate; ραφή, a seam.) Suture of the palate.
Uranis'cus. (Οὐρανίσκος, the roof of the palate.) The palate.
Uranite. Uran-glimmer or uran-mica, an ore of uranium, of green or yellow colour. It may be a phosphate of uranium and calcium, or a phosphate of uranium and copper.
Uranitic. Appertaining to uranite.
Uranium. *Chem.* Symbol U. At. wt 240. A metal discovered by Klaproth in 1789 in pitch-blende, supposed till then to be an ore of either zinc or iron. It resembles nickel in colour, and has a specific gravity of 18.7. It belongs to the chromium group of elementary bodies. Sodium diuranate or uranium yellow is used in making yellow glass, and on glass and porcelain.
Uran-mi'ca. Same as *Uranite*.
Uran-o'chre. A yellow earthy oxide of uranium. It occurs in the granite of France and Saxony with pitch-blende or uraninite.
Uranocolobo'ma. (Οὐρανός, the vault of the heavens, hence the roof of the mouth; *coloboma*.) Cleft palate.
Uranoman'ia. (Οὐρανός, the vault of the heavens; μανία, madness.) Religious mania with exaltation.
Uranoplas'tic. (Οὐρανός, the vault of the heavens, hence the palate; πλάσσειν, to form.) Appertaining to uranoplasty.
Uranoplasty. (Οὐρανός, the vault of the heavens, hence the soft palate; πλάσσειν, to form.) See *Uraniscoplasty*.
Uranor'raphy. See *Uraniscorraphy*.
Uranos'chisis. (Οὐρανός, the vault of the heavens, the palate; σχίσις, cleavage.) Cleft palate.
Uranoscope. A fish of the Genus *Uranoscopus*.
Uranoscop'idæ. A Family of acanthopterygian Fishes. The typical genus is *Uranoscopus*.
Uranos'copus. (L. *uranoscopus*; Gr. οὐρανόσκοπος, looking at the heavens.) The typical Genus of *Uranoscopidæ*.
Uranostaphylor'raphy. (Οὐρανός, the vault of the heavens, the palate; σταφυλή, uvula; ραφή, suture.) See *Uraniscorraphy*.
Uranostomatos'copy. (Οὐρανός, vault of the sky, palate; σκόμα, mouth; σκοπεῖν, to view.) Inspection of the roof of the mouth for diagnostic purposes.
Uranothrite. Thorite containing a small percentage of oxide of uranium.
Uranus. The palate.

Uraposte'ma. (Οὐρον, urine; apostema.) An abscess containing urine.
Urapteryg'idæ. A family of geometrid moths, typified by the Genus *Urapteryx*. The fore-wings are acuminate, and the hind wings generally caudate.
Urap'teryx. (Οὐρά, tail; πτέρυξ, wing.) The typical genus of the family of moths *Urapterygidæ*. The body is slender, the third joint of the palpi indistinct, fore-wings acute, hind wings with a caudiform angle on the exterior border.
Ura'rë. See *Curare*.
Ura'ri. Same as *Curari*.
Ura'rin. See *Curarin*.
Urarised. Same as *Curarised*.
Urarthrit'is. *Arthritis urtica*.
Uras. Urate.
U'rate. A salt of uric acid.
U. test. Heat the upper part of a column of turbid urine; if the turbidity be due to urates it will disappear: or add potassium hydrate to the urine; the urates will dissolve.
U'rat'ic. Appertaining to urates.
U. diath'esis. A condition of nutrition in which there is a tendency to deposit urates in the joints and other parts of the body.
Urato'ma. A deposit of urates in the tissues.
Urato'sis. The condition of body in which urates are deposited in the tissues.
Uratur'ia. (Οὐρον, urine.) A condition in which there is an increase in the amount of urates in the urine.
Uraug'es. (Οὐρά, tail; αὐγή, light.) A genus of African glossy starlings. The typical species has a very long tail. Western and North-Eastern Africa. The plumage is green, with steel-blue, blue, and bronze tints.
Urbantschitsch's meth'od. A method of introducing the Eustachian catheter.
Urbic'olæ. A group of butterflies. The skippers.
Urbic'olous. (L. *urbs*, city; *colere*, to dwell.) Urban.
Urce'ola. (L. *urceolus*, a little pitcher.) So called with reference to the form of the corolla. A Genus of gamopetalous plants of the Order *Apocynaceæ*, Tribe *Echitidæ*, and Subtribe *Ecdysanthereæ*. Seven or eight species are known. Natives of the Malay Peninsula and Archipelago. From their juice an elastic substance has been obtained, and used as a substitute for india-rubber.
Ur'ceolar. See *Urceolate*.
Urceola'ria. In *Bot.*, a Genus of gymnocarpous lichens.
 In *Zool.*, the typical Genus of *Urceolariidæ*.
Urceola'rian. Pertaining to the Family *Urceolariidæ*; an Infusorian of the Family *Urceolariidæ*.
Urceolari'iform. Having the form of lichens of the Genus *Urceolaria*.
Urceolari'idæ. A Family of parasitic infusorians.
Urceola'r'ine. Appertaining to the Genus *Urceolaria*.
Ur'ceolate. (L. *urceolus*, a little pitcher.) Shaped like a pitcher. Having, or being contained in, an urceolus.
Urceoli'na. (L. *urceolus*, an urn.) A Genus of plants, Order *Amaryllidaceæ*, Tribe *Amaryllæ*, Sub-tribe *Cyathiferæ*. Three species, natives of the Andes, are known.

URCEOLUS—URETER

Urce'olus. (L. *urceolus*, an urn.) *Bot.* A pitcher- or urn-shaped body.

Zool. The external tubular casing or sheathing of a wheel animalcule. In rare cases the urceolus is made from foreign matter selected by the animal for this purpose.

Ur'chin. (Mid. Eng. *urchin*; Gr. *χίρ*, a hedgehog.) A hedgehog. Sea-urchin.

U. fish. A sea-porcupine. *Deodon hystrix*.

U. form. The type of form of a sea-urchin.

Urea. (Οὔρον, urine.) Carbamide, CO (NH₂)₂, a crystalline solid, soluble in water, and forming crystalline compounds with acids and bases. It is the product of the proteid metabolism of the body, and is excreted in the urine of mammals.

U. ferment. An enzyme existing in urine passed from an inflamed bladder. It is said to be associated with the mucus contained in this urine.

U. test. Concentrate the urine to be tested by evaporation, add strong nitric acid; the urea falls as a precipitate of nitrate of urea in rhombic plates.

Ureal. Containing, or referring to, urea.

Ureameter. An apparatus for estimating the amount of urea in urine.

Ureametry. The quantitative test for urea in the urine.

Urechitessuberec'ta. Yellow nightshade. Very poisonous, with an action like that of aconite.

Urechitin. (C₂₈H₄₂O₈.) A poisonous glucoside derived from *Urechites suberecta*.

Urechitox'in. (L. *urechites*; Gr. *τόξικον*, poison.) C₁₃H₂₀O₅. A powerful poison derived from the leaves of *Urechites suberecta*.

Urech'ysis. (Οὔρον, urine; ἔκχυσις, an effusion.) An effusion of urine into areolar tissue.

Urede'ma. (Οὔρον, urine; οἰδημα, a swelling.) An ill-defined œdema or swelling due to the infiltration of a tissue by urine.

Uredin'æ. An Order of minute ascomycetous Fungi, parasitic for the most part on living flowering plants and ferns. It includes rust, smut, and mildew. Its various species are remarkable for alternation of form, which led to their being classed independently.

Uredin'eous. Appertaining to the Uredinæ. Affected by uredo.

Ured'ines. (New L. pl. of *uredo*.) The Uredinæ.

Ured'inoid. Resembling or having the characters of the Uredinæ.

Ured'inous. (L. *uredo*, a blight.) Affected with Uredo.

Ure'do. (L. *uredo*, a blight.) A stage in the development of fungi of the Order Uredinæ which precedes the final stage. Until recently it was looked on as a separate genus. Also, a receptacle in which uredospores are produced.

Also (L. *uro*, burn), *Urticaria*.

U. gonid'ium. See *Uredospore*.

Ure'doform. (L. *uredo*, blight; *forma*, shape.) The form taken on by one of the Uredinæ during the time of producing uredospores.

Ure'do-fruit. See *Uredospore*.

Uredospore. (L. *uredo*, blight; σπορά, seed.) A peculiar spore borne on erect basids springing from cushion-like masses of mycelial hyphæ situated beneath the epidermis of the host plant by parasitic uredinous fungi.

Uredospor'ic. *Bot.* Appertaining to a *Uredospore*.

U'reld. (Οὔρον, urine.) A compound of urea and an acid radical.

U'reide. A compound of urea with an acid radical.

Urelco'sis. (Οὔρον, urine; ἔλκωσις, ulceration.) Ulceration of the urethra or urinary organs.

Ure'ma. Urine.

Ure'mia. (Οὔρον, urine; αἷμα, blood.) A condition which follows imperfect elimination of waste products of digestion by the kidneys. Carbamic acid is said to be the active agent. The symptoms are headache, nausea, delirium, and convulsions or heaviness, followed by coma and death.

Uræ'mic. (Οὔρον, urine; αἷμα, the blood.) Due to, or characterised by, uremia.

U'ren. *Urea*.

U'rena. (*Uren*, Malabar name.) A Genus of plants of the Order Malvaceæ typical of the Tribe Ureneæ. There are about six species found in tropical Africa and Asia, with one or two widely dispersed over the warmer regions of America. Their uses are various, medicinally for their mucilaginous properties, as an expectorant, as a sedative. *U. lobata* and *U. sinuata* yield a fibre used in paper making and a leaf used to adulterate patchouli.

U'renæ. A Tribe of polypetalous plants of the Order Maliaceæ. Five genera are known, all tropical.

U'rens. Caustic.

U'reometer. (Οὔρον, urine; μέτρον, measure.) An instrument for measuring the amount of urea in urine.

U'reometry. (Οὔρον, urine; μέτρον, measure.) The quantitative determination of urea.

U'reorrhœ'a. (Οὔρον, urine; ροιά, a flow.) Polyuria. An increased flow of urine.

U're'ra. (L. *urere*, to burn; from its stinging hairs.) A Genus of plants typical of the sub-tribe Ureneæ of the Order Urticaceæ. There are twenty-two species, which are found in tropical America, Africa, and the islands of the Indian and Pacific oceans.

U. baccif'era. Yields fibre, and is suitable for the manufacture of yarn, and is used medicinally as an aperient.

U. gla'bra. Yields a valuable fibre much used in the Sandwich Islands for making fishing nets.

Uresisæ'sthesis. (Οὔρησις, urination; αἰσθησις, sensation.) Constant desire to pass water.

Ure'sis. (Οὔρησις, urination.) Micturition.

U'retal. See *Ureteric*.

U'reter. (Οὐρητήρ, one of the ureters; also the urethra.) The duct of the kidney which carries urine to the structure which in the adult represents the lower part of the allantoic cavity in the fœtus. In man it is about eighteen inches long. It opens into the bladder at the corresponding posterior angle of the trigone. Each ureter lies on the psoas muscle behind the peritoneum, and runs in the bladder wall, gradually approaching the mucous aspect of the bladder wall. The wall of the ureter consists of a fibrous coat, longitudinal and muscular fibres with a lining of mucous membrane and vessels and nerves.

URETERAL—URETHRITIS

Ure'teral. See *Ureteric*.
Ureteral'gia. (Ούρητήρ, ureter; ἄλγος, pain.) Pain in the ureters.
Ureterec'tomy. (Ούρητήρ, ureter; ἐκτομή, excision.) Excision of the ureter.
Ureter'ic. Appertaining to a ureter.
Ureter'icus. Ischury caused by affections of the ureter.
Ureteritis. (Ούρητήρ, ureter; ιτις.) Inflammation of the ureter.
Uretero-cystos'tomy. (Ούρητήρ, ureter; κύστις, bladder; στόμα, mouth.) The establishment of an artificial communication between the ureter and the bladder.
Uretero-dial'ysis. (Ούρητήρ, ureter; δαλυσις, dialysis.) Rupture of the ureter.
Ureterolith. A concretion formed or lodged in the ureter.
Ureterolithi'asis. (Ούρητήρ, ureter; λιθίασις, lithiasis.) The presence of a calculus in the ureter.
Ureterolith'icus. An affection caused by stone in the ureter.
Ureterol'ysis. (Ούρητήρ, ureter; λυσις, a loosening.) See *Ureterodialysis*.
Ureterophleg'ma. (Ούρητήρ, ureter; φλέγμα, phlegm.) Accumulation of mucus in the ureter.
Ureterophlegma'sia. See *Ureteritis*.
Ureteropy'icus. (Ούρητήρ, ureter; πύον, pus.) Appertaining to an affection caused by the presence of pus in the ureter.
Ureteropy'o'sis. (Ούρητήρ, ureter; πύον, pus.) Purulent inflammation of the ureter.
Ureterorrha'gia. (Ούρητήρ, ureter; ῥήγνυμι, to burst forth.) Hæmorrhage from the ureter.
Ureteror'raphy. (Ούρητήρ, ureter; ράφη, seam.) Suture of the ureter.
Ureterostegno'sis. (Ούρητήρ, ureter; στεγνωσις, stenosis.) Constriction of the ureter.
Ureterostenoma. (Ούρητήρ, ureter; στενωμα, a contraction.) Narrowing of the ureter.
Ureterostomat'ic. (Ούρητήρ, ureter; στόμα, mouth.) Resulting from stoppage of the mouth of the ureter.
Ureteros'tomy. (Ούρητήρ, ureter; στόμα, mouth.) The formation of a ureteral fistula.
Ureterothrombo'ides. (Ούρητήρ, ureter; θρόμβος, a lump; εἶδος, resemblance.) Ischury from clotted blood in the ureter.
Ureterot'omy. (Ούρητήρ, ureter; τομή, section.) Incision of the ureter.
Uretero-ureteros'tomy. (Ούρητήρ, ureter; στόμα, mouth.) The establishment of an artificial communication between the ureters or between different parts of the same ureter.
Ure'tero-u'terine. (Ούρητήρ, ureter; L. uterus, uterus.) Appertaining to the ureters and the uterus.
Ure'tero-vag'inal. (Ούρητήρ, ureter; L. vagina.) Appertaining to ureter and vagina.
Urethane, Urethan. Ethyl carbamate. $C_2H_5O.CO.NH_2$. A hypnotic. Dose, 30 to 60 grains.
Ure'thra. (L. urethra; Gr. οὐρήθρα, the passage for the urine.) That part of the foetal urogenital sinus which has been developed into a tube or groove for the conveyance of the urine

and semen, or one of them. In man it extends from the neck of the bladder to the end of the penis, being usually eight or nine inches long. It is divided, for purposes of description, into three parts: the prostatic, the membranous, and the spongy.

The prostatic is that part embraced by the prostatic gland, and is an inch and a quarter long. On the floor of this part is a longitudinal ridge of erectile tissue, the veru montanum, on each side of which is a depression, the prostatic sinus, leading to the openings of the prostatic ducts. In front of the veru montanum is a pit-like depression, the sinus pocularis or uterus masculinus, into which the orifices of the ejaculatory ducts open.

The membranous portion is about three quarters of an inch long, measured along its lower surface, and extends from the end of the prostatic portion to the triangular ligament. Its lumen is smaller than that of the prostatic part or the part just about to be mentioned. The deep perinæal fascia and compressor urethræ muscle surround it.

The spongy or penile portion extends from the triangular ligament to the end of the penis, and is embraced throughout by the corpus spongiosum. It is larger at the beginning and inside the meatus than elsewhere; in the first enlargement open the ducts of the glands of Cowper; the terminal enlargement is called the fossa navicularis. The urethra ends at the meatus urinarius, a vertical slit.

There are many openings in the floor of the penile portion of the urethra of the ducts of the glands of Littre.

U., blind ducts of. Mucous lacunæ of the urethra.

U., bulb of. The dilated portion immediately in front of the triangular ligament.

U., vas'cular tu'mour of. A small, very sensitive vascular swelling, of scarlet colour, found at the orifice of the female urethra.

Ure'thral. Appertaining to the *Urethra*.

U. fe'ver. A febrile reaction which sometimes follows the introduction of a catheter. It may be due to injury, or be the effect of the unusual local stimulation without injury.

U. hæm'orrhoids. Vascular tumours of the urethra.

U. pol'ypus. Vascular tumour of the urethra.

U. shock. Rigor and collapse following urethral operation or catheterisation.

Urethral'gia. (Οὐρήθρα, urethra; ἄλγος, pain.) Pain in the urethra.

Urethra'lis. *Urethral*.

Urethrameter. (Οὐρήθρα, urethra; μέτρον, measure.) An instrument used in measuring the diameter of the urethra.

Urethramorrh'gia. (Οὐρήθρα, urethra; αἷμα, blood; ῥήγνυμι, to burst forth.) Hæmorrhage from the urethra.

Urethratre'sia. (Οὐρήθρα, urethra; atresia.) Imperforate urethra.

Urethremphrax'is. (Οὐρήθρα, urethra; φράσσω, to block up.) Obstruction of the urethra.

U'rethrism. (Οὐρήθρα, urethra.) Irritability of the urethra.

Urethrit'ic. Affected with urethritis.

Urethrit'is. Inflammation of the urethra.

URETHRITO-SYPHILIS—URIA

U., ante'rior. That affecting the penile portion of the urethra.

U. catarrha'lis. Simple non-specific urethritis.

U. granulo'sa. Chronic urethritis with granulations.

U. membrana'cea. Chronic urethritis, with formation of membranes in the urethra.

U., poste'rior. Inflammation of the prostatic and membranous portions of the urethra.

U., specif'ic. Inflammation of the urethra and the adjacent passages, due to a specific cause believed to be the gonococcus of Neisser, which is a diplococcus found in groups of ten to twenty surrounded by an envelope of mucus.

Ure'thrito-syphilis. (Ουρήθρα, urethra; *itis*, inflammation; *syphilis*.) Gonorrhœa accompanied by syphilis.

Ure'thro-blennorrhœ'a. (Ουρήθρα, urethra; *βλεννα*, mucus; *ρέω*, flow.) Gonorrhœa. Gleet.

Ure'throcele. (Ουρήθρα, urethra; *κήλη*, tumour.) A pouch-like thickening of the wall of the urethra in females.

Ure'thro-cystanchento'mia. (Ουρήθρον, urethra; *κύστανχεν*, the neck of the bladder; *τομία*, section.) See *Lithotomy*.

Urethrocys'teo - aneurysmato'to'mia. (Ουρήθρον, urethra; *κύστις*, a bladder; *τομία*, section.) See *Lithotomy*.

Urethrocys'teo-tracheloto'mia. (Ουρήθρον, urethra; *κύστις*, a bladder; *τράχηλος*, a neck; *τομία*, section.) See *Lithotomy*.

Urethrocysti'tis. (Ουρήθρα, urethra; *κύστις*, a bladder; *itis*, inflammation.) Urethritis associated with cystitis.

Ure'thrograph. (Ουρήθρα, urethra; *γράφειν*, to write.) A recording urethrometer.

Urethrohæmorrhæ'gia. (Ουρήθρον, urethra; *αἷμα*, blood; *ρήγνυμι*, to burst forth.) Hæmorrhage from the urethra.

Urethromeno'des. (Ουρήθρον, urethra; *μήν*, a membrane.) A condition caused by a membrane formed in the urethra.

Urethrometer. (Ουρήθρα, urethra; *μέτρον*, measure.) An instrument for measuring the calibre of the urethra, and the position and degree of any stricture.

Urethrophrax'is. (Ουρήθρα, urethra; *φράξις*, a blocking.) Obstruction of the urethra.

Urethroplast'ic. (Ουρήθρα, urethra; *πλάσσειν*, to mould.) Appertaining to urethroplasty.

Ure'throplasty. (Ουρήθρα, urethra; *πλαστός*, form.) An operation for remedying defects in the urethra.

Urethrorraphy. (Ουρήθρον, urethra; *ράφή*, suture.) The operation of closing a urethral fistula by stitches.

Urethrorrhæ'gia. (Ουρήθρα, urethra; *ρήγνυμι*, to burst forth.) Discharge from the urethra, either blood or a gleet discharge.

Urethrorrhœ'a. (Ουρήθρον, urethra; *ρέω*, to flow.) Discharge from the urethra.

Ure'throscope. (Ουρήθρα, urethra; *σκοπεῖν*, to view.) An instrument for rendering possible examination of the mucous membrane of the urethra.

Urethros'copy. (Ουρήθρα, urethra; *σκοπεῖν*, to examine.) Examination of the mucous membrane of the urethra in situ.

Ure'throspasm. (Ουρήθρα, urethra;

σπασμός, spasm.) Spasmodic stricture of the urethra.

Urethrosteno'sis. (Ουρήθρα, urethra; *στένσις*, constriction.) Stricture of the urethra.

Urethros'tomy. (Ουρήθρα, urethra; *στόμα*, mouth.) An operation involving perineal section and fixation of a newly made urethral orifice to the skin of the perineum. The pervious portion of the urethra after operation only extends from the bladder to the new orifice.

Ure'throtome. (Ουρήθρα, urethra; *τομή*, section.) An instrument for performing internal urethrotomy.

U., dilat'ing. A combined urethrotome and dilator.

Urethrotom'ic. Appertaining to urethrotomy.

Urethrotomy. (Ουρήθρα, urethra; *τομή*, section.) The operation for dividing the urethra. Two such operations are performed: internal urethrotomy, in which the instrument is passed in by the meatus; external urethrotomy, in which the section is carried from without inwards through the tissues.

U., Cock's exter'nal. The perinæum is laid open from without, no guide being used. Used in cases of impervious stricture.

U., exter'nal. Incision of the external wall of the urethra.

U., inter'nal. Incision of the urethral wall by an instrument passed down the lumen.

U., Syme's exter'nal. Incision of the urethral wall on to a grooved staff passed through the stricture.

U., Wheelhouse's exter'nal. A staff is passed down the urethra to the stricture, and an incision is then made through the urethral wall in front of the stricture. A grooved director is passed through the wound, through the stricture, and into the bladder. The stricture is divided by a knife passed along the grooved director.

Ure'thro-vag'inal. (Ουρήθρα, urethra; *vagina*, vagina.) Appertaining to the urethra and vagina.

Ure'thro-ves'ical. (Ουρήθρα, urethra; *vesica*, bladder.) Appertaining to the urethra and bladder.

Uret'ic. (Ουρητικός, pertaining to urine.) Appertaining to, or favouring, the flow of urine.

Uret'ics. (Ούρον, urine.) Medicines which influence the secretion of urine.

Ure'tra. *Urethra*.

Ure'tris. (Ουρήτης, a urinal.) *Urinal*.

Ure'um. *Urea*.

Urgin'ea. A Genus of liliaceous plants, of the Tribe Scilleæ. Twenty-four species are known and found in Europe, Africa, and India. They are bulbous plants with long narrow leaves and an unbranched leafless scape, having small whitish flowers in a terminal raceme.

U.scil'leæ. The official variety. Squills.

Urgo'nian. A division of the lower cretaceous stratum. So called from Orgon, near Avignon, where it takes the form of massive limestone, 1000 feet thick.

Urhelko'sis. (Ουρήθρον, urethra; *ἔλκυσ*, ulceration.) Ulcerative urethritis.

Urhidro'sis. (Ούρον, urine; *ιδρώς*, sweat.) Urinous sweating.

Uria. A Genus of Alcidæ. Any of the slender-billed birds of the Auk family.

U. gryl'le. The black guillemot.

U. tro'ile. The common guillemot.

Uri'asis. *Lithiasis.*

Uric. (Οὔρον, urine.) Appertaining to urine.

U. ac'id. $C_2H_3N_4O_3$. Found in the urine, spleen and other organs. A dibasic crystalline acid chemically allied to urea and hydrocyanic acid. When pure it crystallises in scales of varying shapes, having a silky white lustre; in the urine the colour is reddish orange. It is almost insoluble in water, but soluble in solutions of the alkaline salts. It is inodorous and insipid, and of a higher specific gravity than water. It forms the chief part of certain calculi found in man, and its accumulation in the blood is believed to be the cause of some of the morbid phenomena of disease, *e. g.* gout.

Test: add to the liquid to be tested a few drops of nitric acid, evaporate slowly, and add a few drops of ammonia; if uric acid be present a fine purple colour will appear.

Uricacidæ'mia. (Οὔρον, urine; *L. acidus*, acid; Gr. αἷμα, blood.) The presence of uric acid in the blood in sufficient quantity to be shown. According to Haig it is the cause of a pathological state in which the phenomena arise from a morbid condition of the nervous system, joints, digestive and secretory systems.

Uricæ'mia. (Οὔρον, urine; αἷμα, blood.) See *Uricacidæ'mia*.

Uriconian. The name given to a series of volcanic rocks seen chiefly in the Wrekin district of Shropshire, to which a place very low down in the fossiliferous series has been assigned. The name is derived from Uriconium, a Roman station whose position was near the village of Wroxeter in Shropshire.

Uricum. *Urea.*

Uricus. *Urinary.*

Uridro'sis. Excretion by the skin of substances usually excreted in the urine by the kidneys, especially urea.

U. crystall'na. A condition in which the salts of the sweat, with other substances from the urine, crystallise on the skin.

Urile. A cormorant. *Phalacrocorax urile* or *Bicristatus*.

Urinaccelerator. (*L. urina*, urine; New *L. accelerator*.) A muscle which clears the urethra of the last drops of urine. *Accelerator urinae*, *Ejaculator seminis*.

Urinæ. A Sub-family of Alcidae, named from the Genus *Uria*; the musses and guillemots.

U. ci'bi. Urine secreted after a full meal.

U. crystall'na. A deposit of crystalline substance on the skin from urinous sweat.

U. galacto'des. Urine of milky colour.

U. muco'sa. *Cystirrhœa*.

U. nephalo'des. Cloudy urine.

U. po'tus. Urine secreted after taking fluids.

U. profu'vium. Diabetes.

U. san'guinis. Urine secreted independently of taking food and drink.

U. stillcid'ium. Strangury.

U. substil'ium. Strangury.

U. suppres'sio. Retention or suppression of urine.

Urinæ'mia. (Οὔρον, urine; αἷμα, blood.) A condition of the blood in which it contains substances which should have been excreted in the urine.

U'rial. (*L. urina*, urine.) A vessel in

which urine is kept for convenience or inspection. A convenient place, public or private, in which urine may be passed.

Urinal'is. *Urinary.*

U'rialist. One who diagnoses by inspecting the urine.

U'rial'ysis. (Οὔρον, urine; λύσις, setting free.) Chemical examination of the urine.

Urina'ria. *Leontodon taraxacum*.

U'riary. (*L. urina*, water.) Appertaining to urine or to the organs which discharge it.

U. blad'der. The bladder. A musculo-membranous structure situated between the rectum and the pubis or the vagina and the pubis.

U. cal'culi. Calculi which form in the urinary passages.

U. canal'. A primitive urinary passage.

U. cast. See *Renal cast*.

U. depos'it. Solid particles which fall to the bottom of a vessel containing urine, or are thrown down by reagents.

U. fe'ver. *Urethral fever*.

U. fis'tula. Pathological connection between the bladder and some other organ. It may afford a passage for the urine.

U. organs. Organs concerned in the excretion of urine, of whatever kind they may be, and wherever found; such as the kidneys, ureters, bladder, and urethra of a mammal; the Wolffian bodies and ducts of a vertebrate embryo, the segmental organs of worms.

Also, same as *U'rial*.

U. pas'sages. The canals and passages which convey and contain the urine.

U'riate. (*Mod. L. urinare*, urinate.) To micturate.

U'riation. The act of passing urine.

U'riative. That which provokes the flow of urine; diuretic.

Urina'tor. (*L. urinari*, to dive.) A Genus of diving birds giving name to the *Urinatoridæ*.

Urinato'rial. Of, or pertaining to, the *Urinatoridæ*. Resembling one of the *Urinatoridæ*.

Urinator'idæ. (*New L. urinator*.) A Family of diving birds. The name is still used as a synonym for *Colymbidæ*, or used with reference to the loons alone; *Colymbidæ* being then applied to the grebes.

Urinato'rium. *Urinal*.

Urine. (*L. urina*, urine; Gr. οὔρον, water, urine.) The fluid excreted by the kidneys or other urinary organs. It holds in solution most of the soluble waste products of the metabolism of the body. Normal urine is clear and light or dark straw in colour, of brackish taste and slightly acid reaction. Its specific gravity is 1.015 to 1.025. Diet, occupation, temperature, and state of health affect its constitution, specific gravity, and colour. Usually from three to four pints a day are passed. For examination of the urine, a specimen is used which has been passed by the patient on rising in the morning. It contains about from 3 to 7 per cent. of solids, of which from 40 to 55 per cent. is urea, and the remainder chloride of sodium, phosphates, sulphates, substances containing ammonia, uric acid, and extractive matters.

Also (*L. urinari*), to pass urine.

U., ar'dent. Hot urine.

U., black. Urine containing melanin.

U., blood'y. *Hæmaturia*.

URINIFEROUS—UROBILIN

U., chy'lous. Milky urine due to the presence of fat or chyle.

U., crude. Urine that is thin, clear, transparent, and little coloured, giving no deposit.

U., cystin'ic. Urine containing cystine or cystic oxide in solution, or as a deposit.

U., diabet'ic. Urine passed in diabetes. It contains glucose.

U., dyspep'tic. Urine passed by a person suffering from dyspepsia. It generally contains calcium oxalate.

U., examination of. The points to be considered are:

1. Colour, odour, general appearance.
2. Reaction with test-paper.
3. Specific gravity.
4. Total amount of organic and inorganic solids.
5. Total amount of inorganic matter.
6. Determination of urea.
7. Determination of uric acid.
8. Determination of inorganic acids and bases.
9. Determination of albumen.
10. Determination of sugar.
11. Examination for bile.
12. Examination of any organic or inorganic sediment, either by chemical means or by the microscope.

The sample for examination should be taken from the whole amount passed in twenty-four hours.

U., feb'rile. Urine discharged in inflammation and fever.

U., filamen'tous. Urine containing thread-like substances.

U., flocculent. Urine which contains flocculi in suspension.

U., fufura'ceous. Urine containing a bran-like sediment.

U., gouty. Urine passed by gouty people. It is scanty, high coloured, and contains uric acid in excess.

U., hyster'ical. Urine passed after an hysterical attack. It is clear and colourless.

U., leter'ical. Urine containing bile.

U., incont'inence of. Involuntary discharge of urine.

U., in'dican. See *Uroxanthin*.

U., jumen'tous. Ammoniacal urine rendered turbid by a substance similar to small grains of dust, which causes it to resemble the urine of herbivorous animals.

U., lactes'cent. Milky urine.

U., mucilag'inous. Urine containing much mucus.

U., neb'ulous. Urine which is cloudy from the presence of earthy phosphates.

U., oil'y. Urine which pours like oil, or which has an oily pellicle on the surface.

U., oxal'ic. Urine containing oxalates.

U., phosphores'cent. Urine which is luminous or phosphorescent.

U., purpu'ric. Urine which contains substances of purplish or dark red colour, such as purpurin, uroerythrin.

U., resid'ual. Urine which remains in the bladder after the act of micturition is over. It is usually retained because the prostate gland is enlarged or the bladder is diseased.

U., reten'tion of. The condition of retaining in the bladder urine which should be passed. The causes are many.

U., smo'ky. Urine containing blood, in consequence of which its colour is darkened.

U., suppres'sion of. Failure of the kidneys to secrete urine.

Urinif'erous. (L. *urina*, urine; *ferre*, to bear.) Carrying urine.

U. ducts of Belli'ni. The small tubes converging from the cortical part of the kidney to the apices of the papillæ.

Urinific. (L. *urina*, urine; *facere*, to make.) Secreting urine.

Urinip'arous. (L. *urina*, urine; *parere*, to produce.) Applied to certain tubules of the cortical part of the kidney which secrete urine.

Urinogen'ital. (L. *urina*, urine; *genitus*, part. of *gignere*, to produce.) Appertaining to the urinary and genital organs.

Urinogenitary. Same as *Urinogenital*.

Urinology. (Οὔρον, urine; λογία, a treatise.) The study of urine, with especial reference to the diagnostic value of change in its constitution and colour.

Urinometer. (Οὔρον, urine; μέτρον, measure.) An instrument for finding out the specific gravity of the urine.

Urinometric. Relating to the determination of the specific gravity of urine by means of the urinometer.

Urinom'etry. (Οὔρον, urine; μετρία, measure.) The act of determining the specific gravity of urine by the urinometer.

Urinoscop'ic. (Οὔρον, urine; σκοπεῖν, to view.) Referring to the visual examination of urine and its influence on the diagnosis and treatment of disease.

Urinosc'opy. (Οὔρον, urine; σκοπεῖν, to view.) The visual examination of urine in the diagnosis and treatment of disease.

Urinose'. (L. *urinosus*, urinous.) See *Urinous*.

Urinous. Appertaining to urine.

Uрино-vagin'al. *Vesico-vaginal*.

U'rite. (Οὔρά, a tail.) *Biol.* The ventral section of an Arthropodan uromere.

Urit'is. (L. *urere*, to burn; Gr. *ιτις*, inflammation.) Inflammation following a burn.

Urjoon'. The plant *Terminalia arjuna*. Found in India.

Ur'mea cra'nii huma'nii. *Lichen saxatilis*.

U. flor'ida hir'ta. *Lichen plicatus*.

U. hir'ta. *Lichen plicatus*.

U. plica'ta. *Lichen plicatus*.

Urn'ing. (Ger.) One affected with sexual perversion in which the desire is only for persons of the same sex.

U'ro. Urine.

Uroacidim'eter. (Οὔρον, urine; L. *acidus*, acid; μέτρον, measure.) An instrument for measuring the acidity of urine.

Uroa'etus. (Ουρά, a tail; ἀετός, an eagle.) A Genus of eagles containing one known species only, *Uroaetus audax*, found in Tasmania and parts of Australia.

Urobacill'us. (Οὔρον, urine; L. *bacillum*, a rod.) Any bacillus derived from decomposed urine.

Urobenzo'ic ac'id. See *Hippuric acid*.

Uro'bilin. (Οὔρον, urine; L. *bilis*, bile.) $C_{35}H_{40}N_4O_7$. A colouring matter found in the healthy urine in small quantity, and derived from the biliary pigments. In unhealthy urine it may be present in large quantities.

U., pathologic. Excessive amounts of urobilin found in certain dark urines occurring in some diseases, *e.g.* fevers, pernicious anæmia.

Urobilinicterus. A yellowish coloration of the skin, corneæ, &c., due to the absorption of large quantities of blood, as from extravasations. Probably due to the presence of urobilin in the blood.

Urobilinoidin. (Ούρον, urine; *L. bilis*, bile.) A form of pigment found in disease, and resembling urobilin. It is a derivative of hæmatin.

Urobilinuria. A condition in which much urobilin is found in the urine.

Urobutylchlorallic acid. (Ούρον, urine; butyl; *L. butyrum*, butter; *Gr. χλωρός*, green.) A body obtained from urine after the administration of butyl-chloral.

Urocardiac. (Ούρα, a tail; καρδιά, the heart.) Appertaining to the prepyloric part of the cardiac division of the stomach of certain crustaceans.

U. process. A process which passes downwards and backwards from the cardiac plate of the stomach to articulate with the prepyloric ossicle. Seen in the crayfish, where it is calcified.

U. tooth. A strong bifid process passing downwards from the prepyloric ossicle of the stomach of the crayfish.

Urocele. (Ούρον, urine; κήλη, a tumour.) A tumefaction of the scrotum arising from effusion of urine into its cavity or into the areolar tissue.

Urocelia. (Ούρον, urine; κοιλία, belly.) Tumidity of the abdominal wall from infiltration of urine.

Urocer'ata. (Ούρά, a tail; κέρας, a horn.) The *Siricidæ* or *Uroceridæ*, which see below.

Urocer'idæ. A Family of hymenopterous Insects, phytophagous in habit. They resemble the saw-flies, *Tenthredinidæ*, with the exception that the tip of the female abdomen has no saws, but a borer. The larvæ have no prolegs.

Urocerus. (Ούρά, tail; κέρας, horn.) The typical Genus of the Family *Uroceridæ*.

Uroche'ras. (Ούρον, urine; χεράς, sand.) The loose precipitate deposited from urine.

Uroche'sia. (Ούρον, urine; χέζειν, to defecate.) The discharge of urine *per anum*.

Urochord. (Ούρά, a tail; χορδή, a chord.) The caudal chord of an Ascidian or Tunicate.

Urochor'da. Applied to animals having a urochord. The long muscles of the region traversed by the urochord show traces of metameric segmentation. There is no trace of a skeleton. Sense-organs are present. The gill-slits vary greatly in number. The heart is rudimentary. There is no vascular system.

Urochor'dal. Having a urochord. Appertaining to a urochord.

Urochor'date. Having a urochord; ascidian; belonging to the *Urochor'da*.

Uroch'roa. (Ούρά, a tail; χροά, colour.) A Genus of humming-birds with one species, *U. Bougueri*. South America. Long slender bill, long protrusible deeply cleft tongue with a brush-like end. Wings very long. Legs weak. Colour brilliant in male birds.

Urochrome. (Ούρον, urine; χρώμα, colour.) A yellow pigment found in urine.

Urocich'la. (Ούρά, a tail; κίχλη, a

thrush.) A Genus of urens, or birds resembling urens in some ways, containing but one species, *Urocichla longicaudata*. Found in India. This bird is about four and a half inches long, having wings and tail of two inches; its colour is red-brown with white streaks in places.

Urocis'sa. (Ούρά, tail; κίσσα, the magpie.) A Genus of *Coridæ*, found in Asia. The head has neither crest nor wattles, the bill is heavily made, the wings are short, the central feathers of the tail very much longer than those on either side, which in turn gradually decrease in length as they become more laterally placed. They are about two feet long and of bluish colour. Four species are known, all found in Burmah, China, India, and Siam.

Uroclep'sia. (Ούρον, urine; κλεψία, theft.) Micturition of which one is unconscious.

Urocris'ia. A judgment formed either of the urine, or of disease after examination of the urine.

Urocrist'sis. (Ούρον, urine; κρίσις, a separating.) A crisis occurring in disease and attended by excessive urination.

Urocrite'ron. The sign which leads to the formation of judgment of a disease by the urine. See *Urocris'ia*.

Urocyan'ogen. (Ούρον, urine; κύανος, blue.) Blue sediment seen in the urine.

Urocyan'ose. *Urocyanogen*.

Urocyanosis. (Ούρον, urine; κύανος, blue.) Bluish coloration of the urine by indican.

Uroc'yon. (Ούρά, a tail; κύων, a dog.) A Genus of canine quadrupeds, of which the common grey fox of the United States is the type. Closely related to *Canis* and *Vulpes*. The name is derived from a peculiarity of the hairs of the tail. More important differences are found in certain cranial bones, *e.g.* the angle of the jaw. (Century Dict.)

Urocyst. (Ούρον, urine; κύστις, bladder.) That part of the allantoic cavity which develops in the mammal into the urinary bladder. The cystic vesicle.

Urocys'tic. (Ούρον, urine; κύστις, bladder.) Appertaining to the urinary bladder.

Urocys'tis. See *Urocyst*.

Urocysti'tis. (Ούρον, urine; κύστις, the bladder.) Inflammation of the urinary bladder.

Urocystocatar'rhus. *Cystorrhœa*.

Urodela. (*L. neut. pl. of urodelus*.) The tailed amphibians. Ichthyomorphic amphibians which keep the tail throughout life. The skin is naked; the gills may or may not be retained. Efts, newts, &c., are *Urodela*.

Urode'lan. See *Urodele*.

Urodele. (Ούρά, tail; δηλος, manifest.) Having a tail as an amphibian, in contrast to a batrachian which has no tail. Keeping the tail throughout life.

Urodelian. See *Urodele*.

Urode'lous. See *Urodele*.

Urodial'ysis. A partial suppression of urine.

U. neonato'rum. Delayed secretion of urine in the newly born.

Urodo'chium. (Ούρον, urine; δοχείον, receptacle.) A urinal.

Urodyn'ia. (Ούρον, urine; δόδυνη, pain.) Painful micturition.

Uroede'ma. See *Uredema*.

Uroerythrin. (Ούρον, urine; ἐρυθρός, red.) An amorphous reddish acid substance found in pathological urine, especially that

passed during rheumatic fever. Seldom found in healthy urine.

Urofuscohematin. (Ούρον, urine; *L. fuscus*, dark; *Gr. αἷμα*, blood.) A red pigment of the blood derived from hematin.

Urogalba. (Ούρά, tail; New *L. galba*.) The paradise or swallow-tailed jacamars. A Genus of the Family *Galbulidae*.

Urogallus. (*L. urus*, bull; *gallus*, a cock.) A Genus of grouse. The specific name of the capercaillie, *Tetrao urogallus*. Legs and toes feathered. No spurs.

Urogaster. (Ούρον, urine; *γαστήρ*, the stomach.) The urinary passages collectively, developed from the allantois with the primitive intestinal tract.

Urogastic. Appertaining to the *Urogaster*. Relating to the last pair of the divisions into which the gastric lobe of the dorsal surface of the carapace of the crab is divided. Huxley's name.

Urogenital. (Ούρον, urine; *L. genitalis*, genital.) Appertaining to the urinary and genital organs.

U. canal. The *Urethra*.

U. sinus. The anterior part of the cloaca into which the Müllerian ducts open.

Urogenous. (Ούρον, urine; *L. genus*, producing.) Secreting or producing urine.

Uroglau'cin. (Ούρον, urine; *γλαυκός*, blue-green.) Indigo blue occurring in urine, and formed by the oxidation of a colourless chromogen found very frequently in the urine. Especially found when the urine is alkaline as the result of inflammation of the bladder.

Uroglyco'sis. (Ούρον, urine; *γλυκός*, sweet.) *Diabetes mellitus*.

Urogravimeter. (Ούρον, urine; *L. gravidus*, weight; *Gr. μέτρον*, measure.) See *Urinometer*.

Urohæm'atin. Altered hæmatin found in the urine.

Urohæmatopor'phyrin. (Ούρον, urine; *αἷμα*, blood; *πόρφυρος*, purple.) See *Urohæmatin*. It is a urinary pigment which occurs at times in the urine of disease, as acute rheumatism, Addison's disease.

Urohy'al. (Ούρον, urine; *υοειδής*, hyoid.) *Biol.* The tail-piece of the composite hyoid bone, supported by the basihyal, the base of the first branchial arch. Appertaining to the *Urohyal*.

Uroles'tes. (Ούρά, a tail; *ληστής*, a robber.) A Genus of African shrikes of the Family *Laniidae*. The upper mandible is hooked at its point, with a marginal tooth near its tip.

Urolith. (Ούρον, urine; *λίθος*, a stone.) A urinary calculus.

Urolithi'asis. See *Lithiasis*.

Urolith'ic. (Ούρον, urine; *λίθος*, a stone.) Appertaining to a urinary calculus.

Urolitholog'ia. (Ούρον, urine; *λίθος*, a stone; *λόγος*, a writing.) A treatise on urinary calculi.

Urolithot'omy. See *Lithotomy*.

Urolog'ic. (Ούρον, urine; *λόγος*, science.) Appertaining to *Urology*.

Urolog'ical. Appertaining to *Urology*.

Urolog'ist. One who is skilled in *Urology*.

Urology. (Ούρον, urine; *λογος*, written word.) See *Urology*.

Uromancy. (Ούρον, urine; *μαντεία*, divination.) Diagnosis or prognosis by observation of the urine.

Uromas'tix. (Ούρά, tail; *μάστιξ*, whip.) A Genus of Lizards, also called *Agamidae*. The body is covered with imbricated scales, rhombic in shape; the tongue is thick and non-protrusible; the eyes have eyelids; and the teeth are placed on the edge of the bones of the jaws.

Uromel'anin. (Ούρον, urine; *μέλας*, black.) A brownish substance, $C_{36}H_{43}N_7O_{10}$, produced by the decomposition of urochrome. Occasionally found in the urine.

Uromelus. (Ούρά, a tail; *μέλος*, a limb.) A monster with its lower limbs joined and ending in a single foot. *Synpus*.

Uromere. (Ούρά, tail; *μέλος*, a part.) One of the abdominal segments of an Arthropod. A urosomite.

Uromer'ic. Appertaining to a *Uromere*.

Urom'eter. See *Urinometer*.

Urom'phalus. (*L. urachus*, urachus; *Gr. δμφαλός*, navel.) A monstrosity whose urachus protrudes at the umbilicus.

Uromy'ces. (Ούρά, a tail; *μύκης*, a mushroom.)

Uron. (Ούρον, urine.) Urine.

Uron'cus. (Ούρον, urine; *όγκος*, tumour.) A tumour containing urine.

Uronephro'sis. See *Hydronephrosis*.

Uronology. (Ούρον, urine; *λόγος*, a writing.) A treatise which deals with urine.

Uropel'tidæ. A Family of Snakes. Body cylindrical. Head and neck short, and not distinct from one another. Tail short. Scales rounded and polished, the ventral being larger than the rest. Teeth few and small, none on palate. Also called *Planophidæ*.

Uropel'tis. (Ούρά, a tail; *πείλη*, a shield.) A Genus of Snakes of the Family *Uropel'tidæ*.

Urophæ'in. (Ούρον, urine; *φαιός*, grey.) A pigment of the urine, to which has been ascribed the peculiar odour of this fluid.

Urophthi'sis. (Ούρον, urine; *φθίσις*, washing.) *Diabetes mellitus*.

Uropitt'in. (Ούρον, urine.) $C_9H_{10}N_2O_3$. A substance obtained from urochrome.

Uropla'nia. (Ούρον, urine; *πλανάν*, to wander.) The presence of urine in some part of the body where it should not be.

Uroplatoid. Appertaining to the *Uroplatoidæ*.

Uroplatoid'ea. A Super-family of eriglossate lacertilian represented by a family of *Uroplatidæ* alone. (Cent. Dict.)

Uropod. (Ούρά, tail; *πούς*, a foot.) An abdominal limb of an Arthropod.

Urop'oda. A Genus of parasitic mites of the Family *Gamasidæ*.

Urop'odal. Appertaining to *Uropodæ*.

Uropoë'sis. See *Uropoiesis*.

Uropoët'ic. See *Uropoietic*.

Uropoie'sis. The making of urine; the excretion from the body of urine, or of its constituents. The act of voiding urine.

Uropoiet'ic. (Ούρον, urine; *ποιητικός*, making, doing.) Secreting or excreting urine; referring to urinary organs or their function. Applied to the kidneys and their associated structures, as well as to the organs representative of kidneys in those animals which have no proper kidneys.

Uropsam'mus. Urinary gravel.

Urop'sile. A small animal resembling a shrew, of the Genus *Uropsilus*.

Urop'silus. (Ούρα, a tail; *ψιλός*, bare.)

A Genus of shrew-moles, Family Talpidæ, Subfamily Myogalinæ.

U. soric'ipes. The type has the shape of a shrew, with the cranial characters of a mole. Its fore-feet are adapted neither to digging nor to swimming. Each half of the upper jaw has two incisors, one canine, three premolars, and three molars; each half of the lower jaw one incisor, one canine, three premolars, and three molars.

Uropy'gi. A Sub-order of pedipalp Arachnidans, having a long tail-like post-abdomen, and including the true whip scorpions. Differ from Crustacea in having pulmonary vessels and not branchiæ, only four pairs of ambulatory limbs, and no ambulatory appendages on any abdominal segment, and in some other respects.

Uropyg'ial. Οὐρά, tail; πυγή, buttocks.) Appertaining to the uropygium or rump.

Uropyg'ii glandulæ. (Οὐρά, a tail; πογόν, buttock.) The caudal gland of a bird, which secretes the sebaceous matter with which they dress their feathers.

Uropyg'ion. See *Uropygium*.

Uropyg'ium. (Ουροπύγιον; ὄρος, the end of the sacrum; πυγή, buttocks.) The section of the body of a bird which contains the caudal vertebræ, and into which the tail feathers are inserted; also, the upper surface of this part.

Uropylor'ic. (Οὐρά, a tail; πυλωρός, a gate-keeper.) Appertaining to the posterior part of the pyloric division of the stomach of certain Crustaceans.

Urorrhor'æa. (Οὔρον, urine; ὀρός, serum; ῥέω, to flow.) Albuminuria.

Uro'rosein. (Οὔρον, urine; L. *rosein*.) A rose-coloured pigment found in urine in certain diseases.

Urorrhag'ia. (Οὔρον, urine; ῥηγνόναι, to burst forth.) Excessive micturition.

Urorrhodin. (Οὔρον, urine; ῥόδον, rose.) A red pigmentary deposit found in urine, and derived from uroxanthin.

Urorrhœ'a. (Οὔρον, urine; ῥέω, to flow.) Involuntary passage of urine.

Uroru'bin. (Οὔρον, urine; L. *rubus*, red.) A red urinary pigment.

Uro'rubrohæm'atin. (Οὔρον, urine; L. *rubrum*, red; αἷμα, blood.) A pigment found in the urine of patients suffering from leprosy.

Uros'acin. See *Urorrhodin*.

Urosac'al. (Οὐρά, tail; New L. *sacrum*.) Appertaining to both sacrum and coccyx. Especially applied to a number of vertebræ of birds, which are placed between the sacrum and the coccyx, and ankylosed together to the last piece of the sacrum and more or less to the ilia.

Urosac'rum. (Οὐρά, a tail; New L. *sacrum*.) The ankylosed vertebræ found in a bird between the sacrum and the coccyx. It is ankylosed to the sacrum.

Urosal'pinx. (Οὐρά, tail; σάλπιγξ, a trumpet.) A Genus of Gastropods of the Family Muricidæ, having a fusiform shell with radiating folds.

U. cine'rea. Known as the drill or borer. Destroys oysters by boring through their shells.

Uros'cheocele. See *Urocele*.

Urosche'sis. (Οὔρον, urine; σχέσις, retention.) Suppression of urine.

Uroscop'ic. See *Microscopic*.

Uros'copist. (Οὔρον, urine; σκοπεῖν, to

view.) One who makes a speciality of urinary examinations.

Uros'copy. (Οὔρον, urine; σκοπεῖν, to view.) Analysis and examination of urine.

Urosep'sis. (Οὔρον, urine; σήψις, sepsis, septic.) Intoxication resulting from absorption of urine.

Urosep'tic. Οὔρον, urine; σήψις, sepsis.) Appertaining to *Urosepsis*.

Uro'sis. A disease of the urinary organs.

Urosomatic. (Οὐρά, a tail; σῶμα, body.) Appertaining to the urosome, consisting of urosomites.

Urosome. (Οὐρά, tail; σῶμα, body.) The last somatome of a Vertebrate. The post-thoracic region of the body of Arthropods. The abdomen and post-abdomen as contrasted with the cephalothorax.

Urosomite. One of the segments of the urosome. *Uromera*.

Urosomit'ic. Appertaining to a urosomite. *Uromeric*.

Urospasm. (Οὔρον, urine; σπασμός, spasm.) Spasms of some part of the urinary tract.

Urosp'er'mum. (Οὐρά, tail; σπέρμα, seed.) A Genus of composite plants of the Tribe *Cichoriaceæ* and Sub-tribe *Scorzonereæ*. Found in the Mediterranean region.

Uros'tealith. (Οὔρον, urine; στέαρ, fat; λίθος, a stone.) A fatty or saponaceous substance occurring in some urinary calculi. It is dissolved by alcohol and ether. When pure it leaves no ash when burned.

Urosteato'ma. (Οὔρον, urine; στέαρ, fat.) *Urostealith*.

Uroste'gal. Appertaining to the urosteges.

Uros'tegē. (Οὐρά, a tail; στέγη, a roof.) One of the large scales which cover the under side of the tail of a snake. Usually arranged in two rows, the members of which alternate with one another.

Uros'tegite. One of the urosteges.

Urostenosis. See *Urethrostenosis*.

Uros'teon. (Οὐρά, tail; ὀστέον, bone.) A centre of ossification situated in the middle of the posterior part of the sternum of some birds.

Uroster'nite. The sternite, or ventral median sclerite, of any somite of the urosome of an Arthropod.

Urosthene. (Οὐρά, a tail; σθένος, strength.) An animal possessing great strength of tail, or whose tail is greatly developed.

Urosthén'ic. (Οὐρά, a tail; σθένος, strength.) Strong in the tail.

Urostic'te. A Genus of humming-birds with two species of small size. The plumage is green.

Urostylar. Appertaining to a urostyle.

Urostyle. (Οὐρά, tail; στῦλος, column.) The prolongation backwards of the terminal vertebra of the spinal column in some animals. In some amphibia it forms the greater part of the so-called sacrum. An example of it is the os coccygis of a frog.

Urotheobrom'ine. See *Paraxanthin*.

Urotox'ic. (Οὔρον, urine; τοξικόν, poison.) Appertaining to poisonous substances excreted with the urine.

Urotoxy. (Οὔρον, urine; τοξικόν, poison.) A term coined by Bouchard to denote the standard of toxicity of urine necessary to kill a kilogram of living substance.

UROTRICHUS—URTICARIA

Urotrichus. (Οὐρά, tail; θρίξ, hair.)

A Genus of fossorial shrew-moles of the Subfamily *Myogalinae* and Family *Talpidae*. Each half of the upper jaw has two incisors, one canine, four premolars, and three molars. Each half of the lower jaw one incisor, one canine, three premolars, and three molars.

Urous. (Οὔρον, urine.) Having the nature of urine.

Uroxanthin. (Οὔρον, urine; ξανθός, yellow.) A yellow pigment found in small amount in urine which yields indican blue when oxidised. Said to be a mixture of chromogens.

Uroxin. (Οὔρον, urine; ὀξύς, sharp.) Same as *Alloxantin*, $C_8H_4N_4O_7 + 3H_2O$. It is derived from alloxan by the action of acids.

Uroxiphus. (Οὐρά, a tail; ξίφος, a sword.) A Genus of hemipterous Insects; the swordtails.

Urozæmia. (Οὔρον, urine; ζημία, loss.) Diabetes.

U. albumino'sa. Bright's disease of the kidney.

U. mel'ita. Diabetes mellitus.

Urrho'din. (Οὔρον, urine; ῥόδινος, derived from roses.) A red pigment, formerly identified with indigo-red, but containing no nitrogen, obtained from urine, especially when alkaline in presence of cystitis, and produced by the decomposition of a chromogen, uorrrhodinogen.

Urrhosa'cin. See *Urrhodin*.

Ursid. A member of the *Ursidæ*.

Ursidæ. A Family of plantigrade carnivorous animals, Order *Feræ*, Sub-order *Fissipedia*. They are of large size, great weight, and clumsy appearance. Hair stiff and shaggy. They have a rudimentary tail. They chiefly inhabit the northern hemisphere. Six genera are known.

Ursiform. (L. *ursus*, a bear; *forma*, shape.) Having the aspect or structure of a bear.

Ursin albu'tin. A crystalline principle found in *Uva ursi*. Diuretic and astringent.

Ursine. (L. *ursinus*, relating to a bear.) Appertaining to bears. Having hair which is long, bristle-like and erect. A bear.

Ursinæ. The bears proper. *Ursidæ*. Relating to all hairy or woolly lepidopterous larvæ.

Urs'on. (L. *ursus*, a bear.) The tree porcupine of eastern North America.

Ursone. Tasteless principle from *Uva ursi*.

Ursula. A North American butterfly. *Basilarchia*. It is very dark purple in colour, with scattered blue and black blotches.

Ursus. A Genus of plantigrade carnivorous mammals of the Family *Ursidæ*. It does not now include all the *Ursidæ*.

Urti'ca. A Genus of apetalous plants, the nettles, type of the Order *Urticaceæ* and Tribe *Urticeæ*. About thirty species, scattered over the most temperate regions, are known. Its leaves are oppositely arranged, having stinging hairs with stipules united or separate. The fruit is a straight achene; the flowers small, twin, green, and unisexual.

Urtica'ceous. Appertaining to the *Urticaceæ*.

Urtical. Bot. Appertaining to nettles, typified by the Genus *Urtica*. Stinging.

Urtica'ria. (L. *urtica*, a nettle.) Nettle-rash. An eruption which appears in certain people as the result of eating something, often known to the sufferer, which disagrees with them. It consists of indurated wheals raised on the surface of the skin, which are white on the top and surrounded by a zone of inflammation. They itch very much; they come and go sometimes several times in a day.

U. acu'ta. An acute form often associated with fever, 101° to 102° F. The pulse is quick, and there are marked signs of gastric irritation, with headache and prostration. The eruption may not appear for a day or two, and then comes out copiously and all over the body, face, and limbs. It disappears rapidly on removal of the gastric irritation.

U. bullo'sa. Advanced *Urticaria vesicans*.

U. chron'ica. Urticaria in which successive crops of wheals occur, and the disease lasts for a considerable time.

U. confer'ta. Urticaria in which the wheals occur in groups.

U. endem'ica. An irritating lesion of the skin caused by certain caterpillars, especially those of the species *Cnethocampa*. It is usually seen on flexor surface, but may appear anywhere. The poisonous agent is said to be formic acid.

U. evan'i'da. Urticaria in which the symptoms rapidly pass away.

U. facti'tia. A form of urticaria produced in persons who have an irritable skin by slight irritation.

U. febr'i'lis. See *Urticaria acuta*.

U. hæmorrhag'ica. Hæmorrhage into urticarial wheals.

U. marit'ima. An eruption produced by sea-bathing.

U. medicamento'sa. Urticaria caused by drugs.

U. nervo'sa. See *Urticaria factitia*.

U. œdemato'sa. Giant urticaria. The characteristics are the sudden appearance, large size, and œdematous condition of the swellings of the skin and subcutaneous tissue. The eyelids are the parts most often attacked, and the parts near joints come next in frequency. There is a feeling of tension. Acute circumscribed œdema is a form of urticaria in which large circumscribed œdematous swelling rises up on the face or other part of the body, or in which the orbital tissue swells.

U. papulo'sa. Occurs in children. After the subsidence of the wheal a small solid papule remains. It is most abundant about the buttocks. It is often associated with flat, pustular lesions covered by scabs.

U. pigmento'sa. Characterised by large reddish wheal-like tubercles, which change to a brownish-red or yellowish colour. The disease is one of childhood, with a tendency to spontaneous cure at puberty. The parts most frequently attacked are the neck, trunk, limbs, face, and head.

U., provoked'. See *Urticaria factitia*.

U. subcuta'nea. See *Urticaria œdematosa*.

U. tox'ica. Urticaria due to certain things taken as food.

U. tubero'sa. *U. gigans*. Is characterised by wheals which are few in number, large in size, and prominent. The patients have, as a rule, broken health.

URTICARIAL—UTERO-COPULATORY

U. ves'icans. Urticarial wheals having serum effused into their centres with consequent formation of vesicles.

U. vesiculo'sa. See *Urticaria papulosa*.

Urtica'rial. Appertaining to *Urticaria*.

Urtica'rious. See *Urticarial*.

Urticate. (Mod. L. *urticare*, p. p. *urticatus*, to sting.) To sting like a nettle; produce urtication of a surface. To have the power of stinging.

Urtica'tion. The action or result of stinging or urticating; a stinging effect. An old treatment of paralysis in which the skin was beaten with nettles.

Urticeæ. A Tribe of Plants typified by the Genus *Urtica*, Order *Urticaceæ*.

Urubitin'ga. (Braz. *urubu*, a vulture; *tupi tinga*, white.) The native name of some hawk or bird of prey in South America. It is adopted in *Ornithology* as the specific name of an alleged species of *Cathartes* related to the Turkey buzzard of North America, and as the generic name of a number of black and white hawks of the buteonine division of the Family *Falconidæ*. (Century Dict.)

Uru'bu. (Braz.) One of the American vultures; a bird of the Genus *Cathartes*. (Century Dict.)

Uru'cu. *Terra orleana*.

Ur'va. *Herpestes urva*, an ichneumon of India, allied to the civet cats. It is black, except for a white stripe on each side of the head. A generic name of Ichneumons.

Uryl'lic acid. *Uric acid*.

Usage. (L. *usus*, use.) A common habit.

Uschin'sky's solu'tion. Non-albuminous culture media for the cultivation of pathogenic bacteria.

Usne'ii. A Family of gymnocarpous Lichens of which the type is the Genus *Usnea*.

Ustilagin'æ. An Order of zygomycetous Fungi, the smuts. They are parasitic, and attack living plants, particularly grasses.

Ustilagin'eous. Appertaining to the *Ustilagineæ*.

Ustilag'inous. Smutty; attacked by one or more of the *Ustilagineæ*. Belonging to the *Ustilagineæ*.

Ustila'go. Smut. A Genus of parasitic Fungi, type of the *Ustilagineæ*.

U. may'dis. Corn smut. A fungus parasitic on maize or Indian corn. In action it resembles nux vomica and ergot of rye combined, but it is very seldom used.

Ust'io. (L. *uro*, I burn.) Burn.

Ust'ion. (L. *ustio*, *urere*, to burn.) *Chem.* To reduce to ashes.

Surg. To cauterize.

Ustulate. (L. *ustulare*, p. p. *ustulatus*.) Having a scorched appearance.

Ustula'tion. The act of scorching. The act of driving one substance off from another by heat. Drying moist substances to prepare them for being reduced to powder.

Us'tus. (L. *urere*, to burn.) Calcined. Dehydrated by intense heat.

Usus. (L.) Habit.

Uta. A Genus of very small lizards of the Family *Iguanidæ*. American.

Utama'nia. A Genus of *Alcidæ*, whose type is *Alca torida*, differing chiefly from *Alca* proper, and having wings which can be used in flight. The body is boat-shaped, with thick lustrous plumage, webbed feet placed far back.

Uteral'gia. (L. *uterus*, uterus; Gr. *ἄλγος*, pain.) Pain in the uterus.

Uterectomy. See *Hysterectomy*.

Uteri. Plural of *Uterus*.

U. adscen'sus. Synonym for *Hysteria*.

U. anter'vers'io. Anterior obliquity of the uterus.

U. cory'za. *Leucorrhæa*.

U. flex'io. Obliquity of the womb.

U., os. The mouth of the womb.

U., os exter'num. The opening of the cervix into the vagina.

U., os inter'num. The opening at the junction of the cervix with the body of the womb.

U. prona'tio. Anterior obliquity of the uterus.

U. pruri'tus. *Nymphomania*.

U. reflexio comple'ta. Posterior obliquity of the uterus.

U. rheu'ma. *Leucorrhæa*.

U. ver'sio incomple'ta. Obliquity of the uterus.

Uterine. (L. *uterus*.) Appertaining to the uterus. Born of the same mother, but by different father.

U. append'ages. The ovaries and oviducts.

U. ar'tery. A branch of the anterior division of the internal iliac artery which reaches the uterus by passing between the layers of the broad ligament, and ramifies over the anterior and posterior surfaces of the uterus, as well as supplying its substance.

U. bou'gie. Uterine sound.

U. broth'er. One having the same mother but a different father.

U. cake. Placenta.

U. col'ic. Severe pain in the uterus.

U. gesta'tion. Having the embryo in the uterus.

U. glands. Utricular glands.

U. milk. The albuminous fluid contained between the epithelial covering of the villi of the chorion and the crypts or depressions in the decidua.

U. mur'mur. Placental bruit.

U. plex'us. The arrangement of veins and arteries in the wall of the uterus, partly maternal and partly foetal, by which nutriment is conveyed to the foetus.

U. pregn'ancy. Normal pregnancy.

U. rush. Placental bruit.

U. sac. In Ascidians, the shortened and widened oviduct containing the ovarian follicle and ovum.

U. si'nus. Blood spaces in the uterine walls.

U. souf'fle. A sound heard on auscultation of the abdomen over the situation of the uterus between the fifth and sixth months of pregnancy.

U. stran'gury. *Dysmenorrhæa*.

Uterin'us fra'ter. Uterine brother.

Uteritis. (L. *uterus*, womb; *itis*, inflammation.) Inflammation of the womb.

Utero-. A prefix denoting relation with the uterus.

Utero-abdom'in'al. Appertaining to the uterus and the abdomen.

Utero-cerv'ical canal'. The lower uterine segment.

Utero-cop'ulatory. (L. *uterus*; *copulate*.) Vaginal or copulatory, as certain sexual passages of hermaphrodite Gasteropods.

UTERO-DEFERENT—UTERUS.

Utero-deferent. Relating to the oviduct. Appertaining to certain sexual passages of hermaphrodite Gasteropods.

Utero-fixation. The fixation of the uterus by surgical operation.

Utero-gestation. (L. *uterus*, uterus; *gestatio*, gestation.) The period of development within the uterus. Development within the uterus.

Uteroma'nia. See *Nymphomania*.

Uterometer. (L. *uterus*, uterus; Gr. μέτρον, measure.) An instrument used to accurately determine the depth and position of the uterus, and to locate and estimate the dimensions of structures contained in it.

Utero-ovarian. (L. *uterus*, uterus; *ovarium*, ovary.) Relating to, or connected with, the uterus and ovaries.

Uteropexia. See *Hysteropexia*.

Utero-placental vacuum. The vacuum produced by traction upon the funis of a detached placenta, which causes it to cling to the uterine walls.

Uteroscope. (L. *uterus*, uterus; Gr. σκοπεῖν, to inspect.) A uterine speculum.

Uterotome. (L. *uterus*, uterus; Gr. τέμνειν, to cut.) A cutting instrument used in uterotomy.

Uterotomy. (L. *uterus*, uterus; Gr. τέμνειν, to cut.) Incision into the uterus.

Utero-vag'inal plexus. A plexus situated about the sides and upper part of the vagina and cervix.

Utero-ves'ical fos'sa. The space between the bladder and the uterus.

Uterus. (L. *uterus*, uterus; Gr. ὑστέρα, the womb.) The womb. That part of the genital tract of a woman to which the ripe ovum is carried by the Fallopian tube, and in which it is kept during development until it is expelled at maturity. It is developed from the Müllerian ducts, which have coalesced to form it, and is generally single throughout. In some cases it is divided for a varying distance, owing to the fusion of the Müllerian ducts not having been so extensive as usual. In Invertebrates, a part of the oviduct, or certain appendages of the oviduct, which fulfil the function of a uterus. In the non-gravid condition it is about three inches long, two inches wide, and one inch thick, hollow and pear-shaped. It is divided into fundus, the upper and broad portion, body and cervix, which include the remainder of the organ.

U., anteflex'ion of. A condition in which the uterus bends on itself so that the fundus drops forwards between the cervix, or lower part of the uterus, and the bladder.

U., antevers'ion of. A condition in which the uterus comes to be in such a position that the fundus looks to the pubis, while the cervix looks to the sacrum.

U., arbor vi'tæ of. The feather-like arrangement of folds of the mucous membrane of the uterus.

U. bicor'nis. A uterus with two horns, formed by the incomplete fusion of the two Fallopian tubes.

U., bifid. A condition due to failure of the Müllerian ducts to coalesce. Two more or less complete bodies are present.

U. bifo'ris. A uterus with a septum which exists only at the external os. Same as *Septate uterus*.

U. bilocula'ris. A uterus which has a

complete septum dividing it into two cavities. No indication is seen on the external surface of the septum within.

U., bod'y of the. The part above the isthmus.

U., catarrh' of. *Leucorrhœa*.

U., cer'vix of. The part below the isthmus.

U., col'umns of. Ridges in the mucous membrane of the cervix.

U., contrac'tion of. The intermittent contractile action of the uterus which expels the fœtus.

U. cordifor'mis. A uterus with a depressed fundus, due to imperfect development.

U. defec'tus. Congenital absence of the uterus.

U. didel'phys. A condition in which two separate organs, in all respects distinct from one another, exist.

U., du'plex. A double uterus, due to a fault in development.

U., epistax'is of. Hæmorrhage from the uterus occurring a few days after ovariectomy.

U., fun'dus of. The portion above a line joining the openings of the two Fallopian tubes.

U., grav'id. The uterus with a fœtus inside.

U., her'nia of. A condition in which the uterus passes out of the abdomen through some part of the abdominal wall.

U., hour'-glass contrac'tion of. Contraction of the internal os dividing the cavity into two parts.

U., impreg'nated. See *Uterus, gravid*.

U., incarceration of. A condition in which the pregnant uterus is prevented from rising out of the pelvis by its fundus being retained below the promontory of the sacrum.

Also, a uterus which is strangulated by pressure or constriction.

U., iner'tia of. A condition of the uterus during childbirth in which the contractions are either absent or too feeble to produce any effect.

U., in'fantile. An immature or undeveloped uterus.

U., inver'sion of. The uterus is turned inside out.

U., involu'tion of. The process of restoring the uterus to almost its original size after childbirth. It is carried out by fatty degeneration.

U., ir'ritable. Name for a condition in which pain is felt in the lower part of the back and the loins, which is made worse by exercise, and better by lying down. It generally begins a day or two before menstruation, and lasts a day or two after it.

U., isth'mus of. A slight depression on the external surface of the uterus corresponding to the internal os.

U. masculi'nus. Same as *Prostatic vesicle*, *Sinus pocularis*, *Vagina masculina*, *Utriculus hominis*.

U., neck of. See *Cervix uteri*.

U., neural'gia of. See *Uterus, irritable*.

U., preg'nant. See *Uterus, gravid*.

U., prociden'tia of the. An extreme degree of prolapse in which the uterus passes out through the vulva.

U., prolapse' of. Descent of the uterus without protrusion at the vulva.

U., puer'peral. The uterus between childbirth and the completion of involution.

UTETHEÏSA—UVULARIA

U., puer'peral atrophy of. The condition produced when the process of absorption of the puerperal uterus is carried too far.

U., retraction of.

U., retroflexion of. A condition in which the uterus is bent on itself so that the fundus looks backwards.

U., retroversion of. A condition in which the uterus is so placed that its fundus looks backwards and its cervix forwards.

U., rupture of the. The occurrence of a tear in the wall of the uterus during childbirth.

U. sep'tus. *Uterus bilocularis.*

U., subinvolution of. Delayed or incomplete involution of the uterus.

U. subsep'tus. Uterus whose cavity is divided into two by an incomplete septum.

U., two-chambered. See *Uterus bilocularis.*

U., two-horned. See *Uterus bicornis.*

U. unicornis. A uterus which is defective owing to the arrested development of one Müllerian duct.

Utetheïsa. A Genus of Moths of the Family Bombycidae, of moderate size. Antennæ simple in both sexes. Found all over the world.

U'tricle. (L. *utriculus*, a little leather bottle.) A small sac or reservoir of the body. The larger of the two sacs in the vestibule of the membranous labyrinth of the middle ear. It communicates with the openings of the semi-circular canals and with the sacculæ. It is situated in the fovea hemielliptica.

U., primor'dial. A thin lining to the cell-wall of vegetable structures, having the composition of protein and secreting the cellulose.

Utric'ular. Appertaining to a utricle. Having utricles. Resembling a utricle. Applied to certain vapours which condense into small globules, having a pellicle outside and fluid contents, when they come in contact with a cold body.

Utricula'ria. A Genus of aquatic plants typical of the Order Lentibulariæ. Bladder-worts. There are about 160 species, principally tropical. They are insectivorous, and absorb animal matters through their bladders. The fresh applications are said to be good for burns. Some species are said to have diuretic properties.

Utric'ulate. Appertaining to a utricle.

Utriculi. Pl. of *Utriculus*.

Utriculif'erous. Bearing or producing utricles and bladders.

Utric'uliform. (L. *utriculus*, a little bag; *forma*, form.) *Utricular*.

Utric'uloid. (L. *utriculus*, a little bag; Gr. *eidōs*, form.) Same as *Utriculiform*.

Utriculose'. See *Utricular*.

Utric'ulus. Same as *Utricle*.

U. commu'nis. See *Utricle*.

U. hom'inis. See *Uterus masculinus*.

U. lac'teus. *Receptaculum chyli*.

U. pro'prius. The middle and lower part of the utricle of the ear.

U. prostat'icus. See *Prostatic sinus*.

U. ure'thræ. The *Prostatic vesicle*.

U. ur'sæ folia. *Arbutus uva-ursi*.

U'triform. (L. *uter*, a leather bottle; *forma*, form.) Shaped like a leather bottle.

U.-tube. A glass tube in the shape of the letter **U**, used in laboratories.

U'va. A succulent indurated fruit, having a central placenta.

U. ur'si. Bearberry. The leaves of *Arctostaphylos uva-ursi*. It contains gallic and tannic acids, and is an astringent tonic and diuretic.

Uva'ria. A Genus of plants typical of the Tribe Uvariæ, of the Order Anonaceæ. About forty-four species are known; natives of tropical Asia and Africa.

Uva'riæ. Polypetalous plants of the Order Amonaceæ. The flowers have flattened and spreading petals, with stamens densely crowded and dilated at the apex, so as to conceal the anther cells. Thirteen genera are known, all tropical, of which *Uvaria* is the type.

Uvar'ovite. An emerald-green variety of garnet, containing chromium sesquioxide.

U'vea. The iris, ciliary body, and choroid taken collectively. The choroid coat of the eye.

U., commissure of. Ciliary ligament.

U'veal. Appertaining to the uvea.

U. ar'teries. Short posterior ciliary arteries.

U. tract. Choroid membrane.

Uveit'is. See *Iritis*.

U'veous. (L. *uva*, a grape.) Resembling a grape or bunch of grapes. Same as *Uveal*.

U'vic acid. Racemic acid.

Uvig'ena. *Uvula*.

Uvig'era. *Uvula*.

U'væ. (L. *uva*, a grape.) The ripe fruit of *Vitis vinifera*. They are contained in *Tinctura cardamomi compositæ* and *Tinctura sennæ*.

U. pas'sæ. Dried grapes.

U. pas'sæ majo'res. Ordinary raisins.

U. pas'sæ mino'res. Currants.

U. ur'sæ folia. *Arbutus uva-ursi*.

U'vula. A small free muscular body covered with mucous membrane, projecting downwards and backwards from the free edge of the soft palate. The part of the inferior vermiform process of the cerebellum between the amygdalæ and in front of the pyramid. A slight projection of mucous membrane from the bladder into the vesical opening of the urethra.

U. cer'ebrî. A small lobule of the posterior part of the veronis of the cerebellum, forming the posterior boundary of the fourth ventricle.

U. decid'ua. Staphylœdema.

U. elonga'ta. Staphylœdema.

U. of Lieu'taud. A longitudinal median ridge in the trigone of the bladder.

U. relaxa'ta. Staphylœdema.

U. ver'mis. *Uvula* of the cerebellum.

U., ves'ical. A prominence at the internal or external orifice of the urethra.

U'vulæ mus'culus. A muscle arising from the posterior nasal spine, and forming with its fellow the fleshy part of the uvula.

U'vulapto'sis. (L. *uvula*, uvula; Gr. *πτῶσις*, falling.) A relaxed and pendulous condition of the uvula.

U'vular. Appertaining to the uvula. Made with the uvula; of *r*, when pronounced by vibrations of the uvula.

U. glands. Glands in the mucous membrane covering the uvula.

Uvula'ries. Pl. of *Uvularis*.

Uvula'ria. A Genus of liliaceous plants, type of the Tribe *Uvulariæ*. The five species are all natives of the eastern and central United States. Used to make hot fomentations.

UVULARIÆ—VACCINE

U. latifolia and **U. flava**. Used to make hot fomentations.

U. perfoliata. North America. Demulcent and tonic.

Uvulariæ. A Tribe of liliaceous Plants having bulbless leafy herbaceous or climbing stems, with alternate sessile or clasping leaves, extrorsely dehiscent anthers, and often a loculicidal capsule. Nine genera are known; one occurs in America, the others in Asia, Australia, and especially South Africa.

Uvula'ris. The *Arygos uvula*.

U'vulatome. (L. *uvula*, the uvula; Gr. *τομή*, section.) An instrument for cutting off the lower part of the uvula.

Uvulat'omy. (L. *uvula*, uvula; *τομή*, section.) Excision of the uvula.

Uvulato'sis. Prolapse of the uvula.

Uvuli'tis. (L. *uvula*, uvula; Gr. *ιτις*, inflammation.) Inflammation of the uvula.

Uvulot'omy. See *Uvulatomy*.

Uxaidella. *Chenopodium ambrosioides*.

V.

Vaag'mar. The deal fish.

Vaalite. A kind of vermiculite found associated with the diamond in South Africa.

Vaccig'enous. Producing vaccine. Said of institutions where this substance is produced.

Vaccin. See *Vaccine*.

Vaccina. (L. *vaccinus*, of or from cows.) See *Vaccinia*.

Vaccinable. (L. *vaccinus*, of a cow.) Susceptible of successful vaccination.

Vaccina'ceæ. An Order of gamopetalous plants, *Cohort ericales*. Three hundred and forty-eight species, arranged in twenty-seven genera and two tribes. *Thibaudieæ* and *Euvaccinieæ* are known. They are found in temperate and cold regions, tropical Asia, America, and the islands of the Pacific.

Vaccinal. Appertaining to vaccine. Resulting from vaccination.

V. erythe'ma. A red coloration of the skin following *Vaccinia*.

V. fever. *Vaccinia*.

V. scar. A scar occurring at the inoculated spot.

Vaccinate. To inoculate cow-pox, with a view to ward off or mitigate smallpox, by means of vaccine lymph taken from the cow.

Also, to inoculate the virus of any disease, of modified virulence, with a view to diminish the severity of the disease or to ward it off.

Vaccina'tion. Inoculation with the virus of a specific disease, more especially applied to the inoculation of cow-pox as a means of lessening the virulence of smallpox or warding it off. The operation consists in introducing under the skin or applying to a raw surface a small quantity of vaccine. After two days slight redness and swelling occur at the seat of inoculation, followed in twenty-four to forty-eight hours by a vesicle of clear fluid with a depressed centre. After eight to ten days an areola, hard, swollen, and red, forms round the vesicle, and remains there until the thirteenth to fifteenth day, when it disappears, and the vesicle dries to a yellow scab. Constitutional symptoms are often present, and fever, headache, and loss of appetite; locally the glands are generally swollen.

V., an'im'al. That in which lymph cultivated in bovine animals is used.

V., arm-to-arm. That in which the

lymph used is taken from the arm of one patient and inoculated into the arm of another.

V., au'to-. Is the re-inoculation of a person with virus taken from himself.

V., bo'vine. See *Vaccine*.

V., compul'sory. That done in compliance with the law compelling the vaccination of infants within a certain period after birth.

V. rash. A rash which sometimes follows vaccination. As a rule it passes away; at times it assumes the characters of an erythema or eczema. It may be syphilitic.

V. scar. See *Vaccine cicatrix*.

Vaccina'tionist. One who believes in or practises vaccination as a protective against the severer forms of smallpox.

Vaccinator. One who vaccinates. The instrument used to vaccinate.

Vaccine. (L. *vaccinus*, of a cow.) (a) Appertaining to cows. Appertaining to *vaccinia* or vaccination.

(b) The virus of cow-pox used in the operation of vaccination. There are two sources, the heifer and the human being. Lymph from the former causes the most marked constitutional disturbance, while that from the latter may be tainted, and the source of disease.

(c) The virus of any specific disease introduced into the body by inoculation.

V. a'gent. An officer whose duty lies in procuring and distributing pure vaccine matter.

V., bo'vine. That derived from the vesicles of heifers.

V. cic'atrix. The scar remaining after a successful vaccination. As a rule it is dead white, depressed, roundish, and marked by many little pits.

V. farm. A place for the production of vaccine by the inoculation of heifers.

V., hu'manised. That produced from the vaccine vesicles of man.

V. Heh'en. An eruption which follows vaccination. It may be papular, papulo-vesicular, or pustular, and in very rare instances bullous. It begins about the eighth day (fourth to eighteenth day as limits of time), and generally on the arm, though it may start from the neck, face, or trunk, and spread over the greater portion of the body. The papules are minute, pointed, bright red, and may be discrete or may coalesce. It may last a week or two.

V. lymph. See *Vaccine*.

V. point. A thin piece of bone, ivory, or quill, covered with dried vaccine lymph.

V. virus. Virus prepared for the purposes of vaccination.

Vaccinella. An eruption which follows vaccination, without being a genuine vaccinal eruption.

Vaccinia. A specific disease with an eruption, which occurs in cattle. It is papular, and then vesicular. The vesicle has a depressed centre, and the skin around it is reddened, swollen, and indurated. The vesicle grows larger to about the tenth day, and then dries up and falls off about the end of the third week. The lymph taken from the vesicles, when inoculated into man, confers immunity from smallpox or from its severe form.

Vaccinia'ceous. Belonging to the *Vacciniceæ*.

Vaccin'ic. Appertaining to vaccine.

Vaccini'æ. A Tribe of Plants of the Order *Vacciniaceæ*. Ten genera are included under this name, *Vaccinium* being the type.

Vaccin'ifer. (L. *vaccina*, vaccine; *ferre*, to bear.) The source of the vaccine virus. An instrument used in vaccination.

Vaccin'iform. (L. *vaccinus*, appertaining to a cow; *forma*, form.) Resembling vaccinia.

Vaccinin. A bitter principle obtained from *Vaccinium vitis-idaea*.

Vaccinine. A name for the specific contagion of cow-pox.

Vaccini'ola. A secondary eruption following that seen at the seat of inoculation, and like it.

Vaccinist. One who performs or believes in vaccination.

Vaccin'ium. (L. *vaccinium*, whortleberry.) A Genus of gamopetalous Plants, type of the Order *Vacciniaceæ*, and of the Tribe *Euvaccinuceæ*, the blueberries. About 100 species are known; found in the temperate and frigid zones of the northern hemisphere, and in the mountains of tropical regions.

V. crassifo'lium. A plant used, as is *Uva ursi*, in therapeutics. It is especially useful in catarrh of the genito-urinary tract.

V. macrocar'pon. See *V. oxycoccus*.

V. myrtyllus. Myrtleberry, whortleberry, bilberry. Antiscorbutic and astringent.

V. nigrum. *V. myrtyllus*.

V. oxycoc'cus. Cranberry, moorberry, sourberry. The berries are acid and cooling.

V. pensylvan'icum. Low blueberry. The leaves and bark are astringent.

V. puncta'tum. *V. vitis idæa*.

V. resino'sum. *Gaylussacia resinosa*.

V. stamin'eum. Huckleberry. Astringent.

V. vitis-ida'e'a. Cranberry, whortleberry. The leaves are astringent; the berries are acid.

Vacciniza'tion. A method of inoculating, in which the operation is repeated until susceptibility to the virus is destroyed.

Vaccin'ogen. (L. *vaccinus*, appertaining to a cow; *γεννάν*, to produce.) The person or animal from whom or from which vaccine virus is taken.

Vaccinog'enous. See *Vaccigenous*.

Vaccinoid. (L. *vaccinus*, appertaining to a cow; *ειδος*, like.) Resembling vaccinia.

Vaccin'ois. *Vaccinella*.

Vaccinopho'bia. (L. *vaccinus*, appertaining to a cow; *φόβος*, fear.) Morbid dread of vaccination.

Vaccinosyph'ilis. Syphilis caused by the use of tainted vaccine taken from a human being, or by the use of infected instruments.

Vaccinus. *Vaccine*.

Vacci'ola. *Vaccina*.

V. lepro'sa. *Vaccinella*.

V. scutella'ta. *Vaccina*.

V. spu'ria. *Vaccinella*.

V. ve'ra. *Vaccina*.

Vacilla'tio. (L. *vacillo*, to waver.) Staggering, waddling.

V. den'tium. Looseness of the teeth.

Vac'ua. Pl. of *Vacuum*.

Vacu'olar. Appertaining to a vacuole; having the appearance of a vacuole.

Vacu'olate. See *Vacuolated*.

Vacu'olated. Having vacuoles.

Vacuola'tion. The formation of vacuoles; the state of being vacuolated; a system of vacuoles. The first stage in the vascularisation of a clot, in which cracks and fissures appear in it.

Vacu'ole. (New L. *vacuolum*, dim. of L. *vacuum*, an empty space.) A small cell or cavity in the tissue of an organism.

Anat. A small space or interstice of a tissue, in which the lymphatic vessels are believed to originate.

Zool. Any minute space in the tissue of a protozoan, such as an amœba. They may be permanent, pulsating, or gastric; the first are at times present in sufficient number to give the organism the appearance of being strewn with bubbles. The second are contractile. The third are due to the water taken in with the food.

Bot. A space in the protoplasm of living vegetable cells, and filled with cell sap.

Vacuolisa'tion. *Vacuolation*.

Vacu'ousness. *Vacuity*.

Vacu'um. (L. *vacuum*, an empty space.) Space void of matter. An enclosed space, from which as much as possible of the gas originally filling it has been removed.

V. fil'ter. A filter in which the air below the material to be filtered is abstracted, and the process thereby hastened.

V. gauge. A form of pressure gauge for estimating the pressure in a vessel, or the amount of vacuum. It often consists of a U-shaped tube connected at one end with the vessel, and having the other end open to the air. In it is a certain amount of mercury, which stands at the same height in both parts of the tube, unless there be either pressure or negative pressure in the vessel, under which circumstances it moves away from, or towards, the vessel.

V.-pan. A metal vessel which can be made air-tight, connected with a condenser and an air-pump. It is heated by steam pipes and used for concentrating fluids, especially such as burn at the temperature, or below the temperature, of boiling water. The air-pump draws off the vapour and keeps the vacuum.

V.-tube. A sealed glass tube, used to examine the effects of a discharge of electricity through a rarefied gas.

V. valve. A valve connected with a boiler and opening inwards, so that it may be forced open by atmospheric pressure whenever there is a vacuum in the boiler.

Va'dum. (L. *vadum*, a shallow.) A shal-

low in a fissure of the brain, generally in the central and near the dorsal end.

Vagabondism. See *Vagabond's disease*.

Vagabond's disease or **discoloration**. A pathological condition of the skin, in which it takes on a deep brown tint resembling that of Addison's disease. It results from chronic irritation from pediculi.

Vagabundæ. (L. *vagabundus*, wandering.) A Division of Spiders which lead a wandering life, and hunt their prey. They are dipneumonous.

Vagal. (L. *vagare*, to wander.) Appertaining to the vagus nerve.

Vagatores. (L. *vagari*, *vagatus*, to wander.)

Vagi. Pl. of *Vagus*.

Vagina. (L. *vagina*, a sheath.) Bot. A sheath formed by leaves where they are attached to the stem.

Anat. The passage from the vulva to the uterus, formed by the coalescence of the terminal portions of the Müllerian ducts. In some of the lower Mammalia the ducts do not completely coalesce, and there are two vaginæ or a double one.

Ent. A sheath enclosing an organ, e.g. the labrum of the mosquito which encloses the mandibles and maxillæ; the sheath of the proboscis of hemipterous Insects; the parts covering the tongue of a bee.

V. bulbi. Capsule of Tenon.

V. cellulo'sa. Epineurium.

V., columns of. See *Columnæ rugarum*.

V. cor'dis. The Pericardium.

V., cul-de-sacs of. Four arches made by the junction of the vaginal walls with the uterus.

V., double. A condition in which the vagina is a double tube owing to faulty development.

V. fe'moris. The fascia lata of the thigh.

V. fem'oris ten'sor. A muscle of the thigh inserted into the deep fascia of the lateral aspect, arising from the external lip of the iliac crest at its fore part and from fascia over the gluteus medius.

V. fibro'sa. Sheath of a flexor tendon or tendons.

V. fibro'sa ner'vi opt'ica. The fibrous sheath of the optic nerve.

V., for'nix of. The combined cul-de-sacs of the vagina.

V. Glisso'nii. Capsule of Glisson.

V. malleola'ris exter'na. Fibrous sheath of the tendons on the perinæal side of the ankle-joint.

V. mascul'ina. The prostatic vesicle of the male urethra. Also named *Uterus masculinus*, *Sinus pocularis*.

V. muscular'is. Perinysium.

V. nerv'orum. Neurilemma.

V. oculi. See *V. bulbi*.

V. pi'li. The sheath of a hair.

V. portæ. The continuation along the portal vessels and their branches of the capsule of Glisson.

V., ru'gæ of. Transverse elevations of the mucous membrane branching from the columns.

V. ten'dinis. The synovial sheath of a tendon.

V. tendino'sa cru'ris. The fascia lata of the thigh.

V. ten'dinum. Synovial sheath.

V. vas'orum uma'lium. Crural sheath.

Vaginæ mucosæ. *Bursæ mucosæ.*

V. synovia'lis. *Bursæ mucosæ.*

Vag'inal. (L. *vagina*.) Appertaining to a sheath; especially used with reference to the vagina of the female.

V. ar'teries. A branch of the internal iliac artery passing to the vagina and base of the bladder on its own side.

V. biliary plexus. A plexus formed by the ramifications of the hepatic duct in the capsule of Glisson.

V. branches of the ve'na por'ta. Small branches of the portal vein which ramify in the sheath of the portal vessels before entering the interlobular spaces.

V. coat of the eye. Capsule of Tenon.

V. coat of the tes'ticle. The serous tunic of the testicle. It is a bag which surrounds the testicle and epididymis without containing them in its cavity.

V. douche. An apparatus for bathing the vagina.

V. gan'glia. Ganglia formed on the nerves which ramify over the uterus. Its constituent nerves are derived from the hypogastric ganglion and spermatic plexus.

V. her'nia. One which protrudes through the posterior wall of the vagina.

V. hysterectomy. Removal of the uterus through the vagina.

V. ovariotomy. Removal of an ovarian tumour through the vagina.

V. plexus. The branches of the pelvic nerves which pass to the walls of the vagina and supply it. A venous anastomosis in the walls of the vagina.

V. process of the tem'poral bone. A marked bony crest which embraces the base of the styloid process.

V. pulse. Throbbing felt in the vagina during pregnancy or intense engorgement of the pelvis.

V. respira'tion. Breathing of a child while its head is still in the vagina.

V. synovial mem'brane. A sheath of synovial membrane which surrounds a tendon.

V. tu'nic. The capsule of Tenon. The *Tunica vaginalis testis*.

V. vault. The roof of the vagina surrounding the cervix uteri. It is described as having an anterior and posterior portion.

Vaginali'tis. Inflammation of the *Tunica vaginalis testis*.

Vag'inant. Sheathing.

Vagina'ta. An Order of *Actinozoa*. Polyps having a sclerobasic or sclerodermic corallum.

Vag'inate. (L. *vagina*.) To sheath.

Vaginervose. (L. *vagus*, wandering; *nervus*, a nerve.) Bot. Irregularly nerved.

Vaginic'ola. (L. *vagina*, a sheath; *colere*, to inhabit.) The typical Genus of *Vaginicoline*, with essentially the structure of *Forticella*, but having the body protected by a membranous or horny case which is formed by hardening of the cuticle.

Vaginic'oline. Belonging to the *Vaginicoline*. Living in a vagina or sheath.

Vaginicoli'næ. A Sub-family of *Forticellidæ*, Order *Ciliata*, Class *Infusoria*. They

have a protective ensheathing cuticle; hard, and secreted by themselves.

Vaginic'olous. See *Vaginicoline*.

Vaginif'era. A family of Infusorians; the *Vaginicoline*.

Vaginif'erous. (L. *vagina*, a sheath; *ferre*, to bear.) Possessing a vagina. Appertaining to the *Vaginifera*.

Vaginiglutæ'al. Appertaining to the *Vaginigluteus*.

Vaginiglutæ'us. (New. L. *vagina*, sheath; *gluteus*, glutinous.) The *Tensor vaginæ femoris* muscle.

Vaginis'mus. Spasmodic contraction of the sphincter vaginæ accompanied by pain and hyperæsthesia.

V., perinæ'al. That due to spasm of the perinæal muscles.

V., poste'rior. That due to spasm of the levator ani.

V., vul'var. That due to spasm of the constrictor vulvæ.

Vaginitis. (L. *vagina*, a sheath; *itis*, inflammation.) Inflammation of the vagina.

V. adhæsi'va. Vaginitis with partial or complete atresia of the vagina.

V., diphtheritic. Diphtheritic inflammation of the vagina.

V., gran'ular. A granular inflammation of the vagina.

Vaginodyn'ia. (L. *vagina*, sheath; Gr. *dōvñ*, pain.) Neuralgia of the vagina.

Vagino-fixa'tion. (L. *vagina*, vagina; *fixation*.) An operation by which the vagina is rendered immoveable.

Vaginopen'nous. (L. *vagina*, a sheath; *penna*, a feather.) See *Vaginipennate*.

Vagino'tomy. (L. *vagina*, a sheath; Gr. *τομή*, section.) Cutting of the vagina.

Vagino-vesical. (L. *vagina*, a sheath; *vesica*, a bladder.) Appertaining to the vagina and bladder.

Vaginipen'nate. (L. *vagina*, sheath; *pennatus*, winged.) Having sheaths for the wings, as a beetle.

Vagin'ula. (L. dim. of *vagina*.) Bot. A small sheath. Specifically used of the sheath at the base of the seta in mosses.

Zool. A small sheath.

Vagin'ulate. Sheathed.

Vagin'ule. See *Vaginula*.

Vagi'tus. (L. *vagire*, to cry.) The cry of a newly born child.

V. uteri'nus. The cry of a child *in utero*.

Vago-accesso'rius. A name for the nerve-trunk which carries fibres from the nuclei of the vagus and spinal accessory nerves.

Vagot'omy. (L. *vagus*; Gr. *τομή*, section.) Section of the vagus nerve.

Vag'ous. (L. *vagare*, to wander.) Wandering.

Va'grant. (L. *vagare*, to wander.) Wandering, as a vagrant cell.

V. cells. Amœboid cells.

V.'s disease'. A discoloration of the skin which occurs in people infested with vermin; it is most marked on the chest, abdomen, and back. The skin becomes hard and rough. It may be mistaken for Addison's disease.

Vagus. The tenth cranial nerve. Its nucleus lies in the medulla oblongata immediately above that of the eleventh and below that of the twelfth, the three being regarded as

divisions of one nucleus and beneath the alacineæ. It supplies the pharynx, œsophagus, larynx, heart, lungs, stomach, and viscera. Its superficial origin is from the medulla, immediately below the restiform body, whence it passes by the jugular foramen from the skull to the back of the carotid sheath, down which it passes to the base of the neck. Here the left one passes between the carotid and subclavian arteries over the front of the aorta to the back of the lung, while the right one passes in front of the first part of the subclavian to the side of the trachea, and thence to the lung. The two join together below the roots of the lungs to form the plexus gulæ on the œsophagus, from which are derived the nerves which pass through the œsophageal opening in the diaphragm to supply the viscera. It is sensory and motor; its sensory fibres to the larynx are derived from the spinal accessory nucleus in the medulla.

In Insects, the principal gastric nerve, which begins in two parts in the fore-part of the brain, passes thence to a ganglion below the cerebrum, and finally travels along the upper surface of the intestine.

V. gan'gion. Two well-marked enlargements on the vagus nerve, containing nerve-cells with nerve-fibres running from them.

Valan'ida. *Fagus sylvatica*.

Valan'tia aparin'é. *Galium aparine*.

Val'divin. An emetic substance prepared from the fruit of *Simaba valdivia*.

Valence. (L. *valere*, to be strong.) The combining power of an element or radical in terms of the number of atoms of hydrogen it will combine with or replace. It has been held that the valence of an atom is not constant, but depends on the temperature and the nature of the other combining atoms. The quality or force which determines the number of atoms with which another atom will combine.

Valency. See *Valence*. One unit of combining capacity.

Valengin'ian. The French name of the lower division of the Neocomian.

Valen'tia. A Genus of hemipterous Insects.

Valentin'ian ves'icles. Small dark bodies seen by Valentin in the germinal spot.

Valentinite. Antimony trioxide, antimonious oxide, Sb₂O₃. Found in lustrous white, brown, or whitish-brown crystals, massive, belonging to the orthorhombic system.

Valentin's cor'puscles. Small bodies of amylaceous character found in nerve tissue.

V.'s gan'gion. A ganglion placed above the second bicuspid at the junction of the anterior and posterior dental nerves.

Valeral'dehyde. A liquid having an unpleasant, irritating odour, produced by the oxidation of amyl alcohol.

Val'erate. A salt of valerianic acid.

V., ce'rium. A salt useful in the vomiting of pregnancy.

Val'erene. See *Amylene*.

Val'erian. (L. *valere*, to be strong; Mid. Eng. *valerian*; F. *valériane*.) A plant of the Genus *Valeriana*. The root of the official valerian, and the preparations of it. Native of Europe and Asiatic Russia. It is herbaceous, with a perennial root, and grows from two to five feet high. It yields an active volatile oil

VALERIANA—VALLIS

containing valerene, which depresses reflex excitability, and is used in hysteria.

V. alold. The common valerian.

V., Amer'ican. *Cypripedium luteum*.

V., gar'den. *Valeriana phu.*

V., Greek. *Polemonium cæruleum*, Jacob's ladder.

V., offici'nal. *Valeriana*.

V. pug. *Eupithecia valerianata*. A British geometrid moth whose larva feeds on valerian.

V., red. *Centranthus ruber*. A native of the Mediterranean region.

V., spurred. Red valerian.

V., wild. *Senecio aureus*; *Valeriana pauciflora*.

Valeria'na. A Genus of gamopetalous plants, type of the Order *Valerianeæ*. About 150 species, inhabiting the temperate and arctic regions of both hemispheres, are known. Chiefly perennial. The rhizome and rootlets of *Valeriana officinalis*. It is antispasmodic and gently stimulant to the nervous and circulatory organs. In excessive doses it produces diarrhoea and vomiting, impairs sensibility, and causes mental confusion. Its properties are due to a volatile oil.

V. capen'sis. South African species. Used in nervous complaints.

V. cel'tica. An Alpine plant. Its roots are stomachic, carminative, and diuretic.

V. denta'ta. Its roots are antiscorbutic and aperient. It is cultivated for salad under the name of corn salad.

V. edu'lis. *Valeriana*.

V. locus'ta. *V. dentata*.

V. ma'jor. *Valeriana phu.*

V. mi'nor. *Valeriana*.

V. officina'lis. *Valeriana*.

V. paucifl'ora. American valerian.

V. phu. Garden valerian. The roots have been recommended for rheumatism.

V. saxat'ilis. *V. cel'tica*.

V. sp'ica. *Nardus indica*.

V. sylvat'ica. *V. pauciflora*.

Valeriana'ceæ. See *Valerianeæ*.

Valeriana'ceous. Appertaining to the Order Valerianaceæ.

Valer'ianate. A salt of valeric acid.

Valeriane'æ. An Order of gamopetalous plants. About 275 species arranged in nine genera are known. They are natives of the north temperate regions of the Old World and America. Tonic and antispasmodic.

Valerianella. A Genus of gamopetalous plants of the Order Valerianeæ. Fifty-five species; found in the Mediterranean region and Central Europe.

Valer'ian'ic. See *Valeric*.

Valeric. Appertaining to valerian.

V. ac'id. $C_5H_{10}O_2$. Three metameric forms are known. It is an oily liquid, with pungent taste and the smell of old cheese, found in valerian and fæces, and which is produced by the putrefactive decomposition of leucin.

Val'erin. (L. *valere*, to be strong.) A terpene obtained from valerian.

Val'erol. Valerian camphor, changed by the air into valerianic acid.

Valetudina'ria. Pl. of *Valetudinarium*.

Valetudina'rian. An invalid seeking health.

Valetudina'rianism. Infirmary.

Valetudina'rious. *Valetudinary*.

Valetudina'rium. (L. neut. of *valetudinarius*.) An infirmary.

Valetu'dinary. (L. *valetudinarius*, in bad health.) Infirmary.

Valetu'do. (L.) Health.

V. adver'sa. Disease.

V. bo'na. Good health.

V. commo'da. Health.

V. secun'da. Health.

Val'eur glob'ulaire of Lepine'.

The proportion of hæmoglobin to the number of red corpuscles expressed in terms of the amount of hæmoglobin in an individual corpuscle.

Val'gus. (L.) A bow-legged man. Incorrectly used to describe a knock-kneed man. A form of club-foot characterised by eversion of the foot; full name talipes valgus.

V., hal'lux. A deformity of the foot characterised by displacement of the big toe in an outward direction, so that it frequently lies across the toes next it.

V., nerv'ous. Valgus of neurotic origin.

V., paralyt'ic. Valgus caused by paralysis of the tibialis anticus.

V., spu'rious. See *Splay foot*.

Validi'rostr'al. (L. *validus*, strong; *rostrum*, a beak.) Possessing a stout beak.

Val'iga. Tinctura jalapii.

Valitu'do. See *Valetudo*.

Vallec'ula. (L.) *Anat.* A depression or furrow.

Bot. A groove or furrow seen on some stems and between the ribs of an umbelliferous fruit.

V. cerebel'li. A depression on the under surface of the cerebellum which contains the medulla oblongata.

V. cor'dis. A depressed area at the apex of the heart extending between the anterior and posterior longitudinal furrows.

V. glos'so-epiglott'ica. The glosso-epiglottic fossa.

V. ova'ta. The depression in the liver for the gall-bladder.

V. Reil'li. Fissure of Sylvius.

V. Syl'vii. The depression at the beginning of the fissure of Sylvius, the bottom of which is formed by the anterior perforated space.

V. un'guis. The recess formed by the folding back of the skin in which the root of the nail lies.

Vallec'ular. Appertaining to a vallecule or groove.

V. canal'. *Bot.* An intercellular canal lying within the cortical parenchyma, and corresponding to an external groove. Seen in certain Equisetaceæ.

Vallec'ulate. (L. *vallecula*, a little furrow.) Marked with vallecule.

Val'leix's points. Spots situated on a nerve affected by neuralgia, which are tender to pressure.

Val'ley of the cerebel'lum. The depression dividing the lateral hemispheres of the cerebellum.

Vallic'ula. See *Vallecula*.

Vallic'ular. See *Vallecular*.

Val'li-Rit'ter's law. When a nerve is separated from its centre, or when that centre dies, the excitability of the nerve is increased. The increase begins at the central end, and travels toward the periphery. Finally the excitability falls and completely disappears.

Vallis. (L.) Valley.

V. ala'rum. Axilla.

V. fem'orum. Vulva.

Vallisneria. A Genus of monocotyledonous plants, Order Hydrocharidæ, type of the Tribe Vallisneriæ. One species only is known, *V. spiralis*, the tape-grass or eel-grass, common in fresh water in the temperate and warmer regions of both hemispheres.

Vallisneriæ. A Tribe of plants, Order Hydrocharidæ, having very short stems. Found growing immersed in fresh water. Three genera are known, Vallisneria being the type.

Vallota. A Genus of plants, Order Amaryllidæ, Tribe Amaryllæ. The only species known is a native of South Africa, *Vallota purpurea*. It bears an umbel of large scarlet flowers, erect and nearly sessile, and is known as the Scarborough lily.

Val'um. (L.) The eyebrow.

Valonia. (Βάλανος, an acorn.) The commercial name for the acorns of several species of oak imported into Great Britain from Asia Minor, Roumelia, and Greece, to be used in tanning leather. They contain 30 to 40 per cent. of tannin, and are usually mixed with oak bark because, acting by themselves, they cause the leather to be brittle. Leather made by their agency admits very little water.

Valsalvan. Appertaining to the Italian anatomist Valsalva.

Valsalva's experiment. If a healthy individual be instructed to hold his nose, shut his mouth, and forcibly expire, the air will pass by the Eustachian tubes into both his tympanic cavities.

V. lig'ament. Fibrous band extending between the pinna of the ear and the temporal bone.

V.'s meth'od. The method of treating internal aneurisms by purgatives, venesection, and restricted diet.

V., si'nuses of. Dilatations of the aorta and pulmonary arteries at the attachment of the aortic and pulmonary semilunar valves.

Val'va. A valve. The maxilla of a bee.

V. bicus'pis. The bicuspid or mitral valve of the heart.

V. tricus'pis. The tricuspid valve of the heart.

V. Tul'pii. The Ileo-cæcal valve.

Val'val. Appertaining to a valve. Being in such a position that the observer looks at the valve. *Bot.* Said of diatoms.

Val'var. Valvular.

Val'vate. (L. *valvatus*, with folding doors.) Resembling a valve, or fulfilling the functions of a valve. Possessing a valve. In *Bot.*, joined at the margins only. Applied to a form of æstivation in which the pieces of the whorl touch each other without overlapping; also, to the method of dehiscence of some anthers.

Valve. *Anat. and Zool.* A fold which resembles or serves as a valve in connection with the flow of any fluid of the body.

Bot. A segment of a capsule, or one which opens like a lid in the dehiscence of certain anthers.

Conch. One shell of an ordinary bivalve or diatom.

Entom. The plate, usually one of a pair, which serves to cover an organ.

V., aor'tic. Three semilunar pouch-like flaps situated at the junction of the aorta with the heart.

V.s, auric'ulo-ventric'ular. The valves which guard either of the auriculo-ventricular orifices, and prevent the back flow of blood when the ventricle contracts.

V., bicus'pid. The left auriculo-ventricular valve or mitral valve.

V., cor'onary. The valve which covers the opening of the coronary sinus, and prevents regurgitation of blood during contraction of the auricle.

V., Eusta'chian. The semilunar fold of membrane which borders on the opening of the inferior vena cava into the right auricle of the heart.

V., il'eo-cæ'cal. The valve protecting the communication between the ileum and cæcum.

V., il'eo-col'ic. The valve protecting the communication between the ileum and colon.

V., mi'tral. Two more or less crescentic folds of the endocardium, situated between the left auricle and ventricle, which prevent backward flow of blood during ventricular contraction.

V. of Amus'sat. A name given to the spiral arrangement of crescentic folds seen in the mucous membrane of the cystic duct. Also called the valve of Heister.

V. of Bau'hin. The ileo-cæcal valve.

V. of Fallo'pius. Same as *Valve of Bauhin*.

V. of Has'ner. A fold of mucous membrane which makes an imperfect valve at the lower end of the nasal duct.

V. of Heister. See *Valve of Amus-sat*.

V. of Hous'ton. Three folds of mucous membrane found in the rectum.

V. of Kerk'ring. Folds of mucous membrane on the inner surface of the duodenum.

V. of Tari'nus. Same as *Valve of Vieussens*.

V. of the gall-blad'der. *Valve of Bauhin*.

V. of the lymphat'ics. Semilunar folds of the inner coat opposite each other.

V. of Thebe'sius. The fold of the endocardium which protects the opening of the coronary sinus.

V.s of the veins. Folds of the lining membrane of the veins, most numerous in those of the lower extremities. They take off the backward pressure of the column of blood.

V. of Tul'pius. Ileo-cæcal valve.

V. of Varo'lius. Ileo-cæcal valve.

V. of Vieus'sens. The thin covering of nervous tissue forming the anterior part of the roof of the fourth ventricle.

V., pul'monary. The three semilunar valves at the junction of the pulmonary artery with the right ventricle.

V., pulmon'ic. See *Valve, pulmonary*.

V., pylor'ic. The thick fold of mucous membrane which covers the sphincter of the pyloric opening of the stomach.

V., semilu'nar aor'tic. One of the segments of the aortic valves.

V., semilu'nar pul'monary. One of the segments of the pulmonary valve.

V., sig'moid. Semilunar valves of the heart.

V., spi'ral. A spiral ridge of mucous membrane seen in the intestine of some fishes.

V. test. Auscultation of the heart while

the patient is lying with the arms raised perpendicularly, and the legs lifted obliquely.

Valved. Having a valve or valves.

Valveless. Having no valve.

Valviferous. (L. *valva*, the leaf of a door; *ferre*, to bear.) Bearing a valve.

Valviform. (L. *valva*, the leaf of a door; *forma*, shape.) Forming or acting as a valve.

Valvula. A valvule. Specifically, a transparent lamina between the gemina and the lingula, constituting the caudal portion of the mesocelian roof.

V. cæ'ci. Ileo-cæcal valve.

V. cerebel'li. See *Valvula*.

V. co'li. Ileo-cæcal valve.

V. Eusta'chii. Eustachian valve.

V. fora'minis ova'lis. Fossa ovalis.

V. fos'sæ navicula'ris. A transverse fold of mucous membrane at the proximal end of the fossa navicularis.

V. Guiffartia'na. Valve of Thebesius.

V. hymena'lis ure'thræ vir'ilis. *Valvule fossæ navicularis*.

V. il'e'i. Ileo-cæcal valve.

V. lachryma'lis infe'rior. A fold of mucous membrane in the nasal portion of the lachrymal duct.

V. lachryma'lis supe'rior. A fold of mucous membrane in the lachrymal sac below the opening of the lachrymal canals.

V. mag'na cerebri. Same as *V. Vieusse'nii*.

V. pylor'ica. A more or less prominent tubercle in the lowest part of the neck of the bladder.

V. semiluna'ris. A fold of the conjunctiva between the caruncula lachrymalis and the eyeball. In birds it is large, and known as the membrana nictitans.

V. semiluna'ris arteria'rum. The semilunar valve of the aorta and pulmonary artery.

V. semiluna'ris cerebel'li. The *Velum medullare posterius*.

V. si'nus sinis'tri. The interauricular valve.

V. Tar'i'ni. *Velum medullare posterius*.

V. vagi'næ. Hymen.

V. ve'næ mag'næ. The valve of Thebesius.

V. ves'ico-uretera'lis. See *V. pylorica*.

V. Vieusse'nii. A thin lamina of brain substance extending from the lower end of the aqueductus Sylvii over the upper part of the fourth ventricle.

V. Willisia'na. Valvule of Vieussens.

Val'vulæ arterio'sæ. Semilunar valves.

V. a'trio-ventricula'res. The auriculo-ventricular valves.

V. bicuspid'a'les. The mitral valves.

V. conniven'tes. Transverse folds in the mucous membrane of the intestinal tract which extend more or less completely round the lumen. They are found throughout the small intestine.

V. cor'dis. Valves of the heart.

V. cor'dis mitra'les. Mitral valves.

V. cuspid'a'les. The auriculo-ventricular valves.

V. proces'sus vermiformis. Folds of mucous membrane sometimes seen at the opening of the vermiform appendix.

V. semiluna'res. Sigmoid valves.

V. spira'les Heis'teri. Heister's valve.

V. trigloch'ines. Tricuspid valves.

V. trisul'cæ. Tricuspid valves.

V. vena'rum. Valves of the veins.

V. veno'sæ. Auriculo-ventricular valves.

Val'vular. Appertaining to a valve.

Val'vule. A little valve. The valve of Vieussens or one of the valvulæ conniventes.

Valvuli'tis. Inflammation of the tissues forming a valve, especially one of the valves of the heart.

Val'ylene. C_5H_8 . A hydrocarbon with an alliaceous odour. It boils at $50^\circ C.$, and is a homologue of vinyl acetylene.

Vampire bat. One of several species of bat.

1. Frugivorous bats of large size found in Australia and the warmer parts of the world, and called "flying foxes." All the species belong to the Family Pteropodidæ.

2. One of the insectivorous division of the Order Chiroptera, containing the Sub-orders Megachiroptera and Microchiroptera, the latter containing the Family Phyllostomidæ, some few of whom (*Phyllostoma hastatum*, Desmodus) are blood-suckers.

The nose of the bats of this family has leaf-like appendages; the premaxillæ are very well developed, and the canines are of large size, pointed, and lancet-shaped. The tongue has a number of papillæ so placed as to form an organ of suction.

Vam'pirism. The belief that one's blood is being sucked by some one else at night. The practice of sucking the blood of living persons; a common belief among lunatics.

Vam'pyri. A group of phyllostomine bats wholly confined to the New World, and, with the exception of one species found in California, to South America, Mexico, and the West Indies. They are insect and fruit eaters for the most part.

Vam'pyrus. A Genus of phyllostomine bats of the group *Vam'pyri*.

Van Bemmelen, papilliform bodies of. In *Biol.*, Moseley's term for the peculiar organs of touch characteristic of the Chitonidæ.

Van Best's operation. An operation for the radical cure of inguinal hernia by subcutaneously suturing the pillars of the external ring.

Van Deen's test. For blood in the urine. Add 2 c.c. of tincture of guaiacum and 2 c.c. ozonised turpentine; a blue colour occurs when blood is present. Urine containing pus, potassium iodide or saliva, gives a similar reaction.

Van der Kolk's law. The sensory fibres of a mixed nerve are distributed to parts that are moved by muscles supplied with motor fibres from the same mixed nerve.

Van Harlingen's formula. Precipitated sulphur 3j, powdered camphor grs. ij, powdered gum tragacanth grs. x, rose wa'er and lime water aa 3j.

Van Swie'ten's solution. Used in syphilis. Consists of corrosive sublimate grs. ij, alcohol 3iij, distilled water to make up to 3iv. One drachm contains 1-16th of a grain of corrosive sublimate.

Vanadate. A salt of *Vanadic acid*.

Vana'diate. Same as *Vanadate*.

Vanadic. Appertaining to, or containing,

VANADIFEROUS—VAPOUR

vanadium. A combination of vanadium at its highest valency.

V. acid. H_3VO_4 . An acid of vanadium, not yet obtained in a free state, but forming well-defined salts.

Vanadiferous. (L. *vanadium*; *ferre*, to bear.) Containing vanadium.

Vanadious. A compound of vanadium, combined at a lower valency than in vanadic compounds.

Vanadite. A salt of vanadous acid.

Vanadium. Chem. symbol V; at. wt. 51.2, sp. gr. 5.5. Prepared by reducing its chloride in hydrogen. It is a light grey powder of silvery lustre. Found chiefly in vanadinite, a mixture of vanadate of lead with chloride of lead.

V. bronze. A yellow pigment used in place of gold bronze. It is an acid derivative of vanadium.

Vanadous. Appertaining to vanadium. Specifically it denotes compounds of vanadium at a lower valence than it has in those denoted by vanadic.

Vancouve'ria. A Genus of polypetalous plants of the Order Berberidaceæ and the Tribe Berbereæ. Found on the Pacific coast of America.

Van'deæ. A Tribe of orchids.

Vandellia. A Genus of gamopetalous plants of the Sub-tribe Vandellieæ, Tribe Gratiolæ, and Order Scrophularinæ. Found in the warm parts of the Old World, only two species being found in tropical America, *V. crustacea* and *V. diffusa*. Used as an emetic and anti-periodic. Believed to be efficacious in dysentery due to disorder of the liver.

Van'dyke brown. A species of lignite. Reddish brown.

Vanelloe. Vanilla.

Vanellus. (Mod. L., *vanellus*, dim. of *vannus*, a fan.) A Genus of plover-like Birds of the Family Charadriidæ. Characterised by long slender legs, toes webbed at the bases, and a fourth toe, small and raised off the ground. The true lapwings.

Vanessa. A Genus of Butterflies, which gives its name to the Sub-family of *Nymphalidæ*. Named from the Family *Vanessa*.

Vanes'soid. Appertaining to, or resembling, a butterfly of the Genus *Vanessa*. A butterfly of the Group *Vanessinæ*.

Vang'a. A Genus of Laniidæ, shrike-like birds, "butcher birds." The upper mandible is hooked at the tip, and has a marginal tooth near its tip. A shrike of the Genus *Vanga*.

Vanil'la. (F. *vanille*, Sp. *vainilla*, the pod or bean of the vanilla plant.)

1. A plant of the Genus *Vanilla*, with especial reference to those yielding commercial vanilla.

2. The vanilla bean.

3. A Genus of the Orchidaceæ, Tribe Neottieæ, Sub-tribe Vanilleæ. About twenty species are known, scattered throughout the Tropics. Mostly found in Mexico. It is a climbing plant, and begins to bear when three years old. The fruit is a fleshy pod, called from its shape vanilla bean, which contains the active principle vanillin, $\text{C}_6\text{H}_5\text{OCH}_3(\text{OH}).\text{CHO}$. The extract is an aromatic stimulant, and is used also as a flavouring agent. The flowers are large, white, red, or green in colour.

V. planifolia, *V. aromatica*, and *V. grandis*

flora, are the plants most often grown for commercial purposes.

Principally used to make perfume, but said to have aphrodisiac properties.

V. bean. The fruit of the vanilla plant.

V. plant. See *Vanilla*.

Vanillic. Appertaining to vanilla.

V. acid. A monobasic acid, obtained by the oxidation of vanillin (methyl-protachenic aldehyde).

Vanillin. The odoriferous principle of vanilla. $\text{C}_8\text{H}_8\text{O}_3$. Soluble in hot water and alcohol. It crystallises in the form of needles. Melts at 80° to 81° C.

Vanillism. An itching papular dermatitis seen in workers in vanilla, and accompanied by irritation of the nasal mucous membrane, pruritus, headache, vertigo, pains in the muscles, and prostration.

Vanilloes. An inferior kind of vanilla, obtained from *Vanilla pompona*.

Van'ner-hawk. The kestrel.

Va'o. A South American arrow poison.

Va'po-cres'olin. (L. *vapor*, vapour; *cresolin*.) A remedy used in the treatment of laryngeal diphtheria.

Vaporability. To be vaporable.

Vaporable. Capable of being turned into vapour.

Vapora'rium. (L. *vaporarium*, a steam pipe to a hot bath.) A Russian bath.

Vaporate. (L. *vaporare*, *vaporatus*, to evaporate.) To evaporate.

Vapora'tion. (L. *vaporatio*.) The process of causing or undergoing evaporation.

Vapores uteri'ni. Synonym of *Hysteria*.

Vaporiferous. (L. *vapor*, vapour; *ferre*, to bear.) Conveying or producing vapour.

Vaporific. (L. *vapor*, vapour; *facere*, to make.) Capable of converting, or being converted, into steam.

Vaporiform. (L. *vapor*, vapour; *forma*, form.) Existing in the form of vapour.

Vaporimeter. (L. *vapor*, vapour; Gr. μέτρον, measure.) An instrument for measuring the pressure of a vapour by the height of the column of mercury which the vapour will support.

Vaporisable. Capable of being converted into vapour.

Vaporisation. The process of vapouring or being vaporised. Treatment with vapour.

Vap'orise. To convert to vapour by applying heat. To pass off as vapour.

Vapori'ser. An agent which converts into vapour.

Vaporish. Hysterical; splenetic.

Vaporous. Vapourous.

Vaporous. Having the form of vapour. Flatulent.

Vaporousness. The state of being vapourous.

Vapour. (L. *vapor*, F. *vapeur*, a warm exhalation; probably derived from Gr. καπνός, smoke.) A moist exhalation.

Also, in Medicine, a class of remedies which are to be applied by inhalation. Also, wind, flatulence.

Also, the gaseous form of a substance which at ordinary pressure and temperature exists in a solid form.

Also (*v. a.*) (*L. vaporare*, to reek, to warm), to cause to pass into a state of vapour.

V.-bath. The application of steam, medicated or otherwise, or of some other vapour, to the surface of the body by means of suitable apparatus for therapeutical purposes.

V. douche. A jet of vapour impinging upon the surface of the body, or some part of it, and used therapeutically.

V. inhaler. An instrument for administering vapour to be inhaled.

V. pan. A pan for evaporating water.

V. tension. The pressure of vapour, especially of the aqueous vapour in the atmosphere.

Vapourer moth. *Orgyia antiqua*. A common brown moth.

Vapourishness. The condition of being splenetic.

Vapourole. A thin glass capsule containing a definite amount of a volatile drug enclosed in cotton wool and a silk bag. The glass is crushed by the fingers, and the vapour which comes off is inhaled.

Vapours. *Hypochondriasis*; *Hysteria*.

Vapoury. Vaporous.

Vara. A Genus of parrots.

V. parrot. A parrot of the Genus *Coracopsis*.

Varan. A monitor lizard.

Varanian. Appertaining to the *Varanidae*.

Varan'idæ. Large lizards of the Suborder *Tesselenigia*. Found in Asia, Africa, and Australia. Some are terrestrial, while others are aquatic.

Varanoid. (*Varan*; Gr. *είδος*, like.) Resembling a varan. A varan.

Varanus. The typical Genus of *Varanidae*.

Varec. Kelp.

Vareni. Swellings which appear and disappear at intervals and affect different parts.

Vari. The macaco. A lemur. Native of Madagascar.

Variability. The condition of being variable.

Biol. The ability of the organism to modify or lose any or all of its characteristics to suit its surroundings, and to acquire new ones.

Also, the act of varying.

V., gen'orative. Inherited tendency to vary away from the parental type.

Variable. (*Low L. variabilis*, changeable; *L. variare*, to change.) Changeable in a physical sense.

Bot. and Zool. Including individuals and groups which diverge somewhat from the strict type.

V. species. One whose variations are above the average in number, degree, or rate.

Variableness. The state of being variable. Susceptibility to change.

Variably. Changeably.

Variation. (*L. variare*, *variatus*, to vary; *Mid. Eng. variacioun*.) The act or process of varying. The extent to which a thing varies.

Biol. "The accomplishment of that which variability permits, environment requires, and selection directs. It covers the whole range of deviation from a given type, stock, or parent

form. . . . The usual course of variation on a grand scale is believed to be by the natural selection of useful characters to be preserved and increased, with such decrease or extinction of their opposites as tends to their further improvement." (*Darwin*.)

V., analogous. *Biol.* A variation occurring in a species or variety which resembles a normal character in another and distinct species or variety.

V., cor'related. *Biol.* A variation in any part of one organism which is correlated with and consequent upon the variation of another part of the same organism. The idea is that the whole organisation of any individual is so bound together during its growth and development that when slight variations in any one part occur, and are accumulated through natural selection, other parts become modified. (*Darwin*, 'Origin of Species'.)

V., double. The double current produced in a muscle by the passage of a single induction shock.

V., neg'ative. The diminution of the muscle current caused by stimulation of the motor nerve.

V., par'allel. See *Analogous variation*.

Variational. Appertaining to variation, especially in its biological sense.

Varicated. (*L. varix*.) Having varices.

Varication. (*L. varix*, *varix*.) The formation of a varix; a system of varices.

Varicella. (*L. varicella*, dim. of *variola*; *F. varicelle*.) A specific eruptive disease characterised by vesicles of moderate though varying size, filled with clear, slightly yellowish fluid. Chicken-pox. Incubation period eight to fourteen days. The typical vesicle has not a depressed centre.

V. confor'mis. Varicella in which the vesicles are conic.

V., conoi'dal. Same as *V. conformis*.

V. gangreno'sa. A rare form in which the eruption goes on to ulceration of a gangrenous type.

V. globa'ta. Swine-pox. Varicella in which the vesicles are hemispheric.

V. pruri'go. Hutchinson's term for the occurrence of fresh crops of papules and pustules lasting for weeks, and accompanied by itching, but little, if any, ulceration.

V., pus'tular. See *Varioloid*.

V. syphilit'ica. A syphilitic eruption having the appearance of varicella.

Varicellar. Appertaining to *Varicella*.

V. fe'ver. The fever noticed at the beginning of an attack of varicella.

Varicellate. (*Varicella*.) Having small varices.

Varicelloid. Resembling varicella.

Varices. Pl. of *Varix*.

V. gelatino'sæ. Gelatinous accumulations in the umbilical cord.

Variciform. (*L. varix*, a dilated vein; *forma*, shape.) Having the appearance of a varix.

Variciformes parasta'tæ. (*L. varix*; *forma*, form.) A term applied to the ducts of the epididymis, because they feel knotty and varicose.

Varicobleph'aron. (*L. varix*, a dilated vein; Gr. *βλέφαρον*, an eyelid.) A varicose swelling of the eyelid.

Varicocele. (*L. varix*, a dilated vein,

VARICOCELECTOMY—VARIOLA

Gr. *κήλη*, a tumour.) A swelling caused by the dilatation of the veins of the spermatic cord.

V., ova'rian. Varicosity of the veins of the broad ligament.

Varicocele'tomy. (L. *varix*, varix; Gr. *κήλη*, tumour; *ἐκτομή*, excision.) Excision of a varicocele.

Var'icoid. (L. *varix*, a dilated vein; Gr. *εἶδος*, like.) See *Variciform*.

Varicom'phalus. (*Varix*, varix; Gr. *ὀμφαλός*, navel.) A varicosity at the navel.

Var'icorn. (L. *varius*, various; *cornu*, horn.) Possessing antennæ of different shapes. A varicorn beetle.

Varicose'. (L. *varicosus*, full of dilated veins.) Appertaining to varix; suffering from varicosity. Intended for the relief or cure of varix.

Zool. Resembling or having varices.

V. an'eurism. An aneurismal sac having communication with both an artery and a vein.

V. angio'ma. A dilatation of venous radicles.

V. fibres. Medullated axis-cylinders forming the white matter of the brain and spinal cord. After death they have swellings on them caused by the accumulation of fluid between the myelin and the axis-cylinder.

V. lymphat'ics. Irregularly dilated lymphatics.

V. ul'cer. An ulcer of the leg following on dilatation of the veins.

V. veins. Irregular dilatation of veins, usually those of the lower extremity.

Varicosed. Affected by varix; generally refers to veins.

Varico'sis. (L. *varix*.) An abnormal dilatation of the veins.

Varicositas. See *Varix*.

V. conjunctiv'æ. *Cirsomphalus*.

Varicosity. A varix.

Varicotomy. (L. *varix*, varix; Gr. *ἐκτομή*, excision.) See *Cirsotomy*.

Varicous. See *Varicose*.

Varicula. (L. *varicula*, dim. of *varix*, a dilated vein.) A varix of the conjunctiva.

Variega'tæ. Night moths of the Order *Lepidoptera*, Division *Quadrifidæ*. The body is of moderate size, with proboscis and palpi well developed. Colour metallic. Lustrous.

Variegater. One who, or that which, variegates.

Variega'tion. *Bot.* The occurrence of two or more colours in a part of a plant. A condition of a plant in which the leaves of some one part become of a very light colour, or even white, from modification of the chlorophyll. The cause is unknown; the peculiarity can be propagated by grafts.

Vari'etal. *Biol.* The condition of being a zoological or botanical variety.

Referring to differences which are related to the geographical distribution of animals. Sub-specific.

Vari'etally. *Biol.* In a varietal manner. Subspecifically.

Vari'ety. In *Biol.*, a subdivision of a species, one member of several, which differs from the other members of the same species in characters which are transmissible and constant without being absolute distinctions, in that they gradually merge into the characters of the other members of the same species. Especially

used with reference to those changes of characters due to geographical distribution. A term which includes all the modifications which may be artificially produced.

V., climat'ic. A natural variety produced or specially affected by climatic influences.

V., geograph'ical. A variety distributed over a given area, and dependent on the continuance of the conditions which gave rise to it.

Va'riform. (L. *varius*, various; *forma*, shape.) Having different shapes.

Va'riformed. See *Variform*.

Va'rify. (L. *varius*, various; *facere*, to make.) To variegate.

Var'iola. (Mod. L. *variola*, smallpox.) Smallpox. A specific contagious disease, characterised by an eruption which goes through the stages of being papular, vesicular, and pustular. The vesicles have a central depression. It is accompanied by great headache and pain in the loins, fever, and constitutional disturbance. The incubation period is about thirteen days. The pustules dry up at the end of about a fortnight.

V. amboinen'sis. *Frambæsia*.

V. con'fluens. A severe form in which the pustules spread and run together.

V., congen'ital. Variola in the newly born, due to infection while in *utero*.

V. cor'nea. Horn-pox. A variety in which papular growths take the form of pustules.

V. corymbo'sa. The pustules are in patches, which are separated by areas of unaffected skin.

V. cur'ta. *Varicelloid*.

V., discrete'. A form in which the pustules remain distinct.

V. dysenter'ica. Variola attended with diarrhoea.

V., emphysem'atous. A form in which the pustules contain gas.

V. equi'na. *Horse-pox*.

V. hæmorrhag'ica. A form in which hæmorrhage takes place into the vesicles.

V. inser'ta. Variola from inoculation.

V. lymphat'ica. *Varicella*.

V. malig'na. An exceedingly fatal form of variola of the hæmorrhagic type.

V., mitigated. *Varioloid*.

V. modifica'ta. *Varioloid*.

V. no'tha. *Varicella*.

V. ovi'næ. *Sheep-pox*.

V. semicon'fluens. The pustules meet but do not coalesce.

V. sine vari'olis. Fever sometimes seen during the prevalence of variola, accompanied by constitutional phenomena without cutaneous eruption.

V. spu'ria. *Varicella*.

V., tuber'cular. A variety of variola in which the pustules assume a tubercular form.

V. vacci'na. *Vaccina*.

V. vacci'na atroph'ica. *Stone-pox*; an abortive form of variola, in which the vesicle dries before reaching the pustular stage.

V. vacci'na bullo'sa. A form of vaccina in which large single bullæ take the place of the ordinary vesicle.

V. vaccinato'rum. *Varioloid*.

V. vaccin'ia erysipelato'sa. The association of erysipelas and vaccinia at the point of inoculation.

V. vaccin'ia ulcero'sa. Vaccinia accompanied by ulceration.

V. ve'ra. True smallpox.

V. verruco'sa. Wart-pox; a mild abortive form of variola.

Variolad. (L. *variola*, variola.) An infectious germ of the smallpox virus.

Variolæ. Pl. of *Variola*.

V. equinæ. A specific inflammation affecting the skin of the heels of a horse.

V. illegitimæ. *Varicella*.

V. modifica'tæ. *Varioloid*.

V. no'thæ. *Varicella*.

V. pucellæ. *Varicella*.

V. sylves'tris. *Varicella*.

V. tuto'riæ. *Vaccina*.

V. ve'ræ. *Variola*.

V. volaticæ. *Varicella*.

Variolar. See *Variolous*.

Variolate. To inoculate with smallpox. Resembling a scar of smallpox.

In *Bot.*, thickly strewn with pits.

Variolated. Inoculated with the virus of smallpox.

Variola'tion. Inoculation with the virus of smallpox. Bovine variolation. Inoculation of a cow with the virus of smallpox in order to obtain vaccine virus from the resulting eruption.

Va'riole. In *Zool.*, marked by pits, like the pitting of smallpox.

Variolic. *Variolous*.

Varioliform. (L. *variola*, variola; forma, form.) Resembling variola.

Variolin. The specific virus of smallpox.

Variolisa'tion. Same as *Variolation*.

Varioloid. (Mod. L. *variola*, smallpox; Gr. *áidos*, form.) Having more or less the appearance of variola. Modified smallpox, which may abort at the vesicular stage. It occurs in people who have been vaccinated, and in whom the protection is not complete, e.g. when the preventive vaccination has not been repeated. It is chiefly important from the fact that the patient may be a source of infection to others.

Variolous. (Mod. L. *variolosus*, pitted with smallpox.) Appertaining to, or referring to, smallpox. In *Entom.*, having somewhat scattered varioles.

Variolo-vaccina'tion. Inoculation of variola by lymph containing the specific virus.

Variolo-vaccine. Lymph obtained from a heifer suffering from variolo-vaccinia.

Variolo-vaccin'ia. Vaccinia resulting from the inoculation of smallpox virus in a heifer.

Va'rix. (L. *varix*, a dilated vein.) An enlarged and tortuous vessel. A mark on the surface of a shell showing a previous position of the aperture.

V., aneuris'mal. An aneurism communicating with an artery and a vein through the medium of sac connecting them.

V., arte'rial. *V., aneurismal*.

V. lymphat'icus, or **Lymph scro'tum.** An anasarous condition of the scrotum caused by the presence of *Filaria sanguinis hominis* in the blood-stream.

Varnish. (Mod. E. *vernysch*, varnish.) A quickly drying solution of some resin. Used at times to keep the air away from a wound.

Varo'lian bend. The bend between

the hind and after bends in the embryonic mammalian brain.

Varo'li pons. See *Pons Varolii*.

Varo'li's bridge. See *Pons Varolii*.

Varo'lius, bridge of. See *Pons Varolii*.

Var'rentrapp and Will, meth'od of. A method for the determination of nitrogen in organic compounds. The substance to be analysed is powdered, dried, and weighed, mixed with soda-lime, placed in a combustion-tube, and heated. Connected with the tube is a bulb of hydrochloric acid. The nitrogen is converted into ammonia, which is absorbed by the hydrochloric acid. Platinic chloride is added to the hydrochloric acid, and ammonium-platinum chloride separates out. The total nitrogen in the precipitate is estimated.

Varus. (L. *varus*, bent, stretched.) Inversion of the foot. Genu varum is a medical term for bowlegged.

Varus. (L. *varus*, a pimple.) *Acne*.

V., arte'rial. A *Cirsoid aneurism*.

V. com'edo. A pimple which results from the retained secretion of a sebaceous gland in its duct, giving rise to surrounding inflammation.

V. gut'ta ro'sea. *Rosacea*.

V. menta'gra. *Sycosis*.

V. puncta'tus. *Acne punctata*.

V. seba'ceus. *Seborrhæa*.

V. ta'lipes. That form of talipes in which the foot is rotated inward.

Vas. (L. *vas*, a vessel.) In *Anat.* and *Zool.*, a vessel carrying any fluid of the body.

V. chyli'fera. *Rudicle of the thoracic duct*.

V. def'erens. The excretory duct of the testis, or its equivalent. It begins in the globus minor of the epididymis in man, and passes with the other structures forming the spermatic cord to the external inguinal ring along the inguinal canal to the internal inguinal ring, to pass thence to the base of the bladder, where it becomes sacculated, joins the duct of the vesicula seminalis of its own side to form the ejaculatory duct, which opens into the prostatic portion of the urethra.

V. def'erens mulle'ris. The *Fallopian tube*.

V. spira'lē. A small vessel on the under surface of the basilar membrane, and opposite the outer rods of the organ of Corti.

Vasa aberran'tia. Long slender arteries which pass from the axillary artery to one of the arteries of the forearm, usually the radial. A tube extending from the lower part of the epididymis into the cord without communicating with it.

V. afferen'tia. The vessels running to a lymphatic gland, as opposed to those running from it.

V. bre'via. The gastric branches of the splenic artery, about six in number, which pass to supply the fundus of the stomach. Branches passing to the splenic vein, which correspond with the divisions of the splenic artery.

V. capriola'ria. Spermatic vessels.

V. centra'lia ret'inæ. The artery and vein found in the middle of the optic nerve.

V. chylopoë'tica urinif'era. Blood-vessels which convey fluids from the chyloferous vessels to the renal veins.

V. efferen'tia. The efferent tubules of the testis, which collect the seminal fluid from

VASAL—VASO-CONSTRICTOR

the vessels of the rete testis and carry it to the epididymis, whose globus major is composed of these tubules much convoluted—*Coni vasculosi*.

V. Graafianæ. The ducts at the upper end of the rete testis, which go to form the *Coni vasculosi*.

V. hydragoga. Lymphatic vessels.

V. intestini tenuis. Slender branches of the superior mesenteric artery distributed to the ileum and jejunum.

V. lactea. See *Vasa chyliifera*.

V. lymphatica. Lymphatic vessels.

V. nutrien'tia. *Vasa vasorum*.

V. nutri'tia. *Vasa vasorum*.

V. recta. The straight tubules of the testis, formed by the union of the seminiferous tubules and opening into the ducts of the rete testis.

V. resorben'tia. Absorbent vessels.

V. seda'lia. Rectal vessels.

V. serosa. The extreme radicles of the arteries and veins.

V. serpenti'na tes'tis. Seminiferous tubules.

V. vaso'rum. Small vessels supplying the coats of larger vessels.

V. vorticosæ. The veins of the choroid coat of the eye, which converge from all directions to form four or five chief trunks.

Vasal. Appertaining to a vessel.

Vasali'um. Tissues proper to closed cavities or vesicular spaces. Endothelium; the layer of cells lining such surfaces as the serous aspect of the thorax, abdomen, pericardium, arteries, veins, and other vessels.

Vasco'a. A Genus of leguminous plants.

V. amplexicaulis. South Africa. Used as a substitute for liquorice.

V. perfolia'ta. South Africa. Diuretic.

Vascula. Pl. of *Vasculum*.

Vascular. (L. *vasculum*, a small vessel.) Appertaining to the arrangements in the body by which the flow of fluids, such as blood, lymph, and chyle, are carried on.

Also, appertaining to the flow itself. Well provided with vessels necessary to the carrying on of the circulation.

Bot. Used of those structures in plants which are supplied with the means of carrying on the circulation of sap.

V. arch'es. See *Visceral arches*.

V. centres. The centres in the medulla and spinal cord which govern the contractility of the blood-vessels.

V. cryptogams. Those in which the tissues are to a greater or less extent true vascular tissue.

V. fasciculus. The sheaf of vessels running from the limbus to a corneal ulcer.

V. fibres. Vaso-motor fibres.

V. fun'nel. A depression in the centre of the optic disc, out of which rise the central vessels of the optic nerve. When more extensive it is called the physiological excavation.

V. gan'gion. A small swelling on a blood-vessel, or connected with a blood-vessel by a minute vascular cord, which either does consist or has consisted of a very much coiled small artery.

V. lamel'læ. Cathammal plate. One of the vascular lamellæ of certain *Medusæ*.

V. lay'er. Germinal layer.

V. papil'læ. Papillæ of the skin which do not contain tactile corpuscles.

V. plants. Those whose structure includes vessels.

V. rad'icles. Vessels which join together to form a larger vessel.

V. stimulant. One which quickens the flow of blood.

V. substance of the kidney. The cortical substance which secretes the urine.

V. sys'tem. See *Vascular*.

V. sys'tem, interme'diate. The capillary system.

V. sys'tem, periph'eral. The capillary system.

V. tis'sue. One provided with vessels large enough to carry blood or lymph.

V. tu'mour. An aneurism; one composed of dilated terminal blood-vessels. One containing an unusually large number of blood-vessels.

V. tu'mour of the ure'thra. A small, spongy, extremely sensitive vegetation at the opening of the female urethra.

Vascula'res. (L. *vascularis*, vascular.) A name given by De Candolle to the higher Cryptogams, the *Phanerogamia*, including the ferns and their allies, because they contain vascular tissue.

Vascularisa'tion. The act of becoming vascular, or of developing new blood-vessels.

Vas'cularise. To make vascular.

Vascular'ity. The condition of being vascular.

Vas'cularly. By means of vessels.

Vas'culiform. (L. *vasculum*, a small vessel; *forma*, shape.) **Bot.** Shaped like a small vessel.

Vas'culo-mo'tor. (L. *vasculum*, a small vessel; *motor*, mover.) See *Vaso-motor*.

Vasculose'. (L. *vasculosus*, full of vessels.) See *Vascular*.

Chem. The substance which chiefly makes up the vessels of plants.

Vas'culum. (L.) A small vessel. In **Bot.** Same as *Ascidium*.

V. aber'rans. Aberrant duct of the epididymis, which is connected with the duct of the epididymis immediately before the commencement of the vas deferens.

V. sanguiniferum. A blood-vessel.

V. serpenti'num. Seminiferous tubules.

Vas'eline. (G. *wasser*, water; Gr. *ἐλαιον*, oil.) Paraffin. Three degrees of consistency are known: hard, melting between 43° and 63° C.; soft, 40° to 45° C.; liquid, 30° to 40° C. They are emollient, and used as excipients.

Vas'icine. An alkaloid derived from the leaves of the *Adhatoda vasica*.

Vas'idæ. A family of Gastropods named from the Genus *Vasum*.

Vasifactive. (L. *vas*, a vessel; *facere*, to make.) Conducive to the development of new vessels.

Vas'iform. (L. *vas*, a vessel; *forma*, shape.) Shaped like a vessel. Tubular.

V. el'ements. Elements which go to make up the vascular tissues of plants.

V. tis'sue. Tissue made up in part or wholly of vessels or ducts.

Vas'inæ. A Sub-family of Gastropods.

Vaso-constrictive. (L. *vas*, a vessel; *constringere*, to constrict.) See *Vaso-constrictor*.

Vaso-constrictor. (L. *vas*, a vessel; *constringere*, to constrict.) An agent which

brings about constriction of blood-vessels; specifically, a nerve which does so when stimulated, or a drug which acts in this way when administered.

Va'so-coro'na. (L. *vas*, a vessel; *corona*, a crown.) The system of arterioles which supply the periphery of the spinal cord.

Va'so-den'tinal. (L. *vas*, a vessel; *dens*, a tooth.) Appertaining to *Vaso-dentine*.

Va'so-den'tine. (L. *vas*, a vessel; *dens*, a tooth.) Dentine containing capillaries large enough to allow of the passage of red blood-corpuscles.

Va'so-dila'tor. (L. *vas*, a vessel; *dilatator*, a dilator.) An agent which brings about the dilation of blood-vessels; specifically applied to nerves which act thus when stimulated, and drugs which do so when administered.

V. cen'tre. A centre in the medulla oblongata believed to control the dilating mechanism of the blood-vessels.

V. nerves. Nerves which produce relaxation of the coats of the blood-vessels when they are stimulated.

Va'so-for'mative. (L. *vas*, a vessel; *formare*, to form.) Forming or producing vessels.

V. cells. Those producing vascular tissue.

Va'so-gan'glio'n. (L. *vas*, a vessel; Gr. γάγγλιον, a ganglion.) A network of vessels.

Vas'o'gen. (*Vaseline*; Gr. γεννᾶν, to produce.) Oxygenated vaseline.

Va'so-hyperton'ic. *Vaso-motor*; *Vaso-constrictor*.

Va'so-hypoton'ic. *Vaso-dilator*.

Va'so-inhib'itory. (L. *vas*, a vessel; *inhibere*, to inhibit.) Specifically applied to nerve action which brings about dilation of blood-vessels.

Va'so-mo'tion. (L. *vas*, a vessel; *motio*, motion.) Variation in the calibre of a vessel.

Va'so-mo'tor. (L. *vas*, a vessel; *motor*, motor.) Governing the movements of the walls of the blood-vessels. Applied to the nerves and drugs which act on the unstriated muscle of the coats of the vessels.

V. atax'ia. A condition of instability of the circulatory mechanism characterised by readiness of disturbance of the equilibrium of the cardio-vascular apparatus with tardy restoration. The symptoms are those of paresis or spasm. Dermographism and factitious urticaria, with a tendency to hæmorrhage, are usually to be seen. The action of the heart is usually rapid, irregular, and easily disturbed; palpitation is common. Hæmic and functional murmurs may be observed.

V. nerves. Include vaso-constrictors which cause diminution of the calibre of the vessels, and vaso-dilators which cause its increase. The vaso-constrictor fibres pass through the sympathetic nerves from centres in the dorsal spinal cord, while the vaso-dilators rise in other parts of the cord and in the medulla. A vaso-motor centre exists in the medulla, and controls the vaso-motor mechanism.

Va'so-moto'rial. Appertaining to the vaso-motor function.

Va'so-moto'ric. See *Vaso-motorial*.

Va'so-motric'ity. (L. *vas*, a vessel; *motor*, motor.) The quality of having a vaso-motor action.

Va'so-peritone'al. (L. *vas* vessel;

Gr. περιτόνειον, peritoneum.) *Biol.* Appertaining to the closed sac which results from the cutting off from the archenteron of a cæcal diverticulum to which the anterior part of that cavity gives rise. This cæcal diverticulum afterwards opens externally by a pore in a diverticulum derived from itself. Yet later it divides into an ambulacral sac and a peritoneal sac.

Va'so-sen'sory. (L. *vas*, a vessel; *sentire*, to feel.) Supplying sensation to the vessels.

Vas'ti. Plural of *Vastus*.

Vas'tus. Large.

V. exter'nus and **V. inter'nus.** Two fleshy bellies which form part of the quadriceps extensor cruris.

Va'sum. *a.* A vessel. *b.* A Genus of Gastropods.

Vat-blue. See *Indigo-blue*.

Vate'ria. A Genus of polypetalous plants of the Order Diptero-carpeæ. The twenty-eight species are all with one exception natives of tropical Asia.

Va'ter's ampulla. The ampulla of entrance of the common bile-duct and pancreatic duct.

V.'s cor'puscles. See *Pacinian bodies*.

V.'s divertic'u'um. See *Vater's ampulla*.

V.'s fold. A fold of the mucous membrane above the opening of the pancreatic and biliary ducts into the small intestine.

Va'trax. (L.) See *Vatricose*.

Vatricose'. (L. *vaticosus*.) Club-footed.

Vauche'ria. A Genus of Algæ of the Order Siphonææ. Found in fresh water.

Vault'. (Mod. Eng. *vawte*, vault.) The dome of the skull. The hollow of the roof of the mouth.

V. of cra'nium. The upper part of the skull.

Vaulting of the chest. Præcordial prominence of the chest wall in the newly born, or in hypertrophy of the heart, &c.

Vau'queline. A name given by Pelletier and Caventon to strychnine.

Also, the name of a crystalline substance obtained from the bark of the olive tree.

Vau'quelinite. A native chromate of lead and copper.

Veal broth. Veal tea. It is made in the same manner as beef tea.

Vecor'dia. (L. *vecors*, wanting reason.) Insanity; especially dementia or idiocy.

Vec'tis. (L. *vehere*, to carry.) An instrument resembling the single blade of a forceps, and used to deliver the head in labour.

Vec'tor canal'. (L. *vehō*, *vectum*, to carry) Fallopian tube.

Veda'lia. A Genus of Coccinellidæ, Order Coleoptera. Six species are known. A lady-bird.

Vegetability. Of vegetable quality.

Vegetable. (L. *vegetare*, to animate.) Appertaining to a plant.

Also, a plant. Used scientifically to denote any member of the vegetable kingdom.

V. ac'ids. Those which can be obtained from plants.

V., æ'thiops. A kind of charcoal produced by the incineration of *Fuscus vesiculosus* in closed vessels. It contains a small amount of iodine.

V. albu'min. A vegetable albumose found in the seeds of Leguminosæ and in flour.

α. Phytalbumose is soluble in hot and cold water, gives the biuret reaction, and is precipitated by saturation with sodium chloride in an acid solution.

β. Phytalbumose is soluble in cold water, precipitated in a coagulated form by heat, precipitated by saturation with sodium chloride, and gives a faint biuret reaction.

V. al'kali. Potash.

V. anat'omy. The division of botany which includes the relative position, form, and structure of the organs of plants.

V. an'timony. *Eupatorium perfoliatum*.

V. be'zoar. A concretion found occasionally in the cocoa-nut.

V. brim'stone. A powder made from the sporules of *Lycopodium clavatum*. Used as a desiccant and absorbent on raw moist surfaces.

V. butter. *Theobroma ceratum*, *Theobroma oleum*, or cacao butter containing stearin and some olein. It does not become rancid.

V. cal'omel. *Podophyllum peltatum*.

V. ca'sein. Legumin.

V. econ'omy. The systematic arrangements of the parts and organs of plants.

V. egg. *Lucuma mammosa*.

V. fibrin. Gluten-casein.

V. gold. Pipitzahoic acid.

V. gum. $C_6H_{10}O_5$. A tasteless, odourless vegetable mucilage, insoluble in water, soluble in alkalies, found in gum tragacanth, cherry and plum gums.

V. i'vory. The ivory nut.

V. jelly. A gelatinous substance found in plants.

V. mer'cury. The root of *Anchæta salutaris* and *Francisca uniflora*.

V. my'osin. A substance resembling animal myosin found in the seeds of certain plants.

V. naph'tha. Wood naphtha.

V. paraglo'bin. A substance whose properties are those of animal paraglobin, found in papaw juice.

V. physiol'ogy. The branch of botany which deals with the vital functions of plants.

V. pole. A collection of dentoplasm or food-yolk in one part of the ovum, as distinguished from the protoplasm or animal part at the animal pole.

V. pro'teids. Proteid substances found in plants, and closely resembling those found in animals.

V. ser'pent. The snake cucumber.

V. sheep. The sheep plant.

V. sponge. A sponge made of the fibres of the fruit of *Luffa ægyptiaca*.

Also, the fruit of the *Luffa cylindrica*, which, when dry, contains a sponge-like network of fibres.

V. sul'phur. *Lycopodium*. From the sporules of many of the varieties a fine yellow powder is made, which is used as an absorbent on moist surfaces. This powder is inflammable and slightly explosive.

V. wax. A product resembling beeswax found in some plants.

Veg'etablise. To render vegetable in character or appearance.

Veg'etal. (*L. vegetus*, living.) Appertaining to a plant or plants.

Also, appertaining to the vital phenomena found in plants and animals.

Veg'etaline. A material made of wood fibre treated with sulphuric acid, dried, and converted into a fine powder, then mixed with resin soap, and treated with aluminium sulphate to remove the soda of the soap, again dried and pressed into cakes. It can be rendered transparent by being mixed with castor oil or glycerine before being pressed, and can be coloured. It is used as a substitute of ivory, coral, caoutchouc. (E. H. Knight.)

Veg'etality. Of vegetable character. Having vegetal functions.

Veg'etarian. Appertaining to one who abstains from animal food, and who believes vegetable food to be the only kind which should be eaten by man.

Veg'etarianism. (*L. vegetare*, to animate.) The doctrine that vegetable food is the only form which should be used by man. The practice of only consuming vegetable food.

Veg'etation. (*L. vegetare*, to animate.) *Pathol.* An excrescence on the surface of the body.

V., ad'enoid. Morbid growths in the naso-pharynx.

V., dendritic. Villous cancer.

V.s, dig'ital. Prominent growths.

V.s, fibrinous. Wart-like bodies growing on a serous surface.

V.s, urethral. Papillomata of the urethra.

Veg'etative. Having the power of physical growth like a vegetable. Appertaining to those functions or organs of the body which are performed or which act without affecting consciousness, as digestion, circulation.

Also, able to support life in plants.

V. reproduc'tion. Reproduction by means of cells not specially modified for the purpose.

Veg'etatively. In a vegetative manner.

Veg'etativeness. The condition of being vegetative.

Veg'etive. Vegetative.

Veg'eto-alkali. An alkaloid.

Vehicle. (*L. vehiculum*, *vehere*, to carry.) Anything which carries.

Pharm. Any excipient or substance serving as a medium for the administration of drugs.

Veiel's paste. A paste used in the treatment of furuncles. It consists of equal parts of oxide of zinc and vaseline, with 4 per cent. of boric acid. It is to be rubbed into the skin round the boil.

Veil. (*L. velum*, veil.) See *Velum*.

V., acquired. An imperfection of voice from exposure to cold, catarrhal conditions, or over-use.

V., u'terine. A cap fitted over the cervix uteri to prevent the entrance of semen.

Vein. (*L. vena*, a blood-vessel; *Mid. Eng. veine*.) One of the blood-vessels carrying blood from the periphery to the heart, or other centre of the circulation. There are two systems, the systemic and the pulmonary, the latter carrying blood from the lungs to the heart, and opening into the left auricle, while the former open into the right auricle. The walls are, as a rule, thinner than those of an artery, and have three coats, an outer fibrous, a middle muscular, and an inner composed of endothelium on a basal membrane. Small blood-vessels and a few nerves supply the walls of the veins. The

VEIN

portal system of veins collects the blood from the intestine and carries it to the liver, whence it is passed by the hepatic veins into the inferior vena cava, and so to the right auricle.

Entom. One of the ribs which form the framework of the wings of an insect, and carry the thin membrane of the wings. A nervure.

Bot. A fibro-vascular bundle.

V.s, acces'sory por'tal. Smaller veins supplementing the portal vein.

V., acro'mio-thorac'ic. Accompanies the artery of the same name.

V., alve'olar. A vein corresponding to the alveolar branch of the internal maxillary artery, and opening into the internal maxillary vein.

V.s, a'nal. Inferior rectal (hæmorrhoidal) veins.

V., anastomot'ic. A vein which passes from the surface of the parietal lobe of the brain, along the posterior limb of the fissure of Sylvius, backwards to join the superior petrosal sinus.

V., an'gular. A vein corresponding to the angular branch of the facial artery.

V.s, ante'rior car'diac. Two or three small veins which run up over the front of the right ventricle, and open into the right auricle above the auriculo-ventricular groove.

V., ante'rior fa'cial. See *Facial vein*.

V., ante'rior inter'nal max'il'ary. See *Deep facial vein*.

V., ante'rior ul'nar. A small vein on the anterior aspect of the lower part of the forearm which unites with a corresponding vein on the posterior aspect to make the common ulnar vein.

V., ante'rior ver'tebral. Commences in the plexus on the front of the cervical vertebræ, and passes downwards alongside the ascending cervical artery to open into the lower part of the vertebral vein.

V., ascend'ing lum'bar. A trunk formed by anastomotic branches between the lumbar veins. It lies on the transverse processes of the lumbar vertebræ, and is the commencement of the vena azygos major.

V.s, auric'ular. Veins passing from the auricle and its neighbourhood.

V., auric'ular ante'rior. Vein passing forwards and downwards from the auricle.

V., ax'il'ary. A vein which accompanies the axillary artery. It becomes the subclavian at the lower border of the first rib, and the brachial at the lower border of the latissimus dorsi muscle.

V., azygos ma'jor. Begins in the right ascending lumbar vein. It carries blood from the lumbar veins and intercostal spaces of the right side, with the exception of the first. It passes through the diaphragm at the aortic opening, and arches from behind forwards over the root of the lung to open into the end of the superior vena cava.

V., azygos mi'nor. Begins as the left ascending lumbar vein. Traverses the diaphragm through the left crus, and arches to the right across the body of the eighth or ninth dorsal vertebra to open into the vena azygos major. Both the vena azygos major and minor have communication with the vena cava inferior.

V., bas'il'ar. A vein passing over the crus cerebri to open into the veins of Galen.

V., basil'ic. A vein on the inner side of the arm, which joins with the inner brachial to form the axillary.

V.s, basisp'i'nal. The veins of the bodies of the vertebræ; also the veins and venous plexuses in and about the spinal column and cord which draw blood from the vertebral bodies, the cord and its membranes, known as basispinal, dorsispinal, medullispinal, and meningo-rachidian.

V.s, bra'chial. The veins accompanying the brachial artery.

V., bra'chio-cephal'ic. The *Innominate vein*.

V.s, bron'chial. Two veins which are formed by the union of branches from the larger bronchial tubes and other structures of the lung, and open on the right into the vena azygos major, the left into the vena azygos minor.

V., buc'cal. A small vein on the cheek, opening into the facial vein.

V., cap'sular. The *Supra-renal vein*.

V., car'dinal. Veins which run beneath the axial skeleton in the embryo to open with the primitive jugular veins into the ductus Cuvieri. Their representatives in man are the azygos veins.

V., cen'tralis ret'inæ. A vein found with its artery in the optic nerve.

V., cephal'ic. A vein on the outer side of the arm which opens into the axillary vein, and anastomoses across the clavicle with the external jugular vein.

V.s, cerebell'ar. Veins coming from the cerebellum; they empty into the various sinuses.

V.s, cer'ebral. Two sets, superficial and deep. They were said not to anastomose. They ultimately open into the superior longitudinal sinus of the dura mater and the venæ Galeni.

V., cho'roid. A vein found in the inferior cornu of the lateral ventricle.

V.s, cil'ary. Correspond for the most part with the ciliary arteries. They open into the ophthalmic vein.

V.s, col'ic. Those which correspond to the colic arteries. They open into the inferior mesenteric vein.

V., com'mon ul'nar. A short trunk, which sometimes unites the anterior and posterior ulnar veins to the median basilic to form the basilic vein.

V.s, compan'ion. *Venæ comites*.

V., cona'rial. A vein which originates in a fine venous plexus over the conarium. It is one of the prebasal veins that unite to form the subcerebral.

V., cor'onary. 1. Of the heart. One or more small veins on the back wall of the right auricle and ventricle, which pass to the right auriculo-ventricular groove to open into the right end of the coronary sinus.

2. Of the stomach. A good-sized vein which accompanies the coronary artery and opens into the portal vein.

V.s, cos'tal. See *Intercostal veins*.

V., cru'ral. A vein of the thigh, with especial reference to the internal or long saphena vein.

V., cys'tic. A vein returning the blood from the gall-bladder. It opens into the portal vein.

VEIN

V., deep cer'vical or poste'rior ver-tebral. Begins in the suboccipital region, and passes down the neck between the complexus and semispinalis muscles to open at the level of the transverse process of the seventh cervical vertebra into the vertebral vein.

V., deep cir'cumflex il'iac. The vein accompanying the deep circumflex iliac artery.

V., deep fa'cial. Passes from the pterygoid plexus to open into the facial vein below the malar bone.

V.s, den'tal. Veins which accompany the superior and inferior dental arteries, and open into the pterygoid plexus.

V., diaphragmatic. See *V., phrenic.*

V.s, diplo'ic. Are lodged in canals hollowed in the substance of the cranial bones. They pass downwards and forwards, and open into the veins on the outer surface of the bones, and partly in the sinuses of the inner side of the skull bones.

V., dor'sal, of the pe'nis. Is formed by the union of several small branches from the glans, and runs in the dorsal groove of the penis, receiving branches from the corpus spongiosum, the corpora cavernosa, and the skin, to open into the prostatic plexus.

V.s, dorsip'inal. See *Veins, basispinal.*

V.s, du'al. Small veins anastomosing freely between the inner and outer layers of the dura mater, and communicating with the veins of the diploë.

V.s, em'issary. *Mastoid.* Passes by the mastoid foramen and joins the lateral sinus to the outermost occipital vein.

Parietal. Passes by the parietal foramen from the superior longitudinal sinus to the veins of the scalp.

Condylar. Pass by the posterior condylar foramen from the lateral sinus to the plexus of veins surrounding the cervical vertebræ. Often single.

Occipital. Pass by a foramen on the occipital protuberance from the torcular Herophili to one of the occipital veins. Usually single.

V., emul'gent. See *Renal vein.*

V.s, epigas'tric. *Superficial.* Corresponds to the superficial epigastric artery. Opens into the upper end of the internal saphena vein.

Deep. Corresponds to the deep epigastric artery, and opens into the external iliac vein at its commencement.

V.s, ethmoid'al. Veins corresponding to the ethmoidal arteries, and opening into the ophthalmic vein.

V., exter'nal il'iac. The continuation upwards of the femoral vein.

V.s, extra-spi'nal. Veins ramifying over the external surfaces of the vertebræ.

V., fa'cial. Begins in the angular vein at the inner angle of the eye, and runs downwards and backwards to the anterior lower angle of the masseter, whence it passes to open into the internal jugular vein.

V., fal'ciform. The *Inferior longitudinal sinus.*

V., fem'oral. *Common.* Begins at the lower border of Poupart's ligament, and extends to a point which is from one to two inches down the thigh, where it receives the deep femoral and the superficial femoral.

The *superficial* femoral drains the front and inner side of the thigh, and receives all the

blood of the leg except that which is carried by the internal saphena vein to the common femoral.

The *deep* femoral drains the back part of the thigh, and shares with the superficial femoral the blood from the inner side.

V., fron'tal. A vein which carries blood from the forehead, and joins the supra-orbital vein to form the angular.

V., gas'tric. A vein accompanying the artery of the same.

V.s, gas'tro-epiplo'ic. The right accompanies the right gastro-epiploic artery, and opens into the superior mesenteric vein near its end. The left accompanies the left gastro-epiploic artery, and opens into the splenic vein near its beginning.

V., glu'teal. Runs with the gluteal artery, and opens into the internal iliac vein inside the pelvis.

V., great ear'diac, or Co'ronary vein. Begins on the front surface of the heart at the apex, and runs in the anterior interventricular groove to the auriculo-ventricular groove of the left side, in which it continues until it opens into the coronary sinus.

V., great ju'gular. Same as *Internal jugular.*

V.s, hæmorrhoi'dal. The veins of the rectum.

V., hemiaz'ygos. Left, lower, or small azygos vein. Commences as the ascending lumbar vein of the left side, or frequently by a communication with the corresponding renal vein. It enters the thorax through the left crus of the diaphragm, and ascends upon the spine to the level of the ninth dorsal vertebra, where it crosses to the right side behind the aorta to open into the large azygos vein. It receives the intercostal veins from the lower three or four spaces of the left side.

V., hemiaz'ygos accesso'ria, or Left up'per az'ygos vein. Commences in an anastomosis between the intercostal veins of the fourth to the seventh or eighth spaces inclusive. It communicates above with the superior intercostal vein, and opens into the large azygos, either separately or in common with the left lower azygos vein.

V.s, hepatic. Veins which collect the blood brought to the liver by the portal vein and hepatic artery. They begin in the interlobular radicles, and finally open into the inferior vena cava.

V., hypogas'tric. The *Internal iliac vein.*

V., il'iac, com'mon. A vein on each side of the mid-line of the body, which extends from the sacro-iliac synchondrosis to the front of the body of the fourth or fifth lumbar vertebra, where the two join to form the inferior vena cava.

V., il'io-lum'bar. Corresponds to the ilio-lumbar artery. Opens into the common iliac vein.

V., infe'rior longitu'dinal. Inferior longitudinal sinus.

V.s, infe'rior thy'roid. Commence in the thyroid gland, run downwards on the front of the trachea, and open into the left innominate vein.

V., in'fra-or'bital. Accompanies the infra-orbital artery, and opens into the pterygoid plexus.

VEIN

V., innominate. *Left.* Formed by the junction of the subclavian and internal jugular of its own side. Passes across the mid-line to join the right innominate behind the right sterno-clavicular joint.

Right. Formed in the same way as the left. These two innominate veins join to form the superior vena cava.

V., iliac, internal. Begins opposite the top of the great sciatic notch, and extends to meet the external iliac at the sacro-iliac synchondrosis.

V.s., intercostal. Veins of the intercostal spaces. The first on the right side, when it exists, opens into the subclavian vein; the first on the left side communicates with the hemiazygos, receives the left bronchial vein, and opens into the corresponding innominate vein. The intercostals of the right side open into the vena azygos major, those of the left side into the hemiazygos and vena azygos minor.

V.s., interlobular, of kidney. Pass between the pyramids of Ferrein to join the venæ rectæ, and fall into the renal veins.

V.s., interlobular, of the liver. Surround the lobules of the liver. They are the terminal branches of the portal vein.

V., internal. A continuation of the lateral sinus beginning at the jugular fossa. It accompanies the carotid arteries, internal and common, and joins the subclavian vein to form the innominate vein.

V.s., internal mammary. Venæ comites of the internal mammary artery. They open into the innominate vein of their own side by a single trunk.

V., internal maxillary. A vein or veins which accompany the internal maxillary artery, and pass from the pterygoid plexus to the temporal vein.

V.s., intra-spinal. The veins within the spinal column.

V., jugular, anterior. A vein beginning at the under surface of the chin, and ending at the clavicle in the external jugular vein.

V., jugular, external. A vein beginning at the level of the neck of the jaw, with the junction of the posterior auricular and temporo-maxillary veins, and passing down the lateral aspect of the neck to open into the subclavian vein.

V., jugulo-cephalic. (L. *jugulum*, the throat; Gr. *κεφαλή*, the head.) A vein passing between the cephalic vein and the external jugular.

V., lachrymal. Corresponds to the lachrymal artery, and opens into the ophthalmic vein.

V., left cardiac. See *Great cardiac*.

V.s., lingual. Veins of the tongue.

V.s., longitudinal. The superior and inferior longitudinal sinuses of the falx cerebri.

V.s., lumbar. Veins corresponding to the lumbar arteries. They anastomose across the transverse processes of the lumbar vertebrae, and so form the ascending lumbar vein.

V., median. Vein which begins by radicles in the palm of the hand, and passes up the anterior surface of the forearm to divide into median basilic and median cephalic.

V., median basilic. A vein of the forearm formed by the division of the median vein at the bend of the elbow. It joins the an-

terior and posterior ulnar veins to form the basilic.

V., median cephalic. The branch of the median vein which passes to join the cephalic vein.

V., median, deep. A short wide branch which connects the upper end of the median vein of the forearm with the deep veins of the same region. A vein formed by the outer vena comes of the ulnar artery and the muscular and radial recurrent veins.

V.s., medullispinal. The veins of the spinal cord.

V.s., meningo-rachidian. Veins in the spinal canal between the sheath of the cord and the wall of the canal.

V., mesenteric, inferior. Begins in the plexus of veins in the rectum which correspond to the distribution of the terminal branches of the inferior mesenteric artery. It collects blood from the rectum, sigmoid flexure, left colon, and left end of the transverse colon, and passes upwards to join the superior mesenteric or splenic at their place of junction, or to fall into the junction.

V., mesenteric, superior. Receives blood from the small intestine, and from the right colon and transverse colon. It passes over the third portion of the duodenum behind the pancreas to join the splenic and form the portal vein. It receives, also, the right gastro-epiploic vein.

V., middle cardiac. A vein which begins at the apex of the heart, and passes up the posterior interventricular groove to open into the coronary sinus.

V., middle cerebral. One of the large superficial veins of the cerebrum, which collects blood from the under surface of the frontal and temporo-sphenoidal lobes, and opens into the cavernous sinus.

V.s., middle sacral. Venæ comites of the middle sacral artery, discharging by one trunk into the left common iliac vein.

V., middle temporal. One of the veins which collect the blood from the temple and vertex of the head.

V.s., nasal. Tributaries of the angular vein from the sides and bridge of the nose.

V., oblique, of the heart. The remnant of the left innominate vein of the fœtus, or left duct of Cuvier.

V., obturator. Accompanies the obturator artery, and opens into the internal iliac vein.

V.s., occipital. Usually two or three in number; carry the blood from the back of the scalp to the deep cervical vein. The outermost usually receives blood from the lateral sinus by the mastoid emissary vein.

V.s., oesophageal. Veins carrying blood from the œsophagus to the venæ azygos.

V.s. of Breschet. The veins of the diploë.

V. of corpus striatum. The vein which runs in the groove between the corpus striatum and the optic thalamus to join with the choroid vein.

V. of Galen. The *Anterior cardiac vein*.

V.s. of Galen. Two large veins which continue the internal cerebral veins, and open into the straight sinus. There may be but one.

VEIN

V. of Labbé. One of the cortical cerebral veins.

V. of Marshall. See *Vein, oblique.*

V. of Tro'ard. A vein lying in the posterior limb of the fissure of Sylvius, and emptying into the superior petrosal sinus.

V. of Tro'lars. See *Anastomotic vein.*

V. of Vesalius. A vein forming the channel of communication between the pterygoid plexus of veins and the cavernous sinus.

V.s., ophthalmic. Two in number, superior and inferior. The superior begins in a communicating branch from the angular vein, and runs backwards from without inwards over the ophthalmic artery to open into the cavernous sinus. Its tributaries are ethmoidal, muscular, lachrymal, and the central vein of the retina. The inferior starts in a junction of the lower posterior ciliary veins with some muscular veins. It passes backwards, to open either separately or in common with the superior ophthalmic vein into the cavernous sinus. It has a branch passing through the sphenomaxillary fissure to communicate with the pterygoid plexus.

V., orbital. Accompanies the artery of the same name. Receives the external palpebral veins, communicates with the supra-orbital and facial veins, and opens into the middle temporal.

V.s., ovarian. Accompany the ovarian arteries. They open on the right side into the inferior vena cava, on the left into the renal vein.

V., palatine, inferior. A vein which carries blood from the plexus surrounding the tonsil and soft palate. Opens into the facial.

V., palatine, superior. Passes to the pterygoid process.

V., palpebral, external. Opens into the orbital vein, and so into the middle temporal.

V., palpebral, inferior. Vein of the lower eyelid. Opens into the anterior temporal vein.

V.s., palpebral, superior. Two or three small veins which open into the angular.

V., pancreatic. Carries blood from the pancreas to the splenic vein.

V., parietal emissary. See *Emissary.*

V.s., parotid. Are many and small, and pass from the parotid gland to the facial vein and the common temporal vein.

V.s., parumbilical. One or more small veins which descend from the left division of the portal vein along the round ligament of the liver towards the umbilicus, and form connections with the epigastric veins. (Quain.)

V.s., pericardial. Small veins opening into the vena azygos major.

V.s., peroneal. Venæ comites of the peroneal arteries which open into the posterior tibial veins.

V.s., petrosal. See *Petrosal sinuses.*

V.s., pharyngeal. Form a plexus on the pharynx, which carries blood from the tonsil, palate, prevertebral muscles, and pharynx. They open into the internal jugular or common facial vein.

V.s., phrenic. Two on each side accompany the arteries of the same name. On the left they open into the supra-renal vein.

V.s., phrenic, inferior. Accompany the

arteries of the same name. On the left side they open into the vena cava, on the right into the renal vein.

V.s., plantar. Accompany the arteries of the same name.

V., popliteal. Extends from the femoral opening in the adductor magnus to the upper border of the popliteus.

V., portal. The vein which carries blood collected by the visceral veins to the liver, which it enters at the porta hepatis or transverse fissure. Its chief tributaries are the splenic, superior mesenteric, and inferior mesenteric. Its length is about three inches. It begins behind the head of the pancreas, and in its course it crosses behind the first part of the duodenum. The hepatic artery and bile-duct are in front of it.

V., posterior anastomosing. See *Vein of Labbé.*

V.s., posterior cardiac. Two or three small veins which pass up the posterior surface of the left ventricle to open into the coronary sinus.

V., posterior ulnar. Begins on the back of the ulnar aspect of the hand, and passes up that aspect of the forearm to join the anterior ulnar.

V., posterior vertebral. See *Deep cervical vein.*

V., pudic. A vein which ascends from the obturator vein in the thyroïd foramen to join the external iliac vein.

V.s., pulmonary. Four in number, two on each side. Those on the left pass from the hilum of the left lung in front of the aorta to the left auricle; those on the right from the hilum of the right lung behind the superior vena cava to the left auricle. They carry oxygenated blood.

V., pyloric. A vein of small size which accompanies the pyloric branch of the hepatic artery along the small curvature of the stomach. It opens into the lower end of the portal vein.

V., radial. A vein which begins in a plexus on the outer aspect of the hand, and runs up the outer border of the forearm to unite with the median cephalic vein and form the cephalic.

V.s., ranine. Two veins on the under surface of the tongue, one on either side, which open into the facial or internal jugular vein.

V.s., renal. Veins corresponding to the renal arteries. That on the left passes in front of the aorta to reach the inferior vena cava.

V., right coronary. A small vein which collects blood from the posterior walls of the right auricle and ventricle, and runs in the right auriculo-ventricular groove to open into the coronary sinus.

V.s., sacral, lateral. Two in number, run on each side of the sacrum, anastomose with the middle sacral, and receive branches through the anterior sacral foramen. They open into the internal iliac vein.

V.s., sacral, middle. Accompany the middle sacral artery on the front of the sacrum, and open by one trunk into the left common iliac or the lowest point of the inferior vena cava.

V., Salvatella. A vein of the little finger in the fourth metacarpal space, and entering into the formation of the posterior ulnar vein.

V.s., saphenous. Two in number in each lower extremity. Internal, or long, ex-

VEINAGE—VEINED

tends between the inner side of the leg and foot and the femoral vein at a spot about one inch below Poupart's ligament. External, or short, extends between the outer side of the leg and foot to the popliteal vein at its lower end. Both pierce the deep fascia.

V.s, scap'ular. Accompany the arteries. The subscapular set open into the axillary vein. The supra-scapular set open into the external jugular or subclavian vein.

V., sciatic. The vein accompanying the sciatic artery.

V., small cor'onary. See *Right coronary vein*.

V.s, small'est car'diac. Minute veins from the cardiac wall opening directly into the right and left auricles.

V., spermatic. Carries blood from the spermatic plexus, and terminates on the right side in the inferior vena cava, and on the left in the left renal vein.

V., spermatic plex'us. The plexus along the spermatic cord, which ultimately opens into the spermatic vein.

V., sphe'no-pal'atine. A vein corresponding to the artery of the same name which opens into the internal maxillary vein.

V.s, spi'nal. See *Basispinal veins*.

V., splen'ic. Returns blood from the spleen, and forms the vena portæ by uniting with the superior mesenteric vein.

V.s, stel'late. Veins on the surface of the kidney under the capsule. So called from their radiate arrangement.

V., stylomas'toid. Accompanies the artery of the same name. Opens into the vena comes of the occipital artery.

V., subcer'eb'ral. A large vein at the base of the brain.

V., subcla'vian. A vein which extends from the lower edge of the first rib to the inner end of the clavicle, where it joins the internal jugular vein to form the vena innominata. It is the continuation of the axillary vein.

V.s, submaxill'ary. Small veins which pass from the submaxillary gland to the facial vein.

V., submen'tal. Commences below the chin, where it anastomoses with the anterior jugular vein, and receives blood from the submaxillary gland, whence it passes to open into the facial vein.

V., supe'rior intercos'tal. A vein which collects blood from the upper two or three intercostal spaces, and opens on the right side into the vena azygos major, and on the left side into the vena innominata of the left side.

V., supe'rior la'bial. A vein of the upper lip which opens into the facial vein.

V., supe'rior pal'atine. See *Vein, palatine, superior*.

V.s, supe'rior palpe'bral. See *Veins, palpebral, superior*.

V., supra-orbital. Accompanies the supra-orbital artery. A tributary of the superior ophthalmic vein.

V.s, supra-re'nal. Carry blood from the supra-renal bodies to the vena cava inferior on the right side, and the renal vein on the left.

V., Sylvian. A vein on the bottom of the Sylvian fissure which opens into the middle cerebral vein.

V.s, system'ic. The veins of the general

circulation distinguished from the pulmonary and the portal systems.

V.s, tem'poral. Issue from two plexiform venous arrangements, one of which is superficial and drains the side of the head, while the other is deep and drains the temporal fossa. The superficial plexus opens into a vein which is joined by the middle temporal vein from the deep plexus at the anterior extremity of the zygomatic arch, and so forms the common temporal vein.

V., tem'poro-maxill'ary. The trunk formed by the junction of the common temporal vein with the internal maxillary at the level of the neck of the jaw.

V., thy'roid. *Superior.* Passes from the upper part of the thyroid body to open into the internal jugular or facial veins.

Middle. Issues from the lateral lobe of the thyroid body, and crosses the carotid artery to join the internal jugular vein near the cricoid cartilage.

Inferior. Large veins formed by branches which leave the lateral lobe of the thyroid body to form a plexus on the front of the trachea, whence the left passes to the left innominate vein, while the right inclines to the right to open into the right innominate, or the point of junction of the two innominates.

V., transverse'. The *Left innominate vein*.

V., transverse' cer'vical. The companion vein of the transverse cervical artery.

V., transverse' fa'cial. A vein crossing the masseter to open into the temporal vein. It carries blood from the area of the masseter and in front of that muscle.

V., umbil'ical. In the fœtus, a vein extending from the navel along the falciform ligament to the liver.

V.s, vag'inal. Surround the vagina, principally at its lower part, and communicate freely with the hæmorrhoidal and vesical plexuses.

V., varicose'. See *Varicose*.

V., ver'tebral. Formed by the union of branches from the pericranium and the deep muscles behind the foramen magnum of the occipital bone. It passes downwards in the canal formed by the vertebral foramina in the transverse processes of the upper six cervical vertebræ, and crosses in front of the subclavian artery under cover of the internal jugular vein to open into the commencement of the innominate vein.

V.s, ves'ical. Vessels which ramify over the surface of the bladder external to its muscular coat. They are particularly large and numerous near the base of the organ, where they are connected with prostatic hæmorrhoidal plexuses in the male and the vaginal plexus in the female.

V., Vid'ian. One of the branches of the pharyngeal vein.

V.s, von Burow's'. Small veins joining the portal and general circulations.

Vein'age. (*L. vena, a vein.*) *Veining*.

Vein'al. See *Venous*.

Vein'-blood. (*Mid. E. veyne-blood.*) Bleeding of the veins.

Veined. Full of veins. Showing venation. Streaked.

Veining. The arrangement of veins. Streaking. A streak, or the variegated surface produced by a number of such streaks.

Vein'less. Not veined.

Vein'let. A venous radicle. In *Entom.*, a nervule; one of the secondary veins of the wings.

In *Bot.*, one of the smallest ramifications of a vein or rib.

Vein-like. Resembling a vein.

Vein'ous. Same as *Venous*. In *Bot.* and *Zool.*, having veins.

Vein'stone. A concretion formed within a vein. A *Phlebolith*.

Vein'ule. (L. *venula*, dim. of *vena*, a vein.) A *Venule*.

Vein'ulet. (L. *vena*, a vein.) A branch of a veinlet.

Vein'y. Full of veins.

Vela. Plural of *Velum*.

Vela'men. (L. *velamen*, a covering.) See *Velamentum*.

V. nati'vum. The skin.

V. vul'væ. The pudendal apron. An enormous hypertrophy of the labia minora, chiefly seen in Hottentot women.

Velamen'ta abdomina'lē. The *Peritoneum*.

V. bombyci'na. Villous membranes.

V. cerebra'l'ia or **cer'ebr'i.** The meninges of the brain.

V. infan'tis. The foetal membranes.

V. lin'guæ. The glosso-epiglottic folds of mucous membrane passing from the front of the epiglottis to the root of the tongue.

Velamen'tous. (L. *velamentum*, a cover.) In *Anat.* and *Zool.*, a membrane, a covering.

Velar. (L. *velaris*.) Appertaining to a velum or veil.

Velarium. (L. *velum*, a veil.) The velum of certain hydrozoöns.

Velate. (L. *velatus*, p.p. of *velare*, to veil.) Veiled. In *Zool.* and *Bot.*, having a velum.

Velat'es. (L. *velatus*, p.p. of *velare*, to cover.) A Genus of fossil Gastropods of the Family Neritidæ and Order Prosobranchiata.

Velation. (Low L. *velatio*, a veiling.) The formation of a velum.

Ve'l'la. (L. *velum*, a veil.) The typical Genus of the Ve'llidæ.

Ve'll'idæ. A Family of the oceanic Hydrozoa, Order Physophoridae, Sub-class Siphonophora. The pneumatocyst communicates externally by means of several stigmata, and numerous slender processes containing air hang from its under surface (pneumatic filaments).

Ve'lia. A Genus of water-bugs, typical of the Family Veliidæ.

Velif'erous. (L. *velum*, veil; *ferre*, to bear.) Having a velum.

Vel'iform. (L. *velum*, veil; *forma*, form.) Forming a veil.

Veliger. (Low L. *veliger*, sail-bearing.) The bearer of a velum. Specifically applied to the embryo of Mollusca when the ciliated velum is present.

Velig'erous. (Low L. *veliger*; *velum*, a sail; *gerere*, to bear.) Bearing a velum. Applied specifically to the embryonic stage of Molluscs.

Ve'll'idæ. A Family of heteropterous insects related to the Hydrobatidæ.

Vella. A Genus of plants of the Order Cruciferae and Tribe Brassicæ. Three species are known, all natives of Spain.

Vella's fis'tula. A loop of intestine is divided at its ends from the rest of the intestine, and stitched by both ends to the abdominal wall. Intestinal secretions can be collected from it.

Vellarin. A substance obtained from *Hydrocotyle asiatica*, a pale yellow oil used in treating leprous lesions.

Vellarine. *Vellarina*. Pennywort.

Velleity. (L. *velleitas*, *velle*, to wish.) A weak form of volition; feeble desire.

Vel'licate. To twitch convulsively, or cause to twitch.

Vellica'tion. The act of twitching; a twitch.

Vellicative. Having the power of twitching.

Velloria. A Genus of monocotyledonous plants of the Order Amaryllidaceæ, type of the Tribe Vellorieæ. About forty species are known, natives of southern and tropical Africa. It is known as the tree lily.

Vellori'æ. A tribe of monocotyledonous plants of the Order Amaryllidaceæ. Fifty to sixty species are known, belonging to the Genera *Velloria* and *Barbacenia*. The latter is found only in South America.

Vellus. (L. *vellus*, a fleece.) In *Bot.*, the stype of certain Fungi.

Velosynthesis. L. *velum*, covering; Gr. *σύνθεσις*, a putting together.) The process by which layers of tissue are caused to join.

Velpeau's appara'tus. An immoveable dressing for fractures, made up of a compress and cardboard splints hardened by a solution of dextrin.

V.'s her'nia. A femoral hernia in front of the vessels.

Velum. (L., a veil.) See *Velarium*.

In *Bot.*, in Hymenomycetes, a membranous envelope, which temporarily encloses the whole or part of a sporophore.

In *Isoëtes*, the outgrown membranous margin of the fovea.

In *Mollusca*, the ciliated organ of locomotion of an embryo mollusc in the veligerous stage.

In *Hydrozoa*, the free edge which projects inwards round the margin of the disc of many hydrozoöns, as those which are bell-shaped.

In *Infusoria*, a veil-like membrane bordering the mouth of some forms.

In *Rotifera*, the "wheel organ" or "trochal disc," a retractile disc at the cephalic end of the body surrounded by a circle of cilia, which vibrate so rapidly as to produce the impression that the disc itself is rotating.

In *Anat.*, a veil-like structure.

V., inf'e'rior or poste'rior medul'lary. A thin white sheet of brain substance continuous above with the inferior vermis of the cerebellum, and below with the roof of the posterior part of the fourth ventricle.

V. interpos'itum. The prolongation of the pia mater over the roof of the third ventricle. It contains a plexus of blood-vessels, and its continuations on either side with the contained blood-vessels form the choroid plexuses of the lateral ventricles.

V. medulla'rē anti'cum. *Valve of Vieussens*.

V. medulla'rē inf'e'rius. The band of brain substance by which the medulla communicates with the cerebellum.

V. medulla'rē poste'rius. The thin medullary plate between the medulla oblongata and vermis inferior of the cerebellum.

V. palati. The soft palate, especially the posterior part when prolonged into a process, the uvula.

V. plex'ibus choroid'eis interpos'itum. *Velum interpositum.*

V. pupil'læ. Pupillary membrane.

V. staphyll'num. *Velum palati.*

V., supe'rior or ante'rior medul'lary. See *Valve of Vieussens.*

V. Tar'ini. The posterior medullary velum.

V. termina'lē. The anterior boundary of the third ventricle, extending from the pituitary body to the pineal gland. In the embryonic brain, before the development of the lateral masses and olfactory lobes of the cerebrum, it is the most anterior part, whence its name lamina terminales.

V. triangula'rē. *Tela choroidea super'ior.*

V. vesic'æ urina'riæ. *Trigonum vesicæ.*

Velu'men. (L. *velumen*, a fleece.) In *Bot.*, the velvety coating formed over some leaves by short soft hairs.

Veluti'na. (M. L. *velutum*, velvet.) The typical genus of *Velutinidæ*.

Velutin'idæ. A Family of tænioglossate Gastropods, typified by the Genus *Velutina*.

Velu'tinous. In *Bot.*, having a hairy surface like velvet.

In *Entom.*, covered with short upright hairs like velvet.

Vel'vet breast. The American shel-drake, *Mergus americanus*.

V. flower. *Amaranthus caudatus*; so named from its soft velvety flower spikes.

V. grass. See *Holcus*.

V. leaf. *Chondodendron tomentosum* of South America. Its root is diuretic, tonic to the mucous membrane of the generative organs, and laxative. The Indian mallow.

V. moss. A lichen used in dyeing, *Umbilicaria murina*.

V. seed. *Guettarda elliptica*. A small rubiaceous tree found in the West Indies.

Vēna. (L. *vena*, a blood-vessel.) A vein.

V. az'ygus. See *Azygos vein*.

V. ca'va. Either of the two main venous trunks opening into the right auricle from the systemic veins.

Inferior vena cava. Commences with the junction of the two common iliac veins on the right side of the body of the fourth lumbar vertebra (usually), and passes up through the diaphragm to open immediately into the right auricle of the heart. It carries blood from the lower limbs and abdomen.

Superior. Begins with the junction of the two venæ innominatæ behind the right sternoclavicular joint, low down, and passes almost vertically downwards to open into the right auricle. It carries blood from the head, neck, thorax, and upper limbs, and it receives the vena azygos major, the mediastinal and pericardial veins.

V. co'mes. A companion vein. Often applied to one of a pair of veins accompanying an artery in its course.

V. liena'lis. The splenic vein.

V. por'tæ. The portal vein.

V. Salvatel'la. The vein of the little finger which opens into the superficial ulnar.

V. spina'les. See *Basispinal veins*.

V. vortico'sæ. The venous plexus and trunks of the choroid coat of the eye.

Vēnæ basis vertebra'rum. The basispinal veins.

V. cor'dis min'imæ. The smallest cardiac veins; they open from the substance of the heart into the auricles.

V. Gale'ni. The veins of the cerebral ventricles; especially one of the main trunks by which these veins open into the straight sinus.

V. Thebe'sii. The small veins by which the blood passes from the walls of the heart to the right auricle.

V. vortico'sæ. Vortices formed by the meeting together at a centre of veins carrying the blood from the chorio-capillary network of vessels.

Vēnal. (L. *vena*, a vein.) Appertaining to the veins, venous.

Venaliza'tion. The acquirement of venous qualities by the blood.

Venatio. (L. *venari*, to hunt.) See *Venation*.

Venation. (N. L. *venatio*.) In *Bot.*, the method of distribution of the veins of a leaf.

In *Entom.*, the method of distribution of the veins of the wings. The veins collectively.

V., fork'ed. Venation in which the veins branch in repeated equal divisions.

V., retic'ulate. Venation in which the veins have the form of a network.

V., unbranched'. Venation in which the veins run parallel and unconnected from the base to the tip of a leaf.

Venational. Appertaining to venation.

Venefi'cium. (L. *venenum*, poison; *facio*, to make.) Poisoning.

Ven'enate. (L. *venenum*, poison.) Poisonous.

Venena'tion. (L. *venenum*, poison.) The state produced by the poison of a venomous snake or reptile.

Venena'tus. (L. *venenum*, poison.) Poisonous.

Venenific. (L. *venenum*, poison.) Poison-forming.

Venenifluous. (L. *venenum*, poison; *fluere*, to flow.) In *Biol.*, exuding a poisonous fluid or juice.

Veneno'sa. (N. L. neut. pl. of *venenosus*, full of poison.) A convenient descriptive term for those snakes which are poisonous. It does not correspond accurately to any morphological group.

Venenose'. Poisonous.

Venenos'ity. (F. *vénérosité*.) The condition of being poisonous.

Venenous. (Low L. *venenosus*, poisonous.) Poisonous, toxic.

V. anthelmint'ic. A remedy for intestinal worms which acts by killing them. A vermicide, as distinguished from a vermifuge.

Ven'enum. Same as *Poison*.

Veneracea. A Subdivision of the Subclass *Siphonida*, Class *Lamellibranchiata*, distinguished by the possession of long respiratory siphons and a sinuated pallial line. Represented by the *Venerida* family and its allies.

Venera'ceæ. See *Veneridæ*.

Venera'cean. Appertaining to the *Veneracea*.

Vene'real. Appertaining to sexual intercourse. Caused by sexual intercourse, as venereal disease. That will cure venereal disease. Aphrodisiac.

V. bu'bo. A swelling of the glands of the groin secondary to some venereal disease.

V. carnos'ity. See *Venereal warts*.

V. disease'. A term which includes gonorrhœa, syphilis, and chancroid.

V. sore or ul'cer. Chancre or chancroid.

V. warts. Condylomata, or warts situated on the mucous membrane of the genitals. Not now looked upon as being the result of venereal poison.

Vene'rean. Subject to sexual desire, or inclined to sexual intercourse. Wanton.

Vene'reate. To render amorous.

Venereology. (*Venus*, the goddess of love; Gr. λόγος, science.) The science of venereal disease.

Vener'idæ. A Family of bivalves of the Sub-class *Siphonida*. The typical Genus is *Venus*. They are found in temperate and tropical seas.

Veneriv'agus. (*Venus*; *vagus*, wandering.) Libidinous.

Venerous. Same as *Venereous*.

Veneru'pis. (L. *Venus*; *rupis*, a rock.) A Genus of boring bivalve Molluscs of the Family *Veneridæ*.

Ven'ery. (L. *veneria*, sexual intercourse.) Gratification of sexual desire.

Ven'esect. (L. *vena*, a vein; *secare*, to cut.) To cut open a vein.

Venesection. (L. *vena*, a vein; *sectio*, a cutting.) Bloodletting by opening a vein. Any superficial vein may be chosen, but usually the median basilic or median cephalic is the one taken. A bandage is tied round the arm above the point at which the vein is to be opened. The vessel is pierced with a sharp lancet, and the blood allowed to flow as long as deemed advisable, when the bandage is removed and a small compress placed on the wound.

V. band'age. A figure-of-eight bandage applied to the region of the elbow after venesection.

Ven'ice trea'cle. *Theriaca Andromachi*. A compound of many drugs mixed with honey, and given of old as an antidote for snake-bite.

V. turpentine. An old antidote to make poison, compounded of seventy or more drugs.

Ven'iplex. (L. *vena*, vein; *plexus*, a network.) A network of veins in which the vessels anastomose freely.

Ven'iplexed. Making, when taken together, a venous network.

Venisu'ture. (L. *vena*, a vein; *sutura*, a suture.) Suture of a vein.

Ven'om. (L. *venenum*, poison; Mid. Eng. *venim*.) Poison of any kind. The poisonous secretion of certain animals introduced by them into their victims by biting or stinging, as snakes and scorpions. As secreted by Vertebrates, it is produced by glands morphologically identical with salivary glands, and is a modified saliva. It is the normal product of certain glands in some healthy animals, as venomous snakes; or it may be the secretion of the salivary glands of an animal in a pathological condition, as in rabies. To infect with poison. To be, or seem to be, infected with poison.

V. albu'min. The albumin of snake poison.

V. duct. The duct which carries the poison from the place of its secretion to the place of its discharge.

V. fang. A long sharp tooth, either grooved or folded on itself to form a tube for the conveyance of poison. It is connected with the venom duct, and makes a punctured wound.

V.-gland. A gland of which the secretion is poisonous. Generally a modified salivary gland.

V. glob'ulin. Globulin, of more than one kind, found in snake poison.

V. pep'tone. A peptone found in the venom of certain snakes.

V., quick'ening. Sperm.

V.-sac. A structure on each side of the mouth of a venomous serpent which secretes and contains venom.

V., vi tal. Sperm.

Ven'omer. A poisoner.

Ven'omous. (L. *venenum*, poison; Low L. *venenosus*, full of poison.) Poisonous; hurtful.

Ven'omousness. The condition of being venomous.

Veno'sal. Venous.

Venose'. (L. *vena*, a vein.) Bot. Possessing veins.

Zool. and Anat. Venous.

Venose-cos'tate. Having raised veins approaching in character to ribs.

Venos'itas. Venosity.

Venos'ity. A condition in which arterial blood is imperfectly oxygenated. A disturbance of the equilibrium normally existing between the arterial and venous systems, whereby the veins become unduly filled at the expense of the arteries.

Venous. (L. *venosus*, full of veins.) Appertaining to veins. Possessing veins. Relating to blood contained in veins. In *Entom.* Having veins.

V. blood. Blood contained in the veins and right side of the heart. It contains carbonic dioxide and sundry products of metabolism in amounts which vary with the region of the body.

V. cal'culus. See *Veinstone*.

V. canal'. A foetal vein passing from the point of division of the umbilical vein at the liver to the inferior vena cava. It becomes obliterated soon after birth, and then remains as a fibrous cord.

V. circula'tion. The flow of blood through the veins.

V. conges'tion. Engorgement of the veins of a part.

V. duct. See *Venous canal*.

V. hæm'orrhage. Bleeding from a vein. It differs from arterial hæmorrhage in that the blood flows steadily and not in jerks corresponding with the beats of the heart.

V. hum. The murmur heard on auscultating a vein, owing to obstruction.

V. hyperæ'mia. Dilatation of the superficial veins of a part.

V. plex'us. An arrangement in which there is a free anastomosis between many veins, and a more or less close network is formed.

V. pulse. Pulsation occurring in a vein.

V. rad'icles. The finest veinlets which occur immediately on the venous side of capillaries, and are continuous with them.

V. si'nus. One of several large cavities found in the dura mater of the skull. A natural

dilatation of a vein, or a cavity into which two or more veins open.

V. sys'tem of Ja'cobson. The vessels which pass between the portal and systemic vessels in Vertebrates other than mammalia.

Venously. Referring to the venous circulation.

Venousness. *Venosity.*

Vent. (Mid. E. *vente*, vent.) An outlet, especially the anal opening.

Venter. (L. *venter*, the belly, womb.) The womb.

In *Anat.* and *Zool.*, the abdomen. The ventral aspect of the body as distinguished from the dorsum. The body of a muscle.

In *Entom.*, the lower part of the abdomen. The under surface.

In *Bot.*, that part of the archegonium in which the oöphore is formed.

V. i'mus. The *Hypogastrium*.

V. of the il'ium. *Iliac fossa.*

V. of the kid'ney. The pelvis of the kidney.

V. of the scap'u'la. *Scapular fossa.*

V. propen'dens. Anteversion of the uterus.

V. re'nun. The pelvis of the kidney.

Ven'tilable. Capable of being ventilated.

Ven'tilate. (L. *ventilare*, to winnow by throwing up in the air, fan.) To expose to the free passage of air. To purify by withdrawing foul air and admitting pure air.

Ven'tilating brick. A large brick pierced with holes, and so arranged with regard to other bricks like itself as to make a passage which can be used for heating or ventilating purposes.

V. heat'er. An apparatus which draws in cold air and discharges it, heated, into a place which is to be heated.

Ventilation. (L. *ventilatio*, *ventilare*, to winnow by throwing up in the air.) The act or method of replacing foul air by pure air. Aëration of the blood or the body by means of respiratory organs.

Ven'tilative. Appertaining to ventilation.

Ven'tilator. (L. *ventilator*, a winnower.) A mechanical arrangement for replacing foul by pure air.

Ventose'. (L. *ventosus*, full of wind.) Windy, flatulent.

Ven'tose. (Low L. *ventosa*, a cupping-glass.) A cupping-glass.

Ven'tosise. (Low L. *ventosa*, a cupping-glass.) To cup.

Ventos'ity. (Low L. *ventositas*.) Windiness, flatulence.

Ven'trad. (L. *venter*, the belly.) In *Zool.* and *Anat.*, situated on, or directed towards, the ventral surface of the body.

Ven'tral. (L. *ventralis*, of, or belonging to, the belly.) In *Anat.* and *Zool.*, appertaining to the venter. Possessing or resembling a venter. Situated on that side of the body furthest away from the spinal column, anterior or inferior. In *Bot.*, belonging to the anterior surface.

V. chord. In *Entom.*, the ventral nervous chord and its ganglia.

V. her'nia. A protrusion of the peritoneum and gut, or of either alone, at some spot in the anterior wall of the abdomen other than the umbilicus or groin.

V. lam'ina. A lateral mesoblastic plate.

V. medulla. The ventral ganglionic chain of the sympathetic nervous system.

V. ossif'ications. Bones developed in the abdominal walls of some animals.

In *Ichthyol.*, a ventral fin, one of the pelvic pair of fins.

Ventra'lis. In *Ichthyol.*, a ventral fin.

Ven'trally. In a ventral situation or direction.

Ven'tralmost. Nearest to the ventral aspect of the body.

Ven'tralward. See *Ventrad*.

Ven'tricle. (L. *ventriculus*, dim. of *venter*, the belly.) The belly; the stomach; the womb. In *Anat.* and *Zool.*, a hollow part or organ.

V., aor'tic. The left ventricle of the heart.

V., chylif'ic. The *Receptaculum chyli*.

V. of Aran'tius. The posterior part of the fourth ventricle, which extends into the spinal cord to form the upper part of the central canal.

V. of Morga'gni. A small cavity bounding each vocal cord on its outer side.

V.s of the brain. A series of cavities within the brain, connected with each other and with the central canal of the spinal cord. They are four in number; two lateral, the third, and the fourth. Each lateral ventricle opens into the third ventricle by the foramen of Monro, the third opens into the fourth by the aqueduct of Sylvius, and the fourth is continued backwards and downwards into the central canal of the spinal cord. They are representative of the ori-neural canal, formed by the growth and folding over of the epiblast. The fifth ventricle is not in series with these four, being merely a space left between the two layers of the septum lucidum.

V. of the cerebell'um. The fourth ventricle of the brain.

V. of the cord. The central canal which extends from the conus medullaris to the lower part of the fourth ventricle.

V. of the cor'pus callo'sum. A groove between the corpus callosum and that part of the hemisphere which rests upon it—the gyrus fornicatus.

V.s of the heart. Two chambers which receive blood, each from the auricle of its own side, and propel it into the arteries. The right ventricle pumps blood through the pulmonary artery to and through the lungs; while the left ventricle pumps it into the arteries of the systemic system, aorta, &c.

V. of the lar'ynx. A fossa between the superior, or false, and the inferior, or true, vocal cords of each side of the larynx, which leads into the sacculus laryngis.

V., olfact'ory. A cavity in the olfactory lobe of the brain, continuous with the lateral ventricle.

V., op'tic. The cavity of the optic lobe.

V., Syl'vian. The cavity between the laminae of the septum lucidum. The fifth ventricle.

V., Ver'ga's. A space occasionally found between the corpus callosum and the fornix.

Ventricor'nu. (L. *venter*, belly; *cornu*, a horn.) The anterior horn of grey matter in the substance of the spinal cord.

Ventricornual. Appertaining to the ventricornu.

Ventricose. Corpulent; distended.

Ventricous. In *Anat.* and *Zool.*, belly-ing, swelled up.

Ventricular. (L. *ventriculus*, a ventricle.) Appertaining to a ventricle.

V. aqueduct. The *Aqueduct of Sylvius*.

V. bands of the larynx. The false vocal cords.

V. sep'tum. (a) Same as *Septum lucidum*.

(b) The muscular wall separating the two ventricles of the heart.

V. space. The system of cavities in the central nervous system communicating with one another, and comprising the two lateral, the third, and the fourth ventricles, with the primitive central canal of the spinal cord—the neurocele.

Ventriculi. Pl. or genitive case of *Ventriculus*.

V. dilata'tio. Dilatation of the stomach.

V. dissolu'tio. Softening of the stomach.

V. duræ ma'tris. Sinuses of the dura mater.

V. emolli'tio. Softening of the stomach.

V. exulcera'tio. Ulceration of the stomach.

V. flux'us. *Gastrorrhœa*.

Ventriculo-bul'bous. (L. *ventriculus*, ventricle; *bulbus*, bulb.) Appertaining to the cardiac ventricle and the aortic bulb.

Ventriculose. (Low L. *ventriculosus*, appertaining to the belly.) In *Bot.*, minutely ventricose.

Ventriculous. See *Ventricular*.

Ventriculus. (L.) A ventricle in any sense. A locus.

(a) The true stomach of certain animals.

(b) The body-cavity of sponges.

V. bulbo'sus. A bird's muscular gizzard.

V. callo'sus. The gizzard.

V. commu'nis. The common cavity of the brain.

V. cona'ril. See *Recessus infrapinealis*.

V. dex'ter. The right ventricle of the heart.

V. Gale'ni. The ventricle of the larynx.

V. latera'lis. The lateral ventricle of the cerebrum. The procellia.

V. Morga'gnii. The ventricle of the larynx.

V. olfacto'rius. The olfactory ventricle. The rhinocœlia.

V. opt'icus. The optic vesicle. The mesocœlia.

V. pri'mus. The right ventricle.

V. quar'tus. The fourth ventricle of the cerebrum. Metacœlia.

V. quin'tus. The fifth ventricle of the cerebrum. Pseudocœlia.

V. secun'dus. The left ventricle.

V. sin'ister. The left cardiac ventricle.

V. succenturia'tus. The duodenum.

V. ter'tius. The third ventricle of the cerebrum. The diacœlia.

V. trico'rnis. The three-horned ventricle, one of the lateral ventricles of the cerebrum.

Ventricum'bent. (L. *venter*, belly; *cumbere*, to lie down.) Lying upon the belly; prone.

Ven'tricus. Abdominous.

Ven'triduct. (L. *venter*, the belly; *ducere*, to lead.) To direct toward the belly.

Ventrim'esal. Appertaining to the *Ventrimeson*. At or toward the ventral edge of the meson.

Ventrim'eson. (L. *venter*, belly; Gr. μέσος, middle.) The mid-line on the ventral surface. The ventral edge of the mesial plane of the body.

Ventripyr'amid. (L. *venter*, belly; *pyramis*, pyramid.) An anterior pyramid of the medulla oblongata.

Ventrocystor'haphy. (L. *venter*, the belly; Gr. κύστις, a bladder; ραφή, a seam.) An operation in which an intra-abdominal tumour is attached to the abdominal wall, and then opened to allow of free drainage.

Ventrodor'sally. Directed from the ventral towards the dorsal surface.

Ventrofixa'tion. An operation in which an abdominal organ is fixed to the abdominal wall.

Ventroingu'inal. (L. *venter*, the belly; *inguen*, the groin.) Appertaining to the abdominal cavity and the inguinal canal.

V. her'nia. Direct inguinal hernia.

Ventrolateral. (L. *venter*, the belly; *latus*, the side.) Appertaining to the ventral and lateral sides of the body.

Ventrolat'erally. In a ventrolateral position, or directed towards the ventrolateral aspect.

Ventrome'sal. Same as *Ventrimesal*.

Ventrose. (L. *ventrosus*.) Having a belly, or a swelling like a belly. Having a swollen abdomen.

Ventros'ity. (Low L. *ventrosus*.) Corpulence.

Ventrot'omy. (L. *venter*, the belly; Gr. τομία, section.) Abdominal section.

Ven'tus. Wind.

Ven'ula. (L.) A small vein.

Ven'ulæ centra'les. Intra-lobular veins.

V. intralobula'res. Intra-lobular veins.

Venule. (L. *venula*, dim. of *vena*, a vein.) A small vein.

Entom. A nervule.

Venulose. *Bot.* Possessing veinlets.

Ven'ulous. Full of veinlets.

Veratoid'ea. An alkaloid found in veratrine. Produces death by asphyxia.

Veratral'bine. An alkaloid obtained from *Veratrum album*, the white hellebore.

Vera'trate. A salt of veratric acid.

Vera'tre'æ. A Tribe of plants for the most part liliaceous, having a tall leafy stem, bearing an inflorescence which is paniced or racemed, with flowers which are chiefly polygamous. There are thirty-three species found in America.

Vera'tric. Appertaining to *Veratrine* or the Genus *Veratrum*.

V. ac'id. $C_9H_{10}O_4$. Occurs with veratrin in *sabadilla* seeds. It crystallises in short white transparent needles, which melt at $179.5^\circ C$. It is soluble in water and alcohol.

Vera'trin. $C_{32}H_{49}NO_9$. 1. Same as *Veratrine*.

2. Cevadin, which occurs with other alkaloids and veratric acid in white hellebore and *sabadilla* seeds. It crystallises from alcohol in prisms, and melts at $205^\circ C$.

3. A precipitate from the tincture of the root of *Veratrum viride*. It is cathartic, anodyne, and sedative. (Unofficial.)

Vera'trine. An alkaloid, or a mixture of alkaloids, derived from various species of *Veratrum* and from *sabadilla*. It is very poisonous, used in ointment as a means of relieving neuralgia, and also as an arterial sedative and as a resolvent.

Veratrin'um. *Veratrine*.

Veratrisation. (*Veratrum*.) Veratrin poisoning.

Ver'atrise. To give a dose of veratrine of sufficient size to produce the physiological effects of the drug.

Veratroidine. An alkaloid obtained from *Veratrum viride*.

Verat'rum. (*L. veratrum*, hellebore.) A Genus of liliaceous plants, type of the Tribe *Veratee*. There are nine species; four are natives of Europe and Siberia, and the remainder of North America. Their popular name is white hellebore, especially those with whitish, blackish, and green flowers. Their roots are emetic and cathartic, and are collected for medicinal use.

V. album. White hellebore. Related to *Veratrum viride*. It is emetic, cathartic, and very poisonous. (Unofficial.)

V. luteum. *Chamaelirium luteum*.

V. sabadilla. *Cevadilla*. A plant of the Order *Melanthaceæ*. It contains a number of alkaloids, and is the source of *Veratrine*. The seeds are included in the B. P. under the name *Sabadilla*.

V. vir'idë. American hellebore. The rhizome and rootlets contain jervin, veratrine, and other alkaloids. It depresses the heart and paralyzes the spinal cord, its action being similar to that of aconite.

Ver'bal amne'sia. Speechlessness due to imperfection of the memory for words, caused by cerebral conditions.

Verbas'ceæ. A Tribe of gamopetalous plants of the Order *Scrophularineæ*, and Series *Pseudosalanæ*. It includes the three Genera *Staurophragma*, *Celsia*, and *Verbascum*.

Verbas'culum. *Primula veris*.

Verbas'cum. A Genus of plants, type of the Tribe *Verbasceæ* of the Order *Scrophularineæ*. About one hundred species are known, found in Europe, North Africa, Western and Central Asia. The leaves of *Verbascum thapsus*, or the common mullein, are mucilaginous and somewhat bitter, and are used as emollient applications.

Verbe'na. (*L. verbenæ*.) A Genus of plants, type of the Order *Verbenaceæ* and Tribe *Verbenæ*. About eighty species are known.

V. hasta'ta. Expectorant and emetic.

V. oil. See *Indian melissa oil*.

V. triphyl'la. Antispasmodic.

V. urticifolia. Diuretic.

Verben'aca. *Verbenæ officinalis*.

Verbenaceæ. An Order of gamopetalous plants, of the Series *Bicarpellatæ* and cohort *Lamiales*. About seven hundred and forty species are known, classed in sixty-five genera and eight tribes. Common in the tropics and the temperate parts of South America. They have aromatic properties.

Verbenaceous. Appertaining to the *Verbenaceæ*.

Ver'bene. A plant of the Order *Verbenaceæ*.

Verbe'næ. A Tribe of plants of the Order *Verbenaceæ*. Nineteen genera are known. *Verbenæ* is the type.

Verbes'ina acmel'la. *Spilanthus acmella*.

V. virgin'ica. A decoction of the root is used as a diuretic.

Verbig'erate. (*L. verbigere*, to talk.) To make use of *Verbigeration*.

Verbigerat'ion. (*L. verbigere*, to talk.) The frequent and uncontrollable repetition of one sound, word, or sentence without reference to its meaning.

Verde'a. (*L. verdea*, name of a variety of grape, and the wine made from it.) A white grape. The wine made from this grape.

Ver'det. (F.) A fungous disease of maize due to the presence of parasites on the grains. These parasites are *Ustilago segetum*, *Uredo carbo*, and *Sporisorium maidis*.

Ver'digris. (M. E. *verte grece*, derived from M. L. *viride Græcum*, Greek green; F. *vert de gris*.) Chemically basic acetate of copper. Its colour varies from green to greenish blue according as the proportion of acetic acid to copper varies. It is poisonous, and is apt to form on the surface of copper vessels owing to the action of vegetable juices. Commercially it is used as a pigment, a mordant, and in gilding.

V., dis'tilled. A neutral acetate of copper, obtained by dissolving common verdigris in hot acetic acid and allowing the solution to cool, when dark green crystals form.

V., blue. Consists chiefly of dibasic acetate of copper.

V., com'mon. Basic cupric acetate.

V. green. A bright bluish green composed of several acetates.

Ver'diter. (F. *verde de terre*, earth green.) A name applied to two pigments.

V., blue. Carbonate of copper, or a mixture of copper oxide with hydrated lime.

V., green. An impure carbonate of copper with chalk.

Both are used as pigments.

Verd'juice. Old form of *Verjuice*.

Ver'dure. (*L. viridis*, green.) Green vegetation.

Ver'durous. Verdant.

Veren'da. (*L. vereor*, to reverence.) Genital organs.

Veretel'liform. (Low L. *veretillum*; *forma*, form.) Rod-like. Said with especial reference to Holothurians with long cylindrical bodies, such as *Cucumaria frondosa*.

Veretillidæ. Polyps of the Family *Pennatulidæ*, of the division *Alecyonaria* of *Actinozoa*.

Veretil'lum. (*L. veretillum*, dim. of *veretrum*, the penis.) The typical Genus of *Veretillidæ*. The upper part of the colony is short and club-shaped, with the polyps all round its circumference. *Veretillum cynomorium* is a typical example.

Veret'rum. Synonym of *Penis*.

Ver'ga's vent'ricle. A cleft-like space occasionally found between the fornix and corpus callosum.

Verge'. (*L. virga*, a rod.) In *Biol.*, the male organ of crabs, arising from the sternum, or from the coxal joint of the posterior feet.

Vergency. The act of approaching.

In *Opt.*, the reciprocal of the focal distance of a lens, used as a measure of the divergence or convergence of a pencil of rays.

Vergens. (*L.*) Inclining.

V. deor'sum. Inclining downwards.

VERHEYEN—VERMIPAROUS

V. sur'sum. Inclining upwards.

Verhey'en, stars of. Venous plexuses of stellate form situated on the surface of the kidney, beneath its capsule. They unite to form the interlobular veins.

Ver'in. (L. *veratrum*, hellebore.) $C_{28}H_{45}NO_8$. An amorphous alkaloid obtained from veratrin.

Ver'juice. (M. E. *verjus*; L. *verd*, green; *jus*, juice.) The juice of green fruits. An acid liquor obtained from very sour grapes or crab apples, and occasionally used in medicine.

Also, *v. a.*, to make acid.

Ver'male's amputa'tion. Amputation above the knee by lateral flaps.

Vermes. (Pl. of L. *vermis*, a worm.) Worms. Used of old to include animals resembling worms, but without exact classificatory signification. By some it is still used to signify a sub-kingdom containing the Scolecida and Anarthropoda; generally speaking, it is completely abandoned as a name.

Vermeta'cea. Same as *Vermetidæ*.

Vermetidæ. A Family of teneioglossate Gastropods, whose type is *Vermetus*. The shell is conical, and in most cases elongated to form a tube, which is generally coiled. The head is provided with tentacles and eyes, and there is a retractile foot.

Vermet'us. The typical Genus of *Vermetidæ*. The whorls of the shell are not all contiguous. The older ones become separate and contorted.

Vermian. Appertaining to worms.

Vermicella. A Genus of colubriform serpents.

Vermicel'li. (Mod. L. *vermicellus*, dim. of *vermis*, a worm.) A paste of flour, cheese, yolk of egg, sugar, and saffron; made in Italy.

Vermic'eous. Appertaining to worms.

Vermic'idal. That which destroys worms.

Ver'micide. (L. *vermis*, worm; *cædere*, to kill.) A worm-killer as distinguished from an agent which merely causes expulsion of worms.

Vermic'ular. (Mod. L. *vermicularis*, *vermiculus*, a worm.) Like a worm in form or movement. Having the appearance of being worm-eaten.

V. appen'dix. Vermiform appendix.

Vermicula'ris. *Lumbricalis sedum*.

Vermic'ulate. (L. *vermiculatus*, full of worms.) To become full of worms. Fine, close-set, and wavy. Marked with wavy impressions as though worm-eaten. Having tufts of parallel hairs.

Vermicula'tion. (L. *vermiculari*, to be worm-eaten.) Peristaltic action, especially of the bowels, from its resemblance to the action of the successive joints of the body of a crawling worm.

Ver'micule. (L. *vermiculus*, dim. of *vermis*, a worm.) A little worm or grub.

Vermic'uli. Plural of *Vermiculus*.

Vermiculose'. Worm-eaten. Worm-like.

Vermic'ulous. See *Vermiculose*.

Vermic'ulum. Tincture.

Vermic'ulus. (L. *vermiculus*, dim. of *vermis*, a worm.) A little worm; specifically the cochineal insect and its product.

V. capilla'ris. *Dracunculus*.

Vermiform. (N. L. *vermis*, a worm; *forma*, shape.) Having the shape of a worm.

V. appen'dix. A diverticulum of the cæcum, about one third of an inch in diameter and three to six inches long.

V. pro'cess. Inferior and superior. The vermis of the cerebellum.

Vermifor'mia. Lankester's name for the Genus *Phoronis* of the Group Tubicola and Class Gephyrea.

Vermif'ugal. That which tends to expel worms.

Vermifuge. (L. *vermis*, a worm; *fugare*, to make to flee.) A medicine given to bring about the expulsion of worms.

Vermifugous. Anthelmintic.

Vermigra'da. The vermiform *Echinoderms*; the spoonworms.

Vermigra'de. (L. *vermis*, a worm; *gradus*, a step.) Moving like a worm. Referring to the *Vermigra'da*.

Vermil'eo. A Genus of snipe-flies of the Family *Leptidæ*.

Vermilin'gual. See *Vermilinguial*.

Vermiling'ues. See *Vermilinguia*.

Vermiling'ua. (L. *vermis*, a worm; *lingua*, a tongue.) A Sub-order of Lacertilia, comprising one Family, *Chamæleontidæ*, with one Genus, *Chameleo*.

Vermiling'ual. Having a vermiform tongue.

Vermil'ion. (O. F. *vermillon*, a bright red.) The cochineal insect; also its product. Cinnabar, red sulphide of mercury, which occurs in nature, and is manufactured in two ways:

1. Mercury, sulphur, potash, and water are mixed and stirred for an hour in an iron cylinder. The mixture passes through black and brick-red to vermilion. The potash acts catalytically, and does not form part of the final product.

2. Mercury and sulphur are mixed and heated in a retort. Vermilion sublimes over. By properly varying the process and proportions the colour may be turned to a deep or light shade, and to scarlet, crimson, or orange.

A colour resembling the above.

Also (*v.*), to dye, cover, or suffuse with a bright red.

V. bor'der. The red portion of the human lips.

V. fly'catcher. A small tyrant bird of the Genus *Pyrocephalus*, of which the male is brown with a vermilion breast and crest.

V. lac'quer. See *Coral lacquer*.

Ver'min. (L. *verminus*; O. F., and F. *vermine*, vermin.) A noxious or troublesome animal or insect, especially a bug or louse.

Verm'inate. (L. *verminare*, to have worms.) To breed or become infested with vermin.

Vermina'tion. (L. *verminatio*, worms.) Affected by worms. The generation of worms.

Verm'inous. (L. *verminosus*, full of worms.) Tending to breed vermin. Infested with parasitic vermin. Caused by the presence of vermin. Appertaining to vermin.

V. cra'sis. A diseased condition said to be due to the presence of intestinal worms.

V. fe'ver. A fever due to the presence of intestinal worms.

Verm'oriously. In a verminous manner. As if infested by worms.

Vermip'arous. (L. *vermis*, a worm; *parere*, to bear.) Producing or breeding worms.

VERMIS—VERRUCA

Vermis. (L., a worm.) The median lobe of the cerebellum.

V. bombycinus. *Cornu ammonis.*

V. cerebelli. *Vermiform process.*

V. cucurbitinus. *Tenia solium.*

V. dig'iti. *Paronychia.*

V. guinien'sis. *Filaria medinensis.*

Verm'itio. (L. *vermis*, a worm.) *Helminthiasis.*

Vermiv'ora. (L. *vermis*, a worm; *vorare*, to devour.) A Genus of birds, the American worm-eating warblers, including *Helminthus* and *Helminthophaga*.

Vermiv'orous. (L. *vermis*, a worm; *vorare*, to devour.) Worm-eating; feeding on worms.

Verm'ix. A contracted form of the term *Vermiform appendix.*

Vermouth. (F. *vermout*; G. *Wermuth*, wormwood.) A cordial prepared from white wine and flavoured with wormwood.

Vernac'ular. (L. *vernaculus*, native.) The language or dialect of a country.

Vernal. (Low L. *vernalis*, appertaining to spring-time.) Appearing in spring.

V. catarrh'. A chronic disease of the conjunctiva of the tarsus and eyeball, accompanied by photophobia and itching of the eyes, and coming on in warm weather. Broad, flat papillæ covered with a bluish-white film occur on the tarsus; while brown, uneven, hard nodules of gelatinous appearance arise from the limbus at the outer and inner side of the cornea, and invade the transparent cornea on the one side and the conjunctiva on the other.

V. conjunctiv'itis. Inflammation or congestion of the conjunctiva occurring chiefly in the young each spring, and disappearing with the onset of winter.

V. fe'ver. Malarial fever.

Verna'tion. (L. *vernare*, to flourish.) *Biol.* The arrangement of leaves within the bud.

Ver'neuil's neuro'ma. A plexiform neuroma.

Vernicose'. (L. *vernix*, varnish.) Having a varnished appearance.

Vern'ier. A scale attached to various instruments used in physics for the estimation of minute fractions of any unit of distance.

Vernin. A nitrogenous base or alkaloid developed by the vital processes of young plants, as vetch clover.

Vernix. (New L., varnish.) Used in the phrase *Vernix caseosa*, the fatty matter covering the skin of the newly born.

Vernonia. A Genus of *Compositæ*, Tribe *Vernoniaceæ*, Sub-tribe *Euvernoniææ*. About 500 species are known. Chiefly found in the tropical areas of America, Asia, and Africa.

V. anthelmint'ica. Affords a kind of wormseed.

V. arbores'cens. Is the fleabane of Jamaica.

V. cine'rea. Is used in India as a febrifuge, in a decoction.

V. fascicu'la'ta. Cathartic.

V. nigritia'na. The root is febrifuge.

V. noveboracen'sis. Cathartic.

Vernonia'ceæ. A Tribe of composite plants characterised by flower-heads with all the flowers similar and tubular.

Vernonia'ceous. Of, or belonging to, the Tribe *Vernoniaceæ*.

Verno'nin. The active principle of the root of *Vernonia nigritiana*. Its action resembles that of digitalis.

Verona brown. A calcined ferruginous earth.

Veronese' green. Chromic hydroxide.

Veronica. A Genus of gamopetalous plants of the Order *Scrophularineæ*, and Tribe *Digitaleæ*, type of the Sub-tribe *Veroniceæ*. About 200 species have been described, widely distributed through the temperate and cold regions. A few are of medicinal repute, especially—

V. beccabun'ga. Antiscorbutic.

V. officina'lis. Diuretic and diaphoretic. The leaves are used to make medicinal tea.

V. parviflo'ra. Is said to be useful in chronic dysentery.

V. peregrina. Has been used to make washes for chronic inflammations due to tubercle.

V. quinquefolia. The root has been employed as a remedy for leprosy.

V. Tournefortii. *Veronica.*

V. virgin'ica, or black-root. Culver's physic. The rhizome and rootlets of a plant formerly called *Leptandra virginica*. Its properties are believed to be due to a glucoside, leptandrin. It is tonic, laxative, and cholagogue. Dose: extract, 1 to 3 grains; fluid extract, 20 minims to 1 drachm.

Ver'pa. The penis.

Ver'pus. Circumcised.

Verric'ulate. Covered with verricules.

Verricule. (L. *verriculum*, a drag-net.) *Entom.* A thick-set tuft of upright parallel hairs.

Verruca. (L., a height, steep place.) A wart. An excrescence which may be of various shapes.

Bot. A wart or sessile gland produced upon various parts of plants.

Zool. A wart-like prominence.

V. acumina'ta. A warty growth which occurs in parts subjected to moisture, such as the genital and anal regions. They may be acuminate, flat, or cauliflower-shaped, and pink, red, or white, and they are highly vascular. The secretion on their surface is very offensive.

V. a'ni. A condyloma about the anus.

V. carno'sa. Condyloma.

V. congen'ita. A wart which appears at, or shortly after, birth.

V. digita'ta. A flat wart characterised by digitations springing from some part of the surface. Usually multiple.

V. febrilis. See *Variola verrucosa*.

V. filifor'mis. A thread-like wart, single or multiple, congenital or acquired, seen on the neck, face, eyelids, and ears, as well as on the body.

V. follicula'ris. Wart-like accumulations round the mouths of the sebaceous follicles. They are composed of dried epithelium and sebaceous matter.

V. formica'ria. A black wart, so called because it gives rise to a sensation like that caused by the bite of an ant.

V. gla'bra. A smooth wart.

V. necrogen'ica. A wart found on the hands of those who continually handle dead bodies or tuberculous tissues. In the latter case it may give rise to a general infection.

V. pen'silis. A hard wart which hangs by a pedicle.

VERRUCARIA—VERTEBRA

V. per'stans. One which has no tendency to disappear.

V. pla'na. A flat, relatively smooth wart.

V. rhagoid'ea. A small wart on the skin resembling a bud of thyme.

V. seba'cea. The type seen in persons suffering from seborrhœa, who also are unclean.

V. seni'lis. *Keratosis pigmentosa.* The flat pigmented wart of old people. It often becomes epitheliomatous. Its seat of election is the genitalia, and less frequently the trunk and hands.

V. subungua'lis. A soft wart growing under the nail.

V. syphilit'ica. A syphilitic condyloma.

V. vene'reæ. Clustered tubercular syphilodermata.

V. vulga'ris. The wart frequently seen on the hands.

Verruca'ria. (L. *verrucaria*, a plant used as a cure for warts.) A Genus of angiocarpous Lichens, typical of the Tribe *Verrucariacei*.

Verrucaria'cei. A Tribe of angiocarpous Lichens.

Verrucaria'ceous. Bot. Appertaining to the Genus *Verrucaria*, or the Tribe *Verrucariacei*.

Verruca'rine. Bot. Resembling the Genus *Verrucaria*, or the Tribe *Verrucariacei*.

Verruca'rioid. See *Verrucariine*.

Verru'cidæ. (New L. *verruca*.) A Family of sessile Cirripedes of the Sub-order *Thoracica*. The shell is unsymmetrical, and the pieces of the operculum though moveable have no depressor muscle. They are found as fossils in the chalk.

Verru'ciform. (L. *verruca*, a wart; *forma*, shape.) Resembling a wart in appearance.

Verrucose'. (L. *verrucosus*.) See *Verrucous*.

Verrucos'itas conjunctivæ. A granular condition of the eyelids.

Verrucos'ity. The condition of having warts.

Verru'cous. (L. *verrucosus*.) Studded with warty tubercles.

Verru'cula. A little wart or wart-like eminence.

Verruculose'. (L. *verrucula*, a little wart.) Covered with small warts or wart-like elevations.

Verru'gas. (Carrion's disease.) *Peruvian wart.* "A narrowly endemic, specific disease of the skin occurring in the Western Andes in Peru. It consists in the development of raised spots, in size from a lentil to a pea, which become cylindric, conic, or hemispheric tumours, in size from a raspberry to an orange. Severe febrile symptoms precede the eruption of the lesions. The consistence is soft and elastic, the epidermis thins over the tumour, cracks, and bleeding, often copious, follows. There may be hundreds of tumours which ulcerate and fungate. Death usually results from profound anæmia. The disease is believed to be due to a special bacillus—Yzqueirde's bacillus."

Versatile. (L. *versatilis*, moveable; F. *versatile*.) Bot. Swinging or turning freely on a support. Specially referring to an anther fixed by the middle on the apex of the filament.

Ornith. Denoting a toe of a bird which can be turned either forwards or backwards.

Entom. Moving freely up and down.

V. dement'ia. The patient is noisy and restless, with a strong inclination to be destructive.

V. head. *Entom.* A head which can be turned freely in all directions.

Versat'ilely. In a versatile manner.

Versatileness. The condition of being versatile.

Versicol'orate. *Entom.* Same as *Versicolour*.

Versicol'orous. See *Versicolour*.

Vers'icolour. (L. *versicolor*, *versare*, to turn; *color*, colour.) Particoloured. Of changing colour.

Versicoloured. See *Versicolour*.

Vers'io. Version.

V. u'teri. An oblique position of the uterus.

Vers'ion. (L. *vertere*, to turn.) Turning. An operation in obstetrics whereby one end of the fœtus is made to take the place till then occupied by the other.

V., abdom'inal. See *V., external*.

V., a'no-pe'l'vic. A variety of pelvic version, the child being seized by the pubic arch through the mother's pelvis.

V., bipo'lar. Version by acting on both poles of the fœtus.

V., cephal'ic. Version done to bring about presentation of the head.

V., combin'ed. Bipolar version, consisting of a combination of internal and external version.

V., exter'nal. Version effected by external manipulation.

V., French meth'od of. Podalic version. The hand is first of all directed to the breech, and then passed along the thigh and leg to the foot, which is pulled down.

V., Ger'man meth'od of. Podalic version in which the hand seeks the fœtal abdomen, and is then directed to the foot.

V., inter'nal. When the hand is passed into the uterus.

V., mix'ed. See *V., combin'ed*.

V., pel'vic. When the fœtus is turned to make the breech present.

V., podal'ic. When one or both feet are brought down.

V., sponta'neous. The process by which a transverse presentation is changed into a longitudinal without any outside interference.

Ver'tebra. (L. *vertebra*, a joint or bone of the spinal column; F. *vertèbre*.) Any segment of the backbone. Generally applied to one of the axial metameres of a Vertebrate, whether osseous, cartilaginous, or fibrous, and including the segments of the skull and trunk. Specifically applied to one of the usually separate bones or cartilages of the spinal column, with its body and various processes. The centrum is the most solid and the axial part of the bone, and carries the neurapophyses, known in human anatomy as the pedicles and the laminae, which meet posteriorly in the spinous process. Each neurapophysis bears a diapophysis, pre-zygapophysis, and post-zygapophysis; the transverse, superior, and inferior articular processes of human anatomy. Other processes may be present, as anapophyses, metapophyses, and parapophyses. All these processes may be wanting, or disguised by ankylosis, as in the sacrum. Some vertebræ of certain animals carry a single median inferior

VERTEBRÆ—VERTEBRATA

process, the hypophysis. The human vertebræ are divided into groups: cervical, dorsal, lumbar, sacral, and coccygeal.

Cranial vertebra. A portion of the skull which has been looked on as homologous with a vertebra proper. There are four such portions:

1. Occipital, or encephalic, nearly corresponding with the compound occipital bone; the basioccipital is the centrum, the exoccipitals are the neurapophyses, and the supra-occipital is the neural spine.

2. Parietal, mesencephalic, or otic, represented by the basisphenoid as centrum, alisphenoids as neurapophyses, and the parietals as neural spines.

3. Frontal, prosencephalic, or ophthalmic, represented by the presphenoid as centrum, the orbitosphenoids as neurapophyses, and the frontal as a neural spine.

4. Nasal, rhinencephalic, or olfactory, whose corresponding parts are found in the vomer, ethmoid, and nasal bones.

The hæmal arches of these hypothetical vertebræ are found in the facial, hyoidean, and branchial arches.

Epenencephalic, frontal, mesencephalic, nasal, occipital, olfactory, ophthalmic, otic, parietal, prosencephalic, rhinencephalic vertebra, see *Cranial vertebra*.

V., bas'ilar. The last lumbar vertebra.

V. denta'ta. See *Axis*.

V., odon'toid. See *Axis*.

V. prom'inens. The vertebra whose spine is most prominent. In man this is the seventh cervical.

V., toothed. See *Axis*.

V., tricus'pid. In lower animals the sixth cervical vertebra.

Ver'tebræ, cau'dal. The vertebræ of the tail.

V., cephal'ic. The bones of the skull when regarded as having all or some of the parts of a typical vertebra.

V. coccygea'les. Coccygeal vertebræ.

V. col'li. Cervical vertebræ.

V., dor'sal. Same as *V., thoracic*.

V., false or fixed. The united portions of the coccyx and sacrum.

V., pel'vic. Same as *V., sacral*.

V., sa'cral. The vertebræ forming the sacrum.

V., thorac'ic. The vertebræ which articulate with ribs.

V., true. The cervical, thoracic, and lumbar vertebræ, not fused in adult life.

V., uni'ted. See *V., false*.

Ver'tebral. (*L. vertebra*, a joint, vertebra; New *L. vertebralis*.) Appertaining to a vertebra. Characteristic of, or peculiar to, a vertebra. Made up of vertebræ. Possessing vertebræ. Referring to the median row of ossicles found in the ray of a star-fish, and forming a solid axis. Indicating the median line of the upper surface.

Also, a Vertebrate. A vertebral artery.

V., ante'rior. See *Vein*.

V. aponeuro'sis. A strong fascia of the dorsal region, stretching from the spines of the vertebræ to the angles of the ribs. It is in the plane of the serratus posticus inferior, and separates the muscles of the shoulder and arm from those which support the spine and head.

V. arch. Neural arch.

V. ar'tery. A branch of the subclavian

artery, which passes through the vertebral canal to the foramen magnum to enter the skull and join with its fellow to form the basilar artery. In man its branches are posterior meningeal, anterior and posterior spinal, and inferior cerebellar arteries.

V. arthrop'athy. A form of tabetic arthropathy, accompanied by changes in the shape of the vertebræ.

V. border of scap'u'la. That one which lies nearer the vertebræ. Morphologically it is the proximal end of the bone.

V. canal'. The canal enclosed by the vertebræ and the intervertebral discs.

V. ca'ries. Tuberculous disease of the bodies of one or more vertebræ. The cause of angular curvature.

V. col'umn. See *Spinal column*.

V. fas'cia. See *V. aponeurosis*.

V. fora'men. See *Foramen*.

V. for'mula. A short way of expressing the number of vertebræ in each of the regions of the spinal column. In man it is C. 7, D. 12, L. 5, S. 5, Cd. 4 = 33.

V. lig'a'ments. Anterior and posterior. The former extend from the anterior edge of the foramen magnum, along the anterior surfaces of the bodies of the vertebræ, to the coccyx; the latter continue the more superficial part of the occipito-axoid ligament along the posterior surface of the bodies to the sacrum, where it ceases to be a definite ligament.

V. mus'cles. Muscles which lie along the trunk in relation with the vertebræ or vertebral segments. In the higher Vertebrates segmentation is not obvious in the more superficial layers of vertebral muscle which extend along the spinal column, but can be traced in the deeper layers, thus described as being the fourth and fifth. Morphologically they are divided into three groups: epaxial, paraxial, and hypaxial.

V. nerve. The *Splanchnics*.

V. nerves. Spinal nerves.

V. os'sicle. One of the ossicles of a ray of a star-fish.

V. plex'us. See *Plexus*.

V. ribs. In man, the two lowest ribs on each side, which are connected with the vertebræ only.

V. sheath. A sheath formed by the prolongation of the meninges.

V. vein. See *Vein*.

Vertebra'lis. The vertebral artery.

Ver'tebrally. By, with, or as regards vertebræ. At or in a vertebra, and not between two vertebræ.

Vertebra'rium. (*L. vertebra*, a joint.) The vertebræ collectively.

Vertebral'erial. Appertaining to a vertebra and an artery. Specifically, the canal in the vertebræ which carries the vertebral artery. It is formed by the pleurapophysis, or rudimentary cervical rib, joining with the diapophysis, or rudimentary transverse process of a cervical vertebra in such a way as to leave a foramen between themselves; the foramina in consecutive vertebræ assist in forming the vertebral'erial canal.

Vertebra'ta. (*L. vertebratus*, jointed.) A Sub-kingdom of the animal kingdom, distinguished by the following features:—bilateral symmetry, absence of external segmentation, with an internal structure showing more or less clearly composition out of longitudinally arranged

segments; complete separation of the main masses of the nervous system from the visceral cavity; dorsal position of the nervous masses; presence of a structure known as the notochord underlying the cerebro-spinal axis in early embryonic life, which is replaced more or less completely in later life by the cartilaginous or bony axis known as the vertebral column; absence or presence of limbs, which, however, are never more in number than four, and are always turned away from the neural aspect of the body.

Vertebrate. (L. *vertebratus*, articulated.) Having a notochord or chorda dorsalis. Having vertebræ. Appertaining to the Vertebrata. In *Bot.*, contracted at intervals, like the vertebral column of animals, with an articulation at each contraction. Any member of the Vertebrata.

Vertebrated. Jointed by means of vertebræ.

Vertebra'tion. The formation of vertebræ; division into segments, like those of the vertebral column.

Vertebrectomy. (L. *vertebra*; Gr. *ἐκτομή*, section.) Excision of a portion of a vertebra.

Vertebro-arte'rial. (L. *vertebra*, vertebra; Gr. *ἀρτηρία*, artery.) Same as *Vertebralarterial*.

Vertebro-bas'ilar. (L. *vertebra*; *βάσις*, base.) Of, or belonging to, vertebræ and the base of the skull.

Vertebro-chon'dral. (L. *vertebra*; Gr. *χονδρός*, cartilage.) Having relation by one end with a vertebra, and by the other with a costal cartilage.

V. ribs. The highest three false ribs of man on each side. They are connected with one another in front by their costal cartilages.

Vertebro-cos'tal. (L. *vertebra*; *costa*, a rib.) Of, or belonging to, vertebræ and ribs.

Vertebrodym'ia. (L. *vertebra*; *duo*, two.) A double monstrosity in which the trunks are united by the vertebræ.

Vertebro-femoral. (L. *vertebra*; *femur*, thigh-bone.) Appertaining to the vertebral column and the femur.

Vertebro-il'iac. (L. *vertebra*; *ilium*.) Appertaining to the vertebræ and the ilium.

V. lig'ament. *Ilio-lumbar ligament*.

Vertebro'sa. See *Vertebrata*.

Vertebro-sa'cral. (L. *vertebra*; *sacrum*.) Appertaining to the sacral and antecedent vertebræ.

V. angle. In man, the promontory of the sacrum.

Vertebro-spinal veins. Those veins which connect plexuses of the spinal canal with the vertebral vein.

Vertebro-sternal. (L. *vertebra*; Gr. *στέρνον*, sternum.) Extending, as a rib, from the spinal column to the sternum.

V. ribs. True ribs. Those which are connected with the vertebral column and the sternum by means of their costal cartilages.

Vertebrium. The head of the femur.

Vertex. (L.) The top of the head.

V. cor'dis. The apex of the heart.

V. cu'bital. The olecranon.

V. pal'pitans. The fontanelle.

V. presenta'tion. *Obstet.* When the vertex presents itself to the examining finger in plane of the superior strait of the pelvis.

Vertib'ulum. (L.) The rounded head of a bone, as of the humerus. A joint.

Vert'ical. Relating to the *Vertex*.

Zool. and *Anat.* Pertaining to the *Vertex*.

V. an'thers. Anthers attached by the base and erect in position.

V. diam'eter of the cra'nium. An imaginary line from the basion to the bregma.

V. fis'sure. *Anat.* Precentral sulcus.

V. in'dex. *Craniom.* The ratio of the greatest height of the skull to its greatest length.

V. leaves. *Bot.* Leaves with the blade in a perpendicular plane.

V. mar'gin. *Entom.* The posterior boundary of the vertex where it adjoins the occiput.

V. me'dian plane. The vertical section which passes through the middle of a body.

V. or'bit. *Entom.* That part of the orbit or border of the compound eye which adjoins the vertex.

V. sul'cus. *Anat.* Same as *Precentral sulcus*.

Verticil. (L. *verticillus*, dim. of *vertex*, a whirl.) *Bot.* A whorl. Applied to organs that are disposed in a circle or ring round an axis.

Zoot. A set of parts arranged in a ring and radiating from a centre.

Verticil'ium gra'phi. A fungus found at times in the external auditory meatus. It causes inflammation and the formation of pus.

Verticillas'ter. (L. *verticillus*, dim. of *vertex*, a whirl.) *Bot.* A term applied to the pairs of opposite cymes occurring in the axils of the leaves of mint, which at first sight resemble whorls.

Verticillas'trate. *Bot.* Bearing or arranged in verticillasters.

Verticill'ate. (L. *verticillus*, a whirl.) Arranged in a verticil, or having organs thus arranged.

V. anten'næ. *Entom.* Antennæ whose joints are whorled with verticils of hairs.

V. leaves. *Bot.* Same as *Stellate leaves*.

V.-pilose'. Possessing hairs which are arranged in whorls.

Verticill'ated. See *Verticillate*.

Verticill'ately. In a verticillate manner.

Verticilla'tion. The formation of a verticil. The presence of verticils.

Verticil'lus. A verticil.

Vertico-men'tal. (L. *vertex*, vertex; *mentum*, chin.) Appertaining to the vertex and the chin.

Verticor'dia. (L. *vertere*, to turn; *cor*, the heart.) A Genus of plants of the Order *Myrtaceæ* and Tribe *Chamelanciae*. There are forty species, all Australian.

Conch. The typical Genus of *Verticordiidae*.

Verticordi'idæ. A Family of bivalve Molluscs, typified by the Genus *Verticordia*.

Ver'tico-transverse' circum'ference of the skull. Measured variously. 1. A line which starts from one auricular foramen, passes through the bregma to the other auricular foramen, and thence passes behind the styloid processes to the point from which it started.

2. The line which passes from one auricular foramen to the other over the top of the skull at right angles to the auriculo-infraorbital plane.

Vertic'ula. (L.) Articulation.

VERTIGINIDÆ—VESICAL

Vertigin'idæ. A Family of pulmonate Gastropods typified by the Genus *Vertigo*.

Vertigin'ous. (L. *vertigo*.) Affected with giddiness.

Vertigin'ously. In a vertiginous manner.

Vertig'inousness. The condition of being vertiginous.

Vertigo. (L. *vertigo*, dizziness.) A condition in which the individual or the things about him appear to be whirling round.

Subjective vertigo is the name applied to that state in which the patient appears to himself to be whirling.

Objective vertigo is the name applied to that state in which the things about the patient appear to be whirling round him.

V. ab au're læ'so. *Ménière's disease*.

V., arterio-vas'cular. Vertigo which occurs in valvular disease of the heart, especially aortic incompetence and arterio-sclerosis.

V., au'ral. *Ménière's disease*. The prominent symptoms are vertigo, vomiting, progressive deafness, and ringing in the ears. Believed to be a disease of the labyrinth.

V., bil'ious. Vertigo due to derangement of the functions of the liver.

V., cer'ebral. Vertigo caused by cerebral disorder.

V., epilep'tic. Vertigo due to, or associated with, epilepsy.

V., essen'tial. Vertigo for which no cause can be found.

V., gas'tric. Vertigo depending on some derangement of the stomach.

V. gyro'sa. See *Vertigo*.

V., horizon'tal. Vertigo which appears when the person affected assumes the horizontal position.

V., labyrin'thine. *Ménière's disease*.

V., laryn'geal. A name given to a group of symptoms appearing in connection with certain nervous diseases, or, at times, without any obvious cause. It is accompanied by pain, spasm of the larynx, and possibly syncope.

V., lat'eral. Vertigo due to rapidly passing similar objects.

V., mechan'ical. Vertigo caused by mechanical movements.

V., Ménière's. *Ménière's disease*.

V., neurasthen'ic. Subjective vertigo found in neurasthenia.

V., objec'tive. Vertigo in which objects seem to the patient to move.

V., ocular. Caused by the partial paralysis of an ocular muscle. The patient makes extra efforts to fix objects, which leads him to misjudge their positions, and so causes unsteadiness of gait, which gives rise, in its turn, to subjective vertigo.

V., par'alyzing. Gerlier's disease. Occurs in the canton of Geneva. Characterised by attacks of paretic weakness of the extremities, ptosis, great depression, with no loss of consciousness. It only attacks men.

V., ro'tatory. Vertigo in which the patient or the objects about him seem to rotate.

V., smok'er's. Vertigo occurring in smokers of mature age. It may have arterio-sclerosis as its cause.

V., subjective. Vertigo in which the patient seems to himself to move.

V., tenebrico'sa. Vertigo accompanied by impaired sight and headache.

V., ver'tical. Vertigo caused by looking downward from or upward to a height.

Ver'u. (L.) A spit.

V. monta'num. A longitudinal rounded projection in the floor of the prostatic portion of the urethra.

Veru'gas. See *Verrugas*.

Ver'vain. (L. *verbena*, a green bough.) A plant of the Genus *Verbena*, primarily *V. officinalis*, found in warm and temperate regions in both hemispheres.

V. mal'low. A species of mallow.

Ver'veine. *Vervain*.

Vesa'lian. Associated with Vesalius, an Italian anatomist, as foramen Vesalii of the sphenoid bone.

Vesa'lius, fora'men of. A minute hole, not always present, in the root of the pterygoid process of the sphenoid bone.

V., gland of. A pulmonary or bronchial mucous gland.

V., lig'ament of. Poupart's ligament.

V., vein of. A vein which forms communication between the pterygoid plexus of veins and the cavernous sinus.

Vesa'nia. (L. *vesania*, madness.) Disease of the mind.

Vesi'ca. (L., the bladder.) In *Anat.*, a bladder, especially the urinary bladder. The permanently pervious part of the allantoic sac.

In *Bot.*, same as *Vesicle*.

Trigonum vesicæ. A triangular area at the base of the bladder, limited behind by a line joining the openings of the ureters, and having its anterior angle at the opening of the bladder into the urethra.

V. billa'ria. The gall-bladder.

V. cor'dis. Pericardium.

V. fellea. The gall-bladder.

V. intestina'lis. *Vesicula umbilicalis*.

V. prostat'ica. The prostatic vesicle.

V. saccula'ta. A sacculated bladder; inequality of the urinary bladder.

Vesi'cæ unguino'sæ ten'dinum. *Bursæ mucosæ*.

Ves'ical. Appertaining to a vesica.

V. ar'teries. Branches of the anterior division of the internal iliac artery distributed to the bladder. There are three on each side, of which the inferior supplies the prostate, vesiculæ seminales, and lower part of the bladder; the middle a branch of the superior vesiculæ seminales and base of the bladder; and the superior, that part of the foetal hypogastric artery which remains pervious, and supplies the fundus and body of the bladder.

V. cal'culus. Stone in the bladder.

V. gan'glia. See *Spermatic ganglia*.

V. lig'aments. The anterior and lateral true ligaments of the bladder.

V. plex'us. The nervous network on the bladder, deriving fibres from the hypogastric plexus, and the second (?), third, and fourth sacral nerves.

V. plex'us of veins. Veins which collect blood from the wall of the bladder, and open into the internal iliac vein.

V. sac'culus. A local dilatation of the bladder wall.

V. sphinc'ter. Muscular tissue which surrounds the neck of the bladder.

V. syno'vial mem'brane. See *Bursal synovial membrane*.

V. tri'angle. The *Trigonum vesicæ*. Its

VESICANT—VESICO-UMBILICAL

base is a line joining the openings of the ureters, and its apex is at the orifice of the urethra.

V. u'vula. Uvula of the bladder, a prominence situated at the inferior angle of the trigonum.

V. veins. Veins collecting the blood from the bladder.

Ves'icant. Able to produce a blister. A blister.

Vesica'ria. (L. *vesicaria*.) A Genus of cruciferous plants of the Tribe Alyssinæ.

Vesica'rium. Ovary.

Ves'icate. To raise blisters.

Ves'icating collo'dion. Collodion containing cantharides in solution, used as an external application to produce a blister.

Vesica'tion. The formation of blisters.

Ves'icatory. Having the power of producing blisters. A substance applied to the skin to cause a blister.

Ves'icle. (L. *vesicula*, a little blister.) Any small bladder-like structure. A little sac.

In *Anat.* and *Zool.* A generic term of wide application to various hollow structures, otherwise of very different character, and indicated by another and qualifying word.

In *Pathol.* A circumscribed elevation of the epidermis containing serous fluid.

In *Bot.* A small bladder, or bladder-like air cavity. A minute hollow sphere, or bubble of water or other liquid.

V., acous'tic. Same as *Auditory vesicle*.

V., allanto'ic. The allantois; a hollow outgrowth from the posterior part of the primitive gut.

V., au'ditory. See *Auditory*.

V., blastoder'mic. See *Blastodermic*.

V., blood. A blood-corpuscle.

V.s, cer'ebral. The three embryonic membranous expansions of the brain corresponding to the fore-brain, mid-brain, and hind brain. From these vesicles the whole of the adult brain is developed.

V.s, encephal'ic. The divisions of the anterior extremity of the neural tube; they are formed early in fetal life, and are the predecessors of the segments of the brain.

V., ger'minal. The nucleus of the ovum.

V. gland. Same as *Acinus*.

V., Graafian. A cavity in the ovary which contains an ovum, which when the ovum is ripe is ruptured to discharge it into the oviduct or peritoneal cavity.

V., Kupp'fer's. A small cavity seen near the posterior end in teleostean fishes.

V., malig'nant. Anthrax.

V., marginal. Specialised sensory organs found at the margin of the umbilica in certain polyps.

V., oc'ular. A protrusion in the fœtus which is the first indication of the eye.

V. of Ba'er. The ovum of the Graafian vesicle.

V. of Balbia'ni. See *Yolk nucleus*.

V.s of Na'both. Same as *Nabothian follicles*.

V. of Pur'kinje. The germinal vesicle.

V., olfact'ory. The primitive vesicle which develops into the olfactory lobe.

V., ophthal'mic. See *Ocular vesicle*.

V., op'tic. A diverticulum from each side of the primary anterior vesicle of the brain, which forms the basis of the future eye.

V., ot'ic. A pear-shaped closed sac of the

embryonic inner ear, formed by the fusion of the lips of the auditory pit, and giving rise by a diverticulum to the recessus vestibuli.

V., ova'rian. In *Biol.* The female gonophore of a polyp.

V., pitu'itary. The primitive vesicle which develops into the hypophysis.

V.s, pol'ar. Two masses of nuclear substance which detach themselves from the nucleus during karyokinesis. Their significance is not definitely known.

V., prostat'ic. A cul-de-sac placed at the highest part of the crista galli of the urethra. Also called *Uterus masculinus* and *Sinus pocularis*.

V., rhinencephal'ic. A hollow protrusion of the prosencephalon of the embryo to form the rhinencephalon.

V., sem'inal. Two receptacles of membranous character situated at the base of the bladder, one on each side, for the reception and detention of the semen. They converge from behind forwards, and finally each one forms with the vas deferens of its own side a common ejaculatory duct.

V., se'rous. The false amnion.

V., umbil'ical. The yolk-cavity of a Vertebrate when it has been formed into a sac hanging from the umbilicus. Its cavity is continuous with the cavity of the intestine of the embryo. It is the seat of the earliest blood circulation, and the agent for carrying on the fœtal nutrition in animals which do not develop an allantois. It is superseded by the placenta in animals which develop that organ.

Ves'ico-abdom'inal. (L. *vesica*, bladder; *abdomen*, abdomen.) Appertaining to the abdomen and urinary bladder.

Ves'icocele. (L. *vesica*, bladder; Gr. κήλη, a tumour.) Hernia of the bladder. Cystocele.

Ves'ico-cerv'ical. (L. *vesica*, bladder; *cervix*, neck.) Appertaining to the bladder and the cervix uteri.

V. fis'tula. A fistula between the bladder and the neck of the uterus.

Vesicol'ysis. (L. *vesica*, bladder; Gr. κλύσις, drench.) The injection of fluid into the bladder.

Ves'ico-prostat'ic. (L. *vesica*, bladder; Gr. προστάτης, prostate.) Appertaining to the bladder and prostate.

V. artery. The inferior vesical artery.

Ves'ico-pu'bic. (L. *vesica*, bladder; *pubes*, pubes.) Appertaining to the urinary bladder and the pubes.

Ves'ico-rect'al. (L. *vesica*, bladder; *rectum*, the rectum.) Appertaining to the bladder and rectum.

Ves'ico-spinal. (L. *vesica*, bladder; *spina*, the spine.) Appertaining to the bladder and spinal cord.

V. cen'tre. A nerve-centre which influences the action of the bladder, and is situated in the lumbar portion of the spinal cord.

Vesicot'omy. (L. *vesica*, bladder; Gr. τομή, section.) The operation of incising a bladder; generally applied to operations on the urinary bladder.

Ves'ico-umbil'ical. (L. *vesica*, bladder; *umbilicus*, the navel.) Appertaining to the bladder and the navel.

V. lig'aments. The urachus and the obliterated hypogastric arteries, one on each side.

VESICO-URACHAL—VESICULO-TUBULAR

Vesico-u'rachal. (L. *vesica*, bladder; Gr. *ὀρχῶς*, urachus.) Appertaining to the bladder and urachus.

Vesico-u'terine. (L. *vesica*, bladder; *uterus*, the uterus.) Appertaining to the bladder and uterus.

V. lig'aments. Two semilunar folds which pass between the posterior surface of the neck of the bladder and the neck of the uterus.

V. pouch. The dip between the uterus and bladder formed by the peritoneum.

Vesico-u'tero-vag'inal. (L.) Appertaining to the bladder, uterus, and vagina.

Vesico-vag'inal. (L. *vesica*, bladder; *vagina*, sheath.) Appertaining to the bladder and vagina.

V. fist'ula. A communication between the bladder and vagina of pathological origin, and generally due to prolonged pressure by the foetal head during labour.

V. plex'us. The lower portion of the pelvic nervous plexus with which the spinal nerves are more particularly connected.

Vesic'ula. (L.) A vesicle.

V. al'ba. Umbilical vesicle.

V. blastoder'mica. See *Germinal vesicle*.

V. chy'li. *Receptaculum chyli*.

V. fel'lea. The gall-bladder.

V. fel'lis. Gall-bladder.

V. gangrenes'cens. *Anthrax*.

V. Graafia'næ. The vesicles in the outer layer and stroma of the ovary, each of which contains an ovum.

V. Na'bothi. The small glandular bodies within the mouth of the uterus.

V. om'phalo-mesenter'ica. Umbilical vesicle.

V. prostat'icus. The prostatic vesicle. *Uterus masculinus*, *Sinus pocularis*.

V. semina'lēs. The seminal vesicle (which see).

V. sero'sa. The false amnion.

V. umbilica'lis. A small rounded sac found between the amnion and chorion, and connected by the vitelline pedicle with the lumen of the intestinal canal.

Vesic'ular. (L. *vesicula*, a vesicle.) Appertaining to, or having the form or nature of, a vesicle. Consisting of vesicles.

Bot. Consisting of, or appertaining to, vesicles.

V. ascid'ian pol'y'ps. *Vesiculariidae*.

V. breath'ing. The sound heard on auscultating a healthy chest while breathing is carried on in the usual way.

V. col'umn of the spi'nal cord. The ganglionic column, composed of a series of nerve-cells.

V. col'umn, poste'rior. Clarke's column in the spinal cord.

V. col'umns. Columns of Clarke in the spinal cord.

V. cyl'inder. *Clarke's column*.

V. ecze'ma. An eruption of small vesicles on the skin with some surrounding inflammation and itching.

V. emphyse'ma. A chronic condition of the lungs in which the alveoli are dilated and their walls destroyed, with consequent loss of elasticity on the part of the lungs. There is a hyper-resonant note all over the chest, which is "barrel-shaped," with impaired mobility of the ribs, râles, and a feeble inspiratory sound. A

line of distended veins can be seen following the lower margin of the ribs.

V. erysip'elas. Erysipelas associated with the formation of vesicles.

V. fe'ver. *Pemphigus*.

V. germ. The part of a sperm-cell which does not become converted into spermatozoa.

V. glands. *Bot.* Glands containing a volatile oil placed beneath the epidermis of a leaf.

V. lay'er. The layer of brain matter containing the ganglionic cells.

V. mur'mur, nor'mal. The sound heard when a healthy chest is auscultated.

V. qual'ity. The quality of the sound of the vesicular respiratory murmur.

V. râle. The sound made by air breaking down or passing over obstructions to its passage in the bronchi and bronchioles. There are many degrees of size, intensity, and pitch recognised.

V. res'onance. The percussion note of the chest.

V. respi'ratory mur'mur. The murmur heard during auscultation of the lungs in healthy persons breathing normally.

V. stomati'tis. Aphthous stomatitis.

V. syno'vial mem'brane. A bursa.

Vesicula'ria. The typical Genus of *Vesiculariidae*.

Vesiculari'idæ. A Family of *Ctenostomata* of the Sub-order *Gymnolemata* of *Ectoprocta*, one of the primary divisions of *Polyzoa*. The cells arise from a common tube, and their mouths are terminal, with a setose fringe for closing them.

Vesic'ularly. In a vesicular manner.

Vesicula'ta. (New L. *vesiculatus*.) Polyps of the Sub-order *Campanularida*, Order *Hydrida*, Sub-class *Hydroida*. A division of Radiolarians.

Vesic'ulate. (New L. *vesiculatus*; L. *vesicula*, a little bladder.) Having a vesicle or vesicles.

Also, to become vesicular.

Vesiculation. The formation of vesicles. The condition of having vesicles.

Ves'icule. Same as *Vesicle*.

Vesiculif'erous. (L. *vesicula*, a vesicle; *ferre*, to bear.) Producing or bearing vesicles.

Vesic'uliform. (L. *vesicula*, a vesicle; *forma*, shape.) Having the appearance or characters of a vesicle.

Vesiculi'tis. (L. *vesicula*, a vesicle; Gr. *-itis*, inflammation.) Inflammation of the seminal vesicles.

Vesic'ulo-bron'chial. (L. *vesicula*, vesicle; *βρόγχος*, a bronchus.) Combining vesicular and bronchial qualities. Said of the vesicular murmur.

Vesic'ulo-cav'ernous. (L. *vesicula*, vesicle; *caverna*, a cave.) Combining vesicular and cavernous qualities. Said of the vesicular murmur.

Vesiculo'sa. (L. *vesiculosus*, full of vesicles.) In *Entom.*, a Family of dipterous Insects, the vesicular flies.

Vesiculose'. (L. *vesiculosus*, having bladders.) Full of vesicles.

Vesic'ulo-tu'bular. (L. *vesicula*, a vesicle; *tubulus*, a small tube.) Having both vesicular and tubular qualities; applied to respiration in which the normal vesicular sound is heard with an added tubular quality.

VESICULO-TYMPANITIC—VESTIGIAL

Vesic'ulo-tympanit'ic. (*L. vesicula*, vesicle; Gr. *τυμπάνον*, a drum.) Having both vesicular and tympanitic qualities; applied to a percussion note.

Vesic'ulous. See *Vesiculose*.

Vesic'ulus. Same as *Vesicle*.

Ves'pa. A Genus of Hymenoptera, containing the Family *Vespidæ*.

Vespa'gus. (*L. vespa*, a wasp.) A follicular and suppurative inflammation of the hairy part of the scalp.

Vespertilio. (*L.*, a bat.) A Linnæan Genus of Mammals containing six species, and corresponding to the modern Order *Chiroptera*.

Vespertilion'idæ. A Family of the Order *Chiroptera*, containing about 160 species of small insectivorous bats. The nose has not leaf-like appendages. The tail is elongated, and enclosed in a large interfemoral membrane. The dentition nearly approaches that of the insectivorous mammals, the molar teeth having pointed eminences or cusps, and the incisors being of small size.

Vespertilion'inæ. The principal Sub-family of *Vespertilionidæ*, containing *Vespertilio* and about six other genera.

Vespertilionine. Resembling one of the Genus *Vespertilio*. Appertaining to the Sub-family *Vespertilioninæ*.

Ves'pertine. (*L. vesper*, evening.) In *Biol.*, appertaining to the evening.

Vesperugo. (*L. vesperugo*, a bat.) The most extensive Genus of bats of the Family *Vespertilionidæ* and Sub-family *Vespertilioninæ*.

Ves'piary. (*L. vespa*, a wasp.) In *Biol.*, a wasp's nest.

Ves'pidæ. A Family of hymenopterous Insects, typified by the Genus *Vespa*.

Ves'piform. (*L. vespa*, a wasp; *forma*, form.) Resembling a wasp.

Ves'sel. (*L. vasulum*, dim. of *vas*, a vase.) A utensil for holding liquors. In *Anat.* and *Zool.*, any duct or canal in which a fluid is secreted, contained, or carried. In *Bot.*, a row of cells which have lost their intervening partitions, and consequently form a continuous canal.

V., absorbent. The lymphatics and lac-teals.

V., acous'tic. The external auditory meatus.

V., cap'illary. One of the vessels in the capillary area between an artery and a vein.

V., car'diac. One of the vessels carrying blood to or from the heart wall.

V., chylif'erous. Absorbent vessels extending from the intestinal wall to the thoracic duct.

V.s, cor'onary. (*L. corona*, a crown.) A term applied to vessels which surround a part or organ.

V., dor'sal. A vessel situated on the dorsum; specifically applied to the vessels of the dorsum of the foot and penis.

V., glu'teal. A vessel situated in the region of the buttocks.

V.s, hæmorrhoi'dal. Varicose veins of the rectum.

V.s, intercos'tal. The vessels carrying blood to and from the intercostal spaces.

V.s, lac'teal. Vessels which carry away the chyle formed in the intestinal canal.

V., lactif'erous. In *Biol.*, containing latex or milky juice.

V.s, lymphat'ic. A system of minute

ramifying vessels which extend to nearly every part of the body, and form the principal part of the absorbent system. Afferent lymphatics carry the lymph to the lymphatic glands, from which the efferent lymphatics carry it away.

V., umbil'ical. A vessel of the umbilical cord.

Vestib'ular. Appertaining to a vestibule, in any sense.

V. artery. A branch of the internal auditory artery, distributed in the form of a minute capillary network in the substance of the membranous labyrinth.

V. mem'brane. The *Membrane of Reissner*.

V. nerve. A branch of the auditory nerve distributed to the vestibule.

V. pas'sage. The *Scala vestibuli*.

V. sac'cule. The smaller of two sacs found in the vestibule of the internal ear.

Vestib'ulate. In *Anat.* and *Zool.*, having a vestibule, or formed into a vestibule.

Ves'tibule. (*L. vestibulum*, an entrance court.) The common cavity between the semi-circular canals and the cochlea of the internal ear; it is prevented from opening into the middle ear by the membrane which closes the fenestra ovalis. A triangular space between the labia minora of the human female, which contains the orifice of the urethra. A part of the left ventricle of the heart which adjoins the root of the aorta. A depression in the body-wall of some infusorians leading to the oral and sometimes to the anal aperture.

V., aor'tic. The space formed by the left ventricle adjoining the root of the aorta.

V., com'mon s'inus of. See *Utricle*.

V., mem'branous. The membranous sac within the osseous vestibule, divided into a larger part, the utricle, and a smaller saccule.

V. of the ear. The cavity of the internal ear which forms the entrance to the cochlea.

V. of the lar'ynx. The part of the laryngeal cavity which lies above the false vocal cords.

V. of the mouth. The cavity of the mouth outside of the teeth.

V. of the nose. The external nostrils.

V. of the phar'ynx. The passage from the mouth to the pharynx, which is bounded laterally by the pillars of the fauces.

V. of the ven'tricles. The entrance to the vestibules of the brain.

V., os'seous. The body cavity in the petrosal bone enclosing the proötic, epiotic, and opisthotic bones, and containing the membranous vestibule.

V., pyramid of. A hollow bony eminence, in which is the stapedius muscle.

V., u'tricle of. See *Utricle*.

Vestib'ulum. (*L.*) In *Anat.* and *Zool.*, a vestibule. *Aqueductus vestibuli*. The aqueduct of the vestibule of the ear, which begins near the common orifice of the two semicircular canals, and opens on the posterior surface of the petrosal bone.

Scala vestibuli. The canal bounded by the osseous lamina and the membrane of Reissner.

Ves'tige. A trace or remnant of something formerly present or more fully developed.

Vestig'ial. (*L. vestigium*.) Of the nature of a vestige. Rudimentary.

V. fold. A projection of the pericardium

over the root of the left lung, caused by a cord which is the remains of the ductus Cuvieri.

V. mus'cle. A muscle which is scarcely of any use in man and is poorly developed, while actively functional in lower animals.

Vestig'ary. (L. *vestigium*.) *Vestigial*.

Vestig'ium. A vestige. A trace, such as the pit which marks the site of the closed foramen ovale in the interauricular septum. A part which has no evident use in man, though retaining important functions in lower animals.

Vestimentum. (L.) Clothing.

Ves'titure. In *Zool.*, hairs, &c., covering a surface.

Vestit'us. (L.) Any substance used as a covering for the body.

Vesu'vianite. A mineral occurring in brown or green crystals, first found on Mount Vesuvius. The crystals are at times yellow or blue. It is a silicate of aluminium, calcium, and iron.

Vesu'vin. Bismarck brown. Triamidoazobenzol. A stain used in histology.

V. salt. Native potassium sulphate found on Mount Vesuvius.

Ve'ta. Mountain sickness. Its symptoms are nausea, throbbing headache, and vertigo. It attacks persons who ascend to great altitudes.

Vetch. (M. E. *veche*; L. *vicia*.) A plant of the Genus *Vicia*; a tare.

Vetch'ling. *Lathyrus*, a botanical genus.

Vetera'na. *Rubeola*.

Veterina'rian. One who treats diseases in domestic animals.

Veterinary. (L. *veterinarius*, appertaining to beasts of burden.) Appertaining to domestic animals; specifically applied to the surgical or medical treatment of domestic animals.

Veternoma'nia. (L. *veternus*, lethargic; Gr. *μανία*, mania.) Typhomania.

Veternosit'as. See *Coma vigil*.

Veter'nus. Lethargy.

Vetive'ria. A grass, *Andropogon muricatus* of South Asia. From it a highly fragrant volatile oil is obtained, and its infusion is refrigerant.

Veton'ica. *Betonica officinalis*.

Vetula. Sacrum.

Vety'ver. See *Vetiveria*.

Veuve. Any bird of the Genus *Vidua* or the Sub-family *Viduinæ*.

Vew. *Taxus baccata*.

Vexilla. (L.) Plural of *Vexillum*.

Vexillar. (L. *vexillarius*, a standard-bearer.) In *Bot.*, same as *Vexillary*.

In *Ornith.*, appertaining to the web or vexillum of a feather.

Vexillary. (L. *vexillarius*, a standard-bearer.) In *Biol.*, applied to the form of imbricate æstivation in which the other petals are enwrapped by the vexillum, as seen in the corolla of a pea.

Vexillate. (L. *vexillum*, a standard.) In *Biol.*, having vexilla.

Vexil'um. (L.) In *Bot.*, the large posterior petal of a papilionaceous plant. It is outside, and enwraps the others in the bud.

In *Ornith.*, the web or vane of a feather, also both webs, together with the rachis on which they are borne.

Via. (L.) A way.

V. natura'les. The natural passages.

Viability. (L. *viabilis*, viable.) Ability

to live; applied to the condition of a child at the time of birth.

Vi'able. (L. *viabilis*, viable.) Capable of life, or likely to live. Applied to a child born in a state of development which will permit it to live independent of its mother.

Vieæ chyliferæ. Chyliferous vessels.

Vial. (Φιάλη.) A small glass bottle.

Vi'and. Food.

Vibex. (L., the mark of a blow.) In *Pathol.*, a large purple spot appearing under the skin in certain malignant fevers. A linear hæmorrhage beneath or into the skin.

Vibrac'ular. Appertaining to the vibracula of a polyzoon.

Vibracula'rium. (N. L.) Same as *Vibraculum*.

Vibrac'ulum. (L. *vibrare*, to shake.) One of the long filamentous appendages of the ectocysts of Polyzoa, usually articulated with short dilated processes of the ectocyst. They are constantly waving to and fro.

Vibra'men. (L.) Oscillation.

Vi'brans. Oscillatory.

Vibratile. (F. *vibratile*.) Able to vibrate, or capable of being made to vibrate.

V. anten'næ. In *Entom.*, antennæ which are slender, and constantly quivering as the insect moves.

V. cell. A ciliated cell.

V. epithe'lium. Epithelium composed of ciliated cells.

V. mem'brane. A membrane capable of being thrown into vibrations, as the membrana tympani.

Vibratil'ity. The condition of being vibratile.

Vibrating. (L. *vibrare*, to shake.) Shaking.

Vibra'tio. (L.) Oscillation.

V. cardi'aca. Palpitation.

V. cor'dis. Palpitation.

Vibra'tion. (L. *vibratio*.) In *Med.*, same as *Fremitus*.

In *Massage*, a modification of the kneading movement which consists in making the alternate pressures and relaxations with very great rapidity.

V., pec'toral. Vocal fremitus.

V., tac'tile. Vocal fremitus.

V., tus'sive. The vibration of the chest wall caused by coughing.

Vibra'tional. Appertaining to the nature of a vibration.

Vibrative. See *Consonants*.

Vibratory. An epithet applied to the pain of some kinds of neuralgia, because it seems to the patient to vibrate amongst the nerves.

V.mo'tion. Ciliary motion. The waving movement by which cilia cause fluids to flow towards an outlet.

Vibra'tus. (L.) Oscillation.

Vibrio. (N. L. *vibrare*, to vibrate.) A Genus of Schizomycetes, regarded by some as being identical with *Spirillum*. They have cylindrical, curved, or spirally wound cells having at each end a cilium. A member of this genus. A motile bacterium. An animalcule like a bacterium.

V. butyri'cea. *Bacillus butyricus*.

V. pro'teus. Said to be the comma bacillus found in fecal matter.

V. ru'gula. Found in tartar from the teeth and in putrefying fluids.

VIBRION—VIENNA

V. sep'ticus. Found in septic and pyæmic pus.

V. ser'pens. A bacillus found in putrefying fluids.

V. un'dula. A bacillus found in putrefying fluids containing mucus.

Vibrion. (N. L. *vibrio*; F. *vibrion*.) A microscopic motile filament numerously developed in organic infusions.

Vibrion'idæ. A Family of microscopic organisms named from the Genus *Vibrio*. It includes some minute nematoid worms which were confounded with microbes.

Vibrionine. Appertaining to *Vibrios*.

Vibris'sa. (L. *vibrissa*, a hair from the nostrils.) One of the long, stiff, tactile bristles which grow upon the upper lip and elsewhere about the mouth of some of the Mammalia. One of the hairs which grow in the nostrils.

Viburnic acid. An acid identical with valerianic acid, obtained from the bark of *Viburnum prunifolium*.

Viburn'in. (L. *viburnum*, the wayfaring-tree.) A precipitate from a tincture of *Viburnum opulus*. Antispasmodic, tonic, expectorant. Unofficial. Dose, 1 to 3 grains.

Viburnum. (L., the wayfaring-tree.) A Genus of gamopetalous plants of the Order Caprifoliaceæ and Tribe Sambuceæ. There are about eighty species, chiefly inhabiting the Northern Hemisphere and the Andes.

V. denta'tum. Diuretic. American.

V. edu'lë. Used as is the cranberry. Hudson Bay Territory.

V. læviga'tum. *Ilex paraguensis*.

V. lanta'na. Vesicant.

V. lenta'go. Sweet *viburnum*. Used as an antiperiodic.

V. obova'tum. Antiperiodic. Southern North America.

V. op'ulus. Is useful in uterine pains. North America. Antispasmodic.

V. prunifolium. Black haw. The bark is used. It contains viburnic acid, identical with valerianic acid. It is astringent and antispasmodic. Useful in the nervous diseases of pregnancy and in uterine disorders.

V., sloe-leaved. *V. prunifolium*.

V., sweet. *V. lentago*.

V. tinus. Laurestinus. The seeds are purgative.

Vica'rious. (L. *vicarius*, that which takes another's place.) *Physiol.* Indicating the transfer of the functions of an organ to another organ.

V. men'strua'tion. A discharge of blood from some part of the body other than the uterus at the menstrual period, while the discharge from the uterus is absent.

Vice. Defect, fault, or deformity.

V. of conforma'tion. Defect of structure.

Vi'chy salt. (F.) A compound salt intended to take the place of the saline constituents of the Grande Grille spring at Vichy, in France. It is recommended as diuretic, alterative, and antiarthritic.

V. wa'ter. A mildly laxative and antacid mineral water. It contains as its chief constituent sodium bicarbonate.

Vicia. (L., a vetch.) A Genus of leguminous plants, the vetches, of the Sub-order *Papilionaceæ*, type of the Tribe *Vicieæ*. About two hundred species have been described, of

which about half are doubtful members of the genus. They are found in the north temperate regions and South America.

V. ervil'ia. *Ervum*.

V. fa'bia. Garden bean. Order *Leguminosæ*.

Vicie'æ. A Tribe of leguminous plants of the Sub-order *Papilionaceæ*. Six genera.

Vicinitrac'tus. (L. *vicinus*, near; *traho*, to draw.) Erysipelas.

Vicinit'raha. Erysipelas.

Vicis'situde. (L. *vicis*, change.) Constant change.

Vicq d'Azyr, bun'dle of. A thick bundle of nerve-fibres arising from the more posterior of the two median nuclei of the corpus mammillare of the brain, and extending to the anterior tubercle of the thalamus.

V., cen'tra ovalia of. The white matter of the brain seen at the level of the corpus callosum in a horizontal section.

V.'s opera'tion. Incision of the cricothyroid membrane.

V.'s white line. A thin stratum of white matter between the grey strata in the occipital regions of the brain.

Victoria blue. A stain used in histological examinations.

V. green. *Malachite green*.

Victoria'lis fœmin'ea. *Gladiolus vulgaris*.

V. lon'ga. *Allium victoriale*.

V. rotun'da. *Gladiolus vulgaris*.

Vicu'na. See *Alpaca*.

Videstrel'da. A Genus of *Viduinæ* containing the whidah birds. The only species is the *V. regia* of South Africa.

Vid'ian. (L. *Vidius*, the Latinised name of *Guidi*, Italian anatomist.) Specifically applied in anatomy to certain parts.

V. artery. A branch of the internal maxillary artery which passes by the Vidian canal to the Eustachian tube and top of the larynx.

V. canal'. A canal in the sphenoid bone at the base of the internal pterygoid plate, which passes from the foramen lacerum to the sphenomaxillary fossa.

V. fora'men. The anterior opening of the Vidian canal. The canal itself.

V. nerve. The trunk formed by the union of the great deep petrosal and great superficial petrosal nerves. It joins Meckel's ganglion.

Vid'ua. (L. *vidua*, a widow.) An African Genus of *Ploceidæ*, giving name to the *Viduinæ*.

Vidu'inæ. A Sub-family of *Ploceidæ*, named from the Genus *Vidua*.

Vie'irin. Bitter principle from the bark of *Remigia Vellozii* of Brazil. Used for the same purposes as is quinine.

Vien'na caustic. A mixture of caustic potash and quicklime.

V. draught. Compound infusion of senna.

V. green. *Schweinfurth green*.

V. meth'od. A method of examining the spinal cord from in front in an autopsy. The body of the fifth lumbar vertebra is cut away, and then the pedicles of the vertebræ are successively divided from below upwards and the bodies lifted off.

V. mix'ture. Consists of ether 3 parts, chloroform 1 part.

V. paste. See *Vienna caustic*.
V. powder. Potassa and lime.
Vieus'sens, ganglion of. *Solar plexus*.

V., loop of. *Ansa Vieussenii*.
V., valve of. See *Valve*.
Vig'il. (L. *vigilia*, a watching.) Wakefulness.

V., coma. A comatose state in which the patient lies with open eyes unconscious and delirious. Seen in severe attacks of disease, e. g. typhus fever.

Vigilance. *Insomnia*.
Vigilant'ia. *Insomnia*.
Vigil'ia nim'ia. (L.) *Coma vigil*.
Vigil'ium. (L.) Absence of sleep.
Vig'na. A Genus of leguminous plants of the Tribe *Phaseoleæ* and Sub-tribe *Euphaseoleæ*.

Vig'nal, bacill'us of. An inclusive name for several different bacilli found in the saliva of healthy persons.

Vig'nite. A magnetic iron ore.
Vigo plaster. One containing lead plaster, yellow wax, resin, olibanum, sal ammoniac, bdellium, myrrh, saffron, mercury, turpentine, liquid storax, and oil of lavender.

V.'s powder. Red oxide of mercury.
Villar'sia. A Genus of gamopetalous plants of the Order *Gentianaceæ* and Tribe *Menyantheæ*. Some contain a bitter principle used in medicine.

Villatte's liq'uor. A preparation used as an injection for carious bones. It contains sulphate of zinc and sulphate of copper, of each 15 grains, solution of subacetate of lead $\frac{1}{2}$ drachm, dilute acetic acid $3\frac{1}{2}$ drachms.

Vill'i. The hair-like tufts or projections on a mucous membrane which give to it its velvety appearance.

V. of intes'tine. Small vascular processes projecting from the surface of the mucous membrane of the small intestine throughout its whole extent. They are the chief agents of absorption of the substances absorbed by the small intestine.

V. of the cho'ron. Vascular fringes growing from the edge of the vitelline membrane, and eventually covering the entire chorion.

V. pericardi'aci. Villi on the serous membrane lining the pericardium and heart.

V. peritonea'lës. Villi on the free surface of the peritoneum.

V. plura'lës. Villi on the parietal pleura.

V., syno'vial. Small processes projecting from the fringes of synovial membranes.

Villif'erous. (L. *villi*, hairs; *fero*, I bear.) Having hairs or villi.

Villiform. (L. *villus*, shaggy; *forma*, form.) Like villi in appearance or to the touch. Having the character of a set of villi.

Villiplacental. (L. *villus*, shaggy; Gr. *πλακοῦς*, a cake.) Applied to indeciduate Mammals having a villous placenta.

Villit'is. (L. *villus*, villous; Gr. *itis*, inflammation.) Inflammation of the soft part of a horse's hoof.

Vill'oid. (New L. *villus*, Gr. *εἶδος*, like.) In *Bot.*, appertaining to, or resembling, fine hairs or villi.

Vill'ose', or Vill'ous. Appertaining to villi. Covered with long soft shaggy hairs.

Villos'ity. (L. *villosus*, shaggy.) Shagginess resulting from villiform processes, as of an organic membrane.

Vill'ous. (L. *villosus*, shaggy.) Having villi or villiform processes. Covered with fine hairs of woolly substance.

V. can'cer. Cancer in mucous membrane when covered by villous growth.

V. growths. *Papillomata*.

Vill'us. (L., a shaggy hair.) 1. In *Anat.*, one of the small vascular projections from the inner surface of the mucous membrane of the intestine. It consists essentially of a central lacteal vessel, with a vein and artery enclosed in epithelium.

2. A vascular tuft of the chorion.

3. In *Biol.*, one of the long, straight, soft hairs occasionally found on fruit, flowers, and other parts of plants.

Vilmorin'ia. A Genus of leguminous plants of the Tribe *Galegeæ* and Sub-tribe *Robinieæ*.

Vim'en. (L. *vimen*, a pliant twig.) In *Bot.*, a long and flexible shoot of a plant.

Vime'neous. (L. *vimen*, a pliant twig.) In *Biol.*, producing pliant twigs, such as those used for wicker-work.

Vim'inal. (L. *viminalis*.) Appertaining to twigs or shoots.

Vimina'ria. (L. *vimen*, a twig.) A Genus of leguminous plants of the Tribe *Podalyrieæ*.

Vina medica'ta. Wine containing one or more medicines. They are made by digesting medicinal substances in wine. Many of them have been replaced by tinctures, which are more reliable in that they do not decompose and are of standard strength.

Vina'ceous. (L. *vinaceus*.) Appertaining to wine.

Vinasse'. (F.) Potash obtained from the residue of a wine-press. The residuum in a still after distillation.

Vinatico. A laurineous tree, *Phæbe indica*, or its wood. Native in Madeira, Canaries, and the Azores.

Vinatoxi'cum. (L. *vincere*, to conquer; *toxicum*, poison.) The official name of the swallowwort, *Cynanchum vinatoxicum*. Root and leaves have emetic properties.

Vin'ca. A Genus of gamopetalous plants of the Order *Apocynaceæ*, Tribe *Plumerieæ*, and Sub-tribe *Euplumerieæ*. The periwinkles. The leaves are astringent and antigalactic.

Vinctu'ra. (L. *vincio*, to bind). *Fascia*.

Vin'cula ten'dinum. Small fasciculi of connective tissue running from a tendon to its sheath, or uniting tendons one to another, as in the extensor communis digitorum, or bridging over tendons and holding them down to the bones they pass over.

Vincula'ria. (L. *vinculum*, a band.) The typical Genus of *Vinculariideæ*.

Vinculari'idæ. A Family of gymnoëmatous Polyzoa, whose typical Genus is *Vincularia*.

Vin'culum. (L. *vinculum*, a band.) In *Anat.*, a tendinous or ligamentous band uniting certain parts.

V. accesso'ria ten'dinum. Small folds of synovial membrane between the flexor tendons and the bones of the fingers. The ligamenta brevia pass between the tendons at their insertions and the lower part of the phalanx immediately above, while the ligamenta longa join the tendons at a higher level, and are slender and less constant.

VINE—VINY

V. ca'nium. *Frænum penis.*
V. lin'guæ. *Frænum linguæ.*
V. præpu'til. *Frænum penis.*
V. subda'vum. A small band of yellow elastic tissue in the ligamentum breve of the deep flexor tendons of the hand, stretching from the tendon to the head of the second phalanx.
V. umbilica'lë. Umbilical cord.
V. vasculo'sa. *Vincula tendinum.*
Vine. (L. *vinea*, a vine.) A climbing plant with a woody stem, the fruit of which is known as the grape. Genus *Vitis*. Any plant with a long slender stem that trails on the ground, or climbs and supports itself by winding round a fixed object, or by seizing any fixed thing with its tendrils.
V. bow'er. *Clematis viticella.*
V. disease'. Disease of the grape-vine, especially that due to the Phylloxera.
V.-dress'er. The larva of *Ampelophaga myron*.
V. fret'ter. Any aphid or plant louse which feeds on the grape-vine.
V. gall. A swelling on the stem of the vine made by the larva of *Ampelogypter Sessotris*.
V. louse. The grape Phylloxera.
V. slug. The larva of the vine saw-fly.
V. tie. *Ampelodesma tenax*, a grass of the Mediterranean region.
Vine'al. (L. *vinealis*, appertaining to the vine.) Relating to vines.
Vine-black. Same as *Blue-black*.
Vin'egar. (Mid. E. *vinegre*; F. *vinaigre*.) Dilute and impure acetic acid, obtained by the acetous fermentation of inferior wines, or an infusion of malt which has previously undergone vinous fermentation. In *Pharm.*, a solution of a medicinal substance in acetic acid or vinegar.
V., arom'atic. Vinegar mixed with aromatic oils.
V., beer. Sp. gr. 1021 to 1025. Contains dissolved dextrin, maltose, soluble albuminoids, &c., derived from malt, and from 3 to 6 per cent. of acetic acid.
V., beet'root, or sug'ar vin'egar. Prepared from saccharine and amylaceous materials by conversion with dilute acid, followed by fermentation and acetification. Contains dextrose and dextrin, and often calcium sulphate.
V. canthar'idis. *Acetum cantharidis.*
V., ci'der. Contains from 3.5 to 6 per cent. of acetic acid. Sp. gr. 1.013 to 1.015.
V. eel. A nematoid worm of the Family *Anguillulidæ*, commonly found in vinegar and sour paste.
V. fly. A dipterous insect of the Family *Drosophilidæ*, which is attracted by fermentation.
V., Marseilles'. *Acetum aromaticum.*
V., moth'er of. A gelatinous deposit found in vinegar, formed by the filaments of *Mycoderma aceti*, and obtaining its name from its power of converting saccharine solutions into vinegar.
V. of carbol'ic ac'id. Carbollic acid 1, acetic acid 20, water 979 parts.
V. of col'chicum. *Acetum colchici.*
V. of lead. A liquor formed by dissolving litharge in vinegar.
V. of mea'dow saffron. *Acetum colchici.*
V. of rose. Rose petals macerated in vinegar.

V. of squills. *Acetum aromaticum.*
V. plant. *Micrococcus aceti*, which produces acetous fermentation by oxidising the alcohol in liquors into acetic acid. It exists in two forms: anaërobic, which produces mother of vinegar; and aërobic, which produces flowers of vinegar.
V., pyrolig'neous. Wood vinegar.
V., rad'ical. Glacial acetic acid.
V., spir'it. Contains from 3 to 8 per cent. of acetic acid.
V., toilet. Aromatic vinegar.
V. tree. The staghorn sumac, *Rus typhina*, whose fruit is used to increase the sourness of vinegar.
V., wood. An impure vinegar formed by the distillation of wood.
Vin'egarish. Like vinegar.
Vin'egary. Having the character of vinegar.
Vinette'. Wine of barberries, used in finishing some kinds of leather.
Vine'wort. A plant of the Order *Vitaceæ*.
Vini, spir'itus, Gallici. Brandy.
Vin'ic. (L. *vinum*, wine.) Appertaining to, or obtained from, wine.
V. ac'ids. A series of acids obtained by the action of acids on alcohol.
Vin'ny. Mouldy.
Vinolen'ta. Delirium or an apoplectic fit due to drunkenness.
Vinolen'tia. Drunkenness.
Vinometer. (L. *vinum*, wine; Gr. μέτρον, measure.) A contrivance for measuring the alcoholic strength of wine.
Vinum. (L.) In *Pharm.*, a solution of a medicinal substance in wine. The fermented juice of fruits, especially of grapes. White wines are made from the pulp; red wines from the pulp and skins, which give the colouring matter. Each contains from 10 to 14 per cent. of alcohol.
V. absinthia'tum. Wormwood wine, made by macerating *Artemisia absinthiatum* in white wine.
V. adus'tum. Brandy.
V. al'bum for'tus. White wine made from *V. album* by fortifying the latter until it contains from 20 to 25 per cent. of alcohol.
V. antimo'ni. Wine of antimony. Dose, 10 to 30 minims.
V. arom'aticum. Consists of strong white wine 94 per cent., with 1 per cent. each of lavender, origanum, peppermint, rosemary, sage, and wormwood.
V. colchici rad'icis. Wine of colchicum root. Dose, 5 to 20 minims.
V. col'chicisem'inis. Wine of colchicum seed. Dose, 10 to 30 minims.
V. ergo'tæ. Wine of ergot. Dose, 1 to 3 fluid drachms.
V. fer'ri ama'rum. Bitter wine of iron. Dose, 1 to 3 fluid drachms.
V. fer'ri citra'tis. Wine of ferric citrate. Dose, 1 to 2 fluid drachms.
V. ipecacuan'hæ. Wine of ipecacuanha. Dose, 5 to 10 minims.
V. o'pii. 1.3 to 1.5 grms. morphia in 100 c.c. Dose, 5 to 15 minims.
V. porten'së. Port wine fortified to 25 to 30 per cent. alcohol.
V. xer'icum. Sherry wine fortified to 25 per cent. alcohol.
Vin'y. Appertaining to vines.

Vinyl. (L. *vinum*, wine.) The compound univalent radical CH_2CH .

V. bromide. Ethylene bromide, a powerful cardiac poison.

Viola. (L. *viola*, violet.) A Genus of plants, type of the Order *Violariæ* and Tribe *Violeæ*. Includes violets and pansies. About 200 species are known to exist; a larger number have been described. They are widely distributed over the world.

V. canina. Has an emetic and cathartic root.

V. odora'ta. Has fragrant flowers, which are made into a lenitive syrup.

V. peda'ta. Demulcent and expectorant.

V. tric'olor. The heart's-ease pansy. It contains an alkaloid, violin, which has emetic and cathartic properties.

Viola'ceæ. (L. *violaceus*, relating to a violet.) Same as *Violariæ*.

Viola'ceous. Of a violet colour. Appertaining to the *Violariæ*.

Violaniline. Nigrosine, a blue-black aniline dye useful in staining sections of brain tissue.

Violari'æ. An Order of polypetalous plants of the Series *Thalamifloræ* and Cohort *Parietales*. They are tropical shrubs except the members of the Genus *Viola*. There are 270 species, classed in twenty-five genera and four tribes. Their roots often possess emetic properties.

Violate. (L. *violatus*; *violare*, to treat with violence.) To treat roughly. To rape.

Viola'tion. (L. *violatio*, an injury.) The act of violating. Ravishment.

Violative. Tending to cause violation.

Violator. (L. *violator*, one who does violence.) One who injures. A ravisher.

Violé. (L. *violare*, to violate.) To violate.

Violeæ. A Tribe of plants of the Order *Violariæ*, characterised by an irregular corolla with the lower petal unlike the others. Eight genera are known.

Violet. (L. *viola*; F. *violette*.) A plant of the Genus *Viola*. A class of colours. One of the small or violet butterflies of *Lycæna*, *Polyommatus*, and allied genera.

V., acid. A coal-tar colour. The sodium salt of dimethyl-rosanilin-trisulphonic acid.

V., aniline. *Mauve*.

V. blind'ness. A form of colour-blindness in which there is failure to distinguish violet.

V. bloom. *Solanum dulcamara*.

V. car'mine. A brilliant bluish-purple pigment obtained from the roots of the alkanet, *Alkana tinctoria*.

V. cress. A Spanish cruciferous plant, *Inopsidium acaule*.

V., dog. *Viola canina*.

V. ear. A humming-bird of the Genus *Petaspheora*.

V., gentian. A violet aniline dye, used for staining in histological and bacteriological work.

V. mail. See *Violet shell*.

V., meth'yl. A dye used for the same purposes as *V. gentian*.

V., naph'thalene. Same as *Naphthamén*.

V., Par'ls. Methyl violet.

V., Per'kins'. Indisin.

V. powder. Starch powdered and mixed with orris powder or other perfume.

V. quartz. Amethyst.

V., rosan'ilin. A coal-tar colour, composed of the hydrochlorides of mono- and diphenyl-rosanilin.

V. sapph'ire. The oriental amethyst.

V. shell. A Gastropod of the Family *Ianthinidæ*.

V. tip. An American butterfly, *Polygonia interrogationis*.

V. wood. Myall wood. The wood of a leguminous tree of Guiana, *Copaifera bracteata*.

Violin. An emetic substance contained in the sweet-scented violet, *Viola odorata*. Has not been obtained pure. Said to be identical with emetin obtained from *ipecacuanha*.

Violin' player's cramp. An occupation neurosis of violin players.

Violine. (L. *viola*, a violet colour.) A blue precipitate obtained by treating aniline with sulphuric acid and peroxide of lead.

Vior'na. *Clematis vitalba*.

Viper. (L. *vipera*, contr. for *vivipara*, bringing forth alive.) A venomous snake of the Family *Viperidæ*. Any snake that is venomous, or supposed to be so.

Vipera. A Genus of snakes which give their name to the *Viperidæ*. Restricted to a small Genus of the Family *Viperidæ*, of which the type is the common European viper.

Vipera'ria. *Aristolochia serpentaria*.

Viperess. A female viper.

Viper-fish. A fish of the Family *Chauliodontidæ* and Genus *Chauliodus*. Found in the Mediterranean and Atlantic.

Viper-grass. *Scorronera*.

Viperidæ. The true vipers. Sub-order *Solenoglypha*, Order *Ophidia*. Have no pit between the eye and the nose, which distinguishes them from the *Crotolidæ*. All the *Viperidæ* are venomous, and nearly all are inhabitants of the Old World. Seven genera are included in the family.

Viperiform. (L. *vipera*, a viper; *forma*, form.) Having some of the characteristics of a viper.

Viperi'na. (L. *vipera*, a viper.) A name applied with no specific classificatory meaning to venomous serpents. More exactly, one of two Sub-orders of *Ophidia*, *Solenoglypha*.

V. virginia'na. *Aristolochia serpentaria*.

Viperine. (L. *viperinus*.) Appertaining to the viper.

Also, a principle contained in the poison of snakes.

V. snake. A member of the *Viperina*.

Viper's dance. *St. Vitus's dance*, *Chorea*.

Viragin'ity. (L. *virgo*, a virgin.) A form of sexual perversion in which the male is essentially effeminate in his feelings and tastes.

Viragint. (L. *virgo*, a virgin.) A male inclined to viraginity.

Vira'go. A woman with a beard.

Vir'chow's method of opening the heart. This is done with the heart *in situ*. The first incision is made in the right ventricle along the ventricular ridge, from near the auriculo-ventricular groove to near the apex. The second incision opens the right auricle between the openings of the *venæ cavæ*. The left auricle is opened by an incision which passes from the left superior pulmonary vein to the

auriculo-ventricular ring. The left ventricle is opened by an incision which begins behind just short of its base, and passes to a point just short of its apex. The heart is now to be removed by placing the left index finger and thumb respectively in the left and right ventricle and raising the apex. The vessels entering and leaving the heart are divided at a sufficient distance from the heart. The heart is now held in the position similar to that which it occupied in the body, and the following incisions are made. One from the lower end of the incision in the right ventricle towards the pulmonary artery. One from the apex, through the anterior wall of the heart close to the septum through the aorta. Two other subsidiary incisions are generally made to join the incision in the right and left auricles respectively with those in the right and left ventricles.

V.'s the'ory of cel'lular pathol'ogy. Teaches that every cell is derived from a cell.

V.'s the'ory of inflam'mation. There is an increased nutritive and reproductive activity of the cells at the seat of inflammation, which gives rise to the formation of a large number of exudation cells at the expense of the cells of the damaged tissue. Hyperæmia is a subordinate process.

Vir'chow-Hold'er's an'gle. The angle formed by the meeting of two lines, one passing through the most prominent part of the superior alveolar process and the naso-frontal suture, the other through the upper border of the external auditory meatus and the lower border of the orbit.

Vir'chow-Rob'in lymph spaces. The spaces between the adventitia of the cerebral blood-vessels and the coat lying immediately within it.

Virent. Green, fresh.

Vireo. (L. *vireo*, a greenfinch.) A Genus of oscine or singing passerine birds, type of the Family *Vireonidæ*. Any bird of this family.

Vireon'idæ. A family of dentirolal oscine passerine birds. Related to the *Laniidæ*.

Vireonine. Appertaining to the *Vireonidæ*.

Virès. Strength.

Vires'cence. Greenness.

Bot. Unusual greenness of organs which are, as a rule, of some other colour.

Vires'cent. Becoming green.

Vir'ga. The penis.

V. ce'rea. A bougie.

V. cer'ebr'i. Pineal gland.

Vir'gate. (L. *virga*, a rod.) Straight and slender like a wand.

Virgil'ia. A Genus of leguminous trees of the Tribe *Sophoreæ*. One species only is known, *V. capensis*.

Vir'gin. (L. *virgo*, a maid.) A woman who has no carnal knowledge of a man. A man who has preserved his chastity. The state of virginity. Chaste.

A female insect which lays eggs that hatch though there has been no impregnation by the male for several generations. *Parthenogenesis*. A female animal which has not had young or has not copulated.

V. born. Zool. Born of an unfecundated female by a process of internal gemmation.

Vir'gin's bow'er, com'mon. *Clematis vitalba*.

V.'s bow'er, sweet-scent'ed. *Clematis flammula*.

V.'s bow'er, up'right. *Clematis recta*.

V. clay. Clay that has never been moulded or fired.

V.'s cow'slip. Popular name of *Pulmonaria officinalis*.

V. genera'tion. *Parthenogenesis*.

V. hon'ey. The honey of young bees who have never swarmed.

V. mer'cury. Native mercury.

V.'s milk. The white fluid produced when a balsam is mixed with water. Subacetate of lead precipitated by water.

V. oil. That which flows on the first application of pressure.

V. scam'mony. The finest quality of scammony.

V.'s this'tle. The milk thistle, *Silybum Marianum*.

Vir'ginal. (L. *virgo*, a virgin.) Appertaining to virginity.

V. genera'tion. *Parthenogenesis*.

V. mem'brane. The hymen.

Vir'ginal'e claus'trum. The hymen.

Vir'gin'ia cow'slip. *Mertensia virginica*.

V. creep'er. An American creeper, *Ampelopsis quinquefolia*.

V. dog'wood. *Cornus florida*.

V. lung'wort. *Mertensia virginica*.

V. poke. *Phytolacca decandra*.

V. snake-root. The root of the *Aristolochia serpentaria* and the *Aristolochia reticulata*.

V. stone'crop. *Penthorum sedoides*.

V. thyme. *Pycnanthemum linifolium*.

Vir'gin'itas. Virginity.

V. deflora'ta. Defloration.

Vir'gin'ity. The condition of one who has never had sexual intercourse.

Vir'go. (L.) Virgin.

V. au'rea. *Solidago virgaurea*.

Vir'gula. (L.) Penis.

Vir'gula'ria. (L. *virgula*, a little rod.) The typical Genus of the Family *Virgularidæ*.

Vir'gulari'idæ. Polyps of the Family *Pennatulidæ*, Division Alcyonaria of Actinozoa, typified by the Genus *Virgularia*.

Vir'gultum. (L.) A young twig.

Vir'id. (L. *viridis*, green.) Green.

Vir'ide æ'ris. Subacetate of copper.

V. monta'num. Copper.

Vir'ides'cence. Having the characteristic of greenish.

Vir'ides'cent. (L. *viridis*, green.) Greenish.

Vir'id'ia. See *Veratrum viride*.

Vir'idig'enous. (L. *viridis*, green; Gr. *γεννᾶν*, to produce.) Producing a green tinge. In Zool., having reference to certain microscopic vegetable organisms which, when swallowed by the oyster or clam, give it a greenish colour.

Vir'idine. An alkaloid which is obtained from *Veratrum viride*, believed to be the same as jeryine.

Vir'id'ity. (L. *viridis*, green.) The state of being green. In Zool., specifically the greenish tinge of certain molluscs which have fed on viridigenous organisms.

Vir'idoflo'rous. (L. *viridis*, green; *flor* a flower.) Having green flowers.

VIRILE—VISCERAL

Virile. (L. *vir*, a man; *virilis*, manly.) Appertaining to a man, as opposed to a woman. Appertaining to procreation.

V. member. The penis.

Viriles'cence. The condition of a woman who is old, and has certain of the characteristics of a man.

Viriles'cent. Assuming some of the characters of the male.

Viril'ia. (L., neut. pl. of *virilis*.) The male organs of generation.

Viril'itas. Adult age.

Virilita'tis ino'pia. (L.) See *Impotence*.

Viril'ity. (L. *virilitas*, manhood.) The condition of one of the male sex who has arrived at the age of puberty, and acquired strength and the ability to procreate. The power of procreation. Masculine action or appearance.

Viripotent. (L. *viripotens*, fit for a man.) Marriageable. Fit for a husband.

Virola tallow. A concrete fat from the seeds of *Myristica sebifera*.

Viro'sus. (L.) *Virous*.

Virous. (L. *virosus*, poisonous.) Possessing poisonous properties.

Virtual far point in hypermetrop'ia. The imaginary point situated behind the retina, at which rays would meet if prolonged. Designated by the sign — R.

V. fo'cus. The point at which rays of light, which are divergent after passing through a lens, would meet if prolonged backward. The focus of a concave lens is virtual.

V. im'age. The image formed at the virtual focus.

Virtue. Faculty.

Virtus. (L.) Faculty. Property.

V. for'matrix. Plastic force.

V. plas'tica. Plastic force.

Virulence. (L. *virulentus*, full of poison.) The quality of being virulent. The specific quality of any virus.

Virulency. See *Virulence*.

Virulent. (L. *virulentus*, full of poison.) Full of virus.

V. bu'bo. A suppurating bubo accompanying chancre.

Viruliferous. (L. *virulentus*, full of poison; *ferre*, to bear.) Containing a specific virus.

Vírus. (L.) A poison or micro-organism which causes a morbid process or disease.

V., atten'uated. Virus deprived of some of its pathogenic quality by culture and modified by inoculation experiments, so that when inoculated into another person or animal it preserves the same from attack or from the full violence of the disease.

V., hu'manised. Vaccine lymph taken from the vaccine pustule of a human being.

V., spec'ific. The characteristic poison of a disease.

Vis. (L.) Force or energy.

V. a fron'te. Energy exerted from in front. Resistance.

V. a ter'go. Force applied from behind.

V. adhæsi'o'nis. The force of cohesion.

V. attracti'o'nis. The force of cohesion.

V. auc'ta. Sthenia.

V. conserva'trix. The healing power of nature.

V. elas'tica. Elasticity.

V. essentia'lis. Plastic force.

V. formati'va. The energy of nature as manifested in the formation of new tissue to replace that which has been destroyed.

V. genera'trix. Generative power.

V. imminu'ta. Asthenia.

V. iner'tiæ. The force by which a body at rest tends to remain at rest, or if in motion to remain in motion.

V. insi'ta. Irritability.

V. medica'trix. Same as *V. conserva'trix*.

V. medica'trix natu'ræ. The power inherent in an animal or vegetable by which it repairs injuries done to itself, or frees itself from disease.

V. menta'lis. Mental power.

V. metabol'ica. Metabolic force.

V. mor'tua. A term which includes the mechanical properties of membrane which are independent of the vital properties, *e.g.* flexibility, extensibility, &c.

V. vi'tæ. Vital force.

Vis'age. (L. *visus*, a look.) The face.

Vis'cæ. A Tribe of apetalous plants of the Order *Loranthaceæ*.

Vis'cera. Pl. of *viscus*.

Vis'cerad. Toward the viscera. *Ventral*.

Vis'ceral. Appertaining to the viscera; possessing the characteristics of a viscus; forming or containing viscera; splanchnic, abdominal, ventral.

V. anat'omy. See *Splanchnotomy*.

V. arch'es. Thickenings of the walls of the embryo in the region of the neck, transversely placed, and meeting ultimately in front in the middle line. They are branchial, hyoidean, mandibular, and maxillary, of which the last three are persistent, and modified into hyoidean, mandibular, and maxillary parts. The first persists in branchiate Vertebrates only as gill arches; in higher Vertebrates a small part persists as the greater cornu of the hyoid bone.

V. au'ra. Symptoms preceding an epileptic attack, which consist of various sensations referred to the abdominal region.

V. cav'ity. The splanchnic cavity formed by the splitting of the mesoblast between the splanchnopleure and somatopleure.

V. clefts. Pharyngeal slits.

V. crisi's. Violent spasmodic pain which occurs in one of the abdominal viscera in locomotor ataxia.

V. hypochondri'asis. Mental condition in which there is great dread of some affection of the abdominal organs occurring.

V. inver'sion. Same as *Transposition of viscera*.

V. lam'inæ. One of the thickened masses of mesoblast seen on each side of the notochord, which forms ultimately the splanchnopleure and somatopleure.

V. nerv'ous sys'tem. The sympathetic system of nerves.

V. plates. The laterally placed parts of the mesoderm of the embryo.

V. pleu'ra. The layer of pleura on the lung.

V. por'tion of the pericard'ium. That portion of the serous layer of the pericardium which lines the heart and the commencement of the great vessels at the base of the heart.

V. skel'eton. The skeleton of the visceral arches.

VISCERALGIA—VISMIA

V. slit. Same as *Visceral cleft*.

V. tube. The *Visceral cavity*.

Visceral'gia. (New L. *viscera*; Gr. ἄλγος, pain.) Neuralgia of one of the abdominal viscera, especially of the intestine.

Visceral'is. Splanchnic.

Vis'cerate. To disembowel.

Viscericard'iac. (L. *viscera*, viscera; Gr. καρδία, heart.) Appertaining to the viscericardium.

Viscericard'ium. (L. *viscera*, viscera; Gr. καρδία, heart.) The visceripericardial sac of a Cephalopod.

Viscerimo'tor. (L. *viscera*, viscera; motor, mover.) Conveying motor influences to any viscus, as either a cerebro-spinal or sympathetic nerve.

Visceripericar'dial. (L. *viscera*, viscera; Gr. περί, around; καρδία, heart.) Common to the pericardium and other viscera.

Vis'cero-mo'tor. See *Viscerimotor*.

Vis'cero-pericar'dial. See *Visceripericardial*.

Vis'cero-pleu'ral. (L. *viscera*; pleura.) See *Pleuro-visceral*.

Vis'cero-skel'etal. (L. *viscera*; skeleton.) Appertaining to the visceral skeleton, or to that portion of the framework of the body which is hypaxially placed.

Vis'cid. (Low L. *viscidus*, clammy.) Sticky. Covered by a tenacious coating.

Viscid'ity. The condition of being viscid. Stickiness.

Vis'cin. (L. *viscum*, birdlime.) Birdlime. A mucilaginous extract of the mistletoe, *Viscum flavesens*, *Gentiana lutea*, and other plants.

Vis'cold. Relating to a viscid or sticky substance; also to mistletoe.

Viscom'eter. (L. *viscum*, birdlime; μέτρον, measure.) See *Viscosimeter*.

Viscom'etry. The measurement of the viscosity of liquids.

Viscon'ia. *Physconia*.

Vis'cose. (L. *viscum*, birdlime.) A gummy secretion or product of the *Micrococcus viscosus*.

Viscosim'eter. (Low L. *viscosus*, viscous; Gr. μέτρον, measure.) An apparatus for measuring the viscosity of various liquids.

Viscosimet'ric. Appertaining to a viscosimeter.

Viscos'ity. The condition of being viscous. A viscous or glutinous body.

Vis'cous. (L. *viscum*, birdlime.) Glutinous, sticky, clammy.

Vis'cousness. The condition of being viscous.

Vis'cum. A Genus of parasitic plants, type of the Tribe *Visceæ* of the Order *Loranthaceæ*. About thirty species are known, scattered throughout the temperate and warm regions of the Old World. The leaves and stems are used, and from them is extracted mucilage, viscin, and various other extractives. In large doses it induces vomiting and purging.

V. album. Mistletoe.

V. capen'se. South African parasitic shrub growing on the stems of several species of *Rhus* and *Euclea*.

V. flaves'cens. Is said to have properties similar to those of digitalis.

Vis'cus. (L. *viscus*, an internal organ of the body.) An organ which is contained in the

head, thorax, abdomen, or pelvis. Generally used in the plural to mean the entrails.

V., transposi'tion of. See *Transposition*.

Visib'ility. (L. *visibilitas*; *videre*, to see.) Capability of being seen.

Vis'io. Pupil. Vision.

Vis'ion. (L. *visio*, the act or sense of seeing.) The act of seeing external objects. The faculty by which the size, luminosity, shape, and colour of an object are perceived. That which is seen.

V., binoc'ular. Vision effected by both eyes co-operating in such a way that the two impressions made on the retinae are perceived as one.

V., cen'tral. The formation of the retinal image on the macula lutea.

V., cen'tre of. See *Point of vision*.

V., chroma'tic. A condition in which objects appear to have a colour or an iridescent edge, which they have not.

V., day. *Night-blindness*.

V., dichro'mic. A condition in which only two of the primary colours can be perceived.

V., direct'. When the image falls on the macula.

V., dou'ble. The condition in which two images of the same object are perceived. *Diplopia*.

V., erect'. The faculty of seeing things right side up.

V., field of. The extent of indirect vision with fixation of the visual axis upon one point.

V. for form. Acuity of vision with white light.

V., indirect' or periph'eral. Perception of the formation of an image at some part of the retina other than the macula lutea.

V., irides'cent. A condition in which objects seem to have a border of changing colours.

V., lim'it of distinct'. The smallest or greatest distance from which an image of an object can be thrown on the retina.

V., night. A condition in which objects are seen more distinctly at night.

V., periph'eral. When the image is formed on a peripheral part of the retina, and not on the macula lutea.

V., persis'tence of. The continuance of a visual impression after the cessation of the cause which gave rise to it.

V., point of. The position from which a thing is observed or from which anything is represented to be observed.

V., qual'itative. Vision in which there is ability to distinguish objects.

V., quan'titative. Vision limited to mere perception of light.

V., reflect'ed. Vision by reflected light, e. g. by that from a mirror.

V., refract'ed. Vision performed by means of rays refracted or deviated by passing through media of different densities.

V., solid. Vision in which the three dimensions of space are perceived.

Vis'ionless. Sightless.

Visita'tion. (Low L. *visitatio*, a sight, appearance.) Zool. A migration into a place or country.

Vis'mia. A Genus of plants, type of the Tribe *Vismicæ* in the Order *Hypericineæ*.

V. longifolia. Native of Brazil. A purgative resin is obtained from it.

Vismieæ. A Tribe of polypetalous plants of the Order *Hypericineæ*.

Vis'nomy. *Physiognomy*.

Visor'ius. Visual.

Vis'ory. Having the power of vision.

Visual. (Low L. *visualis*, pertaining to sight.) Relating to sight. Produced by a look.

V. acu'ity. The faculty the eye possesses of perceiving the shape and form of objects.

V. amne'sia. Vision in which the object seen originates a corresponding impression in the intellectual centres.

V. an'gle. The angle formed at the meeting-point of two lines drawn from the ends of an object to the first nodal point of the eye.

V. axis. See *Axis*.

V. cen'tres, prim'ary. The lateral corpus geniculatum, the pulvinar, and anterior corpus quadrigeminum, in whose cells the fibres of the optic tract take origin.

V. field. The portion of the external world which is visible in any position of an eye.

V. line. See *Axis, visual*.

V. mem'ory. Memory by objects seen in the mind's eye of the insane.

V. plane. The plane which includes the visual line of both eyes.

V. purple. A pigment found in the retina.

V. rays. Lines of light imagined to come from an object to the eye perceiving it.

V. white. The final product of the chemical change produced by the action of light on the visual purple.

V. yellow. An intermediate product of chemical change from visual purple to visual white.

Visualisa'tion. See *Visualization*.

Visualise. To make visible. To make that which is perceived by the mind visible to the eye. To call up a mental image with a distinctness approaching actual vision.

Visualiser. One who visualises.

Visual'ity. (Low L. *visualitas*, the faculty of sight.) The condition of being visual. A sight.

Visualiza'tion. The act, process, or result of visualising.

Visually. In a visual manner.

Vis'us. (L. *videre*, to see.) Vision.

V. ac'r'ior. *Nyctalopia*.

V. ac'ris. Sharpness of vision.

V. bre'vior. *Myopia*.

V. colora'tus. *Chromopsia*.

V. debil'itas. *Asthenopsia*.

V. deco'lor. *Achromatopsia*.

V. dimidia'tus. Synonym of *Hemiopia*.

V. diur'nus. Synonym of *Hemeralopia*.

V. duplica'tus. *Diplopia*.

V. habetu'do. *Amblyopia*.

V. ju'venum. *Myopia*.

V. lon'gior. *Presbyopia*.

V. lu'cidus. *Photopsia*.

V. nebulo'sus. Impairment of sight due to nebulae in one or more of the media.

V. noctur'nus. *Nyctalopia*.

V. reticula'tus. The sight of a person afflicted with *Musca volitantes* in the form of networks.

V. sen'ilis. Synonym of *Presbyopia*.

Vita. (L.) Life.

Vita'ceæ. An Order of polypetalous

plants of the Series *Discifloræ* and Cohort *Celas-trales*. About 435 species are known.

Vital. (L. *vitalis*, appertaining to life.) Appertaining to life. Necessary to life. That on which the existence of life immediately depends. Viable.

V. air. An old name for oxygen gas.

V. capaci'ty of the lungs. The volume of air which can be expelled from the lungs after the fullest inspiration which can be made.

V. cen'tre. *Respiratory centre*, which see.

V. contractil'ity. The power of contraction inherent in living muscular tissue.

V. germ the'ory of conta'gion. The theory that contagious diseases are due to the presence of perverted bioplasts descended from others originally healthy.

V. kno't. Flourens' name for the respiratory centre in the medulla.

V. pow'er. The ability to live or continue alive.

V. prin'ciple. The principle on which individual life depends.

V. statis'tics. The science of numbers as applied to the life history of communities and nations.

Vitalisa'tion. The act or process of infusing the vital principle.

Vitalise. To make alive.

Vitaliser. A vitalising agent.

Vitalism. *Biol.* The doctrine which ascribes all the functions of an organism to a vital principle distinct from physical forces.

Vitalist. A believer in the existence of vital force as distinct from other forces which act upon animal and vegetable organisms.

Vitalistic. Appertaining to, or involving, the theory of vitalism. Referring to the vital-germ theory of contagion.

Vital'ity. The exhibition of vital powers or capacities.

Vital'ly. In a vital manner. Mortally.

Vitals. The organs which are essential to life.

Vitella'rian. Appertaining to the *Vitellarium*.

Vitella'rium. A form of female generative apparatus of some platode worms, additional to the germarium, in which an accessory vitelline substance is formed.

Vitellary. (L. *vitellus*.) The place occupied by the yolk of an egg. Vitelline.

V. mem'brane. *Zona pellucida*.

Vitellicle. (New L. *vitellculus*, dim. of *vitellus*.) A yolk-sac. In the higher animals called the umbilical vesicle.

Vitelliferous. (L. *vitellus*, yolk of an egg: *fero*, I bear.) Having a yolk.

Vitellig'enous. (L. *vitellus*, yolk; *genus*, producing.) Producing yolk. Indicates cells whose special function is to supply nutriment to the ova.

Vitellin. (L. *vitellus*.) The chief protoid of egg yolk. It is a white granular body insoluble in water, soluble in dilute salt solutions, and not precipitated by saturation with salt.

Vitelline'. Appertaining to the yolk of an egg. Coloured like the yolk of an egg.

V. apoph'ysis. See *V. pedicle*.

V. cav'ity. The spherical cavity formed in an egg by the white yolk dipping down into the yellow yolk.

VITELLINUS—VITREOUS

V. circulation. The circulation through the yolk.

V. disc. Proligerous disc.

V. duct. The channel of communication between the alimentary canal of the embryo and the umbilical vesicle.

V. fluid. See *Vesicula umbilicalis*.

V. membrane. The cell-membrane of the ovum, lying within the zona pellucida.

V. pedicle. The pedicle attaching the umbilical vesicle to the embryo.

V. pouch. *Vesicula umbilicalis*.

V. sac. The umbilical vesicle.

V. sphere. The mulberry-like mass of cells that results from fission of the cells of the ovum after fertilisation.

V. veins. Omphalo-mesenteric veins.

V. vessels. Omphalo-mesenteric vessels.

Vitellinus. A term used to denote a colour like that of the yolk.

Vitel'loducts. (L. *vitellus*, yolk; *ductus*, duct.) The yolk-ducts. Applied to the ducts of the vitellaria of platode worms.

Vitellogene. (L. *vitellus*, yolk; *genus*, producing.) The vitellarium.

Vitellogenous. (L. *vitellus*, yolk; *genus*, producing.) See *Vitellogenous*.

Vitel'lo'utein. (L. *vitellus*, yolk; *luteus*, yellow.) A yellow pigment obtained from the eggs of the spider crab.

Vitel'lo-mesenter'ic. Omphalo-mesenteric.

Vitelloru'bin. (L. *vitellus*, yolk; *ruber*, red.) The reddish-brown pigment obtained from the eggs of the spider crab.

Vitellus. (L. *vitellus*.) The yolk of an egg, including both the formative and nutritive yolk. A viscid, orange-coloured liquid containing oil, cholesterol, vitellin, and albumin. It is used mainly to make emulsions. Its nutritive value is high.

V. formativus. That portion from which the body of the embryo is developed.

V. nutritivus. Food yolk.

V., segmenta'tion of. The process of cell production in development up to the time when the two primitive germ layers are clearly differentiated, and the first trace of organs is beginning to appear. (Minot.)

Vitex. (L. *viteæ*, *Agnus castus*.) A Genus of plants of the Order *Verbenaceæ*, type of the Tribe *Viticeæ*. About seventy-five species scattered throughout the warm regions are known. The fresh seeds have a fragrant smell and an acrid aromatic taste. They were used of old as antaphrodisiacs.

Vitisal'tus. Chorea; St. Vitus's dance.

Viti'ate. (L. *vitiatus*, injured, corrupt.) To render faulty or defective.

Vitia'tion. (L. *vitiatio*, corruption.) The act of vitiating. Impairment, corruption, as of the air or blood.

Vitiator. The agent which or who brings about the vitiating.

Viti'ceæ. A Tribe of gamopetalous plants of the Order *Verbenaceæ*. Eighteen genera are known.

Vit'icide. (L. *vitis*, a vine; *cædere*, to kill.) That which injures or destroys the grape or vine.

Vitic'olous. (L. *vitis*, a vine; *colere*, to dwell in.) In *Bot.* and *Zool.*, inhabiting a vine.

Viti'cula. (L. dim. of *vitus*, a vine.) In *Biol.*, a small trailing vine, like that of a melon or cucumber.

Viticulose'. (L. *vitis*, a vine.) In *Biol.*, producing long trailing vine-like twigs of stems.

Viticulture. (L. *vitis*, vine; *cultura*, culture.) *Bot.* The culture of the vine.

Vitiflo'ra. (L. *vitis*, a vine; *flos*, a flower.) A Genus of stonechats, the *Saxicolæ*, Family *Sylviidæ*, Order *Passeres*, Sub-class *Carnata*.

Vitiflor'inæ. Synonym of *Saxicolinæ*.

Vitilig'ines. *Lineæ albicantes*.

Vitiligo. (L., *tetter*.) A disease of the skin characterised by the appearance of a number of irregularly shaped patches, over which the pigment has been lost and the hair is colourless, while the margin of the patch is over-pigmented.

V. alba gra'vior. *Lepra maculosa*.

V. al'ba le'vior. *V. albus*.

V. al'phus. *Lepra alphoides*.

V. cap'itis. *Alopecia areata*.

V. congenita'lis. Incomplete albinism.

V. gra'vior. *Lepra*.

V. hepatic'a. *Chloasma hepaticum*.

V. me'las. *Lepra nigricans*.

V. ni'gra. *Lepra nigricans*.

Vitil'igoid. Resembling *Vitiligo*.

Vitiligoid'ea. (L. *vitiligo*, *tetter*; Gr. *eidōs*, likeness.) A skin disease characterised by yellowish patches or tubercles, which usually affects the eyelids. *Xanthoma*.

Vit'is. (L.) A Genus of plants including the grape, the type of the Order *Vitaceæ* or *Ampelidaceæ*. About thirty species are known, and found chiefly in the temperate regions.

Vitium. Disease.

V. cadu'cum. Epilepsy.

V. conformatio'nis. A fault in conformation.

V. divi'num. Epilepsy.

V. hercule'um. Epilepsy.

V. scrofulo'sum. Scrofula.

Vitra'ria. *Parietaria*.

Vitre'lla. (L. *vitreus*, glassy.) In *Biol.*, same as *Retinophora*.

Vitreocapsuli'tis. (L. *vitreo*, appertaining to the vitreous humour; *capsulitis*, inflammation of the capsule.) Hyalitis.

Vitreoden'tinal. (L. *vitreus*, of glass; *dens*, a tooth.) Appertaining to *Vitreodentine*. Resembling *Vitreodentine*.

Vitreoden'tine. (L. *vitreus*, of glass; *dens*, a tooth.) A variety of dentine of very marked hardness; distinguished from osteodentine and vasodentine.

Vit'reo-elec'tric. (L. *vitreus*, of glass; Gr. *ἤλεκτρον*, amber.) Containing or exhibiting electricity similar to that which is excited by rubbing glass.

Vitreosity. *Vitreousness*.

Vitreous. (L. *vitreus*, of glass.) In *Med.*, *Anat.*, and *Zool.*, resembling glass in some respects, as in transparency, like the vitreous humour of the eye; in translucency, thinness, or smoothness, as the vitreous shell; in hardness and brittleness, as the vitreous tables of the skull; in mode of cleavage, as a vitreous fracture; in chemical composition, as a vitreous sponge.

V., artific'ial. A glass ball of suitable shape inserted into the cavity of the sclerotic after evisceration of the eyeball, to preserve its shape.

V. bod'y. *Corpus vitreum*.

V. bod'y of the eye. The clear gelatinous body found in the eyeball behind the crystalline lens.

V. cham'ber. The portion of the contents of the globe of the eye behind the crystalline lens.

V. degenera'tion. A disease of fibrous tissue, which becomes transparent, jelly-like, and homogeneous in structure.

V. electric'ity. Electricity produced by rubbing glass.

V. hu'mour of the ear. The *Endo-lymph*.

V. hu'mour of the eye. See *V. body of the eye*.

V. lens. The vitreous body of the eye, together with the crystalline lens.

V. tables of the skull. The dense inner and outer laminae of the skull bones.

V. warts of Des'cemet's mem'brane. Small transparent bodies often seen near the border of Descemet's membrane, on the posterior surface of the cornea.

Vitreousness. The condition of being vitreous.

Vitres'cence. The state of becoming like glass.

Vitres'cent. Tending to become glass.

Vitreum. (New L., neut. of *vitreus*.) The *Corpus vitreum*, *Vitreous body*, or *Vitreous humour of the eye*.

Vitreus. (L.) Hyaline.

Vitric. (L. *vitrum*, glass.) Appertaining to glass or any vitreous material.

Vitrifica'tion. Vitrification.

Vitrifica'tion. Conversion into glass, or into a substance having a glassy or vitreous structure.

Vit'riform. (L. *vitrum*, glass; *forma*, form.) Having the appearance of glass.

Vitri'na. (L. *vitrum*, glass.) The typical Genus of *Vitrinidæ*. The shell is transparent. A snail of this species.

V. audito'ria. Endolymph.

Vitrine auditive. (F.) The fluid contained in the membranous labyrinth of the ear.

Vitrin'idæ. A Family of monotrematous pulmaniferous Gastropods, typified by the Genus *Vitrina*.

Vitrinoid. (L. *vitrina*; Gr. *eidōs*, like.) Resembling, or related to, the *Vitrinidæ*.

Vitriol. (L. *vitriolum*, glassy.) Used in chemistry to indicate substances having a glassy appearance. Sulphuric acid, or one of its many compounds.

V., blue. Hydrous copper sulphate. When found in nature it is called cyanosite.

V., elix'ir of. Aromatic sulphuric acid.

V., green. Cupperas. Ferrous sulphate, FeSO_4 .

V., lead. Anglesite.

V., nick'el. Hydrated nickel sulphate.

V., oil of. Concentrated sulphuric acid.

V., red. A sulphate of cobalt. Ferric sulphate.

V., Ro'man. Copper sulphate.

V., salt of. Zinc sulphate.

V., zinc or white. Hydrated zinc sulphate.

Vitriolate. To convert into vitriol.

Also, converted into vitriol.

Vitriolated so'da. Sulphate of sodium.

V. tar'tar. Sulphate of potassium.

Vitriola'tion. The process or act of converting into vitriol.

Vitriol'ic. Appertaining to, or obtained from, vitriol.

V. e'ther. Sulphuric ether.

Vitrioline. *Vitriolic*.

Vitrioliz'able. Capable of being converted into vitriol.

Vitrioliza'tion. See *Vitriolation*.

Vitriolize. Same as *Vitriolate*. To injure with vitriol.

Vitriolous. *Vitriolic*.

Vitrio'lum al'bum. Sulphate of zinc.

V. ammoniacal'e. *Ammonii sulphas*.

V. cæru'leum. Sulphate of copper.

V. cu'pri. Sulphate of copper.

V. cyp'rium. Sulphate of copper.

V. fer'ri. Sulphate of iron.

V. Goslerien'së. Sulphate of zinc.

V. mar'tis. Sulphate of iron.

V. Roma'num. Sulphate of copper.

V. ven'eris. Sulphate of copper.

V. vir'ide. Sulphate of iron.

V. zin'ci. Sulphate of zinc.

Vitroden'tine. (L. *vitrum*, glass; *dens*, a tooth.) The superficial layer of the true dentine in fishes, which takes the place of the enamel.

Vitro'sus. (L.) *Vitreous*.

Vit'rum. (L.) Glass.

V. antimo'nii. Semi-vitreous oxide of antimony.

V. hypoclep'ticum. A surgical instrument used for separating the pericranium from the skull.

V. sublimato'rium. *Aludel*.

Vit'ta. (L. *vitta*, a band.) 1. In *Biol.*, a band or stripe, either of colour or tissue.

2. One of the longitudinal tubular oil receptacles in the fruits of the Umbelliferae. An oil tube.

Vitta'ria cet'erach. *Asplenium ceterach*.

Vit'tate. In *Bot.*, striped longitudinally.

Vit'ulary fe'ver. A disease which occurs in connection with parturition in cows. It is fatal.

Vitus's dance, St. *Chorea*.

Viva'rium. *Aquarium*.

Viver'ra. The true civet-cats, type of the Family *Viverridæ*, Sub-order *Fissipedia*, Order *Carnivora*. Natives of Africa.

V. civet'ta. *Civet*.

Viver'ridæ. A Family of carnivorous Mammals of the feline series. Sub-order *Fissipedia*, Order *Carnivora*. Progression is semi-plantigrade, or almost plantigrade. The facial region of the skull is lengthened to make room for the teeth, which vary between thirty-four and forty in number. Two large anal glands furnish the substance known as civet.

Viver'riform. (L. *viverra*, a ferret; *forma*, form.) Viverrine in form and structure.

Viver'rinæ. A division of the *Viverridæ*, the other being *Herpestinæ*. Those with retractile as distinguished from those with non-retractile claws.

Viver'rine. Appertaining to the *Viverridæ*. A member of the *Viverridæ*.

Viv'ianite. Hydrous phosphate of iron.

Vivifica'tion. (L. *vivificatio*, a quickening.) The act or process of making alive. In *Physiol.*, the transformation of proteid into living tissue.

Viv'ify. (L. *vivus*, live; *facere*, make, do.) To make to live; to impart life.

Vivip'ara. (Low *L. viviparus*, viviparous.) A name for viviparous Vertebrates. Now obsolete.

Vivipar'idæ. A Family of tænioglossate Gastropods, typified by the Genus *Viviparus*.

Viviparity. The condition of being viviparous.

Viviparoid. Appertaining to the Viviparidæ.

Viviparous. (*L. vivus*, alive; *parere*, to bring forth.) Bringing forth the young alive. Bearing young which remain in vital connection with the parent until they are born in a comparatively advanced state of development. In *Bot.*, germinating from a seed or bud which is still on the parent plant.

V. blen'ny. *Zoarces viviparus*, a fish of the Family *Lycodidæ*.

V. fish. A fish which brings forth living offspring.

V. knot'weed. The *Serpent-grass*.

V. liz'ard. *Zootica vivipara*.

Viviparously. In a viviparous manner.

Viviparousness. The condition of being viviparous. The act, process, or result of bringing forth alive.

Viviparus. (Low *L. viviparus*.) The typical Genus of *Viviparidæ*.

Vivipa'tion. (*L. vivus*, alive; *parere*, to bring forth. In *Embry.*, that form of generation in which the ovum, expelled from the ovary, clings to the maternal organ, and derives its nourishment directly from the mother until birth.)

Vivipercep'tion. (*L. vivus*, alive; *percipere*, to perceive.) The study of physiological processes without dissection or vivisection.

Viv'isect. (*L. vivus*, living; *secare*, to cut.) To dissect the living body.

Vivisection. (*L. vivus*, living; *sectio*, a cutting.) The practice of dissecting or experimenting upon living animals for the purpose of investigating some physiological function or pathological process.

Vivisectional. Appertaining to vivisection.

Vivisectionist. One who vivisects, or who favours or defends the practice of vivisection.

Viv'isector. (*L. vivus*, living; *sector*, a cutter.) One who practises vivisection.

Vlem'ingks's solu'tion. Used for acne. It contains lime 1 part, sulphur 2 parts, water 20 parts. Slack the lime, add the sulphur, and boil to 12 parts.

Vo'cal. (*L. vocalis*, sounding.) Appertaining to the voice. In *Zool.*, sound formed by the mouth as distinguished from all other sounds.

V. auscult'a'tion. Examination of the lungs by sound of the voice transmitted through the lungs and chest wall.

V. cords. *False or superior.* Prominent folds of mucous membrane containing many glands, which form arched projections above the opening of the ventricle of the larynx.

True or inferior. Two bands which correspond with the thyro-arytænoid ligaments, and form the limits of the aperture of the larynx for its two anterior thirds. Their edges are free, sharp, and turned upwards. The mucous membrane over them consists of one layer of epithelial cells, the basal membrane being thin enough to allow the colour of the cords to show through.

V. frem'itus. A vibration felt on pal-

pating the wall of the chest while the patient speaks audibly.

V. glot'tis. See *Rima glottidis*.

V. pro'cess. The elongated angular projection on the inner side of the base of the arytaenoid cartilage to which the true vocal cord is attached.

V. res'onance. The sound heard while auscultating the chest during ordinary speech.

V. spir'acle. In *Entom.*, a thoracic spiracle having an apparatus supposed to produce sounds.

V. tube. In *Anat.*, the space which the sound of the voice has to traverse after being produced in the glottis. It includes the nose and mouth.

Vocalisa'tion. See *Vocalization*.

Vo'calism. Vocalisation.

Vocality. (*L. vocalis*, sonorous.) The quality of being vocal.

Vocaliza'tion. The act or the process of uttering with the voice.

Vo'calize. To make vocal. To utter with the voice. To speak or sing.

Vochys'ia. A Genus of plants, type of the Order *Vochysiaceæ*. About fifty-five species are known, natives of Brazil, Guiana, Eastern Peru, and Colombia.

Vochysia'ceæ. An Order of polypetalous plants of the Series *Thalamifloræ* and Cohort *Polygalinæ*. About one hundred and thirty species belonging to seven genera are known.

Vocifera'tio. Exercise of the voice.

Voc'ule. (*L. vocula*, a small voice.) A feeble, small voice.

Vogt's angle. That formed by the naso-basilar and alveolo-nasal lines.

Voice. (*L. vox*, an utterance.) The sound uttered by the voice of living creatures, especially human utterance. Speech, utterance.

V., artic'ulated. Voice produced by the glottis modified by the motions of the tongue, lips, and other parts of the vocal tube.

V., bleat'ing. *Egophony*.

V., caver'nous. *Pectoriloquy*.

V., convul'sive. An affection of the voice in which discordant sounds are involuntarily produced.

V., pharyn'geal. The second register, or falsetto voice.

V. thrill. See *Vocal fremitus*.

Voice'less. Mute, dumb.

Void. (*Mid. Eng. volder*; *O. F. volder*; *F. vider*, to make void.) To make empty. To emit. Specifically, to evacuate from the intestine or bladder. To have an evacuation.

Void'able. Capable of being voided or evacuated.

Vois'in's meth'od. A method of hypnotising a patient in which he lies on his back and gazes at a silvered ball hanging from the ceiling at about nine inches from his eyes.

Another method is that in which the operator gazes steadily at the patient's eyes and fascinates him.

Vo'la. (*L.*) The hollow of the foot or hand.

Vo'lar. (*L. volaris*; *vola*, the hollow of the foot or hand.) Appertaining to the hand.

Volat'ic. (*L. volaticus*; *volare*, to fly.) Flying; momentary.

Volat'ica. (*L.*) Lichen.

Vol'atile. (*L. volatilis*.) Having the quality of passing off by spontaneous evaporation. Evaporating rapidly.

VOLATILITY—VOLUMETRICALLY

V. al'kali. Ammonia.

V. lin'iment. Liniment of ammonia.

V. oil of mus'tard. A very pungent oil made by macerating black mustard in water and distilling the liquid.

V. oils. Odorous vegetable principles having a strong pungent taste and smell, easily distilled with boiling water. They contain no fats, but are largely hydrocarbons. They are also called essential oils.

V. salts. Carbonate of ammonia.

Volatility. The quality of being volatile.

Volatiliz'able. Capable of being volatilised.

Volatiliza'tion. (F. *volatilisation*.) The act or process of volatilizing.

Vol'atilize. (F. *volatiliser*.) To cause to evaporate or pass off in invisible effluvia or vapour.

Vol'borthite. Hydrrous copper vanadate.

Vole. A short-tailed field mouse. Any member of the Genus *Arvicola* in a broad sense.

Volition. (Mod. L. *volitio*, will.) The act of willing.

Volitional. Appertaining to volition.

V. insan'ity. A form of insanity in which the most marked symptoms are those of impaired or perverted will power.

Volitionally. By the act of willing.

Volitionary. *Volitional*.

Volitionless. Without volition.

Volitive. Possessing the power to will.

Volk'mann's canals'. Vascular canals in the cortical layers of a bone which have no Haversian system surrounding them.

V.'s deform'ity. Congenital tibio-tarsal luxation.

V.'s solu'tion. Thymol 1 part, alcohol 20 parts, glycerine 20 parts, water to 1000 parts. Used as a spray and antiseptic lotion.

Vol'nus. (L. *vulnus*.) A wound.

Volsella. Same as *Vulsella*.

Volt. The practical unit of electromotive force.

V. am'pere. The amount of pressure developed by a current of one ampère having an electromotive force of one volt.

Vol'ta-electric. Appertaining to voltaic electricity.

V.-electric'ity. See *Voltaic electricity*.

V.-electrom'eter. An instrument for the exact measurement of electric currents.

V.-electromotive. Producing, or produced by, voltaic electromotion.

V.-electromotive force. Electromotive force produced in a manner analogous to that of the voltaic battery.

Voltage. Electromotive force reckoned in volts.

Volta'ic. Appertaining to the constant electric current.

V. alter'natives. A term used in medical electricity to indicate sudden reversals in the polarity of the electrodes of a voltaic battery.

V. bat'tery. The galvanic battery.

V. electric'ity. Galvanic electricity.

V. pile. The primitive galvanic battery of plates of copper and zinc, piled alternately and separated by strips of woollen material soaked in strong salt solution.

Vol'taism. That part of electrical science which deals with the production of an electric current by the chemical action of different metals immersed in a liquid.

Vol'taite. Hydrrous sulphate of iron.

Voltam'eter. (L. *volt*; Gr. *μέτρον*, measure.) An electrolytic cell arranged for quantitative measurement of the amount of decomposition produced by the passage through it of an electric current, and hence used as an indirect means of measuring the strength of the current.

Voltametric. Appertaining to the voltameter, or its use.

Voltam'meter. A combination of a voltmeter and a transformer, for the measurement of alternating currents.

Vol'ta's laws. 1. The contact of two different substances produces an electromotive force equal to the algebraic difference of their electric condition, which difference is constant for the same substances.

2. The total electromotive force of a series of cells arranged as a galvanic battery equals the electromotive force of one cell multiplied by the number of cells.

V.'s pile. A vertical series of discs of two dissimilar metals, alternately arranged and laid up with discs of cloth or paper between them moistened with acid water, for producing a current of electricity.

V.'s meth'od. The examination of the anterior nasal region by means of transmitted light.

Vol'tite. A mixture of specially prepared gelatine, with resin, oil, oxidised linseed oil, and paraffin. Used to insulate carriers of electricity.

Volt'meter. A high-resistance galvanometer, or galvanometer combined with a resistance calibrated so that its indications show the number of volts E. M. F. in the circuit between its terminals.

Voltoli'n's disease'. A disease of childhood, followed by permanent deafness. It is a purulent labyrinthine otitis. Its symptoms are extreme pain in the ear, unconsciousness, high fever, and delirium.

Vol'tus. (L.) Countenance.

Volt'zine. An oxysulphide of zinc.

Volt'zite. Same as *Voltzine*.

Vol'uble. (L. *volubilis*, twisting.) A spiral twisting around anything.

Volume. In *Physics*, the space which a substance fills.

V., specif'ic. The molecular weight divided by the specific gravity, referred to hydrogen as a unit.

Volumeter. (L. *volumen*, a volume; Gr. *μέτρον*, 'measure.) In *Chem.* and *Physics*, any instrument for measuring the volumes of gases. Usually the gas displaces a liquid, as water or mercury, and the amount displaced is measured.

Volumetric. (L. *volumen*, volume; Gr. *μετρικός*, measured.) Appertaining to the measurement of gases or liquids by volume, as opposed to measuring them by weight.

V. analysis. The quantitative determination of a constituent by ascertaining the volume of a liquid required to complete a given reaction.

Volumetrical. See *Volumetric*.

Volumet'rically. By volumetric analysis.

Voluntary. (L. *voluntarius*, of free will.) In *Phys.*, subject to, or controlled by, the will.

V. muscle. Striated muscle-fibre, except the heart, as distinguished from plain muscle-fibre.

Voluntas. (L.) Desire or will.

Voluntomatory. Appertaining to motor influence or effect which is voluntary. Specifically denoting the somatopleural division of the body, including the muscular mechanism of spoken language, as distinguished from the splanchnopleural.

Voluptuary. (L. *voluptuarius*, appertaining to pleasure.) Promoting sensual indulgence. Voluptuous. A sensualist.

Voluptuous. (L. *voluptuosus*, full of gratification.) Contributing to sensual pleasure.

Voluptuousness. The state of being voluptuous.

Volupty. (L. *voluptas*, pleasure.) Voluptuousness. *Orgasm*.

Voluta. The typical Genus of *Volutidæ*.

Voluta'cea. The volutes, members of the *Volutidæ*.

Volute'. (L. *voluta*, a spiral scroll.) In *Biol.*, rolled up like a scroll.

Voluted. Possessed of coils or whorls.

Volutidæ. A Family of siphonostomatous Gastropods, Order *Prosobranchiata*, Subclass *Branchiata*.

Volution. In *Anat.*, a gyrus.

Volutite. A fossil volute.

Volutoid. Resembling a volute.

Volva. (L.) In *Bot.*, an external covering of the fruiting organs of some Fungi.

In *Anat.*, *Vulva*.

Volvate. Producing, possessing, or appertaining to, a volva.

Volvocin'ææ. An Order of fresh-water Algae, Class *Anobiceæ*.

Volvox. (L. *volvere*, to turn about.) The typical Genus of the *Volvocineæ*.

Volvulus. (L. *volvere*, to turn about.) A turn or twist of the intestine (ileus), which causes obstruction of its lumen.

Vomer. (L. *vomer*, a ploughshare.) In *Zool.* and *Anat.*, a membrane bone developed in the median line of the skull, below the basi-cranial axis. It consists of two parts, one developed on either side of the median line, which usually join to form one bone. In man it articulates with the mesethmoid above, the sphenoid behind, the palatal processes of the maxillary and palatine bones below, and the triangular median cartilage of the nose in front.

V., cartilag'inous. A cartilaginous plate that forms the anterior part of the septum of the nose.

Vo'merine. Appertaining to the vomer.

Vom'ic. (L. *vomicus*, ulcerated.) Purulent.

V. nut. Nux vomica.

Vom'ica. (L. *vomicus*, ulcerated.) A cavity in a viscus, especially the lung, the result of disease, which contains pus.

V. laryn'gis. Same as *Perichondritis of the larynx*.

Vom'icene. Brucine.

Vom'icus. (L.) See *Vomica*. Relating to vomiting.

Vom'it. (v.) (L. *vomitus*; *vomere*, to discharge.) To eject from the stomach through the mouth.

(n.) (L. *vomitus*, vomiting.) That which

is ejected from the stomach in the act of vomiting. An emetic.

V., bil'ious. Vomit stained with bile.

V., black. Blackish vomit, chiefly altered blood, discharged from the stomach in certain cases of yellow fever. Also, yellow fever.

V., blood'y. See *Hæmæmesis*.

V., cof'fee-ground. Vomit composed of broken-down blood-clots and tissue with the contents of the stomach.

V.-nut. The seeds of the nux vomica.

Vomitine. Emetine.

Vomiting. The ejection of the contents of the stomach through the mouth, effected by a violent contraction of the abdominal muscles and diaphragm, accompanied by dilatation of the cardiac orifice and contraction of the muscular walls of the stomach itself.

V., dry. Persistent nausea with attempts at vomiting, but with ejection of nothing but gas.

V., fæ'cal or stercora'ceous. Ejection of fæcal matter by the mouth.

V. of blood. See *Hæmatemesis*.

V., pern'cious. The vomiting seen in pregnancy at times, which may become so serious as to threaten the woman's life.

Vomitingly. As in vomiting.

Vomitio. (L.) Vomiting.

V. san'guinis. Vomiting of blood.

Vom'ition. Vomiting.

Vom'itive. Emetic.

Vom'ito. (Sp.) The yellow fever in its severest form, usually accompanied by black vomit.

Vomitoni'gro. Black vomit. Synonym of *Yellow fever*.

Vomitory. (L. *vomitorius*, vomiting.) Causing ejection from the stomach; emetic. Also, a vessel to receive the ejecta.

Vomitum. Vomiting.

Vomituri'tion. 1. Ineffectual attempts to vomit; retching. 2. Vomiting in small amount or with little effort.

Vomit'us. Vomiting. Vomited matter.

V. cruen'tus. Bloody vomit.

V. fæculen'tus. Vomiting of fæcal matter.

V. ni'ger. Black vomit; yellow fever.

V. pituito'sus. Vomiting of mucus.

V. purulen'tus. Vomiting of purulent matter.

Von Ba'er's law. A law which teaches that the embryos of higher animals pass through a succession of metamorphoses resembling the adult forms of lower types of animals.

Von Gieth's oil jack'et. Pure olive oil is poured into a warm bowl, and a strip of soft cloth is soaked in it, and applied to the chest so as to surround it. Over this is applied another strip dry, and if necessary a third also dry. It is used as a dressing in the pleurisy of infants or young children.

Von Gra'efe's equilibrium test. A method of finding the numerical determination of the degree of muscular insufficiency. It is founded on the fact that a disturbance of equilibrium becomes manifest so soon as binocular single vision is rendered impossible.

V. G.'s exentera'tion of the eye-ball. The cornea with an adjacent zone of sclera is removed, and the contents of the eyeball scooped out with a sharp spoon, leaving the internal surface of the sclera exposed. The wound

is closed by sutures passed through the conjunctiva and the cut edges of the sclera.

V. G.'s groping test. When a patient is asked to point quickly at an object lying just within the sphere of action of a paralysed extraocular muscle, he misses it, and passes by on the side of the muscle which is paralysed.

V. G.'s method of cataract extraction. Modified linear extraction. The cut is through the sclera at the lower edge of the cornea, and is in shape an arc of small altitude.

V. G.'s operation for cataract. A von Graefe's cataract knife is entered at the upper and outer part of the sclero-corneal margin, pushed into the anterior chamber with its blade parallel with the iris until its point is 7—8 mm. from the point of entry and near the lower and inner part of the sclero-corneal junction. The handle is now lowered and the point brought out at a point opposite to that at which it entered, the edge is turned forwards, and the section of the cornea and conjunctiva completed. The portion of the iris corresponding to the cut is now excised, the capsule opened, and the lens delivered as in other operations. This operation has been abandoned because of the danger of prolapse of the vitreous humour, the difficulty of adjusting the edges of the wound at its angles, and the liability to cystitis.

V. G.'s operation for pto'sis. An incision is made in the skin 5 mm. above the border of the lid; the underlying fibres of the orbicularis palpebrarum are dissected away. Sutures are passed to include the edges of the cutaneous and muscular wound.

V. G.'s performance of advance-ment. Distinguished by the section of the muscle being placed some little distance behind the attachment to the eyeball, and a thread being passed through the bit of tendon left attached to the eyeball, which when the operation was finished was drawn on and fixed by adhesive plaster to the skin, so as to hold the eyeball in any required position.

Von Mering's mixture. Chloroform 1 vol., dimethylactol 2 vols. Anæsthetic, and said not to produce failure of respiration or heart, and no lowering of blood-pressure.

Von Troeltsch, corpuscles of. The connective-tissue corpuscles of Virchow.

Von Walther's method of tarsorrhaphy. The edges of the lids are pared for a short distance adjoining the external angle, and the raw surfaces are brought together by sutures.

Voora'ra. Curare.

Vora'cious. (L. *vorax*; *vorare*, to devour.) Having an insatiable appetite or desire for food.

Vorac'ity. (L. *voracitas*, voracity.) Greediness or rapaciousness for food.

Vor'tex. (L., a whirl.) A whirl, eddy.

V. of the heart. The spiral arrangement of the external fibres of the heart at its apex, where they pass back to join the inner fibres.

Vor'tical. Causing a vortex, as an infusorian. Any ciliate infusorian which makes a vortex.

Vor'ticel. An infusorian animalcule of the Family *Vorticellidæ*. A bell animalcule.

Vorticella. (L. *vortex*, a whirl.) The typical Genus of the *Vorticellidæ*. It consists of a bell-shaped body supported on the extremity

of a slender contractile stem or pedicle. The edge of the bell is surrounded by a projecting rim, within which is a circular surface, the disc, surrounded by cilia arranged in a spiral line prolonged into the commencement of the digestive canal. It occurs in stagnant water and infusions.

Vorticellidæ. A Family of ciliated sedentary infusorians. They inhabit both fresh and salt water.

Vorticellidan. Appertaining to the *Vorticellidæ*. A bell animalcule.

Vorticellinæ. A Sub-family of *Vorticellidæ* containing only the naked vortices.

Vorticelline. Appertaining to the *Vorticellinæ*.

Vortices len'tis. Star-like figures seen on the crystalline lens of the eye.

Vorticose'. (L. *vortex*, whirling, vortical.) In *Anat.*, applied to the veins of the external layer of the choroid coat of the eyeball, the *venæ vorticose*, which converge to trunks placed at regular intervals, and opening into the ophthalmic vein.

Vorticular. Same as *Vorticose*.

Vowel. (F. *voyelle*, vowel.) One of the sounds of the voice formed by the vibrations of the vocal organs unmodified by the resonance organs.

Vox. (L.) Voice.

V. abscis'sa. *Aphonia*.

V. clandestin'a. Whispering.

V. clango'sa. Shrill voice found in affections of the larynx.

Voyeur'. (F.) A sexual pervert who indulges in witnessing coitus.

Voy'ra. A Genus of the *Gentianaceæ*. Found in tropical America.

V. ro'sea. A species grown in Guiana. The roots are treated like potatoes.

Vulcanis'able. Capable of being vulcanised.

Vulcanisa'tion. A method of treating india rubber with one of the forms of sulphur. The result may be, according to the details of the plan pursued, either soft (vulcanised india rubber) or hard (vulcanite). The principal features of the process are the mixture of india rubber with flowers of sulphur at a sufficient temperature, and its subsequent treatment with superheated steam at 250° to 300° F.

Vul'canise. To subject to the process of vulcanisation.

Vul'caniser. In *Dentistry*, the apparatus in which prepared rubber is treated by superheated steam. It is used to fix teeth on a vulcanite base.

Vul'canite. The harder of the two forms of vulcanised india rubber. It differs from soft rubber in containing more sulphur, and being prepared at a higher temperature.

V. base. In *Dentistry*, a vulcanised india-rubber plate adapted to a portion of the alveolar arch deprived of natural teeth, and to be supplied with artificial substitutes.

V., den'tal. India rubber combined with sulphur or sulphur compounds, and coloured with vermilion. A combination of rubber 48 parts, sulphur 24 parts, vermilion 36 parts.

Vul'canol. A thick lubricating oil formed in great quantities in petroleum refineries and in paraffin and solar oil works.

Vul'ga. *Vulva*.

Vulgar. (L. *vulgaris*, common.) Coarse, unrefined. Popular.

Vulgaris. Ordinary.

Vulnerability. The state or property of being vulnerable.

Vulnerable. (Low L. *vulnerabilis*; *vulnerare*, to wound.) Susceptible of wounds or injuries.

Vulnerableness. Vulnerability.

Vulnerary. (L. *vulnerarius*, appertaining to wounds.) Useful in healing wounds.

Vulnerose. (L. *vulnus*, a wound.) The condition of being wounded.

Vulnific. (L. *vulnus*, a wound; *facere*, to make.) Causing wounds.

Vulnus. (L.) A wound.

V. lacera'tum. A wound which has bruised and torn surfaces with usually some loss of tissue.

V. sclopet'icum. Technical term. A gunshot wound.

Vulpes. (L.) A Genus of foxes, Section *Cynoidea* (containing one Family, the *Canidæ*), Sub-order *Fissipedia*, Order *Carnivora*. They give their name to the *Vulpinæ*.

Vulpian's law. Teaches that the functions of the destroyed portion of an animal's brain are assumed by the remaining portion.

Vulpinæ. A Sub-family of *Canidæ* containing the foxes, as distinguished from the dogs, wolves, and jackals.

Vulpis morbus. (L.) Alopecia.

Vulsella. (L., pincers.) A forceps. Specifically, a forceps having hooked or toothed blades, used for laying hold of tissues or foreign bodies.

Vulsellum. See *Vulsella*.

Vulturinæ. A Sub-family of *Falconidæ*, confined to the Old World, and consisting of the vultures of Europe, Asia, and Africa. They have the head and neck more or less bare of feathers, and feed on carrion.

Vul'turine. Appertaining to the *Vul'turinæ*.

Vul'tus. (L.) The face, countenance, or looks.

Vul'va. (L., a covering, womb.) *Anat.* The external organs of generation of a female, especially the orifice of the same.

Ent. The opening of the oviduct.

V. conni'vens. A form of vulva in which the labia majora are close together.

V. hi'ans. A form of vulva in which the labia majora are far apart.

V., ves'tibule of the. See *Vestibule*.

Vul'væ, vela'men. Elongated labia minora.

Vul'var. Appertaining to the *Vulva*.

V. canal. Same as *Vulva*.

V. en'terocele. A vaginal enterocele protruding through the vulva. A hernia which has descended between the ramus of the ischium and the vagina into a labium minus.

V. hernia. See *V. enterocele*.

Vulva'ria. (L.) *Chenopodium vulva-ria*.

Vul'vate. Shaped like a vulva.

Vulvis'mus. See *Vaginismus*.

Vulvitis. Inflammation of the vulva.

V. blennorrhag'ica. Profuse mucopurulent discharge from the vulvar mucous membrane.

V., diphtherit'ic. Vulvitis with diphtheritic deposit.

V., follic'ular. Inflammation of the mucous follicles of the vulva.

Vul'vo-. A prefix denoting relation to the vulva.

Vul'vo-u'terine. Appertaining to the vulva and the uterus.

Vul'vo-vag'inal. Appertaining to the vulva and vagina.

V. canal. Vagina.

V. glands. The glands of Bartholin.

Vul'vo-vagini'tis. (L. *vulva*; *vagina*.) Inflammation of the vulva and vagina.

W.

W. (After *Wolfram*.) *Chem.* The symbol for the element *Tungsten*.

W. L. Abbreviation for wave-length.

Wa'bran. A name for the Genus *Plan-tago*.

Wach'endorf's mem'brane. A term for the pupillary membrane of the foetal eye. See *Membrane, pupillary*.

Wachs'muth's mix'ture. An anæsthetic mixture recommended by Wachsmuth. One part of oil of turpentine is mixed with four parts of chloroform. This addition is said to neutralise the depressing effect of chloroform on the heart.

Wacké. (G.) *Geol.* term for a mineral substance intermediate in characters between basalt and a soft clay.

Wad. A name for *Graphites*.

Wad'ing. Common name for cotton wool, i. e. carded cotton worked into flat sheets.

W. bearer (of Haus'senstein). A special kind of forceps fitted with a moveable

ring, devised for holding a long pledget of wad-
ding.

Wade's bal'sam. The same as *W.'s drops*.

W.'s drops. A name for the *Tinctura benzoini composita*.

Wa'fer. *Pharm.* A preparation in the form of a thin sheet of gelatinous substance, adapted for the convenient administration of any medicinal powder. A thick mixture of flour and water is poured between hot greased plates; and to this, while hot, is added the powder.

W. ash. *Bot.* Common name for the *Ptelea trifoliata*.

W. tree. A syn. for *W. ash*.

Wag'ner, cor'puscles of. (After the physiologist *Wagner*.) See *W., tactile corpuscles of*.

W.'s spot. *Embryol.* A syn. for *Spot, germinal*.

W., tac'tile cor'puscles of. Oval cor-
puscles situated on the endings of sensory nerve-

fibres in the papillæ of the skin, considered by Wagner to be directly concerned in the sense of touch.

W., vesicle of. *Embryol.* The same as *W.'s spot*.

W. and Meissner, corpuscles of. Another name for *W., tactile corpuscles of*.

Wagnerian spot. See *Wagner's spot*.

Wahahë. The *Hartighsea spectabilis* (q. v.).

Wahlenbergia. (After the Swedish botanist *Wahlenberg*.) *Bot.* A Genus of the *Campanulaceæ*. (Foster.)

W. graminifolia. Hab., South Europe. Leaves and flowers believed to be useful in epilepsy.

W. linarioides. Hab., South America. Used to cure datulence.

Wahoo. The *Euonymus atropurpureus*.

W. elm. The *Ulmus alata*.

Wair. See *Pila marina*.

Waistcoat, strait. (*F. camisole de force*; *G. Zwangsjacke*.) A short coat, either without any sleeves or with long sleeves closed at the free end, made of strong, resistant material, used to confine the arms of violent insane patients.

Wakamba poison. A vegetable poison used by the natives of Zanzibar for poisoning arrow-heads. (Billings.)

Wake-robin. A common name for the *Arum maculatum*; also, for the *Trillium cernuum* and *T. grandiflorum*; also, for the *Arisæma atrorubens*; also, for the Genus *Anthurium*, and Genus *Philodendron*.

Wakefulness. In *Med.*, a term used to denote excessive wakefulness, inability to sleep (*Insomnia*). It is a common symptom in insanity.

Walai. (Fijian.) *Bot.* The *Entada scandens*, which is used as an oxytocic in Fiji, where it is native.

Walcheren fever. A severe form of *Malaria*, formerly very prevalent in Walcheren in the Netherlands.

Waldenburg's apparatus. An apparatus introduced by Waldenburg for the inhalation of compressed air or exhalation into rarefied air, made on the principle of a gasometer.

Waldeyer's glands. A name for some acino-tubular glands lying along the attached edge of the tarsus. (Gould.)

W.'s plasma cells. See *Plasma cells*.

W.'s sulcus. A spiral groove in the *limbus laminae spiralis* of the internal ear.

Waldstatt. A place in the Canton Appenzell, Switzerland, noted for its alkaline mineral spring. (Foster.)

Wale. Another form of the word *Wheal*.

Walida. *Bot.* The *Wrightea antidysenterica*.

Walkea. (After the Cambridge botanist *Walker*.) A Genus of trees of the Order *Ochnaceæ*, which is not now recognised. (Foster.)

W. serrat. A syn. for *W. zeylonensis*.

W. zeylonensis. Hab., tropical Asia. Roots and leaves stomachic, and tonic.

Walking. The ordinary method of progression, by means of a succession of steps, one foot at a time always remaining upon the ground; a series of small parabolic curves being described upon the head of the thigh-bones.

Wall. *Anat.* A supporting, limiting, and enclosing structure.

W., germinal, of yolk. *Embryol.* The ring-like thickening formed by the yolk of the embryo round the germinal disc.

W., parietal, of blastoderm. *Embryol.* The outer wall of the *Blastoderm*, made up of epiblast and mesoblast.

W., periotic. Term for the wall of the *Vesicle, otic*.

W., somatic, of blastoderm. A syn. for *W., parietal, of blastoderm*.

W., splanchnic, of blastoderm. *Embryol.* The inner or visceral wall of the blastoderm, composed of hypoblast and the inner layer of mesoblast.

W., visceral, of blastoderm. *Embryol.* See *W., splanchnic, of blastoderm*.

Wallaba. The *Eperna falcata* (q. v.).

Wallawhatoolalum springs. Saline chalybeate mineral springs in Bath County, Virginia. (Billings.)

Wall-bugloss. Common name for *Lycopsis*.

Waller. A British physiologist of the latter part of this century.

W.'s law of degeneration. If a spinal nerve be divided, the peripheral parts degenerate completely. If the anterior root be divided, the peripheral fibres degenerate. If the posterior root be divided, the central fibres degenerate. If the ganglion on the posterior root be divided, both central and peripheral nerve-fibres degenerate. Hence, it is assumed that the trophic centre for the fibres of the anterior root lies in the multipolar cells of the anterior grey cornu of the cord, and the trophic centre for the fibres of the posterior root in the cells of the ganglion in this root.

Wallerian degeneration. The degeneration of nerves separated from their trophic centres.

Wall-eyed. Common epithet applied to an individual, whether human being or lower animal, with leukoma of the cornea, or an abnormally light-coloured iris.

Wallflower. Common name for the *Cheiranthus cheiri*.

Wall-louse. A name for the common bed-bug, *Cimex lectularius*.

Wall-pellitory. Common name for the *Parietaria officinalis*.

Wall-pepper. Common name for the *Sedum acre*.

Wall-rue. Common name for the *Asplenium murale*.

Wall-teeth. A term for *Molar teeth*.

Wallwort. A common name for the dwarf elder, *Sambucus ebulus*; also, for the *Parietaria officinalis*; also, for the *Cotyledon umbilicus*.

Wallwort. The same as *Wallwort*.

Walnut. Common name for the *Juglans regia*, or its fruit.

W., American. The *Juglans nigra*.

W., Belgaum. The *Aleurites triloba*. (Foster.)

W., European. The *Juglans regia*.

W., Indian. The *Aleurites triloba*.

W., oil. See *Aleurites triloba*.

W., oil, Spanish. See *Aleurites triloba*.

W. tree. The *Juglans regia*.

W. tree, white. Common name in the United States for the *Juglans cinerea*.

W., white. The *Juglans cinerea*.

Walsura. *Bot.* A Genus of the *Meliaceæ*.

W. piscida. East Indian fish-poison plant; bark, narcotic.

Walter, Ph. Fr. von. A German surgeon of the earlier half of this century.

W., ganglion of. A name for the *Coccygeal ganglion* or *Ganglion impar*.

W.'s needle. A form of cataract needle introduced by Walter. It is flattened and curved, and resembles that of Dupuytren.

Walther, angle of. *Cranium.* The angle included between a median line from the most prominent point of the forehead to the root of the nose and a basal line drawn to meet this, passing through the external occipital protuberance and the crista galli.

W., ducts of. Name for the ducts of the sublingual salivary gland.

W., oblique ligament of. Term for an oblique fasciculus of the capsular ligament of the ankle-joint, which passes from the external malleolus to the tubercle on the astragalus into which is inserted the flexor longus hallucis.

Waltheria. (After A. F. Walther, a German botanist.) *Bot.* A Genus of the *Malvaceæ*. According to Dungalson, a Genus of the *Sterculiaceæ*.

W. americana. *Hab.*, tropical America. Leaves and flowers contain mucilage. Action, febrifuge; also used as an alterative in syphilis.

W. arborescens. A syn. for *W. americana*.

W. douradinha. *Hab.*, Brazil. Flowers and leaves demulcent, pectoral, and vulnerary.

W. glomerata. *Hab.*, Panama. Leaves vulnerary.

W. indica. A syn. for *W. americana*.

Wambles. An old popular term for *Milk fever*.

Wampee. (*Amer. Indian.*) *Bot.* The *Peltandra virginica*.

Wandering. Moving from place to place. Also, the wandering incoherent speech of delirium.

W. abscess. An abscess that tracks along so as to point at a distance from its original seat.

W. cells. A syn. for *Amœboid cells*.

W. erysipelas. See *Erysipelas*, *wandering*.

W. kidney. A syn. for floating kidney. See *Kidney*, *floating*.

W. liver. See *Liver*, *wandering*.

W. pneumonia. See *Pneumonia*, *wandering*.

W. rash. A syn. for *Tongue*, *geographic*.

W. spleen. See *Spleen*, *wandering*.

W. tumour. See *Tumour*, *wandering*.

Wang. (*Mid. Eng. wange.*) The jaw-bone; also, the cheek-bone. Also, a molar tooth.

W. teeth. The molar teeth.

Wanklyn's ammonia process. A process introduced by Wanklyn for the estimation of nitrogenous organic matter present in water. This amount is estimated by measurement of the quantity of ammonia yielded by the total destruction of the organic matter.

Want. Absence of necessary nourishment. Also, the impression transmitted by various organs to the brain when it is imperative that they should become functionally active.

War fever. A name for *Typhus*.

Warbles. (Derivation uncertain.) A

small hard tumour on the backs of horses, cattle, &c., produced by the irritation of the larva of the warble-fly, *Hypoderma bovis*, or by the galling of the saddle.

Ward. A room in a hospital for patients.

W. carriage. A small table, usually with two or three shelves, mounted on wheels, and used to carry surgical dressings, instruments, &c., in a ward, from one bed to another.

Wardrop's disease. A name for *Paronychia*, *malignant*.

W.'s operation. The ligature of an artery on the distal side of an aneurism, introduced by Wardrop.

Ward's paste. A name for *Confection of black pepper*.

Ware. A popular name for various species of *Seaweed*.

Warega fly. (*Musca*, sp. ?) A Brazilian fly which deposits its eggs beneath the skin of man and animals, giving rise to painful swellings.

Warehouseman's itch. See *Itch*, *warehouseman's*.

Wa'ren. (G.) An hereditary disease, indigenous to Westphalia, characterised by pains all over the body, but especially in the back and loins. Two varieties are recognised: in one the pains are followed by persistent swellings of the joints, and a scurvy-like rash appears, giving rise eventually to intractable ulcers; in the other variety wasting occurs, with local paralysis. Fever is uncommon in either variety. (Littre.)

Warence. An old name for *Madder*. (Foster.)

Waring's system. A system of sewage disposal more correctly named *Moule's system* (q. v.).

Warm bath. See *Bath*, *warm*.

W.-blood ed. Epithet applied to animals that maintain a uniform body-heat independent of the temperature of their surroundings.

W. Springs. Name for a place in San Bernadina County, California, noted for its hot alkaline and sulphur mineral spring; also for a place in Meriwether County, Georgia, noted for its hot, gaseous, alkaline, and iron springs; also for a place in Madison County, North Carolina, noted for its hot, gaseous, saline, and sulphur mineral springs; also for a place in Bath County, Virginia, noted for its hot, gaseous, saline, sulphur, and iron springs. (Foster.)

Warmbrunn. A place in Prussian Silesia, noted for its hot, saline, alkaline, and sulphur mineral springs. (Foster.)

Warming plaster. The *Emplastrum calefaciens*.

Warnas. Old term for *Acetum philosophicum*.

Warneria canadensis. (After Richard Warner, an English botanist.) A name for the *Hydrastis canadensis*.

Warner's Ranch Springs. A place in San Diego County, California, noted for its hot saline and sulphur springs.

Warnings. A popular term for the *Aura* of epilepsy.

War'ras. (*Indian.*) A name for *Kamala*; also for an African drug which has a tænicide action, and is also used as a dye.

War'ren's styptic. The *Lotio adstringens*.

War'rus. The same as *Warras*.

Wars. A syn. for *Warras*.

Wart. (*Ang.-Sax. wearte*; *L. verruca*;

WARTWEED—WATER

F. verrus; **G. Warze**.) *Zool.* A small circumscribed excrescence or elevation of the skin, with a papillated surface and broad base.

In *Bot.*, a small gland-like elevation on the surface of a plant.

In *Farriery*, a spongy prominence in the pastern of a horse.

W.s, a'nal. A term for *Condylomata*.

W., cor'neous. See *Cornu*.

W., fig. See *Ficus*.

W., moist. See *Acrothymion*.

W., necrogen'ic. See *Verruca necrogenica*.

W.s of a'nus. See *W.s, anal*.

W., Peru'vian. See *Verruca peruana*.

W. pock. The same as *W. pox*.

W., post-mor'tem. See *Verruca necrogenica*.

W.-pox. A term for *Varicella verrucosa*.

W., soot. A name for *Cancer*, chimney-sweeper's.

W., vene'real. See *Condyloma acuminatum*.

Wartweed. A popular name for several plants, namely, the *Chelidonium majus*, *Euphorbia helioscopia*, *E. pepus*, *Gnaphalium uliginosum*, and *Senebiera coronopus*. (Foster.)

Wartwort. A syn. for *Wartweed*.

Warty. Like a wart; also, covered or furnished with warts.

W. small'pox. See *Smallpox*, *warty*.

W. tu'bercle. A name for *Verruca necrogenica*.

W. tu'mour of cic'atrix. A tumour appearing sometimes in old scars, and occasionally ulcerating to form the *Warty ulcer* of *Marjolin*.

W. ul'cer of Mar'jolin. See *Marjolin's ulcer*.

Wa'rus. The same as *Warrus*.

Warwick's powder, Earl of. See *Pulvis comites Warwicensis*.

Wash'. As a *verb*, to make clean by the use of some liquid. As a *subst.*, in *Med.* and *Surg.*, syn. for *Lotion*.

W., black. The *Lotio hydrargyri nigra*.

W., red. The *Lotio rubra*.

W., white. The *Liquor plumbi subacetatis dilutus*.

W., yellow. The *Lotio hydrargyri flava*.

Washed sul'phur. The *Sulphur lotum* of the U.S.P.

Washerwoman's hand. See *Cholera hand*.

W.'s itch. See *Itch*, *washerwoman's*.

W.'s scall. A syn. for *W.'s itch*.

Washing so'da. Term for impure carbonate of sodium used for washing.

Wash-leath'er skin. That pathological state of the skin in which certain metals, and especially silver, leave a black mark upon it. It usually occurs in cases where there is some lesion of the trophic nerves of the skin, and sometimes precedes the formation of bed-sores.

Wa'sium. A mineral substance discovered by Bahr, and described by him as being a metal. It was subsequently found by Nickles to be impure *Yttrium* (Littre) or *Thorium* (Foster).

Wasp. Common name for the *Vespa vulgaris*.

Waste. (Mid. E. *wast*.) *Med.* To lose flesh, and especially fat; to get thinner.

Wast'ing. *Med.* Losing flesh and fat; getting thinner. Used popularly as a substantive to signify *Consumption*.

W. disease'. Any disease characterised by wasting. Also, more particularly, *Tuberculosis*, especially pulmonary tuberculosis.

W. palsy. A popular term for *Progressive muscular atrophy*.

Watchfulness. See *Agrypnia*.

Watch'ing. See *Pervigilium*.

Watchmaker's cramp. See *Cramp*, *watchmaker's*.

Water. (L. *aqua*; F. *eau*; I. *acqua*; Sp. *agua*; G. *Wasser*.) H_2O . A transparent, colourless, tasteless, neutral liquid. It is found everywhere in nature, constituting about three quarters of the earth's surface. A constituent also of the atmosphere, and present in all animal and vegetable tissues, whether solid or fluid. It freezes at 32° F., and boils at 212° F. It is a powerful solvent.

W., acid'u'ous, sim'ple. See under *Acidulous water, simple*.

W., aë'rated. Water containing air or some other gas in solution.

W., all'flower. A name for *Urine, cow's*.

W., an'gel. See *Angel water*.

W., an'ise. The *Aqua anisi*.

W., antimephit'ic, of Larnan'dès. Name for a solution of 23 parts of zinc sulphate and 2 parts of copper sulphate in 975 parts of water. (Foster.)

W., ap'ple. See *Apple water*.

W.-ar'um. The *Calla palustris*.

W.-ash. The *Fraxinus sambucifolius*.

W.-av'ens. The *Geum rivale*.

W.-bag. *Med.* An india-rubber bag for holding hot water for local application. In *Comp. Anat.*, the reticulum of the stomach in the *Camelidae*.

W., bar'ley. See *Barley water*.

W.-bath. An arrangement in which the vessel containing a substance to be heated is placed in a larger vessel containing water, this water being heated by means of a flame placed beneath the larger vessel.

W.-bed. A watertight mattress which can be filled with water, and thus made very elastic. Very useful in cases of long illness, especially where there is a tendency to the formation of bedsores.

W.-bet'ony. A common name for the *Betonica aquatica*.

W., Binel'li. See *Aqua Binelli*.

W., black. Name of a disease of cattle characterised by the passing of dark-coloured urine, containing albumen and broken-down blood-corpuscles.

W. blebs. A name for *Pemphigus*.

W.-brain. The staggers in sheep. It is caused by the brainworm.

W.-brain fe'ver. A term for *Menigitis, tuberculous*.

W.-brash. Common name for *Pyrosis*.

W. brax'y. A disease occurring in sheep, characterised by the occurrence of peritoneal hæmorrhage.

W., Broec'hie'rl. The *Aqua Broochieri*.

W.-cal'amint. The *Mentha arvensis*.

W., cam'phor. The *Aqua camphoræ*.

W. can'cer. The same as *Water canker*.

W. can'ker. A name for *Cancrum oris*.

W., car'away. The *Aqua carui*.

WATER

W., car'away, strong. A term for *Spiritus carui*.

W., car'bonated. See *Aqua acidi carbonici*.

W., Carmelite. *Aqua carmelitana*.

W., carra'ra. The name for water containing carbonate of lime held in solution by an excess of carbonic acid.

W.-car'rier's paralysis. A name for paralysis of the radial nerve.

W., cas'sia. The *Aqua cassiæ*.

W. caster. One who casts or forecasts from examination of the urine; a practiser of *Uromancy*.

W.-cell. *Comp. Anat.* One of the cells or diverticula in the paunch of a camel in which water is stored up.

W., chalyb'eate. Water which holds in solution a salt or salts of iron.

W., cherry-lau'el. The *Aqua lauro-cerasi*.

W., chick'en. See *Chicken tea*.

W., chlo'rine. See *Chlorine water*.

W., chlor'oform. See *Chloroform water*.

W., cin'namon. The *Aqua cinnamomi*.

W., cin'namon, strong. The *Spiritus cinnamomi*.

W.-clos'et. A closet in which there is a pan for defæcation, the discharges being carried away by means of a flush of water.

W. coil. An apparatus used for applying locally either heat or cold. It consists of a series of coils of rubber or tin tubing, through which water of any desired temperature may be made to pass.

W., Cologne'. *Eau de Cologne*.

W., creasote. See *Aqua creasoti*.

W.-cress. The *Sisymbrium nasturtium*.

W.-cup. The *Sarracenia purpurea*.

W. cure. A popular name for *Hydrotherapy* in general.

W., dill. See *Dill water*.

W., distilled'. Water which has been rendered pure by distillation. As a drink it is very flat, from the absence of aëration.

W.-dock. Common name for the *Rumex aquaticus*.

W. doc'tor. The same as *W. caster*.

W. dress'ing. Treatment of wounds by lint, &c., wrung out of water.

W.-drop'wort. The *Enanthe crocata*.

W.-el'der. The *Sambucus vulgaris*.

W. far'cy. Lymphangitis occurring in the leg of the horse.

W.-fen'nel. A common name for the *Phellandrium aquaticum*.

W., fen'nel. See *Fennel water*.

W., ferru'ginous. The same as *W., chalybeate*.

W.-fig'wort, great'er. Common name for the *Scrophularia aquatica*.

W.-flag. Common name for the *Iris pseudacorus*; also for the *Iris versicolor*.

W.-flag, yellow. Common name for the *Iris pseudacorus*.

W., Flor'ida. A perfume made of *Oleum bergamii*, *Tinctura benzoini composita*, and alcohol.

W., forge. See *Forge water* and *Aqua fabrorum*.

W. fright. See *Hydrophobia*.

W.-german'der. The *Teucrium scordium*.

W., Goulard'. See *Goulard water*.

W., ground. A synonym for *W., subsoil*.

W. gru'el. Gruel made with water instead of milk.

W.-gur'gle test. *Med.* The gurgling sound heard on auscultation, during swallowing, over the seat of an organic stricture of the œsophagus.

W.-ham'mer pulse. See *Pulse, water-hammer*.

W., hard. Water containing lime salts, which form a curd with soap. The hardness may be either *temporary*, from the presence of calcium carbonate, or *permanent*, from the presence of calcium sulphate.

W., hell. A name for toddy, *Aqua infernalis*.

W.-hem'lock. The *Cicuta aquatica*.

W.-hem'lock, fine-leaved. A common name for the *Phellandrium aquaticum*, or water-fennel.

W.-hem'lock, long-leaved. Common name for the *Cicuta virosa*.

W.-hemp. Common name for a species of *Eupatorium*.

W., holy. A name for distilled water. (Dunglison.)

W., hon'ey. A scent consisting of a mixture of essences to which a little honey is added, and which is coloured with saffron.

W.-hore'hound. Common name for the *Marrubium aquaticum*; also, for the Genus *Lycopus*.

W., Hun'gary. A common name for *Spiritus rosmarini*.

W., ice. Water obtained by melting ice.

W. immer'sion. See under *Objective*.

W. jags. A popular name for *Varicella coniformis*.

W., jav'elle. Name for an aqueous solution of potassium hypochlorite. Used for bleaching.

W.-knot'weed. A name for the *Polygonum amphibium*.

W., lau'el. The same as *W., cherry-laurel*.

W., lav'ender. Common name for *Spiritus lavandulæ*.

W., lead. A synonym for *Goulard water*.

W., lem'on-peel. A syn. for *Tea, lemon-peel*.

W.-lil'y. The *Nymphaea odorata*.

W.-lil'y, white. Common name for the *Nymphaea alba*.

W.-lil'y, yel'low. Common name for the *Nymphaea lutea*.

W., lime. *Liquor calcis*.

W., lime, com'pound. *Liquor calcis compositus*.

W., lith'ia. See *Lithia water*.

W., lith'ia, aërated. See *Lithia water, aërated*.

W., magne'sia, aërated. A synonym for *Magnesia, fluid*.

W., magne'sia, car'bonated. The same as *W., magnesia, aërated*.

W., mar'mala. A perfume distilled in Ceylon from the flowers of the bael, *Ægle marmelos*. Action, alexipharmic.

W., medicated. See *Aquæ medicatæ*.

W.-mel'on. Common name for the fruit (*Citrullum*) of the *Cucurbita citrullus*; also for the plant itself.

W.-mel'on plant. The *Cucurbita citrullus*.

WATER

W., min'eral. A water containing mineral salts in sufficient amount to give it a characteristic taste, and a special medicinal action when taken internally.

W.-mint. Common name for the *Mentha aquatica*.

W., mor'phinated. Name for a .04 per cent. (saturated) aqueous solution of morphia, dissolved by long-continued shaking.

W.-nut. See *Nux aquatica*.

W., nutmeg. The *Spiritus myristicæ*.

W. of ammo'nia. A name for *Liquor ammoniæ*.

W. of ammo'nia, strong'er. A name for *Liquor ammoniæ fortior*.

W. of bitter almonds. The *Aqua amygdalum concentrata*.

W. of carbol'ic ac'id. See *Carbolic acid water*.

W. of carbonate of ammo'nia. The *Liquor ammoniæ subcarbonatis*.

W. of Cotun'nus. See *Cotunnus*, water of.

W. of crystallisa'tion. That portion of water which combines with and becomes a component part of any salt in the process of crystallisation.

W. on the brain. A popular term for *Hydrocephalus*.

W. of the head. A term for *Hydrocephalus*.

W., or'ange-flow'er. The *Aqua aurantii floris*.

W., oxy'genated. A name for *Hydrogen peroxide*.

W. pang. See *Pang*, water.

W.-pars'nep, creep'ing. The same as *W.-parsnip*.

W.-pars'nip. The *Sium latifolium*.

W.-pas'sage. A term for the *Urethra*.

W., pennyroy'al, spir'ituous. The *Spiritus pulegii*.

W.-pep'per. The *Polygonum hydropiper*.

W., pep'permint. The *Aqua menthæ piperitæ*.

W., pimen'to. The *Aqua pimentæ*.

W.-plan'tain. The *Alisma plantago*.

W.-pock. The same as *W.-pox*.

W.-pore. A minute opening in the epidermis of the leaves of some plants over the ending of a vein.

W., pot'ash. The *Liquor potassæ effervescentis*.

W.-pox. A popular name for *Varicella coniformis*.

W., protox'ide of ni'trogen. The *Aqua nitrogenii protoxidi*.

W.-pur'ple. The *Veronica beccabunga*.

W.-purs'lane. The *Ludwigia palustris*.

W. qualm. The same as *W. pang*.

W.-rad'ish. The *Sisymbrium nasturtium*.

W., rain-. When collected as it falls and away from human habitations, the softest and purest form of natural water. It holds in solution minute quantities of chloride and carbonate of sodium, and carbonic acid.

W., red-. A synonym for *W., black*.

W., rice. See *Rice water*.

W., riv'er. This varies very greatly in purity, according to its source and surroundings. The water of a river running through a town necessarily becomes much polluted.

W., rose. The *Aqua rosæ*.

W., saline', pur'gative. A name for *Aqua sedlitzensis*.

W., sea. This contains 33 to 36 parts of solids per 1000; 30 parts of the solids being chlorides of sodium, potassium, and magnesium, and 3 to 4 parts being sulphates of magnesium and calcium.

W., sed'litz. The same as *W., Seidlitz*.

W., Seid'litz. See *Seidlitz water*.

W., Seyd'schütz. The same as *W., Seidlitz*.

W.-sham'rock. The *Menyanthes trifoliata*.

W.-shield. A common name for the *Brasenia hydropeltis*.

W.-smartweed. The *Polygonum acre*.

W., snow. Similar in composition to *W., rain-*.

W., so'da. See *Soda water*.

W., soft. Water which readily forms a lather with soap, being comparatively free from calcium carbonate and calcium sulphate. See *W., hard*.

W., soft'en'ing of. The removal from *Water, hard*, of the constituents causing its hardness, either by application of heat or the employment of chemical decomposition. See *Clarke process*.

W., spear'mint. The *Aqua menthæ viridis*.

W., spring. This varies in composition and purity according to its source. It is usually harder than rain-water. The water from deep springs is usually very pure, and often somewhat hard.

W.-star'wort. The *Callitriche verna*.

W. strapping. The same as *W. dressing*.

W. stroke. A term for *Meningitis*, whether primary or secondary, when the effusion of fluid forms very rapidly.

W. styp'tic, Syd'enham's. The *Solutio sulphatis cupri composita*.

W., sub'soil. See *Subsoil water*.

W., tar. See *Tar water*.

W.-tar'get. The *Brasenia hydropeltis*.

W., toast. See *Toast water*.

W.-tomes. An old term for water-brash, *Pyrosis*.

W.-vas'cular sys'tem. Zool. The respiratory circulation of water through the tissues in some of the *Invertebrata*.

W.-ven'om glob'ulin. Name given by Reichert and Mitchell to a form of globulin obtained from snake-venom by diluting with water and precipitating.

W., well. Very similar in composition to *W., spring*, but much more liable to pollution.

W.-wheel sound. Med. See *Bruit de Moulin*.

W.-ziza'nia. The *Zizania aquatica*.

Watered-silk re'flex. See *Reflex, watered-silk*.

Waters. Popular name for the *Liquor amnii*.

W., bag of. The *Amnion* of the fœtus at the full time of pregnancy.

W., distilled'. See *Aquæ destillatæ*.

W., false. Term for a discharge *per vaginam*, before labour, of a clear fluid secreted in consequence of catarrhal endometritis or hydrorrhœa gravidarum. Also, the clear fluid sometimes present between the amnion and chorion at a late stage of pregnancy.

WATERY—WEAKNESS

W., first. Term for that portion of the *Liquor amni* which is discharged before the birth of the fetus.

W., green. A popular term for the *Lochia serosa*.

Watery eye. See *Epiphora*.

Watt. (After James Watt, a Scotch engineer; born 1736, died 1819.) *Electro-mechanics*. A syn. for *Voltampère*.

Wattenweiler. A syn. for *Watwiller*.

Wattle. The mass of red, tumid, erectile skin at the base of the beak or on the head of certain birds.

Bot. In Australia, &c., name for several species of *Acacia* which have an astringent action.

W. bark. The bark of the *W. tree*.

W. gum. Australian gum; the gum obtained from the *Acacia decurrens*.

W. tree. The *Acacia decurrens*.

Watwiller. A place in Alsace noted for its cold, gaseous, ferruginous mineral spring.

Wave. A hill-like advancing elevation, followed by a corresponding valley-like depression, of the surface of a fluid, with little or no advance of the particles of the fluid. Hence, general term for a cycle of alternating rhythmical movements.

W., contraction. The wave-like movement of contraction along a contracting muscle-fibre, starting from the point of stimulation.

W., dicrotic. See *Pulse, dicrotic*.

W., expansion. See *Pulse*.

W., negative. The blood-wave (wave of "negative pressure") moving towards the heart during the auricular systole.

W., oscillation. Term for a secondary pulse-wave or oscillation occurring in consequence of the inertia of the vessel walls.

W., percussion. A wave occurring in consequence of a sharp blow or percussion.

W., predicrotic. See *Predicrotic wave*.

W., pulse. See *Pulse*.

W., recoil. A syn. for *W., dicrotic*.

W., respiratory. The rise and fall of the blood-pressure curve corresponding respectively with inspiration and expiration.

W.s., stationary flexion. The waves or oscillations of all the particles making up any vibrating elastic body, which are such as to be always in the same phase of any vibrating stretched string or tuning-fork. The oscillations of the small parts of the auditory mechanism occur in such waves. (Landois.)

W., stimulus. Term for the contraction wave (see *W., contraction*) passing along a muscle stimulated at any point.

W., true tidal. Mahomed's term for that part of a sphygmographic pulse-tracing between the apex and the aortic notch.

Wavy. Having the characters of a *Wave*.

W. breathing. A syn. for *Respiration, cog-wheel*.

Wax. (L. *cera*; F. *cire*; I. *cera*; G. *Wachs*; Mid. E. *wax*.) As a subst. See *Cera*.

Also (Mid. E. *waxen* or *woxen*), as a verb. To increase in size.

W., bee's. See *Beeswax*.

W., Brazil. See *Carnauba wax*.

W., carnauba. See *Carnauba wax*.

W., cera. A syn. for *W., carnauba*.

W., China. A hard white wax, composed mainly of ceryl cerotate, deposited by the insect *Coccus ceriferus* on the branches of the tree

Fraxinus chinensis, and used in medicine and for making candles.

W., Chinese in'sect. The same as *W., China*.

W., ear. See *Cerumen*.

W., earth. A name for *Ozokerite*.

W., fossil. The same as *W., earth*.

W., grave. A name for *Adipocere*.

W., Japan. Wax obtained from the Japanese tree *Rhus succedanea*, and consisting mainly of palmitin.

W. kernels. A popular name for enlarged submaxillary glands.

W., mineral. *Ozokerite*.

W. myrtle. The *Myrica cerifera*.

W., myrtle. The wax obtained from the *Wax myrtle*. Used by the Hottentots as food, and with beeswax to make candles.

W., oil of. See *Oleum cera*.

W., ointment of. See *Unguentum cera*.

W., paraffin. See *Paraffin*.

W., pulverulent. See *Cera amydata*.

W., vegetable. A waxy substance of vegetable origin, and especially *W., myrtle*. It is excreted by the epidermis of many plants as a protection from moisture and a check to excessive evaporation.

W., vegetable in'sect. See *W., China*.

W., white. *Cera alba*.

W., yellow. *Cera flava*.

Waxed sponge. *Surg. Spongia cerata*.

Wax'ing. Increasing in size. See *Wax*.

W. and wax'ing pulse. See *Pulsus inciduus*.

W. kernels. A popular name for enlarged glands in children, especially in the groins; given from the popular belief that they were connected with the body-growth.

W. pains. A syn. for *Growing pains*.

Wax'work. A common name for the American climbing shrub *Celastrus scandens*.

Waxy. Of the nature of *Wax*.

W. degenera'tion. A syn. for *Lardaceous degeneration*.

W. kidney. A syn. for *Lardaceous kidney*.

W. liver. A syn. for *Lardaceous liver*.

W. spleen. A syn. for *Lardaceous spleen*.

Way. A path; also, a method.

W., dry. *Chem.* The employment of heat to cause melting or liquefaction.

W. thistle, common creep'ing. Common name for the *Serratula arvensis*.

W., wet. *Chem.* The use of liquid solvents.

Way'bread. A popular name for the *Plantago major*.

Way'land springs. Saline chalybeate mineral springs in Lawrence County, Tennessee.

Ways, diges'tive. A name for the *Alimentary canal*, or digestive tract.

W., sec'ond. A name for the blood-vessels and lymphatics.

Weak sight. See *Asthenopia*.

Weak'ness. A want of strength or force.

W., cer'ebro-acous'tical. Goltz's term for temporary deafness, consequent on a destructive lesion of the acoustic area of the cerebral cortex.

W., cer'ebro-op'tical. Goltz's term for temporary blindness, consequent on a destructive lesion of the visual area of the cerebral cortex.

WEAK-SIGHTEDNESS—WEIGHT

W., in'ward. A popular name for *Leucorrhœa*.

Weak-sightedness. See *Asthenopia*.

Wean. See *Weaning*.

Weaning. Ceasing to feed offspring by the breast.

W. brash. A severe form of diarrhœa sometimes immediately supervening on weaning.

Wean'ling. Old term for any young animal recently weaned.

Wear'ing. A popular term for *Consumption*.

Wea'sand. Old popular term for the wind-pipe or *Trachea*.

Weathercocks. A common name for the *Impatiens pallida*.

Weather-glass. A common name for the scarlet pimpernel, *Anagallis arvensis*.

Weather-plant. A common name for *Jequirity*.

Weaver's bot'tom. Term for chronic inflammation of the bursa over the ischial tuberosity from pressure. It is common in weavers.

Web. A finely woven fabric. In *Anat.*, any membrane-like, semi-transparent structure. In *Puthol.*, a name for *Pterygium*.

W., cho'roid. A term for the *Velum interpositum*.

W.-eyed. Suffering from *Pterygium* or *Web*.

W.-fin'gered. Having the fingers united by a thin web of connective tissue.

W.-foot'ed. Having the toes united by a thin web of connective tissue.

W., mu'cous. See *Rele mucosum*.

W., mus'cular. The *Panniculus carnosus*.

W. of brain. A name for the cerebral *Neuroglia*.

W.-toed. The same as *W.-footed*.

Webbed. Furnished with a web or webs, or of the nature of a web.

W. fin'gers. See *Web-fingered*.

Weber. (After *Weber*, an electrician) *Electr.* A term for *Coulomb*. Also, a term for *Ampère*.

W., Ernst Hein'rich. A German anatomist and physiologist of Leipsic. Born 1821, died 1878.

W.'s cor'puscle. *Anat.* A term for the *Sinus pocularis*.

W.'s exper'iment. In unilateral ear-disease, a vibrating tuning-fork placed on the middle of the vertex of the skull is heard better on the diseased side.

W.'s glands. See *Gland, Weber's*.

W.'s law. A law of sense-perceptions enunciated by *Weber*. If excitation be increased in geometrical progression, the resulting sensation will increase in arithmetical progression. This may also be stated as follows:—The reaction varies directly as the logarithm of the excitation.

W.'s or'gan. The same as *W.'s corpuscle*.

W.'s symp'tom. The symptom, present in some cases, of paralysis of the oculo-motor or third cerebral nerve of one side, with hemiplegia of the opposite side.

W.'s test. The same as *W.'s exper'iment*.

W. and Has'ner, aspira'tion the'ory of. See *Aspiration theory of Weber and Hasner*.

We'bera. *Bot.* A Genus of the *Rubiaceæ*.

W.tetran'dra. East Indian shrub. Leaves and root astringent; root also anthelmintic; bark and leaves used as an antidiysenteric. (Foster.)

Webe'rian cor'puscle. (After *Weber*.) The same as *Weber's corpuscle* (q. v.).

Web'ster's conden'ser. *Microsc.* An arrangement of two lenses for intensifying the light thrown on a body placed beneath.

W.'s din'ner pills, Lad'y. Name for a pill made of aloes, mastich, rose leaves, and syrup of wormwood. Also termed *Lady Crespigny's dinner pills*, and *Pilulæ ante cibum*.

Wedelia. *Bot.* A Genus of the *Wedeliæ*, which are a division of the *Helianthææ*. (Foster.)

W.calendula'cea. *Hab.*, India. Leaves, flowers, and seeds aromatic, deobstruent, and discutient.

Wedge-bone. A small wedge-shaped piece of bone, sometimes present at vertebral joints.

Weed. (Origin not certain.) *Bot.* Any troublesome or useless herbaceous plant, or one that becomes extremely common from its rapid and wide-spread growth.

Med. Milk fever or *Ephemera*.

Vet. med. Lymphangitis of the legs in horses.

W., ar'row. The *Sagittaria variabilis*.

W., bee'tle. The *Galax aphylla*.

W., bit'ter. A name for *Ambrosia artemisiæfolia*.

W., breast. The *Saururus cernuus*.

W., but'ter. The *Erigeron canadense*.

W., can'cer. The *Goodyera pubescens*.

W., dy'er's. The *Reseda luteola*.

W., emet'ic. A name for *Lobelia inflata*.

W., field. The *Anthemis cotula*.

W., horse. The *Erigeron canadense*.

W., horse-fly. The *Sophora tinctoria*.

W. in the breast. *Med.* See under main heading.

W., milk. The *Apocynum androsæmifolium*.

W., phthi'sis. The *Ludwigia palustris*.

W., pride. The *Erigeron canadense*.

W., red. The *Phytolacca decandra*.

W., sil'ver. The *Potentilla anserina*.

W., sol'dier's. A name for *Matico*.

W., thim'ble. The *Rudbeckia laciniata*.

W., white. A name for the *Chrysanthemum leucanthemum*; also for the *Achillea ptarmica*; also for the *Anthriscus sylvestris*. (Foster.)

W., wind. The *Asclepias tuberosa*.

W., yellow. A name for the *Reseda luteola*.

Weep'ing. In *Med.* and *Surg.*, term used to mean exudation or discharge of a watery fluid from a raw surface.

W. sin'ews. Colloquial term for torn tendons. (Gould.)

Wee'sel. *Anat.* A term for the *Trachea*. (Dunglison.)

Weib'el, spirill'um of. See *Spirillum saprophiles* of *Weibel*.

Weight. That property of matter by which, in consequence of the force of gravitation, it tends to fall vertically towards the earth. Also, in a more special sense, the amount of that tendency possessed by any particular body.

W., apoth'ecaries'. See *Apothecaries' weight*.

W., atom'ic. See *Atomic weight*.

W., molecu'lar. See *Molecular weight*.

Weil's disease'. An acute infectious febrile disease, the fever lasting eight to ten days, and characterised by persistent headache, jaundice, enlargement of liver and spleen, and often complicated by nephritis. The mortality is low, and recovery from the disease is usually quick.

Weir-Mit'chell. A celebrated contemporary Scotch physician.

W.-M.'s treatment. A treatment of functional nervous diseases, and especially hysteria, by a course of isolation, complete rest, systematic frequent feeding, and passive exercise (by massage, &c.).

Weismann, August. An eminent contemporary German biologist of Freiburg.

W.'s ahnenplasma. The germ-plasm, which, according to him, is immortal or continuous.

W.'s the'ory of hered'ity. The theory propounded by Weismann of the continuity or immortality of the germ-plasm as distinct from the somatoplasm, the latter forming the body-cells of the individual organism. Kölliker and others have shown that there is no sharp distinction to be found between germ-cells and somatic cells; and thus any theories founded on such supposed distinction cannot be valid.

Weisner's test. A test for the presence of *Lignin* in vegetable cells, introduced by Weisner. Add hydrochloric acid, and then moisten with a dilute alcoholic solution of phloroglucin. If the specimen contains lignin it becomes red.

Weiss's re'flex. A reflex pointed out by Weiss as observable by means of the ophthalmoscope in cases of myopia. It is a curved reflex situated on the fundus, parallel with and to the inner side of the optic disc.

Weissenburg. A place in the canton of Berne, Switzerland, noted for its warm, gaseous, sulphur spring. Also, a place in Middle Franconia, Bavaria, noted for its alkaline spring. (Foster.)

Weitbrecht. An English anatomist of the eighteenth century. (Littre.)

W., cartilage of. Name for the inter-articular cartilage of the acromio-clavicular joint.

W., cord of. The *Orbicular ligament* of the elbow-joint.

W., lig'ament of. A bundle of fibres on the flexor or anterior surface of the interosseous ligament of the forearm.

W., retinac'ula of. Ligamentous bands attached to the base of the great trochanter of the femur.

Welcker, angle of. Certain angles in *Craniometry* introduced by Welcker; namely, the ephippial angle, the nasal angle, and the naso-basal angle.

Welcome-to-our-house. A common name for the *Euphorbia cyparissias*.

Weld. A name for the *Roseda luteola*.

Welk. See *Welk*.

Wellingtonia. (From the Duke of Wellington.) *Bot.* A generic term synonymous with *Sequoia*.

Wells, lymph-. *Histol.* Ranvier's term for the stomata in the diaphragm.

Wells' facies. (After the late Sir Spencer Wells. *L. facies*, the face.) The typical face of ovarian disease.

Welter. An English chemist of the eighteenth century.

W.'s bit'ter. A name for *Picric acid*.

Wem'ding. A place in Bavaria noted for its saline sulphur spring.

Wen. (Anglo-Sax. *wenn*.) Common term for a sebaceous cyst of the face or scalp.

Wendlan'dia. (*Wendland*, a German horticulturist.) A Genus of the *Rubiaceæ*.

W. Lawso'niæ. Hab., Malabar. This tree has an antispasmodic action; all parts used in baths.

Wenz's meth'od. A method introduced by Wenz for removing proteids from any liquid by saturation with ammonium sulphate and filtration.

Were-wolf. The same as *Werwolf*.

Werl'hoff. A Hanoverian physician. Born 1699, died 1767.

W.'s disease'. *Purpura hæmorrhagica*.

Wer'nekinck's com'missure. (After the anatomist *Wernekinck*.) Term for the superior peduncles of the *Cerebellum*.

Wernicke's fis'sure. A syn. for *Fissure, exoccipital*.

W.'s sign. The occurrence of hemiopic inaction of the pupil. Failure of the pupil to contract, in cases of lateral hemianopsia, when light is thrown upon the blind half of the retina. This indicates the presence of a lesion between the retina and the corpora geniculata, *i.e.* a peripheral, not a central lesion.

Werwolf. (Anglo-Sax. *wer*, a man; *wulf*, a wolf. *F., loup-garou*.) An ancient superstition, once common throughout Europe, that human beings transformed into wolves sometimes prowled about the haunts of men, carrying off and devouring children. Sometimes, it was believed, the form of a black goat was taken; sometimes the individual was invisible. Its skin was believed to be wound-proof, unless the missile used had been blessed in a chapel dedicated to St. Hubert, the patron of huntsmen. See also *Lycanthropy*.

Wes'ington springs. Chalybeate sulphuretted mineral springs in Jerauld County, Dakota.

Wesson's iron spring. A chalybeate mineral spring in Hamilton County, Florida.

West African pepper. See *Pepper, West African*.

W. Ba'den springs. Alkaline sulphuretted saline mineral springs at West Baden, Orange County, Indiana.

W. In'dian col'ic. See *Colic, West Indian*.

W. In'dian ki'no. See *Kino, West Indian*.

W. In'dian molas'ses. See *Molasses*.

Westbrook's opera'tion. *Cardi-centesis*.

Wes'tern mug'wort. The *Artemisia ludoviciana*.

Westphal, paradox'ical contraction of. The pathological symptom of contraction of a muscle on the passive approximation of its extremities. It has been found to occur in paralysis agitans and in cases of combined sclerosis of the lateral and posterior columns of the spinal cord.

W.'s nu'cleus. A small grey nucleus lying below the *Aqueduct of Sylvius* in the brain, near the mid-line, and supposed to be the fibres supplying the sphincter pupillæ muscle.

W.'s phenom'enon. A syn. for *W.'s sign*.

W.'s sign. The absence of patellar reflex in locomotor ataxia.

W.'s symptom. The same as *W.'s sign*.

Westphal-Erb's symptom. A syn. for *Westphal's symptom*.

Wet brain. A pathological condition of the brain seen in some cases, namely, general paralysis, alcoholism, &c., in which there is an excess of serous exudation.

W. cup'ping. See *Cupping, wet*.

W.-nurse. A woman who suckles the child of another.

W. pack. The wrapping up of a patient in a cold wet sheet, covered over by dry blankets. It acts as a very strong sudorific, and is very useful as a rapid means of lowering temperature.

W. scald. Eczema occurring in sheep in wet and cold weather.

W. strap'ping. A syn. for *Water dressing*.

W. tet'ter. A name for *Eczema*.

Weyl's test. A test introduced by Weyl for the detection of *Kreatinin* in urine. To the urine add a few drops of dilute solution of sodium nitro-prusside, when a ruby-red colour is produced; then add a dilute solution of sodium hydrate, when the colour changes to greenish and then blue.

W.'s test A. For the detection of nitric acid in urine. Add a few drops of hydrochloric or sulphuric acid, distil; then add solution of caustic potash to the distillate, and then metaphenyl-diamine. A yellow colour is produced if nitric acid is present.

W.'s test B. For the detection of nitric acid in urine. Add a few drops of hydrochloric or sulphuric acid; distil as in test A, then add solution of caustic potash, and finally a solution of pyrogallie acid in extremely dilute sulphuric acid. A yellowish-brown colour is produced if nitric acid is present.

W.'s test C. For the detection of nitric acid in urine. Add a few drops of hydrochloric or sulphuric acid; distil as in test A; then add some solution of caustic potash, and then solution of sulphanilic acid; after ten minutes add some naphthylamine hydrochlorate. If nitric acid is present a red colour is produced.

Whahoo'. The same as *Wahoo*.

Whale. See *Balena*.

W. oil. See *Oleum balenæ*.

Wharton. An English anatomist. Born 1610, died 1673.

W.'s duct. The excretory duct of the *Submaxillary gland*.

W.'s jelly. The mucous tissue of the umbilical cord of the fœtus.

Whartonian duct. A syn. for *Wharton's duct*.

W. jelly. The same as *Wharton's jelly*.

Wheal. (Mid. E. *wheal*.) A raised, bright red ridge on the skin, forming quickly, and usually subsiding again quickly. The colour disappears from the wheal, the raised ridge usually remaining for some time subsequently. A wheal may occur as a symptom in urticaria, from a sharp blow with a stick, or from the bite or sting of an insect, &c.

Wheal worm. A common name for the harvest bug, *Acarus autumnalis*; also for the *Acarus scabiei*.

Wheat. (Ang.-Sax. *hwæte*; F. *froment*; I. *frumento*; G. *Weizen*.)

W., In'dian. Indian corn, the *Zea mays*.

W. phos'phates. Contained in the brain; believed to assist in assimilation when taken internally.

W., Tur'key. A syn. for *W., Indian*.

Wheat'en flour. (L. *farina tritici*; I. *farina di frumento*.) See *Farina tritici*.

Wheel-crutch. A form of crutch fitted with a wheel, by means of which a child with paralysis or hip disease can move itself from place to place.

Wheelhouse's opera'tion. A form of external urethrotomy, introduced by the late Mr. Wheelhouse, in which the urethra is divided on a grooved staff in front of the stricture, the latter being then divided and dilated.

Wheel-shaped. See *Rotatus* and *Trochoides*.

Wheeze. (Ang.-Sax. *hwæsan*, to rattle in the throat.) As a verb, to breathe with *Wheezing*.

As a subst., syn. for *Wheezing*.

Wheez'ing. (See *Wheeze*.) As a subst., a peculiar form of abnormal or disordered breathing, associated with some difficulty in the act, and a harsh rasping sound, occurring usually both with inspiration and expiration. It corresponds with the auscultatory signs of *Rhonchus* and *Sibilus*. Also, the act of breathing, or in the act of breathing, as above.

Whelk. (Ang.-Sax. *hwylca*.) Any localised inequality of a surface; a protuberance or wrinkle. Also, a pustule. Also, a *Wheat*. Also, a term for *Acne*.

W., chin-. A term for *Sycosis*.

W., ro'sy. A term for *Rosacea*.

Whet'stone crystals. A peculiar form of xanthine crystals, resembling a whetstone or oilstone, sometimes found in urine.

Whet'tle-bones. A name for *Vertebræ*. (Dunghison.)

Whey. (Mid. Eng. *whey*; L. *serum lactis*; F. *petit lait*; I. *siero del latte*; G. *Molken*.) The liquid part or serum of milk separating from the curd during clotting. Its composition is very similar to that of blood-serum.

W., al'um. Whey separated from milk by stirring with a piece of alum. It is popularly used as a local remedy for ophthalmia.

W. cure. A treatment for chronic catarrh of the respiratory tract. It consists in drinking warm whey at stated intervals and in certain quantities. About twenty ounces are to be drunk daily. In some cases whey baths are also given.

W., fer'rated. Two hundred parts of milk are mixed with one part of acetate of iron. Another method is to dissolve 3 parts of citrate of iron and ammonia in 1000 of milk.

W., mus'tard. See *Serum lactis sinapium*.

W., ren'net. Another term for *Whey*, the serum lactis.

W., sack. A syn. for *W., wine*.

W., tam'arind. See *Tamarind whey*.

W., vin'egar. See *Vinegar whey*.

W., vit'riolated. One part of dilute sulphuric acid is added to 400 parts of milk.

W., wine. See *Wine whey*.

Whick'flaw. A term for *Whitlow*. (Dunghison.)

Whiff. A sharp puff of air.

W., o'ral. The same as *Whiffing murmur*.

Whiff'ing mur'mur. See *Murmur, whiffing*.

WHIMBERRY—WHITE

Whim'berry. Another form (the *n* changed to *m* before *b*) of the word *Whinberry*.

Whin. *Bot.* The *Ulex europæus*.

W., petty. Common name for the *Ononis arvensis* and the *O. procurrens*.

Whin'berry. Common name for the *Vaccinium myrtillus*.

Whiptongue. *Bot.* The *Galium mollugo*.

Whip'worm. The *Trichocephalus dispar*.

Whirl. (*Mid. E. whirlen.*) To turn round and round rapidly.

W.-bone. A name for the patella; also, for the head of the femur.

Whirling chair. See *Chair, whirling*.

Whis'key. (*Irish usquebaugh*; *L. spiritus frumenti.*) A form of alcoholic drink made by distilling an infusion of fermented grain. It contains from 44 to 55 per cent. by weight of alcohol.

W. liv'er. A name for *Liver, hobnailed*.

W. nose. A name for *Acne rosacea*.

Whis'ky. Another spelling of *Whiskey*.

Whis'per. An uttering of words by the use of the breath without putting into vibration the vocal cords. In *Auscultation*, the whispering voice as conducted through the chest walls.

W., cavernous. See *Cavernous whisper*.

W., exag'gerated bron'chial. In *Auscultation*, an abnormal sound heard over some part of the chest, resembling *Bronchophony*, *whispered*, but less intense.

Whis'pering. (*F. chuchotement*; *I. bisbigliamento*; *G. Flüstersprache.*) See *Whisper*.

W. pectori'loquy. See *Pectoriloquy, whispering*.

W. souf'fle. See *Souffle, whispering*.

Whistle. A sharp musical sound produced by forcing the air through the lips contracted up to form a small rounded opening; also, an instrument giving rise to such a sound when air is sharply forced through it.

W., Gal'ton's. A form of high-pitched whistle designed by Francis Galton for testing the perception of the ear for high tones.

Whis'tling. See *Whistle*.

W. râle. See *Râle, whistling*.

White ag'aric. The *Polyporus officinalis* (q. v.).

W. al'der. The *Clethra alnifolia*.

W. ar'senic. Common name for *Ar-senious acid*.

W. ash. The *Fraxinus americana*.

W. atrophy of optic nerve. See *Optic nerve, white atrophy of*.

W. av'ens. The *Geum virginianum*.

W. ball. Common name for the *Cephal-anthus occidentalis*.

W. bal'sam. See *Balsam, white*.

W. bal'sam of Peru'. The same as *W. balsam*.

W. bay. The *Magnolia glauca*.

W. bis'muth. *Bismuth, subnitrate of*.

W. blis'ters. A term for *Rupia escha-rotica*.

W. bole. See *Bole, white*.

W. ce'dar. See *Cedar, white*.

W. clay. Common name for *Kaolin*.

W. clot. See *Clot, white*.

W. clo'ver. The *Trifolium repens*.

W. cohosh'. The *Actæa alba*.

W. col'umns of spi'nal cord. See *Spinal cord, white columns of*.

W. com'missure. The *Anterior com-*

missure, or anterior portion of the commissure, of the spinal cord.

W. cream of tar'tar. Another name for *Cream of tartar*.

W. decoc'tion. See *Decoctum album*.

W. diarrhœ'a. See *Diarrhœa alba*.

W. dit'tany. The *Dictamnus albus*.

W., Dutch. Name for a mixture of 3 parts of barium sulphate with 1 part of white-lead.

W. dys'entery. A form of dysentery in which there is no blood in the stools.

W. elm. The *Ulmus americana*.

W. flag. The *Iris florentina*.

W. flake. A name for *White-lead*.

W. flux of In'dia. A name for *Diarrhœa alba*.

W. galls. See *Galls, white*.

W. gan'grene. See *Gangrene, white*.

W. gin'ger. See *Ginger, white*.

W. gum. *Med.* A name for *Strophulus albidus*.

W., Ham'burg. Name for a mixture of 2 parts of sulphate of barium with 1 part of white-lead.

W. hel'lebores. The *Veratrum album*.

W. in'farct. See *Infarct, white*.

W. ipecacuan'ha. Name for the root of *Richardsonia scabra*.

W.-lead. Carbonate of lead, *Plumbi carbonas*.

W.-leaf. A common name for the *Pyrola maculata*; also for the *Spiræa tomentosa*.

W. leg. Common term for *Phlegmasia alba dolens*.

W. lep'rosy. See *Alphus*.

W. let'tuce. The *Prenanthus albus*.

W. lil'y. The *Lilium album*.

W. line of pel'vic fas'cia. See *Pelvic fascia, white line of*.

W. lu'pine. The *Lupinus albus*.

W. mat'ter of brain. See *Brain, white matter of*.

W. mat'ter of spi'nal cord. See *Spinal cord, white matter of*.

W., medul'lary. Flechsig's term for *White matter of spinal cord*.

W. mel'ilot. The *Melilotus albus*.

W. mole. See *Mole, white*.

W. mus'tard. The *Sinapis alba*.

W. nail. A condition of the finger-nail in which there are opaque white spots and bands in its substance. In some cases the whole nail is affected. This is due to the presence of air between the laminæ of the nail. The condition is, in some cases, associated with gout, leprosy, or syphilis.

W. oak bark. The bark of the white oak, *Quercus alba* (q. v.).

W. of egg. See *Ovi albumen*.

W., Par'is. A name for *Whitening*.

W., pearl. A name for *Bismuth sub-nitrate*.

W. pep'per. See *Piper album*.

W., per'manent. Name for a mixture of white-lead and powdered sulphate of barium.

W. Peru' bal'sam. See *White balsam of Peru*.

W. pine. The *Pinus strobus*.

W. pneumo'nia. See *Pneumonia, white*.

W. pop'lar. The *Liriodendron tulipi-fera*.

W. precip'itate. The *Hydrargyrum ammoniatum*.

W. precipitate ointment. The *Unguentum hydrargyri ammoniaci*.

W. root. A common name for the roots of several plants, namely, the *Angelica lucida*, *Aselepias tuberosa*, and *Ligusticum actæo-folium*. (Dunglison.)

W. rosin. Common rosin rendered white and opaque by melting and mixing with water.

W. sage. The *Erotia lanata*.

W. sandal-wood. The *Santalum album*.

W. Saunders. A syn. for *W. sandal-wood*.

W. snake-root. Common name for the root of *Eupatorium ageratoïdes*.

W. softening. A form of degeneration of the cerebral substance, consequent on local embolism, or narrowing of the arteries of the affected area from chronic endarteritis, in which the cerebral substance affected is of a dirty white colour.

W., Spanish. A name for subnitrate of bismuth.

W. substance of Schwann. See *Schwann*, white substance of.

W. sulphur springs. Name for various sulphur mineral springs in the United States.

W. swelling. See *Tumor albus*.

W. swelling of lying-in wom'en. A term for *Phlegmasia alba dolens*.

W. swelling, syphilitic. Term for a variety of *Hydrarthrosis* sometimes occurring in tertiary syphilis.

W. tar'tar. The crude tartar deposited on the outside of white-wine casks during the process of fermentation.

W. thorn. The *Onopordium acanthium*.

W. turpentine. See *Turpentine*, white.

W., Venetian. Name for a mixture of equal parts of white-lead and sulphate of barium.

W. vera'trum. The *Veratrum album*.

W. ver'vain. The *Verbena urticifolia*.

W. vitriol. A common name for sulphate of zinc.

W. wal'nut. The *Juglans cinerea*.

W. wax. See *Cera alba*.

W. weed. A common name for the *Chrysanthemum leucanthemum*.

W. wine. See *Wine*, white.

W. wood. A common name for the *Liriodendron tulipifera*; also, for the *Tilia americana*.

White's disease. A syn. for *Kerato-sis follicularis* (q. v.).

White'cap. A common name for the *Spiræa tomentosa*.

Whit'ening. Purified carbonate of calcium.

Whites, the. Popular term for *Leucorrhæa*.

Whit'ing. The fish *Gadus merlangus*.

Also, term sometimes used for *Whitening*.

W., pollack. Common name for the *Gadus poliacius*.

Whit'leather. (Mid. E. *whittlether*.) A popular term synonymous with *Paxwax*; the ligamentum nuchæ of oxen.

Whit'leya stramonifo'lia. (After the English botanist *Whitley*.) Bot. A name for the *Anisodus luridus*.

Whit'low. See *Paronychia*.

W.-grass. Name for the Genus *Draba*, of the *Cruciferae*.

W., melanot'ic. A form of *Sarcoma*, melanotic, which simulates whitlow in appearance.

W., Mor'van's. A syn. for *W.*, painless.

W., pain'less. A name for *Morvan's* disease.

Whoop. (Mid. E. *houpen*.) A loud crowing inspiration, such as that characteristic of whooping-cough.

Whooping-cough. (L. *pertussis*; F. *coqueluche*; I. *tosse convulsiva*; G. *Keuchhusten*.) A specific infectious disease characterised by a convulsive cough, each paroxysm consisting in a number of short, forced coughs without intervening inspirations, but immediately followed by the "whoop," a long-drawn crowing inspiration. It occurs both epidemically and sporadically, and is most commonly communicated by direct contagion. Afanassjew in 1887 cultivated a short bacillus which he believed to be specific, but its characters are not pronounced enough to render this certain. The commonest age at which patients are attacked is between the first and second dentitions. Many people are immune; the most susceptible are weak children with a tendency to catarrh. Incubation lasts for from seven to ten days. Then follows a *catarrhal stage* of one week to ten days, followed by the *paroxysmal stage*, characterised by the whoop, and lasting four weeks or more.

Complications and Sequelæ.—Hæmorrhages; namely, petechiæ, subserous hæmorrhages, epistaxis, hæmoptysis. Convulsions, very rarely followed by paralyzes. Interstitial emphysema, rarely pneumothorax. Broncho-pneumonia is the commonest respiratory complication, often accompanied by pulmonary collapse; in a number of cases the process is tuberculous. Pleurisy; lobar pneumonia. Enlargement of the bronchial glands. Ulceration of the frænum linguæ. Anæmia and wasting. In a few cases deaf-mutism has been known to occur as a sequela of whooping-cough. Among the fatal diseases of children in England it ranks third (Dolan), the annual death-rate per million being five thousand from this disease.

Whorehouse tea. A name for *Tepopote*. (Gould.)

Whore's itch. A syn. for *Army itch*. (Gould.)

Whorl. Biol. The arrangement of organs in a circle round a central axis.

W. of the heart. Anat. A syn. for *Vortex of the heart*.

Whorled. Arranged in a *whorl*.

Whorlywort. The *Leptandra purpurea*.

Whortleberry. Common name for the *Vaccinium myrtus*; also, for the *Vaccinium vitis-idaea*.

W., bear's. See *Bear's whortleberry*.

W., red. Common name for the *Vaccinium vitis-idaea*.

Whorts, black. A popular name for the *Vaccinium myrtillus*; also, the *Vaccinium vitis-idaea*; also, a small kind of *blackberry*.

Whytt's disease. (After Dr. Robert *Whytt*, an Edinburgh physician.) A name for *Meningitis, tubercular*.

Wickersheimer's flu'id. A mixture introduced by Wickersheimer for preserving specimens of animal tissue. There are two fluids thus designated:—The *first fluid*, for injecting specimens, is composed as follows. Arsenious acid 16 grammes, common salt 80 g., potassium sulphate 200 g., potassium carbonate 20 g., potassium nitrate 25 g., glycerine 4000 cub. centim., wood-naphtha 750 c.c., water 10,000 c.c.

WICKSTROEMIA—WILDBAD

The *second fluid*, for immersing specimens, is as follows. Arsenious acid 12 grammes, common salt 60 g., potassium sulphate 150 g., potassium carbonate 15 g., potassium nitrate 18 g., glycerine 4000 cub. centim., wood-naphtha 750 c.c., water 10,000 c.c. (Gould.)

Wickstroemia. *Bot.* A Genus of the *Thymelaceæ*.

W. canescens. Name given by Misner to a Japanese species, from which is made a bibulous paper termed *usego*, used for making wafers or capsules. (Foster.)

W. indica. *Hab.*, Australia and Polynesia. A tall shrub. Bark and leaves used in Fiji for coughs; bark used locally for healing sores.

Wic'opy. A name for the *Dirca palustris*.

Wide-mouth. See *Macrostomia*.

Wid'ow-wail. Common name for the spurge-olive, *Daphne mezereum*.

Wies'au. A town in Bavaria noted for its two mineral springs, one being chalybeate and the other sulphurous.

Wiesbaden. A town in Hesse, noted for its saline mineral waters; temperature 60° C. The water is used both internally and in baths.

Wies'enbad. A place in Zwickau, Saxony, noted for its warm alkaline sulphur spring.

Wigan'dia californica. Another name for the *Eriodictyon californicum* (q. v.)

Wig'ger's ergotin. A form of ergotin introduced by Wigger. The fixed oil of the ergot is first extracted by ether, and an alcoholic extract is then prepared.

Wilbrandia. (*Wilbrand*, a German medical man.) A Genus of the *Cucurbitaceæ*, indigenous to Brazil.

W. drastica. Used as an alterative in gout and syphilis.

W. fluminensis. A strong hydragogue purgative.

W. hibisco'ides. Action, hydragogue purgative.

W. Ric'dell. A syn. for *W. fluminensis*.

W. sca'bra. A syn. for *W. fluminensis*.

W. verticillata. A syn. for *W. fluminensis*.

Wilbur springs. Hot saline sulphur springs in Colusa County, California.

Wild. Growing or living free; not cultivated. Also, uncivilised.

W. all'spice. The *Benzoin odoriferum*.

W. angelica. Common name for the *Angelica sativa*.

W. ap'ple. See *Agriomela*.

W. art'choke. The *Cinara scolymus*.

W. bas'il. See *Basil*, wild.

W. bean. The *Apios tuberosa*.

W. bergamot. The *Mondarda fistulosa*.

W. cab'bage. The *Brassica oleracea*.

W. car'rot. The *Daucus sylvestris*.

W. cham'omile. The *Maruta cotula*.

W. cher'ry. The *Prunus virginiana*.

W. cher'ry-bark. The bark of *P. virginiana*; also that of *P. serotina*.

W. chest'nut. The *Bunium bulbocastanum*.

W. cin'namon. See *Cinnamon*, wild.

W. clove. The *Myrcia acris*.

W. cof'fee. See *Coffee*, wild.

W. col'umbine. See *Columbine*, wild.

W. cu'cumber. The fruit of *Momordica elaterium*.

W. fen'ugreek. Common name for the *Fenugreek*.

W. fig tree. The *Caprificus*.

W.-fire. A popular name for *Erysipelas*.

W.-fire rash. See *Wildfire*.

W. gar'den cress. Common name for the *Agriocardamum*.

W. gar'lic. A name for the Canadian snakeroot, *Asarum canadense*.

W. gin'ger. The rhizome of the *Asarum canadense*.

W. hip'po. The *Euphorbia ipecacuanha*.

W. hops. The *Bryonia dioica*.

W. hore'hound. See *Horehound*, wild.

W. in'digo. See *Indigo*, wild.

W. ipecacuan'ha. See *Ipecacuanha*, wild.

W. jal'ap. See *Jalap*, wild.

W. Job's tears. A popular name for the *Onosmodium virginianum*.

W. leek. The *Allium triococcum*.

W. lem'on. See *Lemon*, wild.

W. li'chen. *Med.* The *Lichen agrius*.

W. liq'uorice. See *Liquorice*, wild.

W.-mare. A syn. for *Nightmare*.

W. mar'joram. Common name for the *Origanum vulgare*.

W. mint. The *Mentha canadensis*.

W. monks'hood. The *Aconitum uncinatum*.

W. myr'tle. See *Acaron*.

W. na'vew. Common name for the *Brassica napus*.

W. oat. Common name for the *Bromus sterilis*.

W. oat-grass. Common name for the *Bromus dioscoridis*.

W. ol'ive. The plant *Oleaster*.

W. on'ion. The *Allium cernuum*.

W. palm. A common name for the motherwort, *Leonurus cardiaca*.

W. pars'ley. Common name for the *Smrynium lusatrum*.

W. pars'nip. Common name for the *Sium latifolium*.

W. pep'pergrass. The *Lepidium virginicum*.

W. pota'to. Common name for the *Convolvulus panduratus*.

W. rad'ish. The *Raphanus raphanistrum*.

W. rash. *Med.* A name for *Strophulus volaticus*.

W. rice. See *Rice*, wild.

W. rock'et. Common name for the *Eruca sylvestris*.

W. rose'mary. The *Andromeda polyfolia*.

W. saffron. Common name for *Carthamus*.

W. sage. The *Serra salvia*.

W. sarsaparilla. See *Sarsaparilla*, wild.

W. sen'na. See *Senna*, wild.

W. silks. See *Silks*, wild.

W. sun'flower. The *Grindelia robusta*.

W. tan'sy. The *Potentilla anserina*.

W. thyme. The *Thymus serpyllum*.

W. vine. The *Bryonia alba*.

W. yam. Common name for the rhizome of *Dioscorea villosa*.

Wild'bad. A place in Württemberg, in the Black Forest, noted for its warm alkaline saline springs. Also, a place in Lower Franconia, Bavaria, noted for its saline springs, which also contain earthy salts.

Wilde, cords of. (After the contemporary anatomist and surgeon *Wilde*.) Name for the transverse striæ on the *corpus callosum*.

W.'s incision. The incision of the soft parts in *W.'s operation* for mastoid abscess.

W.'s operation. There are two operations thus named. 1. For *mastoid abscess*. A longitudinal incision is made over the mastoid down to the bone, half an inch behind the auricle. The bone is then gouged or trephined. 2. For *trichiasis*. A longitudinal incision is made down to the roots of the affected eyelashes, and silver nitrate applied.

Wildeck. A place in the Canton Aargau, Switzerland, noted for its saline mineral spring, which contains bromine and iodine.

Wilder, fissure of. (*Burt Wilder*, the contemporary American comparative anatomist.) Name for a number of fissures of the cerebrum described by Wilder.

Wilder's ear. Name for an abnormality of the auricle, pointed out by Wildermuth as occasionally present, consisting in great prominence of the *Antihelix*.

Wild fire. A name for *Erysipelas*. See also *Wild-fire*.

Wildungen. A town in Waldeck, Germany, noted for its gaseous, ferruginous, and alkaline mineral springs.

Wilhelmsbad. A place in Hesse (Prussia) noted for its saline ferruginous spring. Also, a place in Silesia (Prussia) noted for its sulphur spring. Also, a place in Saxony (Prussia) noted for its saline ferruginous springs. (Foster.)

Wilhoit's soda springs. Alkaline, saline, gaseous mineral springs in Clackamas County, Oregon.

Wilkinson's formula. Sulphur, tar, lard, 2 ounces of each, precipitated chalk 1 ounce, sulphide of ammonium $\frac{1}{2}$ drachm. Used as a parasiticide in scabies and tinea tonsurans.

W.'s ointment. An ointment recommended in prurigo and psoriasis, composed of sublimed sulphur 3 drachms, prepared chalk $2\frac{1}{2}$ drachms, oil of cade 3 drachms, green soap and lard, of each 1 ounce.

Wilks' kidney. (After the contemporary London physician, Sir Samuel Wilks.) A name for *Kidney, large white*.

Will. A determination to perform some action.

Will-o-the-wisp. Popular name for the *Ignis fatuus*.

Will'an. A name for the Genus *Salix*.

Will'an. A physician and dermatologist of this century.

W.'s lupus. A name for ordinary, tubercular lupus.

W.'s lepra. A name for *Psoriasis*.

Williams' tracheal tone. In percussion, the peculiar flat, tympanitic resonance, rising in pitch by the opening of the mouth, sometimes present in the second intercostal space in front, in cases of large pleural effusion. Supposed to depend on the vibrations of the air in a bronchus surrounded by compressed lung.

Willis. An English anatomist and physician. Born 1622, died 1675.

W., chords of. See *Chordæ Willisii*.

W., circle of. See *Circle of Willis*.

W.'s disease. A name for *Diabetes*.

W.'s nerve. A name for the *Spinal accessory nerve*.

Willow. *Bot.* Common name for the Genus *Salix*.

W., Bedford. Common name for the *Salix fragilis*.

W., broad-leav'ed. The *Salix latifolia*.

W. crack. The *Salix fragilis*.

W., great round-leaved. The *Salix caprea*.

W.-herb. The *Epilobium angustifolium*. Also, the *Lythrum salicaria*.

W.-herb, com'mon. The *Lythrum salicaria*.

W.-herb, great. The *Epilobium angustifolium*.

W.-herb, purple. A syn. for *W.-herb, common*.

W.-herb, purple-veined. The *Epilobium coloratum*.

W.-herb, rosebay. The *Epilobium angustifolium*.

W.-leaved oak. The *Quercus phellos*.

W., speck'led. The *Salix humilis*.

W., sweet. The Dutch myrtle, *Myrica galë*.

W., white. The *Salix alba*.

Wil'son. An English physician of the first half of the nineteenth century.

W.'s disease. A name for *Dermatitis exfoliativa*.

W.'s formula. A parasiticide ointment for skins. Sulphur 1 ounce, carbonate of potash 2 drachms, oil of chamomile $\frac{1}{2}$ drachm, benzoated lard 5 ounces.

W.'s muscle. The *Constrictor urethræ*.

Winch, Verona. *Surg.* A variety of winch used for tightening ligatures round piles.

Winckel's disease. An acute disease of new-born children characterised by jaundice, cyanosis, and hæmorrhages, including hæmoglobinuria, and fatty degeneration of the liver. It is very fatal, and occurs in an epidemic form.

Wind. A current or blast of air. Also, used colloquially to mean *flatus*.

W.-blast. (*F. coup de vent*.) The same as *Wind-convulsion*.

W., broken. A syn. for *Heaves*.

W.-col'ic. A form of colic occurring in the horse, consequent on tympanitic distension of the bowels. Also termed *Bloat*.

W.-contu'sion. The contusion set up by the compression of air caused by the passage of a bullet close to the surface of the body.

W. drop'sy. A popular term for *Emphysema*; also, for *Tympanites*, or for simple flatulence.

W., elec'tric. Term for that variety of electric current which gives the sensation of a gentle wind upon the part.

W.-fer'tilised. *Bot.* See *Anemophilous*.

W.-flower. Common name for the Genus *Anemone*.

W.-galls. Term for an enlarged drop-sical condition of the bursæ at the posterior part of the fetlock-joint in the horse.

W.-get'ting. Term for the gradual increase in the capacity of the chambers of the heart, especially on the right side, developing in the course of athletic training.

W. of a ball. See *Wind-convulsion*.

W. of a shot. The same as *W. of a ball*.

W.-pipe. See *Windpipe*.

W.-pox. A popular term for *Varicella coniformis*.

WINDAGE—WINE

W. root. Common name for the *Asclepias tuberosa*.

W.-stroke. Term for acute spinal paralysis in the horse.

W. weed. The same as *W. root*.

Wind'age. A term for *Wind-contusion*.

Wind'iness. A popular term for *Flatulence*.

Wind'lass tourniquet, Span'ish. See *Tourniquet, Spanish windlass*.

Win'dow, o'val. See *Fenestra ovalis*.

W., round. See *Fenestra rotunda*.

Wind'pipe. *Anat.* Common name for the *Trachea*.

Wind'sor bean. The horse-bean, *Vicia faba*.

W. sul'phur springs. Sulphur mineral springs in Carroll County, Pennsylvania.

Wind'stroke. See *Wind-stroke*.

Wind'y. A common term for *Flatulent*.

Wine. (*L. vinum*; *F. vin*; *I. vino*; *G. Wein*.) The alcoholic liquid prepared by fermenting grape juice and other fruit juices. Also, in *Pharmacy*, a vinous tincture, or tincture in which wine is used instead of rectified spirit. In a *dry wine* the sugar has almost all undergone fermentation; in a *sparkling wine* a secondary fermentation is set up, and the resulting carbonic acid gas is retained under pressure.

W., amine'an. A medicated wine formerly used as a stomachic.

W., antimo'nial. The *Vinum antimoniale*.

W., antiscorbu'tic. See *Vinum antiscorbuticum*.

W., aromatic. See *Vinum aromaticum*.

W., bark, com'pound. Common name for the *Vinum de kina kina compositum*.

W., bar'ley. General term for fermented malt liquors. See *Cerevisia*.

W., bitter diure'tic. The *Vinum diureticum amarum*.

W. bit'ters. Term for medicated wines containing some bitter tonic, such as gentian, with a carminative.

W. blue. The colouring matter of red wines, a blue substance which turns red on the addition of an acid.

W., cam'phorated. See *Vinum camphoratum*.

W., ce'dar. The *Vinum cedrinum*.

W., Ch'an. The *Vinum chium*.

W., diure'tic. See *Vinum diureticum amarum*.

W., heav'y. In general, a wine containing more than 12 per cent. of alcohol by weight.

W., high. A term for the ethylic alcohol of commerce.

W., light. In general, a wine containing less than 12 per cent. of alcohol by weight.

W., low. The wine resulting from the first distillation of the fermented grape-juice. Also, a name for the water contained in crude turpentine. (*Foster*.)

W.-mad'ness. See *Oinomania*.

W., milk. See *Koumiss* and *Kefyr*.

W., med'icated. See *Vinum medicinale*.

W., mull'ed. Wine to which beaten-up eggs and spices have been added, and heat has been subsequently applied.

W.-nose. A popular name for *Acne rosacea*.

W. of al'o'es. See *Vinum aloës*.

W. of an'timony. See *Vinum antimoniale*.

W. of bu'chu. Three parts of buchu with 100 of vin de Grenache. (*Codex*.)

W. of cam'phor. (*L. vinum camphoratum*.) Camphor 1 part, alcohol 1, white wine 45, mucilage of acacia 3. (*P. G.*)

W. of cincho'na. (*L. vinum chinæ*.) Tincture of cinchona 100 parts, sherry 300, glycerine 100, according to the *P. G.*; cinchona 5 parts, alcohol 10, red wine 10, according to the *Codex*.

W. of cincho'na, fer'rated. (*L. vinum de cinchona martianum*.) Ferrous sulphate 2.50 parts, cinchona wine 990, citric acid 2, tepid water 10. (*Codex*.)

W. of cit'rate of i'ron. See *Vinum ferri citratis*.

W. of co'ca. Coca 6 parts, macerated in vin de Grenache 100 parts. (*Codex*.)

W. of col'chicum. See *Vinum colchici*.

W. of col'chicum root. See *Vinum colchici radices*.

W. of col'chicum seed. See *Vinum colchici seminis*.

W. of digital'is. (*L. vinum digitaleum compositum*.) Digitalis 5 parts, squill 15, juniper berries 75, alcohol 100, white wine 900. (*Codex*.)

W. of er'got. See *Vinum ergotæ*.

W. of gen'tian. (*L. vinum gentianæ*.) Gentian root 3 parts, diluted alcohol 6, red wine 100. (*Codex*.)

W. of gen'tian, com'pound. See *Vinum gentianæ compositum*.

W. of hel'lebo're, white. See *Vinum veratri*.

W. of ipecacuan'ha. See *Vinum ipecacuanhæ*.

W. of i'ron. See *Vinum ferri*.

W. of i'ron, cit'rate of. See *Vinum ferri citratis*.

W. of op'ium. See *Vinum opii*.

W. of pep'sin. See *Vinum pepsini*.

W. of quinine. See *Vinum quiniæ*.

W. of rhu'barb. See *Vinum rhei*.

W. of squill. See *Vinum scillæ*.

W. of worm'wood. See *Vinum absinthites*.

W., oil of, con'crete. A name for *Etherin*.

W., oil of, heav'y. A name for *Oil, ethereal*.

W., oil of, light. A yellow, oily, aromatic liquid, prepared by heating *W., oil of, heavy*, with water or an alkali. It is a mixture of *etherin* and *etherol*.

W., or'ange. See *Vinum Aurantii*.

W., port. The *Vinum Portugallicum*. See *Port*.

W., red. See *Vinum rubrum*.

W., rhu'barb. See *Vinum rhei*.

W., sher'ry. The *Vinum xericum*. See *Sherry*.

W., spir'it of. A name for *Alcohol, ethyl*.

W., steel. See *Vinum ferri*.

W., tar. A name for tar-water, *Infusum picis liquidæ*.

W., tobac'co. See *Vinum tabaci*.

W., unmix'ed. See *Aparachytum*.

W. vin'egar. See *Acetum vini*.

W. whey. A preparation of white wine and milk. Two to 8 ounces of white wine are added to 1 pint of boiling milk, the whey being strained and sugar added to it. Used as a nutrient and stimulant.

WING—WITCH-GRASS

W., white. See *Vinum album*.

Wing. (Ang.-Sax. *gewing*; Mid. Eng. *winge*.) The fore-limb of birds with the attached feathers (primaries, secondaries, and tertiaries). Also, the fore-limb of bats, with its attached membrane (*patagium*), by which these animals are enabled to fly. Also, any structure which has a similar appearance or function to the above.

W.-like bones. See *Ossa alaria*.

W.-like veins. See *Venæ alares*.

W.s of Ingras'sias. See *Ingrassias*, wings of.

W.s of sac'rum. See *Sacrum*, *alæ* of.

W.s of sphenoid. See under *Sphenoid*.

W.-seed. A common name for the *Ptelea trifoliata*.

W.-shaped. See *Alæformis*, *Alaris*, *Pterygoides*.

Wing'ed. Furnished with wings. See *Alaris*, *Alatus*, *Pinnatus*.

W. elm. Bot. The *Ulmus alata*.

W. scapula. (L. *scapula*, the shoulder-blade.) Term for the prominent, wing-like appearance of the shoulder-blades in patients wasted with pulmonary phthisis.

Winking. See *Nictitation*.

Winograd'sky, bacillus of, nitrifying. Also termed *Nitromonus* of Winogradsky. It is obtained from soil, in which it flourishes, but cannot be cultivated in ordinary culture-media. This bacillus is one of the very few nitrifying organised ferments.

Wins'low. An anatomist, born in Denmark 1679; died in Paris 1760. (Littre.)

W., foramen of. Anat. The narrow opening of communication between the greater and lesser cavities of the peritoneum, or cavities of the greater and lesser omentum. This opening lies behind the hepatic vessels which pass between the liver and duodenum, just below the caudate lobe of the liver and in front of the vena cava inferior.

W., hia'tus of. A syn. for *W., foramen of*.

W., ligament of. The same as *W., ligament of, posterior*.

W., ligament of, poste'rior. (L. *ligamentum posticum Winslovii*.) A name for the posterior ligament of the knee-joint.

Winter's bark. (Winter, an English navigator of the sixteenth century.) A common name for the bark of *Drimys winteri*; also, for the bark of *Wintera aromatica*.

Winter-berry. Another name for *Alder*, black.

W. bloom. Bot. Common name for the *Hamamelis virginiana*.

W. cherry. Bot. Common name for the *Physalis alkekengi*.

W. clo'ver. Common name for the *Mitchella repens*.

W. cough. See *Cough*, winter.

W. egg. Biol. Term for an encysted ovum which is capable of retaining its vitality through the winter.

W.-green. See *Wintergreen*.

W. itch. (L. *pruritus hiemalis*.) See *Itch*, winter.

W. plum. Another name for the persimmon, *Diospyros virginiana*.

W. sav'ory. Common name for the *Satureia montana*.

Win'tera. Term used for the *W. aromatica*.

W. aromati'ca. Bot. The *Drimys winteri*.

W. canel'la. Another name for *Canella alba*.

Winteraceus. The same as *Wintera*.

Wintera'a aromati'ca. A syn. for *Wintera aromatica*.

W. canel'la. A syn. for *Wintera canella*.

Wintera'us. *Winteraceus*.

W., cor'tex. The *Winter's bark*.

W. spur'ius. Bot. A name for *Canella alba*.

Win'terberry. A common name for the *Prinos verticillatus*.

W., smooth. A common name for the *Prinos laevigatus*.

W., Virgin'ia. A syn. for *W., smooth*.

W., whor'led. A syn. for *W., smooth*.

Wintergreen. Bot. Common name for the *Gaultheria procumbens*; also, for the *Chimaphila umbellata*; also, see *W., spotted*.

W., oil of. (L. *Oleum gaultheriæ*.) A sweet, fragrant oil obtained from *Gaultheria procumbens* and other spices. The pure oil is composed of 90 per cent. of methyl salicylate and 10 per cent. of gaultherilene. It has a physiological action closely resembling that of salicylic acid.

W., spotted. The *Chimaphila maculata*.

Win'trich's sign. Med. The existence of a percussion-note over a pulmonary cavity, differing in pitch with the opening and shutting of the patient's mouth during respiration. First pointed out by Wintrich.

Wiring pin. Surg. A special form of steel pin used for wiring together the fragments of a broken bone, especially the patella or olecranon.

W., pin. The method of wiring fragments of bone by means of a *Wiring pin*.

Wirsung. A Bavarian anatomist of the seventeenth century.

W., canal' of. The excretory duct of the pancreas. See *Pancreas*, duct of.

W., duct of. A syn. for *W., canal of*.

Wisdom-of-surgeons. The translation of the *L. sophia chirurgorum*, an old name for the *Sisymbrium sophia*.

Wisdom-teeth. (L. *dentes sapientiæ*. F. *dents de sagesse*; G. *Weisheitszähne*.) Collective term for the third molar tooth in each jaw. They are not cut till after puberty, generally about the seventeenth to the twenty-first year.

Wish-bone. More commonly termed *Merry-thought*; the united clavicles of a bird.

Wismuthum. See *Bismuthum*.

Wisp. A small sheaf or bundle. In *Vet. Med.*, term for an inflammation of the tissues between the digits in the hind foot of the ox species (*Bos taurus*).

Wistar, pyramids of. (Professor Wistar, of the University of Pennsylvania, U.S.) Anat. A name for the *Cornua sphenoidalia*.

Wista'ria. (After Wistar. See *Wistar*, pyramids of.) Bot. A Genus of the *Leguminosæ* indigenous to China, Japan, and the U.S.

W. chinensis. This species contains a poisonous glucoside, *Wistarina*.

Wistar'in. See *Wistaria chinensis*.

Witch'-grass. A common name for the *Triticum repens*.

W.-hazel. A common name for the *Hamamelis virginiana*; also, for the *Sorbus aucuparia*.

WITCHEN—WOOD

W.-meal. A term for *Lycopodium*.

W.'s milk. Popular term for the small amounts of milky fluid secreted by the mammary glands of new-born animals of both sexes.

W.-wood. A name for the mountain ash, *Sorbus aucuparia*.

Witchen. *Bot.* A name for the *Sorbus aucuparia*. (Dunglison.)

Witch'meal. See *Witch-meal*.

Witch'wood. See *Witch-wood*.

Withan'ia. *Bot.* A Genus of the *Solanaceæ*.

W.coag'ulans. Action, alterative, tonic, and diuretic. Its juice coagulates milk.

W. somnifera. Action, hypnotic and emetic.

Withering carcino'ma. Term for a variety of carcinoma characterised by its tendency to wither, *i. e.* to atrophy and shrink.

With'erite. *Chem.* Native carbonate of barium.

With'y. (Mid. Eng. *withy*.) A popular term for several varieties of willow (*Salix*).

Witt's the'ory of colours. A theory propounded by N. O. Witt, according to which certain chromophorous or colour-bearing groups exist in dye-stuffs, and these introduced into colourless bodies form the basis of the dye-stuffs, certain chromogenous or colour-forming groups. By the union of these colour-forming groups with self-forming groups such as amidogen or hydroxyl, dye-stuffs are formed. (Gould.)

Wittich and Kistiakoro'sky's method. A method of extraction of soluble ferments from animal tissues or organs. The tissue is hardened for three days in alcohol, cut up small, extracted with glycerol, and the extract is filtered. The ferment is then precipitated from the filtrate by the addition of alcohol. (Gould.)

Wladimir'off's operation. A form of *Tarsectomy* introduced by Wladimiroff. The astragalus and os calcis with the superjacent soft parts are removed, the articular surfaces of the tibia, fibula, scaphoid, and cuboid are sawn off, and the foot brought up so that it may unite in a straight line with the leg.

Wladimir'off-Mic'ulicz's operation. A syn. for *Miculicz's operation*.

Wood. *Bot.* Common name for the *Isatis tinctoria*; also, for the blue dye prepared from its leaves.

W., wax'en. The *Genista tinctoria*.

W., wild. The *Reseda luteola*.

Woillez' disease. A term applied to active pulmonary congestion, after Woillez, who holds that it is of itself an independent disease.

Wolf. The *Canis lupus*. In *Med.*, a popular term for *Whitlow*; also, for *Lupus*.

W.'s bast. *Bot.* A name for the *Daphne mezereum*.

W.-claw. See *Wolf's-claw*.

W.'s-claw. *Bot.* Common name for the *Lycopodium clavatum*.

W.'s-foot. A syn. for *W.'s-claw*.

W.-grape. A name for the *Solanum dulcamara*.

W.'s-jaw. A term for *Harelip*.

Wolfbane. See *Wolfsbane*.

Wolff, Gas'per Fr. A German anatomist of the eighteenth century.

Wolffian bodies. (L. *corpora wolffiana*; G. *Wolff'sche Körper*.) *Zoöl.* Discovered

by Wolff in 1759. The primitive kidneys. A pair of organs occupying the Wolffian ridge of the embryo. In the *Anamnia* they constitute the essential renal organs through life; in the *Amniota* they are replaced, during embryonic life, by the true kidneys.

W. cyst. A cyst developed in the inferior or hinder portion of the vestige of the embryonic *Wolffian duct*, situated in the antero-lateral region of the vagina, and sometimes extending as far as the base of the broad ligament of the uterus.

W. duct. The excretory duct of the Wolffian body.

W. ridge. *Zoöl.* The ridge or prominence in the embryonic area, out of which arise the pronephros (head kidney), mesonephros (*Wolffian body*), and metanephros (true kidney of the *Amniota*). Also termed *Nephridial ridge*.

Wolffian'a, corpora. The *Wolffian bodies*.

Wölfler's operation. The operation for forming a fistulous communication between the stomach and small intestine, introduced by Wölfler for cases of obstruction of the pylorus.

Wolfram. German name for the metal *Tungsten*.

Wolfram'ate. A salt of *Wolfram*.

Wolfram'ium. *Wolfram*.

Wolfs'bane. A common name for the Genus *Aconitum*, especially the *Aconitum napellus* (monkshood) and *Aconitum lycoctonum*. Also, the *Veratrum viride*. Also, the *Arnica montana*.

Womb. (Mid. Eng. *wombe*.) Common name for the *Uterus*. For sub-headings not given below, see under *Uterus*.

W., fal'ling of. See *Uterus, prolapse of*.

W. grain. A name for *Ergot*.

W., inflamma'tions of. See *Endometritis*, *Endocervicitis*, *Cervicitis*, and *Metritis*.

W. pas'sage. A common term for the *Vagina*.

W. stone. Term for a *Myoma* of the uterus which has become calcified.

W., tympanit'es of. See *Physometra*.

Wom'wal. *Bot.* A common name for the *Pereira medica*.

Woo'ba. East Indian term for a local form of diarrhoea.

Wood. (Mid. Eng. *wode*.) *Bot.* That part of the stem and branches of a woody plant which lies internal to the bark. It is of a hard, firm consistence, and has a longitudinal and concentric "grain" or series of markings, corresponding with the position of the wood-vessels and wood-cells.

W. al'cohol. A syn. for *Wood-spirit*.

W., anacapu'ite. The wood of the Mexican tree *Cordia boissieri*.

W. anem'onë. The *Anemonë nemorosa*.

W. apple. The astringent fruit of the *Feronia elephantum*.

W. bet'on'y. The *Betonica officinalis*.

W.-bind. See *Woodbine*.

W., bit'ter. The wood of members of the Genus *Simaruba*.

W., Brazil'. The wood of the *Cæsalpinia echinata*.

W., Buk'kum. The wood of *Cæsalpinia sappan*.

W.-cells. Elongated, tapering cells, constituting part of the wood of plants.

WOOD-BINE—WORD-BLINDNESS

W.-char'coal. See *Charcoal, wood.*
W. e'vil. A name for gastritis or gastro-enteritis in cattle.

W.-flour. Term for finely powdered wood used as a surgical dressing when mixed with other substances.

W., heart. The older, harder, and more central parts of the wood in the stem of a woody plant, as distinguished from the *W., sap.*

W.-lily. The *Pyxola minor* (q. v.).

W.-lily, American. Common name for the Genus *Trillium*.

W.-louse. Entomol. Common name for the *Oniscus asellus*.

W., March. Bot. A name for the Genus *Ganicle*.

W., moun'tain. The *Lignum asbestos*.

W.-naph'tha. See *Naphtha, wood-*.

W., nephritic. See *Lignum nephriticum*.

W., Nicarag'ua. Asyn. for *Brazil wood* (q. v.).

W.-oil. A name for *Balsam, gurjun*.

W.-paren'chyma. Term for elongated *parenchyma cells*, which are present among the wood-cells in the wood of plants.

W., peach. The same as *W., Brazil*.

W., Pernambu'co. The same as *W., Brazil*.

W.-roof, sweet-scent'ed. A syn. for *Wood-ruff*.

W.-row'el. The same as *Woodruff*.

W.-sage. The *Teucrium canadense*.

W.-samp'fen. The *Cæsalpina sappan*.

W., sap. The outer layer of active cells forming the growing part of the wood of a woody plant.

W.-soot, salt of. A name for *Anumonii carbonas*.

W.-sor'rel. Bot. Common name for the *Oxalis acetosella*.

W., sour. Bot. The *Andromeda arborea*.

W.-spir'it. Common name for *Methyl alcohol*.

W.-straw'berry. The *Fragaria vesca*.

W.-tar cre'asote. Name for the *creasote* of the U. S. P.

W. tea. A preparation in the G. Ph. consisting of a mixture of sassafras wood, guaiac wood, ononis root, and liquorice root. (Dunglison.)

W.-ves'sels. The variously formed longitudinal vessels (scalariform, spiral, &c.) in the wood of woody plants, which serve as channels for the sap.

W.-vin'egar. A name for the crude acetic acid formed in the dry distillation of wood.

W., wax'en. Common name for the *Genista tinctoria*.

W., wax. A syn. for *W., waxen*.

W., witch. Common name for the *Sorbus aucuparia*.

W.-wool. Separated woody fibre compressed and prepared so as to form a light and absorbent surgical dressing.

W., yellow. The *Oxalis stricta*.

Wood-bine. (From *wood-bind*, the original form of the term.) See *Woodbine*.

Wood'bine. (From *wood-bind*, the original form of the term.) Bot. Another name for the common honeysuckle, *Lonicera periclymenum*.

Wood'en tongue. A term for *Actinomyces*.

Wood's therapeutic test. (The contemporary London surgeon John Wood.) The administration of iodide of potassium in daily doses of 1 drachm, as diagnostic of the presence of cerebral syphilis. Wood maintained that if no iodism then occurred, cerebral syphilis was present. This is now known to be a mistake, as personal idiosyncrasy often upsets the test.

W.'s meth'od. Surg. A method of radical cure of inguinal hernia, consisting in suturing together the pillars of the ring.

Woods, The. Name for those woods included under the term *Woods, sudorific*.

W.s, sudorific. Term for a mixture of guaiac, sassafras, China, and sarsaparilla woods, used to make the *Decoctum sudorificum*. Another name for *Decoctum guaiaci compositum*.

Wood'hall Spa. A place in Yorkshire, noted for its saline mineral spring.

Wood'ruff. Bot. A common name for the *Asperula odorata*.

Woody jal'ap. The *Ipomœa orizabensis*.

W. night'shade. Bot. Common name for the *Solanum dulcamara*.

Wood'rush. Common name for the Genus *Luzula* (q. v.).

Woo'ginoos. Bot. Name given by the natives of Abyssinia to the *Brucea ferruginea*.

Wool. (Mid. Eng. *wol*.) A variety of hair found to some extent in most of the Mammalia, and forming in some, as the sheep, the entire covering, in which each hair is finely curled and the individual hairs are long and very closely set, forming a sort of feltwork.

W., antisept'ic. Wool that has been sterilised and impregnated with an antiseptic.

W.-fat. Also termed *Esypus*. It consists of cholesterin, isocholesterin, and compounds of these with fatty acids. See *Lanolin*.

W.s, Holm'gren's. A collection of skeins of wools of various colours and various shades of the same colour, first introduced by Holmgren as a test to detect colour-blindness in its various forms and degrees.

W. perspira'tion. An impurity of wool which is composed of a mixture of potassium oleate and stearate, potassium valerianate, acetate, &c., with small quantities of chlorides, sulphates, and phosphates. (Gould.)

W.-sorter's disease. A term for *Anthrax*.

W., wood-. See *Wood-wool*.

Woolf, sys'tem of. A system of purification of water by mixing it with electrolised sea-water. Introduced by Woolf.

Woolly. Covered with wool. See *Lanatus tomentosus*.

Woorali. A syn. for *Woorara*.

Wooraly. The same as *Woorali*.

Woorara. A syn. for *Curare* (q. v.).

Word-blind'ness. A form of partial *Aphasia* consisting in loss of memory of the meaning of written words.

W.-deaf'ness. A form of partial *Aphasia* consisting in loss of memory of the meaning of spoken words.

W.-man'ia. (G. *Wortbesessenheit*.) A symptom present in some cases of insanity, consisting in the constant repetition by the patient of certain words.

W.-photism. A *photism*, or sensation of light or colour, produced by hearing the pronunciation of a certain word or words.

Working distance. Term for the distance between the front lens of a microscope and the object focussed.

Worm. (Surname.) See *Wormius*.

Worm. (Ang.-Sax. *wurm*.) Zool. A member of either the Class *Vermes* or *Platodes* among the *Invertebrata*. Also, a term for the *lytta* or glosso-hyal fibrous tissue or cartilage in the tongue of *Carnivora*.

Anat. The middle lobe (*vermis*) of the cerebellum.

See also *Worms*.

W.-bark. The bark of the *W.-bark tree* (q. v.).

W.-bark tree. Bot. Common name for *Geoffroya inermis*.

W., bladder-. See under *Cysticercus*.

W., bot-. A popular name for the *Oxyuris vermicularis*.

W. disease'. See *Helminthiasis*.

W. fev'er. Pyrexia consequent on the irritation set up by intestinal worms.

W., flesh-. A popular name for *Comedo*.

W., gourd-. A name for *Distoma*.

W.-grass. The *Spigelia marilandica*.

W.-grass, peren'nial. Bot. Common name for the *Spigelia marilandica*.

W., guinea-. See *Guinea-worm*.

W., hair-head'ed. The *Trichocephalus dispar*.

W., hook'ed. The Genus *Acanthocephalus* (q. v.).

W., long hair-. The same as *W., hair-headed*.

W., long round-. The *Ascaris lumbricoides*.

W., mus'cular hair-.

W., palisade'. Name applied to the *Strongylus armatus*, the *Dochmius duodenalis*, and the *Eustrongylus gigas*.

W., pin-. The *Oxyuris vermicularis*.

W.-root. The *Spigelia marilandica*.

W., round. The *Ascaris lumbricoides*.

W.-seed. A common name for the *Chenopodium anthelminticum*.

W.-seed, Alep'po. The seed of *Artemisia maritima*.

W.-seed, Alexan'dria. A syn. for *W.-seed, Aleppo*.

W.-seed, Amer'ican. Common name for *Chenopodium*; also, for *Santonica*; also, for the *Erysimum cheiranthoides*.

W.-seed, Bar'bary. A variety of *Santonica*, lighter than the official variety, obtained from several species of *Artemisia*.

W.-seed, goose'foot. The same as main heading.

W.-seed, Levant'. A common name for the *Artemisia santonica*.

W.-seed, Span'ish. The flower tops of the *Anabasis tamariscifolia*. Used as an anthelmintic in Spain under the name *Chouan*.

W.-seed, tartar'ean. A syn. for *W., Levant*.

W.-seed, white. The *Corallina corsicana*.

W.-sick'ness. A severe disease occurring among sheep in Holland, set up by the fly *Lucilia sericata*.

W.-tea. An infusion of the roots of *Spigelia marilandica*.

W., thread-. The *Oxyuris vermicularis*.

W., wheal-. Name for the *Sarcoptes scabiei*, and also for the *Leptus autumnalis*.

W.-wood. See *Wormwood*.

Wormian bones. The bones of *Wormius*, or *Ossa triquetra* (q. v.). See *Wormii ossa*.

Wormiana, ossa. The *Wormian bones*.

Worm'i os'sa. (Named after the anatomist *Wormius*.) The *Wormian bones*.

W. ossic'ula. The same as *Wormii ossa*.

Worm'it. Bot. A name for the *Artemisia absinthium*.

Worm'ius. Olaus Wormius or Worm was a Danish physician, born 1588, died 1654.

Worms. See *Vermes*.

W.s, erratic. (See under *Parasites*; sub-heading *Vermes*.) Term for parasitic worms that wander from one part of the body of the host to another.

Worm'seed. See *Worm-seed*.

Worm'weed, Cor'sican. A common name for the *Corallina corsicana*; also, for the *Polanisia graveolens*.

Worm'wood. Bot. Common name for the *Artemisia absinthium*.

W., bast'ard. A name for plants of the Genus *Ambrosia*.

W., bien'nial. The *Artemisia biennis*.

W., Can'ada. The *Artemisia canadensis*.

W., com'mon. The *Artemisia absinthium*.

W., creep'ing. The *Artemisia rupestris*.

W., les'ser. The *Artemisia pontica*.

W., moun'tain. Bot. Common name for the *Artemisia glacialis*.

W., Ro'man. Bot. Common name for the *Artemisia pontica*.

W., sea. Bot. Common name for the *Artemisia maritima*.

W., silk'y. The *Artemisia glacialis*.

W., tartar'ean. Bot. A syn. for *Worm-seed, tartarean*.

Worst'ed test. A syn. for *Holmgren's test*. See *Wools, Holmgren's*.

Wort. (Anglo-Sax. *wyrt*.) An infusion of *Maft*. Action, antiscorbutic. It has been used as a dressing for ulcers.

Wörth. A place in Bavaria, Germany, noted for its saline chalybeate mineral spring.

Woulf's bottles. (After *Woulf*, a German chemist of the eighteenth century.) Chem. An apparatus consisting of a series of three-necked bottles, corked and connected together by bent tubes, used for saturating liquids with gases, or for purifying gases.

Wound. (Anglo-Sax. *wund*; F. *plaie*; I. *piaga*; G. *Wunde*.) Surg. A solution of continuity of any of the soft parts of the body produced by external violence. See *Trauma*.

W., complicat'ed. A wound in which there is a foreign body, in which an unusual amount of pain is present, or an unusual amount of bleeding has occurred.

W., contus'ed. A bruised wound; one produced by a blunt body, in which there is considerable bruising of the part.

W.-fe'ver. See *Fever, traumatico*.

W., flesh. A wound which implicates skin and muscle.

W., gun'shot. (L. *vulnus sclopeticum*.) A wound caused by a missile from some form of firearms.

W., incis'ed. A clean-cut regular wound produced by a sharp, cutting instrument.

WOUNDWEED—XANG

W., lac'rated. A wound in which there is much tearing of the part.

W., o'pen. A wound which has a free external opening.

W., poi'soned. A wound into which some poisonous material has been introduced.

W., punc'tured. A wound caused by a narrow, pointed instrument. It is usually deep, and it has a small, usually rounded, external opening.

W., sim'ple. A wound in which there is simple division of parts, without any complication.

W., subcuta'neous. A wound which has a very minute external opening through the skin.

W., u'terine. A term for that portion of the recently parturient uterus from which the placenta has separated.

Wound'weed. A common name for the *Solidago odora*.

Wound'wort. Common name for several different plants, the *Solidago virga aurea*, *Laserpitium chironium*, *Anthyllis vulneraria*, *Symphytum officinale*, and several species of *Stachys*.

W., clown's. Bot. Common name for *Stachys palustris*.

W., Her'cules'. The *Heracleum panaces*.

W., wa'ter-, Knight's. The *Stratiotes aloides*.

Wourali. The same as *Woorali*.

Woura'ri. The same as *Woorari*.

Woura'ru. The same as *Wourari*.

Wour'nils. Vet. med. A syn. for *Warbles*.

Wrack. A popular term for sea-weed.

W., blad'der-, yel'low. The *Fucus vesiculosus*.

W., grass-. A syn. for *W., sea-.*

W., sea-. The *Zostera marina*.

Wrapping up. Med. A term for dry and wet packing. See *Pack, dry*, and *Pack, wet*.

Wre'din's test. A test for live-birth introduced by Wredin. It consists in the absence of gelatinous substance from the middle ear.

Wrench. A *Sprain*.

Also, an instrument for wrenching, or forcing and twisting.

W., Thom'as's. An instrument specially devised by Thomas for wrenching a club-foot into shape.

Wret'weed. A name for the *Euphorbia palustris*. (Dunglison.)

Wright'ia. (After Dr. Wright, a physician and botanist of Jamaica.) A tropical Genus of shrubs of the Nat. Order *Apocynaceæ*.

W. anti'dysenter'ica. A name for the *Nerium anti'dysentericum*. See *Wrightine*.

W. tinctor'ia. Hab., India. The leaves furnish a poor kind of indigo.

W. tomento'sa. Bark used in scorpion bite. The plant yields a yellow dye.

Wright'ine. (*Wrightia*.) $C_{21}H_{40}N_2$. Also termed *Conessine*. An alkaloid obtained from the barks of the *Wrightia anti'dysenterica* and the *Holarrhena anti'dysenterica*. It is astringent, and is used in cases of diarrhoea and dysentery.

Wrin'kle. (L. *ruga*; F. *ride*; G. *Runzel*.) A fine corrugation or fold on a surface. See *Ruga*.

Wris'berg. A German anatomist, born 1737, died 1808.

W., abdom'inal brain of. A term for the *Solar plexus*.

W., an'sa of. The nerve joining the right pneumogastric nerve with the right greater splanchnic nerve.

W., car'tilages of. Also termed *Cuneiform cartilages*. See under *Cartilage*.

W., gan'gion of. See under *Ganglion*.

W., nerves of. The cutaneous nerves of the arm; also, the *Portio intermedia* between the facial and auditory nerves (*Portio dura* and *Portio mollis*) at their origin.

Wrist. (L. *carpus*; F. *poignet*; I. *carpo*; G. *Handwurzel*.) Anat. The joint between the hand and the distal end of the forearm.

W.-clo'nus. See under *Clonus*.

W.-drop. Dropping of the hand from paralysis of the extensors, occurring in lead-poisoning.

W.-gan'gion. A hernial pouch of a portion of one of the tendon-sheaths at the back of the wrist.

W.-joint. The articulation between the radius and semilunar fibro-cartilage with the proximal row of carpal bones.

Wri'ter's cramp. See *Cramp, writer's*.

W.'s pal'sy. The same as *Writer's cramp*.

W.'s spasm. The same as *Writer's cramp*.

Wri'ting hand. Term for the peculiar position assumed by the hand in *Paralysis agitans*, resembling that of a hand in the process of writing.

Wry-mouth. Common name for the distortion termed *Tortura*.

W.-neck. See *Torticollis*.

W.-neck, ro'tatory. Term for a variety in which spasmodic lateral and rotatory movements of the head occur.

Wura'li. The same as *Wourali*.

Wut'zer's opera'tion. A form of operation for the radical cure of inguinal hernia introduced by Wutzer. The scrotum is first invaginated up as far as the internal inguinal ring by means of a hollow cylinder of wood, in which is concealed a needle; the needle is passed through the various layers of the scrotum, the sac of the hernia, and the abdominal wall, and the whole apparatus is covered over with a case made of boxwood, and retained in this position for about a week after the operation.

X.

X-leg. A popular term for *Genu valgum*, or knock-knee.

Xalapa. (A province of New Spain from which jalap is brought.) *Jalap*, the *Convolvulus jalapa*.

Xalap'pa. The same as *Xalapa*.

Xang. Name for several species of *Pluchea* which are grown in Cochinchina for the sake of their medicinal uses. Leaves sudorific and vulnerary. The salt juice is useful in aphthous stomatitis.

Xanthæmatin. (Ξανθός, yellow; hæmatin. F. *xanthématique*.) A yellow, bitter substance first obtained by Brette and Bird, in 1835, by treatment of hæmatoxin with dilute nitric acid. (Littré.)

Xanthate. A salt of *Xanthic acid*.

Xanthin. (Ξανθός, yellow.) Name for the yellow colouring-matter of plants. It is insoluble in water, but soluble in alcohol.

Xanthelasma. (Ξανθός, yellow; ἔλασμα, a layer.) A syn. for *Xanthoma*.

X. multiplex. See *Xanthoma multiplex*.

X. palpebrarum. See *Xanthoma palpebrarum*.

X. planum. See *Xanthoma planum*.

X. vitiligoides. See *Xanthoma*.

Xanthelasmoidæa. (*Xanthelasma*; Gr. εἶδος, form.) Fox's name for *Urticaria pigmentosa*.

Xanthene. (Ξανθός, yellow.) A yellow body, believed to be a mixture of several colouring-matters, formed by heating *Persulphocyanic acid*.

Xanthic. (Ξανθός, yellow.) Having a yellow colour; belonging to *Xanthin*.

X. acid. (F. *acide xanthique*; I. *acido xantico*; G. *Xanthinsäure*.) $\text{CS} < \text{O.C}_2\text{H}_5$. A monobasic acid, occurring, at ordinary temperatures, as a colourless oily liquid with a sulphurous odour and astringent taste.

X. calculus. Term for that variety of urinary calculus whose chief constituent is *Xanthin*.

X. oxide. A name given to *Uric oxide* on account of its yellow colour.

Xanthidia. (Ξανθός.) *Geol.* Term for small rounded particles found in some of the flints in our English chalk-beds. Carter believes them to be petrified orbicular *Statoblasts* of *Polyzoa*. (Gould.)

Xanthin. (Ξανθός, yellow. F. *xanthine*; I. *xantina*; G. *Krappgelb*.) $\text{C}_5\text{H}_4\text{N}_4\text{O}_2$. A substance present in various tissues of the body, namely, in urine, muscle, blood-serum, brain, spleen, thymus, and liver. It occurs also as a constituent of xanthic calculi. It occurs as a pale yellow powder or scales, acting chemically as a base.

Also, the term applied by Fremy and Cléz to the yellow colouring-matter of plants (*Xanthin*). It is soluble in alcohol, but insoluble in water.

Xanthinuria. (*Xanthin*; Gr. οὖρον, urine.) The condition characterised by the presence of an excess of *xanthin* in the urine, xanthic oxide becoming deposited.

Xanthium. (Ξανθός, yellow.) *Bot.* A Genus of the *Ambrosiæ* (q. v.).

X. catharticum. Hab., Peru. Action, cathartic.

X. indicum. Action and uses similar to those of *X. strumarium*.

X. italicum. A syn. for *X. indicum*.

X. macrocarpum. A syn. for *X. indicum*.

X. orientale. A syn. for *X. indicum*.

X. spinosum. The spiny clot-bur. A European plant. It has been believed to be a specific in hydrophobia.

X. strumarium. The small burdock, or common cocklebar of North America. Used for insect-bites and snake-bites, and as an application to ulcers. It contains a yellow dye. The

herb and fruit are diuretic, vesicant, and laxative. The root is diaphoretic.

X. vulgarë. A syn. for *X. strumarium*.

Xanthiuria. (*Xanthin*; Gr. οὖρον.) The same as *Xanthinuria* and *Xanthuria*.

Xanthocarpous. (Ξανθός, yellow; καρπός, a fruit.) Having yellow fruit.

Xanthocephalous. (Ξανθός; κεφαλή, the head.) *Biol.* Yellow-headed.

Xanthochroi. (Ξανθός; χροιά, the surface, hence the colour, of anything.) *Biol.* Term introduced by Huxley for the pale, fair, or yellow-haired races constituting the prevailing races of North Europe, existing widely through Asia, and represented in North Africa by the Berbers.

Xanthochroia. (Ξανθός; χροιά, the surface, hence the colour, of anything.) A syn. for *Xanthoma* and *Xanthopathia*.

Xanthochromia. (Ξανθός; χρώμα, colour.) Term for a chronic yellow discoloration of the skin.

Xanthochröous. (Ξανθός; χροά = χροιά, the skin.) Having a yellow skin.

Xanthochymus. (Ξανθός; χυμός, juice.) *Bot.* A Genus of trees of the Order *Guttiferæ*, closely resembling the Genus *Garcinia*. The juice of one species (*X. ovalifolius*) was formerly believed to be the source of *Gamboge*. (Foster.)

Xanthocreatinine. (Ξανθός; creatinine.) $\text{C}_5\text{H}_{10}\text{N}_4\text{O}$. A poisonous alkaloid which can be obtained from fresh extract of beef by means of extraction with very dilute aqueous solution of oxalic acid, exhaustion with alcohol, precipitation with ether, and partial evaporation. It forms yellow crystals. Taken internally it produces toxic symptoms—debility and sleepiness, followed by vomiting and purging.

Xanthocroia. (Ξανθός; χροιά, the surface, hence the colour, of anything.) See *Xanthochroia*.

Xanthocyano'pia. (Ξανθός; κύανος, blue; ὄψις, vision.) Mauthner's term for red-green blindness; given on account of the fact that there is normal vision for yellow and blue.

Xanthocyanop'sia. (Ξανθός; κύανος, blue; ὄψις, vision.) The same as *Xanthocyanopia*.

Xanthocys'tine. (*Xantho-*; *cystine*. F. *xanthocystine*; G. *Xanthokystin*.) A nitrogenous substance intermediate in chemical composition between xanthin and cystine. It was discovered in the form of colourless tubercular masses in the liver, pericardium, and digestive tract of a corpse that had been two months buried. (Foster.)

Xanthoder'ma. (Ξανθός; δέρμα, the skin.) A syn. for *Xanthoma*, *Xanthocroia*, and *Xanthopathia*.

Xanthodont. (Ξανθός; ὀδοός, ὀδόντος, a tooth.) *Zool.* Having yellow teeth.

Xanthodontous. (Ξανθός; ὀδοός, ὀδόντος, a tooth.) *Zool.* Having teeth which are discoloured yellow.

Xanthogas'trus. (Ξανθός; γαστήρ, the belly.) *Zool.* Having a yellow abdomen.

Xanthogen. (Ξανθός; γεννάω, to beget. F. *xanthogène*; I. *xantogeno*; G. *Xanthogen*.) A syn. for *Xanthin*.

Xanthoglobulin. (Ξανθός, yellow; globulin.) A syn. for *Hypoxanthin*.

Xanthogna'thus. (Ξανθός; γνάθος, the cheek.) *Zool.* Having yellow jaws or cheeks.

XANTHOKREATININ—XANTHORRHŒA

Xanthokreat'inin. (Ξανθός; κρέας, flesh.) A leukomaine of muscle-fibre. It occurs in sulphur-yellow crystals, and closely resembles kreatinin in its properties. It is formed with kreatinin in muscle-fibres during physiological activity, occurring in about the proportion of one-tenth to nine-tenths of kreatinin. In large amount it produces toxic effects, namely heaviness, fatigue, vomiting and purging.

Xanthokyan'opy. (Ξανθός; κύανος, blue; ὄψις, vision.) The same as *Xanthocyanopia*.

Xantholin. A syn. for *Santonica*.

Xantho'ma. (Ξανθός, yellow.) A form of new growth occurring in the skin, presenting slightly raised yellow plaques or nodules, which vary in size, but are rarely larger than a bean. They are often present in the eyelids of middle-aged or old people, especially in those who have suffered from migraine. The lesions consist in connective-tissue new growth together with a deposit of fat in the true skin and subcutaneous tissue.

X. diabetico'rum. A rare variety sometimes occurring in cases of *Diabetes mellitus*. The plaques are reddish, with a central yellow point, dense and firm, and develop quickly, and give rise to itching. They never occur on the eyelids, but usually on the scalp and face.

X. diabet'icum. The same as *X. diabetico'rum*.

X. linea'rē. A form of *Xanthomaplum* in which the disease occurs in linear patches.

X. macula'tum et papula'tum. In this form the patches form macules and papules interspersed with the ordinary plaques.

X. mul'tiplex. This usually occurs in middle-aged women, is often hereditary, and often follows jaundice.

X. palpebra'rum. A term given to *X. planum*, as this is commonest on the eyelids.

X. pla'nū. This is the commonest variety. See main heading.

X. stria'tum. A syn. for *X. lineare*.

X. tubercula'tum. A syn. for *X. tuberculosum*.

X. tuberculo'sum. A chronic variety characterised by tubercular patches on parts specially exposed to pressure, and on the extensor surfaces of all the extremities. The patches are prominent as well as deep-set, and sometimes coalesce in parts.

X. tubero'sum. A syn. for *X. tuberculosum*.

Xanthomato'sis. (From *Xanthoma*.) Term for *Xanthoma* when occurring in so considerable degree as to constitute a disease in itself.

Xanthom'atous. (*Xanthoma*.) Belonging to, or affected with, *Xanthoma*.

Xanthomel'anous. (Ξανθός; μέλας, black.) Epithet applied to the lighter coloured among the *Melanochroi*, namely, those races of people with yellow skin and black hair, as distinguished from the darker coloured, or those with black hair and black skin.

Xanthono'tus. (Ξανθός; νῶτος, the back.) Zool. Having a yellow back.

Xanthopath'ia. *Xanthopathy*.

Xanthop'athy. (Ξανθός; πάθος, disease, suffering.) Any pathological yellowness of the skin.

Xanthophane. (Ξανθός; φαίνω, to appear.) A yellow pigment occurring in the

inner segment of retinal cones in some animals. It is one of the varieties of *Chromophane*.

Xanthophthal'mum. (Ξανθός; ὀφθαλμός, the eye.) Bot. A syn. for *Chrysanthemum*.

Xan'thophyll. (Ξανθός; φύλλον, a leaf.) A special yellow pigment present in the leaves of plants in autumn.

Xanthophyll'in. A syn. for *Xanthophyll*.

Xanthopic'rin. (Ξανθός; πικρός, bitter.) A yellow colouring-matter, identical with *Berberin*, present in the bark of the *Xanthoxylum caribbæum*.

Xanthopic'rite. The same as *Xanthopicrin*. Also, a yellow, bitter substance obtained from several different plants.

Xanthopic'ritum. The same as *Xanthopicrite* (first defin.) and *Xanthopicrin*.

Xan'thopus. (Ξανθός; πούς; ποδός, a foot.) Biol. Having a yellow stalk or base.

Xanthopro'teic. (*Xanthoprotein*.) Belonging to, or derived from, *Xanthoprotein*.

X. ac'id. (F. *acide xanthoprotéique*; I. *acido xantoproteico*; G. *Xanthoproteinsäure*.) $C_{34}H_{24}O_{22}N_4$. An acid formed by the action of strong nitric acid on solutions containing proteids and albuminous substances in general.

X. reaction. (G. *Xanthoproteinreaktion*.) The formation of a deep orange colour by addition of ammonia to a proteid which has already been turned yellow (*Xanthoprotein*) by being heated with strong nitric acid.

Xanthopro'tein. (Ξανθός; protein.) The yellow substance formed by treating a proteid with strong nitric acid.

Xanthops'ia. (Ξανθός; ὄψις, vision.) Yellow vision; an occasional symptom in jaundice.

Xanthop'sin. (Ξανθός; ὄψις.) A syn. for *Xanthophane*.

Xanthop'sy. A syn. for *Xanthopsia*.

Xanthopsydra'cia. (Ξανθός; ψύδραξ, a blister or pustule.) Term for a variety of *Eczema impetiginosum*, characterised by its yellow crusts.

Xanthopuc'cine. (Ξανθός; puccoon.) An alkaloid obtained from the Genus *Hydrastis*. By some it is considered to be impure *Berberine*, by others a distinct substance.

Xanthopur'purin. (Ξανθός; purpurin.) A yellow colouring-matter obtained from the plant *Rubia tinctorum*.

Xanthorham'nin. (Ξανθός; ῥάμνος, the buckthorn.) $C_{48}H_{60}O_{29}$. A yellow vegetable colouring-matter identical with the *Rhamnin* of Stein.

Xanthorrh'iza. (Ξανθός; ῥίζα, a root.) A Genus of the *Ranunculaceæ*.

X. apiifo'lia. Yellow-root. A shrub indigenous to the United States. The root is a bitter tonic, and contains some *berberine*. The wood contains a yellow dye.

X. simplicis'sima. A syn. for *X. apiifolia*.

X. tincto'ria. A syn. for *X. apiifolia*.

Xanthorrhœ'a. (Ξανθός; ῥέω, to flow.) Bot. An Australian Genus of the *Liliaceæ*. Several species, *X. australis*, *X. fructeata*, *X. hastilis*, &c., yield a resin.

Med. A purulent vaginal discharge.

X. has'tilis. In common with several other species, this yields a resin. See *X. resin*.

X. res'in. Botany Bay gum.

XANTHOSE—XANTHURINA

Xan'those. A syn. for *Xanthosis*.
Also, name for a yellow pigment found in cancers. (Lebert.)

Xantho'sis. (Ξανθός.) A yellow pigmentation of the skin occurring in some cases of *Carcinoma*.

X. of na'sal sep'tum. Term for a dirty yellowish appearance of the nasal mucous membrane, and especially of that over the septum, after repeated nasal hæmorrhages, consequent on degenerative changes of the effused blood.

Xanthoso'ma. (Ξανθός; σῶμα, the body.) A Genus of the *Aracaceæ*. Hab., Tropical America.

X. edu'lë. Hab., Guiana. Said to be identical with *X. sagittifolium*.

X. sagittifolium. The arrow-leaved spoon-flower. It is used in cases of snake-bite. The root-stock and young shoots are edible.

X. u'tilë. A syn. for *X. sagittifolium*.

X. xanthorrhizon. A syn. for *X. sagittifolium*.

Xanthospermous. (Ξανθός; σπέρμα, a seed.) Having yellow seeds.

Xanthostrumarin. An amorphous yellow glucoside present in the fruit of the *Xanthium strumarium*.

Xanthous. (Ξανθός.) Having a yellow skin.

Xanthoxyla'ceæ. A Sub-Order of the *Rutaceæ*.

Xanthoxyl'æ. (Ξανθός; ξύλον.) Bot. Term for a Tribe of the *Rutaceæ*, whose typical Genus is *Xanthoxylum*.

Xanthoxylene. $C_{20}H_{18}$. Term for the liquid part of the volatile oil obtained from the fruit of *Xanthoxylum alatum*. It has an agreeable aromatic odour.

Xanthoxyli fructus. The berries of the prickly ash, *Xanthoxylum americanum*.

Xanthoxylin. (*Xanthoxylum*.) A precipitate obtained from a tincture of the bark of *Xanthoxylum fraxineum*. It is bitter, stimulant, aromatic, and sialogogue.

Also, name applied by Staples to a crystalline bitter principle in the bark of *Xanthoxylum carolinianum* and *X. piperitum*. It is probably identical with *Berberine*. (Billings.)

Also, a stearoptene, $C_{20}H_{24}O_6$, obtained from the fruit of *Xanthoxylum alatum*.

Xanthoxylon. The same as *Xanthoxylum*.

Xanthoxylum. (Ξανθός; ξύλον, wood. *F. clavalier*; *I. xantossilea*; *G. Zahnwehbaum*.) Bot. The only Genus of the *Xanthoxylaceæ*. Also, the bark of *X. fraxineum* and *X. carolinianum*.

X. ala'tum. An Indian species. Action, sudorific and anthelmintic. Its fruit yields *Xanthoxylene* and *Xanthoxylin*.

X. america'num. A syn. for *X. fraxineum*.

X. aroma'ticum. Hab., the Bahamas. Bark, antiperiodic and alterative.

X. avicen'næ. Hab., China. Stimulant and alexipharmic.

X. budrun'ga. Hab., India and Assam. The fruit contains a balsam, and the seeds, an aromatic oil. The root is aromatic, sudorific, and febrifuge.

X. capen'së. Hab., South Africa. Wild cardamoms. Aromatic.

X. caribbæ'um. A n. for *X. clava Herculis*.

X. carolinia'num. Hab., Southern United States. A source of *Xanthoxylum*.

X. caulifo'rum. Hab., North America. Seeds, pungent, used in toothache. Inner part of bark, sialogogue and sudorific.

X. cla'va Her'culis. Southern prickly ash, *Hercules' club*. The bark contains *Berberine*.

X. clava'tum. A syn. for *X. clava Herculis*.

X. cribro'sum. Hab., the United States and the West Indies. Bark, stimulant and diuretic.

X. el'egans. Hab., South America, where it is termed *jaborandi*.

X. emargina'tum. Action, aromatic. Leaves and bark of the tree used for stimulant fomentations.

X. florida'num. A syn. for *X. clava Herculis*.

X. fraxin'eum. Prickly ash or toothache tree. Hab., North America. Bark, stimulant, diaphoretic, and diuretic; chewed for the relief of toothache. It has also been recommended in cases of paralysis of the tongue.

X. fraxinifolium. The same as *X. fraxineum*.

X. hermaphrodi'tum. Hab., the West Indies and Guiana. Capsules pungent, resembling pepper. The tree yields a yellow resin used in making plasters.

X. hiema'lë. Hab., Brazil. Bark used for the relief of earache.

X. naranjillo. A species growing in the Argentine Republic. Recommended as a substitute for *Jaborandi*. (Gould.)

X. nit'idum. A Chinese species. Root and bark, sudorific and febrifuge. The leaves are used as a spice.

X. octan'dra. A syn. for *Fugara octandra* (q. v.).

X. peckoltia'num. Hab., Brazil. Juice of fresh leaves, emmenagogue.

X. pentan'omë. Hab., Mexico. Tonic and stimulant. Used also in syphilis.

X. piperi'tum. A Japanese species. The fruit, Japan pepper, is used as a condiment.

X. ramifo'rum. A syn. for *X. fraxineum*.

X. rhet'sa. Hab., East Indies. Seeds, unripe capsules, and bark are aromatic, and used as spices, and therapeutically as stimulant and tonic.

X. senegalen'së. An African (Senegal) species, similar in properties to *X. nitidum*, but for being poisonous. Bark used externally as an astringent in rheumatism.

X. terna'tum. Hab., West Indies. Fruit pungent, root used to relieve toothache.

X. tricar'pum. A syn. for *X. fraxineum*.

X. triphyl'um. Hab., India. The tree yields a resin, its capsules are aromatic, and its bark yields a cosmetic.

Xanthox'yus. (Ξανθός; ξύλον.) Bot. Having a yellow wood.

Xanthur. (Ξανθός, yellow.) Chem. An old name for an *ethyl-sulphate*. (Littre.)

Xanthuret. Term for a combination of *Xanthin* with a metal.

Xanthu'ria. (Ξανθός; οὖρον, urine.) The same as *Xanthinuria* and *Xanthiuria*.

Xanthuri'na. (*Xanthur*.) Chem. A

XANTHURUS—XERODERMIA

body produced by distilling ethyl-sulphate of copper. It is at ordinary temperatures a sweetish, strongly smelling liquid, and can be decomposed by the action of alcoholic potash solution. (Littre.)

Xanthurus. (Ξανθός; οὐρα, a tail.) *Zool.* Having a yellow tail.

Xantolina. A name for the *Artemisia santolina*.

Xarheb. (Egyptian.) A class of priests of Ancient Egypt whose special work was to embalm dead bodies. Called by the Greeks Paraschistes and Tarichentæ. (Gould.)

Xenarthral. (Ξένος, unusual; ἄρθρον, a joint.) Having unusual or abnormal joints.

Xenela'sia. (Ξενηλασία, from ξένος, a stranger; ἐλαύνω, to banish.) Name for an ancient Spartan law, according to which strangers of doubtful reputation or morality were not admitted to their society for fear of corruption of their youth. (Hack Tuke.)

Xenem'bolé. (Ξένος, unusual; ἐμβολή, a throwing in.) A syn. for *Xenenthesis*.

Xenen'thesis. (Ξένος; ἐνθεσις, a putting in.) The introduction into the organism of a foreign body.

Xenodoc'cum. The same as *Xenodochium* and *Xenodochium*.

Xenodo'cheum. Another spelling for *Xenodochium*.

Xenodo'chium. (Ξενοδοχεῖον.) A house for the reception of strangers. An inn; also, a hospital.

Xenodo'cium. The same as *Xenodochium*.

Xenog'amy. (Ξένος, unusual; γαμός, marriage.) A form of cross-fertilisation consisting in the fertilisation of one plant by pollen from another of the same species.

Xenogen'esis. (Ξένος, unusual; γένεσις, a begetting, a birth.) *Biol.* The generation of offspring differing in characteristics and life-cycle from the parents. (Milne Edwards.)

Xenogenetic. Belonging to *Xenogenesis*.

Xenogen'ic. The same as *Xenogenetic*.

Xenog'eny. (Ξένος; γένης, born.) A syn. for *Xenogenesis*.

Xenome'nia. (Ξένος, unusual; μήνες, the menses. F. *xénoménie*.) A term for *Menstruation*, *vicarious*, or *Menoxenia*.

Xenono'mia. (Ξένος, unusual; νόμος, law.) A syn. for *Heteronomia*.

Xenophthal'mia. (Ξένος, a stranger; ophthalmia.) *Ophthalmia* or conjunctivitis consequent on the irritation produced by a foreign body.

Xenopneumonypos'tasis. (Ξένος, a stranger; pneumonypos'tasis.) The presence of foreign bodies in the lower portions of the lungs.

Xen'osite. (Ξένος, a stranger; σῖτος, food.) Term for a parasite which is lodged in an intermediate host, or in an intermediate organ of its host, not in the host or in the organ in which it finally takes up its abode and breeds.

Xerampel'linus. (Ξηρός, dry; ἀμπελος, a vine.) Of a reddish-brown, similar to that of dead vine-leaves.

Xerans'is. (Ξήρανσις.) *Biol.* The drying up of a part. *Pharm.* The drying up of a drug.

Xeran'tia. (Ξηραίνω, to dry up.) Old term for desiccated medicines.

Xeran'tic. (Ξηραντικός, belonging to,

or fit for, drying.) Causing *Xeransis*, desiccative.

Xera'phion. (Ξηραφίον = ξήριον, a desiccative powder for putting on wounds.) *Pharm.* A drug taken in the dry state; also, a drug which has the action of drying up discharges, an astringent drug.

Xera'phium. The same as *Xeraphion*.

Xera'sia. (Ξηρός, dry; F. *xérasie*.) A disease of the hairs, characterised by stoppage of growth, with extreme dryness and minute scaling of the skin.

Also, a syn. for *Alopecia pityrodes*.

Also, a syn. for *Ichthyosis simplex*.

X. cap'itis. A fuller term for *Xerasia* (def. 1).

X. saurio'ides. A term for *Ichthyosis simplex* (see *Xerasia*, def. 3).

Xer'icus. (*Xeres de la Frontera*, in Andalusia, where sherry is produced.) Belonging to *Xeres*; an epithet applied to sherry, or xeric wine.

Xer'ion. (Ξηρός, dry.) *Pharm.* Old term for a dry medicine which was used locally in the form of a powder; also termed *Catapasma*.

Xer'ium. The same as *Xerion*.

Xeroclyster. (Ξηρός, dry; clyster.) A dry clyster, or suppository.

Xerocollyr'ion. (Ξηρός, dry; κολούριον, a wash for the eyes.) The same as *Xerocollyrium*.

Xerocollyr'ium. (See *Xerocollyrion*.) A dry *Collyrium*, an ointment for the eyes.

Xeroder'ma. (Ξηρός; δέρμα, the skin; F. *xérodermie*.) A congenital dryness and roughness of the skin, unaccompanied by sensory symptoms, affecting more markedly the temples and all the extremities. The skin presents a dull yellowish or greyish colour, with a fine scaly or branny desquamation.

X., chron'ic. One of the two sub-varieties of *X. of Kaposi*. It generally attacks the legs and sometimes the forearms. The skin becomes atrophied, whitish, and wrinkled.

X. ichthyo'ides. A syn. for *X. ichthyoides*.

X. ichthyo'ides. (Ιχθύς, -ύος, a fish; εἶδος, form, resemblance.) A syn. for *Ichthyosis*.

X. of Kaposi. (L. *Angeioma pigmentosum et atrophicum*; G. *Pergamenthaut*.) Name for a diffuse idiopathic atrophy of the skin. Two varieties are described:—1. *Xeroderma* (q. v.); 2. *X. pigmentosum* (q. v.).

X. pigmentosum. One of the sub-varieties of *X. of Kaposi*. It is congenital; the skin is parchmented, and the epidermis is wrinkled and thinned out. There is a mottled pigmentation, with numbers of localised dilated blood-vessels (*telangiectases*). White atrophic spots form, and the skin sometimes becomes warty and ulcerated in parts.

Xeroder'mia. (Ξηρός; δέρμα, the skin.) Term for dryness of the skin in general. Also (of *Wilson*), syn. for *Ichthyosis simplex*. Also, syn. for *Xeroderma of Kaposi*.

X. acquis'ita. Term for an acquired dry rough state of the skin, often coming on as a sequel to some other skin disease.

X. congen'ita. A syn. for *Ichthyosis simplex*.

X. ichthyo'ides. The same as *X. congenita*.

Xero'des. (Ξηρόδης, dryish, dry-looking.) Term for a hard, dry tumour. (Gould.)

Xero'ma. (Ξηρός, dry.) A syn. for *Xerophthalmia*.

X., conjuncti'val. The same as *Xeroma*.

X., lac'rymal. The same as *Xeroma*.

Xerom'atous. Belonging to, or affected with, *Xeroma*.

Xeromyc'ter. A shortened form of the word *Xeromycteria*.

Xeromycte'ria. (Ξηρός; μυκτήρ, the nose.) Abnormal dryness of the mucous membrane of the nasal passages.

Xero'myron. (Ξηρός; μύρον, an ointment.) A stiff, dry ointment.

Xero'myrum. The same as *Xeromyron*.

Xero'nosos. (Ξηρός; νόσος, disease.) A pathological dryness of the skin.

Xer'o'nosus. The same as *Xeronosos*.

Xerophag'ia. (Ξηρός; φαγεῖν, to eat; F. *xérophagie*; I. *xerofagia*.) The exclusive, or almost exclusive, use of dry foods.

Xeroph'agy. The same as *Xerophagia*.

Xeroph'ilous. (Ξηρός; φιλέω, to love.) Epithet applied to plants that especially flourish in dry places, or in dry climates.

Xerophthal'mia. (Ξηρός; L. *ophthalmia*; F. *xérophthalmie*; I. *xerottalmia*; G. *trockene Augenentzündung*.) A thickened, abnormally dry, and atrophic condition of the conjunctiva, which sometimes follows on severe chronic conjunctivitis and affections of the lachrymal ducts.

Xerophthal'mos. (Ξηρός; ὀφθαλμός, the eye.) The same as *Xerophthalmia*.

Xeroplas'ta. (Ξηρός; πλαστός, moulded.) C. H. Schultze's term for a class of pathological conditions associated with deficient secretion, to which he refers marasmus, anuria, agalactia, sterility, and consumption.

Xeroplas'tus. (Ξηρός; πλαστός, moulded.) *Med.* Epithet applied to any of the Class *Xeroplasta*.

Xerosebacillus. (L. *xerosis*; *bacillus*.) A German term for the bacillus of conjunctival *Xerosis*.

Xero'sis. (Ξήρωσις.) A condition of abnormal dryness of the skin or mucous membranes. Also, used to mean *X. conjunctivæ*.

X. conjuncti'væ. A syn. for *Xerophthalmia*.

X. conjuncti'væ epithelia'lis. A syn. for *X. conjunctivæ superficialis*.

X. conjuncti'væ parenchymato'sa. In this disease the conjunctival mucous membrane becomes converted into thick cicatricial tissue.

X. conjuncti'væ profun'da. The same as *X. conjunctivæ parenchymatosa*.

X. conjuncti'væ squamo'sa. The same as *X. conjunctivæ*.

X. conjuncti'væ superficia'lis. A chronic disease in which the epithelial layer of the conjunctiva proliferates, the epidermic scales becoming dried and massed together. The deeper layers sometimes become affected subsequently.

X. gla'bra conjuncti'væ. Term for a variety of *X. of conjunctiva* characterised by the smoothness of the affected surface.

Xerosto'ma. (Ξηρός; στόμα, the mouth.) A syn. for *Aptyalism*.

Xerosto'mia. (Ξηρός; στόμα, the mouth.) A rare disease occurring in women and

usually after middle age, consisting in abnormal dryness of the whole mouth, with redness and cracking of the tongue. Speech and swallowing become difficult. The salivary glands do not appear to be diseased.

Xero'tes. (Ξηρότης.) *Biol.* Any condition of abnormal dryness.

Xerotic. (Xerotes; G. *xerotisch*.) Belonging to, or characterised by, *Xerosis*.

Xerotrib'ia. (Ξηρός; τρίβω, to rub.) Dry friction.

Xerotrip'sis. (Ξηρός; τρίψις, a rubbing.) A syn. for *Xerotribia*.

Xerotropism. (Ξηρός; τροπή, a turning.) *Bot.* Term for bending or turning to one side, of the stem, leaves, &c., of plants, consequent on a dry condition.

Xime'nia. (After *Ximenes*, a Spanish naturalist.) *Bot.* A Genus of the *Placineæ*.

X. america'na. False sandal-wood. Hab., tropical America, Africa, and Asia. Leaves, bark, and root, purgative; wood, aromatic, used instead of sandal-wood; fruit, edible. (Foster.)

X. fe'rox. A syn. for *Balanites ægyptiaca* (q. v.).

X. multifo'ra. A syn. for *X. americana*.

X. russellia'na. A syn. for *X. americana*.

Xiphicos'tal. (Ξίφος, a sword, hence the xiphoid cartilage; L. *costa*, a rib.) Belonging to the xiphoid cartilage and a rib or ribs.

X. lig'ament. A ligament attached to the xiphoid cartilage and the cartilage of the eighth rib.

Xiphihumera'lis. (Ξίφος; Mod. L. *humeralis*, belonging to the *humerus*.) A muscle present in certain animals passing from the xiphoid cartilage to the proximal or upper end of the humerus.

Xiphiifo'lius. (Ξίφος; L. *folium*, a leaf.) A term for *Xiphophyllous*.

Xiphiplas'tra. Plur. of *Xiphiplastron*.

Xiphiplas'tral. (*Xiphiplastron*.) Belonging to the *Xiphiplastron*.

Xiphiplas'tron. (Ξίφος; L. *plastron*. Pl. *xiphiplastra*.) One of the two bony scutes of the *plastron* in turtles.

Xiphister'nal. Belonging to the *Xiphisternum*.

Xiphister'num. (Ξίφος; στέρνον, the breast-bone.) *Biol.* The *Metasternum*, or ensiform cartilage. Also, syn. for *Xiphiplastron*.

Xiph'ium. (Ξίφος.) A name for the *Iris pseudacorus*.

Xiphocos'tal. (Ξίφος; L. *costa*.) Belonging to the xiphoid cartilage and to a rib.

X. lig'ament. Term for that ligament which unites the seventh costal cartilage with the xiphoid or ensiform process of the sternum.

Xipho'des. (Ξίφος; εἶδος, form, resemblance.) *Xiphoid*.

Xiphodid'ymus. (Ξίφος; δίδυμος, double.) A double foetal monstrosity with the pelvic and thoracic cavities united, and two legs, or, sometimes, a rudimentary third leg.

Xipho'dymus. (Ξίφος; δύνω, to mingle. F. *xiphodyme*.) The same as *Xiphodidymus*.

Xiph'oid. (Ξίφος; εἶδος, form, resemblance. F. *xiphoide*; I. *xifoide*; G. *schwertförmig*.) Resembling a sword.

X. appen'dix. A syn. for *X. cartilage*.

X. car'tilage. The ensiform process of the sternum, or *xiphisternum*, which becomes ossified during adult life.

X. ligament. A syn. for *Costoxiphoid ligament* (q. v.).

X. process. The same as *X. cartilage*.

Xiphoidian. Belonging to the *Xiphoid cartilage*.

Xiphopagēs. (Ξίφος; πάγος, fixed. F. *xiphopage*.) The same as *Xiphopagus*.

Xiphopagus. (Ξίφος; πάγος, fixed.) A monstrosity consisting in twins joined together from the lower end of the sternum to the umbilicus.

Xiphophyllous. (Ξίφος; φύλλον, a leaf.) Having sword-shaped leaves.

Xiphoster'nal. (Ξίφος; στέρνον, the breast-bone.) A syn. for *Xiphoid*.

X. cartilage. The *Xiphoid cartilage*.

Xiphosterna'lis. (Ξίφος; στέρνον. L. *sternum*, the breast-bone.) *Xiphosternal*.

Xiphosternum. (Ξίφος; στέρνον.) The same as *Xiphisternum*.

Xis'inum. Old term for *Acetum*, or vinegar. (Ruland and Johnson.)

Xochi'copal. Mexican name for the resin obtained from the *Amyris lignaloës*.

Xylal'oës. (Ξύλον, wood; aloës.) Term for *Aloës wood*.

Xylem. (Ξύλον, wood.) Term introduced by Nägeli for that portion of a *Fibrovascular bundle* of woody plants in which ducts or wood-vessels are present.

Xylene. (Ξύλον, wood. F. *xylène*; I. *xileno*; G. *Xylen*.) $C_{10}H_{10}$. Dimethylbenzene. A carbide of hydrogen; a volatile liquid at ordinary temperatures, obtained from crude wood spirit. It is known as a liquid in three isomeric forms, termed respectively ortho-, meta-, and para-xylene. It resembles *benzol* in its properties. It has been used therapeutically (dose, 3 to 10 minims) in smallpox.

Xyleur'os. (Ξύλον; εὐρώς, decay.) *Bot.* The dry-rot of wood.

Xylidine. (Ξύλον, wood.) $C_8H_9.NH_2$. *Chem.* A body obtained from dimethylaniline. It is a methylated homologue of *aniline*. From it are prepared red dyes. It occurs in six isomeric varieties, all of which but one are liquids.

Also, a syn. for *Xyloidin*.

X., red. A red dye, very like rosaniline, prepared by mixing xylidine with aniline.

Xylidinpon'ceau. (F.) A yellow aniline dye, used to stain the nuclei in alcoholic preparations of connective tissue. (Billings.)

Xyl'inus. (Ξύλον.) Woody; belonging to wood.

X., li'quor. *Bot.* Schultz's term for the *lymph*a or sap of woody plants.

Xyl'ite. (Ξύλον, wood.) A volatile liquid of a pleasant odour, consisting of a mixture of methyl acetate and acetone, sometimes present in wood spirit.

Xylo-. (Ξύλον, wood.) Prefix signifying belonging to wood.

Xylo-al'oës. Old term for *Lignum aloës*, or aloës wood.

Xylobal'samon. (Xylo-; Gr. βάλαμον, balsam.) Name for the twigs of the *Balsamodendron gileadense* (*Commiphora opobalsamum*). Also, a balsam extracted from the above.

Xylobal'samum. (Xylo-; balsamum.) The same as *Xylobalsamon*.

Xylocar'cta. (Neut. pl.) A term for *Carob beans*. (Foster.)

Xylocarp. (Xylo-; Gr. καρπός, a fruit.) A woody, hard fruit.

Xylocar'pous. (Xylo-; Gr. καρπός, a fruit.) Having a woody fruit.

Xylocas'sia. (Xylo-; cassia.) Cassia wood. See *Cassia lignum*.

Xylocinnamo'mum. (Xylo-; cinna'momum.) Old term for *Cinnamon wood*.

Xylocoll'a. (Xylo-; Gr. κόλλα.) Old term synonymous with *Taurocolla*.

Xylo'dia. (Xylo-; Gr. εἶδος, form, resemblance.) *Bot.* Desvauz's term for a monospermous, heterocarpous, non-symmetrical woody fruit, borne upon a fleshy support, as, e. g., the fruit of *Anacardium*.

Xylogene. (Ξύλον, wood; γεννάω, to produce.) The complex lignifying substance formed in the walls of the woody or lignifiable cells of plants. It determines the rigidity of these cells when they become lignified. It is completely soluble in caustic potash. From it are obtained lignin, lignose, &c.

Xyloguai'acum. (Xylo-; guaiacum.) Old term for *Lignum guaiacum*, or guaiacum wood.

Xyl'oid. (Xyloides.) Woody, wood-like.

Xylo'ides. (Xylo-; Gr. εἶδος, form, resemblance.) *Xyl'oid*.

Xyloid'in. $C_6H_9(NO_2)O_5$. Ordinary or insoluble xyloidin is a tasteless white powder formed by the action of strong nitric acid on starch and different kinds of woody fibres. It is inflammable, and is soluble in boiling water. *Isoxyloidin*, or soluble xyloidin, is obtained by the action of an excess of strong nitric acid on ordinary xyloidin, which it closely resembles. (Béchamp.)

Xylol. (Ξύλον, wood; L. *oleum*, oil.) A syn. for *Xylene* (q. v.).

X. bal'sam. A solution of Canada balsam in *Xylol*, used for mounting microscopic specimens.

Xylo'ma. (Ξύλον, wood.) *Biol.* The tough, spore-producing body of certain Fungi.

Xylomar'athrum. (Ξύλον; μάραθρον, marathrum.) A name for *Sassafras root*.

Xylon. (Ξύλον.) Wood.

Also, the cotton plant (the Genus *Gossypium*).

Also, $C_{12}H_{22}O_{11}$, Berzelius' term for a substance identical with wood-cellulose.

Xyl'omite. See *Zylonite*.

Xylopha'geus. The same as *Xylophagous*.

Xyloph'agous. (Xylo-; Gr. φαγεῖν, to eat.) Wood-eating.

Xyloph'ilous. (Xylo-; Gr. φιλέω, to love.) *Biol.* Wood-loving; growing upon wood. Also, living in decayed wood.

Xylo'pia. A Genus of the *Anonaceæ*. Hab., the West Indies and Brazil.

X. æthiop'ica. A syn. for *X. aromatica*.

X. aromati'ca. The aromatic fruit is used as a condiment.

X. frutes'cens. The bitter-wood of Guiana. Fruit and bark, aromatic tonics; seeds used as spice.

X. grandiflo'ra. Fruit, carminative and febrifuge; used also as a condiment.

X. longifo'lia. Hab., near the Orinoco. Fruit, a bitter tonic and febrifuge.

X. seric'ea. Hab., Brazil. The berries, which resemble pepper, have a similar action and uses to those of the fruit of *X. grandiflora*.

X. seto'sa. A syn. for *X. frutescens*.

Xylopic'rum. (Ξύλον; πικρός, bitter.) A name for *Xanthoxylum clava*.

Xylorrhetine. (Ξύλον; ῥήτινη, resin.)

A syn. for *Hartine*.

Xylose. (Ξύλον, wood.) $C_5H_{10}O_5$. A member of the Glucose group which is isomeric (alloisomeric) with *Arabinose*. Prepared by boiling different kinds of wood-gums with weak acids.

Xylos'tein. (*Xylosteum*.) An inert bitter crystalline substance, obtained by Hüb-schmann from the berries of the *Lonicera xy-losteum*.

Xylos'teum. Specific name of the *Loni-cera xylosteum* (q. v.).

Xylostroma. (*Xylo-*; *stroma*.) Bot. A Genus of *Fungi*.

X. co'rium. A syn. for *X. giganteum*.

X. gigan'teum. The oak-leather. A fungus growing in the cracks in the trunks of oaks. Used in Ireland as a dressing for ulcers, and in Virginia for spreading plasters on.

Xylostyp'tic. (Ξύλον; στυπτικός, styptic.) Epithet applied to that which has a styptic action and is a derivative of woody tissue.

X. e'ther. A syn. for *Collodion, styptic*.

Xylother'apy. (*Xylo-*; *therapy*.) Term introduced by Dujardin-Beaumont for treatment by means of certain woods, e.g. cinchona, rose-wood, pitch-pine, mahogany, &c., by the local application of which *æsthesiogenous phenomena* are produced, resembling those produced by *Metalloscopy*. (Foster.)

Xylotomous. (*Xylo-*; Gr. τομή, a cutting.) Wood-cutting; an epithet applied to certain of the *Insecta*.

Xylum. (Ξύλον.) Cotton.

X. ioda'tum. Iodated or iodised cotton. (Codex.)

Xyly'grotēs. (Ξύλον; ὑγρότης, moisture.) Schultz's term for the *Liquor xylinus*, or sap of woody plants.

Xyl'yl. (*Xylene*.) $C_6H_3(CH_3)_3$. The radical of *Xylene*.

Xympath'ia, Xym'physis, Xym-ptoma, Xynnō'a. Ionic forms of words which see under the letter *S* instead of *X*. (See *Sympathia, Symphysis, &c.*)

Xynolo'gia. See *Cænologia*.

Xyn'tasis. See *Syntaxis*.

Xyn'thesis. See *Synthesis*.

Xyphopagēs. The same as *Xiphopages* and *Xiphopagus*.

Xy'ris. (Ξυρόν, a razor; so named from the shape of the leaves.) A syn. for the *Iris fœtidissima*. Also, a Genus of the *Xyridaceæ*, which is an Order of hypogynous Monocotyledons.

X. america'na. A South American species. Juice used in chronic skin diseases.

X. bulbo'sa. A species of the Genus *Xyris*. The leaves and root are used by the Hindus in chronic skin diseases.

X. in'dica. Hab., East Indies and China. Action and uses identical with those of *X. bul-bosa*.

X. vagina'ta. Hab., Brazil. Used in chronic skin diseases.

Xyrrhœ'a. See *Syrrhœa*.

Xy'rum. (Ξυρόν.) A razor.

Xy'rus. (Ξυρός, rare and late form for Ξυρόν.) A razor.

Xy'sis. (Ξύω, to scrape.) 1. The process of scraping.

2. A name for *lint*.

3. The membrane-like flocculent shreds occurring in the stools in certain kinds of diarrhœa, especially in dysentery.

Xysma. (Ξύσμα.) The same as *Xysis*.

Xysmalo'bium. An herbaceous Genus of the *Asclepiadaceæ*.

X. undula'tum. Hab., the Cape of Good Hope. Root, diuretic; used also in colic.

Xys'me. (Ξύω.) The same as *Xysma* and *Xysis*.

Xysmus. The same as *Xysma*.

Xyster. (Ξυστήρ, a rasp.) Surg. A raspatory, or instrument for scraping.

X. ophthal'micus. A syn. for *Blepharoxyston*.

Xyste'rium. The same as *Xyster*.

Xyste'rium. The same as *Xyster*.

Xystos. (Ξυστός.) The same as *Xysma*.

Xys'tra. (Ξύστρα.) The same as *Xyster*.

Xys'trum. (Ξύστρον.) The same as *Xyster*.

X. ophthal'micum. See *Xyster ophthal'micus*.

Y.

Y. The chemical symbol of *Yttrium*.

Y-car'tilage. See *Y-shaped cartilage*.

Y-lig'ament. See *Y-shaped ligament*.

Y-shaped car'tilage. Anat. The portion of cartilage which up till puberty unites the three portions of the hip-bone (ilium, ischium, and pubes) in the acetabulum.

Y-shaped cen'tre. A name for the *Y-shaped cartilage*.

Y-shaped lig'ament. A name for the *Ilio-femoral ligament*.

Yab'in. A bitter alkaloid contained in the bark of the *Andira excelsa*.

Ya'cum spring. A chalybeate spring at Goffstown Centre, Hillsborough County, New Hampshire. (Billings.)

Yam. Common name for the esculent root of several species of *Dioscorea*, especially the *D. alata*, *D. bulbifera*, and *D. sativa*. Somewhat similar in flavour to the potato.

Y. root, wild. The root of the *Dioscorea villosa*.

Yam'adon. (Brazil.) The *Myristica setifera*, or the oil of its seeds.

Yanco'na. The *Piper methysticum*.

Yaourt. Turkish name for *Koumiss*.

Yapon. The same as *Yaupon*.

Yard. (Mid. Eng. *yerd*, yard.) An old colloquial term for the *Penis*.

Y.-sit'ting. In *Massage*, term for sitting with the arms stretched out horizontally.

VARIA—YELLOW

Y.-walk. As a physical exercise, walking with the arms extended horizontally.

Varia. (Arab.) An old term for the *Flos aris*.

Var'in. (Arab.) The same as *Varia*.

Var'row. (Anglo-Sax. *gearwe*.) Bot. A common name for the milfoil, *Achillea millefolium*.

Yau'pon. Bot. A name for the *Ilex vomitoria*.

Ya'va skin. A syn. for *Elephantiasis arabum*.

Yaw root. (African yaw, a raspberry.) A name for the *Stillingia sylvatica*.

Y. weed. The West Indian shrub *Morinda royoc*, which is used therapeutically in Yaws.

Yaw'ey. Belonging to, or affected with, Yaws. (Gould.)

Yawn'ing. (Anglo-Sax. *ginan*, to gape. F. *bâillement*; I. *sbadigliamento*; G. *Gähnen*.) The taking of a long inspiration with the mouth stretched widely open, the breath being then held for a few seconds. It is an involuntary act.

Yaws. (African yaw, a raspberry. F. *framboise*; I. *frambæsia*; G. *Erdbeerpocke*.) See *Frambæsia*.

Y., ring'worm. Term for a variety of yaws characterised by the ringed arrangement of the nodules about the nose, mouth, eyes, and anus.

Y'car. (Arab.) Old term for *Medicamentum*, according to Ruland.

Ydes. A place in Cantal, France, noted for its alkaline, saline, chalybeate spring. (Foster.)

Yeast. (Anglo-Sax. *gest*, the froth of beer. L. *fermentum*; F. *levûre*; I. *fermento*; G. *Hefe*.) General name for the various species of the Genus of Fungi *Saccharomyces*. A ferment which develops readily in saccharine solutions, splitting up the sugar into alcohol and carbonic dioxide. Used in leavening bread and in the preparation of alcohols. Hensen has found that artificial varieties of yeast can be produced, the acquired characteristics of which can be transmitted from generation to generation. (Frankland.)

Y., beer. A culture of the *Saccharomyces cerevisiæ*, used in brewing beer.

Y., bot'tom. Term for the yeast remaining at the bottom of the vessel after fermentation.

Y. cakes. Term for cakes made of washed, dried, and pressed yeast.

Y., German. Beer yeast mixed with dried starch. It is used in baking.

Y. plant. Any species of *Saccharomyces*.

Y. poult'ice. See *Cataplasma fermenti*.

Y., top. Term for the yeast lying on the surface of a fermenting liquid.

Yelk. (Anglo-Sax. *gealwe*, yellow.) The same as *Yolk*.

Yellot. A name for *Jaundice*. (Billings.)

Yellow ash. The *Cladrastis tinctoria*.

Y. atrophy of liver, acute'. See *Icterus gravis*.

Y. bed'straw. The *Galium verum*.

Y. ber'ry. Common name for the fruit of *Podophyllum montanum*.

Y. bod'y. See *Corpus luteum*.

Y. cartilage. See *Cartilage, yellow*.

Y. cincho'na. See *Cinchona flava*.

Y. disease'. A name for the hæmorrhagic form of malarial fever.

Y. dock. The *Rumex crispus*.

Y. dye tree. Common name for the *Cælocline polycarpa*.

Y. elas'tic tis'sue. A fuller name for *Elastic tissue* (q. v.).

Y.-eye. A popular name for the *Hydrastis canadensis*.

Y. fe'ver. (L. *febris flava*; F. *fièvre jaune*; I. *febbre gialla*; G. *gelbes Fieber*.) See *Fever, yellow*.

Y. fe'ver, mild. A name for *Relapsing fever*.

Y. gen'tian. The *Gentiana lutea*.

Y. i'odide of mer'cury. See *Mercury, iodide of, yellow*.

Y. Jack. A popular name for *Y. fever*.

Y. jas'mine. The *Gelsemium nitidum*.

Y. la'dy's bed'straw. The same as *Y. bed'straw*.

Y. lig'aments. See *Ligaments, yellow*.

Y. mel'ilot. The *Melilotus altissimus*.

Y. mercur'ial lo'tion. A syn. for *Y. wash*, the *Lotio hydrargyri flava*. (B. P.)

Y. mercur'ic oxide. See *Hydrargyri oxidum flavum*. (B. P.)

Y. mus'tard. Another name for white mustard, the *Sinapis alba*.

Y. oxide of mer'cury. See *Hydrargyri oxidum flavum*.

Y. paint. A name for the *Hydrastis canadensis*.

Y. paril'la. The *Menispermum canadense*.

Y. pine. The *Pinus palustris*.

Y. pond-lil'y. The *Nuphar advena*.

Y. pop'lar. The *Liriodendron tulipifera*.

Y. prus'siate of pot'ash. Common name for *Potassium ferrocyanide*.

Y. puceoon'. The *Hydrastis canadensis*.

Y. res'in. Common name for the *Resina* of the U.S. P.

Y. root. The *Jeffersonia bartoni*.

Y. root, pars'ley-leaved. The *Xanthorrhiza apiifolia*.

Y. root, shrub. The same as *Y. root, parsley-leaved*.

Y. saun'ders. Bot. Common name for the *Santalum album*.

Y. spot. The *Macula lutea*.

Y. spot of Scem'mering. See *Scem'mering, yellow spot of*.

Y. springs. Calcic mineral waters close to the Little Miami River, Greene County, Ohio. (Billings.)

Y. star. Common name for the *Helenium autumnale*.

Y. subsul'phate of mer'cury. See *Hydrargyri subsulphas flavus*.

Y. sul'phur springs. Saline, sulphurated and calcic mineral waters, near Christiansburg, in Montgomery County, Virginia. (Billings.)

Y. vi'sion. See *Xanthopsia*.

Y. wash. Common name for *Lotio hydrargyri flava*.

Y. wa'ter-flag. Bot. Common name for the *Iris pseudacorus*.

Y. wa'ter-lil'y. Common name for the *Nuphar advena*.

Y. wax. See *Cera flava*.

Y.-weed. Common name for the *Ranunculus acris*.

Y. wood. Common name for the wood of the *Xanthoxylum fraxineum*.

Y. wood, pars'ley-leaved. Common name for the *Xanthorrhiza apiifolia*.

Y. wood-sorrel. The *Oxalis stricta*.

Y.-wort. The *Chlora perfoliata*; also, the *Xanthorrhiza apiifolia*.

YELLOWS—YSOPE

Yellows. *Med.* A popular term for *Jaundice*, especially in cattle; also, for *Vaginitis*.

Bot. A popular name for the *Ranunculus acris*; also, for the *Cypripedium luteum*.

Yemen ul'cer. See *Ulcer, Yemen*.

Yer'ba. Spanish term for a herb.

Y. bu'na. (Span.) The *Micromeria Douglasii*.

Y. del pas'tor. The *Acalypta prunifolia*.

Y. man'sa. (Span.) The *Anemopsis californica*.

Y. ma'té. The *Ilex paraguayensis*.

Y. reu'ma. The *Frankenia grandifolia*.

Y. sagra'da. A name for the *Lantana brasiliensis*.

Y. san'ta. The leaves of the *Eriodictyon californicum*, containing 30 to 40 per cent. of gum-resin; used therapeutically in acute bronchitis, in the form of a fluid extract. Also, the plant itself.

Yer'bine. (*Yerba*.) Term for a variety of *caffein* obtained from the *Ilex paraguayensis* (*Yerba maté*).

Yer'va. A syn. for *Yerba*; also, for *Contrayerva*.

Yest. Another spelling for *Yeast*.

Yew. Common name for the *Taxus baccata*; also, for the Genus *Taxus* in general.

Y., American. The *Taxus canadensis*.

Y. tree. The *Yew*.

Yex. Colloquial phonetic term for hic-cough (*Singultus*).

Ylang'-ylang' oil. (East Indian.) Also termed *Cananga oil*. The volatile oil of the flowers of the *Cananga odorata*. It is used as a perfume.

Ylech. See *Ilech*.

Ylia'ter. The same as *Flech*.

Ymnodiph'ytum. (Υμενώδης, membranous; φυτόν, a plant.) *Bot.* Necker's term for a plant in which the organs of fructification are surrounded by a *spathe*.

Yn. (Arab.) Syn. for *Yoms*.

Yoke. (Phonetic term.) *Med.* Syn. for *Yex*.

Y.-bone. A name for the *Malar bone*.

Yoked. (Anglo-Sax. *geoc*, the frame of wood with which oxen are yoked together.) See *Conjugate*.

Yolk. (Anglo-Sax. *geolca*.) In popular language, the yellow portion of a bird's egg.

Zoöl. Sometimes used to mean the whole ovum, sometimes the vitellus or deutoplasm.

Y., acces'sory. A syn. for *Y., food-*.

Y. cleav'age. The cleavage or *Segmentation* of the vitellus of the fertilised ovum.

Y. duct. The *Vitelline duct*.

Y., food-. The mass of granules of proteid and fatty matter in the ovum, forming a store of nutriment for the embryo.

Y., for'mative. That portion of the protoplasm of the ovum which undergoes segmentation and constitutes the embryo.

Y., ger'minal. The same as *Y., formative*.

Y. grains. A syn. for *Y. granules*.

Y. gran'ules. The granules of the food-yolk. See *Yolk, food-*.

Y. mem'brane. The *Vitelline membrane*.

Y., nu'tritive. The same as *Y., food-*.

Y. of egg. See *Ovi vitellus*.

Y. of wool. A name for *Suint* (q. v.).

Y. plates. Term for those *Y. granules* which are plate-like in shape.

Y. rest. *Embryol.* The internal residual mass of segmentation spheres in the developing ovum.

Y.-sac. The *Vitelline membrane*.

Y. segmenta'tion. See under *Segmentation*.

Y.-skin. A term for the *Vitelline membrane*.

Y. spher'ules. A syn. for *Y. granules*.

Y. stalk. That part of the *Y.-sac* which connects this structure with the embryo.

Y., white. A term for the white of egg; the white albuminous portion surrounding the yellow.

Y., yel'low. The yellow central portion of an egg.

Yoms. (Arab.) Old term for *Ærugo*. (Ruland and Johnson.)

Yo'pon. The *Ilex vomitoria*.

York springs. Natural sulphur waters in Adams County, Pennsylvania.

York'shire san'icle. *Bot.* A common name for the butterwort, *Pinguicula vulgaris*.

Yos. (Arab.) A syn. for *Yoms*.

Youk. (G. jücken, to itch.) A colloquial Scotch term for *Scabies*.

Young-Helm'holtz the'ory. See *Colour-vision, Young-Helmholtz theory of*.

Young's gas well. A gaseous alkaline sulphur spring in Lake County, California.

Y.'s rule. *Pharm.* A rule for dosage of children, introduced by Young. To the number of years of age of the patient add twelve, and divide the result by the number of years of age. The resulting quotient gives the denominator of the fraction of which the numerator is one, and which indicates the proportion of the full adult dose to be administered in the given case.

You'pon. The *Ilex cassine*.

Youth. (Anglo-Sax. *ingudh*; F. *adolescence*; I. *adolescenza*; G. *Jünglingsalter*.) The same as *Adolescence* (q. v.).

Youth'wort. The *Drosera rotundifolia*.

Ypselloglos'sus. See *Ypsiloglossus*.

Ypsilanti mi'neral well. Saline sulphur water, in Ypsilanti, Washtenaw County, Michigan. (Billings.)

Ypsiliform. (Υψιλόν; L. *forma*, shape.) Having a shape like the Greek letter Y (upsilon).

Y. fig'ure. *Embryol.* A peculiar arrangement of cells seen in the development of some ova.

Ypsiloglos'sus. (*Ypsiloides* [os], the hyoid bone; Gr. γλώσσα, the tongue.) Belonging to the hyoid bone and tongue. More correctly, *Hypsiloglossus* (q. v.).

Ypsilo'ides. See *Hypsiloides*.

Ypsoöph'ytum. (Υψόω, to raise; φυτόν, a plant.) *Bot.* Necker's term for a plant whose stamens are inserted on the summit of the peduncle. More correctly, *Hypsoöphytum*.

Y'ride. The same as *Yrides*.

Y'rides. (Arab.) Old term for *Auripigmentum* or orpiment. (Ruland and Johnson.)

Y'ris. (Arab.) Old name for *Ferrum*. (Ruland and Johnson.)

Y. S. Abbrev. for yellow spot (*Macula lutea*).

Ysam'bra. (Span.) Old name for a Spanish poison prepared from a plant of the Genus *Helleborus*.

Also, the Genus *Helleborus*.

Ysope. *Hyssop*.

Ys'opus. Old alchemical term signifying the art of separating, or analysis.

Yt'tria. (From *Ytterby* in Sweden, where yttria was discovered.) Oxide of *Yttrium*, occurring native.

Yttriferous. (*Yttrium*; *L. fero*, to bear.) *Mineral.* Containing *Yttrium*.

Yt'trium. (*Yttria*) *Chem.* Symb. *Y*. A rare metal of the Cerium group.

Yuc'ca. *Bot.* A Genus of the *Liliaceæ*.

Y. filamento'sa. Adam's needle. *Hab.*, the Southern United States. A tincture of the root has been given in gonorrhœa.

Y. glorio'sa. Common Adam's needle of America. Pulp of fleshy capsule, laxative. From the macerated stems is obtained a form of starch.

Also, a name for the *Jatropha manihot*.

Yuck. Another form of the word *Youk*.

Yu'lan. The *Magnolia yulan* (q. v.).

Yulan'. (Chinese.) The *Magnolia conspicua*.

Yup'on. The same as *Yaupon*.

Yux. Phonetic term for hiccough (*Singultus*).

Yver'don. A place in the Canton Vaud, Switzerland, noted for its sulphur and alkaline springs.

Ywer'a. A spirit distilled in the Sandwich Islands from the root of the *Teeroot*, which is first baked, pounded up, and then made to ferment.

Yx'ir. (Arab.) *Med.* Old term signifying a good medicine. (Cf. *Elizir*.)

Yzquier'do's bacillus. A bacillus found by Professor *Yzquierdo*, of Santiago de Chile, in cases of *Wart*, *Peruvian*, and believed to be the specific virus of that disease.

Z.

Z. Z. These letters in ancient times signified *Myrrha*, the Greek analogue *σάπυρη*; afterwards they were used to signify *Zingiber*.

Zaar. Term used by the Arabians and Persians for poison (*Venenum*).

Zaara'a. (Arab.) *Med.* A term for *Vigilum*.

Zaccharum. Old spelling for *Saccharum*.

Zacin'tha. A Genus of the *Compositæ*.

Z. verruco'sa. *Hab.*, the shores of the Mediterranean. Leaves formerly used in skin diseases.

Zacyn'tha. See *Zacintha*.

Zacyn'thius. Term used by Galen (*ζακύνθος*) for liquid *bitumen*.

Zadura. Name for an exotic, rounded root of the colour of ginger, brought from India, and believed to be useful against the plague. Supposed to be the root of a species of *Contrayerva*.

Za'el. The same as *Zail*.

Zaf'fran. Another spelling of *Zafran*.

Zaf're. (? Arab.) A term for *Smalt*, or cobalt protoxide.

Za'fran. (Arab.) *Bot.* Old term for the saffron, or *Crocus*.

Chem. Afterwards used as a syn. for *Ochre*.

Za'hir. (Arab.) Old term for *Dysentery*. (*Avicenna*.)

Zaib'ac. (Arab.) *Chem.* An old term for *Argentum vivum*, or quicksilver (*Hydrargyrum*).

Zaib'ach. Another spelling of *Zaibac*.

Zaib'ar. The same as *Zaibac*.

Za'id'ir. (Arab.) *Chem.* Old name for *Viride æris*, or *Ærugo*.

Zail. See *Borozaile*.

Zais'enhausen. A place in Baden, Germany, noted for its alkaline, saline, and sulphur mineral springs.

Zaiz'on. A place in Kronstadt, Transylvania, noted for its saline mineral springs.

Zalamb'odont. (*Za*, having an intensive force; *λαμβδᾶ*; *ὀδούς*, a tooth.) *Zool.* Epithet applied to animals whose molar teeth are crowned with a V-shaped ridge or crest.

Zaldi'var. A place in Biscay, Spain, noted for its sulphur spring.

Zalef'ski's method. A method, introduced by *Zalefski*, for determining the presence of compounds of iron in the animal organs and tissues. Two methods are employed.

1. The *Ammonium sulphide method*.—The tissue is cut up and put into 65 per cent. alcohol for twenty-four hours, and then for twenty-four hours into 95 per cent. alcohol containing a few drops of strong yellow ammonium sulphide. Next it is placed in absolute alcohol containing a few drops of ammonium sulphide. The preparations are then made into sections.

2. The *Potassium ferrocyanide method*.—A process very similar to the above, ferrocyanide of potassium being used instead of ammonium sulphide.

Zambo. The same as *Sambo*.

Za'mia. *Bot.* A Genus of the *Cycadaceæ*, the species of which yield a form of sago.

Z. arrowroot. Incorrect name for a form of sago obtained from several species of *Zamia*.

Z. caf'fra. A syn. for *Cycas caffra*.

Z. cycadifo'lia. The same as *Cycas caffra* (q. v.).

Z. cyca'dis. A syn. for *Z. cycadifolia*.

Z. integrifo'lia. *Hab.*, Florida. It yields a sort of sago, incorrectly termed arrowroot.

Z. lanugino'sa. A tropical American species. Yields sago.

Z. villo'sa. A syn. for *Z. caffra*.

Za'miæ. A class of plants which includes the *Cycadaceæ*.

Zanal'o'in. (*Zanzibar*; *aloin*.) Name for *Aloin* obtained from Zanzibar aloes; the same as *Socaloin*.

Zanna. A form of *Bole* found in Armenia. It was used in ancient times as a dessicative.

Zano'nia. (*Zanoni*, an Italian botanist.) A Genus of climbing plants, Order *Cucurbitaceæ*.

Z. in'dica. Bandolier fruit. Leaves used as a nervine tonic.

Zante currants. A term for Corinth raisins, or true currants.

Z. wood. The wood of *Rhus cotinus*.

Zan'thic ox'ide. A name for *Zanthin*.
Zanthin. (Ξανθός, yellow.) More correctly, *Xanthin* (q. v.).

Zanthopierin. (Ξανθός, yellow; πίκπος, sweet.) A reddish-brown crystalline sweet substance obtained from the bark of *Zanthoxylum clava Herculis*.

Zanthopierite. Chevallier and Pelletan's term for *Zanthopierin*.

Zanthorrhiza. See *Xanthorrhiza*.

Zanthoxylum. See *Xanthoxylum*.

Zanzibar aloes. The same as *Socotrine aloes*.

Zappania nodiflora. (After *Zappa*, an Italian botanist.)

Zar. Name for a form of *hysteria* occurring among Abyssinian women.

Zar'anth. Hebrew name for *Leprosy*.

Zar'as. (Arab.) Old term for gold (*Aurum*).

Zar'athan. (Arab.) A term for scirrhous induration of the mamma.

Zar'fa. (Arab.) Old term for tin (*Stannum*).

Zarnach'a. Syn. for *Zanna*.

Zar'neg. (Arab.) Old term for orpiment (*Auripigmentum*).

Zar'nek. The same as *Zar'neg*.

Zar'nich. The same as *Zar'neg*.

Zar'rathan. (Arab.) See *Zar'athan*.

Zar'sa. The same as *Sarsa*.

Zarsaparilla. The same as *Sarsaparilla*.

Zasmidium. Bot. A Genus of the Family Perisporaceæ of the *Pyrenomycetes*.

Z. cellarê. The wine-cellar fungus. It grows on the walls of cellars and on casks, bottles, &c.

Zata'nea. (Arab.) Bot. Term for the flower of the *Agnus castus*.

Ze'a. (Zeïa or Zîa.) Bot. A Genus of the *Graminaceæ*.

Z. japonica. Japanese maize.

Z. mais. The *Z. mays*.

Z. maiz. The *Z. mays*.

Z. mays. Indian corn, maize. Hab., America, where it is used for the same purposes as wheat in this country.

Zebd. (Arab.) Old term synonymous with *Butyrum*.

Zeb'eb. (Arab.) Old term synonymous with *Stercus*.

Zec. (? Arab.) An old name for *Tragacanth*.

Zedoaria. The substance zedoary, consisting of the roots of *Kampferia rotunda*, formerly in great repute as a remedy for rheumatism. See *Arnabo*. Also, the *Kampferia rotunda*. Also, an East Indian spice somewhat resembling ginger, constituted by the rhizome of the *Curcuma zedoaria* and the *C. aromatica*.

Z. lon'ga. The same as *Z. rotunda*.

Z. rotunda. The *Kampferia rotunda*.

Zedoary. See *Zedoaria*.

Zefr. (Arab.) Old term synonymous with *Pix*.

Ze'gi. (Arab.) Old term for *Vitriolum*.

Zeher'ech. (Arab.) Old term for *Flos aris*.

Ze'ia. (Zeïa.) The same as *Zea*.

Ze'in. (Zeïa.) A soft, yellowish proteid substance obtained from *Maize*.

Zeis'mus. (Zeïa, maize. F. *zéisme*;

I. *zeismo*.) A form of *Pellagra*, consequent on eating diseased maize.

Zeiss' glands. (After the anatomist *Zeiss*.) The sebaceous glands of the eyelids.

Zeis'sian styte. *Hordeolum zeissianum*. A styte produced by suppurating of one of *Zeiss' glands*.

Zelo'sis. (Ζῆλος, zeal.) A syn. for *Zelotypia*.

Zelotypia. (Ζῆλος, zeal; τυπός, something stamped. F. *zélotypie*.) Abnormally great zeal; also, morbid jealousy.

Med. Pathologically excessive bodily or mental energy.

Zelotypic. Belonging to, or characterised by, *Zelotypia*.

Ze'ma. (Ζέμα.) Pharm. A decoction.

Zemas'arum. (Arab.) Old term for *Cinnabar*.

Ze'mech. (Arab.) Term formerly applied to the *Lapis lazuli*.

Zem-Zem spring. Cold sulphur chalybeate waters, Lake County, California.

Zen'da. (Arab.) A term introduced by Paracelsus for organisms which were supposed to arise without a germ.

Zenex'ton. Old term used by Paracelsus, Helmontius, and others, for an amulet hung round the neck as a preservative against the plague; as, e. g., mercury (*Hydrargyrum*) enclosed in a filbert shell.

Zen'gifur. (Arab.) A syn. for *Zemas'arum*.

Zen'ith. (Arab.) The highest point in the heavens, that vertically above us.

Zenkerism. The condition of *Zenker's degeneration*.

Zen'ker's degeneration. (The contemporary anatomist and pathologist *Zenker*.) A special form of degeneration of muscular tissue, in which this becomes very brittle, occurring sometimes in continued fevers, and more especially in enteric.

Zeoc'riton distichum. (Zeïa, maize; κριθή, barley.) A syn. for *Hordeum distichum*.

Ze'olite. The same as *Zeolith*.

Ze'olith. (Zeïw, to boil; λίθος, a stone.) A mineral composed of a hydrated silicate.

Zeopy'ron. (L. *zea*; πυρός, wheat.) A kind of grain resembling maize, growing in Bithynia.

Zeopy'rum. Latinised form of the term *Zeopyron*.

Ze'oscope. (Zeïw, to boil; σκοπέω, to look at.) Name for an apparatus designed for determination of the alcoholic strength of a liquid by means of its boiling-point. (Gould.)

Zephyria'nus. (L. *zephyrus*, the west wind.) Zephyrian. Old epithet for the unfertilised eggs often laid by fowls in spring.

Zer'ci. (Arab.) Old term for *Vitriolum*.

Zer'icum. (Arab.) Old term for *Arsenium*.

Zer'ma. The same as *Zerna*.

Zer'na. (Arab.) Surg. Old term for *Impetigo* accompanied by ulceration (*Impetigo ulcerata*).

Ze'ro. (Derivation not known. Word taken from the Arab.) A cypher. The imaginary point in the temperature scale when all heat was supposed to be exhausted, this being at the freezing-point of water in the Réaumur and Celsius scales, and 32 degrees below this in the Fahrenheit scale.

ZERUMBET—ZINCI

Zerum'bet. (East Indian.) A name for *Zingiber zerumbet*.

Z. root. Name for the rhizome of *Zingiber zerumbet*.

Zer'zera. An old term for *Quercera*.

Ze'sis. (Ζέσις.) Pharm. A seething, boiling, or decocting.

Zest. (F. *zeste*.) Bot. A name for the yellow outer rind of the orange or lemon, containing the pungent volatile oil.

Zestolu'sia. (Ζεστολουσία.) Med. A hot bath.

Ze'ta. An old term for a vapour-bath.

Zeteorila. The same as *Zeta*.

Ze'tus. (Arab.) A syn. for *Zegi*.

Ze'zi. (Arab.) A syn. for *Zeyi*.

Zi'bach. (Arab.) Chem. Old term synonymous with *Zaibac*.

Ziba'tum. Latinised form of the word *Zaibac*.

Zib'et. (*Zibethum*.) See *Zibethum*.

Zib'ethum. (Arab. *zobeth*.) Term for a kind of *Civet*, secreted by the *Viverra civetha*, an animal living in south-east Asia. Formerly used as a substitute for *Musk*.

Ziep. A name for *Influenza*. (Gould.)

Zie'ria. A Genus of the *Rutaceæ*.

Z. lanceola'ta. Hab., Australia. The fresh leaves and twigs yield an oil resembling oil of rue.

Zietris'ikite. A solid paraffin occurring native in Moldavia. (Billings.)

Zim'ex. (Arab.) Chem. Old term for *Arugo*.

Zim'mermann's corpuscles. (After the physiologist and histologist *Zimmermann*.) A name for *Blood-plaques*.

Z.'s elementary particles. A syn. for *Z.'s corpuscles*.

Zimo'ma. See *Zymoma*.

Zin'alín. $C_{20}H_{19}N_2O_6$. A yellow colouring-matter prepared by the action of nitrous acid on *Anilin*.

Zina'ria. (Arab.) Vicious or abnormal bile.

Zinc. $Zn = 64.9$. One of the metallic elements. Tonic and astringent in small doses, irritant and emetic in larger doses.

Z. acetate. See *Zinci acetas*.

Z. bromide. See *Zinci bromidum*.

Z., but'ter of. A name for *Zinc chloride*.

Z. car'bonate. See *Zinci carbonas*.

Z. car'bonate, na'tive. Calamine.

Z. chlo'ride. See *Zinci chloridum*.

Z. col'ic. A form of colic, induced by poisoning by zinc oxide, closely resembling lead colic.

Z. cream. *Cremor zinci*. Oxide of zinc 80 grains, vaseline 1 ounce, perfume q. s. Used in the same way as violet powder, for babies.

Z. cy'anide. See *Zinci cyanidum*.

Z. ferrocy'anate. A syn. for *Z. ferrocy'anide*.

Z. ferrocy'anide. $Zn_2FeC_6N_6, 3H_2O$. Prepared by precipitation of a soluble zinc salt with potassium ferrocyanide. Action medicinally, similar to that of zinc cyanide.

Z., flow'ers of. A name for *Zinc oxide*.

Z., gran'ulated. See *Zincum granulatum*.

Z. hydrocy'anate. Zinc cyanide.

Z. iodide. See *Zinci iodidum*.

Z. iod'uret. An old name for *Z. iodide*.

Z. lac'tate. See *Zinci lactas*.

Z. oleate. See *Oleatum zinci*.

Z. oxide. See *Zinci oxidum*.

Z. oxide, commer'cial. See *Zinci oxidum venale*.

Z. oxide, impure'. See *Tutia*.

Z. oxychlo'ride. A mixture of powdered zinc oxide and solution of chloride of zinc. Used as a filling for teeth.

Z. oxyphos'phate. Basic phosphate of zinc. Prepared by mixing calcined oxide of zinc with a syrupy solution of glacial phosphoric acid. Used as a filling for teeth.

Z. perman'ganate. A deliquescent, dark brown crystalline salt. Used as an antiseptic astringent in lotions and injections.

Z. phos'phate. Prepared from glacial phosphoric acid and powdered calcined oxide of zinc. Used as a filling for teeth.

Z. phos'phide. Zn_3P_2 . Minute, friable, crystalline masses. Insoluble in water or alcohol. Used in the same cases as phosphorus, in doses of 1-20th grain or more.

Z. salicylate. $Zn(C_7H_5O_3), 3H_2O$. Prepared by the action of salicylic acid on zinc oxide. Action, astringent and antiseptic.

Z., sea-salt of. A name for *Zinc chloride*.

Z. spar. A name for *Calamine*.

Z. sul'phate. See *Zinci sulphas*.

Z. sul'phide, hy'drated. The same as *Z. sulphhydrate*.

Z. sulphocar'bolate. See *Zinci sulpho-carbolas*.

Z. sulphy'drate. Used externally and internally (in a pill) in chronic skin diseases.

Z. valer'ianate. See *Zinci valerianas*.

Z.-white. A name for crude zinc oxide.

Zin'chum. See *Zincum*.

Zin'ci. (L.) Gen. of *Zincum*.

Z. ac'etas. B. P. $Zn(C_2H_3O_2)_2, 2H_2O$. Acetate of zinc. Prepared by dissolving zinc carbonate in a slight excess of acetic acid, and crystallising out. Thin, translucent, pearly plates. Action, astringent.

A non-official preparation is made, *Lotio zinci acetatis*, 2 grains to 1 ounce of water. Used as an astringent injection and collyrium.

Z. bro'midum. A white deliquescent powder. Solubility, 4 in 1 of water. Used in epilepsy. Dose, 2 grains three times a day.

Z. carbo'nas. B. P. $ZnCO_3(Zn_2H_2O)_2, H_2O$. Carbonate of zinc. Prepared by boiling a solution of zinc sulphate with one of sodium carbonate. A white, tasteless powder, soluble with effervescence in dilute nitric acid. The normal anhydrous carbonate occurs native as *Calamine*.

Z. carbo'nas impu'rus. Impure native zinc carbonate, *Calamine*.

Z. carbo'nas præcipita'tus. Precipitated carbonate of zinc.

Z. carbo'nas præpara'tus. A syn. for *Calamina preparata*.

Z. chlore'tum. A syn. for *Zinci chloridum*.

Z. chlo'ridi li'quor. See *Liquor Zinci Chloridi*.

Z. chlo'ridum. B. P. $ZnCl_2$. Chloride of zinc. Prepared by evaporating *Liquor zinci chloridi*. Colourless, opaque, deliquescent rods, astringent, antiseptic, and disinfectant. Non-official preparations: Chloride of zinc points, Compound chloride of zinc points (chloride and oxide), *Lotio zinci chloridi*, *Pasta zinci chloridi cum opio*, *Pulvis zinci chloridi composita*.

ZINCIBER—ZINCUM

Z. chlorure'tum. A syn. for *Z. chloridum*.

Z. citras. Citrate of zinc. Used in epilepsy. Dose, 3 to 12 grains, or more.

Z. cyan'idum. Cyanide of zinc. Has an action on the heart like that of digitalis. Dose, 1-10th to 1 grain.

Z. cyanure'tum. A syn. for *Z. cyanidum*.

Z. et potas'sii cyan'idum. A stable soluble cyanide, with the action of hydrocyanic acid. Dose, 1-10th to 1 grain.

Z. ferrocyan'idum. A white powder insoluble in water or alcohol. Action similar to that of *Zinci cyanidum*.

Z. ferrohydrocy'anas. A syn. for *Z. ferrocyanidum*.

Z. hydrocy'anas. A syn. for *Z. cyanidum*.

Z. iodi'dum. A white, deliquescent salt very soluble in water and alcohol. Prepared by digesting granulated zinc in an aqueous solution of iodine.

Z. iodure'tum. A syn. for *Z. iodidum*.

Z. lac'tas. Lactate of zinc. Not irritating to the stomach; used in epilepsy. Dose, 3 to 30 grains in a pill.

Z. ni'tras. Used as a caustic. It is less painful than *Z. chloridum*, and it cauterises more deeply.

Z. nix. A name for *Z. oxidum*.

Z. olea'tum. See *Oleatum zinci*.

Z. oxidum. B. P. ZnO . Prepared by igniting carbonate of zinc. Used internally as a tonic—dose, 2 to 10 grains; externally as an astringent. Preparations:—*Oleatum zinci*, *Unguentum zinci oleati*. Non-official preparations:—Dusting powder (with salicylic acid and starch), Lassar's paste, *Zinci oleas*, zinc oxide plaster mulls, zinc and salicylic plaster mulls, zinc gelatine.

Z. oxidum impu'rum. Impure oxide of zinc. See *Tutia*.

Z. oxidum vena'lë. Commercial oxide of zinc. A pure oxide of zinc, official in the U.S. P., used for preparing *Zinci acetas*.

Z. permanganas. Permanganate of zinc. Purplish crystalline masses, soluble in 1 in 3 of water. Used as an astringent and antiseptic injection.

Z. phosphas. Normal or orthophosphate of zinc. Occurs as a white powder. Used as a nervine tonic.

Z. phosphidum. Zn_3P_2 . Zinc phosphide. Given as a substitute for *Phosphorus*. Dose, 1-20th to 1-4th grain, in a pill with sugar of milk and glucose.

Z. prus'sias. A syn. for *Z. cyanidum*.

Z. salicylas. Occurs as colourless metallic crystals.

Z. sulphas. B. P. $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$. Sulphate of zinc. Prepared by saturation of sulphuric acid with excess of zinc, and crystallising out. Tonic and astringent in small doses, emetic in large doses; locally astringent. Dose, as a tonic and astringent, 1 to 2 grains; as an emetic, 10 to 30 grains. Non-official preparations: *Injectio zinci sulphatis*, *Lotio rubra*, *Lotio zinci sulphatis*. *Cadmii sulphas* has been used in place of *Zinci sulphas*.

Z. sulphocar'bolas. B. P. $\text{Zn}(\text{C}_6\text{H}_5\text{SO}_4)_2$, H_2O . Sulphocarbolate of zinc. Prepared by heating a mixture of carbolic acid and sulphuric acid, saturating with oxide of zinc, and evapo-

rating and crystallising out. Astringent and antiseptic.

Z. sul'pho-ich'thyolas. Sulpho-ichthyolate of zinc. Miscible with water, glycerine, fats, &c. Used locally in skin diseases, and as an embrocation in rheumatism.

Z. vale'rianas. B. P. $\text{Zn}(\text{C}_3\text{H}_7\text{O}_2)_2$. Valerianate of zinc. Solubility, 1 in 120 of water, 1 in 60 of rectified spirit. Antispasmodic. Dose, 1 to 3 grains in a pill.

Zin'ciber. The same as *Zinziber*.

Zin'cic. Belonging to, or containing, *Zinc*.

Zin'cides. (Nom. pl. From *Zincum*.) Name for a family of mineral bodies whose type is *Zinc*.

Zinciferous. (L. *zincum*; *fero*, to bear. *Mineral*. Epithet applied to bodies that accidentally contain zinc.

Zin'co-cy'anide of mer'cury. A salt found by Lister to be a valuable antiseptic. Used in preparation of an antiseptic gauze.

Zin'cold. (*Zinc*; Gr. *εἶδος*, resemblance.) Resembling *Zinc*; also, belonging to zinc. Epithet applied to the positive or zinc pole of an electric battery.

Zin'conite. A name for *Calamine*.

Zin'cum. B. P. Zn . Atom. weight 65. A bluish-white metal of characteristic taste, and with a slight odour when rubbed, occurring native as sulphide and carbonate. Zinc and its salts in solution give a white gelatinous precipitate with ammonia solution, soluble in excess, the resulting solution giving a white precipitate on addition of an alkaline sulphide or sulphuretted hydrogen.

Z. acet'icum. Syn. for *Zinci acetas*.

Z. boru's'sicum. Syn. for *Zinci cyanidum*.

Z. broma'tum. Syn. for *Zinci bromidum*.

Z. calcina'tum. Syn. for *Zinci oxidum*.

Z. carbon'icum. Syn. for *Zinci carbonas*.

Z. chlora'tum. Syn. for *Zinci chloridum*.

Z. cyanogena'tum. Syn. for *Zinci cyanidum*.

Z. ferrocyna'tum. A syn. for *Zinci ferrocyanidum*.

Z. ferrohydrocyan'icum. Syn. for *Zinci ferrocyanidum*.

Z. granula'tum. B. P. Granulated zinc. Prepared by fusing commercial zinc in an earthen crucible, and pouring into cold water. Used to prepare *Liquor zinci chloridi*, *Zinci chloridum*, and *Zinci sulphas*. Incompatibles of zinc salts are alkalies and alkaline carbonates, lime water, astringent vegetable decoctions and infusions, and milk.

Z. ioda'tum. Syn. for *Zinci iodidum*.

Z. lac'ticum. Syn. for *Zinci lactas*.

Z. muriat'icum. Syn. for *Zinci chloridum*.

Z. oxida'tum. A syn. for *Zinci oxidum*.

Z. salicyl'icum. Syn. for *Zinci salicylas*.

Z. sulphocarbol'icum. A syn. for *Zinci sulphocarbolas*.

Z. sulphophenyl'icum. Syn. for *Zinci sulphocarbolas*.

Z. valerian'icum. Syn. for *Zinci valerianas*.

Z. vitriola'tum. Syn. for *Zinci sulphas*.

Z. zoët'icum. (See *Zoët'ic acid*.) Syn. for *Zinci cyanidum*.

Zin'etus. *Chem.* Old name for a kind of *Marcasita*, resembling brass or copper. (Paracelsus.)

Zin'gar. (Arab.) An old name for *Ærugo*.

Zin'gi. *Bot.* Old name for the *Illicium anisatum*.

Zin'giber. B. P. Ginger. The scraped and dried rhizome of the *Zingiber officinale*. Aromatic, stimulant, and carminative. Dose, in powder, 10 to 20 grains. Preparations: *Syrupus zingiberis*, *Tinctura zingiberis*, *Tinctura zingiberis fortior*. Non-official preparation, *Oleoresina zingiberis*.

Also, a Genus of the *Scitamineæ*.

Z. al'bum. Syn. for *Z. officinale*.

Z. cassumu'niar. See *Cassumuniar*.

Z. commu'nē. Syn. for *Z. officinale*.

Z. fus'cum. Syn. for *Z. officinale*.

Z. german'icum. A name for the *Arum maculatum*.

Z. ni'grum. Syn. for *Z. officinale*.

Z. officina'lē. The ginger plant. Hab., Asia. From it is obtained ginger. See *Zingiber*.

Z. purpu'reum. The same as *Z. cassumuniar*.

Z. spu'rium. The same as *Z. cassumuniar*.

Z. zerum'bet. The same as *Z. cassumuniar*.

Zingibera'ceæ. *Bot.* An Order of *Monocotyledons*.

Zingiberi. The same as *Zingiber*.

Zingiberin. A name for *Oleoresina zingiberis*.

Zingiberis. Gen. of *Zingiber*. Also, the same as *Zingiber*.

Ziniat. (Arab.) *Med.* Old term for *Fermentum*.

Zink. See *Zinc*.

Zin'kum. See *Zincum*.

Zinn, lig'ament of. That portion of the common tendon of the *recti* muscles of the eyeball which is not attached to the sheath of the optic nerve.

Z., mem'brane of. A name for the *Lamella iridis anterior* (q. v.).

Z., zone of. Syn. for *Z., zonule of*.

Z., zon'ule of. *Anat.* The suspensory ligament of the crystalline lens of the eyeball.

Zint. A syn. for *Zinc*.

Zin'ziber. The same as *Zingiber*.

Zin'zifur. (Arab.) *Chem.* The same as *Zengifur*.

Zinzil'la. (Arab.) Old term syn. with *Zona*.

Zi'phac. A name for the peritoneum. (Dunglison.)

Zir'bus. (Arab.) *Anat.* Old term for *Omentum*.

Z. adipi'nus. Old term for *Omentum, gastro-colic*.

Zirco'nium. Zr = 89.6. *Chem.* A rare element resembling silicon, obtained from the mineral zircon. It is soluble in hydrofluoric acid and aqua regia.

Zit'ter. See *Zwitter*.

Zittman's decoction. See *Decoc-tum Zittmanni*.

Ziza'nia. (Ζιζάνιον, the darnel.) A Genus of aquatic *Graminaceæ*.

Z. aquat'ica. Indian rice. Hab., North America. Resembles ordinary rice.

Ziz'ibæ, Ziz'ibi, Ziz'ipha. *Bot.* Old names for *Jujubes*, the fruit of *Rhamnus zizyphus*.

Ziziph'ora pulegio'ides. A syn. for *Hedoma pulegioides*.

Ziz'yphus. *Bot.* A Tribe of the *Rhamnaceæ*. Also, the specific name of the jujube tree, *Rhamnus zizyphus*.

Z. bac'lei. Hab., Senegal. Root astringent. Used to make an astringent injection.

Z. exser'ta. Hab., the Philippines. Used in skin diseases and syphilis.

Z. glabra'ta. Hab., India. Leaves alterative. Bark yields a sort of *Kino*. (Foster.)

Z. juju'ba. Hab., India. Fruit very similar to that of *Z. vulgaris*.

Z. jvazei'ro. Hab., Brazil. Bark bitter, astringent, febrifuge, and emetic.

Z. lo'tus. A North African species. Fruit edible.

Z. nit'ida. Fruit similar to that of *Z. vulgaris*.

Z. œnop'lia. Hab., India. Fruit edible. From the fresh root is made a decoction used locally to wounds.

Z. sat'iva. Fruit similar to that of *Z. vulgaris*.

Z. soporifera. Hab., North China. Seeds, calmative and hypnotic.

Z. soro'ria. Closely resembles *Z. jujuba*.

Z. spi'na Chris'ti. The Christ's-thorn of Palestine. Unripe fruit astringent; ripe fruit refrigerant.

Z. sylves'tris. Fruit similar to that of *Z. vulgaris*.

Z. vulga'ris. Hab., Asia Minor. The fruit is termed *Jujube* (q. v.).

Zoag'ria. (Ζωή; ἀγρεύω.) Term used by Eustachius for the reward for saving life from drowning, &c.

Zo'amine. (Ζωον; amine.) An animal alkaloid.

Zoam'ylin. (Ζωον; amylin. F. *zo-anyline*.) A name for *Glycogen*.

Zoan'thodene. (Ζωον; άνθος, a flower; δέμα, a bundle.) *Biol.* Term for the compound organism resulting from the budding of a polyp in the *Actinozoa*.

Zoanthro'pia. (Ζωον; άνθρωπος. F. *zoantropie*; I. *zoantropia*; G. *Thierwahn*.) *Med.* A form of *Monomania* in which the patient believes himself to be one of the lower animals.

Zoan'thropy. See *Zoanthropia*.

Zoa'ra. (Arab.) *Insomnia*.

Zoa'rial. Belonging to a *Zoarium*.

Zoa'rium. (Ζωαριον, dim. from ζωον.) *Biol.* The composite organism produced by repeated budding in the *Polyzoa*.

Zo'diac. (Ζωδιακός.) *Astron.* An imaginary belt or circle surrounding the heavens, extending about 8° on each side of the ecliptic, in which the planets revolve, so that no planet is ever seen more than 8° below or above the ecliptic.

Z. Springs. Some saline, chalybeate springs in Vernon County, Missouri. (Billings.)

Zodioph'ilous. (Ζωδιον, dim. from ζωον; φιλέω, to love.) *Biol.* Epithet applied to plants pollinated by means of animals.

Zo'e. (Ζωή.) Life.

Zoe'cium. See *Zoœcium*.

Zoe'ther. (Ζωή, life; αιθηρ, the upper air.) *Biol.* A syn. for *Protyle* (q. v.).

Zoetic. (Ζωή.) Belonging to life; vital.

ZOETROPE—ZONE

Zo'etrope. (Ζωή; τροπός, a turning.) See *Phenakistoscope*.

Zographia. See *Zoögraphia*.

Zoiat'ria. (Ζῳον; ιατρεία, medical treatment.) Veterinary medicine and surgery.

Zoiat'rics. The same as *Zoiat'ria*.

Zoiat'ros. (Ζῳον; ιατρός, a physician.) A veterinary surgeon.

Zoiat'rus. The same as *Zoiatros*.

Zo'ic. (Ζωικός.) Belonging to animal life.

Zo'idin. (Ζῳον, an animal.) A syn. for *Glairin*.

Zo'ism. (Zoismus.) See *Zoismus*.

Zois'mus. (Ζωή, life.) The process or the phenomena of animal life.

Also, the theory of *vital force*.

Zois'tic. (Ζωή.) Belonging to animal life.

Zoll'ner's lines. Term for parallel lines with short obliquely intersecting lines, the latter causing the parallel lines to appear to converge.

Zomidin. (Zomos.) An aromatic brown substance which has been obtained from beef extract.

Zomid'ium. Dim. from *Zomos*, q. v.

Zomod'mon. (Ζωμός, hot broth; ὄδμη.) An aromatic reddish-brown colouring matter obtained from muscular tissue, bile, and some other animal substances.

Zo'mos. (Ζωμός.) Hot broth.

Zona. (Ζώνη. F. zone; G. Gürtel.) A zone or girdle. *Med.* The shingles, *Herpes zoster*.

Z. al'ba. White zone. Name for the zone of the eyeball commonly termed the white of the eye; that part of the sclerotic ordinarily visible.

Z. arcua'ta. Term for the internal zone of the *membrana basilaris* of the cochlea.

Z. cartilagin'ea. A syn. for *Z. cochleæ*.

Z. castita'tis. (L. *castitas*, chastity.) *Anat.* A name for the *Hymen*.

Z. choria'cea. *Anat.* One of the layers of which the *Lamina spiralis* (q. v.) is described as being composed.

Z. cilia'ris. The *Ciliary zone*.

Z. coch'leæ. The cartilaginous part of the *Lamina spiralis*.

Z. coria'ceæ. The same as *Z. choriaceæ*.

Z. denticula'ta. A syn. for *Lamina denticulata*.

Z. fascicula'ta. A syn. for *Z. reticularis*.

Z. gangliona'ris. A syn. for *Ganglion spirale*.

Z. glomerulo'sa. *Anat.* The outer layer of the stroma of the cortical part of the *Suprarenal body*.

Z. ign'ea. (L. *igneus*, fiery.) A syn. for *Herpes zoster*.

Z. incer'ta. (L. *incertus*, uncertain.) *Anat.* Term for the anterior part of the *Formatio reticularis* beneath the optic thalamus.

Z. læ'vis. A syn. for *Z. arcuata*.

Z. media'na. A syn. for *Z. choriaceæ*.

Z. membrana'cea. *Anat.* One of the layers into which the *Lamina spiralis* is described as being divided.

Z. moll'is. A syn. for *Z. cochleæ*.

Z. ner'veæ. *Anat.* One of the layers into which the *Lamina spiralis* is described as being divided.

Z. orbicula'ris. *Anat.* Orbicular zone.

A name for the circular fibres of the capsular ligament of the hip-joint.

Z. os'sea. *Anat.* The first or bony portion of the *Lamina spiralis*.

Z. pectina'ta. *Anat.* One of the layers into which the *Lamina spiralis* is described as being divided.

Z. pellu'cida. The *Vitelline membrane*.

Z. perfora'ta. A syn. for *Labium tympanicum*.

Z. perfora'ta of coch'lea. The inner portion of the *Lamina spiralis membranacea*.

Z. radia'ta. A syn. for *Zona pellucida*.

Z. re'pens. (L.) Creeping zone. A name for *Herpes zoster*.

Z. reticula'ris. *Anat.* The inner layer of the stroma of the cortical part of the *Suprarenal body*.

Z. serpigno'sa. *Med.* A syn. for *Herpes zoster*.

Z. spongio'sa. *Anat.* Term for the dorsal extremity of the posterior horn of the grey matter in the spinal cord.

Z. tecta. (L. *tectus*, covered.) *Anat.* Term for that part of the *Lamina spiralis* (q. v.) which lies beneath the organ of Corti.

Z. tendino'sa. Tendinous zone. The white tendinous band encircling each of the two auriculo-ventricular valves of the heart.

Z. traumatica paradoxa. Besnier's name for a case of *herpes zoster* which followed a traumatism, but appeared on the opposite side.

Z. Valsal'væ. (The Italian anatomist, *Valsalva*.) A term for the membranous portion of the *Lamina spiralis*.

Z. vasculo'sa. Vascular zone. Term for the medullary substance of a Graafian vesicle.

Z. vesicula'ris. One of the parts of which the *Lamina spiralis* is made up.

Z. virginita'tis. (L. *virginitas*, virginity.) *Anat.* A term for the *Hymen*.

Z. volat'ica. (L. *volo*, to fly.) A syn. for *Herpes zoster*.

Zonæsthe'sia. (Zona; *æsthesia*.) Term for the pathological sensation of painful constriction of a part of the body.

Zo'nal. (Zona.) Belonging to a zone or to *Zona* (*herpes zoster*). *Zoöl.* Belonging to the subdivisions or rows of an annulose animal.

Zonalis. (Zona.) *Bot.* Having transverse coloured bands.

Zona'nus. The same as *Zonaris*.

Zona'ris. Zonary. Epithet applied to a variety of *Calx carbonatus* consisting of masses presenting in their middle a zone-like ring of facets; also, to a body presenting coloured circular and concentric bands.

Zo'nary. Having the form of a zone.

Z. fau'na. Term introduced by Haeckel for the intermediate deep-sea fauna discovered by Murray as living in zones at different depths in the sea.

Z. placen'ta. See *Placenta*, *zonary*.

Zo'rate. (Zona.) *Biol.* Divided into zones marked with concentric rings.

Zone. (Ζώνη, a girdle; the waist.) *Med.* A term for *Herpes zoster*.

Z., anelectroton'ic. A syn. for *Z., polar*.

Z., boun'dary. That part of the medulla of the internal surface of the body of the kidney close to the cortex.

Z., cer'vical. Term for that zone which

constitutes the lowest fourth of the internal surface of the uterus.

Z., ciliary. Term for the ciliary processes *en masse*. The term *Zona ciliaris* has also been used to mean the *Zonule of Zinn*, or suspensory ligament of the lens.

Z., epileptic. Term for a zone on the face, irritation of which gives rise to epileptiform fits in animals that have a lesion of the spinal cord on the same side.

Also, a syn. for *Z., epileptogenous*.

Z., epileptogenous. (*Epilepsia*; Gr. *γένος*, origin.) Term for certain tracts of the skin in epneptics, irritation of which sometimes sets up an epileptic fit. (Brown-Séquard.)

Also, a zone including certain motor tracts of the cerebral cortex, artificial stimulation of which sets up epileptiform fits.

Z., hepatic. See *Hepatic zones*.

Z., hyperæsthetic. A zone of the skin which is hyperæsthetic.

Z., hystero-epileptogenous. (*Hystero-epilepsy*; Gr. *γένος*, origin.) A hyperæsthetic skin-area in a subject of hystero-epilepsy, pressure upon which may either set up a characteristic attack or check one already in progress. See also *Z., hysterogenic*.

Z., hysterogenic. (*Hysteria*; Gr. *γένος*, origin.) A hyperæsthetic skin-area in a hysterical subject, pressure upon which may either set up a hysterical fit, or stop one already in progress. Such areas are the mammary and ovarian regions.

Z., katelectrotonic. A syn. for *Z., peripolar*.

Z., Lissauer's. A syn. for *Lissauer's tract*.

Z. of Hal'ler. A term for the *Ciliary zone*.

Z. of Zinn. A syn. for *Zonule of Zinn*.

Z., ophthalmic. A syn. for *Herpes zoster ophthalmicus*.

Z., peripolar. Term for the zone immediately surrounding the *Z., polar* on the body of a patient to whom the electric battery is being applied.

Z., placental. Term for that part or zone of the pregnant uterus to which the *placenta* is attached.

Z., polar. Term for the zone of skin immediately surrounding the electrode in the case of a patient to whom the electric battery is being applied.

Z., sclerotic. See *Sclerotic zone*.

Zones. (Plur. of *Zone*.) Term for five spaces or divisions of the earth, viz. the *torrid zone* between the tropics, the *temperate zone* between each tropic and its relative polar circle, and the *frigid zones* between the polar circles and the poles.

Zs of basilar mem'brane. The basilar membrane is divided into an *inner zone*, from the labium tympanicum to the outer border of the base of the inner rods of Corti; and an *outer zone*, from the rods of Corti to the spiral ligament.

Zonesthesia. See *Zonæsthesia*.

Zonociliate. (*Zona*; *ciliate*.) *Biol.* Furnished with a zone of cilia.

Zonolimnetic. (*Zona*; Gr. *λιμνήτης*, living in marshes.) *Biol.* Epithet applied to fresh-water organisms which live in a certain zone or at a certain depth in the water.

Zonoplacental. (*Zona*; *placental*.) Having a *Zonary placenta*.

Zon'ula. (Dim. from *Zona*.) A little *Zone*.

Z. cartilagin'ea. *Anat.* A syn. for *Crista spiralis*.

Z. cilia'ris. The *Ciliary zone*.

Z. coch'leæ. *Anat.* The cartilaginous portion of the *Lamina spiralis*.

Z. Hilda'ni. A syn. for *Cingulum Hildani*.

Z. ner'vea lam'inæ spir'al'is mem-branæ'cæ. A syn. for *Zona nervea*.

Z. of Zinn. See *Zonule of Zinn*.

Z. os'sea lam'inæ spir'al'is. A syn. for *Lamina spiralis ossea*.

Zon'ular. In the form of a *Zonule*.

Z. cat'aract. A syn. for *Cataract, lamellar*.

Zon'ule. (*Zonula*.) A little zone or girdle.

Z. of Zinn. See *Zinn, zonule of*.

Zon'ulet. (*Zonula*.) The same as *Zonula*.

Zoöam'ylin. (*Zōon*, an animal; *amy-lum*.) Animal starch, i. e. *Glycogen*.

Zoöam'yllum. (*Zōon*; *amylum*.) A syn. for *Paramylum*.

Zoö'bic. (*Zōon*; *bios*, life.) A syn. for *Zoöbiology*. (Gould.)

Zoöbiol'ogy. (*Zōon*; *biology*.) The scientific and systematic study of animal life.

Also, the internal phenomena of an organism in relation to external surroundings. (Ducrotay de Blainville.)

Zoöbi'otism. (*Zōon*; *bios*, life.) Animal life.

Zo'öblast. (*Zōon*; *βλαστός*, a shoot.) An animal cell.

Zoöcam'bium. (*Zōon*, an animal; *cambium*.) *Physiol.* A name for the *Liquor sanguinis*.

Zoöcarp. (*Zōon*; *καρπός*, fruit.) *Biol.* A syn. for *Zoöspore*.

Zoöcaul'on. (*Zōon*; *καυλός*, a stem.) *Zoöl.* The branching stem of the colony in some of the *Infusoria*.

Zoöchem'ia. (*Zōon*; *χημεία*, chemistry.) Clinical chemistry.

Zoöchemical. (*Zoöchemia*.) Belonging to *Zoöchemia*.

Zoöchem'y. The same as *Zoöchemia*.

Zoö-cur'rents. (*Zōon*; *current*.) Certain localised currents or rocks in the sea which are crowded with animal life.

Zoöcyst. (*Zōon*; *κύστις*, a box.) *Biol.* An encysted organism which develops zoospores.

Zoöcyst'ic. Belonging to, or having the characteristics of, a *zoocyst*.

Zoöcyt'ium. (*Zōon*; *κύτος*, a cavity.) *Zoöl.* A gelatinous matrix which certain composite *Infusoria* secrete round them.

Zoöend'rrium. (*Zōon*; *ἑνδρόν*, a tree.) *Zoöl.* A branched or dendritic *Zoöcytium*.

Zoö'des. (*Zōon*.) Belonging to an animal (*Zōon*).

Zoödyn'am'ia. (*Zōon*; *δύναμις*.) *Zoodynamics*.

Zoödyn'am'ic. Belonging to *Zoodynamics*.

Zoödyn'am'ics. (*Zoödynamia*.) Animal physiology.

Zoöec'ium. (*Zōon*; *οἶκος*, a house.) *Biol.* The chamber or compartment containing a polyp in the *Polyzoa*. Also termed *Cysted*.

Zoögæ'a. (*Zōon*; *γαῖα*, the earth. *Thierische Erde*.) An old term for animal earth, the residuum of decayed animal bodies.

Zoög'amete. (Ζῶον; γαμετή.) *Biol.* A locomotory gamete.

Zoög'amous. Belonging to Zoogamy.

Zoög'amy. (Ζῶον; γάμος, marriage.) The union of the sexes in animals.

Zoögene. (Ζῶον; γένος, origin.) The same as Zoögenium.

Zoögen'esis. (Ζῶον; γένεσις.) Animal procreation.

Zoögenia. A syn. for Zoögenesis.

Zoögen'ic. Belonging to Zoögenesis.

Zoögenum. (Ζῶον; γένος, origin.) *Chem.* Gimbernat's name for *Glairin*, or its varieties.

Zoögeny. The same as Zoögenia.

Zoögeographic. Belonging to Zoogeography.

Zoögeo'graphy. That branch of Zoölogy which deals with geographical distribution.

Zoögle'a. See *Zoöglæa*.

Zoöglæ'a. (Ζῶον; γλοιός, some sticky substance.) *Zoöl.* A stage in the life-history of some of the *Schizomycetes* among the Fungi in which the microbes secrete around them a gelatinous matrix.

Zoöglæ'ic. Belonging to a Zoöglæa.

Zoöglæ'oid. (*Zoöglæa*; Gr. εἶδος, form.) Like a *Zoöglæa*.

Zoögo'nia. (Ζωή, life; γονή, generation.) *Physiol.* The bearing or producing of living young, in contradistinction to the laying of eggs.

Zoögonid'ium. *Biol.* A motile, ciliated *Gonidium*.

Zoögonolog'ia. (Ζῶον; γονή, generation; λόγος, a discourse.) *Physiol.* The doctrine of the origin or development of animal life.

Zoögonology. See *Zoögonologia*.

Zoög'onous. (Ζῶον; γονός, producing.) *Physiol.* Bearing living young, *Viviparous*.

Zoögraft. (Ζῶον; graft.) Hybrid term for a graft of tissue taken from an animal and implanted on a part of the human body.

Zoögrapher. The same as *Zoögraphist*.

Zoögraph'ia. (Ζῶον; γραφή.) Zoögraphy.

Zoögraphist. One who makes a special study of Zoögraphy.

Zoögraphy. (Ζῶον; γραφή, a writing.) A systematic description of animals.

Zoöham'atin. (Ζῶον; hæmatin.) A term for *Hæmatin*.

Zoöhy'las. (Ζῶον; ὕλη.) Animal matter in general.

Zoöhyl'ica concremen'ta. (Neut. plur. of *Zoöhylicus*; plur. of *L. concrementum*.) Animal concretions.

Zoöhylicus, -a, -um. Belonging to *Zoöhy'las*.

Zoöi'asis. (Ζῶον; ιασις.) The Veterinary art.

Zoö'id. (Ζῶον; εἶδος, form.) Belonging to, or resembling, an animal.

In *Biology*, "each of the distinct organisms which, with various degrees of independence, express, when taken together, the total result of the development of a single ovum" (Huxley).

Zoöid'eus. (Ζῶον; εἶδος.) *Zoöid.*

Zoölite. (Ζῶον; λίθος.) *Geol.* Any specimen or part of a fossilised animal.

Zoöolith. (Ζῶον; λίθος.) The same as *Zoölite*.

Zoöolithiferous. (*Zoöolith*; *L. fero*, to bear.) The etymologically correct term would

have been "Zoöolithophorous." Bearing or containing *Zoöoliths*.

Zoölog'ic. The same as *Zoölogical*.

Zoölog'ical. Belonging to Zoölogy.

Zoölog'ist. (Ζῶον; λόγος, a treatise.) One who makes a special study of Zoölogy.

Zoölogy. (Ζῶον; λόγος, a treatise.) That division of *Biology* which deals with the nature, structure, and classification of animals.

Z., med'ical. The study of those drugs which are of animal origin.

Zoömag'netism. (Ζῶον; magnetism.) Animal magnetism. See *Magnetism, animal*.

Zoömagnetism'us. (Ζῶον; magnetism'us.) *Zoömagnetism*.

Zoömeph'itis. (Ζῶον; mephitis.) *Med.* A mephitic or poisonous exhalation arising from the decomposition of animal matter.

Zoömeph'itism. (*Zoömephitis*.) The same as *Zoömephitis*.

Zoömet'ric. Belonging to *Zoömetry*.

Zoömet'ry. (Ζῶον; μέτρον, a measure.) The measurement of the proportionate and relative sizes of various parts of animals.

Zoöminera'lia. Animal minerals. Cassius' term for animal organisms living in shells, as *e. g.* minerals, corals, &c.

Zoömor'phic. Belonging to *Zoömorph'ism*.

Zoömorph'ism. (Ζῶον; μορφή, form.) The representation of animal forms.

Zoömorpho'sis. (Ζῶον; μορφωσις.) The same as *Zoömorph'ism*.

Zoömor'phous. The same as *Zoömor'phic*.

Zoömor'phy. The same as *Zoömor'phism*.

Zoömu'cus. (Ζῶον; μῦκος.) Animal mucus.

Zoömy'cus. (Ζῶον; μῦκος.) The same as *Zoömucus*.

Zoömyx'a. (Ζῶον; μύξα, any slimy substance.) The same as *Zoömucus*.

Zoön. (Ζῶον.) An animal.

Zoön'al. Belonging to a *Zoön*.

Zoön'ic. (Ζῶον.) *Chem.* Belonging to animal matter. An epithet applied to a supposed acid discovered by Berthollet in the liquid obtained by distillation of animal substances. This supposed acid was subsequently shown by Thenard to be merely acetic acid combined with animal matter.

Zoönite. (Ζῶον.) *Zoöl.* Dugès' term for each animalcule or individual living being of a compound animal or colony of animalcules. Also, one of the metameres or segments of which an articulate animal is constructed.

Zoönit'ic. Belonging to a *Zoönite*.

Zoönom'ia. (Ζῶον; νόμος, a law.) *Physiol.* Old term for the laws of animal life.

Zoönom'ic. Belonging to *Zoönomia*.

Zoön'omy. The same as *Zoönomia*.

Zoönose'ma. (Ζῶον; νόσημα, a disease.) Schultze's term for a disease occurring in a herd of cattle.

Zoö'nosis. (Ζῶον; νόσος, disease. Plur. *Zoönoses*.) A disease communicable to man from one of the lower animals.

Zoönosolog'ia. (Ζῶον; νόσος, disease; λόγος, a discourse.) *Zoönosology*.

Zoönosol'ogist. One who makes a special study of *Zoönosology*.

Zoönosol'ogy. (*Zoönosologia*.) The *Nosology* of animals in general.

Zoöpar'asite. (Ζῶον; parasite.) An animal parasite.

Zoöparasitic. Epithet applied to a disease set up by a Zoöparasite.

Zoöpatholog'ia. (Ζῶον; πάθος, disease; λόγος, a treatise.) Zoöpathology.

Zoöpathologist. One who makes a special study of Zoöpathology.

Zoöpathology. (Zoöpathologia.) The science of animal diseases.

Zoöpathy. (Ζῶον; πάθος, disease.) The science of treatment of diseases of animals.

Zoöpelion'eter. An instrument for performing Zoöpelionometry.

Zoöpelionet'ria. Zoöpelionometry.

Zoöpelionet'rum. A Zoöpelionometer.

Zoöpelion'etry. (Ζῶον; πέλυσ, a basin; μέτρον, a measure.) The measuring of the backs of cattle.

Zoöper'al. (Ζῶον; πείρω, to experiment.) Belonging to Zoöpery.

Zoöper'ist. One who experiments on animals.

Zoöper'y. (Ζῶον; πείρω, to experiment.) Experimentation on animals. (Wilder.)

Zoöphænomenolog'ia. (Ζῶον; phænomenologia.) A treatise on the morbid phenomena of life.

Zoöph'agous. (Ζῶον; φαγεῖν, to devour.) Living on animal food, Carnivorous.

Zoöpharmacol'ogy. (Ζῶον; pharmacology.) Veterinary pharmacology.

Zoöphar'macy. (Ζῶον; pharmacy.) Veterinary pharmacy.

Zoöph'ilus. Animal-loving; epithet applied to certain drugs.

Zoöpho'bia. (Ζῶον; φόβος, fear.) A morbid fear of certain animals.

Zoöphotog'raphy. The photographing of animals.

Zoöphthal'mus. (Ζῶον; ὀφθαλμός.) A syn. for *Hydrophthalmia*.

Zoöphys'ics. (Ζῶον; physicos.) A syn. for comparative anatomy.

Zoöphysiolog'ia. (Ζῶον; physiologia.) Zoöphysiology.

Zoöphysiology. (Zoöphysiologia.) Animal physiology.

Zoöphytan'thracus. (Ζῶον; φύτον, a plant; ἄνθραξ, coal.) Coal produced from the mingled débris of animals and plants.

Zoöophyte. (Ζῶον; φύτον, a plant.) A member of one of the lower forms of the *Invertebrata*, whether a single organism or a colony of organisms.

Zoöophytoid. Like a Zoöophyte.

Zoöphytol'ogy. (Ζῶον; φύτον, a plant; λόγος, a treatise.) The systematic study of Zoöphytes.

Zoöplas'tic. Belonging to, or having, the characters of Zoöplasty.

Zoöplasty. (Ζῶον; πλαστός, moulded.) Tissue-grafting from one of the lower animals to man.

Zoöps'ia. (Ζῶον; ὄψις, vision.) The seeing of animals subjectively, whether as a hallucination or in a dream.

Zoöpsychol'ogy. (Ζῶον; psychology.) The science of animal psychology.

Zoöre'ma. (Ζῶον; ρέω, to flow; ρεύμα, a current.) A Zoö-current.

Zoöscop'ic. Belonging to, or having the characters of, Zoöscopy.

Zoös'copy. (Ζῶον; σκοπέω, to look at.) The subjective appearance of animal forms.

Zoö'sis. (Ζῶος, alive.) A making alive.

Zoö'sperm. See Zoösperma.

Zoösper'ma. (Ζῶον; σπέρμα, a seed.) A syn. for *Spermatozoon*. Also, a syn. for Zoöspore.

Zoösper'mata. Pl. of Zoösperma.

Zoöspermat'ic. Belonging to a Zoösperm.

Zoösper'mium. A Zoösperm.

Zoö'sporange. Shortened form of the term Zoösporangium.

Zoösporan'gial. Belonging to a Zoösporangium.

Zoösporan'gium. (Ζῶον; sporangium.) A *Sporangium* which produces motile spores.

Zoö'spore. (Ζῶον; σπορά, a seed.) Biol. A motile spore, or swarm-spore.

Zoöspor'ic. Belonging to, or having the characters of, a Zoöspore.

Zoösporiferous. (Zoöspore; *L. fero*, to bear. The more correct form would be "Zoösporophorous.") Giving origin to Zoöspores.

Zoötechn'ics. (Ζῶον; τέχνη, an art.) The science of breeding animals.

Zoöthaps'is. (Ζῶν; θάπτω, to bury.) A burying alive.

Zoöthe'ca. (Ζῶον; θήκη, a box.) The case or cell containing a zoöspore.

Zoö'taxy. (Ζῶον; τάξις, arrangement.) The *Taxonomy* of animals.

Zoötechn'ics. The same as Zoötechny.

Zoö'techny. (Ζῶον; τέχνη, art.) The scientific study and application of the breeding and domestication of animals.

Zoöthe'ca. (Ζῶον; θήκη, a case.) The cell which contains a spermatozoon or a zoöspore.

Zoöthe'cal. Belonging to a Zoötheca.

Zoöthe'cial. Belonging to a Zoöthecium.

Zoöthe'cium. (Ζῶον; θηκίον, dim. from θήκη, a case.) The mass of simple *loricæ* which encloses some of the composite *Infusoria*.

Zoötherap'ia. (Ζῶον; θεραπεία, medical treatment.) Zoötherapy.

Zoöther'apy. (Zoötherapia.) The *Therapeutics* of animals in general.

Zoö'tic. (Ζωότης, animal nature.) Epithet applied to a soil or rock containing animal remains.

Z. ac'id. A name for *Hydrocyanic acid*.

Zoö'ticus. Zoötic.

Zoötoc'ia. (Ζῶον; τόκος, birth.) The production of living young, as distinguished from the laying of eggs; viviparity.

Zoö'tocos. (Ζῶον; τόκος, birth.) *Viviparous*.

Zoö'tocus. Latinised form of *Zoötocos*.

Zoötom'ic. Belonging to Zoötomy.

Zoötom'ist. (Ζῶον; τομή, a cutting.) One who makes a special study of Zoötomy.

Zoö'tomy. (Ζῶον; τομή, a cutting.) The dissection of animals.

Zoötrroph'ic. (Ζῶον; τροφή, nourishment.) Belonging to animal nutrition.

Zopho'des. (Ζόφος, dark.) Dark or full of darkness. An epithet applied to dark-coloured urine.

Zophoi'des. (Ζόφος; εἶδος, form.) Resembling darkness. Epithet applied to the menstrual discharge, &c.

Zopissa. (Ζώπισσα.) The pitch and tar scraped off the sides of a ship. Used formerly as a discutient and xerantic.

Zo'pyron. (Ζών; πύρ, fire.) Old name for an antidote for snake-bite.

Zo'pyros. The same as *Zopyron*.

Zo'pyrus. The same as *Zopyron*.

Zora'ba. (Arab.) Old term for *Vitriolum*.

Zoroche. Mountain sickness.

Zosimau'ra. The *Aura vitalis*.

Zos'ter. (Ζωστήρ, a girdle.) A girdle. Shortened term for *Herpes zoster*.

Z. atyp'icus gangrenosus et hyster'icus. Term introduced by Kaposi for a grouped vesicular and papular eruption, which is followed by central scabbing and formation round of pustules. In places, sloughing occurs, and the scar may become keloid. The eruption is symmetrical, recurrent, and occurs in hysterical patients.

Z. auricular'is. Term for herpes zoster affecting the *auricle*, or external ear.

Z. brachial'is. Herpes zoster of the arm.

Z. capillit'il et fronta'lis. Herpes zoster of the forehead and scalp, following the distribution of the first division (*ophthalmic*) of the fifth cranial nerve.

Z. cerebral'is. Unilateral Herpes zoster of cerebral origin.

Z. cervico-subclavicular'is. Herpes zoster of the neck and upper part of the chest.

Z. facial'is. Herpes zoster occurring over the region of distribution of the fifth cranial nerve.

Z., herpes. See *Herpes zoster*.

Z. hyster'icus. Herpes zoster occurring as a symptom in *Hysteria*.

Z. lum'bo-femoral'is. Herpes zoster of the nates, thigh, and calf.

Z. lum'bo-inguinal'is. Herpes zoster of the loin and groin.

Z. ophthal'micus. Herpes zoster occurring in the region of distribution of the ophthalmic division of the fifth cranial nerve.

Z. pectoral'is. Herpes of the chest.

Z. perineal'is. Herpes zoster of the perineum and external genital organs.

Zos'tera mari'na. A syn. for *Pila marina*.

Z. marit'ima. The same as *Z. marina*.

Zoster'ic. Belonging to *Herpes zoster*.

Zo'ticos. (Ζωτικός.) Belonging to life; also, preserving life.

Zo'ticus. Latinised form of *Zoticos*.

Zo'tides. (Ζάω, to live.) An old term given by Piquet to chemical compounds containing oxygen, because of this element being necessary for life.

Zo'zar. A syn. for *Zuchar*.

Zub. An old term for *Butyrium crudum*. (Ruland and Johnson.)

Zubd. The same as *Zub*.

Zuc'aro. The same as *Zuccarum*.

Zuc'carum. The same as *Zaccharum* and *Saccharum*.

Zuch'ar. (Arab.) Sugar.

Zuch'arum. The same as *Zuchar*.

Zuch'ra. The same as *Zuchar*.

Zuckerkan'dl's convolut'ion. (*Zuckerkan'dl*, a contemporary anatomist.) The *Subcallosal convolution* of the cerebrum.

Zulap'ium. The same as *Julapium*.

Zu'ma. The same as *Zyme*.

Zu'mic. (Ζυμή.) The same as *Zymic*.

Zwelf'eri, Al'cahest. See *Alcahest Zwelf'eri*.

Zygad'enus. (Ζυγόν, a yoke; ἀδήν, a gland.) A genus of N. American *Liliaceæ*.

Z. veneno'sus. Hoy's potato. A violent narcoto-convulsant poison.

Zy'gal. (Ζυγόν, a yoke.) Yoked. Epithet applied by Wilder to fissures of the cerebrum which are connected with one another by an annectant fissure.

Zygan'trum. (Ζυγόν; ἀντρον, a cave.) A depression on the posterior surface of the neural arch in certain of the *Reptilia*, receiving the *Zygosphenæ* of the succeeding vertebra, the vertebrae thus interlocking.

Zygapophys'ial. Belonging to a *Zygapophysis*.

Zygapoph'ysis. (Ζυγόν; ἀπόφυσις.) The articular process of a vertebra.

Zy'goïte. (Ζυγόν.) *Biol.* An organism produced by *Zygosis*.

Zygotabial'is. (Ζυγόν; labialis.) *Anat.* A name for the *Zygomaticus minor* muscle.

Zygo'ma. (Ζύγωμα, the cheek-bone. *F. apophyse zygomaticque*; *I. apofisi zygomatici*, *G. Jochfortsatz*.) The arched bony process at the side of the face, formed by the articulation of the temporal process of the malar bone with the zygomatic process of the temporal.

Zygomat'ic. Belonging to the *Zygoma*.

Z. arch. The arch formed by the union of the zygomatic process of the temporal bone with the temporal process of the malar.

Z. bone. A term for the *Malar* bone.

Z. crest. That part of the greater wing of the sphenoid bone which articulates with the malar bone.

Z. fos'sa. The irregular hollow between the tuberosity of the superior maxilla and the external pterygoid plate of the sphenoid; it is partly closed in by the ascending ramus of the inferior maxilla.

Z. glands. Syn. for *Maxillary glands*, *internal* (q. v.).

Z. head. Henle's term for the *zygomatici minores* muscles. See *Zygomaticus minor*.

Z. mus'cles. There are two in number on each side, the *Zygomaticus major* and *Zygomaticus minor*.

Z. nerves. Branches of the facial nerve which pass over the malar bone, and supply the zygomatic muscles.

Z. pro'cess. See *Temporal bone, zygomatic process of*.

Z. spine. The spinous process at the upper and posterior part of the tuberosity of the *zygoma* (*Zygomatic tuberosity*).

Z. sur'face. Name for that surface of the superior maxillary bone which is behind the *zygoma*.

Z. su'ture. The suture between the zygomatic process of the temporal bone and the malar bone.

Z. tuberos'ity. The rough surface on the malar process of the superior maxilla with which the malar articulates.

Z. width. *Craniom.* Name for the greatest distance between the zygomatic arches.

Zygomat'ico-angular'is. Name for a small muscle which arises from the malar bone below the orbit, and is inserted into the deep fascia near the outer canthus of the eye.

ZYGOMATICO-AURICULAR—ZYMOTIC

Zygomat'ico-auric'ular in'dex. *Craniom.* Term for the ratio between the bizygomatic and biauricular diameters of the skull, the latter being taken as 100 (von Török).

Zygomat'ico-auricular'is. A name for the *Attrahens auriculam* muscle.

Zygomat'ico-facial. Belonging to the zygoma and face.

Zygomat'ico-tem'poral. Belonging to the zygoma and temporal bone or the zygoma and the temporal fossa.

Zygomat'icum poster'ius. A name for the *Foramen zygomat'ico-temporale* (q. v.).

Zygomat'icus. (Mod. L.) Belonging to the *Zygoma*.

Z. major. *Anat.* A small facial muscle which arises from the malar bone and is inserted into the angle of the mouth.

Z. minor. A small fasciculus of muscle which arises from the malar bone, and is inserted in common with the levator labii superioris proprius.

Zygomatocol'pos. (Ζυγόν; κόλπος, a hollow.) The *Zygomat'ic fossa*.

Zygomatocol'pus. Latinised form of *Zygomatocolpos*.

Zygomaxillary. (*Zygoma*; *maxillary*.) Belonging to the zygoma and superior maxillary.

Z. point. *Craniom.* Name for the lowest point on the *zygomaxillary suture* (von Török).

Z. su'ture. See *Suture*, *zygomaxillary*.

Zy'gon. (Ζυγόν, a yoke.) *Anat.* The branch connecting two *zygal* fissures of the cerebrum. See *Zygal*.

Zy'go-or'bital point. (*Zygoma*; *orbital*.) *Craniom.* The highest point on the *Zygomaxillary suture*.

Zygophylla'ceæ. A section of the *Rutaceæ*.

Zygoph'illum. The typical Genus of the *Zygophyllaceæ*.

Z. faba'go. Hab., Syria and Mauritius. A bitter vermifuge.

Z. portulacoid'es. A foetid plant the leaves of which are used in ophthalmia. The whole plant is anthelmintic.

Z. simp'lex. A syn. for *Z. portulacoides*.

Zy'gophyte. (Ζυγόν, a yoke; φυτόν, a plant.) A vegetable organism that produces *Zygospores*.

Zygopleur'al. (Ζυκόν; τὰ πλευρά, the side.) Bilaterally symmetrical.

Zy'gose. (*Zygosis*.) Belonging to, or having the characters of, *Zygosis*.

Zygo'sis. (Ζυγώω.) *Biol.* A sexual reproduction by the conjugation (*zygosis*) of two gametes.

Zy'gosperm. (Ζυγόν; σπέρμα, a seed.) A syn. for *Zygospore*.

Zy'gosphene. (Ζυγόν; σφήν, a wedge.) A process on the anterior surface of the neural arch of the vertebræ in some of the *Reptilia* which fits into the *Zygantrum* of the preceding vertebra, thus locking the two together.

Zygosporan'gium. (Ζυγόν; sporangium.) *Biol.* A *sporangium* formed by *zygosis*, and giving origin to *zygosphaeres*.

Zy'gospore. (Ζυγόν; σπορά, a seed.)

Biol. A spore produced by conjugation (*zygosis*) of two gametes.

Zy'gote. (Ζυγώω.) A syn. for *Zygospore*.

Zygozo'o'spore. (Ζυγόν, zoöspore.) *Biol.* A motile *Zygospore*.

Zylonite. (Ζύλον, wood.) A substance composed of pyroxylin and camphor. It is a modification of celluloid. Used in surgery and dentistry.

Zy'maæ. (*Zyme*.) A syn. for *Microzyme*.

Zy'me. (Ζύμη.) An organised ferment.

Zymetology. (Ζύμη; λόγος, a discourse.) See *Zymology*.

Zy'mic. (*Zyme*.) Belonging to a ferment (*zyme*), or to fermentation.

Zy'mine. (Ζύμη.) A ferment extracted from the pancreas. It is used in the treatment of diabetes.

Zym'ogen. (Ζύμη; γενής, producing.) A mother of ferments, a substance capable of being chemically changed into a ferment.

Zymogen'ic. Having the characteristic action of a *Zymogen*.

Zymogenous. The same as *Zymogenic*.

Zymag'ic. The same as *Zymogenic*.

Zymoid. (Ζύμη, a ferment; είδος, resemblance.) Resembling a ferment.

Zymolog'ic. Belonging to *Zymology*.

Zymology. (Ζύμη; λόγος, a discourse.) The science of *Fermentation*.

Zymol'ysis. (Ζύμη; λύσις, a loosening.) Decomposition brought about by the action of an organised ferment.

Zymoly'tic. Belonging to, or associated with, *Zymolysis*.

Zymoma. (Ζύμωμα.) A ferment or mixture of ferments.

Zy'mome. (Ζύμωμα.) Old term for *gluten* of wheat, which is insoluble in alcohol. (Gould.)

Zym'ophyte. (Ζύμη; φυτόν, a plant.) An organised ferment.

Zymoplas'tic. (Ζύμη; πλαστός, moulded.) Epithet applied to substances in the blood-plasma which originate from cells.

Zy'moscope. (Ζύμη; σκοπέω, to look at.) An apparatus devised by Zenneck for gauging the fermentative power of yeast, by measuring the volume of carbonic acid given off during fermentation.

Zymosim'eter. (*Zymosis*; Gr. μέτρον, a measure.) An apparatus for ascertaining the amount of fermentation in a given case.

Zymo'sis. (Ζύμωσις.) *Biol.* Fermentation set up by organised ferments. *Med.* The state of an individual suffering from a *Zymotic* disease.

Zy'mose. (Ζύμη.) A syn. for *Enzyme* (q. v.).

Zymotech'nic. (Ζύμη; τέχνη, art.) The art of setting up *zymotic* or fermentative processes, as in the making of beer, wine, vinegar, &c.

Zymot'ic. (*Zymosis*.) Belonging to *Zymosis*; also, capable of giving rise to *zymosis*.

Z. diseases'es. Diseases believed to be due to some specific micro-organism. This class includes infectious or contagious and endemic diseases.

Z. prin'ciples. The various specific poisons of the *zymotic* diseases.

ZYMURGY—ZYTHUS

Z. the'ory. The theory that in zymotic diseases the specific poison from the air or from an affected person acts as a ferment in the tissues of the person receiving the disease.

Zym'urgy. (*Zóμη*; *ἔργον*, work.) That branch of applied *Chemistry* which treats of the principles of brewing, distilling, wine-making, &c.

Zyr'bus. (Lat.) A syn. for *Omentum*.

Zytho'gala. (*Zythos*, beer; *γάλα*, milk.) A term for *Posset*.

Zytho'galum. The same as *Zythogala*.

Zyth'um. The same as *Zythus*.

Zyth'us. (*Zythos*.) A beer which was prepared by the ancients from barley and lupines. (Foster.)
